Portugal, but really governed by its negro chief. Its circumference is estimated by M. Brue (Labat, v. 118.) at 35 leagues; its soil is undulating, sloping gradually from the sea into moderate hills of easy ascent, all cleared and fertile, presenting everywhere to the eye fields of rice, millet (various kinds of sorghum) of extraordinary height, and other grain, scattered among thickets of Pullams or Cheese-trees, (*Bombax Ceiba*), oranges, plantains, guavas, and other fruit-trees. The shore is beset with mangroves, (*Rhizophora*), the cattle are large and fat, but horses, it is said, cannot live on the island, cows are therefore substituted for them; "*Elles portent à merveille*," says M. Brue; (p. 121;) "*elles vont à l'amble naturellement*." The natives have, as is usual among the tropical Africans, little clothing; but no less love of finery than their countrymen in the colonies. The girls are absolutely naked; but their skin is tattooed into a mosaic pattern of flowers and figures, so that they appear, according to the same writer, "as if dressed in a suit of black satin slashed and garnished, as was formerly the fashion." Collars, bracelets, and a girdle of glass beads, with the hair or rather wool of the head cropped close and cut into flowers and other figures, complete the toilet of a Bisago belle. These negroes are, however, of the Papel race, having expelled or subdued the Bisagos, whose name the island bears. Their religion is fetishism, but of a more sanguinary cast than in many neighbouring places. They sacrifice oxen, dogs, and cocks to a sacred tree, or whatever it may be, (for each man chooses his own idol,) and "water" it with the blood of the victim, whose horns are hung upon the branches. Its flesh, however, is carried away and eaten by the persons present. At the King's death his favourite women and slaves are killed and buried with him; formerly they were buried alive, but in M. Brue's time that custom had fallen into disuse. It would seem, on comparing these barbarous rites with similar ones still prevalent among the Ashantis and other Koromantis, that fetishism in its worst form, like the circular huts and nakedness of the negroes, anciently extended over the whole peninsula; a system of idolatry ill defined and cruel, springing from a servile dread of some more than human but malignant being, and from abject self-devotion, with little, if any, tincture of gratitude, or even any notion of a beneficent Deity. The disappearance of the worst parts of these superstitions may be traced, in some places, to the influence of Christians, and in more to that of Mohammedans; whose horror of the bloody rites of the Ashantis was strongly expressed by those whom Mr. Bowdich met at Kumási. Despotism the most absolute is exercised by the chieftain of Bisao, who, in M. Brue's time, a century and a half ago, had already reduced the Portuguese authority to a mere shadow, notwithstanding their guns and garrison. Búsi, Boísí, or Boussi or Boissise, adjacent to Bisao on the West side, is nearly as large, well watered, thickly wooded, and inhabited by less civilized Papels, who have the reputation of being thievish and treacherous. Játa, the Westernmost island, is inhabited by Balantas; and Bulam, the Easternmost, was, in M. Brue's time, only occasionally occupied by the Bisagós, who had driven the Biafaras out of it. (Labat, v. 150.) It is described by him in terms which represent it as a sort of earthly paradise; and such it doubtless appears in the dry season, but the unsuccessful attempts repeatedly made to colonize it, particularly that in 1792, under the direction of Captain Beaver, R. N., whose interesting narrative is so well known, show that

these promises are fallacious. The humidity of the climate seems to threaten fatal consequences to European constitutions; however, much of what they suffered must be ascribed to the misconduct of the settlers and to mismanagement on the part of the directors of that ill-fated undertaking. Captain Beaver, moreover, who, from his long residence on the island, was well able to judge of its climate and peculiarities, expressed "great confidence in the final success of the colony, had it received one-tenth part of the support given to Sierra Leone."

Bissagots.
Ouarangue.
Aranguera.

Of the second division, or "the Bisagós," the largest and the most Southernly is the Orango,* or Arangéra, which seems to be but little known, but of Kazegyú a full account is given by M. Brue. This island, the nearest to Bisao, is three times as long as it is broad, has a rich soil, producing abundance of Pulams, (Bombax,) Latánias, (fan-palms,) and other trees of the palm family, as well as every kind of tropical fruit and vegetable. The natives are handsome, and have not the flat nose of most negroes. When a cold North-East wind blows the women cover themselves with a petticoat, mantle, and sometimes a hood made of rushes, the grotesque effect of which may be seen in Labat's plates, (v. 184.) The men are adroit and clever, and have such a horror of slavery as to be always ready to rise on the captains of the ships in which they embarked, so that "*il est arrivé,*" says Brue, or his compiler, Father Labat, (p. 185.) "*à plusieurs capitaines Portugais et Hollandois, d'avoir été les dupes de la compassion qu'ils avoient de ces malheureux.*" As Brue was agent of the French African Company, whose most lucrative trade was the traffic in slaves, it is natural enough for him to talk of the humanity of slave-ship masters. The Ilha das Galinhas and Kányabak are very populous and fertile; and the abundance of fish along their shores is so large an additional source of subsistence that, but for the perpetual wars arising from want of civilization and religion, and the unhealthiness of the climate, these islands and the neighbouring continent would be inhabited by almost countless multitudes. Beyond the reef-enclosed islets called Pulam, (Bombax,) in 10° 51' N. and 15° 45' W., and Alcatraz, (Pelican,) in 10° 37' N. and 15° 26' W., besides the three islets of Cape Verga, the next group is that called by our seamen the Isles de Loss, from their Spanish name Islas de los I'dolos, (Idol Islands,) discovered and so named (Ilhas dos I'dolos) by Pero de Cintra in 1462; (Ca da Mosto, in Astley, ii. 597.) but the idols belonged to the people on the neighbouring cape, now called Tumba, (Bier Cape,) then Sagres, from its resemblance to the place of that name in Portugal. Two of the Islas de los I'dolos are larger than the rest; the Western and largest is called Támara or Ufamante. (Dapper, i. 424. ii. 5.) Their inhabitants are treacherous, but ships can get supplies there; and Támara is now inhabited by liberated slaves under the protection of Great Britain. Matacong, (Mata-cão, i. e. Kill-dog,) in 9° 14' N. and 12° 25' W., near the mouth of the Kissi River, is the Támara of D'Anville. Off Cape Shilling, in 8° 9' N. and 13° 10' W., are the Bannanas. Banana or Bravas (Wild) Islands, a group of three islets, and at the other extremity of Yawry Bay, first explored by Jacob Le Maire, in 1615, (Dapper, ii. 6.) are the Sombreras (Shade) or Plantain Islands, in

tains.

* Orango, or Waranga, and Aranguera, are probably Portuguese, not native names, corrupted from Larangia and Larangera, (orange and orange tree.) The vast size which those trees attain in these islands is particularly noticed by M. Brue. (Labat, v. 123.)

7° 55' N. and 13° W., near the Northern point of the mouth of the Sherbro River, called by the Portuguese Rio das Gamboas; (Quince River;) and in 7° 40' N. and 13° 4' W. the Turtle Islands, called Ilhas de Santa Anna by the Portuguese, from the neighbouring shoals, called a Furna de Santa Anna, i. e. St. Ann's den. That bank is indeed a continuation of the island or islands now bearing the same name, but called Faról (Lantern) by the Portuguese, and Farellón (Beacon) by the Spaniards, and Massakoya by the Dutch, (Dapper, from Blomert, ii. 13.) from the chief stationed there by the King of Cabo Monte or Kwoya. It is low and fertile, but its inhabitants cannot be trusted, though courteous and in dress and manners like their neighbours on the main land. They are idolaters, and practise circumcision. The staple of the neighbouring country, much frequented by the English in Blomert's time, is red wood, (cam-wood, *Baphia nitida*,) the produce most sought by the British traders. The island is much infested by elephants; and there is a pearl-fishery on the reefs of St. Ann, not, however, much frequented by the islanders from fear of sea monsters.

The British settlement, or colony of Sierra Leone, now occupies, as before remarked, the whole of the peninsula lying between the cape bearing that name, in 8° 30' N. and 13° 18' W., and Cape Shilling, in 18° 9' N., 13° 10' W., to the seaward, and landwards by a line drawn from the mouth of the Bunch or Bansa River, on the North side, to that of the Kates or Bangué on the South side of this offset from the great central chain called Kong, the Mandingo word signifying mountain. Though mountainous, this small territory is fertile, particularly the low land near the sea. The whole territory, as now estimated, comprehends a tract measuring about 216 square miles; (Sierra Leone, Report, 7th May, 1827;) much of which, however, is scarcely susceptible of cultivation, except for orchards or timber trees. The Kamaranka River, 17 miles South-East of the present boundary, was the limit mentioned in the Charter of 1800, a cession to that extent having been obtained by negotiation with the native chiefs; and the Northern boundary was extended in like manner to the little Scarcies, (Dos Cárceres, in 8° 50' N.) But these additional territories have been since abandoned. The native chieftains are glad to obtain a quit-rent in return for such grants, and therefore readily make them; and they now know that if their successors endeavour to revoke them, the claim will not be allowed by the colonial government. In the same manner the whole of the estuary called the Sierra Leone River is now included in the British colony. Of the appearance of the country from the sea an adequate idea may be obtained from the plates in Lieutenant Matthews's work, (pl. i.—iii.) or from Mr. Rankin's frontispiece, (*Visit to Sierra Leone*,) where the height of the mountains is probably too great, as none are more than 2800 feet above the sea. They are for the most part granitic, traversed by ravines rather than valleys, and the soil on their flanks is light and soon exhausted; but improvement of it by manure or any other dressing has probably never been attempted. In the valleys and near the coast the soil is a deep and fertile loam. These mountains are clothed nearly to their summit with woods, the removal of which, by withdrawing shade, moisture, and a constant supply of vegetable matter, occasions a rapid diminution of the productive soil. The valleys and alluvial ground near rivers are therefore the only places

fit for general cultivation in such a climate; but tropical fruits, spices, coffee, and probably tea, might be advantageously cultivated on the declivities of the hills. The level land is merely a narrow strip, running along the shore for about 30 miles, and varying from one to five. It is cleared only in a few places, and elsewhere thickly wooded; but the levels are separated from each other by difficult rocky passes. Free Town, on the North side of the peninsula, is five miles East of Cape Sierra Leone, immediately above a safe roadstead, on a bank 50 feet from the water's edge, and backed by an amphitheatre of hills and mountains covered with forests. At the foot of Tower-hill, 400 feet high, is the town itself, and half way up the side of the hill the fort, hospital, and old barracks, the new ones having been built on its summit. The town is well laid out, but ill-built, huts being everywhere intermixed with houses, many of the latter unfinished or little better than the former. The population consists of resident Europeans, Nova-Scotians, Negroes, Maroons, liberated slaves from Barbadoes, and pensioned African soldiers, besides natives of the country, who are generally Timanís, Mandingós, and Krús or Kroomen. The Africans taken in slave-ships, and subsequently liberated, are dispersed in villages formed for them in the mountains, the Isles de los I'dolos, and the Bananas. The distribution and management of the liberated slaves has been, ever since the abolition of the slave-trade, one of the greatest difficulties the Government has had to grapple with. They have, as far as possible, been established in fourteen villages in the mountains, each village receiving persons belonging to the same or neighbouring nations. These villages were, for a long time, under the management of the Church Missionary Society, whose labours on behalf of the liberated negroes have been very meritorious, and on the whole successful. Almost all the evidence collected by the Parliamentary inquiries goes to show the comparatively moral and decent conduct of this part of the colonial population. But vicinity to their native country in some cases, and the difficulty of obtaining wives in others, have tempted many to abscond and abandon their allotments, while the Fullas, Mandingós, Serahwalis, and other native traders, as well as the neighbouring Bulam and Timaní chiefs, have too often found the means of practising their old trade of kidnapping even in Free Town itself; so that adults, as well as children, have been clandestinely removed from the colony, and sold into slavery. This is effected with the greater ease, as there is no kind of police maintained. The difficulty of civilizing adults, and the expense attending the education of children, have operated as serious drawbacks to perseverance in the only plans which could promise any satisfactory result; it is, therefore, more surprising that anything should have been done, than that so much should have remained undone. Of this population the numbers, in 1826, were as follows:—

Europeans (including military)	80
Nova-Scotians	578
Maroons	636
Liberated slaves from Barbadoes	60
Pensioned soldiers	949
	2303
Natives, Krús, Mandingós, &c.	2174
Liberated from slave-ships	939
	5416

But in 1829 the number of liberated slaves was 21,205; some of whom were employed in the colonial coasting trade, and not actually resident within the British territory.

The whole charge for the civil establishments at this settlement in 1830 amounted to £29,700; more than one half of which (£15,000) was incurred for the care and maintenance of negroes captured in slave-ships; and of the remaining £14,700, more than one-half (£7500) was derived from revenue raised in the colony. The Parliamentary grant, therefore, was only £7200. This, however, does not include the military department, ordnance, and customs, in each of which the expenditure has been much reduced since 1829. In 1820 the military expenditure amounted to about £46,734; the charge for public works to £2429, for administration of justice to £1067; rent of houses and pay of civil servants £1,433.

A certain fatality seems to have attended this colony from its very commencement; and whether from the frequent change of governors, from occasional alterations of system respecting it at home, or from mismanagement on the part of the persons sent out, a more wretched example of works unfinished, expenditure unaudited, and good intentions frustrated, can scarcely be produced than that unfolded by the Parliamentary Reports respecting Sierra Leone. Of its present condition and prospects the most amusing account is to be found in the light, and sometimes flippant, narrative of Mr. F. Harrison Rankin, who, however, has much solid information and many judicious remarks mixed up with his hasty and broadly coloured sketches, and deserves great praise for endeavouring to dispel the too prevalent notion of its peculiar unhealthiness. He has shown very cogent reasons for believing that it is not more fatal to Europeans than other tropical countries, and that it is daily becoming more healthy; so that the hope of its being one day the source of civilization and Christianity to the negro race, and the great channel of intercourse between Europe and Central Africa, can no longer be ranked as nothing more than an idle chimera.

The history of this ill-fated settlement may be thus very briefly summed up. In the year 1787 an association of benevolent persons was formed in London for the purpose of settling, as a free colony on the African coast, the negro paupers with whom the streets then swarmed, and a small tract of land was obtained for them at Sierra Leone. They were, however, dispersed in 1790, in consequence of the misconduct of some English sailors, which led to a contest with the natives, in which these settlers were, without any fault of theirs, involved. But in 1791 this benevolent association was incorporated by an Act of Parliament, under the name of the Sierra Leone Company, with a Charter for 31 years, for the purpose of establishing an agricultural colony of free negroes on the African coast, and setting the natives an example of the benefit of agricultural labour, so as gradually to prevail on them to abandon the slave-trade. At that period a considerable body of free negroes, who had obtained their liberty by joining the King's troops in the course of the American war, and had received grants of land in Nova-Scotia, were very clamorous for removal to some more genial climate, as they were sinking under the rigours of a Nova-Scotian Winter. The Government therefore proposed to the newly formed Company to receive them under its protection, as an

military
expendi-
ture.Present
state.

History

SIERRA
LEONE.
SIEVE.

useful addition to the body of settlers whom it was sending out. They arrived at Sierra Leone in 1792, at an unfortunate season, just before the commencement of the periodical rains; and from want of proper shelter from the weather, great sickness, and consequent discontent, ensued. Many of the Company's servants seem to have been ill-chosen; their orders were disobeyed; their engagements in many cases unfulfilled. Much dissatisfaction and confusion arose; and the war with France, which broke out in 1793, diminished the chances of an advantageous trade, while it enhanced all the expenses of the settlement; but, to crown the whole of these disasters, in 1794, a French squadron, in direct contradiction of the professions then so ostentatiously made by the Republic, attacked and nearly demolished the infant colony, plundering not only the public stores, but the houses of individuals.* Under these circumstances, the Company's resources would have failed without the aid of Parliament. That aid was granted partly from a desire to promote so benevolent a design as the establishment of a free colony on the coast of Africa, partly from the obligation under which the Government lay, to provide for the Nova-Scotian negroes. These aids were continued for ten years, till, in 1804, it was thought expedient to transfer the colony entirely into the hands of Government; and as it has, from the causes already mentioned, not yet realized the expectations indulged at its establishment, the propriety of entirely abandoning it has been occasionally maintained. Its insalubrity has, however, been exaggerated, its commerce is now considerable, a portion of its territory is under cultivation, and since the suppression of the slave-

trade in its immediate neighbourhood, its influence over the neighbouring chiefs has been more extensive and beneficial; but still much remains to be done, and being considered by Government as one of its least important dependencies, it has too often, as under a popular Government will always be the case, suffered from inattention or fluctuation in the councils of those in power at home, as well as from inefficiency or mismanagement on the part of their servants abroad.

SIEVE, n. } Anciently *siue*, whence *sived*, *siv'd*,
SIFT, v. } *sift*; A. S. *sibi*, *sift-an*; D. *seue*,
SIFTING, n. } *seuen*, *siften*; Ger. *sift*, *siften*, (by
SIEVEYER. } modern usage *sichten*, Wachter,) to
searce, to bould.

To sift is—

To separate, to shake apart, the smaller from the larger parts or particles, the coarser from the finer; to discern, to search, to examine minutely, thoroughly, to scrutinize.

The mullok on an hepe ysweped was,
And on the flore yeast a canevas,
And all this mullok in a sive ythrowe,
And sifted, ay ypicked many a throwe.

Chaucer. *The Chanoyes Yemannes Tale*, v. 16406.

William Siveyer was born at Shinkley in this bishoprick, where his father was a *siveyer* or *sive-maker*; and I commend his humility in retaining his father's trade for his surname, to mind him of his mean extraction.

Fuller. *Worthies*. Durham.

Leave this occupation and sifting of letters to those masters that shut up a thing so magnificent as philosophy is, in syllables: and do imbrace, yea bring to nothing, and utterly destroy the mind, in teaching things that are not worth the labour and study.

North. *Plutarch*. Seneca, p. 1011.

Liv. Never hope it.

'Tis as easie with a sive to scoop the ocean, as
To tame Petruchio.

Beaumont and Fletcher. *The Woman's Prize*, act i. sc. 2.

* The Company's botanist, the learned Afzelius, used to complain that the French even carried off the portfolios in which his dried plants were arranged, because he had taken the trouble to make them up neatly.

You are best but honourable earth;
And howe'er sifted from that coarser bran
Which doth compound, and knead the common man,
Nothing immortal, or from earth refin'd
About you, but your office and your mind.

Drummond. *Elegy*.

And fresh mould sifted and strewed over with riddles, an inch
thicke and no more.

Holland. *Plinie*, book xvii. ch. x.

For Tim will aske much, to the sifting out
Of each man's disposition, by his deeds.

Chapman. *Homer*. *Odyssey*, book xvi.

MASK. Why then, are you a waiting-woman, as you are the
sieve of all your ladie's secrets, tell it me?

Dryden. *An Evening's Love*, act i. sc. 1.

Even those passages of providence, which at first glimpse appear
most opposite or disadvantageous to the goodness of God, (or to
our opinion and belief concerning it,) do, being well sifted, no
wise prejudice it, but rather serve to corroborate and magnify it.

Barrow. *Sermon* 2. vol. i. p. 29.

Mr. Banks's house admitted the water in every part like a sieve,
and it ran through the lower rooms in a stream that would have
turned a mill.

Cook. *Voyages*, vol. ii. book iii. ch. x. p. 283.

I shall not wonder if, to those who have not sifted this question
to the bottom, (which few, I am persuaded, have done,) the evi-
dence of a providence, arising from prophecies of this sort, should
appear to be very slender, or none at all.

Horsley. *Sermon* 17. vol. ii. p. 69.

SIEVERSIA, in *Botany*, a genus so called in honour
of M. Sievers, a Russian botanist and traveller. It be-
longs to the class *Icosandria*, order *Polygynia*, and
natural order *Rosaceæ*. Generic character: calyx ten-
cleft, the five outer segments accessory; petals five;
stamens numerous; ovaries indefinite; ovula ascending;

SIEVER- styles terminal, continuous; carpels awned from the
SIA. styles being persistent; awns feathery, articulated.

SIGH.

Separated from *Geum*, on account of the jointed styles or awns of the carpels, and in the flowers and calyxes being erect, never reflexed. There are sixteen species, native of the Alps of Europe, Siberia, and North America; the most remarkable species is *S. paradoxa*, a native of Mexico.

SIGALPHUS, in *Zoology*, a genus of *Hymenopterous* insects.

Generic character. *Antennæ* setaceous, many-jointed, articulations varying from twenty-one to twenty-eight, the terminal one generally small, ovate, acute; *palpi* filiform, unequal; maxillary longest, six-jointed, the second joint very short; labial three-jointed; mandibles with two or four teeth, the teeth equal, short, and acute; *labrum* minute; head transverse, crown flat, occiput straight; *metathorax* obsoletely dentate on each side; *abdomen* sessile, flat, three-jointed, the segments more or less united; its apex notched, and in the females furnished with a short, straight, ovipositor; wings four, anterior with two cubital areolets, the first somewhat trigonal, the second elongate; two discoidal areolets, one submarginal one, the last acutely closed at the apex of the wings; legs moderate.

Type of the genus, *S. carinatus*; Nees ab Esenbeck, *Hymen. Ichneu. affinia*, vol. i. p. 267. Nine species, of which six are said to be indigenous.

SIGARA, in *Zoology*, a genus of *Hemipterous* insects.

Generic character. *Antennæ* minute; head broad; *thorax* transverse, linear; *scutellum* distinct; body ovate, acuminate behind, and slightly depressed; *elytra* with a groove at the base of the anterior lateral margin above; legs dissimilar, posterior pair longest, and formed for running; two anterior *tarsi* one-jointed, four posterior two-jointed.

Type of the genus, *Notonecta minutissima*; Linnæus, *Syst. Nat.* vol. i. p. 713. One species only, which is abundant throughout Britain, inhabiting lakes and rivulets.

SIGARETUS, in *Zoology*, a genus of *Trachelipodous Mollusca*.

Generic character. Shell somewhat ear-shaped, patulous, almost orbicular, the left margin short, spiral; aperture anterior, very wide, longer than broad, the margins united; mantle enveloping the shell, its anterior sinistral margin notched at the branchial opening; *tenacula* two; eyes at their outer base.

Type of the genus, *Bulla haloitidea*; Montagu, *Test. Britt.* p. 211. pl. vii. fig. 5. vii. ii. fig. 6. *animal*. Two species, both of which are found on the coasts of Britain, though not very commonly; the type also occurs in the Mediterranean and Atlantic Seas.

SIGH, *n.* } Anciently written *sike*; and the past
SIGH, *v.* } participle of *sigh* was (sighed, sigh'd)
SI'GHER, } *sight*; D. *suchten*; Sw. *sucka*; A. S.
SI'GHING, *n.* } *sic-an*, which appears to be the same word as *syc-an*, to *suck*, applied to the *sucking* or drawing in the breath previous to the emission.

To draw in or inhale, to exhale or emit, the breath, *sc.* with longer, deeper breathings than common.

He *sighede* and seide. sore hit me for þynkeþ
Of þe dede þat ich have doun.

Piers Plouhman. Vision, p. 344.

Great is my wo, (quod she,) and *sighed* sore
As she that feelieth deadly sharpe distresse.

Chaucer. Troilus and Creseide, book iv

The morow came, and ghostly for to speke,
This Diomedes is come vnto Creseide,
And shortly for himselfe spake and seide,
That all her *sighes* sore doun he leide.

Chaucer. Troilus and Creseide, book v.

This knight adviseth him, and sore *siketh*,
But at the last he said in this manere.

Id. The Wif of Bathes Tale, v. 6811.

Than wold she sit adoun upon the grene,
And pitously into the see behold,
And say right thus, with careful *sikes* cold.

Id. The Frankeleines Tale, v. 11204.

Then tooke I with mine hondes tway
The arrow, and full fast it out plight,
And in the pulling sore I *sight*.

Id. The Romant of the Rose, v. 1746.

It is a sorie lust to like,
Whose ende maketh a man to *sike*,
And tourneth ioyes in to sorowe.

Gower. Conf. Am. book vii.

Laid in my quiet bed, in study as I were,
I saw within my troubled head, a heape of thoughts appeare,
And euery thought did shewe so lively in myne eyes,
That now I *sighed*, and then I smilde, as cause of thoughtes did rise.

Surrey. No Age is Content.

I was belov'd of many a gentle knight,
And sude and sought with all the service dew;
Full many a one for me deepe groand and *sigh't*.

Spenser. Faerie Queene, book vi. can. 8.

Here I unclasp the book of my charg'd soul,
Where I have cast th' accounts of all my care;
Here have I summ'd my *sighs*; here I enroll
How they were spent for thee; look what they are.

Daniel. To Delia.

Yet sometimes a divided *sigh*, martyr'd as 'twere
I' th' deliverance, will break from one of them,
When the other presently gives it so sweet a rebuke,
That I could wish myself a *sigh* to be so chid,
Or at least a *sigher* to be comforted.

Beaumont and Fletcher. The Two Noble Kinsmen, act ii. sc. 1.

Now for the oppression of thee needie, and for the *sighes* of the
poore, I will vp saith the Lord, and wil set at liberty him whom
the wicked hath snared.

Bible, Anno 1583. Psalmes, xii. 5.

The poor bird was beaten back with the loud *sighings* of an
Eastern wind.

Taylor. Sermon 5. vol. i. p. 88.

— This world, 'tis true,
Was made for Cæsar—but for Titus too;
And which more blest? who chain'd his country, say,
Or he whose virtue *sigh'd* to lose a day?

Pope. Essay on Man. Epistle 4.

The passion of love is the most general concern among men;
and I am glad to hear by my last advices from Oxford that there
are a set of *sighers* in that University, who have erected themselves
into a society in honour of that tender passion.

Spectator. No. 30.

When the mind reflects with regret upon some good unattained
or lost, it feels an internal emotion, which acting upon the dia-
phragm, and that upon the lungs, produces a *sigh*.

Goldsmith. History of the Earth, vol. ii. ch. v. p. 280.

SIGHT,
SI'GHED,
SI'GHTFULNESS,
SI'GHTLESS,
SI'GHTLY,
SI'GHTLINESS.

The preterperfect of *see* was an-
ciently written *sigh*, whence *sighed*,
sigh'd, *sight*. Any thing which is
seen; also the sense, the faculty
by which any thing is seen; vision,
view, inspection.

Sightly; seeming good, or of good seeming, or ap-
pearance to the eye.

þe kȳng wepte with his ine, that *sight* mykelle he praised.
R. Brunne, p. 79.

So clene and fair, & purwyt, among oþer men heo beþ
þat me knoweþ hem in eche lond bi *syȝte*, where me hem seþ.
R. Gloucester, p. 8.

SIGH.

SIGHT.

SIGHT. It made fier to come doun fro heuene into erthe in the *sight* of alle men. *Wiclif. Apocalips, ch. xiii.*
SIGIL. He made fyre come doune from heauē in y^e *sight* of men. *Bible, Anno 1551.*

If that your eyen cannot seen aright,
 Loketh that youre minde lacke not his *sight*.
Chaucer. The Chanones Yemannes Tale, v. 16886.

Lo howe Egypt all out of *sight*
 For reason stant in misbeleue
 For lacke of lore, as I beleue.
Gower. Conf. Am. book v.

The daie made ende, and lost his *sight*,
 And comen was the derke night,
 The whiche all the daies eie blent.
Id. Ib.

But still, although we fail of perfect rightfulness,
 Seek we to tame these childish superfluities;
 Let us not wink, though void of purest *sightfulness*.
Sidney.

It is generally known and observed, that light, and the object of *sight*, move swifter than sound; for we see the flash of a peece is seen sooner than the noise is heard.

Bacon. Natural History. Cent. iii. sec. 210.

The foolish and short-sighted die with fear,
 That they go nowhere, or they know not where.
Denham. Of Old Age, p. 4.

Then Minerua thought,
 What meanes to wake Vlysses, might be wrought,
 That he might see this louely sighted maid,
 Whom she intended should become his aid,
 Bring him to towne, and his return aduance.
Chapman. Homer. Odyssey, book vi.

Borgio and he from this dire region haste;
 Shame makes them *sightless* to themselves and dumb;
 Their thoughts fly swift as time from what is past;
 And would like him demolish all to come.
Davenant. Gondibert, book i. can. 5.

Come to my woman's breasts,
 And take my milke for gall, you murth'ring iainisters,
 Where-euer, in your *sightlesse* substances,
 You wait on nature's mischiefe.
Shakspeare. Macbeth, fol. 134.

Full of vnpleasing blots, and *sightlesse* staines.
Id. King John, fol. 8.

BAST. It lies as *sightly* on the backe of him
 As great Alcides' shoes vpon an asse.
Id. Ib. fol. 4.

Glass eyes may be used, though not for seeing, for *sightliness*.
Fuller. Holy State, (1648,) p. 290.

Thus watch'd the Grecians, cautious of surprize,
 Each voice, each motion, drew their ears and eyes;
 Each step of passing feet increas'd th' affright,
 And hostile Troy was ever full in *sight*.
Pope. Homer. Iliad, book x.

Our *sight* is the most perfect and most delightful of all our senses. It fills the mind with the largest variety of ideas, converses with its objects at the greatest distance, and continues the longest in action without being tired or satiated with its proper enjoyments.
Spectator. No. 411.

He from thick films shall purge the visual ray,
 And on the *sightless* eye-ball pour the day.
Pope. Messiah.

We have already chosen thirty members the most *sightly* of all her majesty's subjects. We elected a president, as many of the ancients did their kings, by reason of his height.

Guardian. No. 108.

When reach'd her ear thy much lov'd sister's death,
 Her eyes grew *sightless*, and she lost her breath.
Boyse. The Disconsolate Hilaria.

SIGIL. Cotgrave has sigille, sealed, and sigillatif, sigillative, sealable; It. *sigillo*; Lat. *sigillum*, a seal.

And sorceries to raise t' infernal powers,
 And *sigils* fram'd in planetary hours.
Dryden. Palamon and Arcite, book ii.

VOL. XXVII.

SIGILLINA, in *Zoology*, a genus of *Tunicata*.

Generic character. Animal agglomerated, biforous, forming by their union a common gelatinous body, elongate-conical, somewhat pedunculated, with scattered tubercles; animals not disposed in any particular or distinct system; tubercles of the surface with two pores; mouth with six tentacula; anal orifice with six teeth.

Type of the genus, *S. Australis*; Lamarck, *Anim. sans Vert.* vol. v. p. 100. Inhabits the coasts of New Holland.

SIGMOIDAL, from the Gr. Σ , sigma, and $\epsilon\iota\delta\omicron\varsigma$, form or shape.

Formed or shaped like the Gr. sigma.

It must necessarily thrust the blood through the open passage of the *vena arteriosa*, where the *sigmoidal* portals hindering its return, it must pass through the strainer of the lungs.

Smith. On Old Age, (1666,) p. 233.

to import.

Signal, *adj.*, remarkable; conspicuous; worthy of note or distinction, memorable.

Significant is used emphatically, *sc.* expressing much meaning; and Ben Jonson uses *signifying* in the same manner.

Signature, *sc.* of plants. See the first Quotation from H. More.

pat was to *signifye*,
 pat he ssolde be Duc of Normandy, & kýng of Engeland.
R. Gloucester, p. 345.

And in sond a *signe* wrot.

Piers Plouhman. Vision, p. 231.

And oon of hem roos up, Agabus bi name, and *signifiede* bi the Spirit a greet hungur to comynge in al the world, which hungur was maad undir Claudius.

Wiclif. The Dedis of Apostlis, ch. xi.

And there stode vp one of them, named Agabus, and *signified* by the Spirite, y^t there shoulde be a greate dearth thorowe oute all the worlde, which came to passe in the Emperour Claudius dayes.
Bible, Anno 1551.

And here I vow me, faithful, true, and kind,

Without offence of mutabilitie,

Humbly to serue, while I haue wit and mind,

Mine hole affiaunce, and my lady free,

In thilke place, there ye me *signe* to be.

Chaucer. The Court of Love, p. 372.

SIGIL-
LINA.
SIGN.

SIGN.

For like as bookes of him list expresse,
He set pillers through his hye prowesse,
Alway at Gades, for to *signifie*,
That no man might him passe in cheualrie.
Chaucer. The Complaint of the Black Knight, p. 341.

But though I tell not as blive
Of hir power, ne of hir might,
Hereafter shall I tellen right
The sooth, and eke *signifaunce*.
As ferre as I have remembraunce.
Id. The Romant of the Rose, p. 178.

And han wel founden by experience,
That dremes ben *significations*
As wel of joye, as tribulations,
That folk endure in this lif present.
Id. The Nonnes Preestes Tale, v. 14914.

Phebus the sonne ful jolif was and clere,
For he was nigh his exhaltation
In Martes face, and in his mansion
In Aries, the colerike hote *signe*.
Id. The Squieres Tale, v. 10402.

The center that standeth a middest the narrowest cercle, is
cleapet the *signet*.
Id. Astrolabie, p. 456.

The vertue whiche is in the stones,
A very *signe* is for the nones
Of that a kynge shall be honest,
And holde trewely his behest
Of thyng whiche longeth to kinghed.
Gower. Conf. Am. book vii.

Vlysses knewe this token nought,
And prayth to witte in some partie,
What thyng it might *signifie*,
A *signe* it is, the wight answerde,
Of an empire.
Id. Ib. book vi.

And whan that he the sooth herde,
Where that the kynge Vlysses was
Alone vpon his horse great pas
He rode hym forth, and in his hond
He bare the *signall* of his londe,
With fisshes thre, as I haue tolde.
Id. Ib.

And euen so say they that the doctoures called the Sacrament
the body and bloud of Christ after the same maner onely, because
it is the memoriall, the earnest and seale of body and bloud, as the
vse of Scriptures is to call *signes* by the names of thynges *signified*
therby.

Tyndall. Workes, p. 447. *Vpon Signes and Sacramentes*.

Than the Bysshoppe of Caunterbury wrote letters *sygned* with
his hande to London, *sygnifyinge* the comynge of the Erle of Derby.
Lord Berners. Froissart. Cronycle, ch. 240.

As he rode forwarde in the forest of Mans, a great *signification*
fell to hym, by the whiche if he had doone well, he shulde haue
called his counsayle aboute hym, and well aduysed hymselfe or
he had gone any further.
Id. Ib. ch. 187.

It [the church] hath yet, or should haue, an other *signification*,
little known among the common people now a dayes. That is to
wit, it signifieth a congregation, a multitude or a company ga-
thered together in one, of all degrees of people.

Tyndall. Workes, p. 249. *What the Church is*.

But give me your figurative, *significative*, and such other like
terms, and I will defend that Christ hath not yet ascended; no
nor yet that he was incarnate, &c.

State Trials. Mary I. Trial of Cranmer.

SHY. I pray you giue me leaue to goe from hence,
I am not well; send the deed after me,
And I will *signe* it.
Shakspeare. The Merchant of Venice, fol. 181.

Y' are meek, and humble-mouth'd,
You *signe* your place, and calling, in full seeming,
With meekenesse and humilitie; but your heart
Is cramm'd with arrogancie, spleene, and pride.
Id. Henry VIII. fol. 218.

1. List, list.
 2. Hearke.
 1. Musicke i' th' ayre.
 3. Vnder the earth.
 4. It *signes* well, do's it not?
- Id. Antony and Cleopatra*, fol. 359.

Thou Saint George shal called bee,
Saint George of mery England, the *signe* of victoree.
Spenser. Faerie Queene, book i. can. 10.

God and thou know'st, with what a heavy heart
I took my farewell, when I should depart;
And being shipp'd, gave *signal* with my hand
Up to the cliff, where I did see thee stand.

Drayton. Mary the French Queen to the Duke of Suffolk.

And therefore herein *significations* are naturall and concluding
upon the infant, but not to be extended unto *signalities*, or any
other person.

Sir Thomas Brown. Vulgar Errours, book v. ch. xxi. p. 326.

Those other examples of the *signation* of the fœtus from the
mother's fancy, Fienus rejecteth.

More. Immortality of the Soul, part iii. book iii. ch. vii. p. 173.

We come now to the *signatures* of plants. I demand whether it
be not a very easie and genuine inference, from the observing that
several herbs are marked with some mark or *sign* that intimates
their virtue, what they are good for, and there being such a crea-
ture as man in the world that can read and understand these *signs*
and characters; hence to collect that the Author both of man and
them knew the nature of them both.

Id. Antidote against Atheism, book ii. ch. vi.

Whoever shall peruse the *signatures* of Crollius, or rather the
phytognomy of Porta, and strictly observe how vegetable realities
are commonly forced into animal representations, may easily per-
ceive in very many the semblance is but postulatory.

Sir Thomas Brown. Vulgar Errours, book ii. ch. vi. p. 105.

Signaturists have somewhat advanced it; who seldom omitting
what ancients delivered, drawing into inferences received distinc-
tions of sex, not willing to examine its human resemblance.

Id. Ib. book ii. ch. vi. p. 108.

They, as if *signets* in their master's hand,
Gave true impressions, keeping stil one forme.

Sirling. Doomes-day. Houre 8.

Goe *signifie* as much, while here we march
Vpon the grassie carpet of this plaine.

Shakspeare. Richard II. fol. 36.

Other some not so well seene in the English tongue, as perhaps
in other languages, if they happen to heare an olde word, albeit
very naturall and *significant*, cry out straightway, that we speake
no English, but gibberish, or rather such as in olde time Evander's
mother spake.

Spenser. Epistle to Maister Harvey.

YORK. Since you are tongue-ty'd, and so loth to speak,
In dumb *significants* proclayme your thoughts.

Shakspeare. Henry VI. fol. 103.

Neither in the degrees of kinred they were destitute of *significa-
tive* words; for he whom we of a French and English compound
word call grandfather, they called eald-fader, whom we call great-
grandfather they call thirda-fader.

Camden. Remaines. On Languages, p. 26.

Seeing the Sultan's dominions, in the time of the Holy War, ex-
tended from Sinus Arabius to the North-Eastern part of the mid-
land sea, where a barbarous kind of Greek was spoken by many,
amirall (thus compounded) was *significatively* comprehensive of
his jurisdiction.

Fuller. General Worthies of England.

This sentence must either be taken tropically, that bread may
be the body of Christ *significatively*, or else it is plainly absurd
and impossible.

Usher. Answer to the Jesuit Malone, p. 190.

One saith, diverse diseases of the body and minde proceed their
influences, (the starres,) as I have already proved out of Ptolemy,
Pontanus, Lemnius, Cardan, and others, as they are principall *sig-
nificators* of manners, diseases.

Burton. Anatomy of Melancholy, part i. sec. 3. p. 190.

Here is a double *significatory* of the spirit, a word and a *sign*.
Taylor.

If this geer hold
Best hang a *signe-post* up, to tell the signiors,
Here ye may have some lewdness at liverie.

Beaumont and Fletcher. The Chances, act iii. sc. 1.

The people press on every side, to see
Their awful prince, and hear his high decree.
Then *signing* to their heralds with his hand,
They gave his orders from their lofty stand.

Dryden. Palamon and Arcite, book iii.

Now, of all the inventions which have been contrived for se-

SIGN.

SIGN. curing opportunity, the most effectual is that of making *signals* by the means of lighted torches.

Hampton. *Polybius*, vol. iii. book x. ch. ii. p. 325.

Who dares inglorious in his ships to stay,
Who dares to tremble on this *signal* day;
That wretch, too mean to fall by martial power,
The birds shall mangle, and the dogs devour.

Pope. *Homer. Iliad*, book ii.

For if the words be but becoming and *signifying*, and the sense gentle, there is juyce.

Ben Jonson. *Discoveries*, p. 121.

So that neither by this instance is any attribute of God more *signalized* than his transcendent goodness.

Barrow. *Sermon* 2. vol. i. p. 27.

These, knowing no other Europeans but Spaniards, it might be expected they would treat all strangers with the same cruelty which they had so often and so *signally* exerted against their Spanish neighbours.

Anson. *Voyages*, book ii. ch. iii. p. 189.

All those virtuous dispositions of mind which we acquire by the practice of virtue are so many genuine *signatures* of God, taken from the seal of his law, and participations of his nature.

Scott. *Christian Life*, part ii. ch. i. p. 199.

Her novices are taught that bread and wine
Are by the visible and outward *signe*,
Receiv'd by those who in communion join.
But th' inward grace, or the thing *signify'd*,
His blood and body, who to save us dy'd;
The faithful this thing *signify'd* receive;
What is't those faithful then partake or leave?
For what is *signify'd* and understood,
Is, by her own confession, flesh and blood.

Dryden. *The Hind and the Panther*, part i.

Thus you see the force and *significancy* of those texts (and of all texts which intimated a plain personal distinction between the Father and Christ) against the Sabellians.

Waterland. *Works*, vol. i. p. 295. *A Defence of some Queries. Query* 26.

For as often as ye eat this bread and drink this cup, ye do shew forth the Lord's death until he come, *καταγγελλετε*, ye do *significantly* express it, ye do solemnly publish and declare it.

Atterbury. *Sermon* 6. vol. iv. p. 169.

To perform this, he made frequent use of tropes, which you know change the nature of a known word, by applying it to some other *signification*.

Dryden. *Letter to Sir R. Howard*.

You seem to forget that it is some time since words have been no longer allowed to be the *signs* of things. Modern grammarians acknowledge them to be (as indeed Aristotle called them, *συμβολα παθημάτων*) the *signs* of ideas; at the same time denying the other assertion of Aristotle, that ideas are the likenesses of things.

Tooke. *Diversions of Purley*, vol. i. part i. ch. i. p. 23.

One of which [boats] I sent away with an officer round a point on the larboard hand, to look for anchorage; this he found, and signified the same by *signal*.

Cook. *Voyages*, vol. iii. book i. ch. iii. p. 60.

No soldier durst begin the battle till the *signal* was given; and the *signal* was contrived to be given in such a manner that no one could know the exact time of it, but all waited for it patiently; nor, after the *signal* was once heard, was it lawful for any man to attack or strike the enemy, who had not taken the military oath.

Knox. *Works*, vol. v. p. 467. *Antipolemus*.

The inhabitants of the extensive but defenceless plains of Scythia or Tartary, have been frequently united under the dominion of the chief of some conquering horde or clan; and the havoc and devastation of Asia have always *signalized* their union.

Smith. *Wealth of Nations*, vol. iii. book v. ch. i. p. 72.

So *signally* serviceable upon great occasions, and so continually useful upon common ones, no wonder it becomes the object of desire in some degree with all men, and gives them vexation upon being crossed, and pleasure upon being gratified.

Search. *Light of Nature*, vol. i. part ii. ch. xxiii. p. 132.

Nobody ever saw one animal, by its gestures and natural cries, *signify* to another, this is mine, that yours; I am willing to give this for that.

Smith. *Wealth of Nations*, vol. i. book i. ch. ii. p. 18.

The new name was always *significant*; and, for the most part, when given by divine authority, predictive of some peculiarity in the character, the life, the achievements, or the destiny of the person on whom it was imposed.

Horsley. *Sermon* 13. vol. i. p. 288.

The third commandment would have been of very small *significancy* under the gospel, as it only prohibits swearing in vain, if our Saviour, by a subsequent law, had prohibited swearing at all.

Secker. *Works*, vol. ii. p. 442. *Sermon* 30.

It [Lord] is a word, therefore, of large and various *signification*, denoting dominion of every sort and degree, from the universal and absolute dominion of God to the private and limited dominion of a single slave.

Horsley. *Sermon* 30. vol. iii. p. 4.

2 Kings xiii. 15—19. Here it is not difficult to apprehend, that the prophet, by God's command, directed the king to perform a *significative* action, whose meaning God had beforehand explained to his messenger.

Warburton. *Works*, vol. vi. p. 194. *The Divine Legation*, book vi.

SIGNET, a ring-seal, very early in use amongst men as an ornament and instrument of authority. The first authentic mention of it is in the book of Genesis, where it is enumerated amongst the pledges which Judah, the son of Jacob, gave to Tamar. It was worn either, as the Persian fashion still is, suspended from the neck, or on the finger, perhaps also attached to the bracelet on the arm. Thus it is said in Canticles, "Set me as the signet upon thine heart, as the signet upon thine arm;" and in the Prophecies of Jeremiah, "Though Coniah the son of Jehoiakim King of Judah were the signet upon my right hand, yet would I pluck thee hence." From the books of Genesis, Job, Daniel, and Esther, it appears that the signet was also in use amongst the Egyptians, Idumeans, and Persians. From the examples of Pharaoh and Ahasuerus, it appears that, by bestowing his royal signet, the King conferred the highest authority in the kingdom. In the East, when the impression of the signet is used instead of a signature, it is made by rubbing a sort of black ink over it. But when employed for sealing letters or doors, the impression is made upon a species of potter's clay or loam, and thus it is written in the book of Job, xxxviii. 14., "It is turned as clay to the seal."

SIGNIOR. See SENIOR.

SIKER. See SECURE.

SILAU, in *Botany*, a genus so called from a name used by Pliny to designate an umbelliferous plant. It belongs to the class *Pentandria*, order *Monogynia*, and natural order *Umbelliferae*. Generic character: margin of calyx obsolete; petals five, obovate-oblong, entire or rather emarginate, each with an inflexed point; fruit terete or nearly so; mericarps furnished with five sharp, rather winged, equal ribs; vittæ many in each furrow, and so close together as to appear but one, and four or six in the commissure.

This genus consists of six species, all glabrous plants, with compound leaves, and umbels of yellowish flowers: *S. pratensis* is a native of Britain, *S. tenuifolius* of Hungary, the rest of Asiatic Russia.

SILCHESTER, a village and parish in the County of Hants, on the borders of Berkshire. The Romans had six principal stations in Hampshire, some of which form the sites of modern towns, and the traces of all are clearly to be discovered. None among them appears to have been of more importance than Vindonum, the Caer Segont of the Britons, and Silchester, or Great City, of the Saxons, which, although reduced to a heap of ruins by Ella, in his devastating march from the coast of Sussex to Bath towards the end of the Vth Century, still exhibits many vestiges of its ancient strength and greatness, and is one of the most interesting spots in England to the antiquary. The walls, which enclose an area of about 100 acres, are still partly standing. They are constructed with much care and regularity, and consist of layers of flag-stones at the distance of two feet and a

SIL-
CHES-
TER.

SILENE.

half asunder, the intermediate spaces being filled up with rubble, pebbles, and large flints. As many as six or seven of these alternate ranges are remaining in some places, and the wall is generally about 15 feet thick and 18 feet in height. Strutt states that when measured on the Southern side in his time, it was found to be fully 24 feet in thickness. Without the walls were deep and very wide ditches, now nearly filled with ruins, and beyond them are the remains of the outer vallum. The situations of four gates are distinguishable; and of four principal streets upon which they opened, and which, running from North to South and from East to West, met in the centre of the city, where the remains of a building or enclosure have been found, called by Strutt those of a Temple, but considered by later antiquaries as relics of the Forum. An altar was discovered near this spot with ashes and cinders around it. Without the walls on the North-East is the site of an Amphitheatre, the lower part of which is now filled with water, and the upper thick with trees and underwood. Traces of five ranges of seats are still to be discovered, the slope between each range measuring about six feet. Near it is a cavity in the earth, which the peasantry of the neighbourhood assert to be unfathomable, and which was probably the den where the wild beasts kept for the savage sports of the Romans were confined. Evident marks of ancient fortifications and encampments exist in various directions around Silchester, and surprising quantities of antique remains have at different times been discovered in and about the city, consisting of pottery, fragments of statues, coins in gold, silver, and brass; seals, personal ornaments, swords, bells, carpenters' and masons' tools, &c. &c. In Gough's *Camden*, a Roman Eagle curiously wrought in steel is particularly mentioned as found in Silchester, and then in the possession of a Bishop of Carlisle. An eminence in the neighbourhood is called Silver Hill, from the number of silver coins which have been found upon it. The site of Silchester is now laid out in fields, and within the walls are the parish church and burying-ground, and a solitary farm-house. A military road called Longbank and Grimsdyke, paved with flints, runs from the South gate to the Northern entrance into Winchester; and another, named the Portway, leads by Andover to Old Sarum. Silchester is seven miles from Basingstoke, and 45 from London.

SILE, } Sw. *sylla*, *lutum*. Ihre. Perhaps from
SILT. } A. S. *syli-an*, to soil. To sile is to strain, to purify; Sw. *sila*. A sile is a sieve or strainer. *Silt* may be that which is strained or left by straining; the soil, the sediment.

Sile is still common in Northern Counties.

In long process of time the *silt* and sands shall so choak and shallow the sea in and about it.

Sir Thomas Brown. *Miscell.* p. 190.

In the great level near Thorny severall trees of oak and firr, some severed from their roots, others joynd to their roots which stand in firm earth below the moor, and in all probability have lain there hundreds of years, till covered by the inundation of the fresh and salt waters, and the *silt* and moorish earth exaggerated upon them.

Hale. *Origination of Mankind*, ch. vii. sec. 2. fol. 191.

SILENE, in *Botany*, a genus of plants: the name said to be derived from the Gr. *σιαλον*, because of the viscid frothy moisture of the stalks of many of the species by which flies are entrapped, hence the English name Catchfly: it belongs to class *Decandria*, order *Trigynia*, and natural order *Caryophyllæ*. Generic character:

calyx tubular, five-toothed, naked; petals five, bifid, unguiculate, usually crowned at the throat by as many bifid scales; stamens ten; styles three; capsule three-celled at the base, and ending in six teeth at the apex.

An extensive genus of about two hundred and sixty species, principally composed of ornamental plants. It is divided into several sections from the structure of the calyx and disposition of the inflorescence. Several of the species are natives of Britain, as *S. acaulis*, *S. inflata*, *S. otites*, *S. conica*, *S. Anglica*, *S. paradoxa*.

SI'LENT,

SI'LENCE, *n.*

SI'LENCE, *v.*

SI'LENCING, *n.*

SI'LENTLY,

SILE'NTIARY.

Fr. *silence*; It. *silere*, *silente*, *silenzio*; Sp. *silencio*; Lat. *silens*, present participle of *silere*, which, with the Gr. *σιγᾶν*, the Etymologists consider to be formed from the *sound*: the note of *silence*, both with Greeks and

Latins, they remark, was *st*. They distinguish *silere*, to discontinue speaking, from *tacere*, to abstain from speaking. *Silence* consists in—

Absence of any sound, and is used as equivalent to stillness, secrecy, cessation, discontinuance of speech, or sound, or noise; oblivion, muteness, taciturnity.

And Alisaundre axide with his hond *silence*, and wold ghelde a resoun to the peple.

Wiclif. *The Dedis of Apostlis*, ch. xix.

But in *seilence*, and in couert

Desyreth for to be beshaded.

Gower. *Conf. Am.* book iv.

And therefore to put all suche heretikes to *silence*, as would wyth babeling put downe the good vertuous ceremonies of the church, he sayd, If any man will be contentious, we haue no such custome nor the church of God.

Sir Thomas More. *Workes*, p. 827. *Concerning the Church*.

'Twere a concealement worse than a theft,
No lesse than a traducement,
To hide your doings, and to *silence* that,
Which to the spire, and top of prayes vouch'd,
Would seeme but modest.

Shakspeare. *Coriolanus*, fol. 7.

For they will not remember how much the scholler of Plato (who, like an absolute monarch over arts, hath almost *silenced* his master throughout the schools of Europe) labours to make poesie universally current, by giving laws to the science.

Davenant. *Preface to Gondibert*.

There Faunus saw that pleased much his eye,
And made his hart to tickle in his brest,
That, for great ioy of somewhat he did spy,
He could him not containe in *silent* rest;
But, breaking forth in laughter, loud profest
His foolish thought.

Spenser. *Faerie Queene*, can. 6. *Of Mutabilitie*.

Now when as all the world in *silence* deepe
Yshrowded was, and every mortall wight
Was drowned in the depth of deadly sleepe,
Faire Malecasta, whose engrieved spright
Could find no rest in such perplexed plight,
Lightly arose out of her wearie bed.

Id. *Ib.* book iii. can. 1.

When I perceiv'd he my remembrance wan,
Yet with his tears it *silently* did show;
I wept for woe, to see mine host distrest;
But he for joy, to see his happy guest.

Drayton. *Legend of Thomas Cromwell*.

I shall only adde his predictions of earthquakes; or rather (because that may seem more natural) his present slaking of plagues in cities, his *silencing* of violent windes and tempests, his calming the rage of seas and rivers, and the like.

More. *Defence of Philosophical Cabbala*, part iv. ch. iii. p. 101.

Witness earth, and heaven, so farre diffusde:
Thou flood, whose *silent-gliding* waves the under ground doth beare,
(Which is the great'st, and gravest oath, that any god can sweare.)

Chapman. *Homer. Iliad*, book xv.

SILENE.

SILENT.

SILENT.

SILESIA.

The *silent* preacher yields to potent strain,
And feels that grace his prayer besought in vain.
Pope. Imitation of Horace.

Arriv'd, the hero in his tent they find,
With gloomy aspect, on his arm reclin'd.
At awful distance long they *silent* stand,
Loth to advance, or speak their hard command.
Id. Homer. Iliad, book i.

The emperor afterwards sent his rescript by Eustathius, the *silentary*, again confirming it.

Barrow. On the Pope's Supremacy.

What the compilers recommended chiefly to our faith, he *silently* passes over; and, instead of recommending the same doctrine, seems to throw it quite out.

Waterland. Works, vol. v. p. 387. Remarks upon Dr. Clarke's Exposition of the Church Catechism.

After their death, and when the interested individuals who have been served by their cunning have been *silenced* by the universal leveller, they have been considered as little more than "artful fabricators of their own fortune."

Knox. Works, vol. ii. p. 455. Winter Evenings. Evening 34.

Here, I have said, at least I should possess
The poet's treasure, *silence*, and indulge
The dreams of fancy, tranquil and secure.

Cowper. The Task, book i.

But man is frail, and can but ill sustain
A long immunity from grief and pain;
And after all the joys that plenty leads,
With tiptoe step vice *silently* succeeds.

Id. Expostulation, p. 620.

SILER, in *Botany*, a genus so called from the Lat. *siler*, withy, on account of the quick growth of the plant; it belongs to class *Pentandria*, order *Digynia*, and natural order *Umbelliferae*. Generic character: margin of calyx five-toothed; petals five, obovate, emarginate, each with an inflexed point; fruit compressed from the back; mericarps with five filiform primary ribs, and usually four secondary less prominent ones; vittæ one in each furrow under the secondary ribs.

Only one species, *S. trilobum*, a coarse plant with ternate leaves and large umbels of white flowers. It is a native of Europe and Asiatic Russia.

SILESIA, (in German *Schlesien*, in Slavonic *Zlezia* and *Czlezia*.) one of the German Provinces of the Prussian dominions, is bounded on the North-West by Brandenburg; on the North-East by Posen; on the East by Poland; on the South-East by Cracovia and Galicia; on the South by Moravia or Austrian Silesia; and on the South-West by Bohemia. It lies between 49° 50' and 52° North latitude, and between 14° 25' 15" and 19° 17' 15" East longitude, and its area is computed at 15,600 square miles. Originally a Polish Province, it has been colonized, since the partition of that ill-fated country, by German settlers, whose industry, seizing the advantages presented by its natural means, has rendered it one of the most valuable possessions of the Prussian monarchy.

Natural
features.

This Province is divided by the Oder, in its course from South-East to North-West, into two almost equal portions; the North-Eastern of which is flat, sandy, and, generally speaking, unproductive; whilst the South-Western, which is nearly altogether mountainous, abounds in fertile and well-cultivated valleys. The Sudetes, the *Hercynii Montes* of the ancients, which comprehend all the mountains between the source of the Oder and that of the Elster, cover the last-named division of Silesia with their various branches; their highest point, the Schneekoppe, in the Riesengebirge range, is, according to Hoser, 5394 feet above the level of the sea. Nearly all the water-courses of the country belong to the basin of the Oder, and are emptied into

the Baltic. There are few lakes, but ponds innumerable; **SILESIA**, a considerable extent of land is likewise covered with marsh; and mineral springs are numerous.

Cultivation, although considerably improved, has not Agriculture reached the perfection it has attained in other German ture, &c. Provinces; and it is only in favourable seasons that the produce equals the consumption. One year with another, the harvest of Silesia is calculated at 60,000 *wispel* of wheat, 375,000 of barley, 270,000 of oats, and 140,000 of potatoes. Flax of fine quality is raised in great abundance, and hops, tobacco, and madder form important items of rural industry. Some silk is produced, and the vine is cultivated in the neighbourhood of Grünberg. The forests are extensive; and the pine, fir, and larch, with which they abound, yield tar, resin, pitch, and turpentine, in considerable quantity. Wood, however, begins to fail in the Northern districts. The live stock is not sufficient to meet the demand of the dense population of the country, with the exception of the sheep, which, upwards of thirty years ago, amounted to 2,229,000. The improvement of the wool has been brought to such perfection that it now supersedes the Spanish in our markets. According to Malte-Brun, the weight of wool annually produced is ten millions of Prussian pounds.

The geognostical formation of Silesia is, says M. Huot, Geology, easily explained: "The entire plain to the North of the mountains is composed of marly clay and vegetable earth, terminating towards the Polish frontier in a vast deposit of clay containing bog iron; to the North of Gleiwitz, this deposit rests on a calcareous and metalliferous formation peculiar to Upper Silesia; it is limited on the South-East by some skirts of the coal and porphyritic layers; and, finally, the mountains which bound Silesia on the South, show, throughout the extent of the chain, the older rocks superimposed in the following order: granite, gneiss, argillaceous schistus, the old sandstone, transition calcareous rocks, the red porphyry, and the new sandstone."

The most valuable of the mineral productions are Minerals, iron, copper, silver, zinc, lead, arsenic, and coal. The iron mines belonging to the crown alone employ 3567 workmen; those that are private property are much more extensive: the yearly produce of the former is estimated at 96,000 quintals of unwrought iron, 38,000 of cast-iron, and 33,000 of bar-iron; that of the latter amounts to 246,000 quintals of unwrought iron, 18,000 of cast, and 136,000 of bar-iron. The yearly return of silver is about 2700 marcs; of zinc more than 200,000 quintals; of lead about 18,000 quintals; and of coal 2,800,000 tons. The total yield of the copper mines is not known; those of Rudelstadt furnish about 300 quintals yearly. Agates, jaspers, and clear crystals of quartz are found on the Silesian mountains, which likewise are rich in slate, mill-stones, pipe-clay, marble, serpentine, and porphyry.

The linen manufactures of Silesia are deservedly famous, as the fabric is in all respects superior to that made in any other country; the yearly produce of its looms is valued at about 9,000,000 rix dollars. The woollen manufacture is estimated at 5,000,000 rix dollars. These manufactures are chiefly carried on in the mountainous districts, which have the advantage of numerous and pure streams.

The principal exports from Silesia are linen, yarn, Trade, cotton, madder, wood, its metals, and manufactures; the imports consist of grain, cattle, flax seed, salt, wine,

SILESIA. and colonial products. The yearly value of the former is about £2,000,000 sterling, that of the latter about £200,000 short of this amount.

**SILI-
QUARIA.**

Population,
&c.

Religion.

Education.

History.

Silesia is one of the most populous Provinces of the monarchy, containing 139 towns, 47 boroughs, 5365 villages, and 2,562,000 inhabitants. The population is chiefly German; the Poles may number about 600,000, and there are 30,000 Wendes. In respect to its military jurisdiction, it is combined with the Province of Posen; but in regard to its civil, it is divided into the three Regencies of Breslau, Oppeln, and Lignitz.

The inhabitants enjoy perfect freedom of conscience as in the rest of the Prussian dominions. The Protestant denomination comprises Lutherans, Calvinists, Hussites, and Moravians, and exceeds the Catholic in point of numbers by about 1,000,000 of souls.

Silesia has a University with a double Theological Faculty, a Protestant and a Catholic; 10 Lutheran and Reformed, and seven Catholic Gymnasias; a Jewish College; a College of Moravians; upwards of 3400 city and parochial Schools; and several scientific institutions. Education is very generally diffused, with the exception, perhaps, of the districts immediately bordering Poland. We have no precise information as to the state of its periodical and other literature.

The *Quadi* and *Lygii* are considered the first inhabitants of Silesia, but from the VIth Century it was certainly Slavonic. When Poland was divided among the sons of Boleslas III., in 1138, Silesia, which was then included in that country, had, for the first time, its own rulers from the family of the Piasts; and forty years afterwards it was divided into Upper and Lower Silesia, a division which still remains as a geographical distinction. It was seized, about the middle of the XIVth Century, by John IV., King of Bohemia, to which Kingdom it remained annexed until its cession to Prussia at the Peace of Breslau in 1742.

For Austrian Silesia, we refer the reader to the account of MORAVIA. The towns of Silesia will be found described under their respective heads, or included in the Articles MORAVIA and PRUSSIA.

Adams, *Tour through Silesia*, 1804; Stein, *Handbuch der Preuss. Erdbeschreibung*, 1818; Malte-Brun; Hassel.

SILICIOUS, made of cilicium, *i. e.* goat's hair; a kind of clothing first used in Cilicia.

A garment of camel's hair, that is, made of some texture of the hair, a coarse garment; a *cilicious* or sack-cloth habit, suitable to the austerity of his life, the severity of his doctrine, repentance, and the place thereof, the wilderness.

Sir Thomas Brown. *Vulgar Errors*, book v. ch. xv. p. 311.

SILICIOUS, Lat. *silicius*, from *silex*, a flint; Vossius thinks from *χαλιξ*, *calx*. See CALCAREOUS.

Flinty, stony.

Silicious earth is often found in a stony form, such as flint or quartz; and still more frequently in that of a very fine sand, such as that whereof glass is made.

Kirwan. *On Manures*, p. 6.

SILIQUEOUS, Miller says, siliquous, having seed-vessels, (in Lat. *siliqua*.) husk, pod, or shell.

SILICUARIA, in *Zoology*, a genus of *Annelides*.

Generic character. Shell tubular, irregularly twisted, attenuated posteriorly, occasionally in a spiral form at the base, and opens at the anterior extremity, with a longitudinal somewhat articulated cleft, which runs along its whole length; animal with dorsal branchiæ.

Type of the genus, *Serpula anguina*, Linnæus; *Sili-*

quaria anguina, Lamarck. Inhabits the Indian Ocean; there are several species.

SILIS, in *Zoology*, a genus of *Coleopterous* insects.

Generic character. *Antennæ* setaceous, remote at the base, serrated within, the second joint minute; *palpi* four, the terminal joint securiform; *maxillæ* bilobed; head nutant; *thorax* transverse, the lateral margins slightly rounded, and cut out near the hinder angle; body elongated; *elytra* soft, covering the wings, and as long as the abdomen; legs stoutish; *tarsi* five-jointed, the penultimate joint bifid.

Type of the genus, *Cantharis ruficollis*, Fabricius; Charpentier, *Horæ Entom.* p. 195, pl. vi. fig. 7. Several species, the typical one being an inhabitant of England, and frequenting marshy districts, especially the vicinity of Whittlesea Mere in Huntingdonshire, about the end of June or beginning of July.

SILK,

Si'lken, *adj.*

Si'lken, *v.*

Si'lky,

Si'lkiness,

Si'lkness.

The A. S. *seolc*, *seolcen*, *seolc-wyirm*, *sid*, *siden*, *sidwyirm*, are evidently of modern introduction. The D. *siide*; Ger. *seiden*; It. *seta*; Fr. *soye*; Sp. *seda*, a *Sidonis*, from the Sidonians; A. S. *seolc*; Eng. silk, from Lat. *sericum*; Gr. *σηρικον*, from the *Seres*. See the Quotations from Pliny and Gibbon.

Silken, *silky*, from the qualities of silk, are used met., smooth, soft, delicate.

And ge worply women. wit goure longe fýngres
pat ge on *selke* and sendel. to sewen wenne tyme ys.
Piers Plouhman. *Vision*, p. 128.

And he vseth in his wrytynge muche playne poetrye, wherewith he daunseth naked not all in a net, but for the more part so starke naked without any net at all, that there is not the bredth of *silken* threde to couer his poetrye.

Sir Thomas More. *Workes*, p. 421. *Against Tyndall*.

The several graces and elegances of music, the soft and *silky* touches, the nimble transitions and delicate closes.

Smith. *On Old Age*, (1666,) p. 144.

And on her now a garment she did weare
All lilly white, withoutten spot or pride,
That seemd like *silke* and silver woven neare;
But neither *silke* nor silver therein did appeare.

Spenser. *Faerie Queene*, book i. can. 12.

The first people of any knowledge and acquaintance be the *Seres*, famous for the fine *silke* that their woods doe yeeld.

Holland. *Plinie*, book vi. ch. xvii.

Her golden lockes, that were upbound
Still in a knot, unto her heeles downe traced,
And like a *silken* veile in compasse round
About her backe and all her bodie wound.

Spenser. *Faerie Queene*, book iv. can. 1.

HOR. Gods, you doe know it, I can hold no longer;
This brize hath prickt my patience: Sir, your *silknesse*
Clearely mistakes Mecænas, and his house;
To think there breathes a spirit beneath his rooffe,
Subject unto those poore affections
Of under-mining envie, and detraction,
Moodes only proper to base groveling minds.

Ben Jonson. *Poetaster*, act iii. sc. 1.

It is commonly said, that in the island Coas there be certain *silkeworms* engendred of flowers, which by the meanes of raine-showers are beaten downe and fall from the cypres tree, terebinth, oke, and ashe; and they soone after doe quicken and take life by the vapour arising out of the earth.

Holland. *Plinie*, book xi. ch. xxiii.

Let Asia's woods,
Untended, yield the vegetable fleece,
And let the little insect-artist form,
On higher life intent, its *silken* tomb.

Thomson. *Liberty*, part v.

**SILI-
QUARIA.**

SILK.

SILK.
—
SILL.

For now when near the morning's dawn,
The youth began as 'twere to yawn;
His eyes a *silky* slumber seiz'd.

Congreve. An Impossible Thing.

I scarcely understand my own intent;
But, *silk-worm* like, so long within have wrought,
That I am lost in my own web of thought.

Dryden. The Conquest of Granada, act i. sc. 2.

I need not explain that *silk* is originally spun from the bowells of a caterpillar, and that it composes a golden tomb from whence a worm emerges in the form of a butterfly.

Gibbon. History of the Decline and Fall of the Roman Empire, vol. vii. ch. xl. p. 90.

Till the reign of Justinian, the *silk-worms* who feed on the leaves of the white mulberry-tree were confined to China; those of the pine, the oak, and the ash were common in the forests both of Asia and Europe; but as their education is more difficult, and their produce more uncertain, they were generally neglected, except in the little island of Ceos, near the coast of Attica.

Id. Ib.

Off with these *silken* robes and cap of velvet;
The vest of steele, my liege, and brazen helmet,
Were fitter now.

Mickle. The Siege of Marseilles, act i. sc. 3.

There are who over-rate our spungy stores,
Who deem that Nature grants no clime but ours,
To spread upon its fields the dews of heaven,
And feed the *silky* fleece.

Dyer. The Fleece, book ii.

The cultivation of mulberry trees, and the breeding of *silk-worms*, seem not to have been common in the northern parts of Italy before the sixteenth century. Those arts were not introduced into France till the reign of Charles IX.

Smith. Wealth of Nations, vol. ii. book iii. ch. iii. p. 182.

SILK, which came to us from the Anglo-Saxon *seolc*, and was borrowed by the Anglo-Saxons from the Latin *sericum*, is remarkable as serving to determine a doubtful question in ancient geography, viz. the position of *Serica*, (*ἡ Σερικὴ*.) the country of the *Seres*; (*Σήρες*;) *primi hominum qui noscantur*, says Pliny, (*Nat. Hist. vi. 17.*) *lanicio silvarum nobiles*. *Sera*, (*Σήρα*.) the metropolis of the *Sinæ*, (*Ptol. Geogr. p. 11, 17, 164.*) was near the Eastern extremity of Asia, beyond *Imaus*, (*Id. p. 163.*) that is *Himálaya*, and its inhabitants, the *Seres*, the most remote nation to the East known to the Romans. *Tam longinquo orbe petitur*, says Pliny, (*loc. cit.*) speaking of the "wool," i. e. silk, which he believed the *Seres* washed down from trees. At a later period the ancients became acquainted with the worm and fly (*bombyx*) by which the silk is spun, and they then made a distinction between cotton, the proper *lanicium silvarum*, and *bombycina*, the produce of the worm. As the worms were no doubt bred on mulberry trees by the *Sinæ* or *Seres*, the error of the ancients in this case was a very natural one. But the names *Sera* and *Seres* prove that silk, and not cotton, was the material procured from *Serica*; for *ser*, (*ὁ σῆρ*.) the name of the worm (*Pausanias, vi. 26, 4.*) which spins the silk, is evidently the root of *Seres*, *Sera*, and *Serica*; and *Pausanias* was misinformed as to its name among the people so called, since *sé*, the word for silk in the polished dialect of the Chinese, is softened down from the harsher word *str* still extant in the Corean language; while the *Manjú sirge*, the Mongol *sirkek*, and the Slavonian *shelk*, are all manifestly derivatives of *ser*, as well as the Greek *σηρικόν*, the Latin *sericum*, and our silk. *Sheram* is likewise the word for silkworm in the ancient Armenian.

Klaproth and Abel-Rémusat in the Journal Asiatique, ii. 243. x. 57; Ptolemæi Geographia, ed. Bertii, 1618. fol.; Pausanias, ed. Facii, Lips. 1795, 4 tom. 8vo.

SILL, A. S. *syl, basis, columna; Hercoles syla, Her-*

cules Pillars. Somner. D. syle; Sw. sylla; Ger. saul, which Skinner derives from the Lat. solum. Lye thinks it more probably from the Goth. suljan, fundare, to found or lay a foundation. See GROUNDSELL.

The base or foundation; a door-sill, a window-sill, upon which the side posts or pillars rest.

And with his axe he smote the cord atwo,
And doun goth all; he fond neyther to selle
Ne breed ne ale, til he came to the selle.
Upon the flore, and ther aswoun he lay.

Chaucer. The Milleres Tale, v. 3818.

He can scarce lift his legge over a *sille*, and hath one foot already in Charon's boat.

Burton. Anatomy of Melancholy, fol. 441.

SILLABUB, Skinner says, is in Lancashire called *sillibauck*; and *Henshaw* derives from *D. sulle, sille, canalis* and *buych, venter*, and supposes the thing to be so called from the form and size of the vessel out of which it was usually drunk; but it is not likely that a name should be compounded of two *D.* words for that which was of home manufacture and consumption.

Howbeit to this daie, the dregs of the old ancient *Chaucer English* are kept as well there as in *Fingall*, as they terme a spider, an *attercop*, a wisp, a wad, a lumpe of bread, a pocket, or a pucket, a *sillibucke* a copprons, a faggot, a blease, or a blaze.

Holinshed. Description of Ireland, ch. i.

And while the bag-pipe plays, each lusty jocund swain
Quaffs *sillabubs* in cans, to all upon the plain,
And to their country girls, whose nosegays they do wear.

Drayton. Poly-olbion, song 14.

SILLAGO, Cuv. In *Zoology*, a genus of animals belonging to the family *Percoides*, order *Acanthopterygii*, class *Pisces*.

Generic character. Head conical; mouth small, and furnished with fleshy lips; both jaws and vomer armed with very fine teeth, and sometimes an outer row of conical teeth; opercule terminating in a sharp point; preopercule denticulated on its ascending edge, and below curving back so as nearly to touch its fellow; branchial rays six; body slightly compressed, and covered with moderate sized scales; dorsal fins contiguous, the rays of the first slender, the second long and rather tall.

This genus was formed by *Cuvier* from certain species of other genera not previously well known.

S. Acuta, Cuv.; *Sciæna Malabarica*, Bl. Its usual length about twelve, sometimes reaches twenty inches, and rarely three feet; the head is a flattened cone, with the muzzle obtuse; nostrils in front and rather above the eyes, small, and close to each other, the anterior vertical, and encircled with an elevated edge, the posterior horizontal, and without an edge; upper jaw semi-circular, and projecting slightly beyond the lower; the teeth form a band in each jaw, and a broad crescent in front of the vomer; limb of the preopercule broad, hollow, and divided into pits by some elevated ridges, which are covered with broad scales, its horizontal twice the length of its ascending edge, which is finely crenulated; the opercule is a fifth of the length of the head and twice its height, its angle is very sharp, and has above it a slight notch; subopercule very small, and interopercule very long; the gill-aperture is only just beneath the preopercule; branchial membrane supported by six rays; pectoral fins pointed, and fifteen-rayed, of which the first is simple and the fifth the longest; ventrals immediately behind, and rather longer; first dorsal commencing opposite the middle of the pectoral, triangular, and supported by eleven slight rays, of which the first is the longest, the last the shortest, and its membrane ter-

SILL.
—
SIL-
LAGO.

SIL-
LAGO.

minating at the foot of the second dorsal, which, as well as the anal, arises at the middle of the body; its spine is strong, and it has twenty-one soft rays, varying in height; the anal corresponds to it, has one small spine and twenty-three rays; caudal fin slightly crescentic, and supported by seventeen rays. General colour tawny, with a silvery gloss; back tinged with bluish; a band of brighter silvery follows the lateral line; fins transparent, sometimes the dorsal are finely spotted with black, at other times these spots collect into five or six spots in front of each ray of the second dorsal. It is found on all the coasts of India on this side of the Ganges; it is very common at Pondicherry, where it is called by the French Creoles *Pêche Bicout*, a corruption of the Portuguese *Peixe Beicudo*, which means a fish with lips and a prominent muzzle. By the natives of the same place it is called *Kigingam*, and at Tranquebar *Koulhenga* or *Koulanga*; in Bengal it is known by the name of *Sorring*; and at Calcutta as the *Pangi-mas* or *Chala*: at the latter place the English settlers call it, as well as many other fishes, the *Whiting*, which it resembles in flavour. It makes its appearance on the Malabar coast in the beginning of May, and it is caught upon the mud banks, where it seeks for the worms on which it feeds.

S. Erythræa, Cuv.; *S. Sihama*, Rupp. Six or seven inches long, and very similar to the preceding, but has the head much larger and shorter, and the silvery band better marked along the side; the caudal fin is also more deeply cleft, back golden-green, belly flesh-coloured, and tinged with silvery; fins transparent violet-red, and the rays of the dorsal dotted with little black spots. It is from the Red Sea.

S. Maculata, Quoy and Gaym. Eight inches long; has the muzzle shorter and thicker, and the curve of the head and back more raised than in the preceding species; denticles of the preopercule very fine; the back rosy glossed with silvery; belly silvery; on each side are seven or eight oblique black spots, and one near the shoulder and another near the tail; a narrow silvery band runs along each side of the body; second dorsal covered with blackish spots. From Port Jackson, New South Wales.

S. Bassensis, Quoy and Gaym. Nine inches long; the head is still shorter than in *S. Erythræa*, and the muzzle rounder and thicker; it has the same silvery band, but not so distinct as in the last species, neither has it any spots. From Port Western, in Bass Straits.

S. Punctata, Cuv. Ten inches in length, and of more slender form; the belly rounded and thicker than the back; denticles of the preopercule very distinct, and occupying nearly its whole edge; first dorsal fin lower, but longer; caudal fin forked; the scales are much smaller than in either of the before-mentioned species; the colour is bright violet tinged with silver on the back, and silvery-white on the belly, which is spotted with black below the lateral line, but it has no silvery band; fins white, and unspotted. From King George's Sound.

S. Ciliata, Cuv. Seven inches in length, and of similar form to *S. Acuta*, but the back is higher and more curved; the edge of the preopercule is so finely toothed as to appear almost ciliated; rays of the first dorsal fin flexible; caudal slightly forked; colour golden with a silvery tinge, a few reddish spots on the first dorsal, and some black points on the second. From the Australian seas.

S. Domina, Cuv. About a foot long; it differs much from the other species; has the eye much smaller, the muzzle broader and more depressed, the outer row of teeth much stronger, the orifices of the nostrils oval, close to each other, and at some distance in front of the eyes; the lower edge of the preopercule has no scales; dorsal line nearly straight; pectoral fins much larger than in the other species, and supported by twenty rays; the ventrals shorter; the first dorsal corresponds to the middle two-fourths of the pectorals, has its first spine very short, but the second extended into a long filament, which reaches nearly to the tail, the third is suddenly shortened, and the others gradually diminish to the tenth, which is as short as the first; second dorsal supported by twenty-seven rays, of which the first is flexible; general colour brown, with a slight golden tinge. It is caught at Pondicherry, and known to the French settlers by the name of *Pêche Madame*, which they originally applied to it in compliment to the lady of M. de la Bourdonnaye, who was Governor of that settlement.

See Bloch, *Ichthyologia a Schneider*; Cuvier and Valenciennes, *Histoire des Poissons*.

SILLY, } Skinner thinks *silly*, *stultus*, *ενηθης*,
SILLILY, } written by Chaucer *seli*, is from Ger.
SILLINESS. } *selig*, *beatus*, *sanctus*, *pious*, holy men
being for the most part *ενηθεις*, *i. e.* simple; because, as the common Lexicons say, they judge of others from themselves; they themselves being *ενηθεις*, men of good morals, pure minds. The Ger. *selig* is the A. S. *selig*, *sellic*, *ge-selig*; and it may be that they are but consequential usages of the A. S. *selig*, *datus*, *donatus*, *condonatus*; *beatus*, *felix*, *bonus*, from the verb *sell-an*, to give; given or endowed with gifts, blessed, happy, good. It has already appeared that our own word *happy*, from *hap*, is by usage restricted to good *hap*, and that fortunate and prosperous owe their present restricted application to usage also. In Chaucer, *seliness*, Mr. Tyrwhitt interprets happiness; that is, the possession of much given, many gifts, many blessings. See UNSELY.

Sely, simple, harmless; *i. e.* good, unsuspecting, or unsuspicious, guileless, harmless, simple; and further, foolish.

A great *selly* is a great folly. Ritson.

She sighit *sely* sore (if Ellis and Jamieson are right) is *wonderfully* sore; and it is a consequential usage, from *sellic*, *bonus*, *dignus*, *moratus mirabilis*. See Wachter, Ihre, Ruddiman's *Gloss.* to G. Douglas, and Jamieson.

þo þis seli mon þis herde, to sorwe ys herte drowe.

R. Gloucester, p. 33.

Thus craftely hath she him besette

With her lime roddes, paunter and snare,

The *selie* soule caught in her nette,

Of her sugred mouth alas nothing ware.

Chaucer. *The Remedie of Love*, p. 541.

With the *selie* man which is thus begiled,

Her husband I mean, I woll wepe and waile

His painfull infortune, whereby reuiled

Causelesse he is.

Id. Ib.

Those *sely* clerkes han ful fast yronne

Toward the fen, both Alein and eke John.

Id. *The Reves Tale*, v. 4088.

Be ther non other maner resemblances

That ye may liken your parables to,

But if a *sely* wif be on of tho?

LAGO.
—
SILLY.

SILLY.

SILO.

Now if he wot it nat, how may he say,
That he hath very joy and *silinesse*,
That is of ignorance aie in derkenesse?

Chaucer. *Troilus and Creseide*, book iii.

O God, (quod she) so worldly *selinesse*
Which clerkes calien false felicity,
Ymedled is with many bitterness.

Id. *Ib.* book iii.

Now was this a grete *selly*,
That trew luf and so grete envy
Als betwix tham twa was than
Might bath at anes be in a man.

Ritson. *Metrical Romances*. *Ywaine and Gawin*, v. 3521.

A *silly* man, in simple weeds forworne,
And soild with dust of the long dried way;
His sandales were with toilsome travell torne,
And face all tand with scorching sunny ray.

Spenser. *Faerie Queene*, book i. can. 6.

Forth, ye fine wits, and rush into the presse,
And for the cloyed world your works addresse.
Is not a gnat, nor fly, nor *seely* ant,
But a fine wit can make an elephant.

Hall. *Satire* 1. book vi.

These kind of knaves I know, which is this plainnesse
Harbour more craft, and more corrupter ends,
Then twenty *silly*-ducking obseruants,
That stretch their duties nicely.

Shakspeare. *Lear*, fol. 292.

O fooles, to raise such *silly* forts, not worth the least account,
Nor able to resist our force, with ease our horse may mount,
Quite ouer all their hollow dike.

Chapman. *Homer*. *Iliad*, book viii.

Why brook'st thou, ignorant horse, subjection?
Why do you, bull and boar, so *sillily*
Dissemble weakness, and by one man's stroke die,
Whose whole kind you might swallow and feed upon?

Donne. *Son*. 12.

What can be more *sillily* arrogant and misbecoming, than for
a man to think that he has a mind and understanding in him, but
yet in all the universe beside there is no such thing?

Locke. *On Human Understanding*, vol. ii. book iv. ch. x. p. 190.

So that it is great weakness and *silliness*, and not conscience,
that prevails with these men I am speaking of, to live in dis-
obedience of the laws.

Sharp. *Works*, vol. ii. p. 208. *A Discourse of Conscience*.

Make it a rule to abstain, not only from the more shocking
sort of oaths and imprecations, but from palliating them under
silly disguises; or using others in their stead, that are gentler;
for besides that they will lead you to worse, they are bad in them-
selves.

Secker. *Works*, vol. ii. p. 485. *Sermon* 32.

SILLY-HOW, in Sw. *seger-hufwa*. "*Hufwa* in
Eng. *howve*, q. v., a hood; and *silly*, A. S. *selig*, happy,
prosperous. In Scotland the women call a *haly* or
sely-how (i. e. *holy* or fortunate cap or hood) a film or
membrane stretched over the heads of children new born."
Ruddiman, *Gloss.* to G. Douglas, in v. *How*. And see
Dr. Jamieson.

Great conceits are raised of the involution of membranous cover-
ing commonly called the *silly-how*, that sometimes is found about
the heads of children upon their birth, and is therefore preserved
with great care, not onely as medical in diseases, but effectual in
success, concerning the infant and others; which is surely no
more then a continued superstition.

Sir Thomas Brown. *Vulgar Errors*, book v. ch. xi. sec. 17.

SILO, in Zoology, a genus of *Trichopterous* insects.

Generic character. *Antennæ* shorter than the wings,
the basal joint porrected, parallel, long, stout, cylindric,
hairy; *palpi* pubescent; maxillary in the males diverg-
ing, slightly pilose, the three terminal joints of equal
length; head small, hairy on the crown; eyes pro-
minent; wings nearly twice as long as the body, ob-
tusely lanceolate, anterior with two costal nervures, then
three furcate ones, and three others united near the disc,

VOL. XXVII.

with a curved one near the hinder angle, posterior
wings small; *abdomen* short and robust; *tibiæ* with a
pair of spurs at the apex, intermediate and posterior,
with a pair also below the middle.

Type of the genus, *Phryganea pallipes*, Fabricius;
Stephens, *Illust. Britt. Ent. (Mandibulata)*, vol. vi.
p. 186. One species, found abundantly in some
marshy districts in England.

SILPHA, in Zoology, a genus of *Coleopterous* insects.

Generic character. *Antennæ* as long as the thorax,
gradually increasing from the base to the apex, and form-
ing a quadriarticulate club, composed of nearly equal
joints, of which the terminal one is largest and conic-
obtusely; *palpi* four, filiform; mandibles entire; head
small, inflexed; eyes rather prominent; *thorax* semi-
circular, generally truncate, rarely emarginated in front;
elytra entire, mostly carinated, and with a deep marginal
groove; body oval, slightly convex; legs moderate,
rather short; *tarsi* pentamerous, the anterior pair dilated
in the males.

Type of the genus, *S. obscura*, Linnæus; Stephens,
Illust. Britt. Ent. (Mandibulata), vol. iii. p. 37. The
insects of this genus reside in the putrid remains of
animals, and from their voracity in all their stages are
highly useful in the economy of nature: there are
about thirty species, of which eight are found in this
country.

SILPHIUM, in Botany, a genus so called from the
Arabic name of *Assafætida*, *Zalapp*. It belongs to the
class *Syngenesia*, order *Necessaria*, and natural order
Compositæ-Asteroidæ. Generic character: rays of
corolla lingulate; achenia obcompressed, two-winged,
two-horned; styles of the disk clavate, quite simple.

There are fourteen or fifteen species of this genus;
they are all coarse, herbaceous plants, natives of North
America, with entire and pinnatifid, opposite, alternate
or whorled leaves, and fastigiate heads of yellow flowers.

SILT. See SILE.

SILVAN, or } It. *silvano*; Lat. *sylvanus*, from
SYLVAN. } *sylva*; Gr. *ύλη*, wood.

Of or pertaining to, consisting of, woods or groves,
woody.

Steepe Parnassus, on whose forehead grow
All *sylvan* off-springs round.

Chapman. *Homer*. *Odyssey*, book xix.

Broke by the jutting land on either side;
In double streams the briny waters glide.
Betwixt two rows of rocks, a *sylvan* scene
Appears above, and groves for ever green.

Dryden. *Virgil*. *Æneid*, book i.

The restless fever of ambition laid,
Calm I retire, and seek the *sylvan* shade.

Churchill. *The Prophecy of Famine*.

SILVANUS, in Zoology, a genus of *Celeopterous*
insects.

Generic character. *Antennæ* as long as the thorax,
rather stout, eleven-jointed, the basal joint large, clavate,
the two next joints small, obconic, the five following
very short, somewhat turbinate, the ninth and tenth
stout, truncate, perfoliate, the eleventh equally stout,
rounded; *palpi* four, very short, unequal, not filiform,
the terminal joint largest, somewhat cylindric; head
prominent, and narrowed in front; eyes slightly pro-
minent; *thorax* elongate, its lateral margins more or
less dentate, somewhat remote from the *elytra*, which
are rounded at the apex; body elongate, narrow, sub-
linear, depressed; legs short; *femora* stout; *tarsi*
four-jointed.

SILO.

SILVA-
NUS.

SILVA-
NUS.

SILVER.

Type of the genus, *Dermestes Surinamensis*, Linnaeus; Stephens, *Illust. Britt. Ent. (Mandibulata)*, vol. iii. p. 104. Six species, one only of which is truly indigenous; the type and a third species have been frequently taken in England, in brown sugar casks, and cannot consequently be reputed British; the remaining species are chiefly natives of tropical regions.

SI'LVÉR, *n.* } Goth *siluba*; A. S. *seolfer*, *sulfer*;
SI'LVÉR, *v.* } D. *silver*; Ger. *silber*; Sw. *silfwer*.
SI'LVÉRÉN, } Junius derives from the Gr. *σιλβεῖν*,
SI'LVÉRLING, *n.* } to shine. Wachter (because, accord-
SI'LVÉRLY, } ing to Tacitus, *silver* was either un-
SI'LVÉRY, } known or disregarded by the ancient
SI'LVÉRLESS. } Germans) also resorts to a Greek
origin, and prefers the Gr. *αλφος*, white, (*s* prefixed,) taking its name (as *aurum*, gold, also does) from its colour. Skinner suggests *sel, bene, multum*, and *fer-an*, to fare; to fare well, to prosper; because much or plenty of this metal *efficit beatos*. None of these are satisfactory.

Silver; met., having the whiteness, the pallid whiteness of the colour of *silver*; white, whitish, having the softness, gentleness of sound, which that metal has; soft, gentle, dulcet.

Of *seluer* or and of gold, of tyn and of lede.

R. Gloucester, p. 1.

Four and twenti þousand ponde he gaf away to go,
To haf pes in his lyeue, þe lond no more schende.
þe Danes tok þe *siluer*, to Danmark gan wende.

R. Brunne, p. 39.

For he sente hem forth *selverles*, in a somer garnement.
Piers Plouhman. Vision, p. 153.

And whanne he had cast forth the *silver* in the temple, he passide forth and ghede and hangide himsilf with a snare.

Wiclif. Matthew, ch. xxvii.

And he caste downe the *syliuer* plates in the temple and departed, and went and hounge him selfe.

Bible, Anno 1551.

For a man, Demetrie bi name, a worcher in *siluer*, makide *siluerne* housis to Diane.

Wiclif. The Dedis of Apostlis, ch. xix.

For a certayn man named Demetrius, a *syliuersmyth*, which made *syliuer* schrynes for Diana.

Bible, Anno 1551.

Loke what ther is; put in thin hond and grope;
Thou shalt ther finden *si'uer* as I hope.
What, diuel of helle! shuld it elles be?
Shaving of *silver*, *silver* is parde.

Chaucer. The Chanones Yemannes Tale, v. 16705.

Whan was this said, down in an extasie,
Rauished in spirite, in a dreame she fell,
And by apparaunce herd where she did lie,
Cupide the king tinging a *siluer* bell,
Which men might here fro heven into hell.

Id. The Testament of Creseide, p. 295.

Siluer and gold whether the angry or favourable gods haue denied them, I doubt. Neither wil I affirme that there is no vaine in Germany which yeeldeth *siluer* and gold: for who hath sought it?

Grenewey. Tacitus. The Description of Germany, sec. 1. fol. 259.

Me no such cares nor combrous thoughts offend,
Ne once my mind's unmoved quiet grieve;
But all the night in *silver* sleepe I spend,
And all the day to what I list, I doe attend.

Spenser. Faerie Queene, book vi. can. 9.

And let your *silver* chime
Move in melodious time,
And let the base of heav'n's deep organ blow.

Milton. Ode 13. l. 128.

Not Ancum's *silver'd* eel excelleth that of Trent.

Drayton. Poly-olbion, song 26.

The *silver*-sounding instruments did meet
With the base murmur of the waters fall.

Spenser. Faerie Queene, book ii. can. 12.

The *siluer*-bow bearer (the sun) and she,
That beares as much renowne for archery;
Stoop with their painles shaftes, and strike them dead,
As one would sleepe, and neuer keepe the bed.
Chapman. Homer. Odyssey, book xv.

Between compulsion, and a braue respect;
Let me wipe off this honourable dewe,
That *siluerly* doth progresse on thy cheekes.

Shakspeare. King John, fol. 19.

The *silver* here, and all over the kingdom of Mexico, is said to be finer and richer in proportion than that of Portosi or Peru, tho' the oar be not so abundant.

Dampier. Voyages, ch. ix. p. 269.

You must rub it on well, till you find every little cavity of the metal sufficiently *silvered* over.

Boyle. Works, vol. iii. p. 492.

Of all th' enamel'd race, whose *silvery* wing
Waves to the tepid zephyrs of the spring,
Or swims along the fluid atmosphere,
Once brightest shin'd this child of heat and air.

Pope. The Dunciad, book iv.

The Northern nations who established themselves upon the ruins of the Roman empire seem to have had *silver* money from the first beginning of their settlements, and not to have known either gold or copper coins for several ages thereafter.

Smith. Wealth of Nations, vol. i. book i. ch. v. p. 52.

And thou, cherubic gratitude, whose voice
To pious ears sounds *silvery* so sweet,
Come with thy precious incense, bring thy gifts,
And with thy choicest stores the altar crown.

Smart. On the Omniscience of the Supreme Being.

His head, [discipline,]
Not yet by time completely *silver'd* o'er,
Bespoke him past the bounds of freakish youth,
But strong for service still, and unimpair'd.

Cowper. The Task, book ii.

SILVIUS, in *Zoology*, a genus of *Dipterous* insects.

Generic character. *Antennæ* porrected, approximating, three-jointed, the basal joint cylindrical, second cup-shaped, the third subulated, with five rings, the basal joint is as long as the others united; *palpi* exserted, two-jointed, having the second joint cylindric in the male, conic in the female; *ocelli* three; wings two, divaricating.

Type of the genus, *Tabanus Vituli*; Fabricius, *Syst. Ant.* p. 97. Two species, the type a native of Southern Europe, and the other of Northern Africa.

SILURUS, from the Gr. *σειω*, *I shake*, and *ουρα*, *a tail*, Lin. Lacep. In *Zoology*, a genus of animals belonging to the family *Siluroides*, order *Malacopterygii Abdominales*, class *Pisces*.

Generic character. Head large, naked, broad, and depressed; mouth at the extremity of the muzzle, and furnished with teeth either in a single or in several rows; jaws furnished with barbules varying from four to eight; lips thick; eyes small, and in some species almost imperceptible; body compressed, scaleless, and freely lubricated with mucus; dorsal fin short and single; anal fin very long, and nearly reaching the tail.

The characters of this genus, as given by Linnaeus, are "head without scales; barbules to the mouth, and a denticulated ray to the dorsal or pectoral fins." To all these characters Bloch objects; first, that the genus *Salmo* has also the head scaleless; secondly, that his *Silurus Militaris* and *Inermis* (species of *Lacepede's Ageneiosi*) have no barbules; and thirdly, that neither his *S. Carinatus* nor *Fasciatus* have the first ray of their dorsal or pectoral fins denticulated. He there considers it would be preferable to assume as generic characters "the body scaleless, the mouth terminal, and the jaws in form of a file. *Lacepede*, however, is little

SILVER.

SILURUS.

SILURUS. satisfied with these characters, and prefers those used by Linnæus, adding to them "a single short dorsal fin." This has formed the groundwork of Cuvier's arrangement, who, diminishing the number of species, places those which are less like the Linnæan in other distinct genera; and divides the *Siluri* into three subdivisions, of which the first has the dorsal fin without any spine, whilst in the second it exists, and in the third the eyes are so small as to be almost imperceptible. They are found principally in Asia, Africa, and America, living in ponds, tanks, and rivers. Northern Europe produces but one species, and it is curious that they are not found either in England or Jamaica. They are slow-moving fish, are predaceous, and do not hunt, but lie in ambush for their prey, hidden either in the mud or in their holes, and playing the barbules on their heads till unwary fish come within their reach, when they spring upon them. Their large, rounded head is supposed to give them the appearance of Whales, and hence some of them have been called River Whales: this resemblance is so great in the American species that Agassiz has thought proper to form them into a new genus by the name of *Cetopsis*.

The characters by which they are divided into sections are noted as they come under consideration.

a. *True Silures, Siluri.* Artedi.

In which the dorsal fin has no visible spine; the maxillary teeth are of a card-like form, and behind the intermaxillary is a band of them upon the vomer.

S. Glanis, Lin.; *Le Silure Mal*, Daub.; *Sly Silurus*, Stew. Is the largest of the fresh-water fishes of Europe, sometimes attaining the length of six feet, or even more, and weighing as much as three hundred pounds: the head is shovel-shaped, and of a deep green colour; it has six barbules, of which those belonging to the upper lip are the longest; the mouth is very large, and the lower jaw projects beyond the upper; the round nostrils are situated between the two long barbules, and behind them are the eyes, small, and having the pupils black and the irides white; the body is thick, long, and covered with slime; the back and sides above the lateral line greenish-black, and below it pale green, the whole body studded with irregular blackish spots; belly yellowish-white; the dorsal fin has five rays, is of a yellowish colour, with a blue tip, so also are marked the ventral fins, which have thirteen rays; pectoral fins furnished with eighteen rays, at their base and tips bluish, and in the middle yellow; their first ray is strong, bony, and denticulated within; anal fin long, supported by fifty rays, yellowish-grey at the base, and tipped with violet, as is also the caudal fin. This fish is found in all quarters of the globe, most commonly in fresh and but rarely in salt water. In 1766 one was caught at the Island of Rugen, in the Baltic, which was first supposed to be a marine monster, but subsequently ascertained to be this species. Kramer mentions that they are occasionally taken in the Danube weighing three hundred pounds. Heim mentions one caught in a pond near Spandau weighing five hundred pounds; and in 1761 one was caught at Writzen, on the Oder, the salted flesh of which without either head or entrails filled two and a half barrels, together weighing seven hundred and fifty pounds. It is also mentioned as having been caught in the Ohio and Mississippi of the length of eight feet. Its body being large and the fins

short render this fish a slow swimmer, but it catches its food not by pursuit but by burying itself in the mud, like the Angler, *Lophius Piscatorius*, or hiding itself in a hole, it awaits the approach within its reach of smaller fish, which are attracted by the motion of its barbules. In Spring time they may be observed in pairs, a male and his female, at midnight approaching the banks of the river or lake in search of the eggs of other fish, on which they also feed, but soon return to their holes. They are not very prolific, as they deposit but few eggs, which are of a green colour, and hatched between the sixteenth and nineteenth day. The flesh is very luscious, fat and white, and is considered very good, especially towards the tail. The fat dried in the skin is on some parts of the Danube used as lard; and on the Wolga a large quantity of isinglass, though not of the best kind, is made from its air-bladder. It is supposed to have been found in Scotland, as Sibbald enumerates it among the products of that country in his *Scotia Illustrata*; but some presume he means the Burbot, although he applies to it the name *Silurus seu Glanis*. Bloch says it is called *Sheat-fish* in England, but on what authority does not appear. In Switzerland it is called *Saluth*; in Germany *Wels*; in Austria *Schaden*; and in Sweden *Mal*.

Lacepede mentions that this species has been naturalized in Alsace by Professor Hermann and his brother the Mayor of Strasburg, who having obtained them from the Feder-see, a lake in Swabia, a few miles distant from Doneschingen, placed them in some ponds belonging to M. Dietrich, where they soon amounted to five hundred; some years after, however, they were for some extraordinary reason taken away, and there now remains not a single fish of this species in the department of the Lower Rhine.

S. Fossilis, Bl.; *Muddy Silure*. Eight inches in length; head narrower than the body, and having on its upper part a deep, oblong depression; mouth small; jaws of equal length; barbules eight, arranged in pairs; nostrils cylindrical, and very near the upper lip; eyes near the top of the head, their pupil blue, and irides brown; the rays of all the fins short and branching; general colour chocolate; all the fins very light brown, except the anal, which is grey. This species is so thin that the muscles can be seen through the skin. It is found at Tranquebar.

S. Bimaculatus, Bl.; *Bimaculated Silure*. Twelve inches long; head small, and lower jaw projecting beyond the upper; mouth small, at each of its corners a long barbule, and below the chin a pair, white and short; nostrils double, and close to the upper jaw; eyes lateral, near the mouth, and covered with skin, their pupils black and irides yellowish-green; back violet; belly and sides silvery; the pectoral fins have fourteen rays, of which the first is rough and denticulated within; the dorsal has five, and the ventral fins sixteen rays; the anal has sixty-seven; the tail crescentic, yellow, and its two ends violet-coloured. It is found at Tranquebar, where it is called *Sewalei*, and spawns in the month of July.

S. Athu, Schn. Lower jaw longer than the upper; mouth very wide; dorsal fin supported by four tall rays; pectorals by eleven, ventrals by seven, and anal by eighty-five; tail fin spear-shaped. It is found in the lakes of the Malabar coast, and called *Atu Culvu*.

S. Sinensis, Bl.; *Chinese Silure*. Lower jaw projecting beyond the upper, which is furnished with a pair

SILURUS. of barbules nearly as long as the head; neither of the fins has a strong denticulated ray; tail forked; upper parts greenish, marbled with green; sides and underparts silvery, tinged with green.

S. Wallagoo, Russ. From fifteen inches to three feet in length; jaws of nearly equal length; mouth wide, and with scarcely any lips; eyes very small, protuberant, and far apart from each other; nostrils double, small, oval, and near the orbit, with a small, round aperture between the roots of the longer barbules and tip of the muzzle on either side; barbules four, of which those of the upper are nearly five times as long as those of the lower jaw; body long and knife-shaped; dorsal fin five-rayed, its first ray scabrous; pectorals low, broad, acuminate above, and the first of their sixteen rays slightly serrated; ventrals having ten and anal ninety-one rays; caudal fin composed of two unequal, falcate lobes; head and back dark leaden, becoming paler on the sides; under parts dull white; fins leaden. It is called by the natives of the Coromandel coast *Wallagoo*, and principally found in lakes or large tanks. In some parts the natives use the dried jaw-bones of this species as an instrument for carding the finest sort of cotton.

S. Dauricus, Pall. Rather more than twenty inches in length; head rounded and regularly convex above; lower jaw much longer than the upper; lips very fleshy; barbules four, of which those belonging to the upper jaw are much longer than the lower and very slender; eyes small, pupil very small and golden, irides golden-brown; body compressed, especially at the hind part; dorsal fin five-rayed; pectorals with fourteen rays, of which the first is bony and its edge scabrous, the others soft; ventral fins rounded, each having thirteen rays; anal supported by ninety rays; general colour blackish-brown, paler on the under part of the head, and ashy-white on the belly. Pallas states that it closely approaches the *S. Asotus* of Linnæus, but prefers the name he has used. It is found in the Ingoda, Onone, and Arguno rivers of Dauria, and in the adjacent slow-flowing streams.

β. *Schilbe*.

First ray of the dorsal fin spiny, strong, and denticulated on its inner edge; head small and depressed; barbules eight; eyes placed so low as to be nearly on a level with the root of the pectoral fins; body much compressed.

S. Mystus, Hasselq. About a foot long; mouth wide; lower jaw rather longer than the upper; the four barbules of the lower jaw closely approximated and very slender, and the outer pair longest; of those of the upper jaw, the outer pair are rather the longest; body much compressed, and its lower margin, where giving attachment to the anal fin, almost carinated; the dorsal fin has seven, the pectoral eleven, the ventral six, and the anal sixty-five rays; caudal fin forked. The skin is so thin that the bony pieces and muscles can be seen through it; the colour of the back is bluish-black, of the belly and sides silvery-white, tinged with rose-colour, and the head bluish, tinged with golden and flesh-colour. It is common in the Nile, and its flesh of better flavour than that of most others of the same genus. It is known to the Arabs by the name of *Schilbe*.

S. Auretus, Geoffr. Never exceeding five inches in length from the muzzle to the root of the tail; its head

is more convex, the barbules longer, the pectoral fins more rounded, and the ventrals smaller than in the last species, but it is remarkably distinguished by the great length of the anal fin, which, commencing at the caudal fin, extends forwards to the anterior third of the total length of the fish; the dorsal fin has seven, the pectoral eleven, the ventrals six, and the anal seventy-seven rays; the tail less deeply forked than in the last species. Its colour is very similar to the preceding. It is also found in the Nile, and called *Schilbé Oudney*, or Eared Schilbé.

γ. *Cetopsis*. Agass.

In this division the head is very obtuse; the eyes almost imperceptible; mouth not very wide; barbules six in number; teeth ranged in a single row on the jaws and vomer, and on the intermaxillaries either in a single or manifold row; branchial opening very small; body rounded, but compressed towards the tail; rays of all the fins soft.

S. Cæcutiens, Spix; *Cetopsis Cæc.* Agass. Five and a half inches long; head rounded; eyes covered with common integument, black, and shining like spots through the skin, above the corner of the mouth, and midway between the posterior nostril and the barbule of the upper jaw; nostrils four; mouth transverse, rather narrow, and not unlike that of the Whale; barbules of the upper jaw a pair, short and threadlike, those of the lower jaw four, and placed in an arched form; body rounded, and rather compressed; the dorsal fin has seven, the pectorals ten, ventrals six, and anal twenty-one rays; caudal fin forked; general colour silvery-grey, inclining to olive on the back; tips of the fins dusky. Is found in the rivers of the Equatorial parts of the Brazils.

S. Candiru, Spix; *Cetops. Cand.* Agass. From five to eight inches long; head rather flattened, and longer than in the preceding species; eyes not visible through the skin, but when that is removed are seen, resembling little black spots embedded in the cellular tissue; lower jaw rather shorter than the upper; teeth in the jaws and vomer ranged in a single row; body cylindrical, and the tail more compressed; the dorsal fin has seven, the pectoral nine, ventral six, and anal twenty-nine rays, all of which, as well as those of the forked tail, are very soft and elastic, but covered with a rough membrane. It is found in the rivers of Equatorial Brazil.

See Linnæi *Systema Naturæ* a Gmelin; Lacepede, *Histoire des Poissons*; Bloch, *Ichthyologie*, and *Ichthyologia* a Schneider; Russell, *Fishes of the Coromandel Coast*; Pallas, in *Nova Acta Academiae Petropolitane*, vol. i.; Cuvier, *Règne Animal*; Geoffroy, in the *Histoire Naturelle de l'Expédition d'Égypte*; Spix, *Selecta Genera et Species Piscium*.

SILYBUM, in *Botany*, a genus so called from a name used by the Greek writers for a plant now unknown. It belongs to the class *Syngenesia*, order *Æqualis*, and natural order *Compositæ-Carduineæ*. Generic character: heads homogamous with hermaphrodite florets; pappus long, in many series, joined together in a ring at the base, filaments papillose; achenia with a papilliform nectary.

This genus consists only of one species, a native of Britain, *S. marianum*, the Milky Thistle. It is a coarse, biennial, shining, strong plant, with pinnatifid leaves; heads of flowers purplish.

SIMABA.

SIMBA-
LATH.

SIVABA, in *Botany*, a genus so called from the Caribbean name of *S. Guianensis*. It belongs to the class *Decandria*, order *Monogynia*, and natural order *Simarubæ*. Generic character: calyx four or five-parted, cleft or toothed; petals four or five; stamens eight or ten; ovaries equal in number to the petals, seated on an equal or broader gynophore; styles four or five, distinct at the base, but combined at top, and terminated by a four or five-lobed stigma; drupes usually dry, one-seeded.

This genus consists of seven species, trees and shrubs, natives of tropical America, with alternate, ternate, or pinnate leaves, entire leaflets, axillary, racemose, or paniced inflorescence, and greenish or reddish flowers.

SIMAETHIS, in *Zoology*, a genus of *Lepidopterous* insects.

Generic character. *Antennæ* moderate, slender, pilose beneath; ciliated in the males; *palpi* two, short, porrected obliquely, curved at the base; triarticulate, the articulations subequal, densely clothed with short scales or elongate hairs, like bundles of scales, leaving the terminal joint exposed; the latter, when denuded, rather shorter than the basal, and attenuated to the apex, intermediate joint rather longest and stoutest; *maxillæ* long; head small, scaly; eyes moderate; *thorax* slender; wings ample, anterior forming a rhomboid figure during repose; anterior generally retuse, sometimes acute; colours dingy; body short, linear, obtuse, stoutest in the females; legs short, posterior *tibiæ* with two pair of long spurs.

Type of the genus, *Phalæna (Tortrix) Fabriciana*, Linnæus; Stephens, *Illust. Britt. Entom. (Haust.)* vol. iv. p. 28. Six species, five of which are found in Britain; the typical one in great abundance, flitting with a very peculiar flight over the tops of nettles, and thence termed *Nettle-laps*.

SIMAGREE, Fr. *chimagrée*, *simagrée*. Menage derives from *simia*, an ape or monkey; others from *simulacrum*. Cotgrave calls it "a wry mouth or filthy face, crabbed visage, &c." Dryden applies it to the visage of the Cyclops in his attempts to look amiable.

Now in the chrystal stream he looks, to try
His *simagres*, and rolls his glaring eye.

Dryden. *Ovid. Metamorphoses*, book xiii.

SIMAR. See **CYMAR**.

SIMARUBA, in *Botany*, a genus so called from the Caribbean name *Simarouba*, of *S. Officinalis*. It belongs to the class *Monoecia*, order *Decandria*, and natural order *Simarubæ*. Generic character: flowers of separate sexes; calyx five-toothed; petals five; stamens eight or ten in the male flowers; ovaries five, seated on an equal five-lobed gynophore; styles five, separate at the base, but combined at top, and crowned by a five-lobed stigma; fruit five, drupaceous.

This genus, which is nearly allied to *Quassia*, consists of four known species; they are trees, natives of tropical America, with alternate pinnate leaves and entire leaflets, axillary and terminal paniced inflorescence, and small greenish flowers. The leaves, bark, and root are intensely bitter; the bark of *S. officinalis* is the *Cortex simaruba* in *Materia Medica*.

SIMBALATH, from the old Latin version of Avicenna, (Ibn Síná,) should be written *Sunbulat* or *Sumbulah*, i. e. an ear of corn or spike, (*spica*), but *Sumbul* is the word used by Avicenna, (i. 225.) who says there are two kinds: 1. the good *Spica*, (*Sunbulu-t-tayyib*), also

called *Sunbulu-l-'asáfir*, (Sparrow's Spike,) and *En-nárdín* or *Sunbulu-r-rúmí*, (the *Spica Nardi* of Asia Minor,) also called *al Iklítí*, (*Celtica*), which is weaker than the Indian or Syrian. It is plain, therefore, that Ibn Síná has confounded the genuine *Spikenard* (*Nárdín*) with the *Nardus Celtica*, which is his *Sunbulu-r-rúmí* or Anatolian Nard. But the *Nárdín* is in reality identical with his *Sumbulu-t-tayyib*, and, as subsequently appears by his quotation from Dioscorides, (i. 6. *et seq.*) is the same as the Indian or Syrian Nard, so called because the mountains producing it look towards Syria, not because it is found in Syria: (Dioscor. p. 8. A.) one kind of this Nard, he adds, is called *Gangitis*, from the river which runs beside the mountain where it grows. Avicenna, therefore, speaks only of the *Nardus Indica* and the *Nardus Celtica*. The first, called *Nerd* or *Nard* by the ancient Hebrews, (*Cant.* i. 12; iv. 14.) and *Nárdín* by the Arabs and Persians, is the *Jatámánsí* of the Hindús, a species of *Valerian*, as was ascertained by the inquiries of Sir William Jones (*As. Res.* ii. 405.) and Dr. Roxburgh. (*Ib.* iv. 433.) It is a native of the mountains of *Bútán* to the North-East of *Bengál*, and is the *Spike-nard* of the ancients. The other species of Nard mentioned by Dioscorides (i. 7.) are, 1. the Celtic, (*Valeriana Celtica*), common in the *Ligurian Alps*; and 2. the *Mountain Nard*, (Dioscor. i. 8.) *Valeriana tuberosa*, found by Dr. Sibthorp in *Cilicia*, of which, Dioscorides says it is a native. The fragrant Nard, found in such abundance by Alexander's army in *Gedrosia*, (Arrian, vi. 22.) was probably the *Andropogon nardus*, which has been sometimes mistaken for the true *Spike-nard*.

Dioscorides, ed. Saracenii, 1598, fol.; Arrian, *Exped. Alexandri*, Lugd. Bat. 704, fol.; Avicennæ *Opera Arab.* Rom. 1593, fol.; *Asiatic Researches*, Lond. v. y. 8vo.; Kurt Sprengel, *Geschichte der Botanik*, Leipz. 1817, 2 th. 8vo.

SIMBIRSK, a Government of the Russian Empire, formerly comprised in the *Khanate of Kazan*, was finally settled in its present form and limits in 1780, when some portions of the Governments of *Kazan* and *Orenbourg* were added to it. It confines on the North with the Government of *Kazan*; on the East with that of *Orenbourg*; on the South with *Saratov*; and with the Governments of *Penza* and *Nijnii-Novgorod* on the West. According to M. Arsénief, its superficial area covers an extent of 1350 square geographical miles; but, according to Schubert, 1402 square geographical miles, or 68,045 square versts.

Its surface presents a slightly undulated plain; but Physical along the right bank of the *Volga*, the ground, which is features, here of secondary formation, rises to the height of about 400 feet. The eminences presented by this higher tract are most remarkable towards the elbow formed by the river as it deflects to *Samara*, in the Eastern extremity of the Government, although they accompany it in its whole course from North to South. Beyond this elbow, the surface becomes entirely level, assuming a character analogous to that of the *Steppes*. The various rivers of the Government belong to the system of the *Volga*; which receives the *Ouca* and *Syzran* on the right, and, on the left, the *Tcheremkan*, the *Sok*, and the *Samara*. The *Soura*, which is navigable in the Spring, traverses the Western districts of the Government; it runs from South to North, rising in the Government of *Penza*, and falling into the *Volga* in that of *Nijnii-Novgorod*. The lakes are inconsiderable in point of size, but numerous,

Products.

amounting to 566. The climate is somewhat ameliorated, yet the temperature both in Winter and Summer is still in extremes. The Volga is frozen for about five months. Generally speaking, the air is salubrious.

The soil, a rich black mould, requires no manure. It yields the cereal grains in abundance; and the poppy, peas, lentils, flax, hemp, tobacco, and potatoes are likewise successfully cultivated. The return is about six for one. Horticulture is much neglected. The woods, which chiefly consist of oak, elm, and birch, are extensive in the Northern districts, but the Southern labour under a deficiency in this respect. The Crown forests cover an extent of 879,127 dessaitines. Although there is no want of natural meadows, the breeding of cattle cannot be said to flourish except among the Calmucks, who inhabit the Steppes in the district of Stavropol. Agriculture is successfully prosecuted by the Tatars. Game is not rare, but the fur-yielding animals are becoming scarce. The fisheries are very productive. The chief minerals found in the Government are naphtha, sulphur, alabaster, gypsum, &c.; it furnishes neither salt nor metals.

Population. The majority of the population is Russian, which absorbs the Finnish races more and more; but the Tatars still jealously preserve their national characteristics. The total population is computed by M. Schnitzler at 1,100,000 souls. The number of towns, according to the same authority, is 17; and of villages 1500.

Although the Government is chiefly an agricultural one, yet manufacturing industry has made some progress. The manufactures consist of cloths, woollens, silks, glass, leather, soap, candles, &c.; and, in 1830, there were in all 57 manufactories, which gave employment to 4495 workmen. There were at the same period 43 distilleries of brandy and 20 tanneries. Commerce is mostly carried on by means of the Volga; and the principal exports are grain, hemp, hides dressed and undressed, tallow, fish, millstones, &c. Simbirsk and Samara are the seats of this trade.

Education. Simbirsk is included in the jurisdiction of the University of Kazan. In 1832 the number of the civil schools was 11, conducted by 56 teachers, and containing 746 scholars. There are no returns of the ecclesiastical schools. The only printing-office in the Government belongs to the Crown.

Simbirsk forms an *Eparchy* with Kazan, and contains 610 Churches; there are besides 153 Mosques.

Political state. This Government is usually placed under the authority of the military Governor of Orenbourg. The State expenses are fixed at 71,561 rubles; and the revenue, according to Hassel, amounts to 2,450,000 rubles.

Simbirsk is divided into the 10 districts of Simbirsk, Boninsk, Alaty, Kiourmych, Ardatov, Karsoun, Singhilei, Syzran, Samara, and Stavropol.

Simbirsk, the capital of the Government, lies on the higher bank of the Volga, on an eminence from which the eye follows the course of this majestic river, and takes in an immense extent of level and unwooded country. It is irregularly built, but its streets are straight and wide. Almost all the houses are of wood; and of its 16 Churches only one is of stone. The surrounding plain is very fertile; and, on one side, it is laid out in gardens and orchards. The inhabitants are in easy circumstances, but possess few intellectual resources. According to Erdmann, the life of the higher classes is both unrefined and monotonous. Population 13,168 souls. North latitude $54^{\circ} 18' 49''$, East longitude $48^{\circ} 12'$.

In the other districts the most considerable towns are Syzran, Samara, and Stavropol; the population of the first of these is 9803, of the second 5648, and of the third 2403. The fort of Stavropol is the residence of the *Noïone* or Chief of the Calmucks.

Schnitzler, *La Russie, La Pologne, et La Finlande*; Erdmann, *Reisen in Innern Russlands*.

SIMBLOCLINE, in *Botany*, a genus so named from the Greek *σμβλος*, a honeycomb, and *κλινη*, a receptacle, in reference to the alveolate receptacle. It belongs to the class *Syngenesia*, order *Polygamia Superflua*, and natural order *Compositæ-Asteroidæ*. Generic character: heads radiate, female ligulæ in one series, linear, elongated; florets of the disk tubular, five-toothed; involucre of many series of scales; outer scales short, lanceolate, acute, tomentose on the back, imbricated; inner scales much longer, glabrous, exceeding the disk, squarrose; receptacle alveolate, alveolæ elevated, toothed, fringed; rays of styles elongated, bifid at top, glabrous; anthers tailless; achenia of the rays oblong, a little compressed, rather hairy and subglandular, those of the disk slender; pappus of the rays in one series, bristly, those of the disk in two series, both bristle-formed, outer one short.

This genus consists only of one species, a Peruvian shrub, with dark green leaves and purplish heads of flowers, which are disposed in a loose corymb. It is nearly allied to *Diplostephium*.

SIMBLUM, in *Botany*, a genus so called by Klotzsch, from the Greek *σμβλον*, pitted, on account of the honeycombed receptacle. It belongs to the class *Cryptogamia*, order *Fungi*. Generic character: volva sessile, roundish, including the receptacle, bursting into two or three unequal parts; receptacle ample, nearly globose, combined or continuous with the stipe, containing a mucous liquor, intermixed with dark green sporidia; stipe at length fistular, distinct from the volva, lacunose.

This genus is nearly allied to *Phallus* and *Clathros*, and consists of a single species, a native of the Mauritius.

S I M I A.

SIMIA, from the Gr. *σιμος*, one who has a flat nose, vulgo, a snub, Lin.; Illig.; Orang, Traill. In *Zoology*, a genus of animals belonging to the family *Simiida*, order *Quadrumana*, class *Mammalia*.

Generic character. Teeth close-set and continuous; four incisive in each jaw, erect and cutting; cuspid teeth rather longer than the former; molar teeth five on a side in each jaw, the anterior two bicuspid, the pos-

terior three quadricuspid; muzzle long, truncated, or rounded anteriorly; facial angle from 35° to 30° ; face naked; nostrils separated by a narrow septum; ears like those of man; no cheek pouches; two pectoral teats; neither tail nor callosities; all the feet five-toed and furnished with flat nails.

The genus *Simia*, as first formed by Linnæus, included the whole of the Monkeys, commonly so called,

SIM-
BIRSK.)

Chief
towns.

SIMIA. and thereby brought together numerous animals, which though sufficiently allied to admit their collection as members of a family, differed so materially in many not merely minor points, as to lead to a better arrangement, by converting the Linnæan genus into a family consisting of no less than thirteen genera, according to the system of Illiger, which number has been increased by later zoologists; Temminck, for instance, to fifteen, and by other writers still more numerous. Long indeed before the time of Linnæus, writers on Natural History had in a cursory manner observed, that among the Monkeys there were several groups. Aristotle speaks of three kinds, *πίθηκοι*, *κῆβοι*, and *κυνοκέφαλοι*, of which he says that the *πίθηκος* has no tail, being a biped. (on which point, however, he is incorrect,) that the *κῆβος* is a *πίθηκος* with a tail, and that the *κυνοκέφαλος*, with the form of the *πίθηκος*, is of more bulky and stronger proportions, but that its face rather resembles that of a Dog. The counterpart of these terms exists in the Latin words *Simia*, *Cercopithecus*, and *Cynocephalus*, and in our own language we find very loosely used the several terms *Ape*, *Ape without a tail* or *Monkey*, and *Baboon*.

The animals forming this genus are now generally known by the name of *Orang-Outang* or *Orang-Utan*, the Malay phrase, signifying a wild-man; and of all the Monkey family most nearly resemble the human form. Hence have arisen the fabulous accounts of Pigmies; and even Linnæus has propped up this error by placing in his genus *Homo*, under the name of *Homo Troglodytes*, one of the species called by Bontius *Homo Sylvestris Orang-Outang*, which is the *S. Satyrus* of Linnæus himself.

The attention of our older English travellers appears to have been drawn to these animals, for Purchas, in his *Pilgrimes*, in his fifth book, speaking of Java, says, "Here are little Apes much resembling men in their countenance, which they used to preserve with certaine spices, having flayed off their skins and left the haire growing in those parts where Nature causeth men to be hairie, and sell them to merchants to be carried ouer the world as the bodies of little men; happily the onely true Pigmies the world yeeldeth." And again, whilst speaking of Africa in his sixth book, he quotes Andrew Battle, and says, "But more strange it seemed which he tolde me of a kinde of great Apes, if they might so bee termed, of the height of a man, but twice as bigge in feature of their limmes with strength proportionable, hairie all ouer, otherwise altogether like men and women in their whole bodily shape. They liued on such wild fruits as the trees and woods yeilded, and in the night-time lodged on the trees. Hee was accompanied with two Negro boyes; and they carried away one of them by a sudden surprize; yet not hurting him, as they used not to doe any which they take, except the captive doe then looke upon them. This slaue, after a moneth's life with them, conveyed himselfe away againe to his master."

Jacob Bontius published at Amsterdam, in 1658, his *Historiæ Naturalis et Medicæ Indiæ Orientalis*, in which work he gave an account and an engraving of a female Orang-Outang, which seems to be one of the Red species; of its manners he says, *Ast quod majorem meretur admirationem. vidi ego aliquot utriusque sexus erecte incedentes, imprimis eam (cujus Effigiem hic exhibeo) Satyram femellam, tanta verecundia ab ignotis sibi hominibus occultentem tum quoque faciem manibus (licet ita dicere) tegentem ubertimque lachrymantem, gemitus cientem et cæteros humanos actus exprimentem,*

ut nihil ei humani deesse diceret, præter loquelam. Loqui vero eos easque posse, Javani aiunt sed non velle, ne ad labores cogentur; ridicule mehercules. Nomen ei inducunt Ourang-Outang, quod Hominem Sylvæ significat.

Tulpius, another Dutch physician, in his *Observationes Medicæ*, 1672-6, speaks of another, *Quamvis extra forum Medicum*, which he calls *Satyrus Indicus*, and says, *Erat autem hic Satyrus quadrupes; sed ab humana specie quam præ se fert, vocatur Indice Ourang-Outang; sive homo Sylvestris uti Africanis Quoiass-morrou. Exprimens longitudine puerum trimum; ut crassitie sexennem.* He states that this animal was a native of Borneo, but it appears to be the *S. Troglodytes*, and as far as we are aware at present, that species is not found in Borneo, but only in Africa.

Our countryman Dr. Tyson was the first, however, who gave any thing like a satisfactory account of these animals, and in his *Anatomy of a Pygmy compared with that of a Monkey, an Ape, and a Man*, has given a most excellent description of the Black Orang or Chimpanzee, and has materially assisted the labours of other and later naturalists, by sifting and getting rid of the fabulous narrations which had, before his Essay, obscured the true nature and structure of these animals. His work on this subject is a most masterly production, worthy of perusal as well for the faithfulness of his description, as proved by recent observation, as for the diligence with which he has collected all that had been previously written on the subject.

More recently Camper, Cuvier, Tilesius, and Mr. Owen have taken up the subject, and their labours, especially those of the latter, have tended to fix in the most satisfactory manner the characters of the genus, and the variations by which its species are distinguished from each other. It is, however, much to be regretted that those individuals of the genus which have been brought to Europe, and subjected to the observations of the scientific world, were all young animals, and that of the habits of the adult we know nothing beyond the loose account given by the natives of the countries where they are found.

Till within a few years it was supposed that there existed but two species of Orangs, the Black or Chimpanzee, and the Red or Ourang-Outang commonly so called. From the observations of Fischer and Owen it however appears, that there are really three species, of which the Red Orang may be regarded as the type, and the latter zoologist has also proved that another animal commonly called the *Pongo*, and generally considered by zoologists as a distinct genus in the Monkey family, is in reality only the adult of the Red species. He has given a very minute account of the difference, so far at least as their bony structure is concerned, in a paper in the first volume of the *Zoological Transactions, On the Osteology of the Chimpanzee and Orang-Utan*; and the result of his comparison of the two animals leads him to agree with Geoffroy in the formation of the two subgenera, *Troglodytes* and *Pithecus*.

It would seem that these animals only in their childhood, as it may be called, exhibit that mildness of disposition and docility which have been considered as separating them widely from others of the Monkey family, and approximating them to man, whilst in their adult state they become morose and vicious, characteristic changes corresponding with the change in their

SIMIA.

SIMIA. organic structure, and common to the whole family of Monkeys. As regards their station and motion in the erect position, it has been shown by Camper, Owen, and others who have minutely examined them with reference to this point, that they are not more truly biped than others of the same family; and that the form of their hind limbs entirely precludes the erect posture, though in connection with other points of their anatomical structure, it admirably suits them for the kind of life to which they are destined, viz., that of living among and climbing on trees, upon the fruits of which they live.

In their wild state they consort together in the woods, far away from the dwellings of men, and though stated to be well known to the inhabitants of the districts near which they live, it would seem that this knowledge arises from the accidental appearance of individuals who have wandered from their usual haunts, and, losing themselves, have been caught sight of and captured by the natives, rather than from being continually about them, as is the case with very many of this family. Hence has arisen the difficulty of procuring them, their consequent rarity in collections of animals, and the great interest excited by them when obtained; added to which, that all the specimens of either species brought either to Europe or America have been young, and with whatever care they have been tended have speedily fallen victims to the change of climate, and probably to the change of food. All these circumstances together have led zoologists to note with the closest attention the habits and manners of such individuals as have fallen under their observation, and it will be presently seen that of few animals in confinement have there been more detailed accounts given than of those now under consideration. Interesting, however, and entertaining as these certainly are, they are of infinitely less value, than would be an account of them when under natural circumstances and of adult age; as, although showing to what extent such animals are capable of education, they tend little to the illustration of natural habits, or to the clearing away the fabulous narrations of these, in their natural state or adult age, but little known animals.

a. Chimpanzee—Troglodytes. Geoffroy; Owen.

Muzzle long, truncated anteriorly; strong, supraciliary ridges, behind which the forehead recedes directly backwards; no cranial ridges; facial angle 35° , excluding the supraciliary ridges; auricles large; thirteen pairs of ribs; sternal bones in a single row; arms reaching below the knee-joint; feet wide; hallux (great toe or thumb of the foot) extending to the second joint of the adjoining toe; canine teeth large, overpassing each other, the apices lodging in intervals of the opposite teeth; intermaxillary bones ankylosed to the maxillaries during the first or deciduous dentition.

S. Troglodytes, Blumenb.; *Jocko*, Buff.; *Black Orang*, Traill; *Chimpanzee* of the Congoese. The only measurements of the adult animal given is that by Mr. Owen, of the skeleton of one shot in Sierra Leone, now in the possession of Mr. Walker, and detailed in the *Zoological Transactions*. The total length of this animal is three feet and ten inches from the crown of the head to the base of the heel bone. The head is of a narrow, elongated figure, slightly contracting towards the anterior part, which is, as it were, truncated from the depth and direction of the symphysis (or chin) of the lower jaw. Compared with the rest of the body it is of small size, owing to the arrested development of the

cerebral portion or skull, which is of a rounded, ovate, depressed figure, altogether behind and not above the face, which slopes forward at an open angle as in the Baboons. The skull has not either intermuscular, frontal, or sagittal crests; and the temporal ridges, at first well marked, soon subside into slightly elevated lines which are lost as they pass backwards. The cranial sutures are for the most part persistent, the coronal and sagittal have the true denticulated structure, and the latter suture is not continued through the frontal bone. The front angle of the temporal joins the frontal bone, and separates the parietal and sphenoid. The mastoid processes are mere ridges of bone, and the styloid processes only small tubercles. The condyles of the occipital bone are proportionally smaller than in man, and the great occipital hole placed in the middle of the posterior third of the base of the skull, and its plane inclining upwards from its anterior margin at an angle of 5° from the plane of the basilar process. In consequence of the approximation of this hole to the back of the skull, there is a considerable space between it and the bony palate. There are no posterior condyloid holes. The articular cavity for the lower jaw is so nearly on a level with the lower part of the bony auditory passage, that the latter affords no resistance against backward dislocation; this, however, is compensated by the existence of a process between the articular surface and the auditory passage. The most remarkable character, however, of the skull consists in the great development of the supra-orbital ridges, which are continued into one another above the root of the nose, and form a barrier between the skull and the face, almost hiding the former from view; and the cranial mass, instead of forming a broad background to the face as in man, is surpassed in breadth by the lateral boundaries of the orbits and zygomatic arches. The orbits are not so deep as in the human subject. The nasal bone projects from the interorbital plane in a slightly arched form, resembling in some degree that of man. The infraorbital hole single. The ascending or nasal part of the superior maxillary bone is of greater proportionate size than in man, and slopes backwards towards the orbits as in the *Cynocephali* and *Carnivora*; its contour from the nasal aperture to the incisive teeth is almost straight. The lower jaw is equally characterised by its strength and size in relation to the skull, and the chin recedes.

The teeth of the Chimpanzee, in their proportionate size, resemble those of man more nearly than any other of the family of Monkeys; but they still exhibit that character peculiar to all Mammalia except the fossil genus, *Anoplotherium*, viz. interrupted proximity, the upper cuspid being separated from the incisive teeth by a well-marked interval, and the lower cuspid from the bicuspid by a smaller space, these gaps being for the purpose of receiving the corresponding cuspid teeth when the jaws are closed. The hyoid or tongue bone is of a triangular form, and hollowed behind to receive one of the laryngeal sacks.

The spine of this animal differs much less than the skull from that of man; it has the same number of true vertebrae, but, in consequence of there being an additional pair of ribs, there are but four lumbar vertebrae. The conical pieces of the spines, instead of being bifurcated as in man, are single and long, that of the third is the shortest of them except the first; this elongation is for the purpose of giving attachment to the muscles necessary for the support of the head, and proves Audebert's

SIMIA. assertion, that it exists only in the Pongo, is incorrect. The lumbar vertebrae are narrower than in man, and the whole of that region is proportionally shorter. The last lumbar is also distinguished from the human in the iliac or hip bones rising on either side, and being partially connected with it. Of the false vertebrae, which are seven in number, only the upper two have the transverse processes fully developed and connected with the hip bones; "hence," as Mr. Owen remarks, "the trunk is less firmly connected with the pelvic arch, and consequently is more in need of additional support from the anterior extremities than in man." In the generally unsuitable form of the pelvis for maintaining the erect posture, the Chimpanzee agrees with the other Monkeys, but approximates more closely than they to man, in the greater extent of the iliac bones between the spinous processes so as to afford greater attachment for the gluteal muscles, and "it may thence," says Mr. Owen, "be inferred that the semierect position is more easily maintained in the Chimpanzee."

The lower extremities of this animal bear the same proportion to the trunk as do those of an infant twelve months old, but it is a curious circumstance that these members are of greater proportional length in the young than in the adult Chimpanzee. The head of the thigh bone is furnished with a round ligament connecting it with the acetabulum.

The size and position of the tarsal bones correspond more nearly than in any other Monkey with those of man, but the slight deviation of the foot resting on the ground upon its outer edge sufficiently indicates its suitableness for climbing rather than for support. The heel bone is smaller than in man, and more compressed from side to side, but is longer than in any other Monkey. The whole foot is narrower and longer than in man, and the toes more inflected towards the sole, but the length and strength of the opposable foot-thumb again approximates it to the human form more than any other Monkey.

Having thus given a brief description of the peculiarities in the skeleton of this species, its external characters remain to be noticed. The skin, itself of a yellowish-white colour, is covered with straight black or dun-black hair, which is very thick on the hind part of the body, very scanty on the neck, chest, and belly, thin on the head, except at the forehead, where it divides, falls down before the ears, about two inches in length, and forms whiskers; a few whitish hairs are seen on the lips and chin, but the face is otherwise bare, as are also the palms of the hands and soles of the feet; the hair is directed downwards on every part except the fore arms and the back of the thighs, upon which it is reversed; the ears are thin and naked, very like the human, but broader at the top; the nose is quite flat, appears only as a wrinkle of the skin, with a slight depression in its centre, and the nostrils patulous and facing upwards; the mouth is wide, and the lips thin. It is a native of the woods of Western Africa, and has not hitherto been found elsewhere.

The near resemblance of these animals to man having rendered them of great interest, it will not be misplaced to give an account of some of those which have been brought to Europe and America, and have been subjected to the observation of naturalists. This will afford the opportunity of indicating the degree of intelligence which they possess, at least in the earlier periods of their life; but to what extent it is retained by the adult

we are in ignorance, though from the change in the form of the skull it is presumed that they lose many points of interest in their disposition, and decline towards the general moroseness of their family.

The first authentic account of the Chimpanzee is that given by Dr. Tyson, in 1751, under the name *Pygmy*; his animal was a male from Angola, which measured twenty-six inches from the top of the head to the heel in a straight line. The hair was of a coal-black colour, "straight, and much more resembling the hair of men than the furr of brutes;" it was thicker and longer on the hind than on the fore parts of the body; the sides of the face were well covered with hair about an inch long; upon the upper lip and chin were a few "greyish hairs like a beard." Tyson considered his animal to be biped, and says, "'tis sufficiently provided to walk erect." He had, however, previously noticed, "that it would make use of its hands to supply the place of feet. But when it went as a *quadruped* on all four, 'twas awkwardly; not placing the *palm* of the *hand* flat to the ground, but it walk'd upon its knuckles, as I observed it to do when weak, and had not strength enough to support its body." This, however, has been proved, by more frequent observation than Tyson had opportunity for, to be the animal's natural mode of walking when upon the ground. Of his manners it is said that he was "the most gentle and loving creature that could be. Those that he knew a-shipboard he would come and embrace with the greatest tenderness, opening their bosoms, and clasping his hands about them; and, as I was informed, tho' there were *Monkeys* aboard, yet 'twas observed he would never associate with them, and, as if nothing akin to them, would always avoid their company." When "a little used to wear cloaths, it was fond enough of them, and what it could not put on himself it would bring in its hands to some of the company to help him to put on. It would lie in a bed, place his head on the pillow, and pull the clothes over him as a man would do," but its habits were not cleanly.

The Black Orang, described by Dr. Traill in the *Wernerian Transactions* for 1818, was a female, about thirty inches high when erect. It was obtained by Captain Payne in the Isle of Princes, in the Gulf of Guinea, from a native trader, who had brought it from the banks of the Gaboon, where the natives informed him that it was of small size, the adult attaining a height of five or six feet; it was said to be a formidable antagonist to the Elephant, and even attacked Lions and other beasts of prey with clubs and stones. At this time it was so thickly covered with hair that the skin of the trunk and limbs was scarcely visible till the long black hair had been blown aside; but after having been some time at sea the hair fell off, and it was affected with a scaly eruption accompanied with excessive itching. "When first our animal came on board," says Captain Payne, "it shook hands with some of the sailors, but refused its hand, with marks of anger, to others, without any apparent cause. It speedily, however, became familiar with the crew, except one boy, to whom it never was reconciled. When the seamen's mess was brought on deck, it was a constant attendant, would go round and embrace each person, whilst it uttered loud yells, and then seat itself among them to share the repast." When angry, it sometimes made a barking noise like a dog, but at other times would cry like a pettish child, and scratch itself with great vehemence. A sound, like *hem*, in a grave tone, indicated its satisfaction, especially on receiving

SIMIA.

SIMIA.

sweetmeats, but its voice had little variety. It generally walked on all fours, and it was particularly observed that the palms of the fore limbs never touched the ground, but that the weight of the body was received on the knuckles, the fists being closed. It rarely attempted the erect posture, though it could run nimbly on two feet for a short distance, and in doing this it steadied the lower limbs by grasping the thighs with its hands. It readily ate all kinds of vegetable food, enjoyed coffee, and was especially fond of sweets. At first it did not relish flesh, but subsequently learnt to eat it, and also to drink wine, but could not bear spirits. It was taught to use a spoon, and drink out of a glass; was much attracted by bright metals, fond of clothing, and often amused itself with putting on a cocked hat. It was disposed to imitate the habits of the men, but was very dirty, and never known to wash itself. It was afraid of fire-arms, and appeared rather a timid animal. It lived with Captain Payne seventeen weeks; was active and cheerful in warm latitudes, but became languid as it travelled Northwards, and, on approaching our shores, exhibited great desire for warmth, rolling itself up in a warm blanket before retiring to rest.

An account of another individual of this species, a male of three and a half feet high, is given by Dr. Jeffries, in Webster and Treadwell's *Boston Journal of Philosophy*, vol. ii. He was brought from Borneo to Boston by Captain Blanchard, on the 1st of June, 1825, and died on the following evening. He was entirely covered with hair, dun-coloured, inclining to black, except the face, the palms of his hands, and the soles of his feet. On the head the course of the hair was forwards and upwards, but before the ears downwards; and in front there was but little, leaving an ample forehead; upon the upper arm the hair was directed downwards, but on the fore arm upwards; it was longest upon the back of the arms and thighs, where it measured from six to seven inches in length. The eyes were hazel, bright, and rather deep sunken, owing to the prominence of the brows, upon which there was but little hair. The skin of the face, palms, and soles of the colour of the negro, and the lips very large and thick; the jaws projecting; the waist small; the hips flat and narrow, and both nates and calves of the legs small. The arms were very long, the tips of the fingers reaching to the ancles, but the lower limbs were short and small in proportion to his size.

When Captain Blanchard first saw him at a merchant's house in Batavia, where he had been kept for some time, he was not a little surprised, when turning round, on being familiarly tapped upon the shoulder, to find this animal making so unceremonious acquaintance. George, as he was called, seated himself at table when directed, and having partaken of coffee, &c. was dismissed. He had a house fitted up for him on board a ship, which he kept always clean and in good order, daily removing the remnants of his food, &c., and washing it out with a cloth and water provided for the purpose. "He was also very cleanly in his person and habits, washing his hands and face regularly, and in the same manner as a man." His general food was rice paddy, sometimes with and sometimes without molasses; but he would eat almost any thing; was fond of tea, coffee, and fruit, and used to come to table for wine, generally claret. He was docile and obedient, fond of play, but often so rough, though in good temper, that correction was required, "on which occasions he would lie down

and cry, very much in the voice of a child, appearing sorry for having given offence." He used to sit on an elevated seat, and not on the floor. His mode of walking was always erect, except when tired, and then he would move or rest on all fours.

Upon dissection the laryngeal pouch was found to extend "from the chin to the sternum or breast bone, continuing round the sides of the neck, and communicating with the larynx between the hyoid bone and thyroid cartilage on each side by two openings about a quarter of an inch in diameter. This pouch could be inflated at pleasure, "for what purpose," says Dr. Jeffries, "I do not know. One use might be, when inflated, to assist in supporting him when swimming!!"

In 1835, the Zoological Society had in their gardens a young male individual of this species, which measured two feet from the heel to the top of the head. An account of its manners whilst in confinement is given by Mr. Broderip in the *Proceedings of the Committee of Science and Correspondence* of that Society for the same year. It was bought off the Gambia coast, and in the preceding Autumn had been brought about a hundred and twenty miles from the interior of the country, and was stated to be about twelve months old. The mother was said to have been four and a half feet high, and was shot at the same time the young one was captured. Mr. Broderip says, that when he saw him "his aspect was mild and pensive, like that of a little withered old man; and his large eyes, hairless and wrinkled visage and man-like ears, surmounted by the black hair of his head, rendered the resemblance very striking, notwithstanding the depressed nose and the projecting mouth. When not otherwise occupied, he would sit quietly in her (the old woman's who tended him) lap, pulling about his toes with his fingers with the same pensive air as a human child exhibits when amusing itself in the same manner." When spoken to, Tommy, as he was called, endeavoured to do the same, gesticulating as he stood nearly erect, protruding his lips, and making a hoarse noise, "hoo, hoo," somewhat like a deaf and dumb person endeavouring to articulate. "The effect of presenting a looking-glass before him when in the midst of his play was very interesting: his attention was instantly and strongly arrested; from the utmost activity he became immovably fixed, steadfastly gazing at the mirror with eagerness and something like wonder depicted on his face. He at length looked up at me; then again gazed at the glass. The tips of my fingers appeared on one side as I held it, he put his hands and then his lips to them, then looked behind the glass, then gazed again at its surface, touched my hand again, and then applied his lips and teeth to the surface of the glass, looked behind again, and then, returning to gaze, passed his hands behind it, evidently to feel if there was any thing substantial there." A large Python, enveloped in a blanket, having been brought in a hamper into the same room, and then uncovered, Tommy cautiously advanced to the basket, peered over its edge, and instantly, with a gesture of horror and aversion, and the cry *hoo, hoo*, darted away to his keeper for protection, but no inducement could bring him back to the same spot till the Snake had been removed. To a live Tortoise he also showed aversion, but not horror. He took his rest in a sitting posture, leaning forward with folded arms, and sometimes with his face in his hands; sometimes, however, he slept prone, with his legs rather drawn up, and his head

SIMIA.

SIMIA. resting on his arms. Mr. Boderip thinks he is more intelligent than the Red Orang, and says his "intelligence is entirely different from that of a well-educated Dog, or a mere mimic, and gives me the idea of an intellect more resembling that of a human being than of any other animal, though still infinitely below it." He was docile and affectionate, very active, and passed a great deal of his time in a position nearly approaching to erect, but he was not observed to walk on his bent knuckles, as did Dr. Traill's Chimpanzee and the Red Orangs. The erect posture, however, certainly is not the natural one, but the semi-erect is more easily maintained by this than any other of the Monkey family. He died of an ulceration of the bowels in the following Spring.

β. Orang; *Pithecus*. Geoff., Owen.

Muzzle large, lengthy, and rather rounded in front; slight supraciliary ridges; forehead receding, sagittal and lambdoidal crests strong; facial angle 30° ; auricles small; twelve pairs of ribs; arms reaching nearly to the ankle-joint; no round ligament in the hip-joint; feet long and narrow, the foot thumb not reaching the root of the adjoining toe, and often having but a single joint, and that nail-less; cuspid teeth very large, and extending beyond the intervals of the opposite teeth; intermaxillary ankylosed to the maxillary bones in the second dentition.

S. Abellii, Fisch.; *Pithecus Satyrus*, Geoffr.; *L'Orang-Outang*, Cuv.; *Red Orang*. The skeleton from which Mr. Owen took his measurements is a female in the Museum of the Royal College of Surgeons, and is four feet and one and a half inches in height, but that mentioned by Dr. Clarke Abel in the *Asiatic Researches* was seven feet. According to Mr. Owen's account the Red Orang has, in common with the Mandrill, (*Papio Mormon*, Kuhl,) the forehead contracted, the hind head flattened, huge jaws strongly expanded, zygomatic arches, and largely developed cranial ridges, but the expression is less ferocious from the face being more perpendicular, from the absence of the supraciliary ridges, from the greater expansion of the cerebral cavity, and from the non-developement of the superior maxillary ridges. The crown of the skull is less flattened than in the Black Orang; the temporal ridges, passing upwards and backwards, meet at the junction of the sagittal and coronal sutures, leaving between them a smooth triangular surface, with a slight longitudinal convexity along its middle; the interparietal crest rises, as in the *Hyæna*, and other carnivorous animals above the level of the skull about one or two-thirds of an inch, and divides upon the crown into other three, which pass down one on either side into the mastoid ridges, and the third straight down half the depth of the occipital bone, and there forms a strong protuberance; the hole in which bone more nearly resembles the lower mammalia, its plane forming with a line drawn parallel to the basilar process an angle of from 15° to 20° . The jaw sockets are much larger, have a square and almost flattened surface, slightly concave laterally, and convex from before to behind, which in connection with the form of its molar teeth indicates a vegetable diet. The auditory process is more developed than in the Chimpanzee; the incisive holes placed an inch behind the incisive teeth; the nasal bone single, and of an elongated, triangular shape, but not projecting

SIMIA. beyond the nasal processes of the upper jaw bone; the space between the orbits is narrower, but the outer boundary of the orbit has a more anterior aspect, and is relatively broader and stronger than in the Chimpanzee. The general contour of the face from the nasal aperture to the incisive teeth is concave, owing to the greater developement of the intermaxillary bones; and the depth of the chin is greater. The spines of the vertebrae of the neck are of simple form, but of great length, on account of the backward position of the occipital hole, the greater developement of the face, and the general curving of the spine forwards. The sacrum or rump bone is longer, narrower, and straighter, and the ilia or hip bones more expanded and flatter than in the Chimpanzee. The clavicles are straight, or nearly so, and the blade bones more nearly resemble the human form, but the acromion is narrower and claviform; the whole upper limb is very long, the fingers reaching to the heel, but the thumb which is very slender does not reach the extremity of the metacarpal bone of the fore finger. The hind limbs are much shorter than in the Chimpanzee, and are very remarkable for having the thigh bones unconnected to the pelvis by a round ligament at the hip-joint; this causes a deterioration of support, compensated, however, by the advantage they acquire as instruments of prehension from the increase in extent and variety of motion of the lower limbs. As to the foot, the heel is short, and does not extend so far back as in the Chimpanzee; the foot thumb varies in the number of bones composing it. Camper describes seven instances in which, besides the metatarsal, it had but a single bone and no nail, whilst only one which he saw had a nail. Sir Stamford Raffles speaks of one without a nail. Mr. Owen mentions two in which there were two bones and a nail; and M. Fred. Cuvier has described another similarly circumstanced. The most important difference, however, is, that in this species the foot thumb, of which the concavity is turned more towards the toes, is shorter, not reaching the head of the metatarsal bone of the next toe, whilst in the Chimpanzee it always reaches to the second phalanx of that toe. The hair of this species is of a reddish-brown colour, thickest upon the back, but thin upon the front of the trunk. They are natives of Sumatra.

The *S. Satyrus*, Lin., is, according to Mr. Owen, an immature Orang, with the deciduous teeth, and probably the young of this species.

The first scientific description of the Red Orang is that published by Vosmaer in 1778, and in the same year Camper also produced an Essay, entitled *Kort Bericht wegens de Ontleding van verscheidene Orang-Outangs*, in which he details the results of his examination of eight individuals of this species; and his account of their anatomical structure is as faithful as Tyson's of the Black Orang.

In 1808 a female Red Orang was brought from Borneo to Paris by Captain Decaen: she was about nine or ten months old, her height from twenty-six to thirty inches; the upper extremities from the arm-pits to the tips of the fingers measured eighteen inches, but the lower, from the top of the thigh to the foot, only eight or nine. The head more nearly resembled the human than any other; the forehead was high and prominent, and the brain-case large; the eyes were as in other Monkeys, but the ears resembled those of man; the nose quite flat at its root, but slightly projecting at the top, with the nasal apertures below; the lips thin

SIMIA. and indistinct, capable of projection to a considerable distance, but there was no appearance of cheek pouches; the upper jaw contained four cutting incisive teeth, of which the middle two were twice as broad as the others, two short cuspid like the human, and three molar teeth with blunt tubercles on their crowns on either side; the lower jaw had the same number and kinds of teeth, but the incisive were of equal size. The hands had each four fingers, and a thumb exactly like those of man, except that the latter scarcely reached the first joint of the index. The feet had also four fingers and a thumb, but the latter set on further back than in man, and instead of being parallel was placed at a right angle with the fingers, the motions of which were equally free with those of the hand. The neck was very short, and the skin on its front very loose, so that the animal seemed affected with goitre when lying on its side; the belly was large; the nates very small, and without either callosity or tail. The animal was almost entirely covered with ferruginous hair, of a more or less deep hue, and more or less thick; the colour deepest on the head, fore arms, and legs, and the hair thickest on the head, back, and upper part of the arms; the belly was thinly covered, and the face still less. The nose, palms of the hands, and soles of the feet completely bare. All the fur was of a woolly texture, coarser on the head, and directed forwards; on the upper arm the hair ran down towards the elbow, but on the fore arm upwards towards the same point. The skin, especially that of the face, was thickish and wrinkled; its colour generally slate, but the ears, ocular and oral circlets, the insides of the hands and feet, the teats, and a longitudinal stripe on the right side of the belly, were coppery-flesh-colour. The eyes were brown, and the nails black. Its general structure was evidently best adapted for climbing, and whilst so employed its motions were easy, but it moved upon the ground uneasily; it first planted its hands firmly on the ground, and raising itself upon its long arms drew the body forwards, and brought the feet beyond the hands, then dropped on its rump, and again throwing out its hands as before brought the body and hind limbs forward. It never walked on its feet except when held up by one hand, and even then assisted itself with the other. Cuvier states, that he very rarely saw it tread on the whole sole of the foot, but that commonly it trod only on the outer side, taking especial care to avoid its toes being rubbed against the ground; and even when it trod upon the whole sole it always doubled under the two last joints, excepting the thumb, which always remained open and expanded. When quiet, it would sit upon its rump, with the legs folded under it like an Oriental. It slept either upon its back or side, as might chance, drawing up its legs and crossing its arms upon its chest. It loved to sleep warm, and collected all the clothes it could get to cover itself up before going to sleep. It used its hands generally for feeding itself, but occasionally took its food with the lips only, and in supping up employed its lips in the same manner as other animals which have them projectile. It was of a mild and affectionate disposition, but had great dislike to children; was fond of being caressed, and gave according to Cuvier's account *de véritables baisers*, and seemed to have great enjoyment in sucking the hands of those who approached it, although it never sucked its own. Its cry was sharp and guttural, but it was never heard except when very anxious to get any thing. All its signs were highly expressive; it threw its head forward to

show its dislike, pouted when its wishes were not complied with, and when very angry cried aloud, rolling itself upon the ground, at which time its neck was much swollen. It was very fond of two kittens, one of which it commonly carried about under its arm, and sometimes placed on its head; in this situation, puss being frightened lest she should fall, would fix her claws in the Orang's head, who bore the pain generally with great patience, but two or three times was observed to take the kitten down, examine her paws with great attention, and having found the claws, endeavour to pull them out with his fingers, but not being able to succeed attempted no further injury. It was taught to feed with a spoon, which however it did not use very handily, but its intelligence supplied the place of its awkwardness, for if it got its food in such way on its spoon that it could not take it, it gave it to its neighbour to have the food properly placed. It drank out of a glass, lifting it with both hands, and Captain Decaen states that on one occasion having observed that on putting the glass down it did not stand flat, but was likely to fall, the Orang put its hand to the side to support it.

In August, 1817, was exhibited at Exeter Change a young male of this species, which had been brought from Java by Dr. Clarke Abel, (on the return of Lord Amherst's embassy to China,) in whose hands he had been placed by Captain Methuen, who had obtained him at Banjarmassing on the South coast of Borneo, to which place he had been brought from the highlands of that island by the natives, who considered him rare. He measured from the heel to the crown of the head two feet and seven inches, and was covered with brownish-red hair, which on some part of the back was six inches and on the arms five inches long; over the back of the hands and feet the hair was short and scanty; the middle of the chest and belly, when he first arrived in England, was bare, but subsequently became hairy; the sides of the face only were hairy, like whiskers, and the chin had a scanty beard; the palms of the hands and feet were bare, and of a deep copper colour; the eyelids and margin of the mouth were of similar colour, but much paler, and the general colour of the skin at other parts was bluish-grey. The eyes were of a dark brown colour; the lids edged with lashes, and the lower saccular and wrinkled. The nose confluent with the face, except at the nostrils, which were slightly elevated, narrow, and oblique. The mouth very prominent, the lips very narrow and scarcely perceptible when the mouth was shut. The jaws were furnished with the same number of teeth, and similar to the animal described by Cuvier. The chin receded, and below it was a pendulous membrane, presenting the appearance of a double chin, and swelling out when the animal was irritated. The hands were long compared with their width; the fingers tapering and small, and the thumb not very short, hardly reaching the first joint of the fore-fingers; the foot thumbs very short, devoid of nails, and set on at a right angle close to the heel. He was quite incapable of walking erect, and his whole exterior conformation showed this; his head leaning forward, forming an angle with the back, and throwing the centre of gravity so far beyond the perpendicular, that the arms, like the fore legs of quadrupeds, were required for the support of his body. Indeed, even to maintain the erect posture for but a few seconds he was obliged to throw his arms above and behind the head to serve as a balance. His progression on the ground was precisely that described

SIMIA.

SIMIA. by M. F. Cuvier, and Dr. Abel adds, "strongly resembles a person decrepit in the legs, supported on stilts." His whole form was specially adapted to climbing, the length and pliability of his fingers and toes enabling him to grasp with great ease and steadiness, and the strength of his muscles sufficiently great to support his body for a long while by one hand or foot. In sitting on the ground he crossed his legs under him, but on a rope or tree he rested on his heels, with the body leaning forwards against the thighs. Whilst in Java he lived on fruit, especially mangostans, of which he was exceedingly fond, and drank water; but on the voyage fed indiscriminately on all kinds of meat, especially that which was raw, and was fond of bread, but preferred fruit when he could get it. He preferred coffee and tea, but would readily take wine, and was fond of spirits, as evinced by stealing the Captain's brandy bottle; but at Exeter Change he preferred milk and beer to any thing else. Whilst on shipboard he was taught "to eat with a spoon; and might be often seen sitting at the boat-swain's cabin-door enjoying his coffee, quite unembarrassed by those who observed him, and with a grotesque and sober air that seemed a burlesque on human nature." He was easily irritated when balked of food offered to him, and showed great address in obtaining it. He neither grimaced nor was prone to mischief as Monkeys generally, but was grave approaching to melancholy, and mild in his disposition. With regard to the kissing mentioned by Cuvier, and which this animal was also taught, Dr. Abel says, "This is certainly not the case with the animal I have described. He imitates the action of kissing by projecting his lips against the face of his keeper, but gives them no impulse." When excited to violent rage he would open his mouth, show his teeth, seize and bite those who were near him. "Sometimes indeed he seemed to be almost driven to desperation; and on two or three occasions committed an act which, in a rational being, would have been called the threatening of suicide. If repeatedly refused an orange when he attempted to take it he would shriek violently, and swing furiously about the ropes; then return and again endeavour to obtain it; if again refused he would roll for some time like an angry child upon the deck, uttering the most piercing screams, and then suddenly starting up rush over the side of the ship and disappear. On first witnessing this act, we thought that he had thrown himself into the sea; but on a search being made found him concealed under the chains." Whilst on the voyage he once exhibited great alarm when eight large Turtles were brought on board the ship, climbing higher than he had ever been before, and looking down upon them, projecting his long lips into the form of a Hog's snout, and uttering a noise between the croaking of a frog and the grunting of a Pig. After he had been brought to England he showed nearly the same degree of fear when a live Tortoise was brought into the room. Whilst in Java he lodged in a large tamarind tree, where he formed a bed by intertwining the smaller branches and covering them with leaves; here he would lie during the day with his head projecting, and watching what was going on below, but on seeing the approach of any fruit would descend to get his share. He retired to rest at sunset, and rose with the sun in the morning. On board of ship he slept at the mast-head, taking care to have the surface smooth before he spread out his sail, having done which he laid down on his back and turned it over him.

If he could not find a sail, he would either steal one of the sailor's jackets or empty a hammock of its blankets to make up his bed. Of some small Monkeys which were brought over with him he took but little notice whilst observed, but Dr. Abel thinks he made more free with them when unnoticed, as on one occasion he was caught playing with a young male Monkey; but although the Monkeys had a great predilection for him, and when broken loose were found about his resting place, yet their intercourse did not seem that of equals, as the Orang Outang never condescended to romp with them as he did with the ship's boys; and once he attempted to throw overboard a cage containing three of them. He died on the 1st of April, 1819, having been an object of great interest and curiosity to the public, and the first of his species which had been exhibited alive in England.

Since that time several have been brought to England.

In the Spring of 1835, a female, one of four brought from Calcutta, the others having died, was exhibited at the Surrey Zoological Gardens: her height was only two feet and two inches; of which the fore limbs from the shoulder to the tip of the middle finger measured twenty-one inches.

At the present time, July, 1838, the Zoological Society have in their gardens at the Regent's Park two individuals of this species, the one a female of this species, and the same height as the last mentioned; her foot thumbs have no nails. When left to herself upon the ground, and induced to walk, she supports herself upon her fore limbs, resting on her bent knuckles, the hind limbs being at the same time bent outwards, and the outside of the foot being applied to the ground instead of the sole. But when she moves more quickly, the body is swung forwards on the fore limbs, as already described. The other is a male, and not so large; he was brought to the gardens in the beginning of June last.

Instances of larger individuals of this species exist in several collections: in the Museum of the College of Surgeons, as already stated, is the skeleton of a female measuring four feet one inch and a half; in that of Leyden are some of still greater size; and but lately, M. Solomon Muller has brought to Heidelberg a specimen from Borneo which measures between six and seven feet in height, and thus corroborates the interesting narrative given by Dr. Clarke Abel in the *Asiatic Researches*, vol. xv. 1825, of which the following is an extract:—

"A boat party from the brig Mary Ann Sophia having landed for the purpose of obtaining water at Ramboom, near Touraman, on the North-West coast of Sumatra, where there was much cultivated ground and but few trees, discovered on one of the trees a gigantic animal of the Monkey tribe. On their approach he came to the ground, but when pursued he fled to a distant tree, exhibiting as he moved the appearance of a tall, manlike figure covered with shining brown hair, walking erect with a waddling gait, but sometimes accelerating his motion with his hands, and occasionally impelling himself forward with the bough of a tree. Walking upon the ground, in which even when assisted by his hands or a stick, his gait was slow and vacillating, was evidently not that for which his organization was best adapted; this was rendered manifest by the agility he displayed when on reaching a clump of trees he ascended by one spring to a lofty branch, and springing from branch to branch with the ease and alacrity

SIMIA. of a common Monkey, passed from tree to tree with speed as rapid as the progress of a swift horse. Considerable difficulty, therefore, occurred in getting aim at him, and it was only by cutting down tree after tree so as to lessen his range that this could be obtained. At last, however, having received five balls, he sunk on the branch of a tree, and vomited a considerable quantity of blood. The ammunition having been exhausted, his assailants cut down the tree on which he lay, expecting to secure him, but whilst it was falling, to their great surprise, he sprung with apparently undiminished vigour to a neighbouring tree; and this feat was repeated till they had cut down all the trees, which alone brought him to the ground, where he exhibited great strength and agility till overcome by stoning and spearing." When nearly dying, "he seized a spear made of a supple wood, which would have withstood the strength of the stoutest man, and shivered it in pieces; in the words of the narrator, he broke it as if it had been a carrot." The man-like expression of his countenance, and the piteous manner of placing his hands upon his wounds, distressed the feelings of his assailants, "and almost made them question the nature of the act they were committing." This animal was said by his captors to be about eight feet high, but Captain Cornfoot, to whom the vessel belonged, told Dr. Abel that when brought on board his ship "he was full a head taller than any man on board, measuring seven feet in what might be called his ordinary standing posture, and eight feet when suspended for the purpose of being skinned. The difference between the two Dr. Abel properly accounts for by referring the shorter measure to "the natural bending posture of the Ape tribe." The length of the head from the point of the chin to the top of the forehead was nine inches, and from the mouth to the setting on of the neck four and a half inches. The face was bare, much wrinkled, and dark lead-coloured, having only a few straggling short downy hairs, except at the lower part, where the beard springing from the upper lip near the corners of the mouth in shape of mustachios, and about three inches long, descended to intermingle with that on the chin, of a chestnut colour, and very wavy appearance. In the words of his biographer, "the chin was fringed from the extremity of one ear to the other with a beard that curled neatly on each side, and formed altogether an ornament rather than a frightful appendage to his visage." The mouth projected considerably in a mamillary form, and its opening very large, being six inches in circumference; the lips were half an inch thick, though when closed they appeared narrow. The nose was scarcely raised above the face, and had the two nostrils placed obliquely side by side; the eyes small, about an inch apart, and the lids well fringed with lashes; the ears an inch and a half long, scarcely an inch wide, lying close to the head, and resembling those of man, except in the deficiency of the lower lobe; the hair of the head five inches long, reddish-brown, and growing from behind forwards; the skin, of a dark lead colour, was covered with very long hair, commencing at the back of the last joints of the fingers, it inclined a little back towards the wrists, and then directly upwards along the fore arm, but on the upper arm downwards, and from its length hanging shaggy below the arm; from the shoulders in large, long, massy tufts, which, mingling with the long hair on the back, formed a long mass to the centre of the body; the flanks were also covered with long hair which descended

below the rump and thighs, and the back of the feet as far as the last joints of the toes, were also clad in long brown hair; on the upper part of the back the hair is much thinner than elsewhere, and small tufts curling abruptly upwards at its junction with the neck correspond to the direction of the hair at the back of the head. Upon the chest and belly the skin was probably comparatively bare of hair. The arms were long in proportion to the animal's height, and in relation to those of man; but his legs were in some respects much shorter. The length of the hand from the tip of the middle finger to the wrist was twelve inches, and of the finger itself six inches and three-quarters; the thumb was two and a half inches, and reached to the first joint of the fore finger; the nails were strong, convex, and black; the palms naked to the wrists, and of the same colour as the face. The foot measured from the heel to the top of the middle toe fourteen inches, the toe itself six inches, and the foot thumb four and a half inches, set on nearly at right angles with the foot, and proportionally very short; the soles bare. The teeth were thirty-two in number, four incisive, two cuspid, and ten molar in each jaw, and closely resembling each other both above and below, except that the middle two upper incisives were twice as broad as the lateral ones; the enamel exposed on the incisive was to the depth of seven-eighths of an inch, and on the cuspid to an inch and an eighth, giving the relative height of the body of each tooth.

S. Wurmbii, Fisch.; *Pongo Wurmbii*, Kuhl; *Grand Orang-Outang*, Geoffr.; *Dusky Orang*. This species resembles the last in stature, and in the large size of its cuspid teeth, but differs from it, according to Mr. Owen, in "the more oblique plane of the orbits;" and, consequently, the straightness of the contour of the skull between the forehead and incisive teeth. The external boundaries of the orbits are broad, have a rough, irregular surface, probably in consequence of the callous protuberances which characterise the sides of the face in the adult male. Wurmb says that these protuberances exist in both sexes, but that they are less developed in the female. The symphysis of the lower jaw is also proportionally longer than in the last species. The body is covered with loose, long hair of a deep fuscous colour, in some parts approaching to black. The hands are reddish. It is a native of Borneo. To this species there now appears but little doubt that the animal called the *Pongo* belongs. The first notice we have of it, rather apocryphal however, is that in Purchas's *Pilgrims*; he says, "This Pongo is in all its proportions like a man, but that he is more like a giant creature than a man; for he is very tall, and hath a man's face, hollow-eyed, with long hair upon his brows. His face and ears are without hair, and his hands also. His body is full of hair, but not very thick, and it is of a dunnish colour. He differeth not from a man but in his legs, for he hath no calf. He goeth always on his legs, and carries his hands clasped on the nape of his neck, when he goeth upon the ground. They sleep in the trees, and build shelters for the rain. They feed upon fruits that they find in the woods, and upon nuts; for they eat no kind of flesh. They cannot speak, and have no understanding, no more than a beast. The people of the country, when they travel in the woods, make fires, where they sleep in the night; and in the morning, when they are gone, the *Pongoes* will come and set about the fire till it goeth out; for they have no understanding to lay the wood together. They go many

SIMIA.

SIMIA. together, and kill many *negroes* that travel in the woods. Many times they fall upon Elephants which come to feed where they be, and so beat them with their clubbed fists and pieces of wood that they will run away roaring from them. These *Pongoes* are never taken alive, because they are so strong that ten men cannot hold one of them. But they take many of their young ones with poisoned arrows. The young *Pongo* hangeth on his mother's belly with his hands fast clasped about hers, so that when any of the country people kill any of the females, they take the young one which hangeth fast upon his mother. When they die among themselves, they cover the dead with great heaps of boughs and wood, which is commonly found in the forests."

To Wurmb, however, is due the honour of having first given an authentic account of this animal in the *Verhandelengen van het Bataviaasch Genootschapen*, vol. ii., which being a book of difficult access, the following extract may not be misplaced. After some general observations, he says, "The older and best informed Javanese know of no other Orang-Outangs than those which are common Apes; and they only include in these two kinds of tailless Monkeys which Buffon arranges under the heads of *Pongos* and *Jockos*. Both come almost entirely from Borneo, and whatever travellers may assert, are as rarely found in our island as the Lions and Elephants marked on the Maps of Great Java.".... "The smaller kind, called by Buffon, for brevity, by the Congoese name *Jocko*, are often brought here by the Banjareese vessels. One of them was conveyed alive to Europe in 1776, and is very circumstantially described by Vosmaer," (*Description de l'Orang-Outang*, Amsterdam, 1778.).... "But the Orang-Outangs of the larger kind, the *Pongos* of Buffon, are very scarce even in Borneo; and, owing to the great difficulty of overcoming these strong and savage animals, we have not for the last twenty years been able to obtain one; nor should we have now succeeded but for the zealous co-operation of M. Palm, Resident at Rembang, who having been despatched by the authorities here on an important mission to Luccadana, availed himself of the opportunity to inquire about these animals, and at last, after much trouble, procuring one, sent it preserved in arrack to the Batavian Society here. This I shall now describe, and show how useless it is to seek in this kind of Orang-Outang for the *Bosch-mensch* of Bontius. The head of the Great Borneo Orang-Outang is rather pointed at the back part, the muzzle projects, and on either cheek is a broad fleshy protuberance or jowl larger than the breadth of the head; the ears are small, naked, and flat on the head; the eyes small and prominent; the nose without any remarkable projection consists principally of two long oblique and parallel slits or apertures; the mouth is furnished with thick lips, and has no cheek-pouches; the tongue thick and broad, and on it were found some remains of vegetables on which the animal had been feeding. In each jaw are four broad incisive teeth between two tusks thick and projecting above them. The face is black-brown and uncovered with hair, except a very thin beard. The neck very short. The breast much broader than the hips. On the rump there is neither tail nor any appendage. The hands are long, and on their inside, as well as the fingers, of a black-brown colour and without hair. The legs short and slender, but very muscular. The toes and fingers furnished with black nails very like those of man, except those of the great

toes which are much smaller and shorter, and probably caused by the great use of those limbs. The breast and belly are bare, and the rest of the body, except the face, ears, and insides of the hands, feet, and fingers, covered with thin brown hair, in some parts a finger long. Beneath the skin of the throat and chest are found two sacks, of which one occupied the greatest part of the chest, and as well as the other, which was smaller and contained within the large one, communicated with the windpipe. As to the capture of this animal, M. Palm relates that he defended himself so strenuously with heavy boughs which he broke off from the trees, that there was no chance of taking him alive. This propensity is common to this animal and to the African *Pongos*, which, according to Battee, attack even Elephants with such weapons and drive them from their usual resorts."

Wurmb has given a very full description of the dimensions of this animal, which was a male, and the following are some of the most important:—the total length from the soles of the feet to the top of the head was three feet ten inches and three-eighths; but when first killed it was said to have measured forty-nine inches. The circumference of the body around the shoulders three feet and five-eighths of an inch; around the chest three feet three inches and a half; and around the hips two feet four inches and a quarter. Total length of the fore limbs from the shoulders to the tips of the fingers three feet and half an inch, of which the hand from the wrist to the tip of the middle finger measured nine inches and three-quarters, the fore arm fourteen inches and a quarter, and the upper arm twelve inches and a half. The hind limbs measured, from the top of the thigh-bone to the heel, twenty inches and three-eighths, of which the thigh had nine inches and a quarter, and the leg, from the knee to the sole, eleven inches and one-eighth; the sole measured, from the heel to the tip of the third toe, eleven inches and three-eighths. The following are the principal dimensions of the head:—the vertical diameter was ten inches and three-eighths; the lateral transverse diameter at three inches and three-eighths below the crown six inches and a half, and at six inches and five-eighths below the same point nine inches and a half; the length from the eye-brows to the back of the head six inches and three-eighths, and from the top of the eye-brows to the middle of the upper lip four inches and seven-eighths; the projection of the snout three inches and a half; the breadth of each orbit one inch and one-eighth, and between the two orbits the same.

In the third volume of the same *Transactions*, Wurmb gives the dimensions of a female *Pongo*, and states that the principal difference consists in the female having the hands and feet longer, and in the jowls or fleshy protuberances of the cheeks being of a smaller size; in all other respects they are the same, and the whole breast is covered with an air-sack as in the male.

Audebert has given an engraving of the skeleton of the *Pongo* described by Wurmb, and sent by him to Holland, but states that Wurmb is incorrect in considering the *Pongo* of Buffon as identical with that which he has described; the *Pongo* of the latter writer being an African animal, not more than two and a half, or at most three feet, and already noticed as the Pigmy of Tyson.

It has been matter of great dispute among naturalists whether the *Pongo* of Wurmb was a distinct species, or only an adult Orang. Geoffroy St. Hilaire held the former opinion in a paper, *Sur les Orang-Outangs*, an

SIMIA.

SIMIA. extract from which is to be found in the *Bulletin des Sciences par la Société Philomathique* for 1797, in which, after describing the various points of difference between the Pongo and the Orangs, he says, that "Wurmb's Orang approaches the Mandrills and even surpasses them in the size of its jaws, the bulk of its teeth, and the great length of the cuspid teeth, which circumstances connect it with the Carnivora, besides that from its occiput, as in Lions and Tigers, there are three crests, tolerably distinct and solid, two running towards the auditory holes, and the third passing forward and bifurcating on the forehead." On the other hand, Mr. Owen, in a paper given to the Zoological Society in November, 1830, and more at large in another paper contained in the first volume of their *Transactions*, contends for, and proves satisfactorily that the Pongo of Wurmb is only an adult Orang, pointing out several coincidences in the skulls of a young Orang and of the Pongo, which are independent of the second dentition, viz., the absence of projecting supraciliary ridges, the presence of double condyloid holes, of numerous infra-orbitary and molar holes; the same disposition of cranial sutures and form of nasal bone, and the same difference from the Chimpanzee in the contraction of the interorbital space. He then follows out the progress of dentition and shows Rudolphi's inference, that the adult Orang must equal the Pongo in size, on account of the large size of the germs of the second or permanent set of teeth, is correct; and further observing, that the large size of the jaws is dependent on the great developement of the cuspid teeth; he states that the crests of the cranium and the facial angle appear to be the result of the action of the powerful muscles of manducation, and of the developement of the extremely large laniarii or euspid teeth. Another remarkable character, viz. the absence of a round ligament to connect the head of the thighbone with the pelvis, observed by Meckel as occurring both in the Pongo and Orang, still further tends to support the identity of the two animals.

Fischer, in his notice of this species, states in a note, *sunt qui hanc speciem pro S. Satyro adulta ducant*; but adds, *permulta tamen sententiæ isti repugnare videntur*. Mr. Owen also observes, "that the species called *S. Satyrus* by Linnæus is an Orang Utan in the immature state, and with deciduous teeth," but does not mention to which species it belongs.

SIMIA. *S. Morio*, Owen. The existence of this species rests only upon the examination of a skull by Mr. Owen, and which "at first suggests the idea of its being an intermediate stage of growth between the young and adult *Simia Satyrus* or Pongo." The examination of the teeth, however, showed that they were larger than the deciduous or first set, and of different proportionate size among themselves than in the permanent set of *S. Satyrus*; their molar and cuspid being smaller, and the cuspid much smaller, whilst the upper incisive have nearly, and the lower fully, the same size as those of the Great Pongo. The cerebral portion of the skull equalled that of the Pongo, but its maxillary portion was smaller; so that the cranium rising above the orbits, and being like the Pongo more convex on its coronal aspect than the Chimpanzee, and wanting the prominent supraciliary ridge, it has a more anthropoid character. Rudiments of the ridges characterising the mature Pongo are also found, but not so much developed, and there is not any mesial occipital ridge. The temporal bones join the frontal as in the Chimpanzee; but the occipital hole is more posterior than in the Chimpanzee and less than in the Pongo, and its plane less oblique than in the latter species. The principal distinction, however, of this skull from the Pongos, either of Borneo or Sumatra, is derived from the smaller developement of their cuspid teeth, which are so placed that those of the lower jaw are worn down by rubbing against the incisive teeth. Mr. Owen considers that the size of the cuspid teeth in this species is less, because that from the animal's bulk, which he presumes to be at least one-third less than either of the two last named species, it is more easy of concealment than either of them, and does not therefore need such defensive organs as they are provided with, on account of being less capable of secreting themselves from the predaceous animals which are likely to attack them.

For a *simoniake*,
Is but a hermoniake,
And no more ye make
Of symony men say
But a childes play.

Skelton. *Colin Clout.*

Whose examination and proofes being sent vnto the pope, he pronounced him an heretike, schismaticke, and *simoniake*, and declared him accursed, condemning him to perpetuall prison.

Holinshed. *Historie of Scotland*, Anno 1477. James III.

It is but reasonable to believe, the Holy Ghost will not descend upon the *simoniackal*, unchaste concubinaries, schismaticks, and scandalous priests, and excommunicate.

Taylor. *Sermon* 6. vol. i. p. 120.

Benefices—disposed of, if not *simoniackally*, yet at least unworthily.

Burnet. *History of his Own Time.*

Simony was not unknown in those times; and the clergy sometimes bought what they intended to sell. It appears that the bishopric of Carthage was purchased by a wealthy matron, named Lucilla, for her servant Majorinus. The price was 400 folles, about £2400.

Gibbon. *History of the Roman Empire*, vol. ii. ch. xvi. p. 455.

SIMONY, in Law, is the buying and selling of holy orders or of any ecclesiastical benefice, dignity, or promotion. The name is derived from the resemblance which the offence bears to the sin of Simon Magus. The cognizance of Simony, and punishment of Simoniackal offences, appears to have originally belonged to the Ecclesiastical Courts alone, though before the Statutes against Simony, the courts of common law would have held Simoniackal contracts void, as being *contra bonos mores* and against sound policy. But since the passing of the Statute 31 Elizabeth, c. 6, questions relating to Simony have been principally discussed in the courts of common law.

The effect of the common law is aided by the Statutes of Eliz. and 12 Anne, c. 12, and may be stated to be;—

1. That to purchase a presentation, when the benefice is actually vacant, is Simony.

2. That for a clerk to purchase either in his own name or others the next presentation, and be thereupon presented at any future time to the benefice, is Simony.

3. That the contract for the sale of a next presentation, the parties at the time knowing the incumbent to be at the point of death, is Simony, and the presentation void, though the clerk be innocent.

4. That the vacant presentation cannot be conveyed to the grantee, when an advowson is purchased during a vacancy.

5. That the corrupt purchase of an advowson during a vacancy, for the purpose of enabling the purchaser to avail himself of the vacant presentation, is Simony.

6. That though a presentation be void, on the ground that the patron has been guilty of Simony, yet the clerk so presented, if innocent, incurs no forfeiture or disability, other than that his presentation is void.

7. That a bond given by a clerk on receiving a benefice, conditioned to resign generally upon the patron's request, is void.

8. That a bond so given, conditioned to resign in favour of some particular person or persons, is void also, unless when it falls within the protection of the Statutes

SIMONY. 7 and 8 George IV. c. 25, and 9 George IV. c. 94, the effect of which is stated below.

9. That it is not necessary to constitute Simony, that the purchase of a presentation should be a purchase for money; and any reward, promise, contract, gift, profit, or benefit accruing to the patron directly or indirectly, in consideration of which he makes the presentation, is, equally with money, Simoniactal.

10. That a contract made when the church is full to give money when it is void for the presentation, and the purchase of the next presentation when the church is full, with intent to present a particular person, have both been held offences within the Statutes.

11. That if the patron is guilty of Simony in presenting, the presentation is void, and the King may present for that turn, and the patron forfeits double the value of one year's profit of the benefice.

12. That if the clerk die without having been convicted of Simony, and if the patron has not been convicted in the lifetime of the clerk, the forfeiture shall not be set up to the prejudice of any other person than the patron originally guilty; the effect of which is, that if the patronage has passed from the Simoniactal patron and vested in another, the Crown loses the right of presentation. This is by Statute 1 William and Mary, c. 16.

13. That if the clerk is guilty of Simony in procuring his presentation, his presentation is void, he forfeits double the value of one year's profit of the benefice, and he is for ever disabled from being presented to the same benefice again.

14. That if any resignation or exchange be effected in consideration of money or any other benefit, both the giver and taker of the benefit shall forfeit double the value thereof.

The Statutes 7 and 8 George IV. and 9 George IV. above referred to, were passed in consequence of a decision of the House of Lords in the case of *Fletcher v. Lord Sondes*, which was brought before them upon a Writ of Error. The House decided that a bond conditioned to resign in favour of one of two persons named in the bond was void. Before that decision an opinion very generally prevailed that such bonds were good, and as many such bonds were in existence the Legislature interposed to give them validity. By the Statute 7 and 8 George IV. validity was given to bonds and agreements made prior to the 9th day of April, 1827, and intended to secure the resignation of the incumbent in favour of one person named, or one out of two persons named, and also to the presentations which had been made in consideration of such bonds and agreements. And it was also provided, that the resignation in pursuance of such bond shall be void, unless the person named be presented within six months after the resignation. As this Act only gave validity to by-gone transactions, the Act of 9 George IV. was passed to give validity to such transactions in future. But the last-mentioned Statute requires that such bonds or contracts shall be deposited in the registry of the diocese within two calendar months after their date, otherwise they are void, and it does not extend to bonds or contracts for resignation entered into after presentation. If a clerk, having been Simoniactal presented, is also instituted and inducted, the King cannot present until the clerk be removed by legal process, which is commonly a *quare impedit*.

In addition to the protections so provided against

Simony by Statute, there is a stringent oath administered under the canonical law to persons presented to ecclesiastical benefices, which is in the following terms:—

I, A. B., do swear that I have made no Simoniactal payment or promise, directly or indirectly, by myself or by any other to my knowledge or with my consent, to any person or persons whatsoever, for or concerning the procuring and obtaining of such ecclesiastical dignity, place, preferment, office, or living, (here that to which the party is to be admitted, instituted, collated, installed, or confirmed is to be particularly named,) nor will at any time hereafter perform or satisfy any such payment, contract, or promise made by any other without my knowledge, so help me God, through Jesus Christ.

If the above oath be taken falsely, the party may be indicted for perjury.

SIMOOM or **SAMIEL**, (*poison*), a hot and pestilential wind which blows at the period of the equinoxes on the borders of Arabia and Syria, in the vicinity of Mecca, along the banks of the Euphrates and in the level parts of Persia, and is fatal to animal life. It comes over the burning sands of the deserts, and the phenomena which indicate its approach are singularly awful. The Eastern part of the horizon assumes a lurid and yellowish aspect; dense sulphureous exhalations appear to rise from the ground, they are whirled round in rapid gyrations, and then ascending into the air involve the sky in a dense haze. Hissing and crackling noises are heard, and a hot current of air accompanied by low sounds rushes over the ground. The beasts of the field manifest their terror by howling, and bend their heads to the earth. When the burning current overtakes caravans in the desert, the camels instinctively plunge their mouths and noses into the sand; travellers have learned from them the only means of escape, which is to fall on the face, keep the mouth close to the ground, and remain perfectly motionless until the pestilential current has passed over, which it generally does in less than half an hour. It is succeeded, however, by a suffocating breeze which affects all exposed to it with great difficulty of breathing and despondency of spirits. Persons in boats, or bathing in a stream, have nothing to fear from the pestilential current, and hence many have plausibly reasoned that its phenomena are connected with electricity. The bodies of those who perish by the Simoom swell, and very quickly begin to putrefy; and this circumstance distinguishes it from the Khamsin, a hot and dangerous South-West wind, which blows periodically between July 15th and August 15th, in Egypt, Arabia, on the shores of the Red Sea and the Persian Gulf. Its appearances are very similar to those of the Simoom, but the bodies of its victims are scorched and dried up so that they putrefy very slowly. Both differ from the Harmattan, a hot wind on the Western shores of Africa, which, though it destroys vegetable life, is found to produce no insalubrious effect on the human constitution. The Sirocco, which blows in Sicily and Italy, is generally supposed to be the Simoom tempered by its passage across the waters of the Mediterranean.

SIMPER, *v.*

SI'MPER,

SI'MPERER,

SI'MPERING, *n.*

SI'MPERINGLY.

Perhaps from the A. S. *smere-ian*, *smere-ian*; Ger. *schmieren*, to smirk.

To smirk or smile affectedly, conceitedly, foolishly.

SIMONY.
SIMPER.

Serenius derives from Sw. *semper*, *semner*; which, Ihre says, is spoken of any one who affects extraordinary moderation in his food. *Semner*, Gr. *σεμνος*.

SIMPER. With a made countenance about her mouth, between *simpering* and smiling, her head bowed somewhat down, (she) seemed to

He clotheth riches (as men seyne)
Under the *simplest* of pouerte,
And doth to seme of great deserte
Thynge, which is littel worthe within.

Gower. Conf. Am. book i.

These prestes hadden wel conceiued,
That she was of great holynesse,
And with a counterfeit *simplesse*,
Whiche hid was in a fals courage,
Feigned an heuently message.

Id. Ib. book i.

To fight or for to make cheste
It thought them then not honeste;
But of *simplicitee* and pacience
Thei maden then no defence.

Id. Ib. Prologue.

Phisicians have in store
Their *simples* to compownd,
and match in mixture so,
As ech disease from sicklie corse
they can enforce to go.

Turbervile. That all Hurtes, &c.

Sayng, how it was a great *symplesnes* to beleue so lyghtly such
fleyng wordes.

Lord Berners. Froissart. Cronycle, vol. i. ch. 320.

Before this cite ther were many assaulted, and sore skrymysshes,
nygh euery daye, for they of the cite wolde nat yelde them vp
symply, for alwaies they thought to be rescued.

Id. Ib. vol. i. ch. xxvi.

Thus having past all perill, I was come
Within the compasse of that island's space;
The which did seeme, unto my *simple* doome,
The ouely pleasant and delightfull place
That ever troden was of footings trace.

Spenser. Faerie Queene, book iv. can. 10.

On every hill side, and each vale he lookes,
If 'mongst their store of *simples* may be found
An hearbe to draw and heale his smarting wound.

Browne. Britannia's Pastorals, book ii. song 4.

Go therefore thou, with all thy stirring train
Of swelling sciences, the gifts of grief;
Go loose the links of that soul-binding chain,
Enlarge this uninquisitive belief;
Call up men's spirits, that *simplesness* retain.

Daniel. History of Civil Wars, book vi.

See, how she paceth forth in virgin-white,
Like what she is, the daughter of a duke,
And sister; darting forth a dazzling light
On all that come her *simplesse* to rebuke.

Ben Jonson. Epithalamion.

And here in making mention of this matter, I cannot but detect
the knaverie of these herbarists and *simplers*.

Holland. Plinie, book xxi. ch. xx.

Impatient *simplers* climbe for blossomes here;
When dewes (heav'n's secret milk) in unseen shou'rs
First feed the early childhood of the year;
And in ripe summer, stoop for hearbs and flou'rs.

Davenant. Gondibert, book ii. can. 5.

O happy men! you ever did possesse
No wisdom, but was mixt with *simplesse*;
So, wanting malice, and from folly free,
Since reason went with your *simplicitie*.

Browne. Britannia's Pastorals, book ii. song 3.

Sometimes the veriest *simplicians* are most lucky, the wisest po-
liticians least, especially where orders are unobserved.

Archdeacon Arnway. Tab. of Mod. (1661,) p. 44.

SIMPLE.

SIMPLE. That precept of the Pythagoreans, *simplifie* yourself, reduce yourself to one, how wise, how holy, how true is it? What a sure foundation is it of life, liberty, and easie sagacity in things belonging to vertue, religion, and justice?

SIMPLOCARIA.

More. Writings. The Defence of the Moral Cabbala, part iv. ch. i.

A plant so unlike a rose, it hath been mistaken by some good *simplist* for amomum.

Sir Thomas Brown. Vulgar Errours, book ii. ch. vi. p. 112.

Though the qualities that affect our senses are, in the things themselves, so united and blended, that there is no separation, no distance between them; yet 'tis plain, the ideas they produce in the mind enter by the senses *simple* and unmix'd.

Locke. Works, vol. i. p. 39. *Of Simple Ideas*, ch. ii.

The first who fell, beneath my javelin bled,
King Augias' son, and spouse of Agamede;
(She that all *simples*' healing virtues knew,
And every herb that drinks the morning dew.)

Pope. Homer. Iliad, book xi.

I know that here are several sorts of medicinal herbs made use of by the natives, who go often a *simpling*, seeming to understand their virtues much, and making great use of them.

Dampier. Voyages, vol. ii. part i. ch. vii. p. 126.

They divided the divine attributes into so many persons; because the infirmity of a human mind cannot sufficiently conceive, or explain, so much power and action in a *simplicity* so great and undivisible as that of God.

Pope. Nature of Epic Poetry, sec. 1.

Philosophers have generally advised men to shun needless occupations, as the certain impediments of a good and happy life; they bid us endeavour to *simplify* ourselves, or to get into a condition requiring of us the least that can be to do.

Barrow. Sermon 34. vol. ii.

While botanists, all cold to smiles and dimpling,

Forsake the fair, and patiently—go *simpling*.

Goldsmith. Prologue to Zobeide.

This being of a more balsamic nature than the other, proves that these people have some knowledge of *simples*.

Cook. Voyages, vol. iv. book iii. ch. ii. p. 14.

They look upon persons employing their time in making verses, pictures, or in reading books, as *simpletons* easily to be deceived; as much their natural prey, as the pigeon is to the kite.

Knox. Works, vol. iii. p. 266. *Evening 60*.

By imitation, I do not mean imitation in its largest sense, but *simply* the following of other masters, and the advantage to be drawn from the study of their works.

Sir Joshua Reynolds. Works, vol. i. p. 146. *Discourse 6*.

The *simplification* of machines renders them more and more perfect, but this *simplification* of the rudiments of languages renders them more and more imperfect, and less proper for many of the purposes of language; and this for the following reasons.

Smith. Moral Sentiments, vol. ii. p. 387.

SIMPLOCARIA, in *Zoology*, a genus of *Coleopterous* insects.

Generic character. *Antennæ* longer than the thorax, eleven-jointed, basal joint robust, elongate, second less robust, subconic, third slender, elongate, subclavate, fourth and fifth of equal length, short, subovate, sixth rather short, the remainder forming an elongate, gradually incrassated club, the four basal joints of which are transverse, the apical one very large, ovate; *palpi* four, with the terminal joint ovate-acute; head very convex; *thorax* rounded behind; body globose-ovate, scantily clothed with a fine pubescence; legs rather elongate, slender; *femora* slightly compressed; *tibiæ* a little dilated and bent, simple, without grooves to receive the tarsi, which are somewhat elongate and pentamerous.

Type of the genus, *Byrrhus semistriatus*, Illiger; Stephens, *Illust. Britt. Ent. (Mandibulata)*, vol. iii. p. 140. Three species, of which two are British, inhabiting the roots of grass near London.

SIMSIA, in *Botany*, a genus so called by R. Brown in honour of the late John Sims, M.D.; it belongs to

the class *Tetrandria*, order *Monogynia*, and natural order *Proteaceæ*. *Generic character*: perianth four-leaved, regular, with reflexed lamina; hypogynous scales wanting; stamens exserted; anthers at length free, but at first cohering; stigma dilated, concave; nut obconical.

This genus consists of two known species; they are humble glabrous shrubs, natives of the South coast of New Holland, with alternate, filiform, dichotomous leaves, and small globose terminal heads of yellow flowers.

SIMULACHRE, Fr. *simulacre*; It. *simulacro*; Sp. *simulacro*; Lat. *simulachrum*, any thing (figure, image) made in likeness (*similis*) of some other thing.

Phidias the Atheniense, whom all wryters do commend, made of yuory the *simulachre* or image of Jupiter, honoured by the gentiles on the hyghe hille of Olympus.

Sir Thomas Elyot. Governour, book i. ch. viii. p. 26.

SIMULATE, } Fr. *simuler*; It. *simulare*; Sp. *simular*; Lat. *simulare*, (from *similis*, like,) to form, to feign, to counterfeit a likeness. See **DISSEMBLE**.

To feign that to be which is not; to put on or assume false appearances; generally, to feign, to pretend, to counterfeit.

The monkes were not threatened to be undre this curse, because they had vowed a *simulate* chastyete.

Bale. The Actes of English Votaries, part ii.

The royalists were at night fain to hang lighted matches on the hedges, (so to *simulate* their abroad thereabouts.)

Fuller. Worthies. Berkshire.

As Christ in the Gospel rebuketh the Pharises aboue al other that were open sinners, and calleth them ypocrites, that is to saye, *simulars* and painted sepulcres.

Udall. Prologue to the Romaines.

I feare me some maintaine blindnes more with theyr *simulation*, then they open the lyght with theyr preaching,

Frith. Workes, p. 61. *Agaynst Rastell. Prologue*.

Hide thee, thou bloody hand;

Thou periur'd, and thou *simular* of vertue

That art incestuous. *Shakspeare. Lear*, fol. 296.

A generall custome of *simulation* (which is this last degree) is a vice, rising either of a naturall falsenesse or fearfulness; or of a minde that hath some maine faults; which because a man must needs disguise, it maketh him practice *simulation* in other things, lest his hand should be out of use.

Bacon. Of Simulation and Dissimulation.

What though the first smooth Cæsar's arts caress'd

Merit and virtue, *simulating* me?

Severely tender! cruelly humane!

The chain to clinch, and make it softer sit

On the new-broken still ferocious state.

Thomson. Liberty, part iii.

Simulation and *dissimulation*, for instance, are the chief arts of cunning; the first will be esteemed always by a wise man unworthy of him, and will be therefore avoided by him, in every possible case; for, to resume my Lord Bacon's comparison, *simulation* is put on that we may look into the cards of another, whereas *dissimulation* intends nothing more than to hide our own.

Bolingbroke. Works, vol. iv. p. 278. *Idea of a Patriot King*.

SIMULIUM, in *Zoology*, a genus of *Dipterous* insects.

Generic character. *Antennæ* porrect, cylindrical, eleven-jointed, the two basal joints distinct from the others; *palpi* exserted, incurved, cylindric, four-jointed, the basal joint shortest, the apical one slightly elongated and slender; eyes round; *ocelli* wanting; wings two, broad, incumbent, parallel; *tarsi* with the basal joint as long as the other joints united.

Type of the genus, *Culex reptans*, Linnæus; Meigen, *Europ. Zweif. Insect.* vol. i. p. 289. pl. x. fig. 6—12. Twenty species, the majority of which inhabit England.

SIMPLOCARIA.

TA-
NEOUS.
—
SIN.

SIMULTANEOUS, } The Barb. Lat. *simulta-*
SIMULTA'NEOUSLY. } *neus* is *similatus*. See SIMU-
LATE. Our own word, and the modern French *simul-*
tanée, are from the Lat. *simul*; being or acting at the
same time, in unison.

All that we have need of, in the performing of these, is only
God's concurrence, whether previous or *simultaneous*.

Hammond. *Works*, vol. iv. fol. 570.

He introduces the deities of both acting *simultaneously*.

Shenstone.

SIMULTY, Fr. *simulté*; Lat. *simultas*, from *simu-*
litas, or *similitas*, applied to the feeling of envy or hate,
that arises between those who have *similar* pursuits, or
objects of rivalry.

Nor seek to get his patron's favour, by embarking himself in
the factions of the family; to enquire after domestic *simulties*,
their sports or affections.

Ben Jonson. *Discoveries*, p. 209.

SIMYRA, in *Zoology*, a genus of *Lepidopterous*
insects.

Generic character. *Antennæ* simple in both sexes,
of the male stout, and pubescent within; *palpi* rather
stout, slightly ascending, somewhat approximating, and
very acute at the apex, or parallel and slightly acute, the
basal joints clothed with woolly hairs, the terminal
scarcely exposed; basal joint as long as the terminal,
subovate, stout, second equal in length to the other two,
slender; terminal elongate, slender, acute; *maxillæ*
short; head small; eyes small, naked; *thorax* rather
stout, woolly, not crested; *abdomen* moderate, more
robust in the females, the sides and apex producing some
tufts of hair; wings entire, deflexed during repose; the
anterior simple, not very long, broad, elongate-trian-
gular, somewhat retuse or sublanceolate, with the apex
acute, the surface pale, suffused with dusky atoms; legs
moderate; anterior *tibiæ* in the male with a long spur.
Caterpillar slightly hairy; *pupa* inclosed in a papyra-
ceous web.

Type of the genus, *Noctua venosa*, Borkhausen; Ste-
phens, *Illust. Britt. Ent. (Haust.)* vol. iii. p. 81. Four
species, of which three are found (but locally and rare)
in England.

SIN, *n.*

SIN, *v.*

SI'NFUL,

SI'NFULLY,

SI'NFULNESS,

SI'NLESS,

SI'NLESSNESS,

SI'NNER,

SI'NNER, *v.*

A. S. *synne*, *syng-ian*, *syn-leas*,
synne-ful; D. *sonde*, *sunde*, *son-*
dighen; Ger. *sunde*, *sundighen*; Sw.
synd. Junius derives from Gr. *συνειν*,
nocere, *tædere*, to hurt, to injure.
Wachter from Ger. *sun-en*, *expiare*,
to expiate, to atone for; *sin* being
that which ought to be expiated or
atoned for.

To *sin* seems to signify, to go or do wrong, (see
WRONG,) to err, to go astray, and may be allied to the
A. S. verb *syndrian*, to go apart or asunder.

To go or do wrong, to act in disobedience, in opposi-
tion, to the laws of God; to violate them, to offend
against them, to neglect or disregard them; it is usually
applied to offences against the laws of religion or mora-
lity, as distinguished from those of the state.

To *sinner*, in Pope. See SAINT.

And þe archebysop of Canterburý, Wýllam þat þo was,
Sacrede hym, as yt was rygt, wel *synuolyche*, alas!

R. Gloucester, p. 445.

& fro þien he went vnto þe courte of Rome,
For to tak his penance & of his *synnes* dome.

R. Brunne, p. 1.

And suffren hem þat *synful* beon. til tyme þat thei repenten.
Piers Plouhman. *Vision*, p. 389.

SIN.

And seide to þe Jewes
That seep hym *synneles*. cesse nat ich hote
To stryke with stoon op' with staf. this strompett to deþe
Qui vrum sine peccato est & cetera.

Piers Plouhman. *Vision*, p. 231.

Thanne Judas that bitriede him saygh that he was dampned, he
repentide and brought agen the thritte pens to the princes of
prestis and to the eldre man of the puple, and seide, I have *synned*
bitraynge rightful blood.

Wiclif. *Matthew*, ch. xxvii.

Then when Judas whiche betrayed him sawe that he was con-
dempned, he repēted him selfe, and brought agayne the xxx. plates
of syluer to the chiefe priestes and elders, saying, I haue *sinned*
betraynge the innocente bloude.

Bible, Anno 1551.

But that ye wite that mannes Sone hath power to forgive *synnes*
in erthe.

Wiclif. *Matthew*, ch. ix.

That ye may knowe that the Sonne of man hath power to forgeue
synnes in erthe.

Bible, Anno 1551.

Jhesus seide to hem hoole men han no neede to a leche, but thei
that ben yvel at eese; for I cam not to clepe just men but *synners*.

Wiclif. *Mark*, ch. ii.

Jesus heard y^t, he sayd vnto them, The hole haue no nede of
the phisicion, by the sycke. I came not to call the ryghteous, but
the *synners* to repentaunce.

Bible, Anno 1551.

And whanne Symount Petir sayz this thing, he felde down to
the knees of Jhesus and seyde, Lord go fro me, for y am a *synful*
man.

Wiclif. *Luke*, ch. v.

When Symon Peter sawe that, he fell doune at Jesus knees,
sayinge, Lorde go fro me, for I am a *synnefull* man.

Bible, Anno 1551.

He that oft falleth in *sinne*, he despiseth the mercy of God, and
encreseth his *sinne*, and is unkind to Crist, and he waxeth the
more feble to withstand *sinne*, and *sinneth* the more lightly, and
the later ariseth, and is more slow to shrive him.

Chaucer. *The Persones Tale*, p. 167.

For as Jesu my *sinfull* soule saue,
There nis creature in all this world liuing,
Like vnto her that I would gladly haue.

Id. *Ballad Pleasant*, p. 564.

Thou blamist Crist, and sayst ful bitterly,

He misdeparteth richesse temporall;

Thy neighebour thou witest *sinfully*,

And sayst, thou hast a litel, and he hath all.

Id. *The Man of Lawes Tale*, v. 4526.

Full ofte er this it hath be seine
The comen people is ouerleyne,
And hath the kynges *synne* abought,
All though the people agilte nought.

Gower. *Conf. Am.* book vii.

But Achiloo the priest and hee,
So as the bokes it recorden,
For certaine some of golde accorden,
That thilke horrible *sinfull* dede
Assoiled was.

Id. *Ib.* book iii.

Down he fell
A monstrous serpent on his belly prone,
Reluctant, but in vaine, a greater power
Now rul'd him, punisht in the shape he *sinn'd*,
According to his doom.

Milton. *Paradise Lost*, book x. l. 513.

But first I mean
To exercise him in the wilderness,
There he shall first lay down the rudiments
Of his great warfare, ere I send him forth
To conquer *sin* and death, the two grand foes,
By humiliation and strong sufferance.

Milton. *Paradise Regained*, book i. l. 155.

His weakness shall o'ercome Satanic strength
And all the world, and mass of *sinfull* flesh.

Id. *Ib.* l. 161.

All crimes are indeed *sins*, but not all *sins* crimes. A *sin* may
be in the thought or secret purpose of a man, of which neither a
judge, nor a witness, nor any man can take notice; but a crime is
such a *sin* as consists in an action against the law, of which action
he can be accused, and tried by a judge, and be convinced or
cleared by witnesses. Farther, that which is no *sin* in itself, but
indifferent, may be made *sin* by a positive law.

Hobbes. *On the Common Laws of England*.

SIN.

KING. So, if a sonne that is by his father sent about merchandise, doe *sinfully* miscarry vpon the sea, the imputation of his wickednesse, by your rule, should be imposed vpon his father that sent him.

Shakspeare. Henry V. fol. 84.

Nor yet staid the terror there,
Infernal ghosts, and hellish furies, round
Environ'd thee, some howl'd, some yell'd, some shriek'd,
Some bent at thee their fiery darts, while thou
Sat'st unappall'd in calm and *sinless* peace.

Milton. Paradise Regained, book i. l. 418.

I am sent
To shew thee what shall come in future dayes
To thee and to thy offspring; good with bad
Expect to hear, supernal grace contending
With *sinfulness* of men.

Id. Paradise Lost, book xi. l. 356.

For when this externall frame of godliness shall break about their ears, they being really at the bottome devoid of the true fear and love of God, and destitute of a more free and unprejudic'd use of their faculties by reason of the *sinfulness* and corruption of their natures, it will be an easy thing to allure them to an assent to that which seems so much for their present interest.

More. Writings. Antidote against Atheism, part i. ch. i. p. 9.

Is there no means, but that a *sin-sick* land
Must be let blood with such a boist'rous hand?

Daniel. History of Civil Wars, book iv.

All *sin* is foolish upon many accounts; as proceeding from ignorance, error, inconsiderateness, vanity; as implying weak judgment and irrational choice; as thwarting the dictates of reason and best rules of wisdom; as producing very mischievous effects to our selves, bereaving us of the chief goods, and exposing us to the worst evils.

Barrow. Works, vol. i. fol. 253. Sermon 18.

If men did duly weigh the *sinfulness* and the danger that all schisms and separations of this kind do bring upon a nation, they would be thus affected.

Sharp. Works, vol. ii. p. 16. Sermon 1.

And since he condescended to such familiarity to those frail mortals, so many of whom were apt to turn the favours of God into wantonness, we may the less admire at his gracious condescensions to those the *sinlessness* of whose condition will keep them from turning his vouchsafements into any thing but occasions of joy and gratitude.

Boyle. Works, vol. i. fol. 287. Seraphic Love.

How usual it is for persons well advanced in piety, when they are making such enquiries as these, to dwell altogether on their defects and miscarriages, without regarding the regular course of a virtuous and well-ordered life; and to condemn themselves as false and insincere, because they are not perfect and *sinless*!

Atterbury. Sermon 12. vol. iii. p. 294.

SIN,	}	D. <i>sichtent</i> , <i>sind</i> ; Ger. <i>seit</i> , <i>sint</i> ;
SINCE,		Sw. <i>sid</i> , <i>sed-an</i> , <i>sich-an</i> ; Scotch, <i>sen</i> ,
SINCE,		<i>syne</i> ; in D. and Ger. <i>sicht</i> , <i>visus</i> ; Sw.
SINCE,		<i>sedd</i> .
SITH,		Mr. Tooke has written upon these
SITHENCE.		words in his best manner.

Sithe, applied to *time*, seems so used with a subaudition of *time*; time *sith* or seen; time past; time, generally.

Since is a very corrupt abbreviation, confounding together different words and different combinations of words; and is therefore, in modern English, made (like *but*) to serve purposes which no one word in any other language can answer; because the same accidental corruptions, arising from similarity of sound, have not happened in the correspondent words of any other language.

Where we now employ *since*, was formerly, according to its respective signification, used, sometimes—1. *seoththan*, *sioththan*, *setthan*, *siththan*, *siththen*, *sithen*, *sithence*, *sithens*, *sithnes*, *sithns*; sometimes, 2. *syne*, *sine*, *sene*, *sen*, *syn*, *sin*; sometimes, 3. *seand*, *seeing*, *seeing-that*, *seeing-as*, *sens*, *sense*, *sence*; sometimes, 4. *siththe*, *sith*, *sithe*, *sith*, *seen-that*, *seen-as*, *sens*, *sense*, *sence*.

Accordingly, *since*, in modern English, is used four ways; *two* as a preposition, connecting (or rather *affecting*) words; and *two* as a conjunction, affecting sentences. It is also used adverbially, as when we say, it is a year *since*, i. e. a year *seen*.

SIN.

When used as a preposition, it has always the signification either of the past participle *seen* joined to *thence*, (that is, *seen*, and *thence-forward*), or else it has the signification of the past participle *seen* only.

When used as a conjunction, it has sometimes the signification of the present participle *seeing* or *seeing-that*; and sometimes the signification of the past participle *seen* or *seen-that*. As a preposition;—1. *Since*, (for *sithan*, *sithence* or *seen* and *thence-forward*), as, "Such a system of government as the present, has not been ventured on by any king *since* the expulsion of James the Second." 2. *Since*, (for *syne*, *sene*, or *seen*), as, "Did George the Third reign before or *since* that example?" As a conjunction; 3. *Since*, (for *seand*, *seeing*, *seeing-as* or *seeing-that*), as, "If I should labour for any other satisfaction but that of my own mind, it would be an effect of phrenzy in me, not of hope; *since* it is not truth, but opinion, that can travel the world without a passport;" 4. *Since*, (for *siththe*, *sith*, *seen-as* or *seen-that*), as, "*Since* death in the end takes from all, whatsoever fortune or force takes from any one, it were a foolish madness in the shipwreck of worldly things, where all sinks but the sorrow, to save that."

Junius says, "*Since that time, exinde, contractum est ex Angl. Sith thence, q. d. sero post, ut sith illud originem traxerit ex illo seithu, sero, quod habet Arg. Cod.*"

Skinner says, "*Since, a Teut. sint, Belg. sind, post, postea, postquam, Doct. Th. H. putat deflexum a nostro sithence. Non absurdum etiam esset declinare a Lat. ex hinc, e et h abjectis, et x facillima mutatione in s transeunte.*" Again he says, "*Sith ab A. S. siththan, syththan, Belg. seyd, sint, post, post illa, postea.*"

After the explanation I have given, I suppose it unnecessary to point out the particular errors of the above derivations. *Sithence* and *sith*, though now obsolete, continued in good use down even to the time of the Stuarts.

Hooker, in his writings, uses *sithence*, *sith*, *seeing*, and *since*. The two former he always properly distinguishes; using *sithence* for the true import of the A. S. *siththe*, which is the more extraordinary, because authors of the first credit had very long before Hooker's time confounded them together, and thereby led the way for the present indiscriminate and corrupt use of *since* in all the four cases mentiond.

Seeing Hooker uses sometimes, perhaps, (for it will admit a doubt,) improperly. And *since* (according to the corrupt custom which has now universally prevailed in the language) he uses indifferently either for *sithence*, *seen*, *seeing*, or *sith*.

Such is the doubtful use of it by Shakspeare in the following passage:

"Of all the wonders that I yet have heard,
It seems to me most strange that men should fear,
Seeing that death, a necessary end,
Will come when it will come."

For it may either be resolved thus,—It seems strange that men, *seeing* that death will come when it will come, should fear:

Or,—Strange that men should fear, it being *seen* that death will come when it will come.

So was his herte all ouercome.

Id. Ib. book ii.

In suche wepyng, and suche crie,

His dead wife, which laie hym bie,

A thousande *sithes* he hir kiste.

Id. Ib. book viii.

A man may alwaye erre, and yet not fayle nor fal away fro God,
sith euery errour is not dāpnable.

Sir Thomas More. Workes, fol. 775. Confutation of Frere Barnes.

And therefore *sithence* the bishop of Rome wil nowe a daies so
be called, and chalengeth vnto him selfe an authoritie that is none
of his.

Jewell. Works, p. 122. Defence of the Apologie of Church of
England.

Euer *sithence* the time of this lawe, a woonderful vncleanesse of
life and manners in Goddes ministers, and sondrie horrible enor-
mities haue folowed.

Id. Ib. p. 180.

For *sithens* shootinge was neglected and decayed amonge the
Romaynes, many a battayle and field hath bene lost.

Ascham. Workes, p. 105. Toxophilus.

SIN.

SINAPIS.

But whenas Calidore was comen in,
And gan aloud for Pastorell to call,
Knowing his voice, although not heard long *sin*,
She sudden was revived therewithall,
And wondrous joy felt in her spirits thrall.

Spenser. Faerie Queene, book vi. can. 11.

A thousand *sithes* I curse that carefull houre

Wherein I longd the neighbour towne to see.

Id. The Shepherd's Calendar. Januarie.

But, faire Fidessa, *sithens* fortune guile,

Or enimies poure, hath now captived you,

Returne from whence ye came, and rest a while,
Till morrow next.

Id. Faerie Queene, book i. can. 4.

It is not in thy power to turn this destiny,

Nor stop the torrent of those miseries

(If thou neglectst her still) shall fall upon thee.

Sith that thou art dishonest, false of faith,

Proud, and doth think no power can cross thy pleasures,

Beaumont and Fletcher. The Prophetess, act iii. sc. 3.

WARW. Talke not of France, *sith* thou hast lost it all.

Shakspeare. Henry VI. fol. 148.

Thus we see that there was no cause of dissimulation in these
things, betweene that one only people before Christ, and the king-
domes of the world *since*.

Hooker. Ecclesiastical Politie, book iii. fol. 116.

For *since* the will by conceiving sin hath the soul of life; and
of life there is no recovery without repentance, the death of sin;
repentance not able to kill sin, but by withdrawing the will from
it; the will impossible to be withdrawn, unless it concur with a
contrary affection to that which accompanied it before in evil: is
it not clear, that as an inordinate delight did first begin sin, so
repentance must begin with a just sorrow?

Id. Ib. fol. 309.

In saying whosoever doth *believe* and is baptized, he appointeth
that the partie to whom baptisme is administred shall first be-
leeue, and then be baptized; to the end that beleeuing may go
before this Sacramēt in the receiuer, no otherwise then preaching
in the giuer, *sith* equally in both, the law of Christ declareth not
onely what things are required, but also in what order they are
required.

Id. Ib. Preface.

Againe, *sith* the later euen of the Apostles owne times had that
which in the former was not thought vpon in this generall pro-
posing of the Apostles' time, there is no certaintie which should
be followed, especially *seeing* that yee giue vs great cause to doubt
how farre yee allow those times.

Id. Ib.

Baptizing of infants, although confest by themselves to haue
beene continued euen *sithence* the verie Apostles owne times, yet
they altogether condemned.

Id. Ib.

For it [imputation] consisteth in such acts and deeds of his, as
would haue longer continuance then while they were in doing, nor
at that very time belong vnto any other but to him from whom
they come, and therefore how men either then, or before or *sithence*,
should be made partakers of them, there can be no way imagined,
but onely by imputation.

Id. Ib. book v. fol. 309.

Peradventure the church hath not now the leisure which it had
then, or else those things whereupon so much time was then well
spent, haue *sithence* that lost their dignitie and worth. If the
reading of the law, the prophets, and Psalmes bee a part of the
service of God, as needful vnder Christ as before, and the adding
the New Testament, as profitable as the ordaining of the Old to
bee read; if therewith, in stead of Jewish prayer, it bee also for
the good of the church to annexe that varietie which the Apostle
doth commend; *seeing* that the time which wee spend is no more
then the orderly performance of these things necessarily required,
why are wee thought to excel in length?

Id. Ib. fol. 251.

SINAPIS, in Botany, a genus so called from the
Gr. σινάπι, which is said to be derived from the Celtic
word *nap*, a designation for all plants resembling the
turnip or cabbage. It belongs to the class *Tetrady-*
namia, order *Siliquosa*, and natural order *Cruciferae*.
Generic character: silique nearly terete; style small,
short, acute; seeds globose, one row in each cell; calyx
spreading; corolla, stamens, &c. as in other cruciferous
plants.

Consisting of about forty species, generally annual,

SINAPIS. branched, hairy herbs, with yellow flowers; natives of Europe, China, North of Africa, and Asia. The principal species are *S. nigra*, the Black Mustard, *S. alba*, the White Mustard, and *S. arvensis*, the Charlock.

SIN-
CERE.

SINAPISM, Fr. *sinapiser*, It. *senapismo*, cataplasm *ex sinapi*, i. e. of mustard.

The places ought before the application of those topicke medicines to be well prepared with the razour, and a *sinapisme* or rubicative made of mustard-seed, untill the place look red.

Holland. *Plinie*, book xxix. ch. vi.

SINCE'RE, Fr. *sincere*; It. *sincero*; Sp. *sincero*; Lat. *sincerus*, i. e. *sine cera*, applied to honey freed or cleansed from the mixture of wax, (*cera*.)

And thus, generally,

Freed from impurity, from any thing foul, polluted, or corrupt, from filth or foulness, pollution or corruption; unmixed, unalloyed, uncorrupt. *Sine vulnere corpus sincerumque fuit*, i. e. sound, entire. See the second Quotation from Dryden, and that from Hooker.

Pure, candid, ingenuous, faithful; free or frank.

It was the necessitie not of preaching things agreeable with the word, but of reading the word it selfe at large to the people, which caused churches throughout the world to haue publique care that the sacred oracles of God being procured by common charge, might with great sedulitie be kept both intire and *sincere*.

Hooker. *Ecclesiasticall Politie*, book v. sec. 22.

I aunswere that master Wickliffe was noted while he was liuing to be a man not onely of most famous doctrine, but also of a very *sincere* life and conuersation.

Frith. *Workes*, p. 117. *Answer to Preface of M. More*.

Seldome or neuer shall you find commonwealths or gouernment, which is absolutely and *sincerely* made of any of them aboue named, but alwaies mixed with another, and hath the name of that which is more, and ouer-ruleth the other alwaies or for the most part.

Smith. *Commonwealth*, ch. vi. p. 6.

If they or any of them do depose, that I have not *sincerely* and wholly declared as is contained in the second article, let him and every of them be examined in virtue of their oath, how they do know it, and by what means.

State Trials, vol. i. p. 683. 3 Edward VI. 1550. Bonner.

But if a man would know the true and *syncere* vermillion indeed, it ought to have the rich and fresh colour of skarlet.

Holland. *Plinie*, book xxxiii. ch. vii.

And think all cunning, all proceeding one,
And nothing simple, and *sincerely* done.

Daniel. *Dedication of the Queen's Arcadia*.

Or. I rest as far from wrong of *sincereness*,
As he flies from the practice; trust me, Madam,
I know by their confessions he suborn'd,
What I should eat, drink, touch, or only have scented.
Beaumont and Fletcher. The Bloody Brother, act iii. sc. 1.

You mend old shooes well, mend your old manners better,
And suddenly see you leave off this *sincereness*.

Id. *Women Pleas'd*, act iv. sc. 1.

But as a man that lov'd no great commerce
With bus'ness and with noise he ever flies
That maze of many ways, which might disperse
Him into other men's uncertainties,
And with a quiet calm *sincerity*
H' effects his undertakings really.

Daniel. *A Funeral Poem*.

Yet had his aspect nothing of severe,
But such a face as promis'd him *sincere*.

Dryden. *Character of a Good Parson*.

He [Achilles] try'd a third, a tough well-chosen spear,
The inviolable body stood *sincere*,
Though Cygnus then did no defence provide,
But scornful offered his unshielded side.

Id. *Ovid. Metamorphoses*, book xii.

And a good man may likewise know when he obeys God *sincerely*. Not but that men often deceive themselves with an opinion, or at least a groundless hope of their own *sincerity*; but if they will deal fairly with themselves, and use due care and dili-

gence, there are very few cases (if any) wherein they may not know their own *sincerity* in any act of obedience to God; for what can a man know concerning himself, if not the reality of his own intentions?

Tillotson. *Works*, p. 164. Sermon 15.

The whole time of war ought to be a time of general mourning; a mourning in the heart, a mourning much more *sincere* than on the death of one of those princes whose accursed ambition is often the sole cause of war.

Knox. *Works*, vol. i. p. 488. *On the Folly of War*.

Let us consider also, that *sincerity* is a duty no less plain than important; that our consciences require it of us, and reproach us for every breach of it; that the light of nature taught it the very heathens, though imperfectly, as it did every thing else; and that Scripture abounds with the strictest precepts of it, and strongest motives to it.

Id. *Ib.* vol. iii. p. 120. Sermon 8.

SINDON, Lat. *sendon*; Gr. *σινδων*, fine linen.

There were found a book and a letter, both written in fine parchment, and wrapped in *sindons* of linen.

Bacon.

SINE, Fr. *sinus*; Lat. *sinus*. See the Quotation.

The *sine* or right *sine* of an arc is the line drawn from one extremity of the arc, perpendicular, to the diameter which passes through the other extremity.

Hutton. *Course of Mathematics*, vol. ii. p. 2.

SINECURE, Lat. *sine cura*, without care. See the Quotation from Blackstone.

But oh! the nymph that mounts above the skies,
And, gratis, clears religion's mysteries,
Resolv'd the church's welfare to ensure,
And make her family a *sine-cure*.

Young. *Love of Fame. Satire 5*.

The great patent offices in the Exchequer are in reality and substance no other than pensions, and in no other light shall I consider them. They are *sinecures*. They are always executed by deputy. The duty of the principal is as nothing.

Burke. *Works*, vol. iii. p. 308. *On Economical Reform*.

When the clerk so presented is distinct from the vicar, the rectory thus invested in him becomes what is called a *sine-cure*; because he hath no cure of souls, having a vicar under him to whom that cure is committed.

Blackstone. *Commentaries*, vol. i. book i. ch. ii. p. 386.

SIN'EW, A. S. *sina*, *sine*, *sinew*, *sinewa*, *sinu*,
SIN'EWED, *nervus*; D. *senue*, *sinuwe*; Ger. *sene*.
SIN'EWLESS, In old English also written *sin*; "and
SIN'EWY, karf, atoo a veyn, and the next *sin*."
SIN'EWISH, P. T. v. 588. Lye in Junius. Applied,
SIN'EWOUS, consequentially, to
Strength, might, firmness, vigour, energy.

Usage of labour is a gret thing, for it maketh, as sayth Seint Bernard, the labourer to have strong armes and hard *sinewes*.

Chaucer. *The Persones Tale*, vol. ii. p. 344.

It is not the bones, nor the *sinowes*, nor the fleshe that hangeth thereon, but it is the highest parte of man, the very soule of man, hee is the grounde and auctor of all concupiscence.

Frith. *Workes*, p. 269. *Freewill of Man*.

By that which lately hapned, Una saw
That this her knight was feeble and too faint;
And all his *sinewes* woxen weake and raw,
Through long enprisonment, and hard constraint.

Spenser. *Faerie Queene*, book i. can. 10.

And aske the Ladie Bona for thy queene;
So shalt thou *sinow* both these lands together,
And having France thy friend, thou shalt not dread
The scattred foe that hopes to rise againe.

Shakspeare. *Henry VI* fol. 158.

Whose *sinewed* wings (in their resistless course)
Beat the thin air with such a violent force,
That the light birds dropt headlong from the skies.

Drayton. *The Owl*.

All that ever was said against these helps to beauty, seems to many wise women weak and *sinewless*.

Taylor. *Artificial Handsomeness*, p. 194.

SIN-
CERE
—
SINEW.

SINEW.

SING.

That first and virgin birth of thine
Be so articulate, so masculine,
So truly limb'd, so *sinewy*, so compact,
So sweetly fair, so every way exact,
As may endure the most judicious touch.

Drayton. *The Barons' Wars*, book i.

His [Hugh de Lacie] neck was short, and his bodie hairie, as
also not fleshie but *sinewish*, and strong, compact.

Holinshed. *Conquest of Ireland*, ch. xxiv.

His [Meilerius] armes and other lims more *sinewous* than fleshie,
a stout and a valiant gentleman he was, and emulous.

Id. *Ib.* ch. x.

In the principal figures of a picture, the painter is to employ the
sinews of his art, for in them consists the principal beauty of his
work.

Dryden. *Parallel between Poetry and Painting*.

These seats our sires, a hardy kind,
To the fierce sons of war confin'd,
The flower of chivalry, who drew
With *sinew'd* arm the stubborn yew.

Tickell. *Ode*.

Bold, firm, and graceful are thy generous youth,
By hardship *sinew'd*, and by danger fir'd,
Scattering the nations where they go.

Thomson. *Summer*.

The son of Lethus, brave Pelasgus' heir,
Hippothous, dragg'd the carcase through the war;
The *sinewy* ancles bor'd, the feet he bound
With thongs, inserted through the double wound.

Pope. *Homer. Iliad*, book xvii.

Then wither'd weakness foils the *sinewy* arm
Of man's meridian and high-hearted power.

Young. *On Public Affairs*.

SONNETIST.

Sw. *sjunga*; D. *singen*; Ger.
singen; A. S. *sing-an*; Goth.
sigguan, *legere*, to read; *sigguan*
bokos, *legere libros*, Luc. iv. 16.
to read, to recite; applied to the
reading of numbers of persons,
the murmuring sound of numbers
reading, their chant, or musical
modulation of voice in reading or
recitation; and hence

To utter vocal sounds in tune
or harmony; in musical propor-
tion or concord; to write or speak

in verse, in poetry; to record, to relate, to rehearse, to
celebrate in verse, in poetry; applied also to the vocal
utterance of certain birds; to sounds resembling the
strains of music.

So gret & murje was þat song, þat me song þer inne wyde,
þat þe folc stod, þat þer were, as hii were y nome.

R. Gloucester, p. 190.

Better him wer with eise in clostre haf led his life,
þe seruise of his song recorded and lered.

R. Brunne, p. 172.

& þi messe songen.

Id. *Ib.*

And ich sang þat song þo. and so dude meny hondred.

Piers Plouhman. *Vision*, p. 377.

And ich y saved as ge may see. with oute *syngynge* of masse.

Id. *Ib.* p. 206.

Hauynge the harpis of God and *syngynge* the song of Moises
the seruaunt of God, and the song of the Lombe.

Wiclif. *Apocalips*, ch. xv.

Hauing the harpes of God, and they songe the songe of Moses
the seruaunt of God, and the songe of the Lambe.

Bible, Anno 1551.

These birdes, that I you deuise,
They song her song as faire and well,
As angels done esprituell,
And trusteth me, when I hem herde,
Full lustie and well I ferde;
For never yet such melodie
Was heard of man that mighte die.

Chaucer. *The Romant of the Rose*, p. 176.

VOL. XXVII.

SING.

And right anon in comen tombesteres
Fetis and smale, and yonge fruitesteres,
Singers with harpes.

Chaucer. *The Pardoner's Tale*, v. 12411.

In suffisaunce, in blisse, and in singings,
This Troilus gan all his life to lede.

Id. *Troilus and Creseide*, book iv.

And playen songes on a smal ribible;
Therto he song somtime a loud quynible.

Id. *The Miller's Tale*, v. 3332.

In a foreste alone he was
He sawe vpon the grene gras
The faire floures fresshe springe,
He herd among the leues singe
The throstel, with the nyghtingale.

Gower. *Conf. Am.* book i.

Whan that she sigh the bowes thicke,
And that there is no bare sticke,
But all is hid with leaues grene,
To woodde cometh this Philomene,
And maketh hir firste yers flight,
Where as she singeth daie and night;
And in hir songe all openly
She maketh hir plaint.

Id. *Ib.* book v.

But wolde God that nowe were one
An other suche as Arione
Whiche had an harpe of suche temprure
And therto of good measure
He songe, that he the beastes wilde
Made of his note tame and milde.

Id. *Ib.* Prologue.

For when I wolde with hir glade,
And of hir loue songes make;
She saide, it was not for hir sake,
And liste not my songes here,
Ne witen what the wordes were.

Id. *Ib.* book i.

Now since I haue performed euery part
Of thy commaunde, as neare as tonge can tell,
Content thee yet before my muse depart,
To take this sonet for my last farewell.

Gascoigne. *Dan Bartholmew of Bathe*.

And, them before, the fry of children yong
Their wanton sportes and childish mirth did play,
And to the maydens sownding tymbrels song
In well attuned notes a ioyous lay.

Spenser. *Faerie Queene*, book i. can. 12.

And when the fire
Of appetite was quencht; the muse inflam'd
The sacred singer. Of men highliest fam'd,
He sung the glories; and a poeme pen'd,
That in applause did ample heauen ascend.

Chapman. *Homer. Odyssey*, book viii.

Their diriges, their trentals, and their shrifts,
Their memories, their singings, and their gifts.

Spenser. *Mother Hubbard's Tale*.

Their song was partial, but the harmony
(What could it less when spirits immortal sing?)
Suspended hell, and took with ravishment
The thronging audience.

Milton. *Paradise Lost*, book ii. l. 562.

Yet not the more
Cease I to wander where the Muses haunt
Cleer spring, or shady grove, or sunnie hill,
Smit with the love of sacred song.

Id. *Ib.* book iii. l. 26.

Now is the pleasant time,
The cool, the silent, save where silence yields
To the night-warbling bird, that now awake
Tunes sweetest his love-labor'd song.

Id. *Ib.* book v. l. 38.

This sing-song was made on the English by the Scots, after they
were flush'd with victory over us in the reign of King Edward the
Second.

Fuller. *Worthies. Berkshire*.

Nor list I sonnet of my mistress' face,
To paint some blowesse with a borrowed grace.

Hall. *Satire* 1. book i.

SING.

SIN-
GANA.

Yea, and the prophet of the heav'nly lyre,
Great Solomon, *sings* in the English quire;
And is become a new-found *sonnetist*,
Singing his love, the holy spouse of Christ.

Hall. *Satire* 8.

Leavie groves now mainly ring,
With each sweet bird's *sonneting*,
Notes that make the echoes long.

Browne. *Thirsis' Praise to his Mistress*.

Assist me some extemporall god of rime, for I am sure I shall
turne *sonnet*.

Shakspeare. *Love's Labour Lost*, fol. 125.

For, fro' thy makings, milke and melly flowes,
To feed the *songster-swaines* with art's soot-meats.

Browne. *Willie and Wernock*.

War, he *sung*, is toil and trouble;
Honour but an empty bubble;
Never ending, still beginning,
Fighting still, and still destroying;
If the world be worth thy winning,
Think, O think, it worth enjoying.

Dryden. *Alexander's Feast*.

I ne'er with wits or wittings pass'd my days,
To spread about the itch of verse and praise;
Nor like a puppy, daggled through the town
To fetch and carry *sing-song* up and down.

Pope. *Prologue to Satires*, p. 244.

Here seem'd the *singer* touch'd at what he sung,
And grief awhile delay'd his hand and tongue.

Parnell. *To Lord Viscount Bolingbroke*, p. 413.

The recitative part of the opera requires a more masculine beauty
of expression and sound; the other, which (for want of a proper
English word) I must call the *songish* part, must abound in the
softness and variety of numbers, its principal intention being to
please the hearing, rather than to gratifie the understanding.

Dryden. *Preface to Albion's England*, p. 305.

Join'd to these

Innumeros *songsters*, in the freshening shade
Of new-sprung leaves, their modulations mix
Mellifluous.

Thomson. *Spring*.

While Philomel is ours; while in our shades,
Through the soft silence of the listening night,
The sober-suited *songstress* trills her lay.

Id. *Summer*.

Who weaves the chaplet, or provides the bays,
For such wool-gathering *sonnetteers* as these?

Swift. *A Poem by Dr. Delany*.

And some have said, that once the humourous god,
Resolving all such scribblers to confound,
For the short *sonnet* order'd this strict bound;
Set rules for the just measure, and the time,
The easy running and alternate rhyme.

Dryden. *The Art of Poetry*.

He [Green] was at this time a pastoral *sonnet-maker* and author
of several things which were pleasing to men and women of his
time.

Wood. *Fasti Oxonienses*, part i. p. 136.

This curious piece (a song or catch in praise of the cuckow) is
thought to be "the most ancient English *song* with (or without)
the musical notes any where extant," is preserved in a manuscript
of the Harleian library in the Museum.

Ritson. *Ancient Songs*, vol. i. p. 1.

In Venice Tasso's echoes are no more,
And silent rows the *songless* gondolier;
Her palaces are crumbling to the shore,
And music meets not always now the ear.

Byron. *Childe Harold's Pilgrimage*, st. 3. can. 4.

A suite of tales was published by George Whetstone, a *sonnet-*
writer of some rank, and one of the most passionate among us to
bewail the perplexities of love.

Warton. *History of English Poetry*, vol. iii. p. 483.

SINGANA, in *Botany*, a genus so called by Aublet
from the Caribbean name of the shrub; it belongs to
the class *Polyandria*, order *Monogynia*, and the natural
family of *Capparidæ*. Generic character: calyx three
or five-parted; petals three or five, unguiculate, serru-

lated; stamens numerous; style one, incurved at top;
capsule six to ten inches long, cylindrical, brittle, one-
celled, many-seeded; seeds size of horse-chestnuts,
wrapped in pulp, fixed to three lateral placentas.

This genus consists of one species, a rambling nodose
shrub, native of Guiana, bearing large leaves, which are
nearly opposite at the nodi, and axillary and scattered
flowers.

SINGE, v. } D. *senghen*; Ger. *sengen*; A. S.

Si'NGINGLY. } *sængan*, *ustulare*, *urere*, *adurere*, to
scorch, to mark, (by scorching or burning,) perhaps
originally to mark or make a mark or sign.

To scorch; to burn so as to mark the surface, not
deeper than the surface.

Thou sayst also, I walke out like a cat;
For who so wolde *senge* the catles skin,
Than wol the cat wel dwellen in hire in.

Chaucer. *The Wif of Bathes Prologue*, v. 5929.

Hire bord was served most with white and black,
Milke and broun bred, in which she fond no lack,
Seinde bacon, and sometime an ey or twey.

Id. *The Nonnes Preestes Tale*, v. 14849.

Wee tearme their eies to bee enflamed, *sengded*, and bloud-
shotten, when their buds be blasted.

Holland. *Plinie*, book xvii. ch. xxiv.

The corns of the ordinarie wheat triticum, being parched or
rosted upon a red hot yron, are a present remedie for those who
are scorched and *sindged* with nipping cold.

Id. *Ib.* book xxii. ch. xxv.

But to answer more home to the purpose, I confess that the
bodies of devils may be not only warm, but *sindgingly* hot, as it
was in him that took one of Melancthon's relations by the hand,
and so scorched her that she bare the mark of it to her dying day.

More. *Against Atheism*, part i. ch. xiii. p. 185. *Appendix*.

The scorching flames climb round on every side;
Then the *sing'd* members they with skill divide;
On these, in rolls of fat involv'd with art.

Pope. *Homer. Odyssey*, book xiv.

If you want paper to *singe* a fowl, tear the first book you see
about the house.

Swift. *Works*, vol. xii. p. 12. *Directions to Servants*.

SINGLE, v. }

SINGLENES, }

SINGLY, }

SINGULAR, adj. }

SINGULAR, n. }

SINGULARIST, }

SINGULARITY, }

SINGULARLY. }

united.

To *single*, to take one from more, to select, to separate.

Singular, particular, especial, peculiar, extraordinary,
uncommon.

And yet say I more, that right as a *singular* persone sinneth in
taking vengeance of another man, right so sinneth the juge, if he
do no vengeance of hem that it han deserved.

Chaucer. *The Tale of Melibeus*, p. 114.

For certes repentance of a *singular* sinne, and not repentant of
all his other sinnes; or elles repenting him of all his other sinnes,
and not of a *singular* sinne, may not availe.

Id. *The Persones Tale*, p. 151.

But whan the soule beholdeth, and seeth the high thought, that
is to saine God, than knoweth it together the somme and *singula-*
rities, that is to sain, the principles, and eueriche of hem by hym-
self.

Id. *Boecius*, book v. *De Consolatione*.

Singularly by himselfe ther reason faileth.

Id. *The Testament of Loue*, book iii.

There was without werre pees,
Without enuie loue stode,
Richesse vpon the commune good,
And not vpon the *singular*,
Ordeined was.

Gower. *Conf. Am.* book vii.SIN-
GANA.

SINGLE.

SINGLE. God's law is pure and *single*; loue thy neighbour, whether he be good or bad. And by loue God meaneth, to helpe at nede.

Tyndall. Workes, p. 201. Exposition on Matthew, ch. v.

But looke that thine eye be *single*, and robbe not Christ of his honour; ascribe not that to y^e deseruyng of thy workes, which is geuen you freely by the merites of his blood.

Id. Ib. p. 75. Of the Wicked Mammon.

And they continued daily with one accorde in the tēple, and brake breade in euery house, and dyd eat their meate together, with gladnes and *synglenes* of heart praysynge God, and had fauoure with al the people.

Bible, Anno 1551. Actes of the Apostles, ch. ii.

Seruauntes be obedyent vnto your carnall masters, with feare and tremblyng in *singleness* of your heartes, as vnto Chryst.

Id. Ephesians, ch. vi.

There be that write how the offer was made by King Edmund for the auoiding of more bloudshed, that the two princes should trie the matter thus together in a *singular* combat.

Holinshed. Historie of England, book vii. ch. x.

And also I [Richard II.] renounce the name, worshyp, and regaly, and kyngely hyghnesse, clerelye, frelye, *syngulerlye*, and hooly, in the moost best maner and fourme that I may.

Fabyan. Chronycle, Anno 1399.

Most sorry truly we be, that your grace, whom we should otherwise honour for the king's majesty's sake, by your own deeds should provoke us to offend you; we do perceive great discommodity to the realme by your grace's *singularity*, if it may be so named, in opinion.

State Trials, vol. i. p. 542. 5 Edward VI. 1551.

But *singularly* before God it is called vnrightheous Mammon, because it is not bestowed and ministred vnto our neighbor's nede.

Tyndall. Workes, p. 71. Of the Wicked Mammon.

Yet did false Archimage her still pursew,
To bring to passe his mischievous intent,
Now that he had her *singled* from the crew
Of courteous knights.

Spenser. Faerie Queene, book iii. can. 4.

But he might have altered the shape of his argument, and explicated them better in *single* scenes.

Cor. That had been *single* indeed.

Ben Jonson. Every Man out of his Humour, act ii. sc. 1.

That you may know my *single* charity,
Freely I here remit all interest
I e'er could claim, and give you back your vows.

Ford. 'Tis Pity She's a Whore, act iv. sc. 1.

Wol. You haue heere, Lady,
(And of your choice,) these reuerend fathers, men
Of *singular* integrity and learning;
Yea, the elect o' th' land, who are assembled
To pleade your cause.

Shakspeare. Henry VIII. fol. 217.

So spake the fervent angel, but his zeal
None seconded, as out of season judg'd,
Or *singular* and rash, whereat rejeic'd
The apostat.

Milton. Paradise Lost, book v. l. 849.

Eloquence would be but a poor thing if we should only converse with *singulars*.

Ben Jonson. Discoveries.

And in this course of setting down medicines, even as I meet with any hearbe of any *singularitie*, I will range it there whereas I know it to be most soveraigne and effectuall.

Holland. Plinie, book xxv. ch. ix.

Oftentimes we find ourselves, I know not how, *singularly* delighted with the shew of such naturall rudenesse, and take great pleasure in that disorderly order.

Spenser. Epistle to Maister Harvey.

And what delight to be by such extoll'd,
To live upon thir tongues and be thir talk,
Of whom to be disprais'd were no small praise,
His lot who dares be *singularly* good.

Milton. Paradise Regained, book iii. l. 54.

Him soon she *singled* from the flying train,
And slew with ease.

Dryden. Virgil. Æneid, book xi.

Ambergreese is a rare cordiall for the refreshing of the spirits, and soveraign for the strengthning the head, besides the most fragrant scent, far stronger in consort when compounded with other things, then when *singly* it self.

Fuller. Worthies. Cornwall.

You produce texts to show that the Father *singly* is the Supreme God, and that Christ is excluded from being the Supreme God; but I insist upon it, that you misunderstand those texts.

Waterland. Works, vol. i. p. 4. A Defence of some Queries. Query 1.

Though according to the common course and practice of the world it be somewhat *singular* for men thoroughly to live up to the principles of their religion, yet *singularity* in this matter is so far from being a reflection upon any man's prudence that it is a *singular* commendation of it.

Tillotson. Works, p. 28. Sermon I.

But it being plain that there are besides *singulars*, other objects of the mind universal; from whence it seems to follow, that sensibles are not the only things; some modern atheistical wits have therefore invented this further device to maintain the cause and carry the business on.

Cudworth. Intellectual System, book i. ch. v. p. 854.

Men not enduring to be termed a foppish simpleton, doting on speculations, and enslaved to rules; a fantastical humourist, a precise bigot, a rigid stoick, a demure sneaksby, a clownish *singularist* or nonconformist to ordinary usage, a stiff opiniatre.

Barrow. Works, vol. iii. fol. 378. Sermon 34.

Thou hast often seen,
From 'mongst the herd, the fairest and the best
Carefully *singled* out, and richly drest,
With grandeur mock'd, for sacrifice decreed,
Only in greater pomp at last to bleed.

Churchill. The Times.

Even the pain which they might otherwise inflict is prevented by a consciousness of having, with *singleness* of heart, espoused a cause beneficial to mankind, and founded on scriptural, as well as the highest human authority.

Knox. Works, vol. vii. p. 6. Preface.

The love of *singularity* has too often a pernicious effect in disputing societies, and sometimes seminaries of learning; and it is highly prejudicial to that investigation of truth which is the professed object of these institutions.

Cogan. On the Passions, vol. i. p. 260.

For had not Providence thus *singularly* provided for us, our Christmas cheer must have been salt beef and pork.

Cook. Voyages, vol. iv. book iv. ch. ii. p. 167.

SINGULF, } Lat. *singultus*, a sob, a sigh, which
SINGULT. } Vossius derives from *singulus*, because it rises separately or singly, and at some interval.

There an huge heape of *singulfs* did oppresse
His struggling soule, and swelling throbs empeach
His faltring tounge with pangs of dreenesse.

Spenser. Faerie Queene, book iii. can. 11.

And ever and anon, with *singulfs* rife,
He cryed out, to make his undersong.

Id. Colin Clout's come Home againe.

So when her teares were stopt from eyther eye
Her *singults*, blubbrings, seem'd to make them flye.

Browne. Britannia's Pastorals, book ii. song 1.

SINISTER, } Fr. *sinistre*; It. *sinistro*; Sp.
SINISTERLY, } *siniestro*; Lat. *sinister*, from the
SINISTROUS, } Gr. *απιστερος*, which the editor of
SINISTROUSLY. } Lennep, with some speciousness, considers to be the comparative form of an obsolete adjective *ἄπισ, vehemens*, a particle of which remains in *ἄπι, vehementer, απιστερος, vehementior*, and thence *pejor, magis infaustus*, &c. And thence, it must be added, *sinister* is opposed to *dexter*, q. v.

In English the common usage is

Opposed to the right, (sc. hand,) left, on the left hand.

Opposed to right; ill or evil, treacherous.

Opposed to good, or good fortune; unfortunate, unlucky.

But when these martiall garboiles are appeased, they are either through false informations wrongfullie behated, or else by enuious carpers *sinisterlie* suspected.

Holinshed. Description of Ireland, ch. vi.

I thought and yet thinke, that it may be that I was shet vp again, vpō some new causeles suspiciō, growen peraduētūre vpon some secret *sinister* informacion.

Sir Thomas More. Workes, p. 1447. Letter from Sir Thomas More to his Daughter.

Fox doubts not to say, "That as general councils have sometimes been observed to err, so princes and parliaments may be sometimes informed by *sinister* heads."

Cobbett. State Trials, p. 436. 33 Henry VIII.

Yet lest such as would be glad *sinisterly* to missecōster euery thyng towarde the clergy, might haue occasion to say y^e matter were hotely hādeled agaist him to force hi to forbear his suite of the premunire, the byshop therefore did the more forbear.

Sir Thomas More. Workes, p. 297. Supplication of Soules.

And why should you so *sinisterly* judge the prince, that if ye had shewed these same unto him, he would have thought that ye had brought that tale unto him more for the strengthening and confirmation of your opinion, than for any other thing else.

Burnet. Records, vol. i. part i. book ii. p. 197. Cromwell to Fisher.

And understood not all was but a shew
Rather than solid vertu, all but a rib
Crooked by nature, bent, as now appears,
More to the part *sinister* from me drawn.

Milton. Paradise Lost, book x. l. 882.

The heavens admit not these *sinister* and dexter respects; there being in them no diversity or difference, but a simplicity of parts, and equiformity in motion continually succeeding each other.

Sir Thomas Brown. Vulgar Errours, book iv. ch. v. p. 243.

For he concludes the Pythagoreans to have held two such substantial principles of good and evil, merely because they sometimes talkt of the contrarieties and conjugations of things, such as finite and infinite, dextrous and *sinistrous*, eaven and odd, and the like.

Cudworth. Intellectual System, book i. ch. iv. p. 221.

Many in their infancy are *sinistrously* disposed, and diuers continue all their life left-handed.

Sir Thomas Brown. Vulgar Errours, book iv. ch. v. p. 242.

The victor eagle, whose *sinister* flight
Retards our host, and fills our hearts with fright,
Dismiss'd his conquest in the middle skies,
Allow'd to seize, but not possess the prize.

Pope. Homer. Iliad, book xii.

The reason was, that he was a man without guile; he had an honest and upright heart, no *sinister* or secular ends to serve, no evil affections to mislead him; therefore was he fitly disposed both to believe and embrace the Gospel.

Waterland. Works, vol. ix. p. 58. Sermon 4.

It proves that the man to whom it is shewn has left his merit to stand or fall, as it might be able of itself; and in the honesty of an upright and ingenuous spirit, has scorned to use *sinister* and collusive arts to repel the weapons of envy and malice.

Knox. Works, vol. ii. p. 492. Evening 40.

SINK, } Sw. *sjunka*; D. *suicken*; Ger.
SINK, } *sinker*; A. S. *sinc-an, sencan*; Goth.
SINKING, n. } *sigu-an, deponere, subsidere, depri-*
mere, demergere; to put or place down, to set or settle
down. *Sinc*, in A. S., was applied to any deposit, hoard,
treasure; consequentially, to any collection, to riches,
filth, collected and deposited.

To set or settle, or cause to settle down; to press down, to depress, to lower, to degrade; to subside, to submerge; to fall down, to decay.

A *sink*; that through which any thing settles down or descends; in which (filth or foulness, literally and metaphorically) is deposited, or deposits itself.

But if they weren wrought of lime and ston;
They percen so, that thurgh the wall they gon;
And som of hem *sinke* down into the ground;
Thus have we lost by times many a pound.

Chaucer. The Chanones Yemannes Tale, v. 16378.

For I endure more hard pennaunce
Than any can saine or thinke,
That for the sorrow almost I *sinke*.

Id. The Romant of the Rose.

Nowe then vpon that other side
To tell my disobeisance,
Full sore it stant to my greunance,
And maie not *sinke* in to my witte.

Gower. Conf. Am. book i.

Alas! and who could thinke
So good a hart so hard a happe should haue?
A sweet perfume to fall into a *sinke*.

Gascoigne. The Fruites of Warre.

The bailife that had the charge of the publick *sinks* vaulted under the ground, dealt with Scaurus for good securitie.

Holland. Phnie, book xxxvi. ch. ii.

Whose corage when the feend perceiv'd to shrinke,
She poured forth out of her hellish *sinke*
Her fruitfull cursed spawn of serpents small,
(Deformed monsters, fowle, and blacke as inke.)

Spenser. Faerie Queene, book i. can. 1.

Ile cast him downe as deepe
As Tartarus (the brood of night) where Barathrum doth steepe
Torment in his profoundest *sinks*.

Chapman. Homer. Iliad, book viii.

Return, then heroes! and our answer bear,
The glorious combat is no more my care;
Not till, amidst yon *sinking* navy slain,
The blood of Greeks shall dye the sable main.

Pope. Homer. Iliad, book ix.

In short, the necessity of carrying a stamp, and the improbability of notifying a bloody battell, will, I am afraid, both concur to the *sinking* of those thin folios, which have every other day re-tailed to us the history of Europe for several years last past.

Spectator, No. 445.

When we are in want of necessities, we must part with all superfluities; of which the value, as it rises in times of opulence and prosperity, so it *sinks* in times of poverty and distress.

Smith. Wealth of Nations, vol. i. book i. ch. xi. p. 265.

SINODENDRON, in Zoology, a genus of *Coleopterous* insects.

Generic character. *Antennæ* much shorter than the thorax, the basal joint about half their length, slightly tumid at the apex, second short, somewhat globose, the five following short, transverse, the remainder forming a serrated, compressed, triarticulate club, the joints of which are trigonal-transverse; *palpi* four; maxillary with the basal joint cylindric-oval; labial with the terminal joint very stout; mandibles very short, connected beneath the clypeus; *mentum* narrow, entire, carinated; head small, with a horn on the clypeus, elongate in the males, and tuberculiform in the females; *thorax* dissimilar in the sexes; body convex, cylindric; legs short; *tibiæ* spinose externally; *tarsi* pentamerous, short, the terminal joint very large.

Type of the genus, *Scarabæus cylindricus*, Linnæus; *S. cylindricum*, Stephens, *Illust. Britt. Entom. (Mandibulata)* vol. iii. p. 167. One species only, which is not uncommon in several parts of Britain, though somewhat scarce near London.

SINQUE, i. e. Cinque, q. v.

And you had such a pipe, that piped so sweetly,
You would dance to death, you have learnt your *sinque* apace.
Beaumont and Fletcher. A Wife for a Month, act iii. sc. 1.

SI'NUOUS, } Fr. *sinueux*; It. *sinuoso*; Lat.
SINUOSITY, } *sinuosus*, from *sinus*, a bay or bow;
SI'NUATED, } a curve or curvature, plait or fold.
SINUA'TION. } Bowing or bending, curving,
winding.

It would be tryed, how, and with what proportion of disadvantage, the voice would be carried in an horn, which is a line arched; or in a trumpet, which is a line retorted; or in some pipe that were *sinuous*.

Bacon. Natural History. Cent. iii. sec. 132.

These as a line thir long dimension drew,
Streaking the ground with *sinuous* trace.

Milton. Paradise Lost, book vii. l. 480.

SINK.
—
SI-
NUOUS.

SI-NUOUS. Meander is a river in Lycia, a province of Natolia or Asia Minor, famous for the *sinuosity* and often returning thereof.
Drayton. Rosamond to King Henry, p. 38. note.

SIPALUS. Another was very perfect, somewhat less with the margin, and more *sinuated*.
Woodward. On Fossils.

The humane brain is, in proportion to the body, much larger than the brains of brutes, having regard to the size and proportion of their bodies, and fuller of anfractus or *sinuations*.

Hale. Origination of Mankind, sec. 1. ch. ii. p. 65.

Here Ouse, slow winding through a level plain
 Of spacious meads with cattle sprinkled o'er,
 Conducts the eye along his *sinuous* course
 Delighted.

Cowper. The Task, book i.

But what is less known, and probably more deserving curiosity, is that they [rivers] run in a more direct channel as they immediately leave their sources; and that their *sinuosities* and turnings become more numerous as they proceed.

Goldsmith. History of the Earth, vol. i. ch. xiv. p. 119.

SIONA, in Zoology, a genus of *Lepidopterous* insects.

Generic character. *Antennæ* stout, single in both sexes, pubescent in the males; *palpi* rather long, porrected obliquely, approximating at the apex, clothed at the base with long scales, and at the tip with short compact ones, the terminal joint conspicuous, acute, triarticulate, the basal joint long, robust, second shorter, slender, terminal elongate-ovate; *maxillæ* very long; head small, scaly; forehead depressed; *thorax* slender, scaly; wings, anterior, with strong, somewhat dilated nervures, immaculate; posterior margins of all considerably rounded; *abdomen* long, linear, with a laminated tuft at the apex in the males, stouter, carinated on the back, and acute in the females.

Type of the genus, *Phalæna (Geometra) dealbata*, Linnæus; Stephens, *Illust. Britt. Entom. (Mandibulata)*, vol. iii. p. 144. Two species, one only of which is British, very local and very rare.

SIP, n. } *D. sippen*; *A. S. sip-an, sorbere*. See
SIP, v. } to SUP.

SIPPET. } To draw up small quantities of liquid
 by the lips; to drink or imbibe small potions, small quantities.

Thus serueth he, without meate or *sip*.

Chaucer. Of Queen Annelida and false Arcite.

And ye wil geue me a *sippet*

Of your stale ale. *Skelton. Elinour Ruming.*

As melting honey dropping from the comb,

So still the words, that spring between thy lips,

Thy lips, where smiling sweetness keeps her home,

And heav'nly eloquence pure manna *sips*.

G. Fletcher. Christ's Victory and Triumph.

But this will cure all strait, one *sip* of this

Will bathe the drooping spirits in delight,

Beyond the bliss of dreams.

Milton. Comus, l. 811.

ESTIP. Green goose you are now in *sippets*.

Beaumont and Fletcher. Rule a Wife and Have a Wife, act iv. sc. 1.

Ridotta *sips* and dances, till she see

The doubling lustres dance as fast as she.

Pope. Imitation of Horace, book ii. Satire 1.

Charles *sipped* a little of the poisonous draught, but enough, however, to infect his whole conduct.

Lord Bolingbroke. Works, vol. iii. p. 51. Upon Parties.

Adieu, Vinosa cries, ere yet he *sips*

The purple bumper trembling at his lips,

Adieu to all mortality! if grace

Make works a vain ingredient in the case.

Cowper. Hope.

SIPALUS, in Zoology, a genus of *Coleopterous* insects.

Generic character. *Antennæ* geniculated, nine-jointed, shortish, stout, clavate, funiculus six-jointed, the articulations short, with the apex truncate, the eighth and ninth joints forming a pear-shaped acuminate club; *labrum* obsolete; head produced in front into an elongate, rounded, deflexed rostrum, as long as the thorax; eyes oblong, approximating beneath, large, depressed; *thorax* subovate, truncate at the base, more or less lobed behind the eyes; *scutellum* distinct, triangular; *elytra* oblong-ovate, convex; legs long, stout; anterior longest, approximating; *femora* simple; *tibiæ* rounded; *tarsi* tetramerous, slender, not spongy beneath; claws long, slender.

Type of the genus, *Calandra granulata*, Fabricius; Schön., *Disp. Meth. Cur.*, p. 325. Seven species, natives of the tropical regions.

SIPANEA, in Botany, a genus belonging to the class *Pentandria*, order *Monogynia*, and natural family *Rubiaceæ*. *Generic character*: calyx turbinate, with a five-parted persistent limb; corolla with a terete tube, a bearded throat, and a five-parted limb; anthers five, sessile; stigma bifid, acute; capsule nearly globose, crowned by the limb of the calyx, two-celled, dehiscing at the cells into two valves; seeds numerous, tubercular; placentas central.

This genus, which is allied to *Rondeletia*, consists of four known species, all annual green herbs, natives of South America. The flowers are axillary and terminal, usually rose-coloured.

SIPARUNA, in Botany, a genus so called by Aublet from the Caribbean name of the shrub. It belongs to the class *Monoecia*, order *Tetra-Decandria*, natural family uncertain. *Generic character*: flowers monoecious; calyx four-parted; corolla none; male flower with four, six, eight, or ten stamens, seated on the calycine disk; female flower with a single superior ovary, an oblong striated style, and five stigmas.

This genus contains a single known species; it is a shrub with opposite leaves, and small axillary subcorymbose flowers, a native of Guiana. The corymbs of flowers are monoecious.

SIPHANTHERA, in Botany, a genus so named from the Greek *σιφων*, a tube, and *ανθηρα*, an anther, on account of the anthers terminating each in a long tubular beak. It belongs to the class *Tetrandria*, order *Monogynia*, and natural family of *Melastomaceæ*. *Generic character*: calyx campanulate, four-toothed, girded by many bracteas; petals four, orbicular; stamens four, exserted; anthers oblong, furnished with an ascending obcordate process at the base, and a tubular beak at the apex; capsule depressed, two-celled, two-valved, emarginate at apex; seeds numerous, rather convex on one side, reticulated.

This genus consists of three species, annual herbs, natives of Brazil; they are elegant little plants, with sessile, toothed, feather-nerved leaves, rose-coloured or white petals, and blue anthers.

SIPHOCAMPYLUS, in Botany, a genus so called from the Greek *σιφων*, a tube, and *καμπυλος*, a curve, in allusion to the curved tube of the corolla. It belongs to the class *Tetrandria*, order *Monogynia*, and natural order *Lobeliaceæ*. *Generic character*: calyx five-parted; corolla tubular, irregular; tube entire, declinate; limb five-parted, bilabiate; segments unequal; stamens and anthers combined, the latter bearded; capsule ovate, two-celled, two-valved, dehiscing at the apex.

This genus has been separated from *Lobelia*. It is

SIPALUS.

SIPHOCAMPYLUS.

SIPHOCAMPHYLUS.

SIPHONOSTEGIA.

composed of forty-three species, mostly natives of Brazil; they are erect shrubs with serrated leaves, and axillary, solitary, usually showy scarlet flowers. *S. Surinamensis* is almost the only species cultivated in British gardens.

SIPHON, Lat. *sipho*, Gr. *σιφων*, from the sound which liquids make when the *siphon* is drawn out; or rather from the Hebrew. Vossius.

Beneath th' incessant weeping of these drains,
I see the rocky *siphons* stretch'd immense,
The mighty reservoirs, of harden'd chalk,
Or stiff compacted clay, capacious form'd.

Thomson. *Autumn*.

He disdains to toss
In rainbow dew their crystal to the sun;
Or sink in subterranean cisterns deep;
That so, through leaden *siphons* upward drawn,
Those streams may leap fantastic.

Mason. *The English Garden*, book iii.

SIPHONA, in *Zoology*, a genus of *Dipterous* insects.

Generic character. *Antennæ* somewhat deflexed, three-jointed, the basal joint small, third elongated, linear, obtuse, with a naked dorsal seta at the base; proboscis exerted, horizontal, filiform, geniculated at the base and in the middle, the apical portion directed backwards; face vertical; eyes naked; wings two, divaricating; *abdomen* robust, cylindric-conic, without bristles in the middle of the segments.

Type of the genus, *Musca geniculata*; Degeer, *Ins.* vol. vi. p. 20. pl. ii. fig. 19—23. Six species, of which five have been taken in England: the genus is synonymous with *Bucentes* of Latreille.

SIPHONELLA, in *Zoology*, a genus of *Dipterous* insects.

Generic character. *Antennæ* inserted beneath a prominence in front, triarticulate, the basal joints indistinct, terminal one large, transverse, furnished at its base with a downy style; head hemispheric; face short; *epistome* prominent, naked; forehead downy, inclined, slightly prominent, and punctured; eyes flat; *thorax* punctured; *scutellum* longish; wings two, ample, transverse nervures approximating, the second oblique, the marginal one not extending to the hinder margin; *abdomen* large, oval, depressed; legs naked; *tibiæ* curved.

Type of the genus, *Chlorops nitida*, Meigen; Macquart, *Diptères*, vol. ii. p. 584. pl. xxiii. fig. 7. Five species, two of which are indigenous.

SIPHONIA, in *Botany*, a genus so called by Richard from the Greek *σιφων*, a pipe, on account of the manner in which the exudation (Indian rubber) is put up. It belongs to the class *Monoecia*, order *Monadelphia*, and natural order *Euphorbiaceæ*. *Generic character*: flowers monoecious; calyx five-cleft, valvate in æstivation; petals none: male flower, filaments connate into a column which is free at top; anthers quinate vertically, nearly sessile, adnate outwards: female flower with three sessile, somewhat two-lobed stigmas; ovarium six-ribbed; fruit a large capsule clothed with fibrous bark, trilocous; *coccae* elastically two-valved, sometimes one or two-seeded by abortion.

This genus contains but two known species, both natives of South America, trees with ternate leaves, and racemously paniced, axillary, and terminal flowers. *S. Caoutchouc* yields the juice of which Indian rubber is formed.

SIPHONOSTEGIA, in *Botany*, a genus so called from the Greek *σιφων*, a tube, and *στεγος*, a covering.

It belongs to class *Didynamia*, order *Angiospermia*, and natural order *Scrophularineæ*. *Generic character*: corolla funnel-shaped, with an elongated tube and a four or five-parted limb; upper lip curved, longer; stamens four, didynamous; cells of anthers parallel, awnless; stigma thickened; capsule oblong, with entire valves.

This genus, which is nearly allied to *Bartsia*, consists of one species, *S. Chinensis*; it is an erect twiggy herb, with pinnatifid leaves and racemose flowers.

SIPHULA, in *Botany*, a genus so called by Fries from the Greek *σιφων*, a tube. It belongs to the class *Cryptogamia*, order *Lichenes*. *Generic character*: apothecia inclosed in the tops of the tumid thalli, closed, but at length opening by a lacerated pore; nucleus globose, at length flattened; thallus vertical, fruticulose; branched.

This genus is nearly allied to *Bæomyces*, and contains but one known species, a native of Sweden; it is a terrestrial plant.

SIPUNCULUS, in *Zoology*, a genus of *Echinodermata*.

Generic character. Body elongated, cylindrical, soft, very contractile and irritable, naked, narrowed posteriorly, with a terminal inflation and a narrow cylindrical neck; mouth orbicular, having a retractile proboscis, with a lacinated margin; vent lateral, placed towards the anterior exteriorly, and near the orifice of the oviducts.

Type of the genus, *S. nudus*; Pennant, *Brit. Zool.* vol. iv. p. 36. pl. xx. fig. 10. Several species, three of which occur on the coasts of England, the type abundantly.

SIR, } Fr. *sieur*, *sire*; It. *ser*, *sere*, *dominus*,
SIRE. } contracted (Skinner) from the Fr. *seigneur*;
It. *signore*; Lat. *senior*. See SENIOR. Applied first to Seniors or elders; then as a title of rank, of respect generally. *Sire*, Skinner adds, is naturally the master (*dominus*) of the family; it is the elder of a family or race, the progenitor, the parent.

Sire, quod heo, bi hye Godes, Lordes of alle þyng,
Y loue more þi leue lyf þan al þat in þe world ys.
R. Gloucester, p. 30.

And suthe ich sauh hym sute. as he a *syre* were.
Piers Plouhman. *Vision*, p. 143.

Sire knight, (quod he) my maister and my lord,
Now draweth cutte, for that is min accorde.
Cometh nere (quod he) my lady prioress,
And ye, *sire* clerk, let be your shamefastnesse,
Ne studieth nought, lay hand to, every man.
Chaucer. *Prologue to the Canterbury Tales*, v. 839.

Than spake our hoste with rude speche and bold;
And sayd unto the nonnes preest anon,
Come nere, thou preest, come hither, thou *Sire* John,
Telle us swiche thing as may our hertes glade.
Id. *The Nonnes Preestes Prologue*, 14824.

Upon a night Jankin, that was our *sire*,
Red on his book, as he sate by the fire.
Id. *The Wif of Bathes Prologue*, v. 6295.

Paine and distresse, sicknesse and ire,
And melancholly, that angrie *sire*,
Ben of her paleis senatours.
Id. *The Romant of the Rose*, p. 203.

This bachiler was tho counsaile
And wedded, and of thilke empire
He was crowned lord and *sire*,
And all the lond him hath receiued.
Gower. *Conf. Am.* book ii.

The most ragged ronagate and idle idiote amonge theym is

SIPHONOSTEGIA.

O worthinesse of nature, breed of greatnesse!

Cowards father cowards, and base things *syre* base.

Shakespeare. Cymbeline, fol. 387.

Be not angrie
(Most mighty Princesse) that I haue aduentur'd
To try your taking of a false report, which hath
Honour'd with confirmation your great judgment,
In the election of a *sir*, so rare,
Which, you know, cannot erre. *Id. Ib.* fol. 375.

SIREDON, from the Gr. *σειρα*, a chain, and *οδον*, a tooth, Wagl. *Axolotl*. In *Zoology*, a genus of animals belonging to the family *Caudata*, order *Batrachia*, class *Reptilia*.

Generic character. Head flat and large; muzzle rounded; gape reaching to the eyes, and having a deep groove receding from each corner; in either jaw a single row of very small teeth, and upon the palate bones numerous close-set small teeth, disposed in an arched form; eyes small, round, and far forwards; branchial apertures four on each side, large, with four semicircular arches, the hindmost anchylosed to the trunk, the middle two armed on their inner edge with two rows of sharp denticles, and the posterior with one row, but the anterior unarmed; upon the outer side of the anterior three arches a narrow membrane ramifying into numerous hair-like processes; gill-flap consisting of a fold of skin; body narrower than the head, but stout, large, and very broad, with a shallow crest commencing between the shoulders, and running to the tip of the tail, which is much compressed, and there joining with another crest commencing from the vent; fore feet four-toed; hind feet five-toed, and all the toes pointed and nailless.

The curious animal upon which this genus is founded was first described by Francisco Hernandez, in his work *Nova Plantarum, Animalium, et Mineralium Mexicanorum Historia*, published in Rome in 1651, under the name of *Axolotl*. He speaks of it as a kind of pond fish, covered with soft skin, four-footed like Lizards, about nine inches long and an inch thick, but sometimes exceeding eighteen inches in length. The head is depressed, and the gape wide; the body of proportionate size, and the thick tail gradually becoming slender towards its tip. It swims with its feet, which terminate in toes like those of a Frog. The colour is black. He considers that it approaches nearly to the Skinks, and states that it was considered a pleasant and wholesome food, not very unlike Eels, and eaten fried, boiled, or roasted with vinegar, much pepper, cloves, and Indian pepperwort, by the Spaniards, but with pepperwort alone by the Mexicans, who valued it very highly as a condiment. Cuvier also considers that this author alludes to the same animal under the name of *Atolocatl* or *Gerynis*, in his *Historia Animalium et Mineralium Novæ Hispaniæ Liber Unicus, in sex Tractatus divisus*. Subsequent writers copied this account with slight variations, but not till Cuvier's description of the two specimens given to him by Humboldt, and of which an account is given in the *Zoology to Humboldt's Travels*, is any satisfactory description to be found of it. Since that time Barnes has noticed it in a paper entitled *An Arrangement of the Genera of Batracian Animals, with a Description of the more remarkable Species, including a Monograph of the doubtful Reptiles*, published in Silliman's *Journal* for 1826.

S. Axolotl, Wagl.; *Proteus Mexicanus*, Barnes; *Siren Pisciformis*, Shaw; *l'Axolotl*, Cuv. It measures from ten to twelve inches in length; has the head flat, large, and broader than the body, which is broader in proportion to its length than any other reptile; the upper crest passes from between the shoulders down the tail, and the under one from the vent to the tip of the tail, being deepest at the middle of that member; it has four toes before and five behind, all without nails. The skin is smooth, scaleless, of a deep brown or ash-grey colour, with numerous rounded black spots, and immense quantities of whitish points invisible to the naked eye; it is disposed in a number of strong transverse wrinkles or furrows, and a longitudinal groove passes from the gills to the tail. The most remarkable circumstance, however, connected with this animal, and which has been the source of great dispute among zoologists, is the respiratory apparatus, which consists both of lungs and gills, the latter of which, so far as has been hitherto ascertained, are permanent organs. The gill openings into the mouth are four, are larger than those of the Siren, and covered with a fold of the skin on each side, which answer to gill-flaps, are very large, and descending below the throat insulate the head; four pairs of cartilaginous arches are found, one between each two of the branchial apertures; the first pair of branchial arches are not toothed, the following two are toothed on their front edge in two rows, and the fourth pair in one row; the first three pair have on their outer edge a sharp membranous crest, with numerous hair-like processes; but, according to Cuvier, without containing any vascular network, the vessels passing without divisions. Mr. Barnes gives the following view of the economy of this peculiar respiratory apparatus, considering it to be permanent, and that the Axolotl is an adult animal, and not a larva of some other and unknown reptile. "The truth at last," says he, "seems to be, that the air is inspired by the nostrils into the air sacs, and reserved for use whilst the animal is in the mud or under water, and slowly expired by the gills or spiracles. The lining membrane of the mouth closes the posterior nares, and prevents the escape of the air, and the persistent operculum closes the opening of the gills, and prevents the influx of the water. The fringed gills may be useful in keeping a free space around the opening, so that the animal may not be strangled by lateral pressure. They may also in the water perform an office similar to that of *mastaces*, or tentacula in other animals. Thus organized the animal is remarkably fitted to his habitation and circumstances." In this view of the Axolotl being a perfect animal, Mr. Barnes agrees with Lacepede, who thinks it a species of *Proteus*. Dr. Harlan also holds it to be a perfect animal, and considers it to be a species of *Menobranchus*, closely allied to *M. Lateralis*, but having one toe more on the hind foot, indicating its transition to the genus *Salamandra*. Cuvier, in his Essay among the Zoological papers attached to Humboldt, states, from the close resemblance it bears in all its parts to the Salamanders and their larvæ, that it is probably only the larva of some large Salamander, and perhaps even that obtained by Michaux, the *Salamandrops*. In the last edition of his *Règne Animal*, he places it as a distinct genus, but adds in a note, *Ce n'est encore qu'avec doute que je place l'Axolotl parmi les genres à branchies permanentes; mais tant des témoins assurent qu'il ne les perd pas, que je m'y vois obligé.* The Axolotl is found in the Lake

He also is so skill'd at the soft weapon, that by the fair insinuating carriage, by the help of the winning address, the *syrene*-mode or meen can inspire poison, whisper in destruction to the soul.

Hammond. *Works*, vol. iv. p. 470. *Sermon* 1.

The *sirens* will so soften with their song
(Shrill, and in sensuall appetite so strong)
His loose affections, that he geues them head.

Chapman. *Homer. Odyssey*, book xii.

Next, where the *sirens* dwell, you plough the seas!
Their song is death, and makes destruction please.
Unblest the man, whom music wins to stay
Nigh the curst shore, and listen to the lay;
No more the wretch shall view the joys of life,
His blooming offspring, or his beauteous wife!

Pope. *Homer. Odyssey*, book xii.

When themes like these employ the poet's tongue,
I hear as mute as if a *syren* sung.

Cowper. *Table Talk*, p. 606.

SIRENS, nymphs or goddesses of an inferior order, who fascinated by their singing the navigators who passed near their island, and then destroyed them. Homer mentions only two, and says nothing of their origin; later poets represent them as more numerous, but give very discordant accounts of their names, residence, family, and history. The inconsistency of the legends seems to prove that the Sirens, like the mermaids, may have been a class of mischievous water-sprites, such as were in the infancy of navigation supposed to haunt dangerous coasts; indeed the various localities assigned to them by the poets are all in the vicinity of dangerous shoals or rocks. It was said that the Fates had decreed that the Sirens should perish when any navigator passed them safely in spite of their allurements; accordingly, when Orpheus, according to some authorities, or Ulysses, according to others, had escaped their snares, they flung themselves into the sea, and were changed into formidable rocks. Plato seems to confound the Sirens with the Muses, for he ascribes to them the music of the spheres.

SIREN, from the Gr. *σειρην*, a *syren*, Lin. In *Zoology*, a genus of animals belonging to the family *Caudata*, order *Batrachia*, class *Reptilia*.

Generic character. Head small, muzzle rounded, lips not very fleshy, and the upper slightly prominent; neither intermaxillary bones nor teeth, except upon the palatine bones, where they are ranged on oblong plates, and upon the inside of the lower jaw; eyes small, round and subcutaneous; no external ears; branchial

apertures three on a side, and over each a fimbriated appendage or gill; body eel-shaped, rounded or slightly compressed before, flattened laterally, and narrow from above to below behind, and terminating in a much compressed tail, the depth of which is increased by a membranous fin on its upper and lower edge; anterior limbs only, four-toed, unwebbed, and nailless.

The first mention of the curious animal which forms this genus was made in a letter, dated May 18, 1765, from Dr. Garden, of South Carolina, to Linnæus. He says, "I have sent you the characters of a very extraordinary animal, which I have never seen till lately, though they are very common here. I have likewise sent you two specimens of it, though they are much less than the one from which I made out the characters, which was between two and three feet in length. I have sent it to Mr. Ellis for the (British) Museum. It appears to me to be a middle link between the *Lacerta* and *Muræna*, having some things in common with both, and yet differing from both." Of the specimen sent to England, Mr. Ellis has given a description in the *Philosophical Transactions* for 1766, in a paper entitled *An Account of an Amphibious Bipes*. It was thirty-one inches long, the head like that of an Eel, but more compressed, the eyes very small, indeed scarcely visible, and, as he observes, well suited to an animal which lives in the mud. The opercules or coverings to the gills correspond in number to them, being three on each side, and of a double pennated form; these he compares to the gill appendages of the larva of the Newt or Eft, (*Triton*), serving them as "coverings to their gills, and for fins to swim with during this state; and which they lose, as well as the fin of their tails, when they change their state, and become land animals." He suspected that the animal might be "the larva state of some large kind of Lizard;" but his examination, in company with Dr. Solander, of all the Lizards in the British Museum ended in this, that "after carefully going through many kinds, we could plainly discover four feet perfectly formed, even in those that were just come out of their eggs." In this state of uncertainty, Ellis entered into a correspondence with Linnæus upon the subject, who in his reply stated that "the animal is probably the larva of some kind of *Lacerta*." . . . "If it does not undergo a change, it belongs to the order *Nantes*, which have both lungs and gills; and if so it must be a new and very distinct genus, and should most properly have the name of *Siren* . . . It is not an easy matter to reconcile it to the larvæ of the Lizard tribe, its fingers being furnished with claws; all the larvas of Lizards that I know are without them. Then also the branchiæ or gills are not to be met with in the aquatic Salamanders, which are probably the larvas of Lizards." About the same time that Ellis made his communication to the Royal Society, a paper was drawn up by Abraham Osterdam, which may be found in the *Amœnitates Academicæ* of Linnæus, vol. vii., and gives a description of the specimen sent by Garden to Linnæus: *Animal aquaticum, formæ adeo singularis*, says the writer, *ut cum nullo alio, quantum scio comparari, neque ad ullum animalium ordinem hucusque stabilitum referri possit*. He then notices that it has fore but no hind legs: *quale nullum usquam animal est inventum*; the hind legs being connected together to form a tail like that of an Eel, and therefore *fabulosis antiquorum Sirenibus est persimile*, and that it is vocal like a bird. He then describes the specimen, and notices the gills

SIREN.

SIREN. projecting three from each side of the neck, corresponding to the number of gill apertures, soft, distichous, and very much ramified, a structure found in no other perfect animal. This paper also includes the anatomical description of the animal drawn up by Dr. Garden, commencing *Animal aquaticum, facie insolenti livide torva*. Of the respiratory apparatus he says, that "the branchial opercules are three on each side, in the form of long, thick, wide, very slippery, pendulous appendages, closely resembling the ears of some Dogs; that the gills are four on each side, the middle two free, and the others attached to the upper and lower side of the branchial aperture. The lungs are very large, extending from the chest to the vent, are close to the back, and each has a proper windpipe by which a communication is kept up with the gills.

To the opinion of Linnæus, that the Siren was a new genus, and not an immature species of any Salamander, there were many opponents among the most learned zoologists; Pallas, Hermann, and Camper all denied it. The former did not consider the absence of hind limbs as any bar to their subsequent appearance in the perfect state; the second thought the large size of the animal was not to be taken as proof of its maturity, since the *Rana Paradoxa* and *Bufo Scorodosma* are as large when imperfect as when they become perfect animals; and the last, in 1785, having examined only a specimen in a bad condition in which he could not find the lungs, denied their existence altogether, and put forth the extraordinary notion that the Siren was a fish, notwithstanding the fore legs with which it is provided, and in direct opposition to the anatomical description of it given by the accurate John Hunter, (in the same volume of the *Philosophical Transactions* which contains Ellis's account,) as follows: "The lungs are two long bags, one on each side, which begin just behind the heart, and pass back through the whole length of the abdomen nearly as far as the anus." In 1807, Cuvier, however, set the matter at rest as to the existence of lungs and gills, and confirmed the descriptions of Garden and Hunter in this particular. And more recently, as mentioned in a paper of Mr. Barnes's in Silliman's *American Journal of Science* for September 1827, "Captain Leconte has dissected a large Siren alive, and has actually seen the expansion and contraction of the lungs in the act of respiration, just as in the Frogs and Tortoises. They are true lungs, and not merely air-sacks, and their connection with the heart and the arteries was distinctly observed."

S. Lacertina, Lin. From three to three and a half feet long; the body resembling that of an Eel, rounded or slightly compressed in front, but flattened laterally and narrowing vertically behind, as it runs back to terminate in a compressed, pointed tail, the latter being increased in depth by a vertical, membranous fin, without rays, which on the under edge commences from behind the vent, and on the upper rather before it, and both meet on the tip of the tail. The head is not separated from the trunk by any neck, is of a rounded form, and terminating in a blunt muzzle; the mouth rather small, and the upper projecting a little beyond the lower lip, but neither fleshy nor supported by bone, as in fishes; the nostrils are two very small apertures near the edge of the upper lip; the eyes, placed above the corners of the mouth, are small, round, and are visible through the skin which passes over them, as they have not eyelids; no appearance of any ear. "On the posterior and lateral parts of the mouth are three open-

ings on each side; these are similar to the slits of the gills in fish, but the partitions do not resemble gills on their outer edges, for they have not the comb-like structure." Hunter. "Nor have they any internal gills, like Lampreys." Cuvier. "Above and close to the extremity of each of these openings externally, so many processes arise, the anterior the smallest, the posterior the largest; their anterior and inferior edges and extremity are serrated, or formed into fimbriæ; these processes fold down and cover the slits externally, and would seem to answer the purpose of the comb-like part of the gill in fish." Hunter. About half an inch behind the branchial apertures are the limbs, one on each side, and connected to the trunk nearer the under than the upper surface of the animal; they are about an inch in length, and the foot is divided into four distinct, unwebbed toes, the thumb being deficient; the toes have not either nails or claws, but the last joints are very pointed, and, being closely invested by the skin, have led to the mistaken statement of their having nails. The skin is smooth and not in the least scaly, but examination of it with a glass presents numerous slightly elevated points and corresponding depressions. The general colour of the animal is deep blackish-brown, with numerous small whitish points above and beneath of a paler colour. In Dr. Garden's time they were common in South Carolina, and he says that he has seen them of all sizes, from four inches to three or three and a half feet long; but lately they have become very scarce. They live in dams and ponds of fresh water, or in low, marshy grounds, and are probably predaceous, as Garden speaks of some of his specimens having been caught on a hook baited with a piece of fish, and, as will also be presently adverted to, in another instance. About the habits of the animal in its natural state no good account has yet been given, and the observations recorded about it are such only as have been noted whilst in a state of confinement. Mr. Barnes mentions one "in Scudder's Museum, New York, which has already lived several years in a glass jar of clear water;" and others for about the same time "in a tub containing mud brought from their native marshes in Carolina. When taken from the mud, they immediately struggle to return, and seem contented only when they are in their natural element." When concealed, their situation is known by the rising of small air bubbles opposite their head.

The most interesting and detailed account of the habits of the Siren has been given by Mr. Neill, a specimen of which was intrusted to his care by Dr. Monro, to whom it had been sent in the early part of the summer of 1825. It was about eighteen inches long, and four in circumference at its thickest part, and was brought over in a barrel half filled with mud and water, and pierced with holes at the top. At first it appeared sluggish, and did not eat for several weeks after its arrival. When given into Mr. Neill's keeping, he placed it in a large box, having an inclined plane at one end, so that the Siren might get out of the water more or less completely as it might be disposed. Sand was first placed in the box, supposing that the animal might be inclined to burrow in it, but the tufts of mosses, *hypnum* or *sphagnum*, were found more agreeable to it, under which it was fond of hiding or routing, and lying upon it. In a warm day it would eat one or two small worms, if placed sufficiently near for it to observe their struggles, as its vision did not appear very strong; but

SIREN. this meal would last for a week or ten days. It swallowed very slowly, allowing half the worm to wriggle about whilst the other half was swallowed. Of some Sticklebacks which were put in the smaller disappeared, as did also two or three larvæ of the *Triton Punctatus* or common Water Newt; but the larger fish were found dead, with pieces bitten out of them, corresponding to the jaws of the Siren. During the first eighteen months the animal was kept in a green-house, only sufficiently warm to keep out the frost; it ceased taking food from October to May, and during that time remained very sluggish, rarely changing its place, except when roughly disturbed. The skin did not appear very sensitive, as the animal was not roused by stroking the back gently, but if the tail were touched, a few bubbles of air were thrown up and it moved slowly away. In April, 1827, the animal in its box was placed in a hot-house ranging from 60° to 80°, but generally about 65°; it soon became more lively, and uttered a single cry at a time without any change of note, and similar to the croaking of a Frog; this cry was continued for some weeks, and from the period of the year was presumed to be its love note. During this summer the Siren ate more quickly three or four worms at a meal, but not more frequently than before; and it was noticed that when it caught sight of the prey, it approached very cautiously, remained motionless for a moment, as if watching, and then made a sudden dart upon it. When touched, its nose moved with a jerking motion causing the water to spout, air-bubbles escape, and it soon came to the surface to take in air by the mouth; but if left alone it would be at the deepest part of the box, in six inches of water, for hours, without coming to the surface, and without discharging any bubbles of air. "But," says Mr. Neill, "on looking attentively into the water, as I have done for twenty minutes at a time, a slight current may be observed to be excited behind the gills, about twice in a minute. The current is sometimes so gentle that it is only to be observed by noticing the motion of minute particles of decayed moss which come within its influence." When the box was cleaned out, about once a fortnight, the Siren was put into an oval jar containing water; it then moved about with rapidity, and frequently protruded its nose and mouth above the surface for the purpose of breathing. When put upon the floor of the hot-house, it moved about very awkwardly; but Mr. Neill was inclined to think, "that among wet grass he might probably get on pretty well; for he exhibited no indications of pain or uneasiness, but merely a desire to escape or get under cover. Dr. Garden has mentioned in one of his letters to Ellis, that a Siren which he had desired his servant to kill by striking its head against the ground, but which had been violently dashed down, to his "surprise broke short off in three or four pieces, just in the same manner as the Glass Snake does when struck;" and thence the Doctor was led to infer that "it was not of the Eel kind, whose skin and muscles are remarkably tough." But this doubtless occurred from the violence used in destroying the animal, as an accident which happened to Mr. Neill's Siren proves, as also the fact of its being capable of living out of the water. One evening, in May 1826, between seven and eight o'clock, the box, which stood about three feet from the ground, happening to leak, was filled by the gardener, and the Siren seen in it: on the following morning, at seven o'clock, the animal was found lying doubled, but not coiled, in a footpath on the exterior of

the green-house, and from the shining mucus which had been rubbed off its body the animal's track through an edging of heath across a narrow flower border to a hole which it had scooped out under the brick wall of the green-house, in escaping from within, was easily traced. The morning being very cold the animal was very much benumbed, and only just showed signs of life when taken up: how long it had been out of the box could not be ascertained, but the burrow it had made in the earth soaked with water by the leaking of the box was no less than eight inches deep and nearly three feet long, for the ascending tunnel at the outside sloped at an angle of about 30°. The cuticle was rubbed off the nose, and the skin in different parts of the back ruffled, indicating, as supposed by Mr. Neill, that "its progress had depended more on rooting with the nose and shoving with the shoulders than on digging or scraping with the feet and toes." When returned to the water it breathed hard, rushing to the surface and opening its mouth wide to inhale the air: it soon after, however, sunk down and liberated several strings of air bubbles. The gills were evidently dried to a certain degree, and thus their functions obstructed; but after remaining some hours in water it had perfectly recovered, and was as lively and well as ever. This animal lived till the 22d of October, 1831, when it again escaped from the box and was found dead. During the six years it had been in Scotland it had increased four inches in length.

Two other species of this genus have been described by Captain Leconte.

S. Striata, Leconte. Nine inches long; the colour blackish, with two longitudinal yellow streaks on each side; its feet have but three toes.

S. Intermedia, Leconte. Does not exceed a foot in length, of a blackish colour; the branchial appendages less fringed; it has four toes.

The first species is said to burrow in the ground; the second in the mud; and the last in both.

See Garden, in Linnæus's *Correspondence*; Ellis, in *Philosophical Transactions*, 1766; Hunter, *Philosophical Transactions*, 1766; Osterdam, in *Linnæi Amœnitates Academicæ*; Cuvier, in the *Zoologie* to Humboldt and Bonpland's *Voyage*; Barnes, in *Silliman's American Journal of Science*, vol. ii.; Leconte, in the *Annals of the Lyceum of New York*, vol. ii.; Neill, in *Edinburgh New Philosophical Journal*, 1828.

SIREX, in *Zoology*, a genus of *Hymenopterous* insects.

Generic character. *Antennæ* filiform or setaceous, as long as, or longer than, the thorax, articulations varying from seventeen to twenty-five, generally most numerous in the females; the first and third joints longest, of equal length, the former robust, second minute, globose, fourth shorter than the third, the remainder very gradually diminishing in length; *palpi* unequal, very short; maxillary ciliated and two or one-jointed; labial thrice as long and more slender, very pilose, with four, three, or two joints, the terminal one robust; mandibles thick, tridentate; head moderate, semiglobose; eyes small; *ocelli* three; *thorax* rather wider than the head, the anterior angle or collar produced; wings with two marginal and two submarginal areolets; *abdomen* long, cylindric, terminating in an elongate point or style, and in the female with a longish ovipositor, arising from beneath the sixth segment, and extending considerably beyond the abdominal style; legs moderate, posterior pair slender in the

SIREN.

SIREX. females, in the males with their *tibiæ* and *tarsi* much dilated.

SIROCCO. Type of the genus, *S. gigas*, Linnaeus; Klug, *Monog. Siric. Germ.* pl. ii. fig. 1—5, p. 31. The insects of this genus are of large size; nearly twenty species have been discovered, of which at least six inhabit England, without including *S. majus*, which has been formed into the genus *Xyloterus* (q. v.) by Hartig: their larvæ are remarkably destructive to trees of the fir tribe, boring large cylindrical holes through the solid timber.

SIRO, in *Zoology*, a genus of *Arachnida*.

Generic character. Body oval; *palpi* two, five-jointed, the joints elongate; mandibles two-jointed, cylindrical, compressed, and forcipated; eyes two, placed on a peduncle on each side of the thorax; legs eight, elongate, filiform; *tibiæ* and *tarsi* two-jointed, terminated with a bent claw.

Type of the genus, *S. rubens*; Latreille, *Gen. Crust. et Ins.* vol. i. p. 143. pl. vi. fig. 2. Found in France and England, at the roots of trees, beneath mosses, not very uncommon in this country, and the only species hitherto detected.

SIROCCO, It. *sirocco*, *scilocco*; Fr. *sirocco*, *siroch*. Menage fashions it from *eurus*. Skinner thinks it may be *ventus Syriacus*, or blowing from Syria, which lies South-East of Italy, Libeccio, Lybian, or African.

Thwart of these as fierce
Forth rush the Levant and the Ponent winds
Eurus and Zephir with thir lateral noise,
Sirocco, and Libecchio.

Milton. *Paradise Lost*, book x. l. 703.

I ought not to complain: for though it is a *sirocco*, and a heavy rain, I have not yawned these two days.

Byron. *Diary*, January 8, 1821.

SIROCCO, more commonly spelt *Scirocco*, or *Scilocco*, is the Italian name of the South-East wind, probably derived from the Arabic word *shurûk*, sunrise, or *shark*, east. In Sicily and the South of Italy it causes, at least in the summer months, a most oppressive heat and drought, and is accompanied by a thick haze, which has the appearance, but not the moisture, of an English fog. At Palermo, Mr. Brydone saw the thermometer, when exposed to it, rise almost immediately 39°, from 73° to 112°. Exclusion of the outward air, and evaporation produced by wet cloths hung in the windows, are the best and almost the only preservatives against its distressing effects—an extreme depression of spirits, and an incapability of exertion, effects which are felt even when it blows with its least force. Persons who have not before experienced the relaxation which it produces are beyond measure perplexed, as they are at first entirely unable to account for the distressing sensations by which they are oppressed. Happily this wind seldom blows for more than forty-eight hours consecutively; and in Sicily, where it is peculiarly prevalent, it is rarely, if ever, followed by serious illnesses. It has been supposed to take its rise in the great African Desert, where vast tracts of sand or gravel are heated by a cloudless and tropical sun; and as almost the only part of that Desert which comes down to the Mediterranean lies nearly due South-East of Sicily, that hypothesis appears the more plausible: but it must also be acknowledged that in the more Eastern parts of the Mediterranean the *Scirocco* is similarly felt, though in a less degree; and in that quarter its operation cannot be explained by any reference to its passage over the African Deserts.

See Brydone, *Tour through Sicily and Malta*, London, 1774, 2 vols. 8vo.

SIRRAH. The writing of this word by Holland *sirr-ha* seems to confirm the Etymology of Minshew, *Sir: ha!* adopted by Skinner and Junius.

She seeing mine eyes still on her were,
Soon, smilingly, quoth she,
Sirrah! look to your rudder there,
Why look't thou thus at me?

Drayton. *The Muses' Elysium*. Nymphal 7.

Apelles could not endure that, but putting forth his head from behind the painted table, and scorning thus to be checked and reproved, *Sirraha*, (quoth he,) remember you are but a shoemaker, and therefore meddle no higher I advise you than with shoes.

Holland. *Plinie*, book xxxv. ch. x.

SIRT. See **SYRTES**. Minshew says, *Sirtes*, sandy places in the extreme parts of Africa where the sands are moved in waves. Lat. *syrtis*, from *σyr-ειν*, *trahere*, to draw together. See the Quotation from Sallust.

They discovered the immense and vast ocean of the courts to be all over full of flats, shelves, shallows, quicksands, crags, rocks, gulfs, whirlpools, *sirts*, &c.

Translation of Boccacini, (1626,) p. 42.

When the sea begins to swell and to be agitated by the winds, the waves roll along with them slime, sand, and stones of prodigious size; so that as the winds shift the bed of the waters changes; and from this quality of dragging their channel they derive their name *syrtis*.

Rose. *Sallust*. *The War against Jugurtha*, p. 211,

SI'RUP, or } Fr. *syrop*; It. *siropo*; Low Lat.
SY'RUP, } *sirupus*, or *syrupus*, from Gr. *σyrιας*
SI'RUP, } *σρος*, *succus Syriacus*, because the use
SI'RUPY. } of *syrups* originated with the Syrians,
(Beckman,) or from the Arab *sirab*, a drink, a potion, a medicated drink. See Vossius and Skinner.

The Pope hath great prouision at cities and townes to get him of the best that may be founde, well dressed and dayntely to make digestion, with spicery, sawces, *siropes*, coloured out of kynde.

Frith. *Workes*, p. 99. *Antithesis between Christ and the Pope*.

His drugs, his drinks, and *sirups* doth apply,
To heat his blood and quicken luxury.

Drayton. *The Owl*.

They'll fetch you conserve from the hip,
And lay it softly on your lip,
Through their nibbling bills they'll chirup,
And fluttering feed you with the *sirup*.

Id. *The Muses' Elysium*. Nymphal 2.

Yet when there haps a honey fall,
We'll lick the *syrup* leaves;
And tell the bees, that theirs is gall
To this upon the greaves.

Id. *The Quest of Cynthia*.

Apples are of a *sirupy* tenacious nature.

Mortimer.

The juice which trickles into these vessels is collected by persons who climb the trees for that purpose, morning and evening, and is the common drink of every individual upon the island; yet a much greater quantity is drawn off than is consumed in this use, and of the surplus they make both a *syrup* and coarse sugar.

Cook. *Voyages*, vol. ii. book iii. ch. ix. p. 255.

He infuses into the phial a little *syrup* of sugar, or a comfortable cordial, that the patient may not make wry faces, or throw it out of the window.

Knox. *Works*, vol. ii. p. 304. *Evening* 3.

SISON, in *Botany*, a genus so named from the Celtic *sisum*, a running stream, on account of the habitats of several former species. It belongs to the class *Pentandria*, order *Digynia*, and natural order *Umbelliferae*. *Generic character*: margin of calyx obsolete; petals curved, deeply emarginate, each furnished with an inflexed point; styles very short; fruit compressed at the sides; mericarps with five filiform, equal ribs, the

SISON.
—
SISYM-
BRIUM.

lateral ribs marginating; vittæ one in each furrow, club-shaped; carpophore bifid.

This genus consists only of one species, *S. amomum*, a biennial plant, native of Britain. Herb branched, with compound leaves and umbels of cream-coloured flowers. Both the involucre and involucels are composed of few leaves; the seeds are aromatic and pungent when dry and ripe.

SI'STER, n. } A. S. *sweoster*, *sweostor*; Goth.
SI'STER, v. } *sivistar*; D. *sustar*; Ger. *schwester*;
SI'STERHOOD, } Sw. *syster*. Ihre thinks the labours
SI'STERLY. } of Etymologists upon the origin of
this word have been hitherto in vain. See them in
Wachter: *Swæs* is *suus*, *proprius*, *swæsre mæg*; *pro-*
prius cognatus; *swæsre sunu*, *proprium filium*.
Swæstre, or *sweoster*, may be a female born of his or her
own parents, of the same parents of her or himself, of
his or her own blood; i. e. of any one so related.

Females by the same parents are *sisters*; males and
females are brothers and *sisters*; more extensively ap-
plied to female relations; females of the same kin or
kind; of the same society or association.

For he [Lear] seide, þou ne louest me nogt as þi *sostren* doþ,
Ac despisest me in myn olde liue.

R. Gloucester, p. 31.

Ther ben sevene *sustres* that serven truthe evere.

Piers Plouhman. Vision, p. 125.

His moder was Sibriht *sister*, þat was a fole kyng.

R. Brunne, p. 14.

But bisidis the cross of Jhesus stooden his moder and the *sistir*
of his modir Marie Cleophe and Marie Maudeleyn.

Wiclif. John, ch. xix.

Then stode by the crosse of Jesus his mother, and his mother's
syster, Marye, the wife of Cleophas, and Mary Magdalene.

Bible, Anno 1551.

So song the mighty Muse, she
That cleped is Caliope,
And her seuen *sisterne* eke.

Chaucer. The House of Fame, book iii.

Phedra hir yonge *suster* eke,
A lustie maide, a sobre, a meke,
Fulfilled of all curtosie,
For *susterhode* and companie.
Of loue, whiche was hem betwene,
To see hir *suster* be made a quene,
Hir fader left.

Gower. Conf. Am. book v.

CAL. Yes, I do service for your *sister* here,
That brings my own poor child to timeless death;
She loves your friend Amintor, such another false-hearted
Lord as you.

Beaumont and Fletcher. The Maid's Tragedy, act i. sc. 1.

Thus have I given your lordship the best account I could of the
sister-dialects of the Italian, Spanish, and French.

Howell. Letter 59. book ii.

— And after much debatement
My *sisterly* remorse confutes mine honour,
And I did yeeld to him.

Shakspeare. Measure for Measure, fol. 80.

— And with her neeld composes
Nature's own shape, of bud, bird, branch, or berry;
That even her art *sisters* the natural roses.

Shakspeare. Pericles, act 5.

Her *sister* hears, and, furious with despair,
She beats her breast, and rends her yellow hair:
And, calling on Eliza's name aloud,
Runs breathless to the place, and breaks the crowd.

Dryden. Virgil. Æneid, book v.

Well, then, we hear no more of this *sisterly* resemblance (of
Christianity) to Platonism.

Warburton. Works, vol. xii. p. 213. Lord Bolingbroke's Philosophy.

SISYMBRIUM, in Botany, a genus so named from
the Greek name (σισυμβριον) of an aquatic plant now

unknown. It belongs to the class *Tetradynamia*, order
Siliculosæ, and natural order *Cruciferae*. Generic charac-
ter: silique terete, sessile upon the torus; stigmas two,
somewhat distinct or connate; calyx equal at the base;
seeds ovate or oblong; corolla, stamens, &c. as in other
cruciferous plants.

This genus consists of annual or perennial herbs,
principally natives of Europe and Asiatic Russia. There
are about sixty species, all of which are very variable,
both in habit and leaves.

SISYPHE, in Zoology, a genus of Coleopterous
insects.

Generic character. *Antennæ* eight-jointed, the basal
joint about as long as the others united, second some-
what hemispheric, third to fifth short, the remainder
forming a laminated club; *palpi* four, labial with the
basal joint broad, transverse, dilated within; head some-
what semicircular; eyes nearly prominent; *thorax* trans-
verse; *coleoptra* forming a triangle; legs elongate,
especially the posterior, which are about half as long
again as the body, and have their femora clavate; ante-
rior *femora* with a fascicle of hairs; four anterior
tibiæ elongate-trigonal, compressed, posterior much
longer, slender, armed; *tarsi* elongate, filiform.

Type of the genus, *Scarabæus Schæfferi*; Linnæus,
Syst. Nat. vol. i. p. 550; Panz. *Faun. Ins. Germ.* pl.
xlvi. fig. 59. Inhabits the South of Europe: there
are nine other species.

SISYRINCHIUM, in Botany, a genus so called
by Linnæus from the Greek *συσ*, a pig, *ῥινχος*, a snout.
It belongs to the class *Triandria*, order *Monogynia*, and
natural order *Irideæ*. Generic character: perianth six-
parted, regular; stamens three; filaments combined at
the base, or distinct; style trifid; stigmas simple; cap-
sule subglobose.

This genus consists of numerous species; they are
small, evergreen, elegant plants, with grassy leaves, and
blue or yellow flowers; mostly natives of America.

SIT, Mr. Tyrwhitt says, to become, to *suit* with;
and it is not unlikely that *suit* is the word intended,
though written without the *u*. To *sit* as a garment,
easily, becomingly, gracefully; and hence, to fit or
befit, to besee, is the usual explanation. The Fr. *il*
sied, quoted by Mr. Todd, in his Note on Spenser, coun-
tenances this; though Cotgrave (Ed. 1673) writes, This
garment becomes, besee, *befits*, or *fits* him well. To
this may be added that Chaucer writes, it *sate*, in the
past tense.

My word shal stand, that warne I you certain:
I am king, it *sit* me not to be.

Chaucer. The Marchantes Tale, v. 10189.

But as for me, I say that evil it *sit*
To assay a wif whan that it is no nede,
And putten hire in anguish and in drede.

Id. The Clerkes Tale, v. 8336.

Well could she sing and lustely,
None halfe so well and seemely:
And cothe make in song such refraining,
It *sate* her wonder well to sing.

Id. Romant of the Rose.

For thy my sonne, if thou wolt loue,
It *sitte* the well to leaue pride,
And take humblesse on thy side,
The more of grace thou shalt gete.

Gower. Conf. Am. book ii.

For if men shoulde trouthe seche,
And finde it not within a kyng,
It were an *unsittende* thyng.

Id. Ib. book vii.

SISYM-
BRIUM.
—
SIT.

SIT.

But shepherds (as Algrind used to say)
Mought not live ylike as men of the laye;
With them it sits to care for their heire,
Enaunter their heritage doe impaire.

Spenser. *The Shepherd's Calendar*. May.

THE. The nightingale is sovereigne of song,
Before him sits the titmouse silent bee;
And I, unfit to thrust in skilfull throng,
Should Colin make iudge of my foolere.

Id. Ib. November.

SIT, v. } Sw. *sitta*; D. *sitten*; Ger. *sitzen*;
SIT'TER, } A. S. *sittan*; Goth *sit-an*, *sedere*.
SITTING, n. } To sit, (or to set,) to place or put, to

be or cause to be in any place, position, or posture, in any state, situation, or condition: applied to a state of rest; to be at rest; to continue at rest, to reside, to dwell, to abide: applied to a posture of rest, as distinguished from standing or kneeling; to place or put, to be or cause to be in a seat; in a seat of power or authority.

Set and sit differ in usage only. See LIE.

Set that down, sit down, (sc. yourself:) the usage of sit is more restricted than that of set; it is more commonly applied to the posture of the body.

For who is gretter: he that sittith at the mete, or he that mynystrieth? Wher not he that sittith at the mete? And I am in the myddil of you as he that mynystrieth.

Wiclif. *Luke*, ch. xxii.

For whether is greater, he that syttheth at meate, or he that serueth? Is not he that syttheth at meate? And I am amonge you, as he that mynistreth.

Bible, Anno 1551.

But at the laste whanne the ellevene disciplis saten at the mete, Jhesus apperide to hem and reprevede the unbileve of hem and the hardnesse of herte, for thei bileviden not to hem that hadden seyen that he was risun fro deeth.

Wiclif. *Mark*, ch. xvi.

After that he appered vnto the eleuen as they sate at meate; and caste in their teth their vnbeleve and hardnes of herte; because they beleued not them whiche had sene him after his resurrection.

Bible, Anno 1551.

And he cam and took of the right hond of the sitter in the trone the booke.

Wiclif. *Apocalips*, ch. v.

And he came and toke the boke oute of the ryghte hande of hym that sate vpon the seate.

Bible, Anno 1551.

I wis he sitteth so nere mine hart,
To speake of him at eve or morrow,
It cureth me of all my sorrow.

Chaucer. *The Romant of the Rose*, p. 192.

There founden thei at home sittynge
Lucrece his wife all enuironed
With women, whiche were abandoned
To werche.

Gower. *Conf. Am.* book vii.

Whiche rynges bare of obliuion
The name, and that was by reason
That where on a finger it sate
Anone his loue he so foryate,
As though he had it neuer knowe.

Id. Ib. book iv.

The said Lord President and Council shall keep four general sittings or sessions in the year, every of them to continue by the space of one whole month.

Burnet. *Records*, vol. ii. part ii. book i. p. 313.

Thou from the first
Wast present, and with mighty wings outspread
Dove-like satst brooding on the vast abyss
And mad'st it pregnant.

Milton. *Paradise Lost*, book i. l. 19.

For while they sit contriving, shall the rest,
Millions that stand in arms, and longing wait
The signal to ascend, sit lingring here
Heav'n's fugitives, and for thir dwelling place
Accept this dark opprobrious den of shame,
The prison of his tyranny who reigns
By our delay?

Id. Ib. book ii. l. 54.

They were contented to adjourn their houses as they had done for some days, and to appoint committees, qualified with more power than the houses had, to meet in London; which for the convenience of the common council, who took up the Guildhall, chose to sit in Grocers'-hall.

Clarendon. *History of the Rebellion*, vol. i. book iv. p. 387.

SITANA, Cuv. In Zoology, a genus of animals belonging to the family Iguanida, order Sauria, class Reptilia.

Generic character. Each jaw armed with four small incisive teeth, and on each side a long cuspid tooth and twelve triangular, trilobed, molar teeth; body and limbs covered with imbricated and carinated scales; no pores in the thighs; extending from the throat nearly to the middle of the belly is a kind of dewlap or very deep doubling of the skin.

This genus was formed by Cuvier, and he has given a very brief description of one species,—

S. Ponticeriana, Cuv. A small reptile from the Coromandel coast, known to the natives by the name Sitana; its colour is tawny, marked along the back with a row of large, rhomboidal, brown patches. It is distinguished from the genus Draco, to which it is nearly allied, by a large kind of dewlap which extends from the throat nearly to the middle of the belly, and is twice as deep as the animal's height; its false ribs also do not project laterally to support the skin and form the so-called wings of the Dragon.

See Cuvier, *Règne Animal*.

SITAREA, in Zoology, a genus of Dipterous insects.

Generic character. Antennæ moderate, triarticulate, the terminal joint cylindric, furnished with a naked seta; peristome broad, transverse; epistome not prominent; body pubescent; abdomen punctured; female with a quadriarticulate, coriaceous ovipositor; wings two, with four transverse fasciæ.

Type of the genus, S. Scorzonera; Robineau Desvoidy, *Essai sur les Myodaires*, p. 764. Two species, natives of France.

SITARIS, in Zoology, a genus of Coleopterous insects.

Generic character. Antennæ filiform, longest in the males, rather stout, with subcylindric joints, the first most robust, the second minute, thrice as short as the third, which is slightly elongate, and, with the remainder, obconic-cylindric, the terminal one being ovate; palpi four, filiform, subequal; maxillary with the terminal joint subovate; labial with the same joint subconic; labrum transverse, semiorbicular; mandibles stout, acute, with the apex elongate; mentum oblong; head inflexed; eyes lunate; thorax orbiculate-quadrate; scutellum large; elytra shorter than the body, very much attenuated towards the apex, and gaping; wings ample; abdomen short; legs stoutish; tibiae slender, simple, posterior with very short spurs, the apex truncate; tarsi simple, heteromorous.

Type of the genus, Necydalis humeralis, Fabricius; Stephens, *Illust. Britt. Ent. (Mandibulata)*, vol. v. p. 53. Seven species, one of which, the type, is found in England, but very rarely; it is parasitic upon Anthophora retusa.

SITE,

Also written scite.

SIT'ED,

Barb. Lat. *situare*; Fr. *situer*; It.

SIT'UATE,

sito, *situare*; Sp. *silio*, *situar*; Lat.

SIT'UATED,

situs, which Vossius derives from sin-

SITUA'TION.

ere, nam unum quodque ibi situm est,

hoc est, positum, ubi illud sivimus, hoc est liquimus.

It seems more easily (considering its meaning) to be

SIT.

SITE.

SITE. formed from the obsolete past participle of *sistere*, *sistitum*, *sistum*, *situm*.

SITHE. The place on which any thing stands; place, locality; seat or settlement, the state or condition; the circumstances within which any one stands or is placed.

He [King Henry VIII.] conferred on him [John Tregonwell] and his heirs the rich demesne and *scite* of Middleton, a mitred abby in Dorsetshire, possessed at this day by his posterity.

Fuller. *Worthies*. Cornwall.

We ask nothing in gift to the foundation, but only the house and *scite*, the residue for the accustomed rent.

Burnet. *Records*, vol. ii. part ii. book ii. p. 422.

————— The other but a child,
Compared with her phere, and Inglewood is call'd,
Both in their pleasant *scites*, most happily install'd.

Drayton. *Poly-olbion*, song 30.

Set out with all this pomp, when this imperial stream [Thames]
Himself establish'd sees amidst his wat'ry realm,
His much lov'd Henley leaves, and proudly doth pursue
His wood-nymph Windsor's seat, her lovely *site* to view.

Id. *Ib.* song 15.

These spacious streets, where every private house
Appears a palace to receive a king:
The *site*, the wealth, the beauty of the place,
Will soon inform thee 'tis imperious Rome,
Rome, the great mistress of the conquer'd world.

Beaumont and Fletcher. *The Prophetess*, act ii. sc. 3.

It *sited* was in fruitful soyle of old,
And girt in with two walls on either side.

Spenser. *Faerie Queene*.

Above were *sited* the masquers, over whose heads he devised
two eminent figures.

Ben Jonson. *Masques at Court*.

Without the hall, and close vpon the gate,
A goodly orchard ground was *situate*,
Of neare ten acres; about which was led
A loftie quickset.

Chapman. *Homer*. *Odyssey*, book vii.

Then to the snowy rocke they next withdrew;
And to the close of Phœbus' orient gates:
The nation then of dreames; and then the states
Of those soules idols, that the weary dead
Gaued vp in earth; which, in a flowry mead,
Had habitable *situation*.

Id. *Ib.* book xxiii.

Three colours, black, and red, and white,
So graceful in their proper place,
Remove them to a different *scite*,
They form a frightful hideous face.

Swift. *The Progress of Beauty*.

————— Borne away
On swelling thought, his wafted spirit flies
To the vain bosom of his distant fair;
And leaves the semblance of a lover fix'd
In melancholy *site*, with head declin'd,
And love-dejected eyes.

Thomson. *Spring*.

Indeed, if we consider the advantage of its *situation*, we may
find it surpassing most places for health and pleasure in America;
for the country about it is of a sandy soil, which soon drinks up
all the rain that falls, to which these parts are much subject.

Dampier. *Voyages*. Anno 1685.

Thus *situated*, we began to clear places in the woods, in order to
set up the astronomer's observatory, the forge to repair our iron
work, tents for the sail-makers and coopers to repair the sails and
casks in; to land our empty casks, to fill water, and to cut down
wood for fuel; all of which were absolutely necessary occupa-
tions.

Cook. *Voyages*, vol. iii. book i. ch. iv. p. 62.

Nor did the shores and woods appear less destitute of wildfowl;
so that we hoped to enjoy with ease, what, in our *situation*, might
be called the luxuries of life.

Id. *Ib.*

SITHE, (time,) see **SINCE**.

SITHE, **SITHED**, or **SCYTHE**, } A. S. *sithe*; and although written
without the *c*, it may be from A. S.
} *scēad-an*, to sever or separate, or other-
wise from A. S. *sig-an*, Sw. *sig-a*, *procidere*.

That which severs, cuts, mows, *hews*.

————— yf he do hit smythie,
In to sykkel op into *sithe*, to *shar* oþer to culter.

Piers Plouhman. *Vision*, p. 61.

As touching the very *sythes*, there bee two sorts of them. For
those of Italie be shorter than other, easie to handle and weld.

Holland. *Plinie*, book xviii. ch. xxviii.

Time, cruel time, come and subdue that brow,
Which conquers all but these; and thee too stays,
As if she were exempt from *scythe* or bow,
From love or years unsubject to decays.

Daniel. *Song* 23.

Thou saw'st great burden'd ships through these thy valleys pass,
Where now the sharp-edg'd *scythe* shears up the spiring grass.

Drayton. *Poly-olbion*, song 16.

Time had not *scythed* all that youth begun,
Nor youth all quit; but, spite of heaven's fell rage,
Some beauty peep'd through lattice of sear'd age.

Shakspeare. *A Lover's Complaint*, p. 66.

The stooping *sytheman*, that doth barb the field,
Thou mak'st wink sure; in night all creatures sleep.

Marston. *Malcontent*.

2 Qu. Honoured Hippolita
Most dreaded Amazonian, thou hast slain
The *sith-tusk'd* bore.

Beaumont and Fletcher. *The Two Noble Kinsmen*, act i. sc. 1.

Elate the mingled prospect he surveys
Of glitt'ring files unnumber'd, chariots *scyth'd*,
On thund'ring axles roll'd.

Glover. *Leonidas*, book iv.

Belinus call'd his painted tribes around,
And rough with many a veteran scar,
Swept the pale legions with the *scythed* car,
While baffled Cæsar fled to gain
An easier triumph on Pharsalia's plain.

Warton. *Ode* 21.

SITONA, in *Zoology*, a genus of *Coleopterous* insects.

Generic character. *Antennæ* geniculated, twelve-jointed, rather short and slender, the scape elongate, clavate, reaching to the middle of the eyes; *funiculus* with the first and second joints rather long, obconic, the remainder short, nodose; club elongate, ovate-acuminate; head produced in front into a short, nearly horizontal rostrum, notched at the apex, and flat above, with an impressed longitudinal line or groove; eyes rather large, sometimes rounded, moderately prominent, or oblong and very prominent; *thorax* rounded, with the sides a little dilated beyond the middle, or dilated in the middle; *scutellum* minute, rounded; *elytra* elongate, with the apex rounded, the shoulders obtusely angulated; legs moderate; *femora* incrassated in the middle; *tibiæ* truncate at the apex, incurved; *tarsi* tetramerous.

Type of the genus, *Curculio lineatus*, Linnæus; Stephens, *Illust. Britt. Ent. (Mandibulata)*, vol. iv. p. 133. A genus consisting of numerous variable insects, of which the species are not only to be ascertained with considerable difficulty, but they are not well determined: about twenty species appear to occur in Britain; the typical species feeds upon the pea, and is sometimes very destructive in gardens, &c.

SITTA, Linn.; *Nuthatch*, Penn. In *Zoology*, a genus of animals belonging to the family *Tenuirostres*, order *Passeres*, class *Aves*.

Generic character. Beak straight, of moderate size, depressed, cylindrical, conical, and sharp at the point; nostrils rounded, basal, thinly covered with bristles directed forwards; third and fourth alar quills the longest; tail composed of twelve quills square or slightly graduated, their stems very weak; feet furnished with three toes in front, the outer connected at its base to the

SITTA. middle, and one behind having a very long and curved claw.

The birds forming this genus are considered by most ornithologists to be found in all parts of the world, Sir William Jardine excepted, who restricts them to Europe and South America. They are extremely restless and active, running up and down the trunks and branches of trees with great rapidity in search of insects on which they live, and which they extract from the holes or cracks by means of their strong awl-like beaks. They also, however, feed upon the kernels of nuts or fruits, and hence the name *Nuthatch*; but Wilson is disposed to think that the bird only breaks up the nuts in search of maggots often there contained. It is certain, however, that they are also seed eaters. In running up and down trees they rest on the whole length of the back of the tarsus as far as the part which is anatomically the heel, but derive no support from the tail as the Creepers and Woodpeckers do. They make their nests in the holes of trees, in old rails, or under the eaves of barns, and sleep with their heads hanging downwards like the Titmice.

S. Europæa, Lin.; *la Sittelle ou Torchepot*, Buff.; *European Nuthatch*. Five inches and a half in length; all the upper parts ashy-blue; throat white; from the corner of the gape a black streak passes above the eye to the ear; front of the neck, chest, and belly, yellowish-ferruginous; flanks and thighs chestnut-red; middle two tail quills grey, lateral quills black, the outer four having a white spot near their tips, which are ashy; beak bluish-ash; legs grey. The colours of the female are less brilliant, and the black streak above the eye less distinct. They make their nest of old leaves in the hollow of a tree, and, according to Montagu, choose the deserted habitation of some Woodpecker. "The hole is first contracted by a plaster of clay, leaving only sufficient room for itself to pass out and in; the nest is made of dead leaves, chiefly those of the oak, which are heaped together without much order. If the barrier of plaster at the entrance is destroyed when they have eggs it is speedily replaced,—a peculiar instinct to prevent their nest being destroyed by the Woodpecker and other birds of superior size, which build in the same manner." The female lays from five to seven eggs of a greyish-white colour spotted with brown, and sits close, being provided with food by her mate; she is, however, easily disturbed from her nest, and then utters a hissing sound like a Snake. Wilson doubts the storing up of nuts against winter which this bird is said to make, but there seems little doubt of the fact, as an equally acute observer of nature, Mr. White of Selborne, observed them bringing out nuts to crack on the 17th of March. Its mode of getting the kernel out of a nut is very curious, and has gained for it in some parts of England the expressive name *Nutjobber*; having stripped off the husk it fixes the nut in a hole or chink of a tree in which it is held steadily; and it is interesting to observe that the same hole is frequently employed for the same purpose, as if to save the trouble of finding another or a better; the Nuthatch then grasping firmly with its claws throws itself backwards upon the feet and then forwards, as it were on a hinge, and striking "with the whole weight of his body," as Mr. Jesse says, "thus assuming the appearance, with his entire form, of the head of a hammer," with which he strikes on all sides to the best advantage till he has attained his object. A filbert is thus broken with ease, but a hazel-nut requires

much more labour. In the performance of this operation a considerable noise is made, which Mr. White says can be heard a furlong off; but Dr. Plot's account, that this bird, by putting its bill into a crack in the bough of a tree, can make such a violent sound as if it was rending asunder, so that the noise may be heard at least twelve score yards, is not correct, that peculiar noise is caused by the Woodpecker. In the cider season Montagu states that they visit the orchards and pick up the seeds from the refuse fruit. In the spring the Nuthatch utters a loud shrill whistle. If taken young, they may be tamed and become very amusing, but are very impatient of confinement, and often kill themselves in attempting to escape if caged when older. Sir William Jardine mentions having observed a nest of Nuthatches which had been taken when young; "they became remarkably tame, and when released from their cage would run over their owner in all directions, up or down his body and limbs, poking their bills into seams or holes, as if in search of food upon some old rent tree, and uttering during the time a low and plaintive cry." They will thrive well upon raw meat.

S. Melanocephala, Gmel.; *la Sittelle à Tête Noire*, Cuv.; *White-breasted, Black-capped Nuthatch*, Wils. Five and a half inches in length and eleven in width; general colour above light blue or lead; upper parts of head, neck, and shoulders deep black with green glossing; breast and belly pure white; vent and lower parts of the thighs ferruginous; inner webs of the three shortest secondaries and all the primaries jet black, the latter tipped with white; inside of the wing black at the bend, and below it a white spot spreading over the roots of the first five primaries; middle two caudal quills leaden, the other five black tipped with white, gradually increasing from one-tenth of an inch to an inch from within to without, and the outer two quills tipped with black; bill black; legs purple. This species is considered by Pennant as merely a variety of the European Nuthatch, but is readily distinguished by its entirely black head and white chest. It is common almost every where in North America among the woods, where it is known by the cry *quank, quank*, frequently uttered whilst running spirally up and down the body and larger branches of trees, in search of insects, spiders, and their larvæ. They build early in April, lay five eggs of a dull white spotted with brown at the larger end. Wilson doubts the assertion of their breaking up nuts, as in the numerous instances he examined he never found other than bugs, ants, small seeds, insects, and their larvæ. It is rarely driven from its native woods except in the severe weather, when it visits the farm-yards, and mingling with the poultry enters into the barns and hunts along the beams in search of food.

S. Canadensis, Briss.; *la Sittelle ou Torchepot du Canada*, Buff.; *Red-bellied, Black-capped Nuthatch*, Wils. About four and a half inches long and eight wide; back and tail feathers similar to the last species, but the secondaries have not the black markings; upper part of the head black, bounded by a white stripe on the frontlet and below the eyes; primaries and whole of the wings dusky leaden; chin white, and the other under parts light ferruginous; beak black; legs, feet, and claws dusky greenish-yellow. The female is distinguished by the black of the head, and the ferruginous of the under parts of the body being less intense. This is a migratory species, living in the Northern parts of America from April to October, when it descends to

SITTA.

SITTA.

the Southward and returns in spring. Its note is more shrill, and its motions much more rapid than those of the last species. It is very fond of the seeds of the pine trees, and, says Wilson, "You may traverse many thousand acres of oak, hickory, and chestnut woods during the winter without meeting with a single individual; but no sooner do you enter among the pines than, if the air be still, you have only to listen for a few moments and their note will direct you where to find them. They usually feed in pairs, climbing about in all directions, generally accompanied by the former species as well as by the Titmouse and the Crested Titmouse, and not unfrequently by the small Spotted Woodpecker; the whole company proceed regularly from tree to tree through the woods like a corps of pioneers; while in a calm day the rattling of their bills, and the rapid motions of their bodies, thrown like so many tumblers and rope-dancers into numberless positions, together with the peculiar chatter of each, are altogether very amazing; conveying the idea of hungry diligence, bustle, and activity."

S. Pusilla, Lath.; *la Petite Sittelle à Tête Brune*, Buff.; *Brown-headed Nuthatch*, Wils. Four inches and a quarter in length and eight in breadth; upper part of head and back of the neck light brown, with some darker patches and a white spot near the back; other upper parts, wing-coverts, and three secondaries next the body slate or lead colour; wings dusky; a darkish brown line passes from the nostrils through the eyes, beneath these the cheeks and chin are white; tail nearly even, its middle two quills slaty, the others black tipped with slate, and diagonally marked with a white streak; upper mandible black, lower blue at its base; legs and feet dull blue. The female has the brown colouring of the head darker and the eye streak less distinct. Is principally found in Virginia and in the Southern of the United States; feeds on insects and their larvæ and the seeds of the pine trees. It is very rapid and restless in its motions, and, according to Wilson's experience, not the "very stupid bird" it is said to be.

S. Velata, Tem.; *Orthorhynchus Frontalis*, Horsf.; *Veiled Nuthatch*. About three and a half inches long; forehead and semicircle on the head black; cheeks and sides of the neck rosy-white; upper parts azure-blue, deeper upon the wings and the tail; belly greyish-white; beak black at its tip. Found in the Isles of Sumatra and Java.

S. Castaneiventris, Vig.; *Chestnut-bellied Nuthatch*. Five inches in length; upper parts leaden-grey; chest and belly chestnut; a black streak passes from the gape through the eyes to the nape; primary and inner webs of the caudal quills black. This is described by Mr. Vigors, who thinks it may perhaps be Latham's *Ferruginous-bellied Nuthatch*, from a specimen brought from India by Major James Franklin.

S. Chrysoptera, Lath.; *Golden-winged Nuthatch*. Ashy above and whitish beneath; wings and tail dusky tawny; alar quills streaked in the middle with ferruginous-orange; rump and tips of the caudal quills white; tail-coverts marked beneath with a white spot. Native of New Holland.

Vieillot describes other three species.

S. Fusca, Vieill.; *Dusky Nuthatch*. About the size of a Nightingale; the head, upper parts of the body, wings, and tail brown; a band upon the neck and throat white; belly red; disk white; beak and legs brown. Native of the Brazils.

S. Chloris, Sparrm.; *Green Nuthatch*. Body green

above, white beneath; tail black and tipped with yellow; legs black and claws yellow. Native of the Cape of Good Hope.

S. Caffra, Sparrm.; *Caffrarian Nuthatch*. Upper part of the body varied with black and yellow; legs black; claws yellow. From Caffraria.

See Linnæi *Systema Naturæ* a Gmelin; Buffon, *Histoire des Oiseaux*; Temminck, *Manuel d'Ornithologie*; Pennant, *British Zoology*; Wilson, *American Ornithology*.

SIUM, in *Botany*, a genus so named from the Celtic *siu*, water, in reference to the habitats of most of the species; it belongs to the class *Pentandria*, order *Monogynia*, and natural family *Umbelliferae*. Generic character: margin of calyx five-toothed or obsolete; petals obovate, emarginate, with an inflexed point each; stylopodium pulvinate; styles reflexed, rather capitate at top; fruit compressed at the sides, rather didymous, crowned by the styles; mericarps furnished with many vittæ, both in the furrows and in the commissure; carpophore bipartite.

This genus consists of nine known species, natives of Europe, Asia, and America; and ten doubtful species, natives of the Cape of Good Hope and Japan. They are mostly aquatic perennial herbs, with pinnate leaves and white flowers; involucre and involucels composed of many leaves; *S. sisarum* is the Skirret of the gardens; *S. latifolium* and *S. angustifolium* are natives of Britain.

SIX, SIXTH, SIXTEEN, SIXTY. Fr. *six*; It. *sei*; Sp. *seiz*; Lat. *sex*; Gr. *εξ*, undoubtedly (says Lennep) from *εχειν*, though the cause of signification is not plain. Scheidius conjectures that it is *εκ* or *εξ*, beyond, in addition to, (from an obsolete verb signifying *cedere*, *accedere*,—the root is probably the verb *ic-an*, to eke, to add,) and applied to the number one more than five, i. e. than the number of fingers on the hand, or to the first unit added from the second hand to the number five already counted on the first.

Six-teen, six and ten; *six-ty*, six tens, or six times ten.

Eneas bi gan hys of spryng to Lumbardie first brynge
Thre thousand & *sixe* & tuenti ger fro the worlde bi gynnynge.
R. Gloucester, p. 10.

& the *sixthe* (age) to the incarnation,
That is, forte God was y bore. Id. p. 9.

The date was nien hundreth *sexti* & *sextene*,
That was alle forwondred, for his dede com tene.
R. Brunne, p. 37.

Elye was a deedli man lyk us, and in preier he preiede that it schulde not reyne on the erthe, and it reynede not three yeeris and *sixe* monethis.
Wiclif. James, ch. v.

Helias was a mā mortal, euē as we are, and he prayed in hys prayer that it myght not rayne; and it rayned not on the earth by the space of thre yeres and *sixe* monethes.
Bible, Anno 1551.

But fro the *sixte* our derknessis weren maad on al the erthe til the nynthe our.
Wiclif. Matthew, ch. xxvii.

From y^e *sixt* houre was there darkenes ouer al the lande vnto the nynth houre.
Bible, Anno 1551.

And sche also hath conseyved a sone in hir eeide, and this monethe is the *sixte* to hir that is clepid bareyn.
Wiclif. Luke, ch. i.

And beholde thy cosē Elizabeth she hath also cōceaued a sōne in her age. And this is her *sixt* moneth, though she be called barren.
Bible, Anno 1551.

And sum makith an hundrid fold, treuly another *sixtifold*, and another thritti fold.
Wiclif. Matthew, ch. xiii.

SIZE.

Parte fell in good ground, and brought forth good frut; some an hundred folde, some *sixty fold*, some thirtie folde.

Bible, Anno 1551.

The seeking for a fortune then is but a desperate after-game; it is a hundred to one if a man fling two *sizes* and recover all; especially if his hand be no luckier than mine.

Cowley. *The Danger of Procrastination*.

SIZE, v. } i. e. to assize, to cress or assess; to im-
SIZE, n. } pose a tax or rate at an assize or session;
SI'ZER. } generally to impose a tax, a rate; to rate the measure, weight, quantity, portion.

A *size*, at Cambridge, is a portion of bread or drink which scholars (*sizers*) have at the buttery.

To *size* is, to set down how much they take on their names in the Buttery Book. Minshew.

Continual claims I've made, injunctions got
To stay my rival's suit, that he should not
Proceed; spare me, in Hillary term I went;
You said, if I return'd next *'size* in Lent,
I should be in remitter of your grace.

Donne. *Satire 2*.

There was also a Statute for the dispersing of the standard of the Exchequer throughout England; thereby to *size* weights and measures; and two or three more of lesse importance.

Bacon. *Henry VII.* p. 101.

SIZER or SERVITOR, a student in the Universities of Cambridge, Oxford, or Dublin, who receives table allowances or *sizes* gratuitously. Examples of the word *sizes*, used to signify allowances of food, from Shakspeare and others, will be found in the next Article.

Sizers were anciently compelled to perform certain menial offices, (as, for example, the learned and excellent Joseph Mede, in one of his earliest letters written from Christ's College, Cambridge, of which he was then a fellow, mentions that his *sizer* had not brought his candles,) but this custom has been long since abolished, and Sizerships are regarded as the reward of distinguished merit in poverty, and an encouragement to future exertions. Many of the most distinguished ornaments of the Church and the Bar have risen from this class of students.

SIZE, n. } See *ante*, SIZE. *Size*, as applied to
SIZE, v. } bulk, seems to be, (see Skinner,) a rated,
SI'ZEABLE. } appportioned, proportioned, bulk, bigness, largeness; (magnitude or quantity;) proportioned to some standard; of usual growth or stature; as, a man of good *size*, a tree of good *size*.

To *size*, to appportion, to arrange or rank according to bulk; to give bulk or bigness.

Sizes, in Shakspeare, (*Lear*;) is appportioned, settled, measure or quantity.

Also this yere was an Acte of Parliament for wood and coal to kepe the fulle *sise* after the Purification of our Ladie, that shall be in the yere of our Lord 1543, that no man shall bargaine, sell, bryng, or conueigh of any other *sise*, to be vttered or sold, vpon pain of forfeiture.

Fabyan. *Chronycle. Henry VIII. continued*.

WITTY. Tush, you shall never come to farther answer for't;
Can you confess your penurious uncle,
In his full face of love, to be so strict
A niggard to your commons, that you are fain
To *size* your belly out with shoulder fees?

Beaumont and Fletcher. *Wit at Several Weapons*, act ii. sc. 1.

When as the age was long, the *size* was great;
Man's growth confess'd and recompens'd the meate;
So spacious and large, that every soul
Did a fair kingdom and large realm control.

Donne. *Anatomy of the World*, p. 177.

'Tis not in thee
To grudge my pleasures, to cut off my traine,
To bandy hasty words, to scant my *sizes*,
And in conclusion, to oppose the bolt
Against my comming in.

Shakspeare. *Lear*, fol. 294.

VOL. XXVII.

SIZE.

SKATE.

Now what my loue is, prooffe hath made you know,
And as my loue is *siz'd*, my feare is so.

Shakspeare. *Hamlet*, fol. 268.

Now all the horrors of the heavens he spies,
And monstrous shadows of prodigious *size*,
That, deck'd with stars, lie scatter'd o'er the skies.

Addison. *Ovid. Metamorphoses*, book ii.

From east to west, look all the world around,
Two troops so match'd were never to be found;
Such bodies built for strength, of equal age,
In stature *siz'd*; so proud an equipage;
The nicest eye could no distinction make,
Where lay th' advantage, or what side to take.

Dryden. *Palamon and Arcite*, book iii.

He should be purged, sweated, vomited, and starved, till he come to a *sizeable* bulk.

Arbuthnot.

He found here some cockles of so enormous a *size* that one of them was no more than two men could eat, and a great variety of other shell-fish.

Cook. *Voyages*, vol. ii. book iii. ch. iv. p. 143.

By their joint labours the whole was drawn out and digested into a *sizeable* volume, which came out in 1727, and was entitled, *The Legal Judicature in Chancery stated*.

Hurd. *Life of Warburton*, p. 8.

SIZE, } It. *assisa*, *assizare*, to size, also to sesse,
SI'ZY, } to assess. "Sisa, a kind of syse or glew
SI'ZINESS. } that painters use." Florio.

Tell him if he i' th' blood-ciz'd field lay swoln,
Shewing the sun his teeth, grinning at the moon,
What you would do.

Beaumont and Fletcher. *The Two Noble Kinsmen*, act i. sc. 1.

The blood let the first time—florid; after a second time—*sizy*.
Arbuthnot. *Nature of Aliments*, p. 353.

Cold is capable of producing a *siziness* and viscosity in the blood.
Id. *Ib*.

SKAIN, or } Fr. *escaigne*, *glomus*, seu *volumen*
SKEIN. } *fili*. Skinner suggests from the preposition *ex* and the Lat. *cannæ*, on account of its hollowness; and he observes that very many things hollow especially if oblong, were called *cannæ*.

Some for very nede
Lay down a *skain* of threde
And some a *skain* of yarne.

Skelton. *Elinour Rumming*.

When you came first, did you not walk the town
In a long cloak half compass? an old hat
Lin'd with vellure, and on it, for a band,
A *skain* of crimson cruil?

Beaumont and Fletcher. *The Noble Gentleman*, act v. sc. 1.

Our style should be a like a *skain* of silk, to be carried and found by the right thread, not ravelled and perplexed; then all is a knot, a heap.

Ben Jonson. *Discoveries*.

SKATE, v. } Lye says, perhaps from *skud*, q. v.

SKATE, n. } *Skates*, from A. S. *scit-an*, to throw out, are so called from the action of the limb required in using them.

The D. *schaetse*, Fr. *eschasses*, Eng. *scatches* or *skatches*, are stiles or stilts.

Or, where the Rhine
Branch'd out in many a long canal extends,
From every province swarming, void of care,
Batavia rushes forth; and as they sweep,
On sounding *skates*, a thousand different ways,
In circling poise, swift as the winds, along,
The then gay land is madden'd all to joy.

Thomson. *Winter*.

Thus we pass along between two rays, one for right foot and tother for left, much in the same manner as a Dutchman *skating* upon the ice.

Search. *Light of Nature*, part ii. ch. xxiii. p. 170.

And they have probably more amusements of this sort, which

4 M

SKATE
—
SKE-
LETON.

afford them at least as much pleasure as *skating*, which is the only one of ours with whose effects I could compare it.

Cook. *Third Voyage*, book iii. ch. ix. p. 137.

SKATE, A. S. *sceadda*; Lat. *squatus, squatina*; quasi *squalus, a squallore*, i. e. *cutis asperitate*.

The fresh gall of a ray or *skeat*, yea, and the same preserved and kept long in old wine, is an excellent medicine for the eares.

Holland. *Plinie*, book xxxii. ch. vii.

About two the next morning, the yawl, which had been left upon the shoal, returned with three turtles and a large *skeat*.

Cook. *Voyages*, vol. i. book iii. ch. iv. p. 151.

SKATING. See SPORTING.

SKEAN, A. S. *scæg-ene, gladius, ensis*, a sword, a skein. See the Quotation from Drayton. Verstegan describes the *skein* to have been bowing, crooked;—much after the fashion of a *sithe*.

Besides this, he, or any man els that is disposed to mischief or villainy, may under his mantle goe privily armed without suspicion of any, carry his head-peece, his *skean*, or pistol if he please, to be always in readines.

Spenser. *Of the State of Ireland*:

So gloriously they show, that all the rest among
The Saxons, of her sorts the very noblest were;
And of those crooked *skains* they us'd in war to bear,
Which in their thund'ring tongue, the Germans hand-seax name,
They Saxons first were called.

Drayton. *Poly-olbion*, song 4.

Scurvie knaue, I am none of his flurt-gils, I am none of his *skaines-mates*, and thou must stand by too and suffer euey knaue to vse me at his pleasure.

Shakspeare. *Romeo and Juliet*, act ii. sc. 4. fol. 62.

SKEG, perhaps shag, shagged.

That kind of peaches or abricots which bee called tuberes, love better to be grafted either upon a *skeg* or wild plumb stocke, or quince.

Holland. *Plinie*, book xvii. ch. x.

SKEGGER, the salmon trout.

I know not, says Skinner, whether from the A. S. *sceacga*, any thing hairy, and so called *ab eximia cutis lævitate et mollitie*.

The Thames about Windsor, a little trout called a samlet, or *skegger* trout.

Walton. *Angler*, part i. ch. iv. p. 141.

And it is noted, that those little salmons called *skeggers*, which abound in many rivers relating to the sea, are bred by such sick salmons that might not go to the sea; and, that though they abound, yet they never thrive to any considerable bigness.

Id. *Ib.* part i. ch. vii. p. 206.

SKELETON, Fr. *scelete, schelete*; It. *scheletro*; Sp. *esqueleto*; Gr. *σκελετον, exsiccatum, (cadaver,)* from *σκελλειν, arefacere, attenuare*.

Democritus, Leucippus, and Protagoras, took only the dead carcase or *skeleton* of the old Moschical philosophy, namely, the atomical physiology.

Cudworth. *Intellectual System*, p. 51.

My men saw two or three beasts like hungry wolves, lean like so many *skeletons*, being nothing but skin and bones.

Dampier. *Voyages*, Anno 1699.

I thought to meet (as late as Heav'n might grant!)

A *skeleton*, ferocious, tall, and gaunt;

Whose loose teeth in their naked sockets shook,

And grinn'd terrific, a Sardonian look.

Hart. *The Vision of Death*.

The whole *skeleton*, considered jointly, may be looked upon as performing that office to the little world, that Atlas hath been fabulously reported to do to the great one; it bears the whole bulk of it, and sustains it in all its motions; none of which could be performed, if either of the bones were not, or not so articulated and jointed, as upon dissection they appear to be.

Wiseman. *Surgery*, book vii. ch. i. p. 236.

A system of precepts, though exquisitely compacted, is, in comparison, but a *skeleton*, a dry, meagre, lifeless bulk, exhibiting nothing of person, place, time, manner, degree, wherein chiefly the flesh and blood, the colours and graces, the life and soul of things

do consist; whereby they please, affect, and move us: but example imparts thereto a goodly corpulency, a life, a motion; renders it conspicuous, specious, and active, transforming its notional universality into the reality of singular subsistence.

Barrow. *Sermon* 2. vol. iii.

SKELLUM, Sw. *skelm*; D. *shelm*; Ger. *schelme*; Fr. *schelme*. The Ger. *schelme* (Wachter) is a skinned carcase, from *schel-en*, to skin, or take off the skin, (A. S. *scyl-an*, to separate;) then tortured in its application, to an abject, worthless person. Dr. Jamieson has an instance of the word *shelm*.

Sir Richard Greenvil, (in 1643,) having deserted to the king at Oxford, they declared him traitor, rogue, villain, and *skellum*.

Biograph. Britann. 2306.

SKENEIA, in Zoology, a genus of *Pectinibranchious Mollusca*.

Generic character. Shell with the aperture circular, the peristome entire, and somewhat disjointed from the body whorl; spire depressed; destitute of spinous processes.

Type of the genus, *Helix depressa*; Montagu, *Test. Britt.* vol. ii. p. 439. pl. xiii. fig. 5. Three recent and eight fossil species are found in Britain, the former not uncommon in deep water, on the coasts.

SKEP, Sw. *skepp, skaepa*; D. *schap*; Ger. *schaff*. See SHIP, SHAPE; and *skep* in Jamieson.

Any thing made, formed or fashioned, to hold or contain; a cask, a case, a box, basket, hive, &c.

A pitchfork, a dungfork, sieve, *skep*, and a bin,

A broom, and a pail, to put water therein.

Tusser. *Husbandry Furniture*.

SKE'PTICK, } Most commonly written Sceptick.
SKE'PTICAL, } Fr. *sceptique*; It. *scettico*; Lat.
SKE'PTICALLY, } *scepticus*; Gr. *σκεπτικός*, one who
SKE'PTICISM, } can or may seek or search. One
SKE'PTICIZE. } (says Cotgrave) who is ever seeking
and never finds. See the Quotation from Hume.

Be by thy vertue bold! when that sun shines,

All arts false lights are with disgrace put out;

Her straightness shows itself and crooked lines,

And her plain texts the *scepticks* dare not doubt.

Davenant. *Gondibert*, book iii. can. 6.

Th' enamour'd youth, whose flaming breast

Makes goddesses and angels all

In's contemplation finds no rest,

For all his joys are *sceptical*.

Brome. *Epithalmy*.

If any one pretends to be so *sceptical*, as to deny his own existence, (for really to doubt of it is manifestly impossible,) let him for me enjoy his beloved happiness of being nothing, until hunger, or some other pain convince him of the contrary.

Locke. *Of Human Understanding*, book iv. ch. x.

Notwithstanding all which, that hath been here suggested by us, we shall not ourselves venture to determine any thing in so great a point; but *sceptically* leave it undecided.

Cudworth. *Intellectual System*, p. 806.

You can afford to *scepticize*, where no one else will so much as hesitate. For almost every one philosophizes dogmatically on this head.

Shaft. *Inquiry concerning Virtue*, vol. ii. part ii. sec. 1. p. 226.

We shall conclude this discourse against the Cartesian *scepticism*, with that of Origen's;—Knowledge is the only thing in the world which creatures have, that is in its own nature firm; they having here something of certainty, but no where else.

Cudworth. *Intellectual System*, p. 721.

We got clear of Popish subtilty and sophistry, showing that there is a medium, namely, moral certainty, between *scepticism* on one hand, and papal infallibility on the other.

Waterland. *Works*, vol. v. p. 127. *Doctrine of the Holy Trinity*, ch. v.

He [Dr. Berkeley] professes, however, in his title-page, (and undoubtedly with great truth,) to have composed his book against

SKE-
LETON
—
SKEP-
TICK.

SKEP-TICK. the *scepticks*, as well as against the atheists and freethinkers. But that all his arguments are, in reality, merely *sceptical*, appears from this, that they admit of no answer and produce no conviction.

SKEW. Their only effect is to cause that momentary amazement and irresolution and confusion which is the result of *scepticism*.

Hume. *Essays*, note.

SKERE, the same, says Lye, as *sheer*, *mundus*, *purus*; cleansed or clean, purified or pure; *i. e. separated* from every thing unclean, or impure. See **SHEER**.

Of the byshop he hath powere
To soile men, or els thei ben lore,
His absolucion maketh them *skere*;
Wo is the soule that he singeth for!

Chaucer. *The Plowman's Tale*.

And for men saine vnknowe vnkiste,
Hir thome she holt in hir fiste,
So close within hir owne honde,
That there wynneth no man londe:
She leueth not all that she hereth:
And thus ful ofte her selfe she *skiereth*,
And is all ware of had I wist.

Gower. *Conf. Am.* book ii.

SKETCH, *n.* } *It. schizzo*; *Fr. esquisse*; *D. schets*;
SKETCH, *v.* } *Ger. schitz*; Wachter derives from
schatten, a shade or shadow. Tooke from the A. S.
verb *scit-an*; *D. schieten*; *Ger. schiessen*, to throw, to
throw off. See to **SHOOT**.

Any thing (a design) thrown off, cast off, *sc.* in out-
line; in delineation, or unfinished draught (of an in-
tended picture or performance.)

To make a *sketch*, or a more perfect model of a picture, is, in the
language of poets, to draw up a scenery of a play; and the reason
is the same for both; to guide the undertaking, and to preserve the
remembrance of such things, whose natures are difficult to retain.
Dryden. Works, vol. iii. p. 336. *Parallel of Poetry and Painting*.

The reader I'll leave in the midst of silence, to contemplate those
ideas I have only *sketch'd*, and which every man must finish for
himself. *Id. Ib.*

This plan is not perhaps in all respects so accurate as might be
wished, it being composed from the memorandums and rude
sketches of the master and surgeon, who were not, I presume, the
ablest draughtsmen.

Anson. *Voyages*, book ii. ch. iii. p. 191.

The method of Rubens was to *sketch* his compositions in colours,
with all the parts more determined than *sketches* generally are;
from this *sketch* his scholars advanced the picture as far as they
were capable; after which he retouched the whole himself.
Sir Joshua Reynolds. Works, vol. iii. p. 106. *On the Art of
Painting*, note 11.

Our point being only to shew, that the antichristian power in
question is a spiritual and not a civil power, I have at present no-
thing to do with its various abominations, here *sketched* out, further
than as some circumstances, concerning these abominations, speak
more fully to the general truth we are upon.

Warburton. *Works*, vol. x. p. 201. *Discourse* 28.

SKEW, } See **ASKEW**.

SKEWED, } *D. scheef*, *scheel*. Skinner seems to
think from *D. schouwen*, to eschew, to shun. "In Danish
skiæv is wry, crooked, oblique; *skiæver*, to twist, to wrest;
skiævt, twisted, wrested." Tooke.

To *skew*, to form or frame obliquely, crookedly; to
view or look up, cast the eyes upon, crookedly, obliquely.

I find also that as these Scots were reputed for the most Scythian-
like and barbarous nation, and longest without letters; so they
used commonlie to steale ouer into Britaine in leather *skewes*, and
began to helpe the Picts, about or not long before the beginning
of Cesar's time.

Holinshed. *The Description of Britaine*, ch. iv.

PUR. Do you think, sir,
This is the end we fight? Can this durt draw us
To such a stupid tameness, that our service
Neglected, and look'd lamely on, and *skew'd* at
With a few honourable words, and thus, is righted?
Beaumont and Fletcher. The Loyal Subject, act ii. sc. 1.

MIR. As I live I am asham'd, this wench has reach'd me,
Monstrous asham'd, but there's no remedy,
This *skew'd* ey'd carrion.

Beaumont and Fletcher. The Wild-Goose Chase, act iv. sc. 1.

Here's a gallimaufry of speech indeed. I remember about the
year 1602 many used this *skew* kind of language.

Brewer. Com. of Ling. (Ed. 1657.) D. 7.

Windows broad within and narrow without, or *skewed* and closed.
1 Kings vi. 4. (margin.)

Several have imagin'd that this *skue* posture of the axis is a
most unfortunate and pernicious thing.

Bentley. Sermon 8. p. 317.

SKEWER, in Devonshire (Lye) called a *skiver*,
which is perhaps a *shiver*, *q. v.* from A. S. *sceaf-an*, to
shave, to cut; meaning

A cut or cutting, a slip; *sc.* of wood; afterwards ap-
plied to metal of the same form and for the same pur-
pose.

Sweetbreads and collops were with *skewers* prick'd

About the sides, imbibing what they deck'd.

Dryden. Homer. Iliad, book i.

These are roasted in their shells, then stuck upon long wooden
skewers, and taken off occasionally as wanted; being eat without
any other preparation, though they often dip them in oil, as a
sauce. *Cook. Voyages*, vol. vi. book iv. ch. iii. p. 295.

SKIFF, } In German written *schiff*, a ship; from
SKIFF, *v.* } which it differs only in the application.
See **SHIP**.

A boat, formed for lightness.

Nor turn'd she to Damascus kingdoms large,
Nor to the fort built in Asphaltes' lake,
But iealous of her deare and precious charge,
And of her loue asham'd, the way did take
To the wide ocean, whither *skiffe* or barge
From vs doth seld or neuer voiage make.

Fairefax. Godfrey of Bulloigne.

They two have cabin'd
In many as dangerous, as poor a corner,
Peril and want contending, they have *skift*
Torrents, whose roaring tyranny and power
I' th' least of these was dreadful, and they have
Fought out together.

Beaumont and Fletcher. The Two Noble Kinsmen, act i. sc. 3.

S. CATH. Thus with short plummets heaven's deep will we sound
That vast abyss where humane wit is drown'd!
In our small *skiff* we must not launch too far;
We here but coasters, not discoverers are.

Dryden. Tyrannick Love, act iv. sc. 1.

I sail'd upon a stormy sea,
Thousands embark'd alike with me,
My *skiff* was small, and weak beside,
Not built, methought, to stem the tide.

Cotton. Friendship. Vision 6.

SKILL, *v.*

SKILL, *n.*

SKI'LFUL,

SKI'LFULLY,

SKI'LFULNESS,

SKI'LLESS.

Also, to differ; have, or make, or cause a difference.

And **Skill**, *n.*,

Discernment, discrimination; power or ability to per-
ceive or to perform; knowledge, ability, art, dexterity,
adroitness: also distinct or particular cause or reason.

Steuens sauh his *skille*, þat Henry did resoun,
With alle þat longed þer till he gaf him Huntýngtoun.
R. Brunne, p. 111.

He praied to hold him stille, tille his tocome mot be,
& he suld do his wille, in alle þat *skille* mot se.

Id. p. 245.

SKEW.

SKILL.

SKILL.

Philip herd þat chance, how þe Inglis had done,
& alle how it bigan, & alle þe skille why.
R. Brunne, p. 252.

At conseil & at nede he was a skilfulle kȳng.
Id. p. 311.

In liik maner also Ion' the apostle for humelnesse in his epistle
for the same skile sette not his name tofore.
Wiclif. Prologue to Ebrewis.

A king to kepe his lieges in justice,
Withouten doute that is his office,
All woll he kepe his lordes in hir degree,
As it is right and skil, that they bee
Enhaunsed and honoured.
Chaucer. Prologue to Legend of Good Women, p. 302.

And all that wrought is with a skilful thought,
The gost, that from the fader gan procede,
Hath souled hem withouten any drede.
Id. The Second Nonnes Tale, v. 15732.

To whom Cecile answered boldly;
Men mighten dreden wel and skilfully
This life to lese, min owen dere brother,
If this were living only and non other.
Id. Ib. v. 15724.

Me thinketh thus, that neyther ye nor I,
Ought halfe this wo to maken skilfully,
For there is art inough for to redresse,
That yet is misse, and sleen this hevinesse.
Id. Troilus and Crescide, book iv.

Myne holy father so I wyll,
For ye haue tolde me suche a skylle
Of this ensample nowe tofore,
That I shall euermo therfore
Her afterwarde mine obseruance
To loue, and to his obeisaunce
The better kepe.
Gower. Conf. Am. book i.

Who ever taught a skilless man to teach,
Or stop a breach that never cannon saw?
Sidney. Arcadia, book ii.

Gainst whom there singled from the other side
A Painim knight that well in armes was skil'd,
And had in many a battell oft bene tride,
Hight Bruncheval the bold, who fiersly forth did ride.
Spenser. Faerie Queene, book iv. can. 4.

And practice, when unpleasant, makes few skil'd.
Davenant. Gondibert, book ii. ch. vi.

It skilleth very much in this matter and question now in hand,
to know the nature of the earth wherein wee meane to plant, how
many trees it may well beare and nourish.
Holland. Plinie, book xvii. ch. xii.

Q. MAR. And so say I.
YORK. And I; and now we three have spoke it,
It skills not greatly who impugns our doom.
Shakspeare. Henry VI. act iii. sc. 1.

_____ Mee of these
Nor skil'd nor studious, higher argument
Remaines.
Milton. Paradise Lost, book ix. l. 41.

Wherefore to passe by the name, let them vse what dialect they
will, whether we call it a priesthood, a presbytership, or a minis-
trie, it skilleth not.
Hooker. Ecclesiasticall Politie, book v. sec. 78. fol. 418.

Who by her wicked arts and wiely skill,
Too false and strong for earthly skill or might,
Unwares me wrought unto her wicked will,
And to my foe betrayd, when least I feared ill.
Spenser. Faerie Queene, book i. can. 12.

As when a skilful marriner doth reed
A storme approaching that doth perill threat,
He will not bide the daunger of such dread,
But strikes his sayles, and vereth his main-sheat.
Id. Ib. book v. can. 12.

And though, by skillesse builders fram'd and wrought,
Their engines rude and rams were late elect,
Yet now the forts and toures (from whence they fought)
Were framed by a cunning architect.
Fairefax. Godfrey of Bulloigne, book xviii. st. 41.

SKILL.
—
SKIM,

From these the congregated troops obey
Young Amphius' and Adrastus' equal sway;
Old Merops' sons, whom, skill'd in fates to come,
The sire forewarn'd, and prophesy'd their doom.
Pope. Homer. Iliad, book ii.

These, if the gods with my desires comply,
(The gods, alas! more mighty far than I,
And better skill'd in dark events to come,)
In peace shall land thee at thy native home.
Id. Ib. Odyssey, book v.

The distribution of land and water, say they, [philosophers,] is
admirable: the one being laid against the other so skilfully, that
there is a just equipoise of the whole globe.
Goldsmith. Animated Nature, vol. i. ch. xv. p. 134.

The ship would quickly strike against the rocks for want of skil-
fulness in the pilots.
Search. Light of Nature, vol. i. part ii. ch. xxxv. p. 336.

SKIM, v.
SKIM, n.
SKI'MMER,
SKI'MMING, n.
KUM, or
SCUM,
SKU'MMY,
SKU'MMER.

Scum, that which is skimmed
off, is the past participle of the
verb to skim. Thence the Italian
schiuma and the Fr. *escume, écume*.
Tooke. Menage derives the Fr.
and It. from the Lat. *spuma*; the
D. *schium*; Ger. *schaum*; Sw.
skumm. Wachter and Ihre derive

also from the Latin.

To scum is—

To move or pass over, or along the surface; to move
or remove any thing from the surface; to pass or glide
along superficially.

And in the same yere, sir Edmonde of Holande erle of Kent,
was by the kynge made admyrall of the see; the whiche storyd
and skymmid y^e see ryght well and manfully.
Fabyan. Chronycle, Anno 1409.

Who, but skimming any thing that came before him, was disci-
plined to leave the trough-handling of all to his gentle wife, who
forthwith caused us to be put in prison.
Sidney. Arcadia, book ii.

Another brought a skommer,
A frying pan and a slice.
Shelton. Elinour Rummung.

Gold and syluer was no more spared then thoughe it had rayned
out of the clowdes, or scomed out of the sea.
Lord Berners. Froissart. Cronycle, ch. xlix.

And skommeth it in a tray
Where as the yest is.
Shelton. Elinour Rummung.

These were the skummy remnants of those rebels, whose naughty
minds could not trust so much to the goodness of their prince; as
to lay their hang-worthy necks upon the constancy of his pro-
mised pardon.
Sidney. Arcadia, book iv.

Some scumd the drosse that from the metal came.
Spenser. Faerie Queene, book ii. can. 7.

_____ A second multitude
With wond'rous art found out the massie ore,
Severing each kind, and scum'd the bullion dross.
Milton. Paradise Lost, book i. l. 707.

The rest had severall offices assynd;
Some to remove the scum as it did rise,
Others to beare the same away did mynd;
And others it to use according to his kynd.
Spenser. Faerie Queene, book ii. can. 9.

But evil on itself shall back recoil,
And mix no more with goodness, when at last
Gather'd like scum, and settled to itself,
It shall be in eternal restless change
Self-fed, and self-consum'd.
Milton. Comus, l. 593.

The uppermost part of the root of ellebor, which is the thickest
and bulbous like to an onion head, is good for dogs only, and given
unto them for to make them skummer.
Holland. Plinie, book xxv. ch. v.

Full in the prince's passage, hills of sand,
And dangerous flats in secret ambush lay,
Where the false tides skim o'er the cover'd land,
And seamen with dissembled depths betray.
Dryden. Annus Mirabilis.

SKIM.
—
SKIN.

Straight to the ships Æneas took his way;
Embark'd his men, and *skimm'd* along the sea:
Still coasting, till he gain'd Cajeta's bay.

Dryden. *Virgil. Æneid*, book vi.

But the natives in these months watch the rivers, and take up
thence multitudes, *skimming* them from off the water with little
nets.

Dampier. *Voyages*, vol. ii. part i. ch. ii. p. 27.

There are different degrees of *skimmers*; first, he who goes no
further than the title-page; secondly, he who proceeds to the con-
tents and index, &c.

Skelton. *Deism Revealed. Dialogue 8.*

The salt, after its crystallizing, falls down to the bottom, and
they take it out by wooden *scummers*, and put it in frails.

Ray. *Rem.* p. 120.

Hear, ye sullen pow'rs below;
Hear, ye taskers of the dead,
You that boiling cauldrons blow,
You that *scum* the molten lead.

Dryden. *Ædipus*, act iii. sc. 1.

They oint their naked limbs with mother'd oil;
Or from the founts where living sulphurs boil,
They mix a medicine to foment their limbs;
With *scum* that on the molten silver swims.

Dryden. *Virgil. Georgics*, book iii.

I have met with persons who could not understand more of what
they read in Latin or French than in English, because their mo-
ther tongue affording too easy a passage to their thoughts, they
skim lightly over the surface and never touch the greater part
lying at the bottom.

Search. *Light of Nature*, vol. i. part i. ch. x. p. 271.

They relished the very *skimmings* of the kettle and dregs of the
casks.

Cook. *Voyages*, vol. v. book i. ch. vii. p. 184.

They stigmatize them, in the aggregate, as people whom nobody
knows, as the *scum* of the earth, as born only to minister to their
pride, and to supply the wants of their luxury.

Knox. *Works*, vol. i. p. 371. *Essay*, No. 76.

SKIMMIA, in *Botany*, a genus so called by Thun-
berg, from the native name of the tree in Japan, *Mijama-
Skimmi*. It belongs to the class *Tetrandria*, order
Monogynia, and natural family of *Ilicineæ*. Generic
character: calyx small, persistent, four-parted; petals
four, concave, combined at the base; stamens four,
short; berry ovate, umbilicate, slightly four-furrowed,
somewhat four-valved, containing mealy pulp inside;
seeds four, slightly trigonal, oblong.

This genus, which is nearly allied to *Ilex*, consists of
only one known species, *S. Japonica*. It is a tree
with alternate, crowded, evergreen leaves, and paniced
flowers.

SKIN, *n.*

SKIN, *v.*

SKI'NNER,

SKI'NNING, *n.*

SKI'NNY.

Derives from A. S. *scin-an*, to shine; because the skin
presents itself conspicuously to the eye. *Skin*,

The covering of the flesh of animals; also the covering
or coating of vegetables. To *skin*, is either

To cover with, or strip off, the skin, the hide; gene-
rally, to cover over, thinly.

And Ion was clothid with heeris of camels, and a girdil of *skyn*
was aboute his leendis.

Wiclif. *Mark*, ch. i.

John was clothed with camelles heer, and with a gyrdil of a
skin about his loines.

Bible, Anno 1551.

For when his horse is in the stable
He may it sell againe parde,
And winnen on it, such happe may be,
All may the manne not lese iwis,
For at the least the *skinne* is his.

Chaucer. *The Romant of the Rose*, p. 214.

SKIN.
—
SKINK.

Hir nose baas, hir browes hie,
Hir eies small, and depe sette,
Hir chekes ben with teres wette,
And riuelyn, as an empty *skyn*.

Gower. *Conf. Am.* book i.

— Mother, for loue of grace,
Lay not a flattering vnction to your soule,
That not your trespasse, but my madness speakes:
It will but *skin* and filme the vicerous place,
Whilst ranke corruption mining all within,
Infects vnseene.

Shakspeare. *Hamlet*, act iii. sc. 4. fol. 271.

ISAB. Because authoritie, though it erre like others,
Hath yet a kinde of medicine in it selfe
That *skins* the vice o' th' top.

Id. *Measure for Measure*, act ii. sc. 2. fol. 68.

This is but the *skinning* of an old sore, it will break out upon
all occasions.

Taylor. *Sermon 6.* vol. iii. p. 160

Then freely up those royall spoyles he tooke,
Yet at the lyon's *skin* he inly quooke;
But it dissembled, and upon his head
The crowne, and on his backe the *skin* he did,
And the false foxe him helped to array.

Spenser. *Mother Hubbard's Tale.*

Let not the *skinner's* daughter's sonne
Possesse what he pretends,
He liues to die a noble death
That life for freedome spendes.

Warner. *Albion's England*, book iv.

'And [it cureth] the bones charged with purulent and *skinnie*
matter.

Holland. *Plinie*, book xxiii.

After all, that his machine might not seem too violent, we see
the hero limping after Turnus. The wound was *skinned*, but the
strength of his thigh was not restored.

Dryden. *Dedication to Æneid.*

These *skins* were always worn with their hair on; and to render
them more terrible and frightful, the teeth were frequently placed
grinning on their enemies.

Potter. *Antiquities of Greece*, vol. ii. book iii. ch. iv. p. 25

And it is still Episcopacy that before all our eyes worsens and
slugs the most learned, and seeming religious of our ministers,
who no sooner advanced to it, but like a seething-pot set to cool,
sensibly exhale and reek out the greatest part of that zeal, and
those gifts which were formerly in them, settling in a *skinny* con-
gealment of ease and sloth at the top.

Milton. *Works. Of Reformation in England*, vol. i.

Then the Hockser immediately mounts, and rides after more
game, leaving the other to the *skinners*, who are at hand, and
ready to take off his hide.

Dampier. *Voyages*, vol. ii. part ii. ch. ii. p. 98. Anno 1676.

Never since I was born did I hear so much wit,
And, madam, I laugh'd till I thought I should split;
So then you look'd scornful, and snift at the dean,
As you should say, Now, am I *skinny* and lean?

Swift. *Hamilton's Bawn.*

The wounds, our own earth hath formerly received, are yet deep
and ghastly; which though *skinned* over by time and human cul-
ture, are seen, by those who pry the least beyond its surface, to
bear all the marks and memory of a ruined world.

Warburton. *Works*, vol. ix. *Sermon 2.*

What is most remarkable in these [the whistling duck] is, that
the end of their beaks is soft, and of a *skinny*, or more properly,
cartilaginous substance.

Cook. *Voyages*, vol. iii. book i. ch. v. p. 88.

Before they set forward, therefore, it was unanimously agreed
that they should eat their vulture; the bird was accordingly
skinned.

Id. *Ib.* vol. i. book i. ch. iv. p. 54.

SKINK, } A. S. *scænc*, a cup; *scænc-full*, a cup-
SKI'NKER. } full. A. S. *scencan*, to give drink, to
play the *scinker*. Somner. D. *schenken*; Ger. *schenken*;
to pour, to pour (wine; and, consequentially, to serve
wine, when poured.) "Skynk, to fill drink, to drink."
Gloss. to G. Douglas; and see Jamieson. *Skink*,
To pour and serve wine. *Skinker*, a wine-server,
cup-bearer.

SKINK.

Bacchus the win hem *skinketh* al aboute.

Chaucer. *The Marchantes Tale*, v. 9596.

SKIP.

Alur. Villaines, why *skink* you not vnto this fellow?

He makes me blythe and merry in my thoughts.

Lodge. *Looking-glass for England*.

We find also that Scotch *skinck* (which is a pottage of strong nourishment) is made with the knees and sinews of beef, but long boiled.

Bacon. *Natural History*, Cent. i. sec. 45.

But sweet Ned, to sweeten which name of Ned I giue thee this peniworth of sugar, clapt euen now into my hand by an vnder *skinker*, one that neuer spake other English in his life, then eight shillings and six pence, and, You are welcome.

Shakspeare. *Henry IV.* act ii. sc. 4. fol. 56.

The reconciler-bowl went round the board,
Which empty'd, the rude *skinker* still restor'd.

Dryden. *Homer. Iliad*, book i.

The gods laugh'd out, unweary'd, as they spy'd
The busy *skinker* hop from side to side.

Tickell. *Homer. Iliad*, book i.

SKINNERA, in *Botany*, a genus so called by Forster, after a Mr. Skinner, whom he terms an acute and clear-sighted botanist. It belongs to the class *Octandria*, order *Monogynia*, and natural order of *Onagraceæ*. Generic character: tube of calyx adhering to the ovarium at the base, ventricose above the ovary; limb four-cleft, with three-nerved segments; petals four, ovate, alternating with the lobes of the calyx, and inserted in the upper part of its tube; stamens eight; style filiform; stigma capitate; berry four-valved, four-celled, many-seeded.

This genus, which is separated from *Fuchsia*, consists of one known species, *S. excorticata*, a native of New Zealand; it is a shrub with alternate toothed leaves, and axillary, pedicellate, drooping, violaceous, and purple flowers.

SKINNERIA, in *Botany*, a genus so called after Captain Skinner, of the East India Company's service, who lately visited the fountains of the rivers Jumna and Ganges. It belongs to the class *Pentandria*, order *Monogynia*, and natural order of *Convolvulaceæ*. Generic character: calyx of five sepals; corolla small, rather urceolate; style one; stigma capitate, two-lobed; ovarium one-celled, containing four ovula.

This genus, separated from *Convolvulus*, consists of one species, *S. cæspitosa*, a tufted herb with entire lanceolate leaves and pale yellow flowers. It is a native of the East Indies.

SKIP, *v.*

SKIP, *n.*

SKI'PPER,

SKI'PPINGLY.

In A. S. *forth-scipe* is expedition, speed, dispatch; but all other traces of the word are lost. To *skip* is To move by short, quick jumps or leaps; to move or pass over by a jump or leap; generally, to pass over, to omit, to miss.

R. herd it say, he dred an oste mot *skip*
Behind, & stop his way bituex him & Philip.

R. Brunne, p. 181.

And over *skippers* al so.

Piers Ploughman. *Vision*, p. 221.

And he castide away his cloth and *skippide*, and cam to him.

Wiclif. *Mark*, ch. x.

And whanne the apostlis, Barnabas and Poul, herden this, thei torenten her cootis, and thei *skipten* out among the peple, and crieden and seiden, Men, what doen ghe this thing?

Id. *The Dedis of Apostlis*, ch. xiv.

Than shal your soule up into heven *skippe*,
Swifter than doth an arow of a bow.

Chaucer. *The Marchantes Tale*, v. 9476.

The lambe thinkes not the butcher's knife
Should then bereue him of his life;
For when the sunne doth once runne in,
Then all their gladnes doth begin;
And then their *skips*, and then their play,
So falls their sadnes then away.

The Louer describing his whole State.

Now the devil, said she, take these villains, that can never leave grinning, because I am not so fair as mistress Mopsa; to see how this *skippack* looks at me.

Sidney. *Arcadia*, book iii. p. 642.

To nimble shifts the knight himselfe betaketh,
And *skippeth* here and there for his defence.

Fairefax. *Godfrey of Bulloigne*, book vii. st. 39.

If one read *skippingly* and by snatches, and not take the thread of the story along, it must needs puzzle and distract the memory.

Howell. *Instructions for Travellers*, p. 39.

But in a quick succession of thought, it is easy to run ideas one into another, *skipping* over the intermediate terms which should keep them distinct.

Waterland. *Works*, vol. v. p. 434. *Nature of Christian Sacraments*, ch. i.

Remember you were in the lowest station of human life, which, as the old ballad says, is that of a *skipkennel* turned out of place.

Swift. *Works*, vol. xii. p. 53. *Directions to the Footman*.

The nightingale may claim the topmost bough,
While the poor grasshoppers must chirp below;
Like him unnoticed, I, and such as I,
Spread little wings, and rather *skip* than fly.

Cowper. *Table Talk*.

SKIPPER, *D. schipper*, a shipper or shipman.

For in ages past, as the *skipper* told me, there grew a fair forest in that channel where the Texel makes now her bed.

Howell. *Letter 5.* book i. sec. 5.

SKIPTON, a Market-Town in the West Riding of Yorkshire, situated in the vale of the same name, on the banks of the Aire, in the romantic district of Craven. The town, built entirely of stone from the prolific neighbouring quarries, consists chiefly of one very wide street, in which is the church, a spacious structure, containing the tombs of several of the Clifford family, a name conspicuous in the history of the Wars of the Roses, and which owes yet more of its celebrity to Shakspeare. Skipton Castle was built by Robert de Romeli, soon after the Conquest, and given by Edward III. to the brother of Roger Lord Clifford, who in 1321 perished on the scaffold, the first victim of his house to its devotion to that of Lancaster. At Skipton Castle dwelt one "valiant Clifford," who fought at Crecy and Poitiers, and another who accompanied Henry V. to France and was killed there. His successor died for the cause of Lancaster at the first battle of St. Alban's, and was father of the too famous Lord Clifford, the butcher, who fell at Castleford. To Skipton Castle, also, after a childhood of fear and a youth of menial labour, was restored his son the shepherd Lord Clifford, when, "her thirty years of winter past, the red rose was a gladsome flower." The happiest of his turbulent race, he descended peacefully to the grave after a long and honourable life, during which he distinguished himself at the battle of Flodden, and won from his vassals and dependents the name of "the good Lord Clifford." Skipton Castle now belongs to the Earls of Thanet. It is approached by an ancient gateway near the market-place. In one of the inner courts is a yew tree of extraordinary antiquity. Skipton is thickly inhabited by an industrious population and carries on a considerable trade, particularly in grain, which is greatly facilitated by the near neighbourhood of the Leeds and Liverpool canal, and has been much increased by the inclosure of Knares-

SKIP.

SKIP-TON.

SKIP-TON. borough Forest. The quarter sessions for the West Riding of Yorkshire are held at Skipton. It has a good grammar-school, and is a rectory and vicarage. Population, in 1831, 4181. Distance from Keighley 10 miles, and from London 216 miles.

SKIR. See SCUR, *i. e.* to scour.

Send out more horses, *skirre* the country round,—
Hang those that talke of feare.

Shakspeare. Macbeth, act v. sc. 3. fol. 254.

If they will fight with vs, bid them come downe,
Or voyde the field; they do offend our sight.
If they'l do neither, we will come to them,
And make them *sker* away, as swift as stones
Enforced from the old Assyrian slings.

Id. Henry V. act iv. sc. 7.

— *A skyrgaliarde.*

Skelton. Laureate.

SKI'RMISH, } Written *scarmish*, *scarmage*,
SKI'RMISH, } *scrymish*. A. S. *scrimbre*, gladi-
SKI'RMISHING, n. } ator. A sword-player, a master
of defence, or fencing-master. Kilian—*scherm*: hence
our words of *skirmish* and *skirmishing*; as also the
French (who to words of other languages beginning
with *s* often prefix *e*) *escrimer*. Somner. Fr. *escar-*
moucher; It. *scaramucciare*; Sp. *escaramuzar*. See
SCARAMOUCH. The word seems to have an affinity with
the A. S. *scyr-an*, to part, to divide.

To fight partially, or in parts or divisions; to make
partial attacks; to engage in slight or partial conflicts.

And when the Thebans were besette about,
The manly knights would haue pricked out,
And haue *scarmished* in hir hasty pride,
With hir fomen on that other side.

Lydgate. The Story of Thebes.

Now let her slepe, and we our tales holde
Of Troilus, that is to paleis ridden,
Fro the *scarmishe* of which I you tolde.

Chaucer. Troilus and Creseide, book ii.

So happed it that at *scarmishing*,
She cast her herte vpon Minos the king,
For his beautie, and his chevalrie,
So sore, that she wende for to die.

Id. Ariadne of Athens, p. 313.

There were dyuerse compaignyons a horseback, that passed the
ryuer, and some a foote, to *skrymisshe* with the Scottis; and in
like wyse some of the Scottis brake oute, and *skrymissed* with
them; so that there were dyuerse on bothe partyes slayne, wounded,
and takyn prysoners.

Lord Berners. Froissart. Cronycle, vol. i. ch. xviii. fol. 24.

But euery nyght the Englysshe oste made good and sure watche,
for they doubted makynge of *skryes*; and euer the moste part of
the oste laye in their harneys; and euery day ther were *skry-*
mysshes made, and men slayne on both parties. *Id. Ib.*

[Gundefilf] gaderyd a power of knyghtes and made warre vpon
his sayd brother, and lastly beseged hym in y^e cytie of Vienne,
wher vpon eyther parte was by *skrymisshes* and assautes great
people slayne. *Fabyan. Chronycle*, ch. xcix. fol. 72.

— And ere the war begin,
He lightly *skirmishes* on every string
Charg'd with a flying touch.

Crashaw. Musick's Duel.

But, if for me ye fight, or me will serve,
Not this rude kynd of battaill, nor these armes
Are meet, the whiche doe men in bale to sterve,
And doolefull sorrowe heape with deadly harmes;
Such cruell game my *scarmoges* disarmes.

Spenser. Faerie Queene, book ii. can. 6.

At length they came whereas a troupe of knights
They saw together *skirmishing*, as seemed;
Sixe they were all, all full of fell despight,
But foure of them the battell best beseemed,
That which of them was best mote not be deemed.

Id. Ib. book iv. can. 9.

They built small works or forts of timber, wherein they plant
little guns, and lie in sight of each other two or three months,
skirmishing every day in small parties, and sometimes surprising a
brest-work. *Dampier. Voyages*, vol. i. ch. xii. p. 337.

Light are their *skirmishes*, their war is flight,
And still to wheel their wavering troops delight.

Rowe. Lucan. Pharsalia, book viii.

Tho' there seldom happens a pitch'd battel between them, yet
there are often *skirmishings*, which keep the soldiers on each side
upon their guards.

Dampier. Voyages, vol. ii. part i. ch. iv. p. 72. Anno 1688.

In this *skirmish* only two of the Indians were hurt with the
small shot, and not a single life was lost, which would not have
been the case if I had not restrained the men, who, either from
fear or the love of mischief, showed as much impatience to destroy
them as a sportsman to kill his game.

Cook. Voyages, vol. i. book ii. ch. iv. p. 335.

SKIRRHOPHORUS, in *Botany*, a genus so called
by De Candolle from the Greek *σκιρρος*, a *tumour*, and
φορεω, to bear, on account of the tubes of the florets being
tubercled at the base. It belongs to the class *Synge-*
nesia, order *Æqualis*, and the natural family of *Com-*
positæ-Senecionideæ. Generic character: heads two-
flowered, collected into an oval bundle; scales of invo-
lucrum oblong, deciduous; corollas tubular, minute,
five-toothed; tube dilated into a scirrhose tubercle at
the base; branches of style short, capitellate at the
apex; achænia glabrous, oblong, attenuated at the base,
and bald at top.

This genus, which is nearly allied to *Slytoncerus*,
consists of a single species, a native of New Holland.
It is a suffruticose, branched, tomentose plant, with
narrow entire leaves, and terminal clusters of yellow
flowers.

SKIRT, } *Skired*, *skir'd*, *skirt*, from A. S. *scyr-an*,
SKIRT. } to cut, to divide, to separate.

The part where the continuity is separated; a separate
part or portion: the edge, the border, the bound or
boundary.

In a long purple pall, whose *skirt* with gold
Was fretted all about, she was arayd.

Spenser. Faerie Queene, book ii. can. 9.

LEAR. Of all these bounds, euen from this line, to this,
With shaddowie forrests, and with champains rich'd
With plenteous riuers, and wide-skirted meades,
We make thee lady.

Shakspeare. Lear, act i. sc. 1. fol. 283.

EMIL. Canst not thou work such flowers in silk, wench?

WOM. Yes.

EMIL. I'll have gown full of 'em, and of these,
This is a pretty colour, wil't not do
Rarely upon a *skirt*, wench?

Beaumont and Fletcher. The Two Noble Kinsmen, act ii. sc. 2.

— The middle pair
Girt like a starrie zone his waste, and round
Skirted his loines and thighs with downie gold
And colours dipt in heav'n.

Milton. Paradise Lost, book v. l. 280.

And the coast itself seemed quite rocky and barren, and the
water's edge *skirted* with precipices.

Anson. Voyages, book i. ch. x. p. 143.

The *skirts* or outer part of the island, especially that part of it
which borders on the main sea, is woody.

Dampier. Voyages, vol. i. ch. xv. p. 406. Anno 1687.

In these circumstances, it seems to disagree with those found
by the Russians; and also in not having the outer toes of the hind
feet *skirted* with a membrane.

Cook. Voyages, vol. vi. book iv. ch. ii. p. 271.

— Mighty winds,
That sweep the *skirt* of some far-spreading wood
Of ancient growth, make music not unlike
The dash of ocean on his winding shore,
And lull the spirit while they fill the mind.

Cowper. The Task.

SKIR-
MISH.
—
SKIRT.

SKIT.
—
SKY.

SKIT, SKI'TTISH, SKI'TTISHLY. } From the A. S. *scyt-an*, to throw out.
A wench, who throws or casts, sc. lures or enticements; a wanton. A jeer or jibe thrown or cast out. (See Tooke.)

Skittish, a skittish horse, one that throws or casts itself out of its course; unsteady, giddy.

Skittels, (*skit-dæls*), diminutive of *skit*, the bowl cast or thrown; the pins thrown at.

[Herod] at the request of a dancing *skit* stroke off the head of St. John the Baptist.

Howard, (*Earl of Northampton*.) *Def. ag. Sup. Proph.* Anno 1583.

Thy high estate which sets thy heart on fire,
Or new found choyce which cannot serue thee long,
Shal make me dread with pen for to reherse,
The *skittish* deedes in thys my parting verse.

Gascoigne. *Farewell with a Mischiefe.*

For so moche as syr Edward his sone, to whom he had lytle before geuen the erldom of Chester, wolde haue chaungyd some of theyr *skyttshe* cōdycyons.

Fabyan. *Chronycle.* Henry III. fol. 339. Anno 1257.

A *skittish* filly will be your fortune, Welford, and fair enough for such a packsaddle.

Beaumont and Fletcher. *The Scornful Lady*, act iii. sc. 1.

The beasts were very plump, and *skittishly* played as they passed by; not knowing whither they were driven.

Situation of Paradise, (1683,) p. 93.

Name not yourself her lover, but her friend.
How many *skittish* girls have thus been caught!
He prov'd a lover, who a friend was thought.

Dryden. *Ovid. Art of Love.*

Withal it is observed, that the lands in Barkshire are very *skit-tish*, and often cast their owners; which yet I impute not so much to the unruliness of the beasts, as to the unskilfullness of the riders.

Fuller. *Worthies. Barkshire.*

No more the wherry feels my stroke so true;

At *skittles*, in a Grizzle, can I play?

Woodstock, farewell! and Wallingford, adieu!

Where many a scheme reliev'd the lingering day.

Warton. *To a Grizzle Wig.*

SKREEN. See SCREEN.

SKRIES, *n.* See ASCRY.

But every nyght the Englishe oste made good and sure watche, for they doubted makynge of *skryes*; and euer the most part of the oste laye in their harneys; and euery day were skrymysshes made, and men slayne on both parties.

Lord Berners. *Froissart. Cronycle*, vol. i. ch. xviii.

SKUD. See SCUD.

SKUE. See SKEW.

SKULK. See SCULK.

SKULL. See SCULL.

SKY, } G. Douglas renders *per umbram* (*Æn.*
SKY'EY, } ii. 732.) throw the *sky*. A. S. *scua*,
SKY'ISH, } *scuwa*, *umbra*; Sw. *sky*; D. *scheye*; and
SKY'ED. } it is so used by Chaucer and Gower, a shade, a cloud; and is probably from the A. S. *scead-ian*. See SHADE, SHAW.

It is usually derived from the Gr. *σκια*.

A shade, or shadow, a cloud; and thence applied to the region of the clouds; the heavens.

And let a certaine winde go,
That blewe so hidously and hie,
That it ne left not a *skie*
In all the welken long and brode.

Chaucer. *The House of Fame*, book iii.

And with that worde, all sodenly
She passeth as it were a *skye*.

Gower. *Conf. Am.* book iv.

With that she loketh, and was ware
Downe fro the *skie* there came a chare,
The whiche dragons aboute drowe.

Id. *Ib.* book v.

God layed him [Joseph] where he could neither see sunne nor moone, neyther any starre of the *skye*, and that many yeares.

Tyndall. *Workes*, p. 98. Preface.

Whose wals were high, but nothing strong nor thick,
And golden foile all over them display'd,
The purest *skye* with brightnesse they dismayd.

Spenser. *Faerie Queene*, book i. can. 4.

If wee have regard to the coldnesse of water, necessarie it is that the well should stand in some coole and shadowie place not exposed to the sunne, and nathelesse open to the broad aire, that it may have the full view and sight (as it were) of the *skie*.

Holland. *Plinie*, book xxxi. ch. iii.

The *skiebred* eagle, roiall bird,
Percht there upon an oke above.

Spenser. *Friends Passion.*

If I do loose thee I do loose a thing
That none but fooles would keepe; a breath thou art,
Seruile to all the *skye* influences,
That dost this habitation where thou keepst
Hourely afflict.

Shakspeare. *Measure for Measure*, act iii. sc. 1. fol. 70.

Now pile your dust, vpon the quicke and dead,
Till of this flat a mountaine you haue made,
To o're top old Pelion, or the *skyeish* head
Of blew Olympus.

Id. *Hamlet*, act v. sc. 1. fol. 278.

————— The third his feet
Shaddow'd from either heele with feather'd maile
Skie-tinctur'd grain.

Milton. *Paradise Lost*, book v. l. 283.

Behold, slow-settling o'er the lurid grove
Unusual darkness broods; and growing gains
The full possession of the *sky*, surcharg'd
With wrathful vapour, from the secret beds,
Where sleep the mineral generations, drawn.

Thomson. *Summer.*

————— The pale deluge floats
O'er the *sky'd* mountain to the shadowy vale.

Id. *Ib.*

As soon as the soul is dislodged from this cloudy mansion in the body, all things will then appear, not as by an uncertain *sky-light* in a dark room, but in an open and distinct view, and then it will be impossible to be any longer deceived by false representations of things.

Stillfleet. *Sermon* 9. vol. iv. p. 354.

SKY (Isle of.) See WESTERN ISLES.

SLAB,

SLA'BBER, *n.*

SLA'BBER, *v.*

SLA'BBY,

SLA'VER, *n.*

SLA'VER, *v.*

See LAB, LAP, &c.

Slabber is also written *slobber* and *slubber*. From the A. S. *slip-an*, to slip, to be or cause to be slippery, slippery, sloppy, or slabby.

Slab is in Dutch *slibbe*, *slibber*, *limus*; *slipperigh*, *limosus et lubricus*; muddy, slimy, slippery: D. *slabben*, *slabberen*, *sorbire*.

Slab is any thing *slippery*; *slime*, wetted, *slopped*, earth, stone, &c.

Slabber or *slaver*, the slimy moisture that comes (*slips* or *slides*) from the mouth or lips.

To *slabber* or *slaver*; to produce, to drip or drivel, to cover with such slimy moisture. Also,

To sup up in a slabbering, sloppy manner; *i. e.* so as to wet or slop the lips with the pottage.

A *slab*, *sc.* of timber, stone, &c.; a slip, in Tusser, said to be the outermost piece (*i. e.* slip) cut off by the sawyer.

See BESLABBER.

Tho cam Sleuthe al by *slobered*, wit to slýmed eyen.
Piers Plouhman. Vision, p. 110.

Save *slap* of thy timber for stable and sty,
For horse and for hog more cleanly to lye.

Tusser. *September's Husbandry.*

Ill huswife, unskilfull, to make her own cheese,
Through trusting of others, hath this for her fees;
Her milk-pan and cream-pot, so *slabber'd* and sost,
That butter is wanting, and cheese is half lost.

Id. *April's Husbandry.*

SKY.
—
SLAB.

SLAB. For the rest so perfect proportioned, that nature showed she doth not like men who *slubber* up matters of mean account.
Sidney. Arcadia, book i. p. 110.

Miso having now her authority increased, came with scouling eyes to deliver a *slaving* good morrow to the ladies.
Id. Ib. book ii. p. 205.

In the superscription it appeared *slubbered*, by reason of often handling, peradventure lying among so many his writings and old letters.

Cobbett. State Trials, vol. i. p. 313. 19 *Henry VIII.*
Make the grewell thicke and *slab*.

Shakspeare. Macbeth, act iv. sc. 1. fol. 144.

O love! how sweet thou look'st now! and how gentle!
I should have *slubber'd* thee, and stain'd thy beauty.

Beaumont and Fletcher. The Mad Lover, act v. sc. 1.

ISAB. Who I? I thank you, I am as haste ordain'd me, a thing *slubber'd*; my sister is a goodly portly lady, a woman of a presence.
Id. Wit without Money, act i. sc. 1.

Now the gentry of this county were generally addicted to that party, which made them so remiss in this matter, slightly *slubbering* it over, doing something for show, and nothing to purpose.
Fuller. Worthies. Yorkihire.

————— This object, which
Takes prisoner the wild motion of mine eye,
Fiering it onely heere, should I (damn'd then)
Slauer with lippes as common as the stayres
That mount the capitoll.
Shakspeare. Cymbeline, act i. sc. 7. fol. 375.

————— But I will sell my dukedome,
To buy a *slobbry* and a durtie farme
In that nooke-shotten Ile of Albion.

Id. Henry V. act iii. sc. 5. fol. 80.

————— Is the marriage done, sir?
RUT. Yes they are knit; but must this *slubberdegullion*
Have her?

Beaumont and Fletcher. The Custom of the Country, act i. sc. 1.
They must be diligently cleansed from moss, *slab*, and oose.
Evelyn.

Like to a light fast lock'd in lanthorn dark,
Whereby by night our wary steps we guide
In *slabby* streets, and dirty chanel's mark.

More. Pre-existence of the Soul.

Who ingross many pluralities under a non-residence and *slubbing* dispatch of souls.
Milton. Works, vol. i. fol. 133. *An Apology for Smectymnuus.*

Not such as basely sooth the humour of the time,
And *slubbingly* patch up some slight and shallow rhyme,
Upon Parnassus' top, that strive to be install'd,
Yet never to that place were by the Muses call'd.

Drayton. Poly-olbion, song 21.

And Mathiolus hath also a passage, that a toad communicates its venom, not only by urine, but by the humidity and *slaver* of its mouth.

Sir Thomas Brown. Vulgar Errours, book iii. ch. xiii. p. 171.

So Armarillis and the cook that *slobbers* his beard with sack-
posset, in The Man's the Master, have, in my opinion, made the
most diverting part of the action.

King. Art of Cookery. Letter 6.

When waggish boys the stunted beesom ply,
To rid the *slabby* pavement, pass not by
Ere thou hast held their hands.

Gay. Trivia.

————— I have
Other affairs to dispatch of more importance betwixt
Queen *slobber-chops* and myself.

Dryden. The Tempest, act iii.

Quoth she, Although thou hast deserv'd,
Base *slubberdegullion*, to be serv'd
As thou didst vow to deal with me,
If thou hadst got the victory,
Yet I shall rather act a part
That suits my fame, than thy desert.

Butler. Hudibras, part i. can. 3.

Of all mad creatures, if the learn'd are right,
It is the *slaver* kills, and not the bite.

Pope. Prologue to Satires.

VOL. XXVII.

Your greedy *slaving* to devour,
Before 'twas in your clutches' power.

Butler. Hudibras, part iii. can. 2.

When, bless each little *slobbering* mouth,
It had not cut a single tooth.

Mason. The Dean and the Squire.

It lies in wait for wild animals near the paths, and when it throws itself upon them, it wraps them round so closely as to break all the bones; then moistening the whole body over with its *slaver*, it makes it fit for deglutition, and swallows it whole.
Goldsmith. History of the Earth, vol. iv. book iii. ch. iii. p. 153.

————— Three legs upholding firm
A massy *slab*, in fashion square or round.

Cowper. The Task.

SLACK, *adj.*

SLACK, *n.*

SLACK, *v.*

SLA'CKEN, *v.*

SLA'CKING, *n.*

SLA'CKLY.

SLA'CKNESS.

See *ante. ASLAKE*, and *LACK*.

D. slaec; *Ger. schlack*; *Sw. slak*; *A. S. slæc, sleac*, from the

verb *sleacian, sleacgian, tardare, remittere, relaxare, pigrescere*, to be, or cause to be, slow, to retard, to remit, to relax or loosen; to be or

cause to be or become *sluggish*, inert, or inactive.

Slack, *adj.*, slow, tardy; inactive, relaxed, loose, remiss, abated, diminished, weakened.

Slake, in Norfolk, is leisure. *Grose*. In the North, very small coals—to damp or abate the burning of the larger are called *slake, slack, or sleek*.

And whanne thei hadden take up the ancris thei bitooken hem to the see and *slakiden* togidre the iointouris of gouernailis. *Simul laxantes juncturas gubernaculorum.*

Wiclif. The Dedis of Apostlis, ch. xxvii.

Right so fortune—that semeth, as it suffreth with *slaked* or vngouerned bridles—it suffreth bridles, that is to saine, to been gouerned, and passeth by thilke lawe, that is to saine, by the deuine ordenaunce.

Chaucer. Boecius. De Consolatione, book v.

Walter hire gladeth, and hire sorwe *slaketh*.

Id. The Clerkes Tale, v. 8920.

The wedding and the feast to devise,
To me that have itake such emprise,
And so many a storie for to make,
It were to longe, lest that I should *slake*
Of thing that beareth more effect and charge.

Id. Cleopatras Queene of Egypt.

The noblest of the Grekes that ther were
Upon hir shouldres carrieden the bere
With *slacke* (some ed. *slake*) pace.

Id. The Knightes Tale, v. 2904.

And if she than hede toke,
Howe pitousliche on hir I looke,
Whan that I shall my leue take
Hir ought of mercy for to *slake*
Hir daunger, whiche saith euer naie.

Gower. Conf. Am. book iv.

Their fastynges were also verye paynefull and precyse; and ours neglygent, *slacke*, and remysse, and now almost worne awaye.
Sir T. More. Workes, p. 1312. *Vpon the Passion of Chryste.*

We are informed that many of you are so negligent and so *slack* herein, that it doth appear you look rather, as it were, through your fingers, than diligently see to the execution of the said laws and proclamations.

Cobbett. State Trials, vol. i. p. 644. 3 *Edward VI.* 1550.

When thou hast vowed a vowe to the Lorde thy God, se thou be not *slacke* to pay it. *Bible, Anno 1551. Deut. ch. xxiii.*

When thou shalt vow a vow unto the Lord thy God, thou shalt not *slacke* to pay it. *Id. Common Version.*

The raines of the regiment fell into the hands of a pezzant not a puissant prince, a man euill qualified, dissolute, *slacke*, and licentious, not regarding the dignitie of his owne person, nor fauoring the good estate of the people.

Holinshed. Historie of England, book vii. ch. i.

So God agaynewarde vseth hymselfe towarde hym, in holdynge

SLAB.

SLACK.

SLACK. hym the more *slackely*, and than the tother waxeth thereby the more faynte.
Sir Thomas More. Workes, p. 591. The Maner and Order of oure Eleccion.

I haue trauelled with the more paines to absolue and end this my worke; not after the maner of a student, but as a traueiler, whose nature and condition is, that when he dooth set forth on his iournie verie *slacklie* and slowlie, then dooth he make the more hast, and trauell the more speedilie.

Hooker. Conquest of Ireland. Proem.

But the Romans could not follow the Britains farre, because they wanted their horssemen which were yet behind, and through *slacking* of time could not come to land.

Holinshed. Historie of England, book i. ch. xii.

I have marked in you, I will not say an alteration, but a relenting truly, and a *slacking* of the main career you had so notably begun and almost performed.

Sidney. Arcadia, book i.

But being none of them who think all things done, for which they have once given direction, he followed every where his commandment with his presence, which witnessed of every man's *slackness* or diligence, chastising the one, and encouraging the other.

Id. Ib. book v.

Ne ever Artegall his griple strong
 For any thing wold *slacke*, but still upon him hong.

Spenser. Faerie Queene, book v. can. 2.

Well I must of another errant to Sir John Falstaffe from my two mistresses; what a beast am I to *slacke* it!

Shakspeare. The Merry Wives of Windsor, act iii. sc. 4. fol. 52.

From his *slack* hand the garland wreath'd for Eve
 Down dropp'd, and all the faded roses shed.

Milton. Paradise Lost, book v. l. 892.

So it cometh to passe, that they seeme to move more slowly when they go their highest circuit; not, for that naturall motions doe either hasten or *slacke*, which bee certaine and severall to every one.

Holland. Plinie, book ii. ch. xvi.

Nor shall this storme *slacken* a whit that firm league of love, wherein I am eternally tied unto to you.

Howell. Letter 53. book i. sect. 6.

I saw likewise stand,
 Vp to the chin, amidst a liquid lake,
 Tormented Tantalus, yet could not *slake*
 His burning thirst.

Chapman. Homer. Odyssey, book xi.

Some in her threaden fillet still did bide,
 And, true to bondage, would not break from thence,
 Though *slackly* braided in loose negligence.

Shakspeare. A Lover's Compliment.

Th' enraged commons ready are to rise
 Upon the regent, to his charge and lay'd,
 That from his *slacknese* and base cowardice
 These towns were lost, by his neglect of aid.

Drayton. The Misery of Queen Margaret.

It is the partiality or *slackness* of the subordinate inferior executions that is guilty of this prevalence of sin.

Hall. Sermon 28. vol. v. p. 388.

These are your fatal seats, and this your Troy,
 Time calls you now, the precious hour employ,
Slack not the good presage, while heaven inspires
 Our minds to dare, and gives the ready fires.

Dryden. Virgil. Æneid, book v.

Illustrious nymphs, from ocean sprung, arise,
 Bless with a recent view our longing eyes,
 Bid from the thirsty soil a torrent burst,
 Or open some hard rock to *slake* our thirst.

Fawkes. Argonautics of Apollonius Rhodius, book iv.

Moderate refreshments or recreations are not only useful, but sometimes necessary to breathe our spirits after they have been almost stifled in a crowd of business, and divert our wearied thoughts, which, like the strings of a lute, by being *slackened* now and then, will sound the sweeter when they are wound up again.

Scott. Christian Life, part i. ch. iv. p. 108.

And in other liquors actually cold, like unheated water, and one or two of them far more thin or subtle than it, I have kept time

long without *slaking*, and without imparting to the ambient liquor any sensible heat.

Boyle. Works, vol. iii. p. 479. Of Man's Ignorance of Natural Things.

Such humble acknowledgments as I have been here mentioning, must not, however, be so understood as to afford any excuse or colour for *slackness* in our bounden duties, or for pleading any exemption or discharge from true Christian obedience.

Waterland. Works, vol. ix. p. 283. Sermon 22.

Sages after sages strove
 In vain to filter off a crystal draught
 Pure from the lees, which often more enhanc'd
 The thirst than *slak'd* it, and not seldom bred
 Intoxication and delirium wild.

Cowper. The Task, book ii.

He sees that human equity is *slack*
 To interfere, though in so just a cause;
 And makes the task his own.

Id. Ib. book vi.

The shaking head, and the contracted limb;
 And ling'ring atrophy, and hoary age;
 And second childhood, *slack'ning* ev'ry nerve;
 To joy, to reason, and to duty dead!

Jago. Edge-Hill, book iv.

What means the bull,
 Unconscious of his strength, to play the coward,
 And flee before a feeble thing like man,
 That, knowing well the *slackness* of his arm,
 Trusts only in the well-invented knife?

Blair. The Grave.

SLADE, A. S. *slæd*, *aslade*, a valley, Somner. A path or way in the vales, between the mountains, Lye. Perhaps from A. S. *slid-an*, to slide.

The thick and well-grown fog doth mat my smoother *slades*,
 And on the lower leas, as on the higher hades,
 The dainty clover grows.

Drayton. Poly-olbion, song 13.

SLAG, Grose says, in Gloucestershire, the copper dross; it is perhaps the A. S. *slog*, *slough*, (q. v.) the inert, heavy dross or sediment, the refuse or recrement; generally, the sediment, the sludge.

In the yeere after hauing well doonged it in the meane time with *slawke* of the sea, they sowe barlie in the selfe places where the turffes grew.

Holinshed. Description of Britaine, vol. i. p. 73.

I somewhat doubt whether this be totally to be ascribed to the air and length of time, or to the leaving of metal in the *slagge* in old times, before great furnaces were in use.

Boyle. Works, vol. v. p. 742.

SLAIN. See **SLAY**.

SLAM. See *ante*, **LAMN**.

To *slam* one (in the North) is to beat or cuff one strenuously, to push violently. Grose. It is also so used in Suffolk, to slam the door, to push it violently, to bang it. Lye says, to *slam* is

To beat or bang, to conquer, to defeat. *Slampant* in North, and *slampaine* in Holinshed, seem to denote a hit, a knock, a cuff.

It may be corrupted from Goth. *slaham*; A. S. *slan*; D. *slaen*, to strike, to beat.

The townesmen being pinched at the heart, that one rascal in such scornfull wise should giue them the *slampaine*.

Holinshed. Description of Ireland, vol. vi. fol. 30.

In the mean time Polyperchon, who had the government of the king's person, meaning to give Cassander a *slampant* and blurt, he sent letters patent unto the people at Athens, declaring how the young king did restore unto them their popular state again.

North. Plutarch. Lives, fol. 633. Phocion.

Thus all the while a club was trump,
 There's none could ever beat the rump,
 Until a noble general came,
 And gave the cheaters a clean *slam*.

Loyal Songs.

SLACK.

SLAM.

SLAN-
DER.SLANDER, *n.*
SLANDER, *v.*
SLANDERER,
SLANDEROUS,
SLANDEROUSLY.Fr. *esclandir*, which Ihre ob-
serves is used in the same sense
as the Sw. *klander*, i. e. *pro infamia*; the Fr. *esclandre* for *esclan-*
dre, from the Lat. *scandalum*.See Menage, and SCANDAL, *ante*. Junius suggests the
A. S. *slean*, to beat, to strike, consequentially, to wound
by the tongue; and it is worthy of remark, that the Fr.
esclandre also denoted *slaughter*; but Junius concludes
nevertheless that the Fr. is from the Lat.A defamation, detraction, unjust imputation, (Cot-
grave,) scandal, calumny. See the Quotation from
Tillotson.And he hath not roote in him silf, but is temporal, for whanne
tribulacioun and persecution is maad for the word, anon he is
sclaundrid. *Wiclif. Matthew*, ch. xiii.Mannes Sone schal send his aungelis, and thei schulen gedre
fro his rewme alle his *sclaundris*, and hem that don wickidnesse.
*Id. Ib.*The *sclandre* of Walter wonder wide spradde
That of a cruel herte he wikkedly,
For he a poure woman wedded hadde,
Hath mured both his children prively;
Swich murmur was among hem comunly.
Chaucer. The Clerkes Tale, v. 8598.To *slander* women thus what may profite,
To gentillesse namely, that hem arme should
In defence of women, and hem delite,
As that the ordre of gentillesse wold,
If that a man list gentill to be hold,
He must all eschewe that thereto is contrary,
A *sclaundrous* tonge is his great adversary.
*The Letier of Cupid.*A voice was herde, whan that thei fel,
Which saide; O damned man to hell,
Lo thus hath God thy *sclaunder* wroke,
That thou agein Constance hath spoke,
Beknowe the sothe er that thou die.
Gower. Conf. Am. book ii.First *slaunder* he, which alwayes beareth hate,
To happy harts in heauenly state that bide;
Can play his part to stirre vp some debate,
Whereby suspect into my choyse might glide.
*Gascoigne. A Lady wronged by False Suspect.*Yet it is not onely by the comon lawes of this realme vpon
greate payne forbydden, that any man shoulde wyth any *sclaun-*
derous railing wordes misse vse him selfe towarde his prince, but
also by the plaine Statute *De Scandalis Magnatum* fore and
straightlye prohibited, that no man shal *sclaunderously* speake of
anye man in y^e realme.*Sir Thomas More. Workes*, p. 622.O let that name, quoth she, from book be torn,
Lest in that place the sad displeased earth
Doth loath itself, as *slander'd* with my birth.
Drayton. The Barons' Wars, book v.Soone as they thence departed were afore,
That shamefull hag, the *slaunder* of her sexe,
Them follow'd fast, and them reviled sore.
Spenser. Faerie Queene, book iv. can. 8.And let it be to good men no slight satisfaction, that the *slan-*
derer here confesses he has no further notice of me than his own
conjecture.*Milton. Works*, vol. i. p. 108. *Apology for Smectymnus*.Truth shall retire
Bestuck with *slandrous* darts, and works of faith
Rarely be found.*Id. Paradise Lost*, book xii. l. 535.Whether we speak evil of a man to his face, or behind his back;
the former way indeed seems to be the most generous, but yet is a
great fault, and that which we call reviling; the latter is more
mean and base, and that which we properly call *slander* or back-
biting.*Tillotson. Sermon* 42.

So far it [a life of religion] is from abridging us of any of our

earthly delights, (as its enemies *slanderously* represent it) that it
abundantly heightens them.*Sharp. Works*, vol. i. p. 47. *Sermon* 2.He bids him glow with unremitting love
To all on earth, and to himself above;
Condemns th' injurious deed, the *sland'rous* tongue,
The thought that meditates a brother's wrong.*Cowper. Truth.*SLANDER, in *Law*, is the malicious speaking, within
the hearing of a third person, of words that falsely im-
pute to the person slandered either some offence for
which he would be liable to be punished; or some mis-
conduct or incapacity in the trade or profession by which
he obtains his livelihood, or in the office which he holds;
or some disease which would render him unfit to be ad-
mitted into the society of his fellow-men. The following
may be taken as instances. To say of a man that he is
a thief, or that he has committed perjury, for both of
which offences he would be liable to be indicted, or of a
tradesman that he is dishonest in the way of his trade, or
of a magistrate that he administers his office corruptly,
or of a physician that he is ignorant and incompetent,
or of a merchant that he is insolvent and likely to be-
come bankrupt, all these assertions amount to Slander,
for which the party injured may have an action and
recover such damages as a jury will award. But words
that are merely abusive, such as the terms swindler,
rascal, liar, coward, applied without reference to the
office, trade, or profession of the party slandered, are not
in themselves actionable, because they do not impute
any punishable offence. The same may be said of an
imputation of unchastity to a woman.Words, however, that are not actionable in themselves,
will become actionable, if they occasion any particular da-
mage or loss to the individual; as, if the imputation of
unchastity has been the occasion of the woman's being
excluded from the house of a former acquaintance, or
if the imputation of falsehood has produced any similar
inconvenience, in both these cases an action will lie.
But the gist of the action in such cases is the special
damage, and the words are merely considered as the in-
strument by which the injury is occasioned.To be actionable, the words must be *false*; and there-
fore it is always a justification if the defendant can prove
that the words are true. The truth of a libel is no
answer to a *criminal* prosecution for the publication, but
the truth is always a defence to a *civil* action either for a
written libel or for words, as the law does not consider a
man entitled to any pecuniary compensation if he de-
serves the character which is imputed to him.To be actionable, the words must also be spoken *malici-*
ously. The law always implies malice, when the words
are spoken unnecessarily upon an occasion, which does
not itself supply a justification. But words are, from
the occasion on which they are spoken, often considered
as *privileged communications*. As when a master is
asked the character of a servant, or a father is advising
his infant son in the choice of his companions, on these
and numberless similar occasions, if the speaker utters
his real opinion *bonâ fide*, believing that he has good
reason for that opinion, he is not liable to an action.
Though the imputation be in fact false, yet the occasion
on which the words are spoken negatives the presump-
tion of malice. It is an answer to such a defence as
this, to show that the speaker was not acting *bonâ fide*,
but was in fact actuated by express malice. The occa-
sion is not allowed to protect a man in giving vent to
secret spite.SLAN-
DER.

SLAN-
DER.
—
SLAP.

The great protection against frivolous actions of Slander is the regulation as to costs; for when the words are actionable in themselves, the plaintiff cannot obtain his costs unless he has a verdict for forty shillings or upwards. When, however, the words are only actionable by reason of special damage, though the plaintiff may be deprived of his costs by a certificate from the Judge if he has a verdict for less than forty shillings, yet, unless the Judge certifies, he recovers his full costs, however small the damages may be.

SLANG. See SLING, the *n.* common.

SLANT, *adj.* } See *ante*, ASLANT. Skinner de-
SLANT, *v.* } rives from the D. *slanghe*; Ger.

SLAVERY.

SLAVE, *n*.SLAVE, *v*.

SLAVERY,

SLA'VISH,

SLA'VISHLY,

SLA'VISHNESS.

See *ante*, ENSLAVE. Ger. *schlew*; Dan. and Sw. *slaf*; Fr. *esclave*; It. *schiavo*; Sp. *esclavo*; Low Lat. *schlavus*. The word, in its present application, is from the Slavi or Sclavi, reduced to servitude by the Germans. See the Quotation from Gibbon. In the Slavonian tongue, *slava* or *slawa*, *laus*, *gloria*, is a word (says Gibbon) of familiar use in different dialects, and forms the termination of the most illustrious names. One reduced to captivity, to servitude, to bondage, who is bound or compelled to serve, labour, or toil for, obey another.

To *slave*, to reduce to servitude or bondage; to treat as a *slave*, to subject, to make subservient. See the note on the Quotation from Shakspeare.

There dyd I see such sightes as yet my heart do pricke;
I sawe the noble Bragadine, when he was fleyd quicke.
First like a *slave* enforst to beare to euery breach,
Two baskets laden full with earth Mustaffa dyd him teach.
Gascoigne. Deuise of Maske for Viscount Mountacute, p. 495.

In this hall, all vile service, and all *slavery*, with all laboursome
toil, and drudgery, and base business, is done by bondmen.

More. Utopia, vol. ii. book ii. ch. v. p. 53.

Nay grant they had *slav'd* my body, my free mind,
Like to the palm-tree walling fruitful Nile,
Shall grow up straighter and enlarge it selfe
'Spight of the envious weight that loads it with.
Beaumont and Fletcher. The False One, act v. sc. 4.

Let the superfluous and lust-dieted man,
That *slaves* your ordinance, that will not see
Because he do's not feelee, feelee your poure quickly.
Shakspeare. Lear, act iv. sc. 1. fol. 300.

But I in armes, and in atchievements brave,
Do rather choose my flitting houres to spend,
And to be the lord of those that riches have,
Then them to have my self, and be their servile *slave*.
Spenser. Faerie Queene, book ii. can. 7.

For knots of cord to ev'ry town they send,
The captiv'd English that they caught to bind,
For to perpetual *slav'ry* they intend
Those that alive they on the field should find.
Drayton. The Battle of Agincourt, p. 14.

Bequeath not to their lot
The shame that from them no device can take,
The blemish that will never be forgot;
Worse than a *slavish* wipe, or birth-hour's blot.
Shakspeare. Rape of Lucrece, p. 32.

When perch'd aloft to perfect their estate
They rack their rents unto a treble rate;
And hedge in all the neighbour common lands,
And clodge their *slavish* tenants with commands.
Hall. Satire 2. book iv.

They are commonly such people, rude, silly, superstitious ideots,
nasty, uncleane, lowsy, poore, dejected, *slavishly* humble.

Burton. Anatomie of Melancholy, p. 158.

Detaining them in more than Egyptian *slavishness*.

Fotherby. Atheom. p. 113.

His willingness to serve such base things is the greet brand of
his *slavishness*.
Fotherby. Atheom. p. 120.

Their songs are very melancholy and doleful, so is their musick;
but whether it be natural to the Indians to be thus melancholy, or
the effect of their *slavery*, I am not certain.

Dampier. Voyages, vol. i. ch. v. p. 127. Anno 1684.

He loves command and due restriction;
And she as well likes contradiction;
She never *slavishly* submits;
She'll have her will, or have her fits.

Gay. Fable 12.

From the Euxine to the Adriatic, in the state of captives or
subjects, or allies or enemies, of the Greek empire, they overspread
the land; and the national appellation of the *slaves* has been de-
graded by chance or malice from the signification of glory to that
of servitude.

Gibbon. History of the Roman Empire, vol. x. ch. lv. p. 197.

To exchange that temperate, conditional subordination of the
clergy, here laid down for the *slavish* dependency which Hobbes
and his followers prescribe, would prove a very ill bargain for the
state.

Warburton. Alliance, book ii. ch. i.

But if others [high-strained expressions of civility] of the same
sort are coined from time to time to succeed them, this renews and
perpetuates the mischief; besides the further inconveniences of
making a language absurd, and imprinting a character of *slavish-
ness* upon it, under a groundless pretence of refining and polishing
it.

Secker. Works, vol. iii. p. 94. Sermon 7.

SLAVERY. Although this word is generally under-
stood, it is not an easy matter to define it with logical
precision; probably the most accurate definition is that
given by Cicero, *Servitus est obedientia fracti animi
et abjecti et arbitrio carentis suo*. Such obedience
being involuntary must have been originally derived
from force; the compacts by which gamesters among
savage tribes, and debtors unable to satisfy the claims of
their creditors, sell themselves to labour for the benefit
of a master, could only arise in countries where Slavery
had long been an established usage. Man, in the
infancy of society, uses his physical strength at his own
pleasure; the strong have consequently a pre-eminence
over the weak, which is manifested even in the domestic
circle. The family of a savage exhibits a perfect image
of Slavery: his wife is an abject drudge; his children
in infancy are dependent for their very existence on his
caprice; unruly passions lead him to seize upon women
to minister to his pleasures, and the transition is easy
to seizing weaker individuals of the male sex that they
might labour for his benefit. Hence it appears that the
origin of Slavery may probably be earlier than that of
civil society;—indeed from the language used by Noah, in
denouncing a curse upon Ham and Canaan, it is pretty
clear that slavery must have existed before the Flood:
“Cursed be Canaan; a slave of slaves shall he be unto his
brethren;” (*Gen. ix. 25*.) for the word עֶבֶר, inaccurately
rendered servant in our version, always means a pur-
chased or naturally born slave, in contradistinction to
שָׂכִיר, a hired servant. Society, in its infancy, was but

SLA-
VERY.

an enlargement of the domestic circle, and restraints on the exercise of power were no more provided for the chief of a tribe than for the head of a family. Domestic Slavery consequently increased, and gradually led to public Slavery. Prisoners of war were supposed to have lost all right to life and property; servitude or death was their only alternative. "It was a law," says Xenophon, "established from time immemorial among the nations of antiquity, to oblige those to undergo the severities of servitude whom victory had thrown into their hands." (*Cyropæd.* lib. vii. *sub fin.*) It seems probable that Nimrod was the first who thus associated the ideas of victory and servitude, and that it was the first conqueror who was the first great slave-dealer; or, as Pope says,

Proud Nimrod first the bloody chase began,
A mighty hunter, and his prey was man.

Wars were less pernicious in the devastations they occasioned, than in the passions they fostered and the habits they formed. Soon after the trade in captives had been found profitable, kidnapping and piracy were employed to increase the number of slaves; and far from being looked upon with horror, were regarded as heroic and honourable employments. The Phœnicians and the wandering tribes of Asia were early distinguished as man-hunters, and both found profitable markets for their living booty in Egypt. The ancient Greeks imitated their example; "those who inhabited the sea-coasts and islands gave themselves wholly to piracy; it was in short their only profession and support." (*Thuc.* i.) Involuntary servitude seems also to have been sometimes inflicted as a punishment upon persons convicted of a grave offence, and in a later age upon debtors unable to satisfy their creditors.

So early as the age of Abraham the maxim that captives taken in war should immediately be reduced to the condition of slaves, appears to have become an established law of nations; for after the victory over Chedorlaomer, the King of Sodom, proposing the division of the spoil, says, "Give me the persons, and take the goods to thyself." (*Gen.* xvi. l.) The sale of Joseph to the Ishmaelites shows us that kidnapping was also practised, for these merchants exhibited no surprise when the youth was offered them for sale by his brethren.

The Egyptian monuments show us that the Pharaohs and their subjects were very unscrupulous in the procuring of slaves. Captives taken in battle are represented, chained together in droves, and forced to the market like herds of cattle; crowds of women and children are depicted on their march to the royal secretary, who kept the account of such valuable stock; and not unfrequently the artist contrives to affect the feelings by contrasting the joyous ignorance of childhood with the mother's despairing knowledge of the destiny which awaits herself and her babes.* It deserves particular notice, that we frequently find negroes among those unfortunate groups, so early did the calamities of this hapless race begin. "Women slaves," says Mr. Wilkinson, "were also engaged in the service of families, like the Greeks and Circassians in modern Egypt and other parts of the Turkish empire; and from finding them represented in the sculptures of Thebes, accompanying men of their own nation, who bear tribute to the

Egyptian monarch, we may conclude that a certain number were sent annually to Egypt from the conquered provinces of the North and East, as well as from Ethiopia. It is evident that both white and black slaves were employed as servants; they attended on the guests when invited to the house of their master; and from being in the families of priests, as well as of the military chiefs, we may infer that they were purchased with money, and that the right of possessing slaves was not confined to those who had taken them in war." (*Customs of Ancient Egyptians*, vol. i. p. 403.)

In the heroic ages of Greece, captives were invariably reduced to Slavery, and no privileges of exalted birth or former station saved them from being employed in the most menial offices. This circumstance renders the parting words of Hector to Andromache so painfully sad:

Oh, my Andromache! thy griefs I dread;
I see thee trembling, weeping, captive led!
In Argive looms our battles to design,
And woes, of which so large a part was thine!
To bear the victor's hard commands, or bring
The weight of waters from Hyperia's spring,
There while you groan beneath the load of life,
They cry, "Behold the mighty Hector's wife."

Iliad, vi.

And Æschylus shows us that the anticipations of such degradation were not unfounded, for he introduces Hecuba complaining that she was kept chained like a dog before the palace of Agamemnon. Piracy and kidnapping are mentioned by Homer as ordinary occurrences; Ulysses asks Eumæus if he had not been thus wrested from his parents, in terms which show that these were common modes of procuring slaves:

So left perhaps to tend the fleecy train,
Rude pirates seiz'd and shipp'd thee o'er the main,
Doom'd a fair prize to grace some prince's board,
The worthy purchase of a foreign lord. *Odyssey*, xv.

Cyprus and Egypt appear to have been the principal marts for these unhappy victims; we find Alcinous thus menacing Ulysses:

Unless at distance, wretch, thou keep behind
Another isle than Cyprus more unkind;
Another Egypt shalt thou quickly find.

Odyssey, xvii.

Severe laws were enacted by Solon against those who betrayed free citizens to slave-merchants, but the legislator permitted the sale of daughters and sisters convicted of fornication. The Thessalians, however, even in the age of Aristophanes, continued to steal persons of free birth, and sell them. Thus in the *Plutus*, where Poverty tries to convince Chremylus of the evils of wealth:

Pov. Whence will you then
Get slaves?
CHR. With cash of course we'll purchase them.
Pov. But first who'll be the seller, when himself
Has money too?
CHA. Some merchant fond of gain
Coming from Thessaly, where dwells a race
Of faithless kidnappers.

The Romans derived their chief supplies of slaves from their constant wars; indeed the word *servus*, a slave, is derived from *servare*, to preserve, and primarily signifies a captive whose life was spared. But along the frontiers of the empire kidnapping establishments were maintained, and the barbarous tribes of Britain, Germany, &c. were regarded as beings placed beyond the

* See Hoskins's *Ethiopia*, pl. iii. p. 332.

SLA-
VERY.

SLA-
VERY.

pale of humanity, and deemed as legitimate articles of traffic, as the negroes in modern times.

The treatment of slaves varied in different ages and countries. Among the patriarchs they appear to have been regarded as a part of the family, and to have become in some cases heirs to their lords; for Abram intimates that if he continued childless his inheritance would pass to his chief domestic slave, Eliezer. (*Gen.* xv.) But even in that early age the condition of a slave was proverbially miserable; and Job forcibly describes the tranquillity of the grave by declaring "the small and the great are there, and the slave is free from his master." (*Job* iii. 19.) It seems probable that the Jewish legislator derived his principal regulations respecting slaves from the customs of Egypt. These were more merciful than the laws of the Greeks and Romans, for they rendered the master responsible for the life of the slave if he was beaten to death: but even in this rule there was a restriction, which showed that slaves were ranked with cattle and other species of property. "If a man smite his servant, or his maid (male or female slave) with a rod, and he die under his hand, he shall be surely punished. Notwithstanding, if he continue a day or two, he shall not be punished; for he is his money." (*Exod.* xx. 21.) On the Egyptian monuments we find slaves frequently punished by the bastinado; but we find no traces of the more cruel punishment to which they were subjected by the Greeks and Romans. We have no example of slaves being tortured to give evidence against their masters in Eastern countries; this monstrous perversion of justice and outrage on humanity belonged only to countries further advanced in civilization, and boasting of their freedom.

In Athens the slaves formed a large portion of the population; they could neither plead nor be produced as witnesses, yet with strange inconsistency confessions extorted from them by torture were received as valid evidence. The various modes of torture employed are briefly enumerated by Aristophanes:

- XAN. Go, take this slave and question him by torture,
And if thou shouldst detect me doing wrong,
Then lead me forth to death.
- ÆACUS. And in what way
Shall I examine him?
- XAN. In every way—
Binding him to a staircase, hanging him,
Scourging him with whips made of hog's bristles, flogging
By torturing, by pouring vinegar
Under his nose, by placing bricks upon him,
And every other way. *Frogs, act iii. sc. 1.*

The various modes of torture thus proposed by Xanthias give a terrible picture of the state of domestic manners among the Athenians, which permitted and enjoined masters accused of any crime to give up their slaves to the inquisition of the rack in its worst forms. If the master was acquitted, he received a pecuniary compensation for the injuries the slave had suffered, but the wretched victim himself was refused any atonement. Slaves were, however, treated with more humanity at Athens than in most other places; they were allowed to fly for sanctuary to the Temple of Theseus, whence they could not be forced without sacrilege, and they had the privilege of bringing an action at law against their master for barbarous treatment. If the slave substantiated his complaint, his master was obliged to sell him. Emancipation of slaves was common; those who served in the sea-fight at Arginusæ received their liberty from the State, and their loyalty was simi-

SLA-
VERY.

larly rewarded in other emergencies. In no part of the world were slaves treated more cruelly than in Sparta; they were called Helots, from a Laconian town which the Spartans subdued, and reduced the inhabitants to Slavery. The Helots performed every task of public and private drudgery; for the Spartans were too proud to undertake any laborious or mechanical employment; the reward of their toils was the most barbarous cruelty, and not unfrequently, wholesale butchery, when their increasing numbers alarmed the suspicions of their jealous masters.

The Roman slave-system was, beyond all others, extended in its operations and methodized in its details. From the age of Romulus, whose captives were sold into bondage, slaves continued to form a numerous and important part of the Roman population down to the overthrow of the Western Empire. Indeed the slaves were not only the principal domestics and the chief part of the operatives in the towns, but they became almost the only agricultural labourers, so that in the age of the Gracchi there were hardly any free husbandmen in Italy, a state of things which continued to a very late period of the Empire. The condition of the slaves in the social system was as low as can be imagined; they possessed no rights, and could therefore claim no legal protection; their marriages were not recognised even by the Christian church until after the Lombards had established their kingdom in Italy; they could possess no property except by permission of their masters; and they had no protection against personal violence; outrage on female slaves, unless they were below the age of puberty, or were materially lessened in value, was not prohibited by any penalty in Italy before the reign of the Gothic monarch Theodoric. Under the republic, and the first emperors, the master possessed the uncontrolled power of life and death; he might kill, mutilate, or torture his slaves for any or no offence; he might force them to become gladiators or prostitutes; he could form or dissolve at pleasure the temporary unions between male and female slaves; he could separate families when he pleased; and he was not obliged to support his slaves in sickness or old age. It was by slow degrees that these iniquitous rules were modified; but as Christianity prevailed, the condition of the slave was gradually improved, and at length the first Christian Emperor issued a memorable edict, declaring the murder of a slave equally criminal with the murder of a freeman.

Crucifixion was the usual punishment of a fugitive slave; but this horrible form of death was inflicted frequently for such petty offences as theft, insolence, and disobedience. Some cruel slave-owners hired professed torturers to punish their slaves. Not only masters, but mistresses superintended the infliction of the most revolting torments, and even visitors were invited to witness the flogging of a refractory slave as an amusing spectacle. There were, however, certain festivals in which the slaves were allowed an extraordinary degree of licence; of these the most remarkable was that of the Saturnalia, when they were allowed to say what they pleased with impunity, to feast at their masters' tables, and to mimic all the actions of freemen.

Servile wars were not of such frequent occurrence as the vast number and general ill-treatment of the slaves would lead us to expect, but those which have been recorded were of a most sanguinary character. In the civil wars few leaders ventured upon the hazardous experiment of offering liberty to the slaves but the

SLA-
VERY.

barbarous invaders of Italy felt no such repugnance, and Totila, in particular, frequently recruited his army with these men, who had no alternative but victory or death. The baneful influence of Slavery had destroyed the class of free peasants, and thus deprived the Romans of materials for maintaining a body of infantry, compelling them to rely upon mercenary soldiers. The admixture of such large bodies of foreigners with the population gradually corrupted the Latin language, and when the emancipation of slaves became frequent, the Roman citizens became a heterogeneous mass, without any community of feeling to unite them against a foreign enemy. For these reasons Slavery may well be regarded as one of the main causes of the decay of the Empire. Slavery was continued by the Germanic tribes even after the overthrow of the Roman Empire, and our Anglo-Saxon ancestors were particularly remarkable for their dishonourable and dishonest traffic in slaves. The city of Bristol had a bad pre-eminence in this infamous trade; the citizens sold those whom they kidnapped, and even their own children, as slaves to the Irish. A law of King Alfred ranks slaves with horses and oxen, forbidding the purchase of any of the three, unless a voucher was produced to warrant the sale. So late as the reign of Elizabeth, A. D. 1574, a commission was issued for inquiring into the lands and goods of all the Queen's bond-men and bond-women in the Counties of Cornwall, Devon, Somerset, and Gloucester, in order to compound with them for their manumission, that they might enjoy their lands and goods as freemen. Colliers and salters were slaves in Scotland until within the last half-century, when they obtained the rights of freemen by an Act of the British Legislature.

We have already shown that negroes were sold as slaves so early as the days of the Pharaohs. The Carthaginians continued the trade with the interior of Africa, and it seems to have been subsequently practised to some extent by the Romans and the Vandals. The Arabs were always remarkable for kidnapping and selling slaves, and they appear to have first given the hint of enslaving negroes to modern Europeans. But the modern slave-trade, properly so called, was commenced by the Portuguese about the middle of the XVth Century. A captain of that nation, named Antonio Gonzales, landed in Guinea A. D. 1484, and carried away some black boys, whom he sold advantageously to Moorish families settled in the South of Spain. Six years after he committed a similar robbery; and many merchants, instigated by his success, imitated the practice, and built a fort to protect the traffic. It has been generally stated, that Bartolomeo de las Casas proposed to Cardinal Ximenes the regular importation of negroes into the Spanish settlements, as a means of rescuing the aborigines from the severe lash imposed upon them by their Spanish conquerors; but this story has been long since satisfactorily refuted. The large profits made by the Portuguese slave-dealers induced other nations to engage in the traffic; and it was formally recognised as a legitimate branch of commerce by the Spanish government under Charles V., the French under Louis XIII., and the English under Queen Elizabeth. The hypocritical pretences for this detestable traffic were that it was an act of charity to the negroes themselves, who would otherwise be butchered when taken in war; and that it might be made a means of converting the heathen to Christianity. But the profits which the petty despots of Africa derived from the sale of captives gave rise to

interminable wars and outrages, for the ordinary supply of prisoners and convicts was inadequate to meet the demand. The appearance of an European ship on the slave-coast was the signal for fierce hostilities; the despotic sovereigns, influenced merely by cupidity, attacked the neighbouring tribes, and if they failed to procure an abundance of prisoners, turned their arms against their own subjects; kidnappers, singly or in companies, laid wait for the peaceful inhabitants of the villages, and the Europeans themselves employed every artifice to entrap the ignorant and the confiding on board their vessels, where they were treacherously arrested and detained. Large factories for collecting slaves were established along the coast of Africa, and captives were frequently driven down from the interior, distances of twelve or thirteen hundred miles, to be exchanged for rum, brandy, toys, iron, &c. The number of those beings who have been thus torn from their country during the last three centuries has been estimated at more than forty millions.

When the ships had completed their human cargo they weighed anchor, and commenced what was called the Middle Passage. The accommodations provided for the unhappy victims of rapacity were perfectly horrible. In the best regulated ships each grown-up negro was allowed only sixteen English inches in width, two feet eight inches in height, and five feet eleven inches in length; or, as Surgeon Falconbridge expressed himself, "not so much room as a man has in his coffin." No words can express the intensity of their sufferings; the mortality was dreadful, from 15 to 20 per cent. generally expired on the voyage.

When the ships reached their destined ports, the negroes were either consigned to slave-brokers, sold by auction, or disposed of by the "scramble." The "scramble" was held either on board the ship or in some enclosure on shore; in either case, an area was darkened, into which the unhappy victims were crowded; at a given signal, the purchasers, each provided with a long rope, rushed in amongst them and endeavoured to encircle as many as they could; and this human lottery was long deemed one of the most exciting pastimes in the West Indies.

The first efforts to mitigate Slavery, and effect the abolition of the slave-trade, were made by some Quakers in England and America. In 1751 the Quakers entirely abolished it among themselves. Granville Sharp, in 1772, established in an English court of law the principle, that the slave who lands in England immediately becomes free, a principle which had some years before been recognised in France. At length, in 1783, the first petition was presented to Parliament, praying for the abolition of the slave-trade, and was ably supported by Mr. Wilberforce, who thenceforward became the zealous advocate of the most injured portion of the human race. He found an able and energetic assistant in Mr. Thomas Clarkson, who resolved to devote his whole life to the cause. Injudicious friends have attempted to establish a rivalry between the claims of these great and good men, to the merit of having removed the disgrace which the horrible traffic brought upon the country, but, in truth, both deserve equal praise, and the fame of one is identified, rather than associated, with that of the other.

From 1788 to 1807, Wilberforce, Pitt, Fox, and many other eminent statesmen, maintained a protracted struggle to enforce the rights of humanity. By the aid of Lord

SLA-
VERY.

SLA-
VERY.

Grenville in the Upper, and Lord Howick (now Earl Grey) in the Lower House of Parliament, who supported the measure with all their influence as ministers of the Crown, the slave-trade was finally rendered illegal in England and its Colonies on the 25th of March, 1807. On the 4th of May, 1811, it was enacted that all who knowingly participated in the slave-trade should be punished with fourteen years' transportation; and on the 31st of March, 1824, the traffic was declared piracy. The abolition of the slave-trade in the United States was effected about the same time as in England, but many American citizens continued secretly to engage in the traffic, and there is reason to believe that many merchants, especially in the Southern States, are still traders in human flesh, and will so continue while Slavery is permitted to exist. Foreign powers were invited to co-operate with England in measures to be adopted for the abolition of the African slave-trade. Portugal and Spain received £700,000 from the British Government, as an indemnification for the losses which were expected to result from abandoning the trade. France, Holland, Denmark, Sweden, and Brazil subsequently gave their adhesion to these arrangements, but the slave-trade was still continued, and more cruelly than ever, under the Spanish, French, and Brazilian flags. The English, therefore, sent vessels of war to cruise after the slave-ships, but their operations were impeded by difficulties arising respecting the right of search, and by the inconsistent permission to the Spaniards and Brazilians to continue the slave-trade South of the Line. Mr. R. Walsh, in his *Notices of Brazil*, gives a fearful description of a slave-ship examined by the English man-of-war in which he returned from Brazil, May, 1829. "She had taken in on the coast of Africa 336 males and 226 females, making in all 562, and had been out seventeen days, during which 55 had been thrown overboard." The description of their misery is too painful to be extracted: one incident will enable the reader to form an estimate of the whole. "On looking into the places where the slaves had been crammed, there were found some children next the sides of the ship, in the places most remote from light and air. They were lying nearly in a torpid state, after the rest had turned out. The little creatures seemed indifferent as to life or death; and when they were carried on deck many of them could not stand. After enjoying for a short time the unusual luxury of air, some water was brought; it was then that the extent of their sufferings was exposed in a fearful manner. Then all rushed like maniacs towards it. No entreaties, or threats, or blows could restrain them; they shrieked, and struggled, and fought with one another for a drop of this precious fluid, as if they grew rabid at the sight of it." "When the poor creatures were ordered down again several of them came and pressed their heads against our knees, with looks of the greatest anguish, at the prospect of returning to the horrid place of suffering below." The captain of the English ship, however, was obliged with great reluctance to release the slaver, as it could not be proved, after a strict examination, that he had exceeded the privilege allowed to Brazilian ships of procuring slaves South of the Line. The average annual amount of slaves captured by British cruisers and restored to freedom is about 1400, and the probable annual amount of slaves still exported from Africa is believed to exceed 100,000.

Slavery has ceased in nearly all British Colonies since
VOL. XXVII.

SLA-
VERY.

the 1st of August, 1838; throughout South America, with the exception of Brazil, it has either been abolished, or is drawing to a close, and all the slaves in Mexico were declared free September 15, 1829.

Slavery of Whites.—In the early wars between the Mohammedans and Christians the captives on both sides were reduced to Slavery, and compelled to row the galleys, or perform other tasks equally toilsome, until ransomed by their friends or relations. While these contests were confined for the most part to Eastern Europe, they attracted little attention; but when the Regencies of Algiers, Tunis, Constantina, &c. were annexed to the Turkish Empire by the Barbarossas about the beginning of the XVIth Century, the adventurous corsairs from these ports became the scourge of the Western Mediterranean, not only plundering vessels, but landing on unprotected coasts, and carrying away all they could seize into Slavery. So frequent were their ravages that it became necessary to erect watch-towers at proper distances along the Southern shores of Spain, supplied with guards constantly on the alert to give notice of the approach of the piratical squadrons, and protect the inhabitants from their ravages. The Emperor Charles V. was honourably anxious to remove this scandal to the Christian powers, and went with a powerful armament to besiege Algiers, (A. D. 1511,) but unfortunately the season of the year was too far advanced for successful operations; his fleet was shattered by a storm, his army broken down by famine and disease, and he was forced to abandon the enterprise after an enormous expenditure of blood and treasure. The Algerines thenceforward continued their profitable piracies, directing their hostilities principally against the Spaniards, Portuguese, and Italians, whom they regarded as the most determined enemies of the Mohammedan name. The more powerful maritime States of Europe concluded separate treaties with the piratical hordes, and, content with the protection of their own subjects and commerce, connived at the ravages committed on less warlike nations, supplying the corsairs with arms and ammunition, soliciting their passes, and purchasing their forbearance by tribute paid under the guise of annual presents. But this disgraceful condescension was not sufficient to restrain the rapacity and cruelty of the Algerines; British subjects were frequently seized and detained as slaves, until the increase of the English naval power in the latter half of the XVIIIth Century terrified the corsairs, and compelled them to respect the British flag. The kingdoms of Sardinia and the Two Sicilies were still exposed to their ravages, and suffered so severely, that at the Congress of Vienna it became a subject of deliberation what means should be used to put a final stop to these enormities, and to protect the shores of Sicily and Italy from the pirates and man-hunters of Africa. Immediately after the pacification of Europe, consequent on the battle of Waterloo, the two great maritime powers, England and Holland, resolved to give efficacy to the wishes of their allies. Lord Exmouth and Sir Thomas Maitland were sent to Tunis to demand the restitution of all the captives actually in bondage, and the perpetual abolition of Christian Slavery. This mission succeeded in Tunis, but in Algiers it produced a violent excitement, which produced fatal consequences. The ships of several Christian merchants engaged at the pearl-fishery at Bona were suddenly attacked by the Moors, and all the crews ruthlessly massacred. Lord Exmouth was sent with a

SLA-
VERY.
—
SLAY.

powerful fleet to punish this atrocious outrage. He appeared before Algiers August 20, 1816, and on the refusal of the Dey to give proper satisfaction, destroyed the fortifications of the city, and burned all the shipping in the harbour. The Dey, completely humbled, purchased peace by liberating more than 1200 slaves, and repaying the ransoms he had received from the Kings of Sicily and Sardinia. But the effect of this castigation soon passed away; the Algerines renewed their piracies, chiefly attacking French vessels. Charles X., after vainly demanding satisfaction, declared war. A large armament was sent from Marseilles in May, 1830; on the 5th of the following July, Algiers was taken with little difficulty, and Christian Slavery in Northern Africa finally annihilated.

Slavery in Turkey.—The condition of slaves in Turkey is far less miserable than in any other country, and scarcely differs from that of hired labourers, except in the case of Christians, who remain faithful to their religion. When the Sultan agreed to liberate the Greek captives who had been sold into Slavery during the war of the Revolution, the great majority of them refused to accept the proffered boon of freedom, as the Russians had done previously, when the Turks agreed to restore all the prisoners of that nation after the treaty of Carlowitz. Slavery in Turkey entails no degradation; even at the present day many of the highest functionaries in the state and officers in the army are persons originally purchased in the market. The female slaves, especially the Circassians, frequently dispute with legitimate wives supremacy in the harem; a favourite mistress frequently rules, not only over domestic establishments, but even over the state. Wars were long the chief means of supplying the bazaars of Constantinople, and in the earlier stages of the Greek revolution there was a perfect glut of slaves in the market. Since that period the supply has been rapidly diminished; at present black slaves are principally brought from Abyssinia by the Arabs, and white slaves are imported from Mingrelia and Circassia.

The warlike Circassian tribes sell to the Turkish slave-dealers not only their captives and the offspring of

their slaves, but even their own sons and daughters. They are not ashamed of the traffic; they believe that their children are placed on the road to fortune the moment that they are delivered to the merchants. Neither do the children struggle against their fate, for almost every popular tale and tradition current in their mountains relates to the good fortune which some Circassians found at Cairo or Constantinople. The boys look forward to a brilliant career in the army or the state; the girls speculate on the probability of their becoming sultanas, and therefore quit without regret the miserable villages of their parents. In fact, when a beautiful Circassian has been purchased by a merchant, her fame precedes her, and long before she passes the Thracian Bosphorus the discreet matrons who manage the traffic have commenced negotiations for her sale with the most noted amateurs. Since the late war with Russia, Turkey has been shut out from Circassia, and slaves cannot now be procured without great risk and difficulty; indeed it is the opinion of the most intelligent travellers that the supply must soon be cut off altogether, for in the impoverished state of the Turkish empire it will be impossible to defray the increasing cost of the traffic.

Slavery beyond the Caspian Sea.—The wild hordes of Turkestan and the regular States of Khiva and Bokhara make slaves of the Persians and the Russians, whom they treat with savage cruelty. Many efforts have been made by the court of St. Petersburg to put an end to this traffic, and to rescue the unfortunate victims, but they have as yet failed, nor is there any reasonable prospect of an improvement. The Asiatic frontiers of Russia are too extensive to be guarded against such enterprising foragers as the Kirghiz and Turkomans, and the proposition to establish a colony beyond the Caspian has been abandoned. In central Asia all agricultural labour is performed by slaves; freemen deem such toil a degradation, consequently until the whole system of society is changed Slavery must continue, for in such countries the comparative cost of free and slave-labour cannot form an element in effecting improvement.

SLAVER. See SLAB.

SLAY,

SLA'YER,

SLA'UGHTER, *n.*

SLA'UGHTER, *v.*

SLA'UGHTERER,

SLA'UGHTEROUS,

This word and the past tense and past participle are very variously written.

Slaughter is formed upon the past participle *slawghed*, *slawgh'd*, *slaught*. The Goth. *slahan*; A.

S. *slan*; D. *slaen*; Ger. *schlagen*, to strike, to beat; to smite; and, consequentially, to quell or kill. See SLEIGHT. Compare Chaucer and Dryden.

To strike or beat, (*sc.* to death;) to kill or quell; to put to death.

No tonge telle may
þat folk, þat þer was y *slawe* on eyþer side þat day.
R. Gloucester, p. 17.

þo lond folk, þo he hyder com, turnede to hym faste,
So þat þer was *slawgt* gret, þe wyle it wolde laste.
Id. p. 97.

Bituex þise tuo kȳnges a werre bigan,
Slaj̃n was Bernewolf, & with him many man.
R. Brunne, p. 14.

At þat tȳme R. þere manȳ a man *slouh* he,
þe kȳng sonne of Dare he smote in tuo his the.

R. Brunne, p. 191.

Sen þis greuance hard, þe *slauhter* & þe drede,
Fulle sone afterward þe kȳng to zork gede.

Id. p. 91.

And nyle ye drede hem that *sleen* the bodi; for thei moun not
slee the soul, but rathir drede ye hym that may leese bothe soule
and bodi into helle. Wiclif. Matthew, ch. x.

And the keper of the prisoun was awaked and sigh the ghatif
of the prisone opened, and with a swerd drawn out he wolde have
slaw hymself. Id. The Dedis of Apostlis, ch. xvi.

Not as Cayn that was of the yuel, and *sloug* his brothir. And
for what thing *sloug* he hym? Id. 1 John, ch. iii.

Not as Cayn which was of the wicked, and *slewe* his brother.
And wherfore *slew* he him? Bible, Anno 1551.

But the erthe tileris seyng the sone seyden withynne hemself.
This is the eyr, come ye *sle* we him, and we schulden have his
erytage. And thei token and castiden him out of the *vyneyerd* and
sloun him. Wiclif. Matthew, ch. xxi.

But when the husbandmen sawe the sonne, they sayde amonge
them selues, This is the heyre; come let vs kil him, and let vs
take his inherytaunce to our selues. And they caughte him and
thrust out of y^e vineyarde, and *slew* him.

Bible, Anno 1551.

SLAY.

The *sleer* of himself yet saw I there,
His herte-blood hath bathed all his here;
The naile ydriven in the shode on hight
The colde deth with mouth gaping upright.
Chaucer. The Knightes Tale, v. 2008.

For eyther I mote *slen* him at the gappe;
Or he mote *slen* me, if that me mishappe.
Id. Ib. v. 1647.

So was it showed in that purtreiture
As is depeinted in the cercles above,
Who shal be *staine* or elles ded for love.
Id. Ib. v. 2038.

Divided is thy regne, and it shal be
To Medes and to Perses yeven, quod he.
And thilke same night this king was *slawe*.
Id. The Monkes Tale, v. 14240.

Thou *sleer*, devourer, and confusion
Of gentlewomen.
Id. Hipsiphele and Medea.

He made of hem through his high renoun,
So great *slaughter* and occisioun,
That as the death from his swerd they fled.
Id. The Story of Thebes, part iii.

For this condicion he had
That were hym hapneth the victoire,
His lust and all his most gloire
Was for to *slee*, and not to saue.
Gower. Conf. Am. book vii.

Fro therto couthe he not accorde,
But whom he might *sleyn*, he *slough*,
And therof was he glad enough.
Id. Ib. book vii.

Euen so Rochester layeth to Marthin Luther's charge the
slaying and murtheryng of Christen men, because they will not
beleue in his doctrine.

Tyndall. Workes, p. 129. The Obedience of a Christian Man.

MAN. Of ruin indeed me thought I heard the noise,
Oh it continues, they have *slain* my son.

CHOR. Thy son is rather *slaying* them, that outery
From *slaughter* of one foe could not ascend.
Milton. Samson Agonistes, l. 125.

And he hath giuen it to be fourbished, that he may handle it;
this sword is sharpe, and is fourbished, that he may giue it into
the hande of the *slayer*.

Bible, Anno 1583. Ezekiel, ch. xxi.

Yet, when she saw the heapes which he did make
Of *slaughtred* carkasses, her heart did quake

For very ruth, which did it almost rive,
That she his fury willed him to slake.
Spenser. Faerie Queene, book v. can. 11.

For the proud Souldan, with presumptuous cheare,
And countenance sublime and insolent,
Sought onely *slaughter* and avengement.
Id. Ib. book v. can. 8.

MORT. Thou do'st then wrong me as y^t *slaughterer* doth,
Which giueth many wounds, when one will kill.
Mourne not, except thou sorrow for my good,
Onely giue order for my funerall.

Shakspeare. Henry VI. First Part, act ii. sc. 5. fol. 105.

I have supt full with horrors,
Direnesse familiar to my *slaughterous* thoughts
Cannot once start me. Wherefore was that cry?

Id. Macbeth, act v. sc. 5. fol. 150.

When he was knowne once to carie a cruell hand over his poore
patients, in cutting, launcing, dismembering, and cauterizing their
bodies, they quickly began to alter his name, and to tearme him
the bloudie butcher or *slaughterman*.

Holland. Plinie, book xxix. ch. i.

The *slayer* of himself yet saw I there,
The gore congeal'd was clotted in his hair;
With eyes half clos'd, and gaping mouth he lay,
And grim, as when he breath'd his sudden soul away.
Dryden. Palamon and Arcite, book ii.

How many valiant sons I late enjoy'd,
Valiant in vain! by thy curst arm destroy'd;
Or, worse than *slaughter'd*, sold in distant isles
To shameful bondage and unworthy toils.
Pope. Homer. Iliad, book xxii.

SLAY.

SLED.

In his black thoughts revenge and *slaughter* roll,
And scenes of blood rise dreadful in his soul.
Pope. Homer. Iliad, book i.

Beneath the beech, whose branches bare,
Smit with the lightning's livid glare,
O'erhangs the craggy road,
And whistle hollow as they wave;
Within a solitary grave,
A *slayer* of himself holds his accurs'd abode.
Warton. The Suicide.

SLEAVE. Thomson says, to *sleave* is to untwist
thread for placing it on the *slay* or reed. See SLAY.

Macbeth, does murther sleepe, the innocent sleepe,
Sleepe that knits vp the ravel'd *sleeve* of care.
Shakspeare. Macbeth, act ii. sc. 2. fol. 136.

MERTILLA. O I could wish this place were strew'd with roses,
And that this bank were thickly thrumb'd with grass
As soft as *sleave* or sarcenet ever was,
Whereon my Cloris her sweet self reposes.
Drayton. The Muses' Elysium. Nymphal 4.

Let coarse bold hands from slimy nest
The bedded fish in banks out-wrest,
Or curious traitors *sleave* silk flies,
Bewitch poor fishes wand'ring eyes.
Donne. Witchcraft.

The more subtle, and more hard to *sleave* a two-silken thread of
self-seeking, is that dominion over consciences.
Whitlock. Manners of the English, (1554,) p. 360.

Eight wild men all apparelled in green moss made with *sleved*
silk.
Holinshed. History of England, p. 835.

At length I on a fountain light
Whose brim with pinks was platted,
The bank with daffidillies dight,
With grass, like *sleave*, was matted.
Drayton. The Quest of Cynthia.

SLED, or } D. *sledde, slidde*; Ger. *schlitten*;
SLEDGE, } Sw. *slæda*. Wachter, Ihre, and Skinner
SLEDDED. } concur to derive from A. S. *slutan*;
Ger. *schlitten*, to *slède*; and if this Etymology be right,
sledge is an improper way of writing the word.

Some write, that Satyrus, a great architect or engraver, con-
ueied it [obeliske] to Alexandria by the meanes of flat bottomes or
sleeds.
Holland. Plinie, book xxxvi. ch. ix.

So frown'd he once, when in an angry parle
He smot the *sledged* Pollax on the ice.
Shakspeare. Hamlet, act i. sc. 1. fol. 152.

In winter they travel only upon *sleds*, the ways being hard and
smooth with snow, the rivers all frozen; one horse with a *sled* will
draw a man 400 miles in three days.

Milton. History of Muscovia, ch. i.

From thence he furrow'd many a churlish sea;
The viny Rhene, and Volgha's self-did pass,
Who *sleds* doth suffer on his wat'ry lea,
And horses trampling on his icy face.
Fletcher. Eglogues, st. 13.

Eager on rapid *sleds*,
Their vigorous youth in bold contention wheel
The long-resounding course.
Thomson. Winter.

So have I seen, amidst the grinning throng,
The *sledge* procession slowly dragg'd along.
Lloyd. Epistle to C. Churchill.

These are fitter for drawing the *sledge*, to which the Laplander
accustoms them betimes, and yokes them to it by a strap, which
goes round the neck, and comes down between their legs. The
sledge is extremely light, and shod at the bottom with the skin of
a young deer, the hair turned to slide on the frozen snow.
Goldsmith. History of the Earth, vol. ii. book ii. ch. v. p. 124.

Usually (by connivance, at length ripened by humanity into
law) a *sledge* or hurdle is allowed, to preserve the offender from
the extreme torment of being dragged on the ground or pave-
ment.

Blackstone. Commentaries, vol. iv. book iv. ch. vi. p. 92.
4 o 2

SLED.

A sledge cannot be drawn along as smoothly, and easily, and swiftly, as a carriage with wheels; but it may be dragged.

SLEEK.

Tooke. *Diversions of Purley*, part i. ch. iii.

SLEDGE. See SPORTING.

SLEDGE, D. *slaghel*, *slaghel*; Sw. *slægga*; A. S. *slecg*, from the verb *slæg-an*, to strike; A. S. *slegele*, any thing to strike with.

A tool to strike with; a heavy hammer.

To throw the sledge, to pitch the bar,
To wrestle, and to run,
They all the youth excell'd so far,
That still the prize they won.

Drayton. *The Muses' Elysium*. *Nymphal* 2.

She's a good plain wench, that will do as I will have her, and bring me lusty boys to throw the sledge, and lift at pigs of lead.

Baumont and Fletcher. *The Scornful Lady*, act v. sc. 1.

Your casting of the sledge, or learning how
To toss a pike? all chang'd into a sonnet?

Ford. *The Lover's Melancholy*, act ii. sc. 1.

Otherwise it would follow that the quick stroke of a light hammer should be of greater efficacy than any softer and more gentle striking of a great sledge.

Wilkins. *Works*, vol. ii. p. 121. *Archimedes*, book i. ch. viii.

SLICK,

SLEEK,

SLEE'KLY,

SLEE'KNESS,

SLEE'KY.

then, consequentially, *sleek* will be smooth, plain; having the glossy smoothness; having the smoothness of an oily, greasy substance; smooth with fatness.

Her flesh tender as is a chike
With bent browes, smoth and *slike*.

Chaucer. *The Romant of the Rose*, fol. 18.

Thou sayst also, I walke out like a cat;
For who so wolde senge the cattles skin,
Than wol the cat wel dwellen in hire in;
And if the cattles skin be *sleke* and gay,
She wol nat dwellen in hous half a day,
But forth she wol, or any day be dawed,
To show hire skin, and gon a caterwawed.

Id. *The Wife of Bathes Prologue*, v. 5930.

FRED. Come, your honour,

Your house, and you too, if you dare believe me,
Are well enough; *sleek* up your self, leave crying.

Baumont and Fletcher. *The Chances*, act iii. sc. 1.

The third, a gentle Squire Ostlero hight,
Who will our palfries *slick* with wisps of straw,
And in the maunger put them oats enough.

Id. *The Knight of the Burning Pestle*, act ii. sc. 1.

The bodie thereof is not all over smooth and *slicke*, (as we see in birds' eggs,) which excellent authors have termed *tenerum*, is showed by good arguments.

Holland. *Plinie*, book ii. ch. iii.

He clensd his broad-soild-shoulders; backe and head
Yet neuer tam'd. But now, had fome and weed,
Knit in the faire curles. Which dissolu'd; and he
Slickt all with sweet oile; the sweet charitie,
The vntoucht virgin shewd in his attire,
He cloth'd him with.

Chapman. *Homer*. *Odyssey*, book vi.

Let their heads bee *slickely* comb'd, their blew coats brush'd,
and their garders of an indifferent knit.

Shakspeare. *The Taming of the Shrew*, act iv. sc. 1. fol. 221.

I confess, we may live to the spectacle, and the bearing-staffe;
to the stooping back, to the snow, or to the *sleekness* of the de-
clining crown.

Feltham. *Resolve* 22.

I had said, that because the remonstrant was so much offended
with those who were tart against the prelates, sure he lov'd tooth-
less satyrs, which I took were as improper as a toothed *sleekstone*.

Milton. *Apology for Smeect mnuus*.

Now with a crooked scythe his beard he *sleeke*,
And mows the stubborn stubble of his cheeks.

Dryden. *Ovid*. *Metamorphoses*, book xiii.

Me, when to town in winter you repair,
Battening in ease you'll find, *sleek*, fresh, and fair,
Me, who have learn'd from Epicurus' lore.

Of brave Troxartas' line, whose *sleeky* down,
In love compress'd Lychomile the brown.

Parnell. *The Battle of the Frogs and Mice*.

Your cheeks, by *sleeking*, are so lean,
That they're like Cynthia's in the wane.

Swift. *Sheridan's Reply*.

RAY. An old hag once told me,

That my friends' hands should tear my heart, should rend
Each string, and while it wrung the master-cord,
With *sleek* adulterous smiles should mock my woes.

Mickle. *The Siege of Marseilles*, act ii. sc. 4.

Thus all is here in motion, all is life;
The creaking wain brings copious store of corn;
The grazier's *sleeky* kine obstruct the roads.

Dyer. *The Fleece*.

[She] ordered them to be employed in common drudgery.
They lost their *sleekness* and grace, and were soon purchased at
half the value.

Rambler, No. 138.

SLEEP, v.

SLEEP, n.

SLEE'PER,

SLEE'PFUL,

SLEE'PY,

SLEE'PILY,

SLEE'PINESS,

SLEE'PING, n.

SLEE'PLESS,

SLEE'PLESSNESS.

Cotgrave says Fr. *dormir* is to *slug* it. *Sleep* is
inertness, inactivity, laziness; drowsiness, stupor, of
bodily and mental faculties.

þe foure & tuenty houres he spende in holy life.
þe ferst. viii. houres in praier alderberst,
þe toþer. viii. houres in *slepe* & in rest.

R. Brunne, p. 23.

Ac on a May morwenyng, on Malverne hulles

Me bý fel for to *slepe*. for weyrýnesse of wandryng.

Piers Plouhman. *Vision*, p. 1.

Sevene *slupen* a seith þe book. more þan sýxtý wynter
Leveden with outen býfode. and at þe laste awakeden.

Id. lb. p. 257.

And eftsoone he cam and founde hem *slepyng* for her yghen
weren hevyed.

Wiclif. *Matthew*, ch. xxvi.

And he came, and founde them a *slepe* agayne.

Bible, Anno 1551.

And after these thingis he seith to hem, Lazarus oure frend
slepith; but I go to reyse him fro *sleep*. Therfor his disciples
seiden, Lord, if he *slepith*, he schal be saaf. But Jhesus hadde
seide of his deeth; but thei gessiden that he seide of *slepyng* of
sleep.

Wiclif. *John*, ch. xi.

And after that, he sayd vnto thē, Our frende Lazarus *slepeth*,
but I go to wake him out of *slepe*. Then sayde hys discyples,
Lorde yf he *slepe*, he shall do well ynough. How be it Jesus
spake of his death; but they thought that he hadde spoken of the
naturall *slepe*.

Bible, Anno 1551.

A man to lyen hath great disease,

Which may not *sleepe* ne rest in ease.

Chaucer. *The Romant of the Rose*, p. 190.

This man out his *slepe* for fere abraide;
But whan that he was waked of his *slepe*,
He turned him, and toke of this no kepe;
Him thought his dreame was but a vanitee.
Thus twies in his *slepyng* dremed he.

Id. *The Nonnes Preestes Tale*, v. 15014.

And also it is not like to me,
That any herte should *sleepey* be,
In whom that Love his fyr dart woll smite.

Id. *The Cuckoo and the Nightingale*.

SLEEK.

SLEEP.

SLEEP.

Thou shalt, he saide, whan time is
Awaite, and take right good kepe,
Whan that the Pope is fast a slepe,
And that none other man be nie.

Gower. Conf. Am. book ii.

A good father certes no,
I had leauer by my trouthe,
Er I were sette on suche a slough,
And beare suche a slepye snoute,
Bothe eien of my head were out.

Id. Ib. book iv.

Lo see myne eyes flow with continual teares,
The body still away slepelesse it weares.

Wyat. To his Vnkinde Loue.

Nor think, though men were none,
That heav'n would want spectators, God want praise,
Millions of spiritual creatures walk the earth
Unseen, both when we wake, and when we sleep.

Milton. Paradise Lost, book iv. l. 675.

Hither, quoth he, me Archimago sent,
He that the stubborne sprites can wisely tame,
He bids thee to him send for his intent
A fit false dreame, that can elude the sleepers sent.

Spenser. Faerie Queene, book i. can. 1.

Distrust will cure a lethargy; of a sleepful man it makes a
wakeful one, and so keeps out poverty.

Scott. Essay of Drapery, (1635,) p. 138.

You euer
Haue wish'd the sleeping of this busines, neuer desir'd
It to be stir'd; but oft haue hindred, oft
The passages made toward it.

Shakspeare. Henry VIII. act ii. sc. 4. fol. 218.

A crown,
Golden in show, is but a wreath of thorns,
Brings dangers, troubles, cares, and sleepless nights
To him who wears the regal diadem,
When on his shoulders each man's burden lies.

Milton. Paradise Regained, book ii. l. 458.

Without the castle, in the earth is found
A cave resembling sleepy Morpheus' cell,
In strange meanders winding under ground,
Where darkness seeks continually to dwell.

Drayton. The Barons' Wars.

I rather chose to endure the wounds of those darts, which envy
casteth at novelty, than to go on safely and sleepily in the easy
ways of ancient mistakings.

Raleigh.

That is very memorable which Seneca tells us of great Mecænas,
that in three yeers he slept not so much as the space of an hour;
which, however, Lipsius thinks good to mitigate with a favourable
construction, as conceiving an impossibility of an absolute sleep-
lessness.

Hall. Works, vol. iii. fol. 571. The Balm of Gilead.

O sacred rest,
Sweet pleasing sleep, of all the pow'rs the best!
O peace of mind, repaire of decay,
Whose balms renew the limbs to labours of the day,
Care shuns thy soft approach, and sullen flies away.

Dryden. Ovid. Metamorphoses, book xi.

Nor love is always of a vicious kind,
But oft to virtuous acts inflames the mind,
Awakes the sleepy vigour of the soul,
And, brushing o'er, adds motion to the pool.

Id. Cymon and Iphigenia.

Towards the latter end of their prayer, they loudly invoke their
prophet, for about a quarter of an hour, both old and young
bawling out very strangely, as if they intended to fright him out of
his sleepiness or neglect of them.

Dampier. Voyages, vol. i. ch. xii. p. 343. Anno 1686.

For quiet, friend, the soldier fights,
Bears weary marches, sleepless nights,
For this feeds hard, and lodges cold.

Otway. Ode 16.

After some time those who had charge of the basket placed
themselves round it upon the ground, and leaning upon it, appeared
to go to sleep; the others, improving their opportunity, came
gently upon them, and, lifting them up from the basket, carried off

their prize; the sleepers soon after awaking, missed the basket,
but presently fell a dancing, without any farther regarding their
loss.

Cook. Voyages, vol. i. book i. ch. xx. p. 248.

The story of the Seven Sleepers has been adopted, and adorned,
by the nations from Bengal to Africa, who profess the Maho-
metan religion; and some vestiges of a similar tradition have been
discovered in the remote extremities of Scandinavia.

Gibbon. Decline and Fall of the Roman Empire, vol. vi. ch. xxxiii.
p. 35.

What age and sickness, for a man so bold,
Had done, we know not—none beheld him old:
By night as business urg'd, he sought the wood,
The ditch was deep, the rain had caus'd a flood;
The foot-bridge fail'd, he plung'd beneath the deep,
And slept, if truth were his, th' eternal sleep.

Crabbe. Parish Register.

SLEEPWALKING. See SOMNAMBULISM.

SLEET, } A. S. *sliht*, a shower. We call what
SLEE'TY. } is between snow and rain *sleete*. Somner.
It is (Tooke) the past participle of *sle-an*, *projicere*, to
cast forth. *Sle-ed*, *sleed*, *sleet*. See SLEIGHT, *infra*.
Something, that which (between snow and rain) is
cast forth, *sc.* from the clouds.

The bitter frostes with the sleet and rain
Destroyed han the grene in every yerd.

Chaucer. The Frankeleines Tale, v. 11562.

He saw them in thir forms of battel rang'd,
How quick they wheel'd, and flying behind them shot
Sharp sleet of arrowy shower against the face
Of thir pursuers, and overcame by flight.

Milton. Paradise Regained, book iii. l. 311.

Now van to van the foremost squadrons meet,
The midmost battles hastening up behind,
Who view farr off the storm of falling sleet,
And hear their thunder rattling in the wind.

Dryden. Annus Miiabilis.

O'er Cornwall's cliffs the tempest roar'd,
High on the screaming sea-mew soar'd;
On Tintagel's topmost tower
Darksome fell the sleety shower.

Warton. The Grave of King Arthur.

In the night the wind increased to a strong gale attended with
sleet and snow, and obliged us to double-reef our top-sails.

Cook. Voyages, vol. iii. book i. ch. iii. p. 39.

SLEEVE, } Skinner derives from D. *sloove*,
SLEE'VELESS. } *tegmen*; A. S. *slyf*, (*slef*), formerly
called *earm-slyfe*, that with which the arm is covered;
the past participle of *slef-an*, (D. *sloouen*), *inducere*, to
put on, clothe, or cover.

Sleeveless (met.) means, without a cover or pretence.
Tooke.

A cover or clothing for the arm.

To laugh in the sleeve, to laugh covertly.

I say, he toke out of his owen sleve,
A teine of silver (yvel mote he cheve)
Which that ne was but a just unce of weight.

Chaucer. The Chanones Yemannes Tale, v. 16693.

"Good childe," (quod she,) "what echeth soche renome to the
conscience of a wise man, that loketh and measureth his good
nesse, not by *sleeuelesse* wordes of the people, but by sothfastnesse
of conscience; by God nothings.

Id. The Testament of Loue, book ii.

For than is pouertee at gate,
And taketh hym euen by the sleue.

Gower. Conf. Am. book v.

For she had sent
The rest on *sleeuelesse* errands from her side.

Fairefax. Godfrey of Bulloigne, book vi. st. 89.

Yet when he hath my crabbed pamphlet read
As oftentimes as Philip hath been dead,
Bids all the furies haunt each peevish line
That thus have rack'd their friendly readers' eyne;
Worse than the Logogryphes of later times,
Or hundreth riddles shak'd to *sleevelesse* rhymes.

Hall. Satire 1. book iv.

SLEEP.

SLEEVE.

SLEEVE. Their armour is a piece of buffaloe-hide, shaped like our carters' frocks, being without *sleeves*, and sowed both sides together, with holes for the head and the arms to come forth.

Dampier. Voyages, vol. i. ch. xv. p. 432. Anno 1687.

She begs an idle pin of all she meets,
And hoards them in her *sleeve*; but needful food,
Though press'd with hunger oft, or comelier cloaths,
Though pinch'd with cold, asks never.—Kate is craz'd.

Cowper. The Tusk.

That great observer of Nature, Cervantes, made Sancho (to save himself from the vexation of a *sleeveless* errand) palm upon his master a superstitious Dulcinea.

Warburton. Works, vol. iii. p. 398. *The Divine Legation*, book iii.

SLE'NDER, } *D. slender, tenuis, exilis*, is ap-
SLE'NDERLY, } plied to any thing easily broken or
SLE'NDERNESS. } bent; of small substance, and may
be of the same origin as *slant*; to bend out of a right line.

Small in bulk or dimensions, in girth or circumference: small, thin; slight, weak.

Hire freshe beautee, and hire age tendre,
Hire middel small, hire armes long and *scendre*.

Chaucer. The Marchantes Tale, v. 9575.

This maketh that our heires ben so *scendre*
And feble, that they moun not wel engendre.

Id. The Monkes Prologue, v. 13941.

Aulus Gellius sayeth, that it were a great deale better for a man to bee sharply rebuked, yea and openly to haue his faultes published of his enemy, then to bee coldly and *slenderly* prayed of his frende.

Frith. Workes, p. 4. *To the Christian Reader*.

And that he had then advised the king to leave out that point, or to touch it more *slenderly*.

Strype. Ecclesiastical Memorials, vol. i. book i. ch. xxvi. p. 292.

And upon the other side, the *slenderness* of the abused authority of the Pope; which, by patience of princes, simplicity of the people, ambitious avarice of his predecessors, and process of time, was grown to this intolerable iniquity.

Id. Henry VIII. vol. i. book i. ch. xxxiii. p. 376.

Her fickle hart conceived hasty fyre,
Like sparkes of fire which fall in *scender flex*,
That shortly brent into extreme desyre,
And ransackt all her veines with passion entyre.

Spenser. Faerie Queene, book iii. can. 2.

We now have playde, Augustus, wantonly,
Turning our song into a tender muse,
And, like a cobweb weaving *slenderly*,
Have onely playde.

Id. Virgil's Gnat.

For when a man hath no reason for his faith, but a great many lusts against it, the *slenderest* shows of probability will suffice to make him an infidel.

Scott. Christian Life, part ii. ch. iii. p. 218.

Now vapour being an accident or an affection of matter, that relates to our tongue, palate, and other organs of taste, it may very possibly be, that the small parts of a body may be of such a size and shape, as either by their extreme littleness, or by their *slenderness*, or by their figure, to be unable to pierce into and make perceptible impression upon the nerves or membranous parts of the organs of taste.

Boyle. Works, vol. i. p. 574. *The Sceptical Chymist*.

The greater part cannot, from the *slenderness* of their fortunes, make such a compensation as might probably be required by him [a tutor] when found.

Knox. Works, vol. i. p. 100. *Hints to Young Men*.

SLENT, *slants*, *sly* jokes or petty lies. "He *slants* a good deal, he is given to lying." Brockett. *Slent*, in the first Quotation from North, is in the subsequent Edition (1676) *jest*. See Nares. It should, perhaps, be written, as in Brockett, *slant*, meaning

Sloping or bending, (*sc.* out of a right line,) bending or curving, going or dealing crookedly.

One Proteus, a pleasaunt, conceited man, and that could *slent* finely.

North. Plutarch. Lives, fol. 744. *Alexander the Great*.

He had no great liking of these dark and mystical arguments of some, that think to hide vertue in the obscurity of their words, but he gave himself wholly to the true practice thereof; though otherwise he was as pleasant a man to give a fine *slent* in discourse as could be possible to be found.

North. Plutarch. Lives, fol. 918. *Epaminondas*.

And when Cleopatra found Antonius' jests and *slents* to be but gross and souldier-like, in plain manner, she gave it him finely, and without fear taunted him thoroughly.

Id. Ib. fol. 763. *Antonius*.

SLESWICK, a Province of Denmark with the title of Duchy, extends from 54° 12' to 55° 29' North latitude, and from 7° 57' 15" to 11° 22' 15" East longitude. It comprises part of the Danish peninsula, and is bounded on the North by the diocese of Ribe; on the North-East by the Little Belt, where it possesses the Island of Aarøe; on the East by the Baltic, in which it has the Islands of Alsen and Ærøe; on the South by Holstein, where it confines with the river Eyder and the canal of Kiel; and on the West by the North Sea, in which the Islands of Nordstrand, Pelvorm, Hoge, Langeness, Amrumøe, Fohr, Syltøe, and Römøe belong to it, either wholly or in part. The superficial extent of the Duchy is about 3540 square miles.

The Eastern coast is deeply indented, and in particular the gulfs of Apenrade, Flensburg, and Eckenförde run far inland; its Western coast line is marked by numerous sandbanks, and the drifting of the sand here has formed extensive downs, which are gradually encroaching on the country. These moving sands extend from its Northern border as far as Höyer, where the *marsch* soil begins, and the vegetation is protected by immense sea-dikes, often rising to the height of 18 or 20 feet. The surface of the Duchy is in general flat, but a line of hills separates the basin of the North Sea from that of the Baltic. In the Eastern districts of the country the soil is tolerably fertile; and in the interior marsh-land and heath are intermixed with productive strips of ground. The country furnishes grain sufficient for the consumption of the inhabitants, consisting chiefly of rye and barley, with colza, hemp, flax, and potatoes. The richer soils are mostly devoted to pasture. There is a deficiency of wood, but the turf-pits yield an inexhaustible supply of fuel. Horned cattle and sheep enter largely into the agricultural wealth of the Province, and the fisheries provide employment for numerous hands. As most families weave their own cloth, linen, &c., there are few manufactories in the Duchy, and these are mostly at Flensburg.

"That part of the Duchy of Sleswick," says Dr. General Clarke, "which a traveller must pass in his route from Flensburg to Apenrade is particularly interesting to Englishmen, because the very name of their country, the features of its inhabitants, and many of its manners were hence derived. It is called *Angeln*; but this word is pronounced exactly as we pronounce England or Engelande. We were surprised at the number of English faces we met; and the resemblance is not confined to features. Many articles of dress and many customs are common to the two countries. The method of cultivating and dividing the land is the same in both: the meadows bounded by quickset hedges, or by fences made of intertwisted boughs, reminded us of Kent, Surrey, and Sussex. The natural appearance of the country is also like the South of England, being diversified by numerous hills and valleys, adorned with flourishing woods and fertile fields."

The exports consist of grain, horses of the same race Commerce.

SLENT!

SLES-

WICK!

Face of the country, agriculture, &c.

**SLES-
WICK.** as the famous Holstein breed, horned cattle, wool, but-
ter, cheese, fish, &c. Flensburg is the chief commercial
town, and trade to some extent is likewise carried on
**SLE-
VOGTIA.** at Husum, Apenrade, and Sleswick. Excluding vessels
under 20 tons burthen, there belonged, in 1830, to the
Duchy, 1022 ships, whose united tonnage amounted to
33,926 tons.

Chief
towns.

Sleswick is divided into fourteen bailiwicks, viz. Gottorp, Flensburg, Sonderborg with the Islands of Alsen and Ærøe, Norburg, Apenrade, Hadersleben, Tondern, with the Islands of Föhr and Syltöe, Bredstadt, Husum and Schwadstadt, Lygum, Hütten, Nordstrand, Eiderstadt, Stapelholm, and Fehmern. Population of the Duchy, in 1835, 430,258.

Sleswick, (Schleswig,) the capital of the Duchy, is seated at the extremity of an arm of the sea named the *Schley*, and rises above it in an amphitheatrical form. It is irregularly built, and consists of four distinct quarters; the castle of Gottorp with its park and dependencies; the *Lollfuss*, which is a single street; the *Friedrichsberg*, which covers a small hill; and the *Altstadt*, or old town, in the centre. The chief building of the town is the castle of Gottorp; the cradle of that branch of the House of Holstein now seated on the throne of Russia, and the residence of the Governor-General of the Duchies of Sleswick and Holstein. There are here five Churches, three Hospitals or Lunatic Asylums, and several other charitable establishments. The manufactures are trifling; and the depth of water in the port does not exceed nine feet, so that vessels of small burthen only can trade here; about 200 enter the port annually. Sleswick was formerly an imperial town, belonging to the Hanseatic League, and of much more importance than it is at present. Population 7000. North latitude 54° 32', East longitude 9° 42'.

Flensburg, which lies about 20 miles North of the above town, is clean, well-built, and the most flourishing place in the peninsula of Jutland. Its handsomest buildings are the Hôtel de Ville, Exchange, and Theatre; and it contains four Churches, a Hospital, College, Naval School, a public library, a printing-office, and numerous manufactories. The sugar-refineries here, and manufactories of soap, pottery, and snuff, are on rather a large scale; and there are likewise some oil-mills and a brass foundry. Its port, situated at the Western extremity of the *Flensburg-fjörd*, is annually entered by more than 800 vessels, 250 of which belong to the place. Population 18,000. North latitude 54° 42', East longitude 9° 27'.

Of the islands belonging to the Duchy, that of *Nordstrand*, though scarcely six miles in diameter, is fertile and peopled by from 2000 to 3000 inhabitants. It possesses an excellent race of horned cattle; the cows yielding about eleven quarts of milk daily. *Föhr*, which has a population of about 6000 souls, is frequented in the season as a bathing-place, and is also celebrated for its oysters, which form a considerable export to Hamburg. About 50,000 wild ducks are yearly taken here. It should be observed that only the Eastern half of *Föhr* belongs to the Duchy of Sleswick, the rest being included in Jutland; the same holds good of some of the other islands. The remaining ones, as *Syltöe*, &c., are chiefly inhabited by fishermen.

Clarke, *Travels*, part iii. *Scandinavia*; Feldborg, *Denmark Delineated*; Malte-Brun; Bell, *Geography*.

SLEVOGTIA, in *Botany*, a genus so called by Reichenbach after J. H. Slevogt, a German botanist. It

belongs to the class *Pentandria*, order *Monogynia*, and the natural family of *Gentianeæ*. Generic character: calyx tubular, five-toothed; corolla funnel-shaped; limb five-cleft; stamens five, enclosed; filaments filiform, furnished each with a cup-shaped scale on the inside at the base; anthers linear, apiculate; stigma capitate; capsule ovate, crustaceous, one-celled; valves with placentiferous, bent-in edges; seed minute, globose, scrobiculate.

This genus, which is separated from *Exacum*, consists of a single species, a perennial plant, a native of India; it has a creeping woody root; tetragonal, simple stems; narrow, lanceolate, three-nerved leaves, and small, axillary, sessile, white flowers.

SLEW, see **SLAY**.

SLEY, } A. S. *slæ*, *pecten tectoris*, the slay of a
SLEID. } weaver's loom. Somner. Perhaps (Skinner)
from the A. S. *slæg-an*, *slæan*, to strike, to beat; *percusso feriunt insecti pectine dentes*, Ovid, *Metamorphoses*, lib. vi. v. 58. See the Quotation from Croxall.

Mr. Thomson says, a *slay* is

A weaver's reed fastened in a frame which *beats* the woof close in the web.

Ther. No? why art thou then exasperate, thou idle immaterial skiene of *sleyd* silke?

Shakspeare. *Troilus and Cressida*, act v. sc. 1. fol. 100.

B'et when she weav'd the *sleided* silk

With fingers long, small, white as milk.

Id. *Pericles*, act iv.

Around the solid beam the web is ty'd,
While hollow canes the parting warp divide;
Thro' which with nimble flight the shuttles play,
And for the woof prepare a ready way;
The woof and warp unite, press'd by the toothy *slay*.
Croxall. Ovid. *Metamorphoses*, book vi.

SLICE, } Junius writes *s-clise*, and derives from
SLICE. } A. S. *slit-an*, to slit; Ger. *schleissen*, *scindere*, *findere*, to slit, to split.

To divide, to cut; usually, to cut into pieces broad and flat.

Any thing so formed as to cut into such pieces: the piece or part so cut.

Dog, (he replied,) urge not my ruth, by parents, soule, nor knees,
I would to God that any rage would let me eate the raw,
Slic't into pieces.

Chapman. Homer. *Iliad*, book xxii.

They then *slic'd* off his ears, and nail'd them upon the gates of the city.

Howell. *Letter* 19. book i. sec. 1.

In the burning turne it often with a *slice* or spatula.

Holland. *Plinie*, book xxxiv. ch. xi.

Lay a peece of silver ore upon a *schise*, plate, or firepan of yron red hot, if it continue white still, it is very good, if the same become reddish, goe it may for good too in a lower degree; but in case it look blacke, there is no goodnesse at all in it.

Id. *Ib.* book xxx. ch. viii.

Whereas the pellican hath a beake broade and flat, much like the *slice* of apothecaries and chirurgions, with which they spreade their plaisters, no way fit to pierce.

Hakewill. *Apologie*, p. 13.

Now let us imagine an iron bar *sliced* out into a multitude of plates as thin as paper and perfectly smooth.

Search. *Light of Nature*, vol. ii. part i. ch. iii. p. 52

Be his the great concern to show,
If Roman gowns were tied or no;
Whether the Grecians took a *slice*
Four times a day, or only twice.

Lloyd. *A Dialogue*.

SLICK. See **SLEEK**.

**SLE-
VOGTIA.**

SLIDE.

SLIDE, *n.*SLIDE, *v.*

SLIDER,

SLI'DER,

SLI'DDER,

SLI'DINGNESS,

SLI'DEGROTE, *n.*A. S. *slid-an, slider-ian*; D. *slid-deren, sledderen, labi, dilabi*;

To move in a continuous, uninterrupted motion; without step or rotation; to move or pass along smoothly, silently, secretly, stillly; also without firmness of step, without resistance.

But it is ympossible that thei that ben oonys lightned and han taastid also an heuenli ghifte, and ben maad parteneris of the Hooly Goost, and nethes han taastid the good word of God, and the vertues of the world to comynge, and ben *slidun* fur awei, that thei ben renewed eftsoone to penaunce.

Wiclif. Ebrewis, ch. vi.

For bothe Troilus and Troie toun
Shall knotlesse throughout her herte *slide*,
For she woll take a purpose for to abide.

Chaucer. Troilus and Creseide, book v.

He poureth peesen vpon the hatches *slider*.

Id. Cleopatras Queene of Egypt.

The which wandryng happes nathelesse, thilke declining lownesse of the yerth and the flowyng order of the *slidyng* water governeth.

Id. Boecius. De Consolatione, book v.

For thy but if a kynge his will
Fro lustes of his fleshe restreyne,
Ageyn hym selfe he maketh a treyne,
Into the whiche if that he *slide*,
Hym were better go beside.

Gower. Conf. Am. book vii.

For than he leseth his lustie weie,
With dronkeship, and wote not whither
To go, the waies bene so *slider*,
In whiche he maie per cas to fall,
That he shall breke his wittes all.

Id. Ib. book vi.

Often [he] had used to be an actor in tragedies, where he had learned, besides a *slidingness* of language, acquaintance with many passions, and to frame his face to bear the figure of them.

Sidney. Arcadia, book ii. p. 367.

It chaunst (eternall God that chaunce did guide)

As he recoiled backward, in the mire
His nigh forwearied feeble feet did *slide*,
And downe he fell, with dread of shame sore terrifide.

Spenser. Faerie Queene, book i. can. 11.

On a night when the lieutenant and he for their disport were plaieing at *slidegrote* or shoofleboord, suddenlie commeth from the cardinall a mandatum to execute Kildare on the morrow.

Holinshed. Chronicles of Ireland, Anno 1528.

In all her religion, and in all her actions of relation towards God, she had as strange evenness and untroubled passage, *sliding* toward her ocean of God and of infinity with a certain and silent motion.

Taylor. Sermon 8. vol. iii. p. 272.

Then lookes upon a hill, whose *sliding* sides
A goodly flocke, like winter's cov'ring, hides.

Browne. Britannia's Pastorals, book ii. song 3.

Then Pyrrhus, thus: Go thou from me to fate;
And to my father my foul deeds relate.
Now die. With that he dragg'd the trembling sire
Sliddering through clotter'd blood and holy mire
(The mingled paste his murder'd son had made)
Haul'd from beneath the violated shade,
And on the sacred pile the royal victim laid.

Dryden. Virgil. Æneid, book ii.

They have not only *slid* imperceptibly, but have plunged openly into artifice.

Lord Bolingbroke. Works, vol. v. p. 293. Essay on Human Knowledge.

For as young children, who are tied in
Go-carts, to keep their steps from *sliding*;
When members knit, and legs grow stronger,
Make use of such machine no longer.

Prior. Epistle to Fleetwood Shephard, Esq.

Prospects, however lovely, may be seen
Till half their beauties fade; the weary sight,
Too well acquainted with their smile, *slides* off
Fastidious, seeking less familiar scenes.

Cowper. The Task, book i.

SLIGHT, *adj.* or

SLEIGHT,

SLIGHT, *n.*SLIGHT, *v.*SLI'GHTEN, *v.*

SLI'GHTER,

SLI'GHTFUL,

SLI'GHTINGLY,

SLI'GHTLY,

SLI'GHTNESS,

SLI'GHTY.

Our word seems formed thus: SLIGHT.

slay or sley, (see ante,) sleyed, sley'd, sleit, or sleight.

Scotch, *slight*; D. *slechten, slichten*; Ger. *schlichten, destruere, dirimere, evertere*, from A. S. *slahan, percutere, cedere, decidere, dejicere*, (to slay,) to strike or beat, to strike, to fall or cause to fall, to cast down. See Skinner, Junius, and also Jamieson.

To *slight* is

To cast or throw down, to overthrow, to destroy, to demolish. See the Quotation from Clarendon.

To cast down or away; to reject, to abject, *sc.* as of little worth; to contemn; to neglect, to disregard.

Falstaff was *slighted*, *i. e.* thrown into the river; the letters of Cassius were *slighted* off, *i. e.* thrown off or aside; disregarded.

The maid puts him off, *slights* him, *i. e.* throws him aside; the dreadful laws were loosely *slighted*, thrown or put aside, disregarded, contemned. And thus *slight*, the *adj.*, is

Abject or cast aside, *sc.* as of little value; of little force or strength; and thus further, inconsiderate, inefficient, weak, feeble, small, slender.

Sleight of hand; an adroit, dexterous *cast* or motion of the hand; adroitness, dexterity; *cast* (*q. v.*) was used, consequentially, as equivalent to, to forecast or project, to contrive.

And *sleight*, *met.*, is a dexterous trick or contrivance, a subtle manœuvre, an act of *slyness*. See *SLY* and *SLEY*.

And stele up on myn enemy
For to slee hym *slehliche*. *slehtes* ich by þenke.

Piers Plouhman. Vision, p. 93.

And hardily they dorsten lay hir necke,
The miller shuld not stele hem half a pecke
Of corn by *sleighte* ne by force hem reve.

Chaucer. The Reves Tale, v. 3937.

Thei ben clerkes, and courts ovir se,
Ther pore tenaunce fully thei *slite*.

Id. The Plowmannes Tale, p. 3.

Tho weshen they, and set hem down and ete,
And after noone fall *slightly* Pandarus
Gan draw him to the window nye the street.

Id. Troilus and Creseide, book ii.

The sacrilege whiche he wrought
Was cause why the Grekes sought
Unto the towne, and it belaie,
And wolden neuer parte awaie,
Till what by *sleight*, and what by strength,
They had it wonne in brede and length,
And brente, and slayne, that was within.

Gower. Conf. Am. book v.

And thoughe it be darkened with men's *slevghtye* iugling and counterfeit craftes, as it wer with certain mists for a while; yet at the time of God apoynted, it bursteth out again, and sheweth it self clerely like the sonne, whan darknes is banished and chased away.

Winchestre. Of True Obedience, fol. 6.

For the instruction of my consciēce in the matter, I haue not *sleightly* looked, but by many yeres studied and aduisedly considred.

Sir Thomas More. Workes, p. 1435.

Alas how long wyll you lacke vnderstanding? perceyue you not yet how they would keepe you in dareknes because you shoulde not espye theyr priuy practice and *sleightly* conueyaunce.

Frith. Workes, p. 97.

(The rogues *slighted* me into the riuer with as little remorse as they would haue drownde a blind bitches' puppies.

Shakspeare. The Merry Wives of Windsor, act iii. sc. 5. fol. 53.

You have condemn'd, and noted Lucius Pella
For taking bribes heere of the Sardians,
Wherein my letters, praying on his side,
Because I know the man was *slighted* off.
Shakspeare. Julius Cæsar, act iv. sc. 3. fol. 124.

He makes the maid to answere, Whoop, doe me no harme, good
man; puts him off, *slights* him, with Whoop, doe me no harme,
good man. *Id. The Winter's Tale*, act iv. sc. 3. fol. 293.

Heare your owne dignity so much prophan'd,
See your most dreadfull lawes so loosely *slighted*;
Behold your selfe, so by a sonne disdained.
Id. Henry IV. Second Part, act v. sc. 2. fol. 97.

EUPH. Could my tears speak,
My griefs were *slight*.

Ford. The Broken Heart, act v. sc. 2.

MONT. Some forty crowns, nay rather not so much, 'tis quickly
cast.

MAL. 'Tis strange to me that your estate shou'd have so low an
ebb, to stick at such *slight* sums.

Beaumont and Fletcher. The Honest Man's Fortune, act ii. sc. 1.

Thus I hurle
My powder'd spells into the spungie air,
Of power to cheat the eye with *slight* illusion.
Milton. MS. Mask of Comus, Trinity College, Cambridge.

No more shall now the darknesse of the night
Defend thee from the vengeance of thy fone;
But with thy bloud thou shalt appease the spright
Of Guizor by thee slaine and mured by thy *slight*.
Spenser. Faerie Queene, book v. can. 7.

PRIG. Will ye see any feats of activity.
Some *slight* of hand, legerdemain?
Beaumont and Fletcher. Beggar's Bush, act iii. sc. 1.

Do you think that the wrong you have offer'd me,
The most unmanly wrong, unfriendly wrong—

DIN. I do confess—

CLER. That boyish *slight*—

DIN. Not so, sir.

Id. The Little French Lawyer, act ii. sc. 1.

In three days, his Majesty being present, they *slighted* and de-
molished all the works of that garrison.

Clarendon. History of the Rebellion, vol. ii. book viii. p. 483.

It is an odious wisdom to blaspheme,
Much more to *slighten*, or deny their power.
Ben Jonson. Sejanus, sc. 10.

I do not believe you are so great an undervaluer or *slighter* of it,
as not to preserve it tenderly and thriftily.
Taylor. Artificial Handsomeness, p. 102.

Wilde beasts forsooke their dens on woody hills,
And *slightful* otters left the purling rills.
Browne. Britannia's Pastorals, book ii. song 4.

Read it, sweet maid, though it be done but *slightly*;
Who can show all his love, doth love but lightly.
Daniel. Sonnet to Delia.

Where an entangled ram does half appear,
And struggles vainly with that fatal net,
Which, though but *slightly* wrought, was firmly set.
Cowley. The Davideis, book ii.

Where gentry, title, wisdom
Cannot conclude, but by the yea and no
Of generall ignorance, it must omit
Reall necessities, and giue way the while
To vnstable *slightnesse*.
Shakspeare. Coriolanus, act iii. sc. 1. fol. 15.

It is the best point of wisdom, to take the first opportunity of
fixing good notions, which otherwise are of themselves light and
slighty. *Hall. Contemplations. Nehemiah redressing, &c.*

Encourag'd thus, the blameless man replies;
Nor vows unpaid, nor *slighted* sacrifice.
But he, our chief, provok'd the raging pest,
Apollo's vengeance for his injur'd priest.
Pope. Homer. Iliad, book i.

'They who accuse Æneas for want of courage, either understand
not Virgil, or have read him *slightly*; otherwise they would not
raise an objection so easy to be answered.

Dryden. Dedication to Æneid, p. 336.

And if it were true, yet so long as there is other sufficient proof, **SLIGHT.**
(such as every reasonable man must readily acquiesce in,) it should
not be *slightingly* spoken of. **SLIGO.**
Waterland. Works, vol. iv. p. 465. *The Bad Tendency of New*
Tenets.

Though it seem but a *slight* and trivial preparation, yet expe-
rience has given us a better opinion of it than I fear the *slightness*
of the preparation will as yet allow you.

Boyle. Works, vol. ii. p. 231. *Appendix to Natural Philosophy.*

A heav'nly mind
May be indiff'rent to her house of clay,
And *slight* the hovel as beneath her care.

Cowper. The Task, book ii.

Nor should you suffer yourselves to suspect that the weight of
this argument is at all diminished, if there be others, acounted
in the rank of learned men, who have affected to think *slightly* of
the religion of their country.

Warburton. Works, vol. ix. p. 260. *Sermon 13.*

We are told by a menial servant, or some other of our spies,
that a person, whom we esteemed our friend, has spoken *slightingly*
of us, made a joke upon us, or cast a severe reflection.

Knox. Essays, No. 25.

The *slightness* which we see in his [Gainsborough] best works
cannot always be imputed to negligence.

Reynolds. Works, vol. ii. p. 171. *Discourse 14.*

SLIGO, a Maritime County of Ireland, in the Pro-
vince of Connaught, is bounded on the North by the
Atlantic Ocean; on the East by Leitrim; on the South-
East by Roscommon; and on the South and West by
Mayo. It extends from 53° 53' to 54° 26' North lati-
tude, and from 8° 3' to 9° 1' West longitude, comprising
an area, according to the Ordnance Survey, of 434,188
statute acres. Of this extent 257,217 acres are under
cultivation; 168,711 acres are unimproved mountain
and bog; and 8260 are covered with water.

The surface presents considerable variety of feature. Face of the
Its Northern districts consist of extensive plains, backed country.
by lofty mountains; and the Western part of the County,
which stretches along the Southern shores of Donegal
bay, is likewise backed by a range of high hills, be-
tween which and the shore the soil is chiefly bog. The
interior also is hilly; and the lakes and rivers which
intersperse it, though not remarkable for either length or
size, enhance the attraction of the scenery by the pictu-
resque beauty of their banks and the rapidity of their
currents. Dr. Beaufort writes of the face of the country
as follows: "The County of Sligo contains very good
land intermixed with large tracts of coarse and unprofit-
able ground. In the Barony of Carbury are the moun-
tains of Benbulbin and Samore; a chain of rough hills
extends from Lough Gill to the bounds of Roscom-
mon and Leitrim. Tyreragh, though level along the
coast, is intersected by large bogs; and the Southern
part of it is bounded by the Ox mountain, Sliebh-Dham,
and a great range of desolate hills that extend a good
way into the Barony of Leny, in which also there is a
great scope of bog. The Curlews and other mountains
cover the most of Coolavin, and the Kishcorrau forms a
long ridge on the borders of Tyreragh." **SLIGO.**

The County on the whole is most adapted to tillage, Soil and
though there are many tracts well fitted for the fattening agriculture.
of cattle. In the North, the soil is either a thin turf
moss on a freestone, gravelly bottom, or a thin sandy
loam skirted with bog. The best land lies to the South
of the town of Sligo, where there is a district of about
140 square miles, calculated for either grazing or tillage.
The same remark is applicable to parts of its Southern
extremity, though the soil changes its character in con-
formity with that of the surface, the rocky mountain

SLIGO. tracts being covered with a stratum of freestone, gravel, and rock. The waste land lies principally in the North and West; but throughout the County there occurs a substratum, called *lac-leigh*, or "grey flag," which is perfectly impervious, and consequently retentive of water. It is found from nine to twelve inches below the surface, and its principal ingredient seems to be silicious marl in a concrete state. When broken up and incorporated with the overlying soil it improves the compost; and as the stratum underlying it is a limestone-gravel, the water which had been retained by it is immediately absorbed. The size of the farms varies from three Irish acres to 500. Tillage is on the increase. Oats and potatoes are the principal crops; the wheat sown is inconsiderable. Ploughing is now performed by horses instead of oxen as formerly; and as the rotation system and green crops are common among the gentry, the improved methods are gradually extending to the smaller farmers. Large quantities of butter are made in the County, especially in the dairy farms around Sligo and Ballymote, which are chiefly sent to the British market. The favourite breed of cattle is a cross between the Durham and the native race; and bullocks of the largest size are furnished to the Dublin and English markets from the rich lowlands. Sheep are numerous, and much attention is paid to their breeding. The best horses in the County are brought from Roscommon and Galway. The soil is favourable to the growth of timber, and plantations are on the increase, as well as the custom of planting forest trees in the hedge-rows.

Geology.

The County forms the North-Western extremity of the great central flætz limestone field of Ireland, which is interrupted to the South of Lough Gill, and along the great Western mountain range, by the mica slate formation. This range, which is very narrow, varying from three miles to a quarter of a mile in breadth, stretches from Foxford in Mayo, by Collooney, to Manor-Hamilton in Leitrim. To this usually succeed beds of red or yellow sandstone. The principal mineral is iron; lead, manganese, copper, and silver likewise occur. Marl is abundant, and there are various fine clays fit for pottery.

Rivers and lakes.

The chief rivers are the Sligo, Arvenshein, May, Eask, Bonnet, and Collooney. Their course is short, but characterised by the rapidity of their currents. The Sligo rises in Lough Gill, and is navigable as far as the town from which it takes its name. The May, which for several miles forms the boundary between the County and Mayo, has lately been rendered navigable for ships of large burden as far as Ballina. The principal lakes are Lough Gill, Arva or Arrow, Calt, and Gara. The first of these, which is situated a short distance to the East of the town of Sligo, is about nine miles long by three in breadth, and is studded with beautiful islands, of which two are inhabited. Lough Arrow is about the same size as the preceding; more irregular in its shape, but with equally picturesque scenery. Lough Calt or the High Lake, which is in the Ox mountains, is environed by lofty cliffs that seem to have been thrown up by some convulsion of nature. Trout abound in this lake and in the Garra; and in the Sligo and May, the salmon fisheries are of some importance.

The linen manufacture is actively carried on in the County. The estimated rental is £227,443; and the average rent per statute acre 10s. 8½d. Sligo contains six Baronies and 39 parishes, and returns three Members to Parliament, viz. two for the County, and one for

the Borough of Sligo. Population, according to the census of 1831, 171,765.

SLIGO, the County Town of Sligo in Ireland, situated on the bay of the same name at the mouth of the river by which the waters of Lough Gill are discharged into the Atlantic. The manufacture of linen cloth thrives greatly in Sligo and its neighbourhood, and it carries on a considerable trade, which is yearly increasing. This town was gradually formed around an abbey and castle built in the year 1262 by Maurice Fitzgerald, Lord Justice of Ireland. The castle was destroyed shortly afterwards, but rebuilt in 1310; and both its ruins and those of the abbey evince their original extent and importance. In the vicinity of Sligo are a number of enormous perpendicular stones, which are called Lugna Clogh, or the Giant's Grave, and near which, at different times, human bones have been disinterred. The County Assizes are held at Sligo, and among its public buildings are a Court-house, a chartered School, a Gaol and an Infirmary. Sligo sends one Member to the Imperial Parliament. Population, in 1788, was 8000, but it has since much increased. Distance from Killala 26 miles, from Dublin 104.

Wakefield, *Statistical Account of Ireland*; Inglis, *Ireland in 1834*; Lewis, *Topographical Dictionary of Ireland*.

SLIKE, *i. e.* like; so-like. See **SWILKE**.

A wilde fire upon hir bodies fall,
Wha herkned ever *slike* a ferly thing?
Chaucer. *The Reves Tale*, v. 4128.

SLIM, a word of very common use in Lincolnshire, says Skinner, from the D. *slim*; Ger. *schlimm*, which Kilian interprets to have anciently signified *vilis*, of little worth; and, in the North, *slim* is wicked, mischievous, perverse; and is also used in the same sense with *sly*; (*q. v.*;) it also signifies slender-bodied, and thinly clothed. Grose.

The church of Rome indeed was allowed to be the principal church. But why? Was it in regard to the succession of St. Peter? no that was a *slim* excuse.

Barrow. *On the Pope's Supremacy*.

SLIME, } D. *slym*; Ger. *schleim*; Sw. *slem*,
SLI'MY, } *sordes, eluvies*; A. S. *slim, limus, cæ-*
SLI'MINESS. } *num, slime, mud*. Ihre suggests *lim*,
lime, q. v.

An adhesive substance; holding, binding fast, viscous, glutinous. See the Quotation from Tyndall.

Tho cam sleuthe al by slobered. wit to *slymed* efen.
Piers Ploukman, p. 110.

Slyme was their mortar, chap. xi., and *slyme* pittes, chap. iv., that *slyme* was a fatnesse that issued out of the earth, like unto tarre; and thou mayst call it cement if thou wilt.

Tyndall. *Workes*, p. 6. Prologue.

As when old father Nilus gins to swell
With timely pride above the Egyptian vale,
His fattie waves doe fertile *slime* outwell,
And overflow each plaine and lowly dale.
Spenser. *Faerie Queene*, book i. can. 1.

And, shortly after, everie living wight
Crept forth like wormes out of her *slime* nature,
Soone as on them the sun's life giving light
Had poured kindly heat and formall feature.
Id. *Colin Clout's come Home again*.

Unsatiated yet, they mount up higher,
Where never sun-born frog durst to aspire,
And in the silken beds their *slimy* members place,
A luxury unknown before to all the watery race!
Cowley. *The Plagues of Egypt*.

SLIME.

SLIME.

SLINK.

And where in pomp the sunburnt people ride,
On painted barges, o'er the teeming tide,
Which, pouring down from Ethiopian lands,
Makes green the soil with *slime*, and black prolific sands.
Dryden. Virgil. Georgics, book iv.

So there I came to an anchor, Jan. 30th, in thirty-three fathom
water, black *slimy* ground, about half a mile from the shore; from
which distance I took the sight of the town.

Dampier. Voyages, vol. iii. ch. i. p. 4.

Nor will the Muse prescribe
A *slimy*-born and sun-begotten tribe;
Who, far from steeples and their sacred sound,
In fields their sullen conventicles found.

Dryden. The Hind and the Panther.

How the soft *slime* of the snail hardens at the bottom of the sea
into the stony substance of a shell is not easy to conceive. This
slime must at least be possessed of very powerful petrifying powers.
Goldsmith. History of the Earth, vol. iv. book iv. ch. v. p. 49.

Divers little creatures are procreated by the sun's heat and the
earth's *stiminess*.

Austin. Hæc Homo, p. 47.

tation from Potter.

To throw;—usually from something hanging or pen-
dulous; to move along or convey upon something (a
rope, cord, strap, &c.) hanging loosely.

& fyfti armed sueynes porters at þat gate.
With *slenges* & magneles þei kast to Kyng Richard
Our Cristen bi parcelles kasted ageynward.

R. Brunne, p. 183.

Sleuth with hus *sljnge*. an hard saucht he made.

Piers Plouhman. Vision, p. 403.

Sire Thopas drow abak ful fast;
This geaunt at him stones cast
Out of a fel staffe *sling*.

Chaucer. The Rime of Sire Thopas.

And as longe as y^e stones thereof dyd remayne in the walles of
brycke the *slyngers* went vpon it and bette it.

Bible, Anno 1554. Kings, ch. iii.

Load the altars till there rise
Clouds from the burnt sacrifice,
With your censers *sling* aloof
Their smells, till they ascend the roof.

Drayton. The Muses' Elysium. Nymphal 8.

Most famous for her folk excelling with the *sling*,
Of any other here this land inhabiting.

Id. Poly-olbion, song 2.

The most common [engines] in field engagements was a *sling*;
which we are told by some was invented by the natives of the
Balearian islands, where it was managed with so great art and
dexterity that young children were not allowed any food by their
mothers till they could *sling* it down from the beam, where it was
placed aloft. *Slings* resembled a platted rope, somewhat broad in
the middle, with an oval compass, and so by little and little de-
creasing into two thongs or reins. The manner of *slinging* was by
whirling it twice about the head, and so casting out the bullet.

Potter. Antiquities of Greece, vol. ii. book iii. ch. iv. p. 45.

They repulsed the cavalry, cut the archers and *slingers* to pieces,
surrounded the enemy's left wing, and were the first that obliged
them to fly.

Bladen. Caesar. Commentaries, book iii. ch. xxxii. p. 316.

The yard is *slung* nearly in the middle, or upon an equipoise.

Cook. Second Voyage, vol. iv. book iii. ch. ii. p. 16.

Upon this stage stand the fighting-men, whose missile weapons
are *slings* and spears.

Id. Ib. vol. i. book i. ch. xviii. p. 206.

SLINK, D. *slinghen*; Ger. *schlingen*; A. S. *slinc-*
an, to crawl or creep; "*slinge*, to go *creepingly* away as
if ashamed; to sneak. Hence a *slink*, a sneak or
sneaker." See Brockett.

To creep or crawl away; to go off or away, as if **SLINK**,
ashamed or afraid; to sneak or steal off privily.
To *slink* her foal is, perhaps, to *sling*, i. e. to cast it. **SLIP.**

Wherfor yit or eve I shall abate your pride,
That som of yew shall be right feyn to *slynk* away and hide.
Chaucer. The Marchantes Second Tale.

And if it go against you and your part go to wracke, then *slinke*
away fro the fiede, and make as ye came not ther.
Sir Thomas More. Workes, p. 366. Answer to Tyndall's Preface.

Bes. The king rages extreamly, shall we *slink* away?
Beaumont and Fletcher. A King and no King, act i. sc. 1.

For the wily fox,
Safe in th' increasing number of his foes,
Kens well the great advantage; *slinks* behind,
And slyly creeps through the same beaten track,
And hunts them step by step.

Somerville. The Chase.

To prevent a mare *slinking* her foal in snowy weather, keep her
where she may have good spring water to drink. *Mortimer.*

This membrane does not properly appertain to dogs, &c., yet it
may be found in *slink* calves. *Student, vol. i. p. 340.*

SLIP, n.

SLIP, v.

SLIPPER, adj.

SLIPPER, n.

SLIPPING, n.

SLIPPERED,

SLIPPERY,

SLIPPERINESS,

SLIPPERY.

D. *slippen*; Ger. *schlippen*; Sw.
slipa; A. S. *slip-an, labi, dilabi.*

By the word *slide* we express a
continuous motion, without step or
rotation; by *slip*, a motion by
which a state of firmness, entire-
ness, security, uprightness, direct-
ness, equipoise, is lost; a mo-
tion, involuntary, sudden, unex-
pected, unnoticed, without effort. It is also used as
equivalent to slide, q. v.

A *slip*, a small part easily removed from the main
body; any thing easily put on or off; a small, narrow
portion. Also, counterfeit pieces of money of brass,
and covered over with silver, were by the common
people called *slips*. See the Quotation from Shakspeare,
and the commentators upon it.

Slippery, smooth; too smooth to stand or move upon,
to hold or keep; infirm, unsteady, unsure.

Slipper sauce, in Tyndall, is *slippery* or slabby sauce.

What man may the winde restraine,
Or hold a snake by the taile,
Or a *slipper* ele constraine.

Chaucer. Praise of Women.

And as he couthe hym selfe forshape
In lykenesse of an adder he *slipte*
Out of his honde, and forthe he skipte.

Gower. Conf. Am. book iv.

And as hounde that goth to folde
And hath there take what he wolde,
His mouth vpon the gras he wipeth,
And so with feigned chere hym *slipeth*,
That what as euer of shepe he strangle
There is no man therof shall iangle,
And for to knowe who it dede.

Id. Ib. book v.

The greyhound is agreeu'd, although he see his game,
If stil it *slippe* he must be stayde, when he would chase the same.
Gascoigne. An Absent Dame Complayning.

Founde thou not manye stones, that is to saye, muche constaunte
people whan thou began to edify thy church, were not they
whych thou did set in the foundation softe and *slipper* earth?

Fisher. Penitential Psalmes, part ii. Psalm 143.

Many haue so *slipper* a minde y^t they cannot kepe in memory a
thing shewed too them by the space of an houre.

Id. Ib. part iii. Psalm 143.

I know they bee *slipper* that I haue to do wyth, and there is
no holde of them.

Barnes. Workes, p. 283. Lawful for Men to read Holy Scripture.

SLIP.

Her *slipper* back doth rowle with forked tong,
And raised brest, lift vp against the sun.

Surrey. Virgil. Æneis, book ii.

On his feet he had nothing but *slippers*, which, after the ancient manner, were tied up with certain laces, which were fastened under his knee, having wrapped about, with many pretty knots, his naked legs.

Sidney. Arcadia, book v. p. 833.

But the sword, more merciful than he to himself, with the *slipping* of the pommel, the point swerved, and razed him but upon the side.

Id. Ib. book iii. p. 564.

So that the ground he stood upon being over high in happiness, and *slippery* through affection, he could not hold himself from falling into an error.

Id. Ib. book iii.

His stomacke abhorreth—longyng after *stibbersause* and *swashe*, at which a whole stomacke is readye to cast hys gorge.

Tyndall. Workes, fol. 65. The Parable of the Wicked Mammon.

These words were no sooner spoken than the Lord Thomas, striking the ball to Alen againe, answered, as one that was somewhat *slipper-toonged*, in this wise.

Holinshed. The Chronicles of Ireland, vol. vi. p. 288.

Edwin, being woonderouslie amazed, thanked his friend, but refused to depart the cuntry, sith he had no iust cause outwardlie giuen to play such a *slipper* part.

Id. Historie of England, book v. ch. xxv.

And yet if he saied as muche after agayne, and thereupō were called again, he might say againe that he were ouersene in the saying, of a lightnesse of wit and *slippernesse* of tonge.

Sir Thomas More. Workes, p. 925. The Apology.

Nathelesse so sharpely still he him pursewd,
That at advantage him at last he tooke,
When his foote *slipt*, (that *slip* he dearely rewd.)
And with his yron club to ground him strooke.

Spenser. Faerie Queene, book vi. can. 7.

Let the world think me a bad counterfeit, if I cannot give him the *slip* at an instant.

Ben Jonson. Every Man in His Humour, act ii. sc. 3.

ROMEO. Good morrow to you both, what counterfeit did I giue you?

MER. The *slip*, sir, the *slip*, can you not conceiue?

Shakspeare. Romeo and Juliet, act ii. sc. 4. fol. 62.

KING. Impudent too? well, what have you sworn?

CLAR. That I, a simple waiting-woman, having taken My bodily oath, the first night of admittance Into her ladship's service, on her *slippers*, (That was the book,) to serve her well in all things, And to know no religion but her pleasure.

Beaumont and Fletcher. The Lover's Progress, act v. sc. 1.

————— The sixt age shifts
Into the leane and *slipper'd* pantaloone,
With spectacles on nose, and pouch on side.

Shakspeare. As You Like It, act ii. sc. 7.

The first true verdict at the first may bring,
The last is slow, or *slipper* as the slime,
Oft changing names of innocence and crime.

Mirroure for Magistrates, p. 310.

But foolish mayd, whyles heedlesse of the hooke
She thus oft-times was beating off and on,
Through *slipperie* footing fell into the brooke,
And there was caught to her confusion.

Spenser. Faerie Queene, book v. can. 5.

O blessed, glorious Trinity,
Bones to philosophy, but milk to faith,
Which as wise serpents diversly
Most *slipperiness*, yet most entanglings hath, &c.

Donne. The Trinity.

1 CIT. Well, *slip-string*, I shall meet with you.

Beaumont and Fletcher. A King and No King, act ii.

These worldly advantages, these honours, profits, pleasures, whatever they be, are of uncertain continuance, and may, in a little time, *slip* away from us; to be sure, we shall, in a little time, *slip* away from them, and leave them behind us; and therefore, why should we rest in them? why should we boast of them?

Atterbury. Sermon 6. vol. iv. p. 157.

SLIP.

SLIT.

But when the smoother bole from knots is free,
We make a deep incision in the tree;
And in the solid wood the *slip* enclose,
The battening bastard shoots again and grows;
And in short space the laden boughs arise,
With happy fruit advancing to the skies.

Dryden. Virgil. Georgics, book ii.

Thrice rung the bell, the *slipper* knock'd the ground,
And the press'd watch return'd a silver sound.

Pope. The Rape of the Lock, can. 1.

Still pressing onward, to the walls he drew,
Where shafts, and spears, and darts promiscuous flew;
And sanguine streams the *slippery* ground embrue.

Dryden. Virgil. Æneid, book xii.

The students did not forbear to whisper among themselves, that rather than there should be a mistake in the calculation, he sent up his soul to heaven thro' a *slip* about his neck.

Wood. Athenæ Oxonienses, vol. i. fol. 628.

I caused one of the bystanders to thrust his arm down to the bottom of the tub, and with his hand to make part of the oiled surface of the upper marble slide off, on any side, from that of the lower, which, by reason of the smoothness and *slipperiness* of the surfaces, he found most easy to do.

Boyle. Works, vol. iii. p. 637. Of Bodies under Water.

The ancients called it [luxation] a *slipping* of the head of a bone out of its cavity.

Wiseman. Surgery, vol. ii. book vii. ch. ii.

Like quicksilver, the rhet'ric they display
Shines as it runs, but grasp'd at *slips* away.

Cowper. Progress of Error.

And mistake in the names, by a *slip* of their pen,
May, perhaps, have occasion'd mistake in the men.

Byrom. On the Patronage of England.

By the 13th and 14th of Charles II. c. 7, the exportation, not only of raw hides, but of tanned leather, except in the shape of boots, shoes, or *slippers*, was prohibited.

Smith. Wealth of Nations, vol. iii. book iv. ch. viii. p. 19.

But in stage customs what offends me most
Is the *slip-door* and slowly rising ghost.

Lloyd. The Actor.

The shiv'ring urchin, bending as he goes,
With *slipshod* heels, and dewdrop at his nose.

Cowper. Truth.

SLIT, *n.*

SLIT, *v.*

SLITTING, *n.*

SLOT.

to cut.

A. S. *slit-an*, to divide. *Slot*, of a deer; the cleft; (*fissura cervini pedis*;) any cleft or fissure.

To separate, to pull or tear asunder,

For he hire wombe let *slitten* to behold
Wher he conceived was.

Chaucer. The Monkes Tale, v. 14402.

In holy church of suche a *slitte*
Is for to rewe vnto vs alle,

Gower. Conf. Am. Prologue, p. 10.

The earl, thinking the same [dagge] not to be sufficiently safe in that place, it was by the earl's appointment taken from thence, and put into a *slit* in the side of a mattress that lay under the earl's bed, near to the bed's head.

State Trials, vol. i. p. 1125. 27 Elizabeth, 1584.

But the fair guerdon when we hope to find,
And think to burst out into sudden blaze,
Comes the blind Fury with th' abhorred shears,
And *slits* the thin-spun life.

Milton. Lycidas, v. 73.

For certainly this tormentor of semicolons is as good at dismembring and *slitting* sentences, as his grave fathers the prelates have bin at stigmatizing and *slitting* noses.

Id. Works, vol. i. p. 112. Apology for Smectymnus.

The engine wherewith the execution is doone is a square blocke of wood of the length of foure foot and an halfe, which dooth ride vp and doone in a *slot*, rabet, or regall betweene two peeces of timber, that are framed and set vp'right of fve yarden in height.

Holinshed. Description of Englande, book ii. ch. xi.

For by his *slot*, his entries, and his port,
His frayings, fewmets, he doth promise sport,
And standing 'fore the dogs.

Ben Jonson. The Sad Shepherd, act i. sc. 2.

SLIT.

SLOE.

The labouring hunter tufts the thick unbarbed grounds
Where harbour'd is the hart; there often from his feed
The dogs of him do find: or thorough skilful heed,
The hunstman by his *slot*, or breaking earth perceives.
Drayton. Polyolbion, song 13.

Proceeding on to speak of mysterious things in nature, I had occasion to fit the language thereafter, matters not; for the reading of this odious fool, who thus ever when he meets with aught above the cogitation of his breeding, leaves the noisome stench of his rude *slot* behind him, maligning that any thing should be spoke or understood above his own genuine baseness.
Milton. Works, vol. i. p. 306. Reply to an Answer against the Doctrine and Discipline of Divorce.

For had it hit
The upper part of him, the blow
Had *slit*, as sure as that below.

Butler. Hudibras, part i. can. 2.

We made it to move in a perpendicular *slit* in a piece of paste-board that was fastened to one part of the upper basis.
Boyle. Works, vol. iii. p. 252. On the Spring of the Air.

Zoe, for fear of the old man,
Into the army quickly ran;
And sav'd the *slitting* of his nose,
By timely changing of his clothes.

King. Art of Love, part v.

When the hounds pursue upon the scent, until they have unharboured the stag, they are said to draw on the *slot*.
Goldsmith. History of the Earth, vol. ii. book ii. ch. v. p. 98.

SLIVE, } A. S. *slif-an, findere*, to cleave, to *slive*,
SLIVER, } to *sliver*. The word is thus recognised by Somner as of common use. Mr. Moore has preserved it in his *Suffolk Words*; and Grose says, to *slive* is to sneak, in Lincolnshire. See also Ray and Brockett.

To cleave, to split, to slit or slide, to divide.

Alas, that he all hole or of him some *slivere*
Should have his refute in so digue a place,
That Jove, him sone out of your herte race.

Chaucer. Troilus and Crescide, book iii.

She that herself will *sliver* and disbranch
From the material *sap*, perforce must wither,
And, come to deadly use.

Shakspeare. Lear, act iv. sc. 2.

An enuious *sliver* broke,
When downe the weedy trophies, and her selfe,
Fell in the weeping brooke, her cloathes spread wide,
And, mermaid like, a-while they bore her vp.

Id. Hamlet, act iv. sc. 7. fol. 276.

Gall of goate, and slippes of yew,
Sliver'd in the moone's eclipse.

Id. Macbeth, act iv. sc. 1. fol. 143.

When frost will not suffer to dike or to hedge,
Then get thee a heat with thy beetle and wedge,
Once Hallowmas come, and a fire in the hall,
Such *slivers* do well for to be by the wall.

Tusser. December's Husbandry.

SLOANEA, in *Botany*, a genus so called by Plumier in honour of the celebrated Sir Hans Sloane. It belongs to the class *Polyandria*, order *Monogynia*, and the natural family of *Tiliaceæ*. Generic character: calyx of from four to seven narrow sepals, which are sometimes connected at the base, and silky outside; petals none; stamens with very short filaments, but very long, pointed anthers; style filiform, persistent; capsule coriaceous, woody, roundish, four or five-celled, four or five-valved, echinated outside; cells one to three-seeded; seeds covered with fleshy arils.

This genus consists of seven species, natives of South America, but principally of the West Indies; they are trees with large alternate leaves, and each flower is furnished with one bractea.

SLOE, A. S. *sla*, *Prunum sylvestre*; a sloe, so called,

happily, from its *slowness* in the passage through the belly. Somner.

Or search'd the hopefull thicks of hedgy-rows,
For brierie berries, or hawes, or souer *sloes*.

Hall. Satire 1. book iii.

I fed on scarlet hips, and stony haws,
Or blushing crabs, or berries, that emboss
The bramble, black as jet, or *sloes* austere.

Cowper. The Task, book i.

SLOOP, contracted from *shallop*, q. v.

And besides, at this island we might build canoes, it being plentifully stored with large cedars for such a purpose, and for this reason the Jamaica men come hither frequently to build *sloops*.

Dampier. Voyages, vol. i. ch. iii. p. 29.

SLOP, } Skinner has three different Etymologies
SLO'PPY, } for what he thinks are three different words. Junius thinks *slop* (a pair of *slops*) has the same origin as *sleeve*. Tooke that *slop* generally is the past participle of *slip*. And see **SLOPE**.

A *slop*, liquid, &c. that slips or has slipped.

Slops worn by sailors, labourers, that *slip* on easily without dragging.

To *slop*, to spill liquids. *Sloppy*, wet with *slops*.

His overest *sloppe* it is not worth a mite.

Chaucer. The Chanones Yemannes Tale, v. 16100.

And well might his proportion be judged, for he had nothing upon him but a pair of *slops*, and upon his body a goat skin, which he cast over his shoulder.

Sidney. Arcadia, book i. p. 110.

When your surgeon's paid,

And all your leaks stopt, see whose *slops* are heaviest.

Beaumont and Fletcher. The Mad Lover, act i. sc. 1.

Who is come hither private for his conscience,
And brought munition with him, six great *slops*,
Bigger than three Dutch hoys.

Ben Jonson. The Alchemist, act iii. sc. 2.

When we lay out a day's diversion by some little excursion abroad we regard what will entertain us most for the day, notwithstanding some trifling inconveniences of *sloppy* roads or indifferent accommodations at a paltry inn.

Search. Light of Nature, vol. i. part ii. ch. xxvii. p. 190.

SLOPE, *n.*

SLOPE, *v.*

SLO'PENESS,

SLO'PINGLY,

SLO'PY.

quently to mean

That which, the surface of ground, &c. which, we slip along, slip down; which lies on an inclined plane, on a declivity, obliquely to the horizon.

The fosse goeth not directlie but *slopeswise* ouer the greatest part of this iland.

Holinshead. Description of Britaine, ch. xix.

It riseth three or foure miles or more within the land *slopeswise*.
Id. Ib. ch. xiv.

For many times I haue it seene,
That many haue beguiled beene,
For trust that they haue set in hope,
Which fell hem afterward a *slope*.

Chaucer. The Romant of the Rose, p. 203.

Though castles topple on their warders' heads;
Though pallaces and pyramids do *slope*
Their heads to their foundations; though the treasure
Of Nature's germaine tumble altogether,
Euen till destruction sicken: answer me
To what I aske you.

Shakspeare. Macbeth, fol. 144.

Oft till the star that rose at evening, bright,

Towards heav'n's descent had *slop'd* his westring wheel.

Milton. Lycidas, l. 30.

The growing upon *slopes* is caused, for that moss, as on the one side it cometh of moisture and water, so on the other side the water must but *s'ide*, and not stand or poole.

Bacon. Natural History. Cent. vii. sec. 537.

SLOE.

SLOPE.

SLOPE. Where there is a great quantity of water, and space enough, the water moveth with a *sloper* rise and fall.
SLOTH. Bacon. *Natural History*. Cent. vii. sec. 537.

The Italians are very precise in giving the cover a graceful pendency of *sloopeness*.
Reliquiæ Wottonianæ, p. 48.

To noontide shades incontinent he ran,
 Where purls the brook with sleep-inviting sound;
 Or when Dan Sol to *slope* his wheels began,
 Amid the broom he bask'd him on the ground,
 Where the wild thyme and camomile are found.
Thomson. Castle of Indolence, can. 1.

But soft, by regular approach, not yet,
 First through the length of yon hot terrace sweat;
 And when up ten steep *slopes* you've dragg'd your thighs,
 Just at his study-door he'll bless your eyes.

Pope. *Moral Epistle* 4.

Lyc. Your country friends were told another tale;
 That from the *sloping* mountain to the vale,
 And dodder'd oak, and all the banks along,
 Menalcas sav'd his fortune with a song.

Dryden. *Virgil. Pastoral* 9.

For this purpose they take to sea with them a great number of mats, which, whenever the rain descends, they range *slopingly* against the gunwale from one end of the ship to the other, their lower edges resting on a large split bamboo.

Anson. *Voyages*, book ii. ch. x. p. 332.

At the other end the earth is raised *sloping*, to walk up to the entrance, which is by a hole in the top of the roof over that end.

Cook. *Voyages*, vol. vi. book iv. ch. ix. p. 113.

The land upon this side of the island rises in a gentle *slope*, from the sea to the foot of the mountains, which occupy the centre of the country.

Id. Ib. vol. vi. book iii. ch. xi. p. 177.

Where the mantling willows nod
 From the green bank's *slopy* side,
 Patient, with his well-thrown rod,
 Many an angler breaks the tide!

Cunningham. *A Landscape*.

The self-complacent actor, when he views
 (Stealing a sidelong glance at a full house)
 The *slope* of faces, from the floor to th' roof,
 (As if one master-spring controll'd them all,)
 Relax'd into a universal grin,
 Sees not a count'nance there, that speaks of joy
 Half so refin'd or so sincere as ours.

Couper. *The Task*, book iv.

SLOTH, n. Rather, says Skinner, from our

SLOTH, v. verb, to *slow*, and then more pro-

SLO'THFUL, perly written *slowth*; and Junius,

SLO'THFULNESS. } *slow* and *slothful*, *piger*, *iners*.

Tooke considers it to be the third person singular of *slow*; *sloweth*, *slow'th* or *slouth*, *sloth*.

That which *sloweth*, or maketh one *slow*.

See **SLOUCH**, &c., **SLUT**, and **SLUG**.

Laziness, idleness, tardiness.

Sloth, the animal, so called from its sloth.

Vor wanne men bep al ydel, þat er batayles sogte,
 Her ydelnesse hem ssal brýnge to sýnne lecherye,
 To tauerne, and to sleuþe, and to hasarderýe.

R. Gloucester, p. 195.

And as thou smellst hem thurgh my praiere,
 So shalt thou seen hem leve brother dere,
 If it so be thou wolt withouten *slouth*
 Beleve aright, and know the veray trouthe.

Chaucer. *The Second Nonnes Tale*, v. 15660.

————— I would vtterly
 Right of mine owne honde write her now
 A letter, in which I would her tellen how
 I farde amisse, and her beseech of routh;
 Now help thy selfe, and leave it for no *slouth*.

Id. Troilus and Creseide, book ii.

The first point of *slouth* I call
 Lachesse, and is the chief of all,
 And hath this properly of kinde
 To leuen all thyng behynde.

Gower. *Conf. Am.* book iv.

I wol the tellen abouen all
 In whome no vertu maie befall,
 Whiche yeueth vnto the vices rest,
 And is of *slouth* the slowest.

Gower. *Conf. Am.* book iv.

The Lord commaundeth the talent to be taken away from the euill and *slouthfull* seruant, and to bynde hym hand and foote.

Tyndall. *Workes*, p. 34. *Prologue upon St. Matthew*.

And at Wynchester, in the newe abbey, he put in monkes, where, before dayes, were seculer preestes; y^e cause wherof was, for so moch as the preestes fled or neglegently *slouthed* the deuyne seruyce of God, and sette vykers in theyr places, whyle they lyued at theyr pleasure in other places, and spent the patrimony of that church after theyr sensuall wyll.

Fabyan. *Chronycle*, ch. 193. p. 196.

If shootinge could speake, she would accuse Englande of unkindnesse and *slouthfulnesse*; of unkindnesse towards her, because she, beinge left to a little blind use, lackes her best maintainer, which is cunninge.

Ascham. *Toxophilus*, book i.

But now, seeinge the order of communion is no more obserued amongst vs, and that through the negligence, and *slouthfulness*, as wel of the laye people as of the priestes, the Holy Ghost by the often saieinge of priuate masses, hath founde out a godly remedie for this wante.

Jewell. *Workes*, fol. 478. *Of Pluralitie of Masses*, art. 13.

For all he did was to deceive good knights,
 And draw them from pursuit of praise and fame
 To slug in *slouth* and sensuall delights,
 And end their daies with irrenowned shame.

Spenser. *Faerie Queene*, book ii. can. 1.

So she him lefte, and did herselfe betake
 Unto her boat again, with which she clefte
 The *slouthfull* wave of that great griesy lake.

Id. Ib. book ii. can. 6.

The chief thus answer'd mild: Immortal maid!
 I own thy presence, and confess thy aid.
 Not fear thou know'st, withholds me from the plains,
 Nor *sloth* hath seiz'd me, but thy word restrains.

Pope. *Homer. Iliad*, book v.

Still, with your voice, the *slouthful* soldiers raise,
 Urge, by their father's fame, their future praise.

Id. Ib. book x.

It is natural for men, when they are beaten out of other excuses, to fetch apologies for their neglect, or *slouthfulness* in any business that is pressed upon them, from the greatness of the work, and their own want of strength and ability to go through it.

Sharp. *Works*, vol. i. p. 105. *Sermon* 5.

The lower sort still are ambitious to follow them as close as they can, every day indeed, but on that especially, consume the beginning of it in stupid *sloth*, the remainder in lewdness or drunkenness.

Secker. *Works*, vol. i. p. 76. *Sermon* 5.

SLOUCH, n. } See **SLOTH**, ante, **SLOUGH**, in-
SLOU'CHING, n. } *fra.* Skinner derives *slouch* from
SLOU'CHING, adj. } the Dan. *sloff*, *hebes*, the Ger.
schlausz, *negligens*. Tooke thinks it is the A. S. *slæc*,
 (*ch* for *k*.) from the verb *slac-ian*, to slow or cause to
 be slow; applied to a *slow* pace; one who moves a
slow pace.

A lazy, idle fellow; one who moves lazily, idly, heavily; too lazy to move upright; with a bend or stoop; a lazy, stooping, lowting position or gait.

The first of those rude rascalls, Lypon hight,
 A foul great stooping *slouch*, with heauie eyes
 And hanging lip.

More. *On the Soul. Psychozoia*, st. 8.

Begin thy carols then, thou vaunting *slouch*!
 Be thine the oaken staff, or mine the pouch.

Gay. *The Shepherd's Week. Pastoral* 1.

The awkward, negligent, clumsy, and *slouching* manner of a booby.

Lord Chesterfield.

As some take stiffness for a grace,
 And walk a dancing-master's pace,
 And others, for familiar air,
 Mistake the *slouching* of a bear.

Lloyd. *A Dialogue*.

SLOTH.
SLOUCH.

SLOVEN.
SLOUGH.SLOVEN,
SLO'VENVLY,
SLO'VENVLINESS,
SLO'VENVRY.

Slouen, slouen, sloven, (and slut, q. v. from slowed,) past participle of the verb to slow, (q. v.) i. e. to make slow or cause to be slow.

One who is too *slow*, lazy, idle, to do any thing carefully; to dress properly, neatly.

The onelie meane at those daies whereby hir husband his countrie was reclaimed from sluttishnesse and *slouenrie* to cleane bedding and ciuilitie.

Holinshed. The Chronicles of Irelande, Anno 1524.

Some sluggyshe *slouens* that slepe day and night.

Skelton. The Crown of Laurell, p. 238.

I beseech ye, friends, ere the brickbats fly, resolve me and yourselves, is it blasphemy, or any whit disagreeing from Christian meekness, whenas Christ himself, speaking of unsavoury traditions, scruples not to name the dunghill and the jakes, for me to answer a *slovenly* wincer of a confutation, that if he would needs put his foot to such sweaty service, the odour of his sock was like to be neither musk nor benjamin?

Milton. Works, vol. i. fol. 113. An Apology for Smectymnuus.

Whether the multitudes of sects, and professed *slovenliness* in God's service, (in too many,) have not been guilty of the increase of profanenesse amongst us.

Hall. Works, vol. iii. fol. 248. A Defence of the Humble Remonstrance.

There's not a piece of feather in our hoast;
Good argument (I hope) we will not flye;
And time hath worn vs into *slouenrie*.

Shakspeare. Henry V. fol. 87.

The medium between a fop and a *sloven* is what a man of sense would endeavour to keep.

Spectator. No. 140.

Canted, and whin'd, and talk'd most odly,
Was very *slovenly* and godly.

The Bald Batchelor.

That its worship may not be exposed to contempt by the *slovenliness* and barbarity of its outward appendages.

Scott. Christian Life, part ii. ch. vii. p. 470.

Who, destitute of humour, wit, and taste,
Let all their little knowledge run to waste,
And frustrate each good purpose, whilst they wear
The robes of learning with a *sloven's* air.

Churchill. Gotham, book ii.

The reader reflects how little this invincible demonstration for our holy faith hath been hitherto insisted on; how slightly it hath been handled; and how hastily and *slovenly* hurried over.

Warburton. Julian's Attempt to Rebuild the Temple.

SLOUGH, } A. S. *slog*, a hollow filled with mud
SLOUGHY. } or mire. Junius. Tooke thinks it the
past participle of *slocc-ian*, (a broad,) to *slow*, meaning
Slow, (water,) sluggish water; water, mire, that
stays, does not drain off.

Slough of an animal, (serpent,) the skin cast; probably so called from the *sluggish* state of the animal during this process of nature.

Slough of a wound or sore; the inert, senseless skin or matter that separates or comes from it.

That was wel twight, min owen bard boy,
I pray God save thy body and Seint Eloy.
Now is my cart out of the *slough* parde.

Chaucer. The Freres Tale, v. 7145.

Here never durst the babling cuckow spit,
No *slough* of falling star did ever hit
Upon this bank.

Beaumont and Fletcher. The Faithful Shepherdess, act iii. sc. 1.

In the spring time serpents first doe cast their *sloughes* or skins.

Holland. Plinie, book xxv. ch. ii.

Passing over Haerlem Mere, a huge island *slough*, in company of his father who had been at Amsterdam, to look how his bank of money did thrive.

Howell. Letter 10. book i. sec. 4.

If order were taken that their boughs should continuallie be kept short, and the bushes not suffered to spread so far into the

narrow paths, that inconvenience would also be remedied, and manie a *slough* proue hard ground that yet is deepe and hollow.

Holinshed. Description of Britaine, ch. xix.

And when the mind is quickned, out of doubt
The organs, though defunct and dead before,
Breake vp their drowsie graue, and newly moue
With casted *slough* and fresh legeritie.

Shakspeare. Henry V. fol. 83.

The tubercles and breast sunk, and, after the casting forth of some corrupt *sloughs*, the matter became well scented.

Wiseman. Treatises, vol. i. book i. ch. xxi. p. 179.

But when by genial rays of summer sun,
Purg'd of his *slough*, he nimbly thrids the brake,
Whetting his sling, his crested head he rears
Terrific.

Philips. Cerealia.

When he, renew'd in all the speckled pride
Of pompous youth, has cast his *slough* aside,
And in his summer livery rolls along,
Erect, and brandishing his forky tongue,
Leaving his nest, and his imperfect young.

Dryden. Virgil. Georgics, book iii.

Neither should that odious custom be allowed of cutting scraws (as they call them,) which is flaying off the green surface of the ground to cover their cabins, or make up their ditches; sometimes in shallow soils, where all is gravel within a few inches; and sometimes in low ground, with a thin green sward, and *sloughy* underneath; which last turns all into bog by this mismanagement.

Swift Works, vol. x. p. 203. Letter 7.

SLOW, *adj.*

SLOW, *n.*

SLOW, *v.*

SLO'WLY,

SLO'WNESS.

active, unready.

Slow- (worm, A. S. *slaw-wyrme*.) See the Quotation from Goldsmith.

A *slowe*, a sloth or sluggard.

His Lorde answerde and seide to him, Yvel servaunt and *slow*, wistist thou that I repe where I sewe not, and gedre togidre where I spredde not a brood.

Wichf. Matthew, ch. xxv.

Ech come bifore to worschipe othir not *slough* in bisynesse, feruent in spyryt.

Id. Romaynes, ch. xii.

And whanne in many daies we seilidin *slowli* and unnethe camen aghens Gwidun, for the wynd lettide us, we seiliden to Crete bisidis Salomona.

Id. The Dedis of Apostlis, ch. xxvii.

And when we had sayled *slowly* may dayes, and scarce were come ouer against Guidon, (because the wynde withstode vs,) we sailed harde by the coste of Candy, ouer against Salmo.

Bible, Anno 1551.

Fie on you (quod she) euerichone,
Ye nastie swine, ye idle wretches,
Full of rotten *slow* tetches.

Chaucer. The House of Fame, book iii.

It is a *slowe* may nat forbear,
Ragges ribaned with gold to weare,
For also well woll loue be sette
Under ragges as rich rotchette.

Id. The Romant of the Rose, p. 206.

There ben other uices *slow*,
Whiche vnto loue do great lette,
If thou thyn herte vpon hem sette.

Gower. Conf. Am. book iv.

Being moderatlie taken (saith he) it [*aqua vitæ*] *sloweth* age, it strengthneth youth.

Holinshed. Description of Ireland, ch. ii.

We have also the *sloworme*, which is blacke and graiesh of colour, and somewhat shorter than an adder.

Id. Description of England, ch. vi.

FRI. I would I knew not why it should be *slow'd*,
Looke, sir, here comes the lady towards my cell.
Shakspeare. Romeo and Juliet, act iv. sc. 1. fol. 70.

SLOUGH.
SLOW.

SLOW.

SLUG.

And after him she rode with so much speede,
As her *sloure* beast could make; but all in vaine;
For him so far had borne his light-foot steede,
Pricked with wrath and fiery fierce disdain,
That him to follow was but fruitlesse paine.

Spenser. *Faerie Queene*, book i. can. 2.

Ah! when will this long, weary day have end,
And lende me leave to come unto my love?
How *slowly* do the houres theyr numbers spend!
How *slowly* does sad Time his feathers move!

Id. *Epithalamion*.

Impatient friends, stand, that your strength may last!
Burn not, in blaze, rage that should warm you long!
I wish to foes the weaknesses of haste,
To you such *slowness* as may keep you strong.

Davenant. *Gondibert*, book i. can. 5.

The small-ey'd *slow-worm* held of many blind,
Yet this great ark it quickly out could find,
And as the ark it was about to climb,
Out of its teeth shoots the invenom'd slime.

Drayton. *Noah's Flood*.

What awe did the *slow* solemn knell inspire;
The pealing organ, and the pausing choir.

Tickell. *On the Death of Mr. Addison*.

Another backward to the tower would go,
And *slowly* eats his way against the wind;
But the main body of the marching foe
Against th' imperial palace is design'd.

Dryden. *Annus Mirabilis*.

Those words of our Lord to Nicodemus express some kind of
marvel at his *slowness* of apprehension; "Art thou a master of
Israel, and knowest not these things?"

Waterland. *Works*, vol. vi. p. 314. *On Regeneration*.

Having uttered some words, which we were very sorry we could
not understand, he went back to his companions, and the whole
body *slowly* retreated.

Cook. *Voyages*, vol. ii. book iii. ch. iv. p. 158.

Various circumstances might take place, added to the *slowness*
of the procession, to retard the execution till nine, the very time
fixed by St. Mark.

Knox. *Works*, vol. vii. p. 319.

SLU'BBER, v. }

SLU'BBERINGLY. }

See SLAB.

SLUG, n.

SLUG, v.

SLU'GGARD,

SLU'GGARDY,

SLU'GGARDIZE, v.

SLU'GGISH,

SLU'GGISHLY,

SLU'GGISHNESS,

SLU'GGY.

Skinner and Junius have no-
thing at all satisfactory to them-
selves. Tooke thinks *slug*, A. S.
slog, is *slow*, (i. e. reptile.) See
SLOUGH.

A *slow* reptile; any thing *slow*,
lazy, dull, heavy, lumpish, drowsy,
dronish.

To *slug*; to be or cause to be

lazy, dull, inert.

Than cometh sompnolence, that is, *sluggish* slumbring, which
maketh a man hevy, and dull in body and in soule, and this sinne
cometh of slouth.

Chaucer. *The Persones Tale*, p. 161.

Er it was day, as she was wont to do,
She was arisen, and all redy dight;
For May wol have no *slogardie* a-night.

Id. *The Knightes Tale*, v. 1042.

He woll not leue his *sluggardie*.

Gower. *Conf. Am.* book iv.

Telle him that he shal neuer haue list to slepe, and therby
leese the pleasure y^t he was wont to take in *slugging*.

Sir Thomas More. *Workes*, fol. 1258. *Of Comfort against Tribu-
lation*, book iii.

In secret sylence of the night
This made me, with a reckles brest,
To wake thy *sluggards* with my bowe.

Surrey. *Against London*.

Ye that in loue find lucke and swete abundance,
And liue in lust of joyful jolitie,
Arise for shame, do way your *sluggardy*.

Wyat. *The Louer Unhappy*.

But now after they had twice by experience in theselues learned,
that through slouthful sitting vnawares thei fell a slepe, for a redye
remedy agaynste that *sluggishe* slepy sicknes, gaue he the this
lesson to rise.

Sir Thomas More. *Workes*, p. 1375. *Upon the Passion of Chryst*.

Wherefore I doe sore marueile y^t there bee certain men the which
geue the selues to slouthfulnes and *sluggishnes*, and will not learne
those things that bee good.

Barnes. *Workes*, p. 289. *That it is lawfull for all men to read
Holy Scripture*.

For all he did was to deceive good knights,
And draw them from pursuit of praise and fame,
To *slug* in slouth and sensuall delights,
And end their daies with irrenowned shame.

Spenser. *Faerie Queene*, book ii. can. 1.

That he did never eat his meat, before he had won it with his
sword, that he lay not all night *slugging* in a cabbin under his
mantle, but used commonly to keepe others waking to defend
their lives.

Id. *Works*, vol. viii. p. 396. *View of the State of Ireland*.

[Usury] doth dull and dampe all industries, improvements, and
new inventions, wherein money would be stirring, if it were not for
this *sluggie*.

Bacon. *Essays. Of Usury*.

And it is still episcopacy that before all our eyes worsens and
slugs the most learned and seeming religious of our ministers.

Milton. *Of Reformation in England*, book i.

For all the words that came from gullets,
If long, were *slugs*; if short ones, bullets.

Cotton. *To John Bradshaw, Esq.*

And said, Ah! wretched sonne of wofull syre,
Doe thou sit wayling by blacke Stygian lake,
Whylest here thy shield is hangd for victors hyre?
And, *sluggish* German, doest thy forces slake
To after-send his foe, that him may overtake.

Spenser. *Faerie Queene*, book i. can. 5.

I rather would entreat thy company
To see the wonders of the world abroad,
Then (liuing dully *sluggardiz'd* at home)
Weare out thy youth with shapelesse idlenesse.

Shakspeare. *Two Gentlemen of Verona*, act i. sc. 1. fol. 20.

Who, that they might not come *sluggishly* to possess what others
had won for them, either by their own seeking, or by appointment,
are set in place where they could not but at their first coming give
proof of themselves upon the enemy.

Milton. *Works*, vol. ii. fol. 50. *History of England*, book iii.

Millstones, in the Greek Gospel, are termed *μύλοι ὄνικαι*, that is,
asses' millstones; either because asses (as St. Hilary will have it)
used to draw them about, (before men taught the wind and water
to do that work for them,) or because the lower millstone was
called *ὄνος*, an asse, from the *sluggishnesse* thereof, as always
lying still.

Fuller. *Worthies. Anglesey*.

Add, that it would also weaken and enervate men's natural
faculties, by *slugging* them, and rather beget a puffy conceit and
opinion of knowledge by a multifarious rabble of indigested no-
tions, than the truth thereof.

Cudworth. *Intellectual System*, book i. ch. iv. p. 321.

As forc'd from wind-guns, lead itself can fly,
And ponderous *slugs* cut swiftly thro' the sky.

Pope. *Dunciad*, book i.

So a man being shot with a *slug* near the external canthus of
the right eye, through that bone, it seemed to the chirurgeon that
dressed it to have passed directly forwards.

Wiseman. *Surgery*, book vi. ch. ii.

For sprightly May commands our youth to keep
The vigils of her night, and breaks their *sluggard* sleep.

Dryden. *Palamon and Arcite*, book i.

Answerable to my conjecture, there remained in the bottom a
salt, not only far more *sluggish* than the fugitive one of urine.

Boyle. *Works*, vol. iii. fol. 305. *History of Particular Qualities*.

On shore they [seals] lie very *sluggishly*, and will not go out of
our ways unless we beat them, but snap at us.

Dampier. *Voyages*, vol. i. ch. iv. p. 90.

How should this instance of the operative virtue of God's word
reproach our *sluggishness* and insensibility!

Atterbury. *Sermon 5*. vol. iv.

SLUG.

Slugs pinch'd with hunger smear'd the slimy wall.*Churchill. The Prophecy of Famine.*SLUM-
BER.

Every man who has undertaken to instruct others, can tell what slow advances he has been able to make, and how much patience it requires to recal vagrant inattention, to stimulate *sluggish* indifference, and to rectify absurd misapprehension.

Knox. On Liberal Education.

I would rather wish a student, as soon as he goes abroad, to employ himself upon whatever he has been incited to by any immediate impulse, than to go *sluggishly* about a prescribed task.

*Reynolds. Works, vol. ii. p. 74. Discourse 12.*SLUICE, v. } Fr. *escluse*; It. *sclusa*; Sp. *esclusa*;SLUICE, n. } D. *sluyse*, from the Lat. *clausus*,SLU'CY. } closed or dammed up. *Sclusa*; *locus**ubi concluduntur aquæ.*

A place in which water is closed or inclosed; a dam.

To *sluice*, (or to *unsluice*, *q. v.*) to open that which closes, the gate; to issue forth, *sc.* in or like floods of water; to wet or waste abundantly, to overwhelm.

His governor led his men homeward, while he kept himself still hindmost, as if he had stood at the gate of a *sluice* to let the stream go, with such proportion as should seem good unto him.

Sidney. Arcadia, book iii. p. 448.

Most of their towns are thereby incompass'd with water, which by *sluces* they can contract or dilate as they list.

*Howell. Letter 5. book i. sec. 1.*JUL. Oh, thou hast op'd a *sluce* was long shut up,

And let a flood of grief in; a buried grief

Thy voice hath wak'd again.

Beaumont and Fletcher. The Maid in the Mill, act iii. sc. 1.

I say, that he did plot the Duke of Gloucester's death,

Suggest his soone beleevuing aduersaries,

And consequently, like a traitor coward,

Sluc'd out his innocent soule through streames of blood.*Shakspeare. Richard II. act i. sc. 1. fol. 24.*

Nigh on the plain in many cells prepar'd,

That underneath had veins of liquid fire

Sluc'd from the lake, a second multitude

With wond'rous art found out the massie ore,

Severing each kind, and scum'd the bullion dross.

Milton. Paradise Lost, book i. l. 705.

TORR. You wrong me; if you think I'll sell one drep

Within these veins for pageants; but let honour

Call for my blood; and *sluce* it into streams;

Turn fortune loose again to my pursuit,

And let me hunt her through embattl'd foes,

In dusty plains, amidst the cannon's roar,

There will I be the first.

Dryden. The Spanish Friar, act i.

The water which yields this salt works in from out of the sea through a hole in the sandbank before mentioned, like a *sluce*, and that only in spring tides.

Dampier. Voyages, vol. iii. p. 16. Anno 1699.

The yellow harvests of the ripen'd year,

And flatted vineyards, one sad waste appear!

While Jove descends in *sluicy* sheets of rain,

And all the labours of mankind are vain.

Pope. Homer. Iliad, book v.

The weight of waters saps the yielding wall,

And to the sea the floating bulwarks fall,

Incessant cataracts the thunderer pours,

And half the skies descend in *sluicy* showers.*Id. Ib. book 12.*

SLU'MBER, v. } Also written (as in Gower)

SLU'MBER, n. } *slomer.*SLU'MBERER, } D. *sluymeren*, *sluymeren*; Ger.SLU'MBERING, n. } *schlum-mern*; A. S. *slummeran*;SLU'MBEROUS, } *nictare*, *dormitare*, to wink, to be

SLU'MBERY. } inclined or disposed to sleep.

To be sleepy, drowsy, inert; to compose, to still, to quiet; to repose.

And sayd Awake, full wonderlich and sharpe.

What *slumbrest* thou, as in a litergie?

Or art thou like an asse to the harpe,

That heareth sound, whan men the strings ply?

Chaucer. Troilus and Creseide, book i.

VOL. XXVII.

And ever lay

Pandare a bed, halfe in a *slombring*.*Chaucer. Troilus and Creseide, book ii.*The carpenter out of his *slomber* sterte,

And herd on crie water, as he were wood,

And thought, Alas! now cometh Noes flood.

Id. The Reves Tale, v. 3814.

Than cometh sompnolence, that is, sluggy *slumbring*, which maketh a man hevy, and dull in body and in soule, and this sinne cometh of slouthe.

Id. The Persones Tale, p. 161.

With mochell wo but at laste,

His *slomerend* eies he vpcaste,

And said hir, that it shall be do.

Gower. Conf. Am. book iv.

In dreames and visions of the night season (when *slombrynge* commeth vpon men, that they fall aslepe in theyr beddes) he roundeth them in the eares, he infourmeth them, and sheweth them playnly, that it is he whiche withdraweth man from euyll, delyuereth hym from pryde, kepeth hys soule from destruccion, and his lyfe fro the swearde.

Bible, Anno 1551. Job, ch. xxxiii.

Oft list'ning how the hounds and horn

Chearly rouse the *slumb'ring* morn,

From the side of some hoar hill,

Through the high wood echoing shrill.

Milton. L'Allegro, v. 53.

Yea, rather than my losse should draw on hers,

(Heare, heaven, the suite which my sad soule preferres!)

Let this her *slumber*, like oblivion's streame,

Make her beleve our love was but a dreame!

*Browne. Britannia's Pastorals, book ii. song 5.*And as a *slumb'rer* stretching on his bed,

This way he this, and that way scattered

His other leg, which feet with toes up bear.

Donne. The Progress of the Soul.

The drouping night thus creepeth on them fast;

And the sad humor loading their eye-liddes,

As messenger of Morpheus, on them cast

Sweet *slombring* deaw, the which to sleep them biddes.*Spenser. Faerie Queene, book i. can. 1.*

So long they sought, till they arrived were

In that same shady covert whereas lay

Faure Crysogone in *slombry* traunce whilere.*Id. Ib. book iii. can. 6.*

God hath set

Labour and rest, as day and night to men

Successive, and the timely dew of sleep

Now falling with soft *slumbrous* weight inclines

Our eyelids.

Milton. Paradise Lost, book iv. l. 612.

In th' English fleet each ship resounds with joy,

And loud applause of their great leader's fame;

In fiery dreams the Dutch they still destroy,

And *slumbering* smile at the imagin'd flame.*Dryden. Annus Mirabilis.*

Now charg'd with blessings while you seek repose,

Officious *slumbers* haste your eyes to close;

And glorious dreams stand ready to restore

The pleasing shapes of all you saw before.

Id. Ib.

Beneath an ample portico they spread

The downy fleece to form the *slumberous* bed;

And o'er soft palls of purple grain unfold

Rich tapestry, stiff with inwoven gold.

Pope. Homer. Odyssey, book iv.

Sleep-soothing groves, and quiet lawns between;

And flowery beds that *slumberous* influence kest,

From poppies breath'd.

Thomson. Castle of Indolence, can. 1.

They immediately fell into a deep *slumber*, which was miraculously prolonged, without injuring the powers of life, during the period of one hundred and eighty-seven years.

*Gibbon. Decline and Fall vol. vi. ch. xxxiii. p. 33.*SLUM-
BER.

SLUM-
BER.
—
SLUT.

With these the statesman strove to ease his care,
To sooth his sorrows, and to divert despair;
But long his grief sleep's gentle aid denies;
At length a *slumb'rous* Briton clos'd his eyes.
Whitehead. State Dunces.

At length the hero from the earth he rais'd,
Then to his lips convey'd the balmy draught;
The senseless chief the *slumb'rous* potion quafft.
His heavy eyes the *slumb'rous* potion clos'd,
Ere yet his tongue his various doubts propos'd.
Cambridge. The Scribleriad, book v.

SLUR, v. } Perhaps a corruption of *slutter*; to do
SLUR, n. } as the slut does; (slovenly or sluttishly;)
Slirt, from *slurred, slur'd, slurt*.

To do any thing lazily, carelessly, dirtily; to smear,
to soil, to tarnish, to pollute; to cast a soil or spot
upon; to pass slightly, (with a view to escape notice,) and thus, as in *Hudibras*, to cheat.

This touched the reputation of Mr. Rich to the very quick, and
was a *slur* that could not be effaced without the utmost difficulty.
State Trials. 26 Henry VIII.

Then from the table he gave a start,
Where banquet and wine were nothing scarce;
All which he *slirted* away. *Ben Jonson. Song 29.*

I can manage the little comb, set my hat, shake my garniture,
toss about my empty noddle, walk with a courant *slurr*, and at
every step peck down my head.

Dryden. Secret Love, act v.

What was the public faith found out for
But to *slur* men of what they fought for?

Butler. Hudibras, part ii. can. 2.

A manger was the place that first received the Lord of glory.
This *slur*, this affront God then thought fit to put upon all that
external splendor and grandeur which usually doth so much dazzle
the eyes of mortal men.

Sharp. Works, vol. i. p. 274. Sermon 11.

In every part of the human figure, when not spoiled by too great
corpulency, will be found this distinctness, the parts never appear-
ing uncertain or confused, or, as a musician would say, *slurred*;
and all those smaller parts which are comprehended in the larger
compartment are still to be there, however tenderly marked.
Reynolds. Works, vol. iii. p. 185. Notes on the Art of Painting.

Those worthies seem to see no shame in,
Nor strive to pass a *slur* on gaming.

Cambridge. A Dialogue.

There would have been one species of beings wanting to com-
pleat the universe; and it would have been a *slurre* to the divine
goodnesse not to have given being to such creatures as in the idea
were fairly possible; and contradicted no other attribute.

Glanvil. Pre-existence of Souls, ch. viii. p. 85.

SLUT, } *Slut*, or, as Gower writes it, *slout*,
SLUTTERY, } is the past participle of the verb
SLUTTISH, } *slaw-ian*, to slow, i. e. to make slow,
SLUTTISHLY, } or cause to be slow; and formed
SLUTTISHNESS. } thus, *slowed, slow'd, sloud, slout*,
slut. *Slut* formerly, as sloven now, was applied to males
as well as females. See Tooke.

One who is too slow; lazy, idle; to do any thing
carefully, cleanly; to dress properly, neatly; a lazy,
uncleanly, dirty person.

It shall not be in hir election,
The foulest *slutte* in all the toun, to refuse,
If that me lust, for all that they can muse.

Chaucer. The Letter of Cupid.

Why is thy lord so *sluttish* I thee preye,
And is of power better cloth to beye,
If that his dede accorded with thy speche?

Id. The Chanones Yemannes Prologue, v. 16104.

Among these other of *sloutes* kinde,
Which all labour set behinde,
And hateth all besines,
There is yet one, whiche Idelnes
Is cleped.

Gower. Conf. Am. book iv.

Than he shewed them, in maner of communycasion, all the
nature of the Spanyardes, howe they be *sluttysshe* and lousy
and enuyous of other mannes welthe.

Lord Berners. Froissart. Chronycle, vol. ii. ch. xxxi. p. 92.

CLO. Truly, and to cast away honestie vppon a foule *slut* were
to put good meate into an vncleane dish.

Shakspeare. As You Like It, fol 198.

Nor i' th' appetite,
Sluttery to such neate excellence oppos'd,
Should make desire vomit emptinesse,
Nor so allur'd to feed.

Id. Cymbeline, fol. 374.

These make our girls their *slutt'ry* rue,
By pinching them both black and blue,
And put a penny in their shoe,
The house for cleanly sweeping.

Drayton. Nymphida. The Court of Fairy.

What rooms are these?

OTR. They are *sluttish* ones.

Beaumont and Fletcher. The Maid in the Mill, act v. sc. 1.

They have taken a toil, surely very laborious, out of infinite
huge volumes to pick whatsoever may seem to be either absurdly,
or falsely, or fondly, or scandalously, or dishonestly, or passion-
ately, or *sluttishly* conceived or written.

Sir E. Sandys. State of Religion.

The onelie meane at those daies whereby hir husband his
countrie was reclaimed from *sluttishnesse* and slouenrie to cleane
bedding and ciuilitie.

Holinshed. The Chronicles of Ireland, vol. vi. p. 280.

As for spiders, it is evident that they are of the *τα αυτοματως*
γενόμενα, as Aristotle phrases it, and are generated of mere *sluttery*
and putrefaction.

More. Immortality of the Soul, book iii. ch. 13.

A poach'd egge; meat which in the shell may safely be eaten
after a *sluttish*, out of it not after a malicious hand.

Fuller. Worthies. Essex.

Be it enacted then
By the fair laws of thy firm-pointed pen,
God's services no longer shall put on
A *sluttishness* for pure religion.

Crashaw. Steps to the Temple.

Here by the by I cannot but look upon the strange instinct of
this noisome and troublesome creature the louse, of searching out
foul and nasty clothes to harbour and breed in, as an effect of
Divine Providence, designed to deter men and women from *slut-*
tishness and sordidness, and to provoke them to cleanliness and
neatness.

Ray. On the Creation, part ii. p. 357.

SLY, } Is, perhaps, the same word as *sleight*,
SLY'LY, or } (i. e. *sleyed, sley'd, sly'd*, the final *d*
SLI'LY, } omitted,) meaning,
SLY'NESS. } Acting with forecast; forecasting or
projecting; cautious, circumspect; cunning, crafty;
subtle. Substance *sly*, in Spenser, is substance *slight*
or slender. Milton, *Comus*, v. 155. "To cheat the
eye with blear illusion," had been in the MS. examined
by Mr. Todd, "with *sleight* illusion." See the fifth
Quotation from Chaucer.

And stele up on myn enemy
For to slee hym *slehliche*. *slehliches* ich by þenke.

Piers Plouhman. Vision, p. 93.

Lo I sende you as scheep in the myddil of wolves, therfor be
ghe *slygh* as serpentis, and simple as dowves.

Wiclif. Matthew, ch. x.

A thefe he was forsooth, of corn and mele,
And that a *slie*, and usant for to stele.

Chaucer. The Reves Tale, v. 3937.

A col fox, ful of *sleigh* iniquitee.

Id. The Nonnes Preestes Tale, v. 15151.

And eke men brought him out of his contre
Fro yere to yere ful prively his rent.
But honestly and *sleightly* he it spent,
That no man wondred how that he it hadde.

Id. The Knightes Tale, v. 1446.

SLUT.
—
SLY.

SLY.
SMACK.

And if this man slee here himselfe, alas!
In my presence, it nill be no sollas,
What men would of it deme I can nat say,
It needeth me full *slightly* for to play.
Chaucer. Troilus and Crescide, book ii.

Tho weshen they, and set hem down and ete,
And after noone fall *slightly* Pandarus
Gan draw hem to the window near the street.
Id. Ib. book ii.

The heauen is far, the worlde is nigh,
And vaine glorie is eke so *sligh*,
Whiche couetise hath now witholde,
That thei none other thinge beholde,
But only that thei mighten winne.

Gower. Conf. Am. Prologue.

For thei ben *sligh* in suche a wise,
That thei by *slyght*, and by queintise
Of fals witnes bringen inne,
That doth hem ofte for to wynne,
That thei be not worthy therto.

Id. Ib. book v.

Thei shope amonge them suche a wile,
The kynge was dead within a while,
So *slyly* came it not aboute,
That thei ne ben discovered out,
So that it thought them for the best
To flee, for there was no reste.

Id. Ib. book i.

Two goodly beacons, set in watches stead,
Therein gave light, and flamd continually;
For they of living fire most subtilly
Were made, and set in silver sockets bright,
Cover'd with lids deviz'd of substance *sly*,
That readily they shut and open might.

Spenser. Faerie Queene, book ii. can. 9.

Beneath that shade two rivers *slyly* steal,
Through narrow walks, to wider Adice,
Who swallows both, till proudly she does swell,
And hastes to shew her beauty to the sea.

Davenant. Gondibert, book iii. can. 1.

One may believe that this was in your head, by your *slyly* re-
marking, presently after, that Tertullian, Origen, and Lactantius
affirmed the same thing of angels and souls, as the Nicene fathers
did of the Son.

Waterland. Works, vol. iii. p. 12. Answer to the Preface.

They tempted me t' attack your highness,
And then, with wonted wile and *slyness*,
They left me in the lurch.

Swift. Sheridan's Submission.

So that upon an opportunity offering wherein a man may gain
some pleasure or advantage *slyly* and safely without danger of after
damage to himself, though with infinite detriment to all the world
beside, and in breach of every moral obligation, he will act wisely
to embrace it.

Search. Light of Nature, vol. i. part ii. ch. xxxvi. p. 364.

SMACK, *n.* } D. *smaecken*, *sapere*, *gustare*;
SMACK, *v.* } Ger. *schmaeck*, *gustus et sapor*; Sw.
SMA'CKING, *n.* } *smaka*; A. S. *smæc-can*, to taste,
to have or take a smack or savour of. Somner. Ihre is
inclined to believe the verb formed from the sound of
the lips in eating eagerly; and thence appropriated to
the taste. The word is applied to

The sound of the lips, separated from compression;
to a similar sound, as of a whip; of the hand upon the
face; to a taste, a savour, a relish.

————— She behind thy back
So liberall is, she woll nothing withsey,
But smartly of another take a *smack*,
Thus fare these women all the pack.

Chaucer. The Letters of Cupid.

Then Battus kindly leadeth her,
And euer as she trips,
God blesse thee, mouse, the bridegroome said,
And *smakt* her on the lips.

Warner. Albion's England, book ii. ch. x.

The tast or *smacke* of saverie, origan, cressies, and senvie, is
hote and biting.

Holland. Plinie, book xix. ch. xii.

SMACK.
SMALL.

There eke the soft delights, that witchingly
Instil a wanton sweetness through the breast,
And the calm pleasures always hover'd nigh;
But whate'er *smack'd* of noyance, or unrest,
Was far off expell'd from this delicious nest.

Thomson. Castle of Indolence, can. 1.

At harvest-home, and on the shearing day,
When he should thanks to Pan and Pales pay,
And better Ceres; trembling to approach
The little barrel, which he fears to broach:
He 'ssays the wimble, often draws it back;
And deals to thirsty servants but a *smack*.

Dryden. Persius. Satire 4.

To write in pain, and counterfeit a bliss,
Like the faint *smacking* of an after-kiss.

Id. Prologue to the Mock Astrologer.

Would often boast his matchless skill,
To curb the steed, and guide the wheel,
And as he pass'd the gazing throng,
With graceful ease, and *smack'd* the thong.

Whitehead. The Youth and the Philosopher.

But when, obedient to the mode
Of panegyric, courtly ode,
The bard bestrides his annual hack,
In vain I taste, and sip and *smack*,
I find no savour of the sack.

Lloyd. A familiar Epistle to a Friend.

Thy soldiery, the Pope's well manag'd pack,
Were train'd beneath his lash, and knew the *smack*,
And, when he laid them on the scent of blood,
Would hunt a Saracen through fire and flood.

Cowper. Expostulation.

SMALL, *adj.* } D. *smal*; Ger. *schmal*; Sw. *smal*;
SMALL, *n.* } A. S. *smæl*, *smal*, *smel*; *smallunge*,
SMA'LLY, } *minutio, diminutio*; a diminishing;
SMA'LNES, } a making small, thin, or slender.
SMA'LLISH. } See MALL. Minute, thin, slender;
opposed to large, or great: delicate, gentle; opposed to
gross.

A long knýf ýt was & *smal* ýnou, as me may gut ýse
Atte chýrche of Kauersham, as he aþ gare ýbe.

R. Gloucester, p. 289.

Go out swithe into the grete stretis and *smale* stretis of the citee:
and bringe yn hidir pore men and feble, blynde and crokid.

Wiclif. Luke, ch. xiv.

Ovide, amonges other thinges *smale*,
Said, Mida had under his longe heres
Growing upon his hed two asses eres.

Chaucer. The Wif of Bathes Tale, v. 6535.

To supper set, full *smallly* they eat.

Id. The Remedy of Love.

His shoulderes of large brede,
And *smallish* in the girdlestede.

Id. The Romant of the Rose, p. 177.

————— My wittes ben to *smale*
To telle euery man's tale.

Gower. Conf. Am. Prologue.

Her garment was cut after such a fashion, that though the
length of it reached to the ancles, yet in her going one might dis-
cern the *small* of her leg.

Sidney. Arcadia.

The Frenchmen, seeing they could not that way prevail, con-
tinued their battery but *smallly*, on which before they had spent
1500 shot in a day.

Burnet. Records. Journal of King Edward's Reign. Year 3.

A kynnesmā of Sigebert, late kynge, entending to reuenge the
deposyng of hys kynnesmā, awaytid y^e tyme, and beset y^e house
where Kenulph and his paramowre was, *smallly* accōpanyed.

Fabyan. Chronycle, ch. 152. p. 139.

Thenceforth I gan in my engrieved brest
To scorne all difference of great and *small*,
Sith that the greatest often are opprest,
And unawares doe into daunger fall.

Spenser. Visions of the World's Vanitie.

Since when the greatness of his charge exceeds
The *smallness* of his pou'rs, he must collate
The same on others.

Daniel. History of Civil Wars, book ii.

SMALL.

SMARIS.

Esteem and kindness in one breast would grow :
But 'twas heaven knows how many years ago.
Now some *small* chat, and guinea expectation,
Gets all the pretty creatures in the nation.

Dryden. *An Epilogue.*

That sort of animals being, by reason of their *smallness*, the fittest of those furnished with lungs and hot blood we could procure.

Boyle. *Works*, vol. iii. fol. 376. *Pneumatical Experiments about Respiration.*

Knights, lords, and dukes—Mad wretch, forbear,
Dangers unthought of ambush there ;
Confine thy rage to weaker slaves,
Laugh at *small* fools, and lash *small* knaves.

Churchill. *The Ghost*, book iii.

SMALT, *i. e. smelt.*

To make a light purple, mingle ceruse with logwood water ;
and moreover turnsoil with lac mingled with *smalt* of bice.

Peacham.

SMARAGD, D. and Ger. *schmaragd* ; Lat. *smaragdus* ; Gr. *σμαραγδος*, from *σμαρασσειν*, or *μαρασσειν*, to shine. See EMERALD.

The forth was of a *smaragde* or an emerald, which is not only grene of his owne nature, but he maketh all the ayre aboute him to seme grene also.

Bale. *Image*, part iii.

SMARAGDITES, in *Zoology*, a genus of *Hymenopterous* insects.

Generic character. *Antennæ* apparently nine-jointed, as long as the whole body, with the basal joint dilated, the second short, the third very small, the remaining long, filiform, with long hairs ; body very shining ; head rather broader than the *thorax*, the latter ovate, with the front margin rounded ; the *abdomen* rather longer, but much narrower than the *thorax*, elongate-ovate, concave above ; *tarsi* four-jointed.

Type of the genus, *S. admirabilis*, Westwood ; London, *Mag. Nat. Hist. &c.* vol. vi. p. 419. Inhabits England.

SMARIS, in *Zoology*, a genus of *Arachnides*.

Generic character. *Palpi* small, filiform, straight, simple ; mouth porrect, elongated into a beak ; eyes two ; body oval, scaly ; legs not formed for swimming, eight in number, the anterior pair longest, four posterior somewhat remote.

Type of the genus, *S. Sambuci* ; Latreille, *Gen. Crust. et Ins.* vol. i. p. 153. Inhabits various parts of Europe, on the elder ; taken occasionally in England.

SMARIS, from the Gr. *σμαρις*, a kind of *small fish*, Cuv. *Picarel*. In *Zoology*, a genus of animals belonging to the family *Menides*, order *Acanthopterygii*, class *Pisces*.

Generic character. Both jaws furnished with a narrow row of very fine teeth ; but none in the vomer ; mouth protractile ; body spindle-shaped.

This genus, with some others, were separated by Cuvier from the Linnæan *Spari* on account of the protractility of the mouth, which can be projected in the form of a tube, depending upon the length of the pedicles of the intermaxillary bones, and form his family *Menides*. The *Picarels* are distinguished from the genus *Mæna*, to which they are, in almost every respect, similar, by the absence of teeth in the vomer. They are found in the Mediterranean and in the Atlantic, but not hitherto in the Pacific Ocean, living near the shore in muddy, weedy parts, and feeding upon small fish and molluscous animals.

S. Vulgaris, Cuv. ; *Sparus Smaris*, Lin. ; *Common Picarel*. About eight inches in length, round, and spindle-shaped ; head pointed ; mouth not large when

closed, but very protractile ; both jaws furnished with a narrow row of very fine teeth, and the inferior has two cuspid teeth at its tip ; skin of the palate disposed in ridges, on which are numerous rather prominent papillæ, liable to be mistaken for teeth ; eyes large ; preopercule rather large, its limb prominent, not covered with scales, but marked with parallel vertical striæ ; opercule of moderate size, closely connected with the subopercule ; interopercule very narrow and indistinct, although separate from the other pieces, all of which and the cheek are scaly ; branchiostegal membrane narrow and supported by six rays ; body covered with strong, rough scales ; dorsal fin commencing with the second third of the length of the body, and about half its depth in height, the membrane connecting its eleven spiny and some branching rays very delicate ; anal fin supported by three spiny and four soft rays ; pectoral fins long and narrow ; caudal slightly forked ; the general colour of the fish is silvery-grey, deeper on the back, and lighter on the belly ; dorsal and caudal fins silvery-grey, the latter edged with reddish ; the other fins reddish-yellow. This species is found throughout the Mediterranean ; at Iviça it is called *Jarret*, and on the Spanish coast *Caramel* ; at Venice, according to Rondelet, it is known as the *Giroli* or *Geruli*. It lives near the shore, feeds on small crustaceous animals ; and is so abundant at Iviça that it forms more than half of the fishery. It has often been confounded with the *Pyraie* of Antibes, a fish of the Herring kind, of which sauce is made, and not of the *Picarel*.

S. Insidiator, Cuv. ; *Insidious Picarel*. More than six inches long ; the head much longer, the muzzle more lengthened ; the eye larger ; the body rounder and more slender than in the last species ; the scales very small ; it is reddish-brown on the back, and silvery on the belly, but it has not the black spot which almost all the *Picarels* have on their sides ; fins reddish, tinged with yellow, excepting the caudal, which is red. It is found off the coast of Sicily.

S. Alcedo, Cuv. ; *Kingfisher Picarel*. About seven inches in length, and deeper than the common species, as are also its dorsal and anal fins, especially their soft part, but the eyes are much smaller ; the back is grey, tinged with golden ; the sides silvery, and the belly of a light yellowish-green tint ; a blue streak passes from the tip of the muzzle below each eye, some others on the top of the head, and three on the opercule ; rows of large, bright blue spots are seen, one above and three below the lateral line ; upon the belly are six rows of paler spots ; the dorsal, anal, and caudal fins brilliant yellow, spotted with blue, and between the first and second dorsal ray is a brown spot ; pectorals reddish ; and the ventrals bluish, mingled with reddish at their base, and edged with yellow. Found in the Mediterranean ; at Nice it is called *Gerle blavié* and *Martin-pêcheur de Mer*, on account of its beautiful colours ; at Marseilles it is known as the *Varlet de ville*.

S. Chryselis, Cuv. ; *Golden Picarel*. Not more than five or six inches in length, of a thick, broad make, with the spiny part of the dorsal deeper, and its soft part and the anal shallower ; back yellow ; belly silvery, with a large, blackish spot on the sides ; sometimes there are traces of blue markings.

S. Gagarella, Cuv. ; *Gagarel Picarel*. The body of this species is deeper, and its head longer than the last species ; the brown spot on the front of the dorsal fin broader, and reaching to its fourth ray. Both these

SMARIS. species are also from the Mediterranean, and to one or other perhaps belongs Duhamel's name, *Picarelle blanche*.

SMART.

S. Angustatus, Cuv.; *Sciæna Angustata*, Solander; *Narrow Picarel*. Very nearly resembling *S. Insidiator*, from which it is distinguished by three additional soft rays to the dorsal fin; body red; tip of the muzzle yellow. Found at Madeira.

S. Royeri, Bowdich; *Royer's Picarel*. Seven inches long; the colour reddish-yellow, glazed with bright silvery, and the back deep violet; upon the body are three rows of points. It is caught at Porto Rico, in Madeira, where it is called by the Portuguese *Boquero*.

S. Melanurus, Cuv.; *Black-tailed Picarel*. Eight inches in length; spiny part of the dorsal fin much deeper than the soft part, its last spine far distant from the first soft ray, but the membrane unbroken; pectoral fins long and pointed; caudal deeply cleft; back leaden, glossed with yellowish; belly silvery; fins olive; on the tail in front of the caudal fin a large black spot, and a small one at the base of each pectoral. Is found off Goree.

S. Martinicus, Cuv.; *Martinique Picarel*. Four inches long; body rounded and shortened; reddish on the back and silvery on the belly, with a small black spot on the side. Found off Martinique.

S. Balteatus, Cuv.; *Stoiled Picarel*. Four inches long; the body rounded and narrower than the common species; the last rays of the first dorsal fin so short that the distinction between the two fins is greater than in *S. Insidiator*, to which it has much resemblance; tail forked; the back is sprinkled with small brilliant silvery spots on a reddish ground, whilst the sides and belly are silvery-white; a broad silvery band extends from above the eye across the opercule to the tail; fins pale. It is caught at Ceylon.

See Linnæi *Systema Naturæ* a Gmelin; Cuvier et Valenciennes, *Histoire Naturelle des Poissons*.

SMART, adj. D. *smerte*; Ger. *schmerz*; Sw.

SMART, n.

SMART, v.

SMA'RTLY,

SMA'RTNESS.

smarta; A. S. *smeort-an*, *dolere*, *cruciare*, to pain. It is supposed the word to have been primarily applied to the punishments of the martyrs; and is inclined to derive from the Lat. *martyrus*: he thinks that the preposition of the letter *s* is the principal objection. Perhaps from the A. S. *merr-an*, to mar, *q. v.* *Smart* is generally applied to

An acute, quick, pungent, cutting pain. *Smart, adj.*, acute, sharp, quick, lively, active, brisk; trim; spruce.

porgh *smerted* of þe law he did þam justise.

R. Brunne, p. 306.

Sir Marmeduk out cam, he trosted on þer fayth,
To him & his þei nam, & *smertly* did þam grayth.

Id. p. 300.

ge seggeþ soþ by mýsoule quap ich. ich have seýen hit ofte
Her smýt no þýnge so *smerte*. ne smelleþ so foule
As shame. Piers Plouhman. Vision, p. 228.

Hold not the devil's knif ay to thin herte,
Thine anger doth the all to sore *smerte*,
But shew to me all thy confession.

Chaucer. The Sompnoures Tale, v. 7673.

Alas! said she,
Is ther no ship, of so many as I see,
Wol bringen home my lord? than were my herte
Al warished of his bitter peines *smerte*.

Id. The Frankeleines Tale, v. 11095.

The murmur sleth myn herte and my corage,
For to myn eres cometh the vois so *smerte*,
That it wel nie destroyed hath myn herte.

Id. The Clerkes Tale, v. 8443.

And therwith he sterte up *smertly* and cast down a grote.
Chaucer. The Pardoner and Tapstere.

And for to lede hym swithe and *smarte*,
After the bright daies lawe,
There ben ordeined for to drawe,
Four hors his chare, and him withall,
Wherof the names tell I shall.

Gower. Conf. Am. book vii.

And when the sunne hath eke the darke opprest,
And brought the day, it doth nothing abate
The trauailes of mine endlesse *smart* and paine.

Surrey. Of the restless State of a Lover.

And sad repentance used to embay,
His body in salt water *smarting* sore,
The filthy blotches of sin to wash away.

Spenser. Faerie Queene, book i. can. 10.

And as some speed well ynough with their wicked deeds and
irreligion; so others againe feeble the *smart* and are punished by
the saints whom they adore, and the holy ceremonies which they
observe.

Holland. Plinie, book ii. ch. xii.

Yet, if the stony cold
Have not all seized on your frozen hart,
Let one word fall that may your grief unfold,
And tell the secretes of your mortall *smart*;
He oft finds present helpe, who does his grieffe impart.

Spenser. Faerie Queene, book ii. can. 1.

Thrice had the golden sun his hote steedes washt
In the west maine, and thrice them *smartly* lasht
Out of the baulmy east, since the sweet maide
Had in that dismall cave beene sadly laid.

Browne. Britannia's Pastorals, book ii. song 3.

Objects will then be as present, and will strike as *smartly* upon
our senses.

Barrow. Sermon 7. vol. ii. p. 172.

Her conversation might, for this reason, seem to want somewhat
of that salt and *smartness* which the ill-natured part of the world
are so fond of.

Atterbury. Sermon 6. vol. i. p. 223.

Birch—
Ah, why should birch supply the chair? since oft
Its cruel twigs compel the *smarting* youth
To dread the hateful seat.

Dodsley. Agriculture, ch. ii.

And this we denominate heat, from that best known effect we
find it have upon ourselves in raising a burning *smart* in our flesh
whenever we approach near enough.

Search. Light of Nature, vol. i. part i. ch. vii. p. 199.

SMASH, see **MASH**, a word very common in speech.

SMATCH, v. } *i. e. smack, q. v.* (by the common
SMATCH, n. } change of *ck* into *tch*.)

But yit ner the lattir
He held it nat al foly that Geffrey did clattir,
But wisely hym governyd. as Geffrey hym taught.
For percell of his wisdom he had tofore *smaught*.

Chaucer. The Marchantes Second Tule, p. 661.

Neuerthelesse no man of our tyme and in our Englishe toungue
(which none but our selves for our own vse do muche passe on)
writeth so ornately, but that he hath in sundry woordes and
phrases sum *smatche* of his natie countrey phrases, that he was
borne in.

Udall. Luke. Preface.

I prythee, Strato, stay thou by thy Lord,
Thou art a fellow of a good respect:
Thy life hath had some *smatch* of honor in it.

Shakspeare. Julius Cesar, act v. sc. 5. fol. 130.

Allowing his description therein to retain and *smatche* of veritie.
Banister. History of Man, fol. 22. Anno 1578.

We give some Latin, and a *smatch* of Greek;
Teach him to fence and figure twice a week;
And having done, we think, the best we can,
Praise his proficiency, and dub him man.

Cowper. Progress of Errour.

SMAT'TER, n. } Skinner thinks so written, *q. d.*
SMA'TTER, v. } smacker, (rather *smatcher*, see
SMA'TTERING, n. } **SMATCH**.) He that has a *smat-*

SMEATH-
MANNIA.

To smack, to taste, to savour; to have a mere taste, a slight taste or savour; to act, to employ slightly or superficially.

For I abhor to *smatter*
Of one so deuillyshe a matter,
But I will make further relacion

Shelton. Why come ye not to Court.

But in the parties themselves, these two causes I conceive of Atheism: 1. More abundance of wit than judgment, and of witty than judicious learning, whereby they are more inclined to contradict any thing than willing to be informed of the truth. They are not therefore men of sound learning for the most, but *smatterers*.

Cranmer's Letter unto Hooker.

That as for my parts, they were such as he saw;
That, indeed, I had a small *smutt'ring* of law,
Which I lately had got more by practice and reading,
By sitting o' th' bench, whilst others were pleading.

Cotton. A Voyage to Ireland, ch. ii.

The small time I supervis'd the glasshouse, I got among those Venetians some *smatterings* of the Italian tongue.

Howell. Letter 3. book i. sec. 1.

But being a virtuoso, able
To *smatter*, quack, and cant, and dabble,
He held his talent most adroit,
For any mystical exploit.

Butler. Hudibras, part iii. can. 1.

For all other sciences, they were in a manner extinguished during the course of this [Assyrian] empire, excepting only a *smatter* of judicial astrology, by which, under the name of Chaldeans, some of that race long amused ignorant and credulous people.

Sir William Temple. Works, vol. iii. p. 501. Of Ancient and Modern Learning.

Others, that they may seem universally knowing, get a little *smattering* in every thing.

Locke. Of Human Understanding, vol. ii. p. 350.

SMEAR, *v.* } See BESMEAR.

SMEAR, *n.* }

SME'ARY. }

Smergh in Scotch is marrow; and A. S. *smere*, any kind of fat, greasy substance. See Jamieson. D. *smeeren*; Ger. *schmieren*; Sw. *smörja*; A. S. *smear-an*, ungere, linere, illinere.

To cover or rub over with any greasy, slimy, dirty matter. To soil, to daub.

Her shone *smered* with talow.

Shelton. Elinour Rimming.

And Lancashire, not as the least I ween,
Thoro' three crowns three arrows *smear'd* with blood.

Drayton. The Battle of Agincourt.

But if that honest licence now you take,
If into rogues omnipotent you rake,
Death is your doom, impal'd upon a stake;
Smear'd o'er with wax, and set on blaze, to light
The streets, and make a dreadful fire by night.

Dryden. Juvenal. Satire 3.

The *smear*y wax the brightening blaze supplies,
And wavy fires from pitchy planks arise.

Rowe. Lucan. Pharsalia, book iii.

SMEATHMANNIA, in *Botany*, a genus dedicated in honour of Smeathmann, a German, who travelled in many parts of Western Africa, and collected many specimens of plants, particularly at Sierra Leone. It belongs to the class *Polyandria*, order *Polygynia*, and natural order *Passifloreæ*. Generic character: nectary one-leaved, urceolate, surrounding the bases of the stamens; stamens numerous, distinct, seated on a short column; stigmas five, peltate; capsule inflated, papery, four or five-valved; seeds dotted, numerous.

This genus consists of three species, natives of Sierra Leone; they are elegant, upright shrubs, with copious, solitary, axillary, white flowers.

SMELL,

SMELL,

SME'LLER,

SME'LLING.

This word has not been satisfactorily traced to its origin. In A. S. *smell*, the sense of smelling, is *swæc*; a word which also denoted *taste*.

Minshew derived it from the Ger. *schmeichen*; A. S. *smæcc-an*, to smack; and he did so, rashly as Skinner thought, and as he thought himself, it may be supposed, from the omission in his second edition. It may however be remarked, that the Ger. *schmeichen* denotes both *taste* and *smell*: that taste is not the mere touch of the organs of tasting, nor smell of the organs of smelling, and that from this coincidence the word applied to the one may have owed its appropriation to the other. It is only to suppose *smæclian* or *smæglian*, a diminutive of *smæccan*, and the word, by dropping the guttural, is formed. To *smell*, (see the Quotation from Locke,)

To have or cause to have sensations or feelings by the nose; through the medium of air.

To have or cause to have an odour, a scent.

To scent; to savour: to scent, to trace, discern by the scent.

ge seggeþ soþ bý mý soule quap ich. ich have seýen hit ofte
Her smýt no þýnge so smerte. ne *smelleþ* so foule
As shame.

Piers Plouhman. Vision, p. 228.

And thei tooken the bodi of Jhesus and bounden it in lynnun clothis with swete *smellynge* oynementis, as it is the custom to Iewis for to byrie.

Wiclif. John, ch. xix.

There saw I eke the fresh hauthorne
In white motley, that so swote doth *smell*.

Chaucer. The Complaint of the Black Knight.

The flourie yere yeldeth swete *smelles*, in the first sommer season warmynge.

Id. Boecius. De Consolatione, book iv.

Toward the golde he [Fabricius] gan him drawe,
Wherof [golde] in all menes loke
Parte vp in his honde he toke,
Whiche to his mouth in all haste
He put it for to *smelle* and taste,
And to his eie, and to his ere;
But he ne founde no comforte there.

Gower. Conf. Am. book vii.

And, all within, it full of wyndings is
And hidden wayes, that scarce an hound by *smell*
Can follow out those false footsteps of his.

Spenser. Faerie Queene, book v. can. 9.

Such nasty *smellers*,
That if they'd been unfurnish'd of club-truncheons,
They might have cudgell'd me with their very stinks,
It was so strong and sturdy.

Beaumont and Fletcher. The Nice Valour, act v. sc. 1.

But the milde ayre with season moderate
Gently attemptred, and dispos'd so well,
That still it breathed forth sweet spirit and holesom *smell*.

Spenser. Faerie Queene, book ii. can. 12.

Smelling is another sense, that seems to be wrought on by bodies at a distance; though that which immediately affects the organ, and produces in us the sensation of any smell, are effluvia, or invisible particles, that coming from bodies at a distance, immediately affect the olfactory nerves.

Locke. Of Human Understanding, vol. ii. p. 428.

All the *smell* of plants, and of other bodies, is caused by these volatile parts, and is *smelled* wherever they are scattered in the air; and the acuteness of *smell* in some animals shows us, that these effluvia spread far, and must be inconceivably subtle.

Reid. On the Human Mind, ch. ii. sec. 1.

They could not be far off, as we *smelled* the smoke of fire, though we did not see it.

Cook. Voyages, vol. iii. book i. ch. iv. p. 64.

SMELOWSKIA, in *Botany*, a genus so called by C. A. Meyer, after a Russian botanist. It belongs to the class *Tetradynamia*, order *Siliquosa*, and the natural

SMELL.

family of *Cruciferae*. Generic character: calyx loose, equal at the base; petals undivided; hypogynous glands four; stigma simple; silique sessile, short, attenuated at both ends, subtetragonal, two-celled, few-seeded; valves subnavicular; seeds pendulous in one series, smooth, without margins; umbilical funicle free, setaceous.

This genus is nearly allied to *Lepidium* and *Sisymbrium*, and consists of three known species, all natives of Asiatic Russia; they are small perennial plants, with entire or pinnatifid leaves, and terminal racemes of white flowers.

SMELT, v. } D. *schmelten*; Ger. *schmelzen*; Sw.

SMELTER. } *smelta*; A. S. *melt-an*, *milt-an*, to melt.

To reduce to a liquid or fluid state; usually applied to the melting of ores.

What tools are used in *smelting*, their figures, use, &c. and the whole manner of working?

Boyle. *Works*, vol. v. fol. 741. *General History of the Air*.

The *smelters* come up to the assayers.

Woodward. *On Fossils*.

Having too much water, many corns will *smilt*, or have their pulp turned into a substance like thick cream. Mortimer.

The miner, the builder of the furnace for *smelting* the ore, the feller of the timber, the burner of the charcoal to be made use of in the *smelting-house*, the brick-maker, the bricklayer, the workmen who attend the furnace, the mill-wright, the forger, the smith, must all of them join their different arts in order to produce them.

Smith. *Wealth of Nations*, vol. i. book i. ch. i. p. 16.

SMERINTHUS, in *Zoology*, a genus of *Lepidopterous* insects.

Generic character. *Antennæ* prismatic, slightly and gradually incrassated, serrated, especially in the males, the apex generally incurved and attenuated; *palpi* contiguous, minute, three-jointed, densely clothed with scales; *maxillæ* very short; head small; wings reversed during repose; anterior pair more or less angulated, and dentated on the hinder margin; *abdomen* stout, elongated, conical, not tufted at the apex: larva shagreened; head small, conical, last segment with a recurved conical horn; pupa slightly roughed, acute, and pointed at the apex, subterraneous.

Type of the genus, *Sphinx ocellata*, Linnæus, vol. ii. p. 796; Donovan, *Brit. Ins.* vol. viii. p. 47. pl. 269. Four European species; three of which occur, not uncommonly, in England; hybrids have been reared between *S. ocellatus* and *S. Populi*.

SMIRK, v. } *dere*, to smile; to smerke. Somner.

SMIRK, n. } *Suaviter et cum leni susurro ridere*.

Junius.

To smile sweetly, and with a gentle or slight murmur.

Which granted so, and held deserved due,

I may full well on stage supplie the place a while,

Till I have plainly laid before your view

That I have cause, as these, to plaine of Fortune's guile,

Which *smirking* though at first, she seeme to smooth and smile.

Mirror for Magistrates, p. 477.

So, thou maist, with thy past'rall ministralsy

Beating the aire, atweene resounding hills,

Draw to thee bonibels as *smirke*, as hy,

And wrap hem in thy love begrey their wils.

Broune. *Young Willie and old Wernock*.

CUD. Seest how brag yond bullocke beares,

So *smirke*, so smoothe, his pricked eares?

Spenser. *The Shepherd's Calendar*. Februarie.

Gay rainbow silks her mellow charms infold,
And nought of Lyce but herself is old,
Her grizzled locks assume a *smirking* grace,
And art has levell'd her deep furrow'd face.

Young. *Love of Fame*. Satire 5.

Oh! torture me not, for love's sake,
With the *smirk* of those delicate lips,
With that head's dear significant shake,
And the toss of the hoop and the hips.

Jenyns. *A Song*.

SMICKER, } A. S. *smicre*, elegant, trimme,
SMICKERING, } gallant, pretty, *smugg*; well or cun-
SMICKLY. } ningly wrought or contrived. Som-

ner.

Mr. Gifford says, "*smickly* is finically, effeminately." We should now perhaps say *smugly*. *Smickering* (in Dryden) seems to be a *smack*, or taste for.

Regardful of his honour he forsook
The *smicker* use of court humanity.

Ford. *Fame's Memorial*.

RAY. Shall I be brave, then?

HUM. Golden as the sun.

RAY. What's he that looks so *smickly*?

Id. *The Sun's Darling*, act ii. sc. 1.

We had a young doctour, who rode by our coach, and seem'd to have a *smickering* to our young lady of Pilton, and ever rode before to get dinner in a readiness.

Dryden. *Works*, vol. i. p. 88. To Mrs. Steward. Letter 35.

SMIDDY, i. e. Smithy. See SMITH.

His pate is his anvil, the forge his study; so as I may properly apply those antient verses, upon this occasion, to our truant chanterman:

That scholar well deserves a widdie,

Who makes his study of a *smiddie*.

Comment. on Chaucer, (1665,) p. 50.

SMIERA, in *Zoology*, a genus of *Hymenopterous* insects.

Generic character. *Antennæ* inserted in the middle of the forehead, thirteen-jointed, fusiform or filiform in the males, clavate in the females, the club triarticulate; *labrum* short, transverse; *palpi* four-jointed, filiform; *ocelli* three, placed in a triangle; collar broader than long, its hinder margin arched; wings four, ample, anterior with the stigma beyond the middle, united to a nervure which extends to the apex; posterior slender; *abdomen* petiolated; ovipositor beneath, concealed; *femora* large, somewhat clavate, *tibiæ* with a spine at the apex; *tarsi* rather long.

Type of the genus, *Chalcis sispes*, Fabricius; Panzer, *Faun. Ins. Germ. Init.* p. 7. pl. xi. Above twenty species; of which three inhabit England, but are not very common, being local; they occur about July.

SMIGHT. See SMITE.

SMILACINA, in *Botany*, a genus so called by Desfontaines from a diminutive of *Smilax*, on account of the similar roughness of the species. It belongs to the class *Hexandria*, order *Monogynia*, and the natural family of *Smilacæ*. Generic character: corolla inferior, six-parted, spreading; stamens six; filaments diverging, attached to the bases of the laciniae of the corolla; berry globose, three-celled.

This genus, which is nearly allied to *Convallaria*, consists of about nine or ten species; they are mostly North American herbs, with bifoliate or leafy stems, and terminal, subumbellate, racemose, or paniced inflorescence and white flowers.

SMILAX, in *Botany*, a genus so called by Linnæus, from the Greek *σμηλη*, a scraper, on account of the stems

SMERK.

SMILAX.

SMILAX. of most of the species being rough from prickles. It belongs to the class *Dioecia*, order *Hexandria*, and natural order of *Smilacæ*. Generic character: flowers of separate sexes; perianth six-parted, nearly equal, spreading; male flower with six stamens and erect anthers; female flower with a persistent perianth, a three-celled ovary, the cells one-seeded; style very short; stigmas three; berry one to three-seeded.

SMILE.

This genus consists of numerous species, natives of all the more temperate and hotter parts of the globe; they are usually climbing, prickly shrubs, with leaves resembling those of dicotyledonous plants; the roots of many of the species are the *Sarsaparilla* of the shops.

SMILE, } *D. smuylen*; Ger. *schmollen*;
SMILE, } Sw. *smæla*. The origin of this
SMILER, } word is perhaps the A. S. *smæl*,
SMILINGLY, } *exilis, gracilis*; *smelt* or *smilt*, (past
SMILINGNESS. } participle of the lost verb,) *tenuis*,
mitis, blandus, serenus. *Smylt* or *smolt wæder*. (*D. smôel wæder*.) Weather, when the sky is clear and without wind. Somner. See the Quotations from Chaucer, Phaer, and Dryden. To *smile*,

To move, to contract the features, about the mouth—especially—from some feelings of pleasure or self-satisfaction: to look favourably or kindly, to favour, be favourable or propitious to.

For as I thought, that *smiling* sign
 Was token, that the herte encline
 Would to requests reasonable,
 Because *smiling* is favorable
 To every thing that shall thrive.

Chaucer. *Dream*.

The maker of the gods and men to cher all sweetely *smyles*,
 With countenance such as from the skies y^e stormes and clouds
 exiles. Phaer. *The fyrste booke of Æneados*.

This miller *smiled* at hir nicetee,
 And thought, All this nis don but for a wile.
 They wenen that no man may hem begile,
 But by my thrift yet shal I blere hir eie,
 For all the sleighte in hir philosophie.

Chaucer. *The Reves Tale*, v. 3974.

It is of loue, as of fortune,
 That chaungeth oft, and nill contune,
 Which whylome woll of folke *smile*,
 And glombe on hem another while.

Id. *The Romant of the Rose*, p. 203.

The *smiler* with the knif under the cloke.

Id. *The Knightes Tale*, v. 2001.

A softe paas thei daunce and trede,
 And with the women otherwhile
 With sobre chere awonge thei *smile*,
 For laughter was there none on hie.

Gower. *Conf. Am.* book viii.

And eke the gentle shepheard swaynes, which sat
 Keeping their fleecy flockes as they were hyr'd,
 She sweetly heard complaine both how and what
 Her sonne had to them doen; yet she did *smile* thereat.

Spenser. *Faerie Queene*, book iii. can. 6.

And her against sweet cherefulness was placed,
 Whose eyes, like twinkling stars in evening cleare,
 Were deckt with *smyles* that all sad humors chased,
 And darted forth delights the which her goodly graced.

Id. *Ib.* book iv. can. 10.

She seeing mine eyes still on her were,
 Soon, *smilingly*, quoth she,
 Sirrah! look to your rudder there,
 Why look'st thou thus at me?

Drayton. *The Muses' Elysium*. *Nymphal* 7.

The Philosopher [Socrates] having been silent all the while,
smilingly said, I thought after so much thunder we should have
 rain.

Howell. *Letter* 9. book i. sec. 4.

Begin, auspicious boy, to cast about
 Thy infant eyes, and, with a *smile*, thy mother single out;
 Thy mother well deserves that short delight,
 The nauseous qualms of ten long months and travail to requite,
 Then *smile*; the frowning infant's doom is read,
 No god shall crown the board, nor goddess bless the bed.

Dryden. *Virgil*. *Pastoral* 4.

Thus pencils can with one slight touch restore
Smiles to that changed face that wept before.

Id. *Astræa Redux*.

Ev'n children follow'd, with endearing wile,
 And pluck'd his gown, to share the good man's *smile*;
 His ready *smile* a parent's warmth exprest,
 Their welfare pleas'd him, and their cares distrest.

Goldsmith. *The Deserted Village*.

The very knowledge that he lived in vain,
 That all was over on this side the tomb,
 Had made despair a *smilingness* assume.

Byron. *Works*, vol. i. p. 232. *Childe Harold's Pilgrimage*.

SMILIA, in Zoology, a genus of *Homopterous* insects.

Generic character. *Antennæ* short, the two basal joints thick, somewhat equal and cylindric, the terminal one forming a gradually attenuated bristle; forehead produced into a dilated rostrum; *thorax* gibbous, produced behind into an elongate, subulated scutellum, and cornute on each side; *elytra* nearly hyaline, with strong nervures; *tibiæ* compressed, angulated, and denticulated.

Type of the genus, *Centrotus cornutus*, Fabricius; Panzer, *Faun. Ins. Germ. Init.* L. fig. xix. One indigenous species only occurs, which is found not uncommonly in the neighbourhood of London; there are several foreign species.

SMILT. See **SMELT**.

SMIRCH, is perhaps *smutch'd*, or *smudg'd*.

CEL. I'll put my selfe in poore and meane attire,
 And with a kinde of vंबर *smirch* my face.

Shakspeare. *As You Like It*, fol. 187.

Th' ascent is easy, and the prospect clear,
 From the *smirch'd* scullion to th' embroider'd peer.

Smollett. *Advice*.

Hii býsegede vaste þe toun, so þat þe þrydde day
 þe Crystene ost *smot* hym.

Id. p. 403.

þei com Philip so nere, þat he cried, tak þe kýng,
 Bot non so hardi were, to *smyte* him for no þing.

R. Brunne, p. 203.

Edward did *smyte* rounde pený, halfpený, ferthýng,
 þe croice passed þe bounde of alle þorghout þe rýng.

Id. p. 238.

Batailles shulle never eft be. ne man bere eg tool
 And ýf ený man *smýþen* hit. be *smyte* þ' w' tu deþe.

Piers Ploughman. *Vision*, p. 62.

And thei that weren aboute him, and sighen that was to come
 seiden to him, Lord wher we *smyten* with swerd? And oon of hem
smoot the seruaunt of the prince of prestis, and kittide of his right
 eere.

Wiclif. *Luke*, ch. xxii.

When they whiche were about him sawe what woulde folow,
 they said vnto him: Lorde, shall we *smyte* wyth swearde. And one
 of them smote a seruaunte of the hiest priest of all, and *smote* of
 his ryght eare.

Bible, Anno 1551.

And lo oon of hem that weren with Jhesus streyghte out his
 honde and drough out his swerd, and he *smote* the seruaunt of the
 prince of prestis, and kitte of his eere.

Wiclif. *Matthew*, ch. xxvi.

SMILE.

SMITE.

SMITE. And behold, one of them which were wyth Jesus, stretched out
hys hande and drewe hys swerde, and stroke a seruaunt of the hie
priest, and *smote* of his eare. *Bible, Anno 1551.*

A techere, not ghoun mych to wyn, not a *smyster* but temperat.
Wiclif. 1 Tymo. ch. iii.

How gret a sorwe suffereth now Arcite?
The deth he feleth thurgh his herte *smite*;
He wepeth, wailleth, crieth pitously.
Chaucer. The Knightes Tale, v. 1151.

And on the nose he *smote* him with his fist;
Doun ran the bloody streme upon his brest.
Id. The Reves Tale, v. 4203.

For if the wolfe come in the waie
Their gostly staffe is then awaie,
Wherof thei shuld their flokke defende.
But if the poure shepe offende
In any thyng, though it be lite,
Thei ben all ready for to *smile*.

Gower. Conf. Am. Prologue.

And when I called, no man gaue me answe. Was my hande
cleane *smitten* of, that it myghte not helpe? Or had I not power
to delyuer? *Bible, Anno 1551. Esaye, ch. l.*

The Lorde God hath opened myne eare, therefore can I not say
nay; nor withdrawe my selfe, but I offer my back vnto the
smiters, and my chekes to the nippers. *Id. Ib.*

Suddeinly an innumerable flight
Of harmefull fowles about them fluttering cride,
And with their wicked winges them ofte did *smight*,
And sore annoyed, groping in that griesly night.
Spenser. Faerie Queene, book ii. can. 12.

— Till Satan, who that day
Prodigious power had shewn, and met in armes
No equal, raunging through the dire attack
Of fighting Seraphim confus'd, at length
Saw where the sword of Michael *smote*, and fell'd
Squadrons at once.

Milton. Paradise Lost, book vi. l. 246.

So the workeman comforted the founder, and hee that *smote*
with the hammer, him that *smote* by course, saying, It is readie
for the sodering, and he fastened it with nailes that it should not be
moued. *Bible, Anno 1583. Isaiah, ch. xli. v. 7.*

— Yet not the more
Cease I to wander where the Muses haunt
Cleer spring, or shady grove, or sunnie hill,
Smit with the love of sacred song.
Milton. Paradise Lost, book iii. l. 26.

— And the torrid clime
Smote on him sore besides, vaulted with fire.
Id. Ib. book i. l. 302.

If, like Moses' rod, it turns us into serpents, and that we repent
not, but grow more devils; yet then it turns into a rod again, and
finishes up the *smiting*, or the first designed affliction.

Taylor. Sermon 12. vol. ii. p. 219.

One hand her bosom *smites*; in one appears
The lifted lawn, that drinks her falling tears.
Savage. The Wanderer, can. 2.

— Breath'd hot,
From all the boundless furnace of the sky,
And the wide glittering waste of burning sand,
A suffocating wind the pilgrim *smites*
With instant death. *Thomson. Summer.*

All that secret regret, and those inward *smittings*, laniatus and
ictus, which are so often felt in the minds of men, upon the com-
mission of any great sin, do argue some common intimations, even
in the light of nature, of another judgment after this life, wherein
they shall be accountable for such actions as men do not punish or
take notice of.

Wilkins. Of Natural Religion, book i. ch. xi.

Smit with the glorious avarice of fame,
He claims no less than an immortal name.

Mason. Art of Painting.

SMIDDY. } this name was given to all who *smote*
VOL. XXVII.

with the hammer. See **CARPENTER**; and Tooke, vol. ii.
p. 414, 8vo. Ed., Note by the Editor. In *Isaiah* xli. 7.
our version has "The carpenter encouraged the gold-
smith." The *Bible*, 1551, reads, "The *smythe* con-
forted the moulder."

SMITH.

SMOCK.

[He] shal be demed to þe dep. bote yf he do hit *smythie*
In to sykkel of into sithe. to shar oper to culter.

Piers Plouhman. Vision, p. 61.

A softe pas he went him over the strete
Until a *smith*, men callen dan Gerveis,
That in his forge *smithed* plow-harneis;
He sharpeth share and cultre besily.
Chaucer. The Milleres Tale, v. 3687.

Ther were also of Martes division,
The armerer, and the bowyer, and the *smith*,
That forgeth sharpe swerdes on his stith.
Id. The Knightes Tale, v. 20026.

The god of fire, whiche Vulcanus
Is hote, and hath a crafte forth with
Assigned for to be the *smith*
Of Jupiter. *Gower. Conf. Am. book v.*

Your borrowed meane to moue your mone, of fume withouten flame,
Being fet from *smithy* smoaking coale, ye seeme so by the same
To shew is what such coals use, taught by such as have assayde.
Answer to the Complaint of a Hot Woer, &c.

For as the *smith* with hammour beats
His forged mettall, so
He dubs his club about their pates
And sleas them on a row.
Warner. Albion's England, book ii. ch. vii.

His blazing locks sent forth a crackling sound,
And hiss'd like red hot ir'n within the *smithy* drown'd.
Dryden. Ovid. Metamorphoses, book xii.

It is impossible to separate so entirely the business of the gra-
zier from that of the corn-farmer, as the trade of the carpenter is
commonly separated from that of the *smith*.

Smith. Wealth of Nations, vol. i. book i. ch. i. p. 8.

The din of all this *smithery* may some time or other possibly
wake this noble Duke, and push him to an endeavour to save some
little matter from their experimental philosophy.

Burke. Works, vol. viii. p. 61. A Letter to a Noble Lord.

SMITHIA, in *Botany*, a genus so named in honour
of Sir J. E. Smith, late President of the Linnæan Society.
It belongs to class *Diadelphia*, order *Decandria*, and
natural family of *Leguminosæ*. Generic character:
calyx bipartite; corolla papilionaceous; stamens divided
into two equal bundles; legume transversely articulated,
plicate, enclosed in the calyx.

This genus, consisting of three species, is nearly
allied to *Æschynomene*, but is distinguished from it by
the enclosed legume. Annual trailing plants with pin-
nate leaves, and racemes of yellow flowers.

SMOCK, } A. S. *smoc*,—now applied (though not
SMOCKLESS. } exclusively) to the simple under dress
of a female,—seems formerly to have been an article
of more importance, and may be from the A. S. *smicre*;
D. *smuck*; Ger. *schmuck*; Sw. *smuck*; *ornatus*, dressed,
adorned. Piers Plouhman opposes it to hair, (i. e. a
hair-shirt;) Chaucer speaks of it as wrought with silk.
See **SMUG**.

Hue sholde unsywe hure *smok*. and sette þer an heire,
To afaiten hure flesch. þat fers was to synne.
Piers Plouhman. Vision, p. 87.

For through her *smocke*, wrought with silke,
The flesh was seene as white as milke.
Chaucer. The Romant of the Rose, p. 180.

Naked out of my fadres hous (quod she)
I came, and naked I mote turne againe.
All your plesance wolde I folwe fain;
But yet I hope it be not your entent,
That I *smokies* out of your paleis went.
Id. The Clerkes Tale, v. 8684.

SMOCK.

SMOKE.

Tho casten thei, that he and shee,
Footthe with their children on the morowe,
As thei that were full of sorowe,
All naked but of *smocke* and sherte,
To tendre with the kynges herte,
His grace shuld go to seche,
And pardon of the death beseche.

Gower. *Conf. Am.* book i.

On th' other side they saw the warlike mayd
Al in her snow-white *smocke*, with locks unbownd,
Threatening the point of her avenging blade.

Spenser. *Faerie Queene*, book iii. can. 1.

In which house [Serrani] this order was precisely kept, that
there was not a woman among them knowne to weare any linnen
about her, not so much as in a *smocke* next her bare skin.

Holland. *Plinie*, book xix. ch. i.

They [a pair of drawers] are of a thin rose-coloured damask,
brocaded with silver flowers. My shoes are of white kid leather,
embroidered with gold. Over this hangs my *smocke*, of a fine white
silk gauze, edged with embroidery.

Lady Montague. *Letter* 29.

Old chiefs, reflecting on their former deeds,
Disdain to rust with batter'd invalids;
But active in the foremost ranks appear,
And leave young *smock-fac'd* beaux to guard the rear.

Fenton. *Prologue to Southerne's Spartan Dame*.

SMOKE,

SMOKE,

SMO'KER,

SMO'KELESS,

SMO'KING, n.

SMO'KY.

D. *smoock*, *smuyck*, *smoken*,
smook-en, *smuycken*; A. S. *smic-an*,
fum-are, *evaporare*, to evaporate,
to exhale, to reek; to cause an ex-
halation, a cloud, a fume, to fume, to
fumigate; and, consequentially, ap-
plied to express a rapidity of motion: causing the exha-
lation of heat, a discovery, (as smoke of latent fire,) a
perception of first symptoms.

To *smoke* a person is nearly equivalent to—to roast him.

And sette azen þe Cristenemen assure in ech ende,
þat þe *smoke* þer of hem ssolde boþe stenche & blende.

R. Gloucester, p. 407.

A bresid reed he schal not breke, and he schal not quench
smokyng flex til he caste out doom to victorie.

Wiclif. *Matthew*, ch. xii.

And a *smoke* of the pitt stighide up as the *smoke* of a greet fur-
neis.

Id. *Apocalips*, ch. ix.

And there arose the *smok* of a great fornace.

Bible, Anno 1551.

The vnstable mountaigne that hight Ueseuus, writheth out
through his broken chimeneis, *smokyng* fires.

Chaucer. *Boecius. De Consolatione*, book i.

The bente Mone with her hornes all pale,
Saturnus and Jove, in Cancro ioyned were,
That such a raine from heaven gan availe,
That every maner woman that was there,
Had of that *smoky* raine a very feere.

Id. *Troilus and Creseide*, book iii.

It was a vault ybuilt for great dispence,

With many raunges reard along the wall,
And one great chimney, whose long tonnell thence
The *smoke* forth threw.

Spenser. *Faerie Queene*, book ii. can. 9.

This is that pernicious *smoake* which sullyes all her glory, su-
perinducing a sooty crust or furr upon all that it lights, spoyling
the moveables, tarnishing the plate, gildings, and furniture, and
corroding the very iron bars and hardest stones with those piercing
and acrimonious spirits which accompany its sulphure.

Evelyn. *Fumifugium*.

Thear, cousing ore two sticks a-crosse,

Burnt at a *smoakie* stocke,

They chat how young men them in youth,

And they did young men mocke.

Warner. *Albion's England*, book ix. ch. xlvi.

He was first *smoak'd* by the old Lord Lafew; when his disguise
and he is parted, tell me what a sprat you shall finde him.

Shakspeare. *All's Well that Ends Well*, act iii. sc. 6. fol. 244.

I know not whether you took notice of the *smoke-jack* in my
brother's kitchen chimney, which has been there I have heard near
a hundred years, and has seldom stood still from its first setting
up, night or day; it makes very little noise, needs no winding up,
and for that preferable to the more noisy inventions.

Evelyn. *Miscellaneous Works*, p. 691. To Aubrey, Feb. 1675.

The volcan may easily be known, because there is not any other
so high a mountain near it, neither is there any that appears in the
like form all along the coast; besides it *smoaks* all the day, and
in the night it sometimes sends forth flames of fire.

Dampier. *Voyages*, vol. i. ch. v. p. 119. Anno 1684.

The public scribe or registry of the university that now was,
being given more to bibbing and *smoaking* than the duty of his
office, many learned and valiant persons are omitted by him.

Wood. *Fasti Oxonienses*, vol. ii.

TINSEL. Thou'rt very smart, my dear. But see! *Smoke* the
doctor.

Addison. *The Drummer*, act iii. sc. 1.

No rafter'd roofs with dance and tabor sound,
No noontide bell invites the country round;
Tenants with sighs the *smoakless* towers survey,
And turn th' unwilling steeds another way.

Pope. To Lord Bathurst. *Epistle* 3.

We went by the way of one of those hot *smoaking* places before
mentioned, and dug a hole in the hottest part; and the mercury
presently rose to 100°.

Cook. *Voyages*, vol. iv. book iii. ch. ix.

SMOKE-JACK. See *Treatise on MANUFACTURES*.

SMOKING CHIMNEYS. See CHIMNEYS.

SMOLENSK, a Government of European Russia,
is bounded on the North by Tver; on the East by the
Governments of Moscow, Kalouga, and Orel; on its
extreme South by that of Tchernigov; on the West by
those of Vitebsk and Moghilev; and on the North-West
by Pskov. The general survey gives this Government
an area of 954 square geographical miles; but the cal-
culation of Schubert, which raises this cipher to nearly
double the amount, namely, to 1800 square geographical
miles, is that preferred by M. Schnitzler.

The country forms a rather high table-land, varied by
considerable undulations, which for the most part occur
along the rivers and towards the North-West, where the
ramifications of the hills, anciently called the *Mons*
Alaunus, make their appearance.* Its principal rivers
are the Dvina, which touches its North-Western fron-
tier, and the Dniepr, which traverses the Government
through nearly two-thirds of its length. (See RUSSIA.)
In all, there are about 80 rivers in the Government.
Smolensk is covered with marshes, which are more nu-
merous than the lakes; the latter are computed at 150
in number, but are inconsiderable in point of size. Ge-
nerally speaking, the climate is damp and cold, and the
Winters long and severe; yet these are compensated by
the warmth of the Summers, which quickly develops a
vigorous vegetation. With some few exceptions the air
is healthy.

We have no data to estimate the proportion of the
land in tillage. However, the soil is in general fertile,
and the corn harvest furnishes an annual excess of
about 200,000 chetwerts. Next to wheat and rye, the
chief agricultural products are hemp and flax; tobacco
and hops form subsidiary branches of rural industry.
The pasture lands are very good; but the breeding of
cattle is in a very backward state. It is the timber
supplied by the immense forests of the country which
constitutes the staple of its wealth, being calculated for
the various wants both of civil and naval architecture.
These forests abound in wild animals; bears, wolves,
the wild boar, deer, and game of every kind. The
fisheries are of little value. Swine are reared in abun-

SMOKE.

SMO-

LENSK.

mate, &c.Agricul-
ture, &c.

SMO-
LENSK.Manufac-
tures.

dance, and wax and honey are furnished by apiculture in considerable quantities. Iron and copper are met with here, and salt abounds.

Smolensk cannot be called a manufacturing Government, though there are numerous saw-mills, distilleries, and works for the preparation of tar. Independently of these, the number of manufactories in 1830 was estimated at 71, employing 1770 workmen: they are chiefly glassworks and tanneries.

Trade.

The towns of Smolensk, Viazma, and Gjatsk, are the chief seats of the trade of the Government, which consists of timber floated down the Dniepr, and the rivers communicating with the Dvina and Oka; grain, flour, hemp, flax, flaxseed, hogs' bristles, honey, wax, skins, tobacco, &c., which articles are forwarded to Riga, Vilna, and Moscow. The capital declared by the merchants, according to M. Huot, is 800,000 rubles, though M. Schnitzler states that, so far back as 1802, the declared capital amounted to 7,700,000 rubles.

Schools.

With respect to education, this Government is included in the jurisdiction of the University of Moscow. In 1831 the ecclesiastical schools, or schools under the superintendence of the clergy, amounted to 18, having 45 masters, and 1097 pupils; the civil schools, in 1831, were eight in number, with 27 teachers, and 1534 scholars. There are two printing-offices, one of which belongs to the Crown.

Churches.

The *Eparchy of Smolensk and Dorogobouj* is under the administration of either an Archbishop or a Bishop; and, in 1830, it comprised nine Monasteries, one Convent, 13 Cathedrals, and 609 Churches.

Revenue.

Smolensk is the seat of a military governor, in whose Government other Provinces are sometimes included. Its revenues are estimated at 3,648,000 rubles; and its expenses, according to the ancient regulation, are fixed at only 67,026 rubles.

This Government is divided into the 12 districts of Smolensk, Krasnõi, Roslavl, Ielnia, Dorogobouj, Ioukhonof, Viazma, Gjatsk, Sytchefsk, Bieloï, Doukhovchina, and Porétchiè. The population, at the commencement of 1827, was 1,325,000 souls.

Chief
towns

Smolensk, the capital of the Government, lies on either bank of the Dniepr, which traverses it from East to West, but chiefly on the left bank. A wooden bridge is thrown over the river. It is not a fine town, but it is picturesquely situated, and previously to its being burnt, in 1812, by Barclay de Tolly, when he evacuated it before the French army, its fantastic appearance, and the singular contrasts presented by its wooden huts, brick churches, irregular streets, and turreted walls, form a favourite theme with travellers. (See Coxe, *Travels into Poland, Russia, Sweden, and Denmark*.) Since the fire it has been better built, and many of the houses are of stone. Smolensk contains a Lutheran and a Catholic Church, 16 Greek Churches, and three religious houses. Its two Cathedrals boast of immense wealth; and in one of them is the celebrated image, called *Smolenskõi*, to which the Russians partly attribute the success of Koutousof. There are here a Gymnasium, a Seminary, a Military School for the children of nobles, Hospitals, and various manufactories. Of the latter, the carpet manufacture employs many looms, set up in private houses, and chiefly worked by women. The carpets are highly esteemed throughout Russia.

Smolensk is one of the sacred towns of the Empire. It was founded before the IXth Century, and, claiming the title of Grand Principality, entered into rivalry with

that of Kiev. Its Princes long maintained their independence against Kiev and the Moscovites, as well as against the Lithuanians and the Tatars. After undergoing various changes, and being the subject of long wars between Poland and Russia, it was finally ceded to the latter country in 1667. Its fortifications were considerably strengthened and improved by Peter the Great, and have been carefully repaired since the conflagration of 1812.

Population 11,155. North latitude 54° 46', East longitude 32° 43'.

Viazma, which is seated at the confluence of the Viazma and the Bebrï, is built on a hill, and the spaces between the houses are so large as to make the town appear much more considerable than it really is; an illusion fostered by the steeples and cupolas of its twenty churches. However, it is said to contain more than 12,000 inhabitants. Viazma was formerly an apanage of the Principality of Smolensk.

Gjatsk, a small town containing only 2400 inhabitants, is of note from its annual fair, held on the 8th of July, and as being a place of transit for all the products of the country expedited to Moscow and Petersburg.

Remembrances of the triumphs and defeats of the French *Grande Armée* are attached to numerous localities in this Government; and particularly to *Krasnõi*, and the little village of *Valoutina-Gora*. The former was the seat of two battles in which the French and Russians were alternately victors. At the latter Ney, who commanded the advanced guard of the French, was held in check by the rear-guard of the Russians under Korf, during a sanguinary contest which night alone terminated.

Muller, *Sammlung Russ. Gesch.*; Schnitzler, *La Russie, la Pologne, et la Finlande*; Segur, *Histoire de Napoléon et de la Grande Armée en 1812*.

SMOOR, or } D. *smooren*; A. S. *smoran*, to smore. } ther.

So he wrapped them and entangled them, keping down by force the fether-bed and pillowes hard vnto their mouthes, that within a while *smored* and stifled, theyr breath failing, thei gaue vp to God their innocent soules into the ioyes of heauē.

Sir Thomas More. *Workes*, fol. 68.

SMOOTH,

SMOOTH,

SMO'OTHEN,

SMO'OTHER,

SMO'OTHLY,

SMO'OTHNESS.

A. S. *smoeth*, from *smeth-ian*, *planare*, *æquare*, to make plain or even, perhaps by *smiting* or beating flat. See the Quotation from *Isaiah*. To make plain or even, to flatten, to level; to polish; to move evenly, to glide; to flow; to level or remove roughness, harshness, difficulty; to ease, to mitigate, to mollify.

be abbey of Redynges, & of Cyrencestre al so,

Hii rerde vorst of *smeye* grounde, & gut mo perto.

R. Gloucester, p. 424.

Her fleshe tender as is a chicke

With bente browes, *smooth* and slicke.

Chaucer. *The Romant of the Rose*, p. 175.

Some other thinke, the mettall maketh all,

Which tempred is both rounde and *smooth* to see.

Gascoigne. *The Fruites of Fetters*.

The fore castel of my ship

Shall glide and *smothely* slip

Out of the waues wode

Of the stormye floude.

Skelton. *Colin Clout's come Home again*.

So the carpenter encouraged the goldsmith and he that *smootheth*

SMO-
LENSK.

SMOOTH.

SMOOTH. with the hammer, him that *smote* the anvil, saying, it is ready for the sodering; and he fastned it with nails, that it should not be moved.—In *Bible*, 1551, “The iron *smyth* confornted the hammer-man.” In 1583, “Hee that *smote* with the hammer, hym that *smote* by course.” *Bible. Isaiah*, ch. xli. v. 7.

SMO-THER.

Beholde, Esau my brother is roughe, and I am *smooth*
Bible, Anno 1551. Genesis, ch. xxvii.

And she put y^e skynnes upon his hands and upon the *smoothe* of his neck.
Id. Ib.

For though we live amongst the tongues of praise,
And troops of *smoothing* people, that collaud
All that we do. *Daniel. To Lady Anne Clifford.*

Such smiling rogues as these,
Like rats oft bite the holy cords atwaine,
Which are t^r intrince t^r vnloose; *smooth* euery passion
That in the natures of their lords rebell.
Shakspeare. Lear, act ii. sc. 2. fol. 293.

For in this *smoothing* age who durst indite
Hath made his pen an hired parasite,
To claw the back of him that beastly lives,
And pranck base men in proud superlatives.
Hall. Satires. Prologue.

Come, my fair girls, let's see, what will you buy?
Here be fine night-masks, plaster'd well within,
To supple wrinkles, and to *smooth* the skin.
Drayton. The Muses' Elysium. Nymphal 7.

How sweetly did they flote upon the wings
Of silence, through the empty, vaulted night,
At every fall *smoothing* the raven down
Of darkness 'till it smiled. *Milton. Comus.*

And on the top of all, that passers by
Might it behold, the toomb he did provide
Of *smoothest* marble stone in order set,
That never might his luckie scape forget.
Spenser. Virgil. Gnat.

The British language, which our vowels wants,
And jars so much upon harsh consonants,
Comes with such grace from thy mellifluous tongue.
As do the sweet notes of a well-set song,
And runs as *smoothly* from those lips of thine,
As the pure Tuscan from the Florentine.
Drayton. Queen Catharine to Owen Tudor.

Ne any lake, that seems most still and slowe,
Ne poole so small, that can his *smoothnesse* holde
When any winde doth under heaven blowe.
Spenser. Faerie Queene, can. 7. *Of Mutabilitie.*

Among these they were distinguished by the name of scalds, a word which denotes “*smoothers*, and polishers of language.”
Percy. On Ancient Minstrels, p. 22.

The ship is wafted on with gentle gales,
And o'er the calm Ionian *smoothly* sails.
Dryden. Ovid. Metamorphoses, book xv.

How soon a beauteous mind repairs
The loss of chang'd or falling hairs;
How wit and virtue from within
Send out a *smoothness* o'er the skin.
Swift. To Dr. Sheridan.

How many different trades are employed in each branch of the linen and woollen manufactures, from the growers of the flax and the wool to the bleachers and *smoothers* of the linen, or to the dyers and dressers of the cloth.

Smith. Wealth of Nations, book i. ch. i. p. 8.

The *smoothness* of the sea sufficiently convinced us that we were surrounded by them, [low overflowed isles,] and how necessary it was to proceed with the utmost caution, especially in the night.

Cook. Voyages, vol. i. book i. ch. ix. p. 130.

SMO'THER, v. } *D. smooen*; *A. S. smor-an*, to
SMO'THER, n. } *smudder* or *smother*.

To suffocate, to stifle; to choke; to keep or restrain from issuing forth, to suppress.

She, *smothered* with so monstrous a weight, did sink down under it to the earth.
Sidney. Arcadia, book iii. p. 602.

They yeeld a distinction and varietie in our words, cutting and hewing them thicke and short, framing them pleasant, plaine, and

readie, drawing them out at length, or *smuddering* and drowning them in the end.

Holland. Plinie, book vii. ch. 116.

ORL. I rest muche bounden to you; fare you well.
Thus must I from the *smoake* into the *smother*,
From tyrant duke vnto a tyrant brother.

Shakspeare. As You Like It, fol. 186.

There is nothing makes a man suspect much, more than to know little; and therefore men should remedy suspicion, by procuring to know more, and not to keep their suspicions in *smother*.
Bacon. Of Suspicion.

But there is a more fiery sort of zeal, and more dangerous than this; which may lie *smothering* for a time, till it meets with suitable matter and a freer vent, and then it breaks out into a dreadful flame.
Stillingfleet. Sermon 6. vol. ii. p. 367.

SMO'ULDER, v. } *Smoulder, smouder, smooder,*
SMO'ULDER, n. } *smudder, smother, seem to be*
SMO'ULDRY. } merely different ways of writing

the same word; from the *A. S. smoran*, to smoor or smore, *q. v.* Sir Thomas More writes *smowder*, Jewell *smooder*, Holland *smudder*. *Smoulder* seems now commonly applied to the smother of smoke arising from any thing heated or on fire.

Mine eyes can neyther quenche the cole,
Which warms my heart in all this haste.
Nor yet my fancie make such flame,
That I may *smoulder* in the same.

Gascoigne. Dan Bartholmew of Bathe.

And y^t is y^t thig y^t Poule signifieth by the wood, hay, and strawe, of which the tone is a light flame sone ended, the tother *smowdret* much lenger, and the third is hottest and endureth longest.

Sir Thomas More. Workes, fol. 371. *The Supplication of Soules.*

Now the Sonne is vp, your *smooder* is scattered. God with his truthe wil haue the victorie.

Jewell. Works, part i. fol. 651. *Answer to M. Hardinge.*

The powder sends his smoke into the cruddy skies,
The *smoulder* stops our nose with stench, the fume offends our eies.
Gascoigne. Deuise of a Maske for Viscount Mountacute, p. 495.

They preassed forward vnder their ensignes, bearing downe suche as stooode in their way, and with their owne fire *smouldered* and burnt them to ashes.

Holinshed. History of England, vol. i. book iv. ch. ix. p. 494.

A great number of them falling with their horssees and armour into a blind ditch (shadowed with reed and sedges which grew therein) were *smouldered* and pressed to death.
Id. Ib. book viii. ch. xi. p. 762.

With such a horrid clang
As on Mount Sinai rang,
While the red fire and *smouldring* clouds out brake.
Milton. Ode 17.

— The heavens it doth fill
With thundring noyse, and all the ayre doth choke,
That non can breath, nor see, nor heare at will,
Through *smouldry* cloud of duskish stincking smoke.
Spenser. Faerie Queene, book i. can. 7.

Or, by the holy butcher if he fell,
Th' inspected entrails could no fates foretel;
Nor, laid on altars, did pure flames arise;
But clouds of *smouldering* smoke forbade the sacrifice.
Dryden. Virgil. Georgics, book iii.

— Such—but envious time
Forbids the Muse to these fair scenes to rove,
Still minding her of her unfinish'd theme,
From russet heaths, and *smouldring* furnaces,
To trace the progress of thy steely arts.
Jago. Edge-Hill, book iii.

SMUDGE, } Formed upon the *n. smut, q. v.*
SMUTCH, v. } (*smutchin* in Howell,) so called from
SMUTCHIN. } its dirtiness.
To smear or stain with dirt or filth.

SMO-THER.

SMUDGE.

SMUDGE.

SMUG-
GLE.

But rather wish the beauty of the mind
Which neither time can alter, sickness change,
Violence deface, nor the blacke hand of enuy
Smudge and disgrace, or spoile or make deformed.
A Pleasant Conceited Comedy, 1608, sig. I. 3.

What! hast smutch'd thy nose?
They say it is a copy out of mine.
Shakspeare. The Winter's Tale, act i. sc. 2. fol. 278.

One shall commonly see the serving-maid upon the washing-block, and the swain upon the ploughshare, when they are tir'd with labour, take out their boxes of smutchin and draw it into their nostrils with a quill, and it will beget new spirits in them with a fresh vigor to fall to their work again.

Howell. Letter 7. book iii.

Praise from the rivell'd lips of toothless bald
Decrepitude, and in the looks of lean
And craving poverty, and in the bow
Respectful of the smutch'd artificer,
Is oft too welcome, and may much disturb
The bias of the purpose.

Cowper. The Task, book ii.

Examine well
His milk-white hand; the palm is hardly clean—
But here and there an ugly smutch appears.
Foh! 'twas a bribe that left it; he has touch'd
Corruption.

Id. Ib. book iv.

SMUG, *n.* } D. *smuck, smucken*; Ger. *schmuck*,
SMUG, *v.* } *schmucken*; Sw. *smuck, smyka, ornatus*,
SMUGLY. } *ornare*. "Smug is the past participle
of *smæg-an, smeag-an, deliberare, studere, considerare*.
Applied to the person or to dress, it means *studied*: that
on which care and attention have been bestowed."
Tooke.

Studiously nice or neat; studiously or carefully dressed.

I could haue brought a noble regiment
Of smugskinnde nunnes into my countrey soyle.
Gascoigne. Voyage into Hollande, Anno 1572.

Thus said, he smugg'd his beard, and stroked up fair.
Drayton. Poly-olbion, song 21.

But meane time, my men,
In Circe's house, were all, in seuerall baine
Studiously sweetn'd, smugd with oil, and deckt
With, in, and outweeds; and a feast secret
Seru'd in before them.

Chapman. Homer. Odyssey, book x.

No sooner doth a yong man see his sweet-heart coming, but he
smugs up himself, puls up his cloak now faln about his shoulders,
ties his garters, points, sets his band, cuffs, sticks his hair, twires
his beard, &c.

Burton. Anatomy of Melancholy, vol. ii. p. 335.

Stir her against ye in whose hand your life lies?
More than your life, your honour? what smug Amazon
Was that I brought you?

Beaumont and Fletcher. The Lover's Progress, act iii. sc. 1.

JUL. Would I were nearer to him,
A young smug handsom holines has no fellow.
Id. The Pilgrim, act i. sc. 2.

Lilies and roses will quickly appear,
And her face will look wond'rous smugly.
Gay. Beggar's Opera, act i. sc. 1.

SMUGGLE, *v.* } D. *smokkelen, smokkelaar*; from
SMUGGLER, } A. S. *smug-an, serpere*, to creep
SMUGGLING, *n.* } by little and little. Somner.
To creep in, to steal in; to act by stealth; silyly or
insidiously, with a view to escape detection.

We might there find proofs of his perfidious behaviour, and per-
haps at the same time discover the secret of his smuggling cor-
respondence with his neighbouring governors, and the Spanyards
of Buenos Ayres.

Anson. Voyages, &c. book i. ch. v. p. 75.

Smuggling, or the offence of importing goods without paying the
duties imposed thereon by the laws of the Customs and Excise, is
an offence generally connected and carried on in hand with the
former, [owling.]

Blackstone. Commentaries, book iv. ch. xii. p. 155.

And I had the greatest reason to believe that not a single
article was smuggled by any of our people who were admitted on
shore, though many artful means were used to tempt them.

Cook. Voyages, vol. i. book i. ch. ii. p. 28.

The most hazardous of all trades, that of a smuggler, though,
when the adventure succeeds, it is likewise the most profitable, is
the infallible road to bankruptcy.

Smith. Wealth of Nations, book i. ch. x. p. 151.

In order to discourage the practice of smuggling, and prevent the
desperadoes concerned therein from enlisting in the service of the
enemy, a law was passed, enacting that every person who had
been, before the first of May in the present year, guilty of illegal
running, &c.

Smollett. History of England, George II. (1757,) sec. 34.

SMUT, } D. *smetten, besmetten*; Ger.
SMUT, } *schmitzen*; Sw. *smitta*; A. S. *smit-*
SMUTTY, } *tan, besmittan, polluere, maculare,*
SMUTTILY, } *inficere*;
SMUTTINESS. } To defile, to dirty, to smear or
stain with dirt or filth; to pollute, to contaminate.

Smut, in corn, a disease showing itself by a dirty
blackness.

Let me add, that, considering the sottishness of superstition in
the age he [Henry of Huntingdon] lived in, he is less smoohted
therewith than any of his contemporaries, and, being a secular
priest, doth now and then abate the pride of monastical pretended
perfection.

Fuller. Worthies. Huntingdonshire.

I am the rather confirmed in my hopes, because a help hath
been found out against the smooting of wheat, at least wise in some
good proportion; I say, the smooting of wheat which makes it a
negro, as mildew makes it a dwarfe; viz. by mingling the seeds
with lyme, as your husbandmen will inform you.

Id. Ib. Middlesex.

Ye Acherusian fens, to mine resign your glory,
Both that which lies within the goodly territory
Of Naples, as that fen Thesposia's earth upon,
When that infernal flood, the smutted Acheron
Shoves forth her sullen head.

Drayton. Poly-olbion, song 25.

I think Clotho had her fingers smutted in snuffing the candle,
when she began to spin the thread of her life, and Lachesis
frowned in twisting up.

Howell. Letter 1. book ii.

Or at the ear of Eve, familiar toad,
Half froth, half venom, spits himself abroad,
In puns or politics, or tales, or lies,
Or spite, or smut, or rhymes, or blasphemies.

Pope. Prologue to Satires, v. 319.

The steam of lamps still hanging on her cheeks
In rosy smut.

Dryden. Juvenal. Satire 6.

We only fear the beaux may think it hard,
To be to-night from smutty jests debarr'd.

Congreve. Epilogue.

It is the same poverty which makes men speak or write smuttiy
that forces them to talk vexingly.

Tatler, No. 269.

I found my vines, peaches, apricots, and plums upon my best
south walls, and sometimes upon my west, apt for several years to
a soot or smuttiiness upon their leaves first, and then upon their
fruits, which were good for nothing the years they were so affected.

Sir William Temple. Works, vol. iii. p. 241. On Gardening.

Let the grave sneer sarcastic speak thee shrewd,
The smuttiy joke ridiculously lewd.

Smollett. Advice.

An untimely shower, or an unseasonable drought; a frost too
long continued, or too suddenly broken up with rain and tempest;
the blight of the spring, or the smut of the harvest, will do more to
cause the distress of the belly than all the contrivances of all
statesmen can do to relieve it.

Burke. On a Regicide Peace. Letter 3.

SMUG-

GLE.

SMUT.

SMYN-
THURUS.SNAF-
FLE.

SMYNTHURUS, in *Zoology*, a genus of *Ametabola*.
Generic character. *Antennæ* geniculated, and ter-
minated with very numerous, extremely robust articu-
lations; *palpi* not exerted, inconspicuous; *abdomen*
globose; tail furcate, and bent beneath the abdomen;
legs six.

Type of the genus, *Podura atra*; Linnæus, *Syst.*
Nat. vol. i. p. 1013. There are but few species of this
genus; they occur in damp hedges, on the ground, and
leap well.

SMYRNA. See NATOLIA.

SMYRNIUM, in *Botany*, a genus so called from the
Greek *σμύρνα*, a synonyme of *μύρρα*, the odour of
Myrrh being common to umbelliferous plants. It
belongs to the class *Pentandria*, order *Digynia*, and
natural family *Umbellifera*. Generic character: margin
of calyx obsolete; petals lanceolate or elliptic, entire,
acuminated, each furnished with an inflexed point; fruit
contracted at the sides, didymous; mericarps gibbous,
with three dorsal sharp ribs, and two lateral, almost
obliterated, marginal ones; carpophore bipartite; seed
involute.

This genus consists of five known species, all erect,
biennial herbs, with fleshy roots and variable leaves.
The involucre are also variable. The flowers are yellow
or greenish-yellow. *S. olusatrum* is the common *Alex-*
anders, formerly eaten as a salad.

SNACK, *i. e.* *snatch*; so much as is taken at a
snatch; a part or portion, a share.

Ask, for what price thy venal tongue was sold;
A rusty gammon of some sev'n years old:
Tough, wither'd treuffles; ropy wine, a dish
Of shotten herrings, or stale, stinking fish.
For four times talking, if one piece thou take,
That must be cantled, and the judge go *snack*.

Dryden. *Juvenal. Satire 7.*

Lintot, dull rogue! will think your price too much:
Not, sir, if you revise it, and retouch.
All my demurs but double his attacks:
At last he whispers, Do; and we go *snacks*.

Pope. *Prologue to Satires*, v. 63.

SNA'FFLE, } D. *snavel*; Ger. *schnelle*; the nose,
SNA'FFLE, v. } that which sniffs or *snaffles*. Dryden
renders the Lat. *capistrum* (a head stall) by our
English *snaffle*,

A bridle, so called.

To *snaffle*, (generally,) to bridle, to manage, to guide.

The woordes of the prophete wel serving for this purpose; with
a *snaffle* and a brydle hold harde my iaws, O God, when I dooe
not approche towards thee.

Sir Thomas More. *Workes*, p. 1366.

I perceive this man will neuer obeie my commandements, 'till
he be ridden with a *snaffle*.

Holinshed. *History of Scotland*, vol. v. p. 274. *Duncane*.

For hitherto slie writers' wilie wits
Which haue engrossed princes' chiefe affaires,
Haue been like horses *snaffled* with the bits
Of fancie, feare, or doubts.

Mirror for Magistrates, p. 395.

LAN. I may live to requite it, put a *snaffle* of sack in my mouth,
and then ride me very well.

Beaumont and Fletcher. *Wit without Money*, act v. sc. 1.

As for my wife,
I would you had her spirit, in such another,
The third o' th' world is yours, which, with a *snaffle*,
You may pace easie, but not such a wife.

Shakspeare. *Antony and Cleopatra*, act ii. sc. 2. fol. 346.

Sooth him with praise, and make him understand
The loud applauses of his master's hand:
This from his weaning let him well be taught;
And then betimes in a soft *snaffle* wrought.

Dryden. *Virgil. Georgics*, book iii.

SNAG, } Is perhaps *snack* or *sneck*; that which
SNA'GGY. } we may snatch, catch, or seize hold of;
any thing jutting or projecting. Prior applies the word
to the teeth. *Snaggy*, in the North, Grose says, is
tetchy, peevish. It is probably snatchy, apt to snatch
or catch at. A *snag*,
A short projection.

And yet the one her other legge had lame,
Which with a staffe all full of litle *snags*
She did support, and impotence her name.

Spenser. *Faerie Queene*, book ii. can. 11.

His stalking steps are stayde
Upon a *snaggy* oke, which he had torne
Out of his mother's bowelles, and it made
His mortal mace, wherewith his foemen he dismayde.

Id. *Ib.* book i. can. 7.

In China none hold women sweet,
Except their *snags* are black as jett.

Prior. *Alma*, can. 2.

These plants produce their fruit upon the former year's wood,
and also upon small *snags* which come out of the old wood, so that
in pruning them these *snags* should be preserved, and the young
shoots shortened in proportion to their strength.

Miller. *Dictionary*.

SNAIL, } A. S. *snæg-el*, (or *snakel*), the diminutive of *snake*,
SNAIL, v. } the past participle of the
A. S. *snic-an*, to creep.

Met. any creeping, slow or sluggish being.

This [tobacco] lately grew in this country, [Gloucestershire],
but now may not. It was first planted about Winchcomb, and
many got great estates thereby, notwithstanding the great care
and cost in planting, replanting, transplanting, watering, *snailing*.

Fuller. *Worthies. Gloucestershire*.

Bearing his pawn-laid hands upon his backe,
As *snails* their shells, or pedlers do their packe.

Hall. *Satire 2.* book iv.

Oh, Master Pompey, how is't, man?

CLOW. *Snails*, I'm almost starv'd with love, and cold, and one
thing or other.

Beaumont and Fletcher. *Wit at several Weapons*, act v. sc. 1.

Yet when he had once enjoyned himself so hard a task, he then
considered the Greek proverb, that he must either eat the whole
snail, or let it quite alone.

Dryden. *Dedication to Juvenal*.

It is a square place boarded in, and filled with a large quantity
of large *snails*, that are esteemed excellent food when they are well
dressed.

Addison. *Italy. Switzerland*.

SNAKE, } A. S. *snaca*; D. *snake*, from the A. S.
SNA'KY. } *snic-an*, *serpere*, to creep. *Snic-ende*
wyrme, reptile, a creeping worm or the like.

It is equivalent to the Lat. *serpens*,
A serpent.

The throte of hem is an open sepulchre, with her tungis thei
diden gilefulli, the venym of *snakis* is undir hir lippis.

Wiclif. *Romayns*, ch. iii.

All ye that ladies are of Lymbo lake
With hissing haire, and *snakie* bush bedect,
Your beddes of steele and dankish dennes forsake.

Turbervile. *He Sorrows*.

Not sever'd from the shore, aloft where Chesil lifts
Her ridged *snake-like* sands, in wrecks and smould'ring drifts,
Which by the south-wind rais'd are heav'd on little hills.

Drayton. *Poly-olbion*, song 2.

The crooked armes Meander bow'd with his so *snakie* flood.

Chapman. *Homer. Iliad*, book ii.

Nor swelling streames of that god *snakie* paced,
Which hath so often with his overflowing
Thee drenched.

Spenser. *The Ruines of Rome*.

Well, go your way to her; (for I see loue hath made thee a
tame *snake*.)

Shakspeare. *As You Like It*, act iv, sc. 3. fol. 202.

SNAG.
SNAKE.

—
SNAKE.
—
SNAP.

Thus, when Alcides rais'd his infant cry,
The *snakes* besieg'd his young divinity:
For vainly with their forked tongues they threat;
For opposition makes a hero great.

Dryden. *Britannia Rediviva*.

Wings on his heels were hung, and in his hand
He holds the virtue of the *snaky* wand.

Addison. *Ovid. Metamorphoses*, book i.

The ringed or common *snake* is the largest of the English serpents, sometimes exceeding four feet in length; the neck is slender; the middle of the body thickest; the back and sides covered with small scales; the belly with oblong, narrow, transverse plates.

Pennant. *British Zoology*, vol. iii. p. 44.

SNAP,

SNAP,

SNA'PPER,

SNA'PPISH,

SNA'PPISHLY,

SNA'PPISHNESS.

D. *snappen*; Ger. *schnappen*; Sw. *snappa*, *captare*, *rapere*, *arripere*, *raptim prehendere*. Wachter derives from *schnebbe*, the beak of a bird, with which it *snaps* or seizes its prey.

To catch or smatch at; to try to catch or seize; to try or endeavour to bite; to be bitter or sharp; to *snap* is also to make a sharp sound or noise; to *snap* or *knap* (*q. v.*) asunder, is to sunder sharply, shortly; to break sharply asunder.

Again, some of them promote false plaintes against honeste simple menne beefore their princes or capitaines, for none other purpose, sauing that a porcion of the parties goodes being seased as a forfaiture, may come to their *snaps* in reward of their false accusacion maliciously and slaundersouslye presented.

Udall. *Erasmus. St. Luke*, ch. iii.

First, to make this realm a prey to all venturers, all spoiles, all *snaphaunces*, all forlorn hopes, all cormorants, all ravenors of the world, that will invade this realm.

Strype. *Ecclesiastical Memorials*, vol. i. book i. ch. xlii. p. 53. Henry VIII.

And our tacklings
Snapping, like to too high-stretch'd treble strings.

Donne. *The Storm*.

As when a gentle greyhound set around

With little curs, which dare his way molest,

Snapping behind; soon as the angry hound,

Turning his course, hath caught the busiest.

Fletcher. *The Purple Island*, can. 11.

ELDER LO. Come, come, you would know it; that's as good;
but not a *snap*, never long for't, not a *snap*, dear ladie.

Beaumont and Fletcher. *The Scornful Lady*, act iv. sc. 1.

DIE. Take heed of the *snap*, sir, ha's a cozening countenance,
I do not like his way.

Id. *The Spanish Curate*, act ii. sc. 1.

My father nam'd me Autolicus, who being (as I am) lyterr'd
vnder Mercurie, was likewise a *snapper-up* of vnconsidered trifles.

Shakspeare. *The Winter's Tale*, act iv. sc. 2. fol. 290.

You charge me with malepertnes, in that I presume to chop
loglike with you being gouvernour, by answering your *snappish*
quid with a *knappish quo*.

Holinshead. *Description of Ireland*, ch. vi.

The companions that serued vnder the prince had met with it
by the way, and taken it from them that had the conueiance of it;
he therefore required the prince to rid the realme of those *snaphances*.

Id. *History of England. Edward III. Anno 1367*.

PEN. 'Faith wholesome women will but spoil ye too,

For you are so us'd to *snaphances*.

Beaumont and Fletcher. *Women Pleased*, act iii. sc. 2.

Since the privateers and logwood-ships have sailed this way,
these fishermen are very shy, having been often *snapp'd* by them.

Dampier. *Voyages*, vol. ii. part ii. ch. i. p. 12.

A village cur, of *snappish* race,
The pertest puppy of the place,
Imagin'd that his treble throat
Was blest with music's sweetest note.

Gay. *Fable 46*.

SNAP.
—
SNARE.

Quoth Richard in jest, looking wistly at Nelly,
Methinks, child, you seem something round in the belly.
Nell answer'd him *snappishly*, How can that be,
When my husband has been more than two years at sea?
Prior. *A Sailor's Wife*.

For his [Adrastus] steeds,
Scouring the plain in terrour, plung'd at length
Into a myrtle thicket, where, detain'd
And struggling to escape, they *snapp'd* the pole,
And with the splinter'd fragment flew to Troy.

Cowper. *Homer. Iliad*, book vi. v. 45.

Is winter hideous in a garb like this?
Needs he the tragic fur, the smoke of lamps,
The pent-up breath of an unsav'ry throng,
To thaw him into feeling; or the smart
And *snappish* dialogue, that flippant wits
Call comedy, to prompt him with a smile?

Id. *The Task*, book iv.

He threatened with great *snappishness* to flog me.

Wakefield. *Memoirs*, p. 23.

SNAR, *i. e. snarl, q. v.*

And some of tygres, that did seeme to gren
And *snar* at all that ever passed by.

Spenser. *Faerie Queene*, book vi. can. 12.

SNARE,

SNARE,

SNA'RER,

SNA'RY.

See ENSNARE. D. *snoeren*; Ger. *schnuren*; Sw. *snierja*, *vincire*, *ligula* *vel laqueo constringere*; and thus *ir-retire*, *illaqueare*.

To catch or take by guile, to take in a net or noose;
to allure, to seduce, to inveigle, to entrap, to surround
or entangle by treachery or guile, by allurements or
enticements.

And whanne he had cast forth the silver in the temple, he
passide forth and ghede and hangide himsilf with a *snare*.

Wiclif. *Matthew*, ch. xxvii.

The book sayth; "While that thou kepest thy conseil in thin
herte, thou kepest it in thy prison; and whan thou beureyst thy
conseil to any wight, he holdeth thee in his *snare*."

Chaucer. *The Tale of Melibeus*, p. 110.

Also repent we neuer so much, be we neuer so well willyng vnto
the law of God, yet are we so weake, and the *snare*s and occasiōs
so innumerable, that we fall dayly and hourelly.

Tyndall. *Workes*, fol. 91. *Parable of the Wicked Mammon*.

The bodie's beauties that are thus expos'd,

Though both the sexes haunt together must,

(Nought can take fire, where fire is not enclos'd)

Shall neither *snare*, nor tempt the minde with lust.

Stirling. *Doomes-day. The twelfth Houre*.

That had her eyes dispos'd their lookes to play,
The king had *snared* beene in loue's strong lace,
But wayward beautie doth not fancie moue,
A frowne forbids, a smile engendreth loue.

Fairefax. *Godfrey of Bulloigne*, book ii. st. 20.

Into new woes unweeting I was cast

By this false faytor, who unworthie ware

His worthie shield, whom he with guilefull *snare*

Entrapped slew, and brought to shamefull grave.

Spenser. *Faerie Queene*, book i. can. 4.

Never prate on't; nor, like a cunning *snarer*,

Make thy clipp'd name the bird to call it others.

Middleton's *Witch*, (before 1620.)

For I am young, a novice in the trade,
The fool of love, unpractis'd to persuade;
And want the soothing arts that catch the fair,
But, caught myself, lie struggling in the *snare*.

Dryden. *Palamon and Arcite*, book iii.

Spiders in the vault their *snary* webs have spread.

Id. *Id.*

But he, triumphant spirit! all things dar'd,
He poach'd the wood, and on the warren *snar'd*;
'Twas his at cards each novice to trepan,
And call the wants of rogues the rights of man.

Crabbe. *Parish Register*.

SNARL. SNARL, *snare*. Spenser uses *ensnarle*, (*q. v.*) to en-
snare.

SNATCH. *Snarle* seems to be a diminutive of *snar*,
To ensnare, to entangle.

But fury was full ill appareiled
In rags, that naked nigh she did appeare,
With ghastly looks and dreadfull drierihed;
And from her backe her garments she did teare,
And from her head ofte rent her *snarled* heare.
Spenser. *Faerie Queene*, book iii. can. 12.

You *snarle* yourself into so many and heynouse absurdities, as
you shall never be able to wynde yourself oute.

Cranmer. *Answer to Bishop Gardiner*, p. 168.

SNARL, } The D. *snarrer* is *premere*, *murmur*
SNA'RLER. } *rare*, *strepere*. *Snarl* and *gnarr*, Skinner
thinks, are both formed from the sound, and are applied
to

The angry, nasal noise or sound of a dog.

Her brazen shield two sable dogs adorn,
Who each at other stare, and *snarl*, and swell.

Fletcher. *The Purple Island*, can. 8.

Do ye *snarle*, you black Jill? She looks like the picture of
America.

Beaumont and Fletcher. *The Knight of Malta*, act v. sc. 1.

MERC. I shun in vain the importunity
With which this *snarler* vexeth all the gods;
Jove cannot 'scape him.

Carew. *Cælum Britannicum*.

Like dogs that *snarl* about a bone,
And play together when they've none.

Hudibras, part iii. can. 3.

Even from the depths of hell the damn'd advance,
Th' infernal mansions nodding seem to dance;
The gaping three-mouth'd dog forgets to *snarl*,
The furies hearken, and their snakes uncurl.
Dryden. *Virgil. Georgics*, book iv.

Should stupid libels grieve your mind,
You soon a remedy may find;
Lie down obscure like other folks
Below the lash of *snarlers'* jokes.

Swift. *To Dr. Delany*.

Sometimes, when we came suddenly upon them, or waked
them out of their sleep, (for they are a sluggish, sleepy animal,)
they would raise up their hands, snort and *snarl*, and look as
fierce as if they meant to devour us.

Cook. *Voyages*, vol. iv. book iv. ch. iv. p. 185.

SNAST, the *snout* of a candle; Ger. *schnautze*,
schnautze.

The swiftest in consuming was that with saw-dust, which first
burned faire till some part of the candle was consumed, and the
dust gathered about the *snaste*; but then it made the *snaste* big,
and long, and to burn duskishly, and the candle wasted in half
the time of the wax pure.

Bacon. *Natural History*, Cent. iv. sec. 369.

And thus in our daies do men practise to make long lasting
snasts for lampes out of *Alumen plumosum*; and by the same we
read in Pausanias, that there alwaies burnt a lamp before the image
of Minerva.

Sir Thomas Brown. *Vulgar Errours*, book iii. ch. xiv. p. 175.

SNATCH, } D. *snacken*, *captare*, *capitare*.
SNATCH, } To catch or take, or try or attempt to
SNA'TCHER. } catch or take, by quick, sudden mo-
tion or action; hastily, sharply, eagerly.

A *snatch*; a part or portion *snatched*, or caught or
taken, hastily, sharply, eagerly; a catch.

His obseruaunces, nor his queynt aray,
His skalding sighes, nor yet his cooling care,
His wayting still to *snatch* himselfe in snare,
I can not write what was his sweetest soure,
For I my selfe was neuer paramoure.

Gascoigne. *Dan Bartholmew of Bathe*.

When the boy saw that hys father was dead, and that the
catch-poles began to *snatch* at him, he was sore dismayed, and
thought that he should dye to.

Frith. *Workes*, fol. 57. *Answer vnto Fisher, Byshop of Rochester*.

Out of her gored wound the cruell steel
He lightly *snatcht*, and did the floodgate stop
With his faire garment.

Spenser. *Faerie Queene*, book ii. can. 1.

Like dastard cures, that, having at a bay
The salvage beast embost in wearie chace,
Dare not adventure on the stubborne pray,
Ne hyte before, but rome from place to place
To get a *snatch* when turned is his face.

Id. *Ib.* book iii. can. 1.

ARON. Why then it seemes some certaine *snatch* or so
Would serue your turnes.

Shakspeare. *Titus Andronicus*, act ii. sc. 1. fol. 36.

The *snatches* in his voice,
And burst of speaking, were as his: I am absolute
'Twas very Cloten.

Id. *Cymbeline*, act iv. sc. 2. fol. 388.

For like as dropsie patients drinke and still be drie,
Whose vnstanch't greedie thirst no liquor can allay,
And drinke they nere so much, yet thirst they by and by;
So catchers and *snatchers* do toile both night and day,
Not needie, but greedie, still prolling for their prey.

Mirror for Magistrates, p. 278.

KING. We do not meane the coursing *snatchers* onely,
But feare the maine intendment of the Scot,
Who hath been still a giddy neighbour to vs.

Shakspeare. *Henry V.* act i. sc. 2. fol. 71.

These are the agonies but of one single person whom death
snatches away in the midst of his years, his pleasures and his
hopes.

Stillingfleet. *Sermon* 11. vol. i. p. 438.

Thus Pegasus, a nearer way to take,
May boldly deviate from the common track;
From vulgar bounds with brave disorder part,
And *snatch* a grace beyond the reach of art.

Pope. *Essay on Criticism*, v. 150.

At this time we happened to have no victuals dressed, but I
offered one of them some biscuit, which he *snatched* and threw
overboard with great disdain.

Cook. *Voyages*, vol. ii. book iii. ch. iv. p. 156.

There are, however, few charitable establishments that so imme-
diately tend to *snatch* the lowest classes from wretchedness and
ruin as that of the Marine Society.

Knox. *Works*, vol. ii. p. 131. *Essays*, No. 145.

SNEED, } *cisio*, *segmentum*; A. S. verb *snid-*
SNA'TTOCK. } *an*, *snith-an*, to hew, to polish, to
make smooth. Somner.

A cutting, a cutting of wood, (formed into a hold or
handle.)

This is fixed on a long *sneed*, or strait handle.

Evelyn, book ii. ch. vi. sec. 2.

Snattocks of that very cross; of cedar some, some of juniper.

Gayton. *On Don Quixote*, p. 275.

When stormy days constrain to quit the field,
The house or barn may useful business yield;
There crooked *snaths* of flexile sallow make,
Or of tough ash the fork-stale and the rake.

Scott. *Amœbean Eglogues*, egl. 2.

SNEAK, } A. S. *snic-an*, *reperere*, to creep,
SNEAKER, } to go softly or easily. Hence,
SNEAKINGLY, } perhaps, says Somner, our *sneak*.
SNEAKINGNESS, } To *sneak* out or away; i. e. *clan-*
SNEAKSBY, n. } *culo proripere se*. See SNAKE.
To creep, covertly, meanly, servilely; to move or act
with creeping servility, covertly, concealedly.

CRE. What *sneaking* fellow comes yonder?

PAN. Where? yonder? that's Dæphobus,—'tis Troylus!

Shakspeare. *Troilus and Cressida*, act i. sc. 2. fol. 80.

SNATCH.

SNEAK.

SNEAK.

SNECK.

There are they still, poor rogues, shaking their chops,
And sneaking after cheeses.
Beaumont and Fletcher. The Woman Hater, act v. sc. 1.

FALST. How? the Prince is a Jacke, a sneake-cuppe; and if
hee were heere I would cudgell him like a dogge, if hee would
say so.

Shakspeare. Henry IV. First Part, act iii. sc. 3. fol. 64.

At a time when many had abandoned the faith, and more had
been sneakers and time-servers, Athanasius, with a few adherents,
had the courage to speak out the truth, boldly, without minc-
ing it.

*Waterland. Works, vol. iii. p. 420. A second Defence of some
Queries. Query 23.*

The fawning, sneaking, and flattering hypocrite that will do or
be any thing for his own advantage is despised by those he
courts, hated by good men, and at last tormented by his own
conscience, for being false to God and religion.

Stillington. Sermon 1. vol. ii.

While you sneakingly submit,
And beg for pardon at our feet.

Butler. The Lady's Answer to the Knight.

Such persons are deeply accessory to their own and piety's dis-
grace, by a sneakingness, which so implies a guilt, that where it
proceeds not from a fault, it is one.

Boyle. Works, vol. vi. fol. 16. Discourse against customary Swearing.

Men not enduring to be termed a foppish simpleton, doting on
speculations, and enslaved to rules; a fantastical humourist, a
precise bigot, a rigid stoick, a demure sneaksby, a clownish
singularist, or non-conformist to ordinary usage, a stiff opiniatre.

Barrow. Sermon 34. vol. iii. fol. 378.

This is a mean and sneaking kind of wisdom (I can allow it no
better epithets) which marks the present times, and consists in a
compliance with the inclinations, and an assent to the opinions of
those with whom we converse, however opposite they may be to
our own, or to those we complied with, or assented to, in the last
company in which we were engaged.

Knox. Works, vol. i. p. 67. Essays, No. 12.

Vice has spread more generally, and has taken deeper root,
than while it sneaked about in disguise; while it denied its
parentage, and pretended to be related to virtue.

Warburton. Works, vol. x. p. 281. Sermon 33.

SNEAP, v. } To sneap is to snap or snub, snib, or

SNEAP, n. } snub, q. v. Grose says, to snape or
sneape, to check; as children easily sneaped. See SNUB.

Herbs and fruits sneaped with cold weather.

It is a general word used all over England.

That we do enough hate our corruptions; when, at our sharpest,
we do but gently sneap them, as Eli did his sons; or, as some
indulgent parent doth an unthrifty darling, whom he chides, and
yet feeds with the fuel of his excess.

Hall. Works, vol. v. p. 136. Sermon 9.

But life that's here,
When into it the soul doth closely wind,
Is often sneep'd by anguish and by fear,
With vexing pain and rage that she n'ote eas'ly bear.

More. Song of the Soul, part iii. st. 18. can. 3.

FERD. Berowne is like an envious sneaping frost,
That bites the first borne infants of the spring.

Shakspeare. Love's Labour's Lost, act i. sc. 1. fol. 123.

FAL. My lord, I will not vndergo this sneape without reply.
Id. Henry IV. Second Part, act ii. sc. 1. fol. 79.

SNEB. See SNIB.

SNECK, or } A sneck or snick of a door is the

SNICK. } catch or latch; that which snatches or
catches hold. To sneck up, or snick up, is supposed to
be equivalent to Go hang yourself; q. d. snick up;
catch up, latch up the noose or cord. Mr. Weber pro-
duced the Quotation from Taylor in support of this
explanation.

To. We did keepe time, sir, in our catches. Snecke vp.
Shakspeare. Twelfth Night, act ii. sc. 3. 261.

VOL. XXVII.

A Tiburne hempen caudell will e'en cure you;
It can cure traytors, but I hold it fit
T' apply 't ere they treason do commit.
Wherefore in Sparta it ycleped was
Snick-up, which is in English gallowgrass.

Taylor. Praise of Hempseed.

MICH. Shall not my father go with us too?

MIST. MÉR. No Michael, let thy father go snick up, he shall
never come between a pair of sheets with me again, while he lives.

Beaumont and Fletcher. The Knight of the Burning Pestle, act ii. sc. 1.

WIFE. Look, George, did not I tell thee as much, the Knight
of the Bell is in earnest, Rafe shall not be beholding to him, give
him his money, George, and let him go snick up.

Id. Ib. act iii. sc. 1.

SNEED. See SNATHE.

SNEER, v. } This word does not appear to be of
SNEER, n. } very long date in our language. It is
SNE'ERER, } applied to a turn of the nose similar to
SNE'ERFUL. } that of a snarling dog.

To turn up the nose contemptuously, scornfully, or
scoffingly; to speak or act with a slight emotion of
scorn or scoffing, of disparagement or derision.

Knowledge of books and men exalts their thought,
In wit accomplish'd, though in wiles untaught,
Careless of whispers meant to wound their name,
Nor sneer'd nor brib'd from virtue into shame.

Savage. On Public Spirit.

That, from dependance and from pride secure,
I am not plac'd so high to scorn the poor,
Nor yet so low, that I my lord should fear,
Or hesitate to give him sneer for sneer.

Churchill. The Conference.

Such, so adorn'd, the cell I mean to sing!

Cell ever squalid! where the sneerful maid

Will not fatigue her hand! broom never comes,

That comes to all.

Shenstone. Economy, part iii.

Meantime it chanc'd, that hard at hand

A one-horse chaise had took its stand;

When thus our vehicle begun

To sneer the luckless chaise and one.

Warton. The Phaeton and the One-Horse Chaise.

The buffoon and sneerer are still on the wrong side of the
charter.

Warburton. On Prodigies.

Who can refute a sneer? Who can compute the number, much
less, one by one, scrutinize the justice of those disparaging in-
sinations which crowd the pages of this elaborate history?

Paley. Moral Philosophy, vol. ii. book v. ch. ix. p. 107.

SNEEZE, v. } D. niesen; Ger. niessen; Sw.
SNEEZE, n. } nysa, nuisa; A. S. nies-an, sternu-
SNE'EZING, n. } tare, to neese or sneeze. Somner.

A. S. naese, the nose.

See NEEZE, and the Quotation from Bacon. Sneez'd,
in Pope, is neezing in Chapman.

For wer it win, or old or moistie ale,
That he hath dronke, he speketh in his nose,
And snezeth fast. (In some editions sniveleth.)

Chaucer. The Manciples Tale, v. 17041.

If one chaunce to sneeze after repast, the order is for to call for
a dish of meat and a trencher againe to be set upon the bourd: and
in case he tast not of somewhat afterward, it is thought a most
fearefull and cursed presage on his behalfe.

Holland. Plinie, book xxviii. ch. ii.

I heard the rack
As earth and sky would mingle; but my self
Was distant; and these flaws, though mortals feare them
As dangerous to the pillar'd frame of heaven,
Or to the earth's dark basis underneath,
Are to the main as inconsiderable,
And harmless, if not wholsom, as a sneeze
To man's less universe, and soon are gone.

Milton. Paradise Regained, book iv. l. 449.

Looking against the sun doth induce sneezing. The cause is,
not the heating of the nostrils, for then the holding up of the nos-
thrils against the sunne, though one winke would do it, but the
drawing downe of the moisture of the brain; for it will make the
eyes run with water, and the drawing of moisture to the eyes doth

SNECK.

SNEEZE.

SNEEZ-
ING.

draw it to the nostrils, by motion of consent, and so followeth sneezing. Bacon. *Natural History*, Cent. vii. sec. 687.

She spoke. Telemachus then sneez'd aloud;
Constrain'd, his nostril echo'd through the crowd.
The smiling queen the happy omen bless'd:
So may these impious fall, by fate oppress'd!

Pope. *Homer. Odyssey*, book xviii.

We have often observed repeated sneezings to proceed from the invisible steams of spirit of *sal armoniack*.
Boyle. *Works*, vol. iii. p. 687. *Of the great Efficacy of Effluvioms*.

SNEEZING.—*Popular Opinions and Superstitions respecting.*—A necessary result from the polytheistic and pantheistic systems of the ancients was, that the most ordinary natural phenomena were invested with a mysterious character, and attributed to a direct supernatural agency. To a rational mind, nothing appears more indifferent than the simple act of Sneezing, nevertheless we find scarcely any age or nation exempt from superstitious ideas concerning it. It is not surprising to find those notions often at variance with each other. Sometimes the phenomenon was attributed to the direct influence of an evil being; at others it was regarded as an intimation of good, or a warning against evil, proceeding from a benevolent deity. The Greeks and Romans seem generally to have considered it under the latter point of view.

The origin of this superstitious attention paid to Sneezing was a subject of speculation as early as the days of Aristotle. In the problems of that philosopher, (sect. 33.) among a good deal relating to the physical portion of the inquiry, it is gravely examined why Sneezing is regarded as a deity, (*διὰ τὸ τὸν παρμυδὸν θεὸν ἡγούμεθα εἶναι*.) and why it is considered more propitious to sneeze between noon and midnight than from midnight to noon. The solutions given are not very satisfactory; but the fact of Aristotle's entertaining the question at all, shows that some degree of importance was attached to it in his days, at least in the popular mind.

The earliest notice we find of the superstitious ideas connected with Sneezing is in the *Odyssey*, lib. xvii. 541. *et seqq.* Penelope, wearied with the persecution of her suitors, expresses a wish that Ulysses would return and chastise their insolence and misconduct. Telemachus at this moment sneezes aloud; his mother rejoices, and regards it as an omen of the accomplishment of her wish. The passage is noticed both by Dionysius of Halicarnassus and Eustathius. The latter is ready with a solution from a natural cause, *ἐπεὶ ἡ κεφαλὴ τιμία*—"because the head is an honourable part;" which he duly backs by the authority of Aristotle and other philosophers. It is not to be supposed that mythologists and poets would acquiesce in such a matter-of-fact explanation; accordingly, they go back to the very primordia of the human race, and trace the popular notions to Prometheus and his image of clay, which is said first to have manifested signs of animation by Sneezing when the celestial fire was brought in contact with its nostrils. Prometheus was of course delighted with this promise of success to his undertaking, and ordained that Sneezing should ever after be held in particular reverence by the human race. At all events the passage in the *Odyssey* shows the remote antiquity of the superstition; and in the later Greek and Roman authors many passages occur in which Sneezing is considered as an omen, generally a propitious one. A well known instance occurs in the *Anabasis*. After the assassination of Clearchus and the other Grecian chiefs, Xeno-

phon harangues his fellow-soldiers, and exhorts them not to despond, but to force their way courageously through the enemy's territory. While he is speaking, a soldier sneezes, the whole army rejoices, and accepts it as a token of encouragement to comply with the orator's advice. It was more especially in love affairs that Sneezing was regarded as propitious. Examples may be found in Aristænetus, (*Epist.* v. 2.) in Propertius, and in Catullus's beautiful poem of *Acme and Septimius*.

In the case of Timotheus's army refusing to proceed, because the commander sneezed at setting out, there was probably something unpropitious in the time of its occurring; for though Sneezing was held to be good while the moon was in Taurus, Leo, Libra, Capricorn, or Pisces, it was commonly reputed bad in the other signs.

It appears from Pliny and other Latin authors, that the opinions of the Romans on this point generally coincided with those of the Greeks. Passages illustrative of the subject occur in Apuleius, in Petronius Arbiter, and the well-known epigram of Ammianus, (*Anthol.* lib. ii. epig. c. 23.) It is related that Tiberius was punctual in paying the salutation usual on such occasions, and that he rigidly enforced it from others, even when riding in his chariot.

The later Rabbins have a curious legend on this subject. They suppose that it was ordained in the first instance that a man should only sneeze once, as a certain token of approaching death. The patriarch Jacob having sneezed, was alarmed at the omen, and prayed earnestly to have the consequences averted. His prayer was listened to, and it was decreed that from that time the prognostic should change its character, and become propitious instead of inauspicious. Other Oriental nations appear to have held conflicting opinions respecting it. In the *Pend-nameh* of Ferideddin Attar, we find an odd catalogue of things ascribed to diabolical agency, in which it is affirmed that Sneezing, if it occurs but once, is of the works of the devil without doubt. Some notion of this sort probably gave rise to the ancient custom of invoking a blessing on the sneezer, in order to counteract the malevolent influence supposed to be at work. Hanway tell us that in his time the Persians considered Sneezing, often repeated, an omen of singularly favourable import. In Sabatier des Castres's *Dictionnaire des Origines*, it is stated that "the Siamese wish long life to persons Sneezing; for they believe that one of the judges of hell keeps a register wherein the duration of men's lives is written, and that when he opens this register and looks upon any particular leaf, all those whose names happen to be entered there sneeze immediately." Similar superstitions appear to have been current in Peru, in Southern Africa, and doubtless in many other countries.

The notions of our Teutonic forefathers on this head may be partially gathered from ecclesiastical writers and from popular superstitions, which, though fast wearing out, are not yet wholly extinct. By the clergy such things were zealously reprobated as relics of Paganism, or marks of intercourse with evil beings. An old German professor of theology, quoted in Grimm's *Deutsche Mythologie*, declares, "*Observationes somniorum, auguriorum, constellationum, sternutationum, &c., non solum vicinæ sunt idolatriæ sed etiam vere idolatriæ, quibus omnibus se fraus antiqui serpentis immiscet.*" In Hartlieb's *Buch aller verboten Kunst, ungeläubens und der Zauberei*, (Wolfenbüttel MS. of the XVth Cen-

SNEEZ-
ING.

SNEEZ-
ING
—
SNIB.

tury,) occurs a passage worth giving at length: "There is yet a superstition in the art, (of divination,) that is, when a man sneezes, by a natural effort to clear the brain, it is held to be a notable token of good or bad luck. They deduce their prognostications thus: if the Sneezing is *thrice* repeated, there are four thieves about the house; if *twice*, the person must rise from his bed, and lie down to sleep elsewhere; but if repeated *thirteen times*, it is a most excellent token, and whatever is seen in the night will infallibly come to pass. But in the morning, when people leave their beds, Sneezing has a variety of imports; and all this is downright superstition." *Deutsche Mythologie, Aberglaube*, p. 62. In the Chemnitz territory, a person who sneezes in the morning fasting expects to receive a present the same day. Among the Esthonians, if two pregnant women happen to sneeze together, it is looked on as a presage that both will have *daughters*; if, on the other hand, the *husbands* sneeze, both the children will be sons.

Many parallels might doubtless have been found in our own country, had they been early and carefully collected; at present we only meet with scattered and incidental notices. In *Hormanni Vulgaria*, two or three sneezes are reputed better than one: *Bina aut terna sternutatio salutaris, solitaria vero gravis*. To sneeze twice for three successive nights denotes death, or calamity to the house, *vel maximum bonum*; an alternative which doubtless often served to save the credit of the soothsayer. Little remains of those various superstitions in the more civilized parts of Europe beyond the custom of saluting, or wishing health to a person Sneezing; of which the Chevalier Jaucourt cynically remarks that it is "*un salut qui ne coule rien et ne signifie rien, comme tant d'autres puérilités dont les hommes sont, et dont ils seront toujours esclaves*."

For the *Physiological* part of the subject see the INDEX, *sub voce*.

SNIB, or } D. *snabben, snappen*; *captare, rap-*
SNUB. } *tare*, to catch or seize, to snap.

To catch or snap out, angrily, chidingly; to check forbiddingly; to repress; to nip, to pinch.

But it were any persone obstinat,
What so he were of highe or low estat,
Him wolde he *snibben* sharply for the nones.

Chaucer. *Prologue to the Canterbury Tales*, v. 523.

I have my sone *snibbed*, and yet shal,
For he to vertue listeth not to entend,
But for to play at dis, and to dispend.

Id. *The Frankeleines Prologue*, v. 11000.

And in his small bushes used to shrowde
The sweete nightingale singing so lowde;
Which made this foolish brere wexe so bold,
That on a time hee cast him to scold
And *snebbe* the good oake, for hee was old.

Spenser. *The Shepherd's Calendar*. *Februarie*.

It's an hard case, when men of good deserving
Must either driven be perforce to sterving,
Or asked for their pas by everie squib,
That list at will them to revile or *snib*.

Id. *Mother Hubbard's Tale*.

Here percase some *snappish* carper will take me at rebound,
and snuffingly *snib* me for debasing the Irish language; but trulie,
whosoever shall be found so ouerthwartlie bent, he takes the matter
farre awrie.

Holinshed. *Description of Ireland*, ch. i.

Hee [Octavius Cæsar Augustus] was a prince more respective
of thrift and holesomenes, than desirous of popularitie, praise, and
honour; when the people complained of the want and dearth of
wine, he checked and *snibbed* the with this most severe speech,
That his sonne in lawe Agrippa had taken order good enough
that men should not be athirst, by conueighing so many waters into
the cittie.

Holland. *Suetonius*, p. 57.

SNICK AND SNEE. *Snick* is, perhaps, *sneck* or *snatch*; and *snee, sneed*, a cutting. See *ante*, SNATHE.

Among other customs they have in that town, one is, that none
must carry a pointed knife about him; which makes the Hol-
lander, who is used to *snik and snee*, to leave his horn-sheath and
knife a ship-board when he comes ashore.

Howell. *Letter 41*. book i. sec. 1.

For, to proceed in the parallel; as comedy is a presentation of
human life in inferior persons and low subjects, and by that means
creeps into the nature of poetry, and is a kind of juniper, a shrub
belonging to the species of cedar, so is the painting of clowns, the
representation of a Dutch kermis, the brutal sport of *snick-or-snee*,
and a thousand other things of this mean invention.

Dryden. *Works*, vol. iii. p. 316. *A Parallel of Poetry and Painting*.

SNIFF, } D. *snoffen, snuffen, snuyven, snoffelen*;
SNIFF. } Ger. *schnaufen, schniffeln*; Sw. *snufwa*.

To draw the air or breath strongly up the nose. (Ger.
schnebbe.)

The diminutive is to *snivel*, *q. v.*

Never since I was born did I hear so much wit,
And, madam, I laugh'd till I thought I should split.
So then you look'd scornful, and *snift* at the dean,
As you should say, Now, am I skinny and lean?

Swift. *Hamilton's Bawn*.

He, ent'ring at the study-door,
Its ample area 'gan explore;
And something in the wind
Conjectur'd, *sniffing* round and round,
Better than all the books he found,
Food chiefly for the mind.

Cowper. *On the Death of Mrs. Throckmorton's Bulfinch*.

She's gone! but there's another in her stead,
For of a Princess Charlotte's brought to bed;
Oh, cou'd I but have had one single sup,
One single *sniff* at Charlotte's caudle-cup!

Warton. *The Oxford Newsman's Verses*, 1767.

Snuff, resentment expressed by *sniffing*; perverse resentment.
Dr. Johnson. *Dictionary*, in *v. Snuff*.

To snuff, to *snift* in contempt.

Id. *Ib.*

SNIGGLE. Skinner says, a word well known to
anglers. It seems to be the diminutive of *sneak*. See
the Quotation from Walton.

Because you that are but a young angler know not what *snig-*
gling is, I will now teach it you. Observing your time in a warm
day, where the water is lowest, take a strong, small hook tied to a
strong line, or to a string about a yard long; and then into
one of these holes, [on the river banks,] or between any boards
about a mill, or under any great stone or plank, or any place
where you may think an eel may hide or shelter herself, you may,
with the help of a short stick, put in your bait, and as far as you
may conveniently.

Walton. *Angler*, part i. ch. xiii. p. 260.

Now, Martell, have you remembered what we thought of?

MART. Yes, sir, I have *snigled* him.

Beaumont and Fletcher. *Thierry and Theodoret*, act ii. sc. 1.

SNIP, } D. *snippen*; Ger. *schnippen, secare*, to
SNIP, } cut. Wachter derives from A. S. *cnif*, a
SNI'PPER, } knife. It is probably the same word as
SNI'PPET. } *snap*, to break off, sever, separate shortly;
and thus,

To cut; to go *snips* is to go shares; each to take his
cut or share or division.

TAYLOR. I take measure of your worth, sir,
And because I will not afflict you with any large bill
Of circumstance, I will *snip* off particulars.

Beaumont and Fletcher. *The Fair Maid of the Inn*, act iv. sc. 1.

LECU. If you are so resolv'd, I have provided
A means to *snip* him hence.

Id. *Thierry and Theodoret*, act iv. sc. 1.

The leaves grow disposed and distant by certain spaces asunder,
much like unto those of cinquefoile or hempe, *snipped* and cut
about the edges ordinarily in five parts.

Holland. *Plinie*, book xxv. ch. vi.

SNICK
AND
SNEE.
—
SNIP.

SNIP.
—
SNIVEL.

What's this? a sleeue? 'tis like demi-cannon,
What, vp and downe caru'd like an apple tart?
Heers *snip*, and nip, and cut, and slish and slash,
Like to a censor in a barber's shoppe:
Why what a deuill's name, tailor, cal's't thou this?
Shakspeare. The Taming of the Shrew, act iv. sc. 3. fol. 224.
MASK. Pray, sir, let me go *snip* with you in this lye, and be not
too covetous of honour.

Dryden. An Evening's Love, act v.

Therefore I fitted it with a cannula, which I retained with a
snip of plaister, and applied a thin piece of sponge press'd out of
wine upon it, with compress and bandage over it, directing the
dressing of it twice a-day.

Wiseman. Surgery, vol. i. book ii. ch. xii.

For some have doubted if [the beard] 'twere made of *snips*
Of sables, glew'd and fitted to his lips.

Butler. Nye's Beard.

Or witches, simpling, and on gibbets
Cutting from malefactors *snippets*?

Id. Hudibras, part ii. can. 3.

Dennis and dissonance, and captious art,
And *snip-snap* short, and interruption smart.

Pope. The Dunciad, book ii.

They must, like our taylors, have all their fashions from the
French, and study the French league for every alteration, as our
snippers go over once a year into France to bring back the newest
mode, and to learn to cut and shape it.

Dryden. The History of the League. P. S.

SNITE, } D. *snuyten*; Ger. *schneutzen*; Sw. *snytla*;
SNOT, } A. S. *snyt-an*, to wipe; candel *snytels*. To
SNO'TTY. } wipe; to wipe the nose; to cleanse it;
and hence to *snite* a candle; cleanse or clear away.
Snot, that which is *snited* or wiped away. See SNOUT.

Theodorus drew one *snetting* his nose.

Holland. Plinie, book xxxv. ch. xi.

Nor would any one be able to *snite* his nose, or to *sneeze*; in
both which actions the passage of the breath through the mouth,
being intercepted by the tongue, 'tis forc'd, as it then ought to do,
to go through the nose.

Grew. Cosmologia Sacra, book i. ch. v. fol. 26.

Being thus put into the road to get beneficial places, and so
consequently riches, which he hungred after, by the continual
importunities of his covetous and *snotty* wife, he became Master of
the Roils, 8 Nov. 1643. *Wood. Athenæ Oxonienses*, fol. 307.

SNITE, A. S. *snite*, a woodcock, snipe or *snite*.
Somner. Perhaps so called from the peculiar length of
its bill or *snout*.

The felde fare and the *snyte*.

Skelton. Philip Sparrow.

The heron leaves watching at the river's brim,
And brings the *snyte* and plover in with him.

Drayton. Noah's Flood.

SNIVEL, } The diminutive of *sniff*, as *snuffle*
SNIVELLER, } is of *snuff*. See the first Quotation
SNIVELLING. } in v. *Sneeze*.

To make a *sniffing* or *snuffing*; to have a running
at the nose; to cry, weep, or fret, as children do.

Let him cough, roughe, or *sneuil*.

Skelton. Colin Clout.

I left our young poet *sniveling* and sobbing behind the scenes,
and cursing somebody that has deceived him.

Dryden. Prologue to the Mistakes.

He'd more lament when I was dead,
Than all the *snivellers* round my bed.

Swift.

Sending old rakes to church in shoals,
Like children, *sniv'ling* for their souls.

Moore. The Trial of Selim the Persian.

Ye writers of what none with safety reads;
Footing it in the dance that fancy leads;
Ye novelists, who mar what ye would mend,
Sniv'ling and driv'llin folly without end.

Cowper. Progress of Errour.

SNORE, v. } D. *snorchen*; Ger. *snorchen*, SNORE.
SNORE, n. } *snarchlen*. In A. S. *snora*, *sternu-*
SNO'RING, n. } *tatio*: *snore*, *snored*, *snor'd*, *snort*. SNOUT.
SNORT, v. } To *snore*, to breathe loudly through
SNO'RTING, n. } the nose.

To *snort*, to sound or utter a strong sound (as horses
do) through the nose.

He dranke, and wel his girdel underpight;
He slepeth, and he *snoreth* in his gise
All night, until the sonne gan rise.

Chaucer. The Man of Lawes Tale, v. 5209.

This miller hath so wisly bibbed ale,
That as an hors he *snorteth* in his slepe.

Id. The Reves Tale, v. 4160.

Her nose *snorted* up for tene,
Full hidous was she for to sene.

Id. The Romant of the Rose, p. 172

Her lubber now was *snorting* ripe,
And she meane while was glad,
That for to serue her turne else-wheare
So good a staile she had.

Warner. Albion's England, book vi.

His horse (spoyld both of guide and king, thicke *snoring*, and
amaz'd,

And apt to flight) the myrmidons made nimbly to and seaz'd.
Chapman. Homer. Iliad, book xvi.

SEB. Thou do'st *snore* distinctly,
There's meaning in thy *snores*.

Shakspeare. The Tempest, act ii. sc. 1. fol. 8.

Come, my sweet Corrinna, come;
Laugh, and leave thy late deploring;
Sable midnight makes all dumbe,
But thy jealous husband's *snoring*.

Beaumont. A Charme.

They fall soone asleepe above the water, and keepe suche a
snorting and routing in their sleepe, that they bewray where they
be, and so are easily taken.

Holland. Plinie, book ix. ch. x.

He chafes, he stampes, careers, and turnes about,
He fomes, *snores*, neighs, and fire and smoke breathes out.
Fairefax. Godfrey of Bulloigne, book xx. st. 29.

A pleasant beverage he prepar'd before
Of wine and honey, mix'd with added store
Of opium; to his keeper this he brought,
Who swallow'd unaware the sleepy draught,
And *snor'd* secure till morn, his senses bound
In slumber, and in long oblivion drown'd.

Dryden. Palamon and Arcite, book ii.

The nurse sleeps sweetly, hir'd to watch the sick,
Whom *snoring* she disturbs.

Cowper. The Task, book i.

Quenchless his thirst;
He takes the river at redoubled draughts,
And with wide nostrils, *snorting*, skims the wave.

Thomson. Summer.

Oft will his *snorting* steed, with terour struck,
His wonted speed refuse, or start aside,
With rising smoke, and ruddy flame annoy'd.

Jago. Edge-Hill, book iii.

SNORING. See *Treatise on MEDICINE*.

SNOT. See SNITE.

SNOUT, n. } D. *snuyte*; Ger. *schnute*. Snout
SNOUT, } is the past participle of *snite*; that
SNO'UTY. } which is *snited* or wiped.

The nose or nozle.

Who that meteth hym first pay him on the *snout*.

Chaucer. The Pardoner and Tapstere

A good father certes no,
I had leauer by my trowth,
Er I were sette on suche a slouth,
And beare suche a slepye *snoute*,
Bothe eien of my head were out.

Gower. Conf. Am. book iv.

SNOUT. Their shoes and pattens are *snowted* and piked more than a finger longer crooking vpwards.
— SNOW. Camden. *Remaines*, p. 233. *Apparel*.

Boots and shoes are so long *snouted*, that one can hardly kneel in God's house, where all genuflection and postures of devotion and decency are quite out of use.

Howell. *Letter* 3. book iii.

Dio. Thou art like thy name,
 A cruel boar, whose *snout* hath rooted up
 The fruitfull vineyard of the common-wealth.

Beaumont and Fletcher. *The Prophetess*, act ii. sc. 3.

He [Fitzmoris] procured a young harlot, who was somewhat *snowfaire*, to go to the castell.
 Holinshed. *Sup. to Chronicles of Ireland*, (by Hooker,) Anno 1581.

But these are erroneous tenents; a modest virgin well conditioned, to such a faire *snout peece*, is much to be preferred.

Burton. *Anatomy of Melancholy*, p. 627.

The nose was ugly, long, and big,
 Broad and *snouty*, like a pig;
 Which show'd he would in dunghills love to dig.

Otway. *The Poet's Complaint of his Muse*.

SNOW, n. } A. S. *snaw*, *snaw-an*; D. *sneun*,
SNOW, v. } *sneeuwen*; Ger. *schnee*, *schneyen*; A. S.
Sno'wy, } *snaw*, *snaw-an*; Goth. *snawis*. Ju-
Sno'wish. } nius from the Gr. *νιφ-ειν*. Skinner
 from the It. *neve*.

See the Quotation from Locke.

Her throte also white of hewe,
 As *snowe* on braunce *snowed* newe.

Chaucer. *The Romant of the Rose*, p. 175.

Withou'ten bake mete never was his hous,
 Of fish, and flesh, and that so plenteous,
 It *snewed* in his hous of mete and drinke,
 Of all deintes that men coud of thinke.

Id. *Prologue to the Canterbury Tales*, v. 344.

The golden tressed Phebus high on loft,
 Thrise had all with his beames clere
 The *snowes* molte, and Zephirus as oft
 I brought ayen the tender leaves grene.

Id. *Troilus and Creseide*, book v.

This markis hath hire spoused with a ring
 Brought for the same cause, and than hire sette
 Upon an hors *snow-white*, and wel ambling.

Id. *The Clerkes Tale*, v. 8199.

Her *snowisse* throte.

Id. *Troilus and Creseide*, book iii.

And ofte also the great shoure
 Out of suche place it maie be take,
 That it the forme shall forsake
 Of reyne, and in to *snowe* be torned.

Gower. *Conf. Am.* book vii.

A lovely ladie rode him faire beside,
 Upon a lowly asse more white then *snow*;
 Yet she much whiter; but the same did hide
 Under a vele, that wimpled was full low;
 And over all a blacke stole shee did throw.

Spenser. *Faerie Queene*, book i. can. 1.

There they doe finde that godly aged sire,
 With *snowy* lockes adowne his shoulders shed;
 As hoary frost with spangles doth attire
 The mossy braunches of an oke halfe ded.

Id. *Ib.* book x. can. 10.

Her *snowish* necke with blewish vaines
 Stood bolt vpriight vpon
 Her portly shoulders.

Warner. *Albion's England*, book iv.

Snow is the small particles of water frozen before they unite into drops.

Locke. *Elements of Natural Philosophy*, ch. vi.

Ev'n when the vital sap retreats below,
 Ev'n when the hoary head is hid in *snow*;
 The life is in the leaf, and still between
 The fits of falling *snow* appears the streaky green.

Dryden. *The Flower and the Leaf*.

The stately-sailing swan
 Gives out his *snowy* plumage to the gale;
 And, arching proud his neck, with oary feet
 Bears forward fierce, and guards his osier-isle,
 Protective of his young.

Thomson. *Spring*.

Thus a *snow-ball* having the power to produce in us the ideas of white, cold, and round, the powers to produce those ideas in us, as they are in the *snow-ball*, I call qualities.

Locke. *Of Human Understanding*, vol. i. book ii. ch. viii. p. 111.

And in yon mingled wilderness of flowers,
 Fair-handed Spring unbosoms every grace;
 Throws out the *snow-drop*, and the crocus first.

Thomson. *Spring*.

The inhabitants of those places where the fields are continually white with *snow* generally become blind longe before the usual course of nature.

Goldsmith. *History of the Earth*, vol. i. ch. iii. p. 17.

The cold was now become more severe, and the *snow-blasts* more frequent.

Cook. *Voyages*, vol. i. book i. ch. iv. p. 49.

SNOW. See *Treatise on METEOROLOGY*.

SNUB, v. } See SNEAP, and SNIP.

SNUB, n. } To check; to scold, to rebuke, to re-
 prove, to chide, pettishly.

Therewith the gyaunt buckled him to fight,
 Inflamd with scornfull wrath and high disdain,
 And lifting up his dreadfull club on hight,
 All armd with ragged *snubbes* and knottie graine,
 Him thought at first encounter to have slaine.

Spenser. *Faerie Queene*, book i. can. 8.

We frequently see the child that has been beholden to neither of these impulses in their parents, in spite of being neglected, *snubbed*, and thwarted at home, acquire a behaviour which makes it as agreeable to all the rest of the world, as that of every one else of their family is to each other.

The Tatler, No. 235.

This appears from the trees which grow on and near the sea-shores all along the western coast of England, whose heads and boughs I have observed to run out far to landward, but toward the sea to be so *snub'd* by the winds as if their boughs and leaves had been par'd or shaven off on that side.

Ray. *On the Creation*, part i. p. 97.

SNUDGE, i. e. snug or snuc; one who has sneaked or who sneaks.

A sneaking, mean, miserly person.

Suffiseth this, that still he honors those

Which wade in warres to get a woorthie name,
 And least esteemes the greedie *snudge* which goes
 To gayne good golde, without respecte of fame.

Gascoigne. *The Fruites of Warre*.

And thus your husbandrye, me thincke, is more like the life of a covetous *snudge* that ofte very evill proves, then the labour of a good husbände that knoweth well what he doth.

Ascham. *Toxophilus*, book i.

Some of his friends, that were *snudging* peniefathers, would take him vp verie roughlie for his laushing and his outrageous expences, as they tearme it.

Holinshed. *Description of Ireland*, vol. vi. ch. iii. p. 23.

SNUFF, n.

SNUFF, v.

SNU'FFER,

SNU'FFINGLY,

SNU'FFLE,

SNU'FFLING, n.

Snuff is the past participle of to *sniff*, q. v., that which is *sniffed*.

To *snuff*, the verb formed upon the past participle, is,

To draw the air or breath up the nose; to smell, by action of the

nostrils; to move or turn up the nose, sc. in scorn or derision; in anger, in indignation; also to take away or remove the *snuff*, or nose of a candle.

To take a thing in *snuff* is a common expression; in scorn, anger, indignation, affront.

Such enuie boyles, such falshood fire doth blowe,
 That bountie burnes, and truth is called thief,
 And good desertes are brought into such brief,
 That slaunder-*snuffe* which swears the matter out,
 Brings oftentimes the noblest names in doubt.

Gascoigne. *The Fruites of Warre*.

SNOW.

— SNUFF.

SNUFF.

A water spaniel came down the river, shewing that he hunted for a duck, and with a *snuffing* grace disdaining that his smelling force could not as well prevail thorough the water as thorough the air.

Sidney. *Arcadia*, book ii. p. 246.

And he made seven lampes thereto, and the *snuffers* therof, and fyrepānes of pure gold.

Bible, Anno 1551. *Exodus*, ch. xxxviii.

And a heifer will put up his nose, and *snuffe* in the aire against raine.

Bacon. *Natural History*. Cent. viii. sec. 826.

Ye said also, Behold, what a weariness is it, and ye have *snuffled* at it, saith the Lord of Hosts.

Malachi, ch. i. v. 13.

As a thrifty wench scrapes kitchen-stuff,
And barelling the droppings, and the *snuff*
Of wasting candles, which in thirty years,
Relicly kept, perchance buys wedding cheer.

Donne. *Satire* 2.

The bride was praising Sir Dauphine, and he went away in *snuff*, and I followed him.

Ben Jonson. *The Silent Woman*, act iv. sc. 2.

What hath bin seene,
Either in *snuffes*, and packings of the Dukes,
Or the hard reine which both of them hath borne
Against the old kinde king; or something deeper,
Whereof (perchance) these are but furnishings.

Shakspeare. *Lear*, act iii. sc. 1. fol. 296.

And thou shalt make vii. lampes and put them an hye there on, to geue lyght vnto the other syde that is ouer agaist it; with *snuffers* and fyre pannes of pure golde.

Bible, Anno 1551. *Exodus*, ch. xxv.

Rut. Good gentlemen;
You seem to have a *snuffing* in your head, sir,
A parlous *snuffing*, but this same dampish air—
2. A dampish air indeed.

Beaumont and Fletcher. *The Custom of the Country*, act iv. sc. 1.

Here percase some snappish carper will take me at rebound, and *snuffinglie* snib me for debasing the Irish language; but trulie, whosoever shall be found so ouerthwartlie bent, he takes the matter farr awrie.

Holinshed. *The Description of Ireland*, vol. vi. ch. i. p. 5.

CHLOE. Marry, foh! you sell *snuffers* too, if you be remembered; but I pray you let me buy them out of your hand; for, I tell you true, I take it highly in *snuff*, to learn how to entertain gentlefolks of you at these years, i' faith.

Ben Jonson. *The Poetaster*, act ii. sc. 1.

He *snuffs* the wind, his heels the sands excite,
But, when he stands collected in his might,
He roars, and promises a more successful flight.

Dryden. *Virgil. Georgics*, book iii.

Snuff the candles at supper as they stand on the table, which is much the securest way; because, if the burning *snuff* happens to get out of the *snuffers*, you have a chance that it may fall into a dish of soup, sack-posset, rice-milk, or the like, where it will be immediately extinguished with very little stink.

Swift. *Works*, vol. xii. p. 23. *Directions to the Butler*.

One, clad in purple, not to lose his time,
Eats, and recites some lamentable rhyme;
Some senseless Phillis, in a broken note,
Snuffing at nose, and croaking in his throat.

Dryden. *Persius. Satire* 1.

Who, with high nostrils *snuffing* up the wind,
Now stood, the champion of the salvage kind.

Id. *The Conquest of Granada*.

Here the yet rude unjointed *snuff-box* lies,
Which serves the rallied fop for smart replies.

Gay. *The Fan*, book i.

Virgil says, "As the young women are plying their evening tasks, they are sensible of the winter season, from the oil sparkling in the lamp, and the *snuff* hardening."

Cooke. *A View of the Works and Days*.

As forth he walk'd in quest of prey,
The hunters met him on the way;
Fear wings his flight; the marsh he sought;
The *snuffing* dogs are set at fault.

Moore. *The Wolf, the Sheep, and the Lamb*.

Tom, a pert waiter, smart and clever,
Adroit pretence who wanted never,
Curious to see what caus'd this rout,
And what the doctors were about,
Slyly stepp'd in to *snuff* the candles,
And ask'd whate'er they pleas'd to want else.

Cawthorne. *The Antiquarians*.

Then came drum, trumpet, hautboy, fiddle, flute;
Next *snuffer*, sweeper, shifter, soldier, mute.

Churchill. *The Rosciad*.

Quick to his side he flies amain,
And peeps, and *snuffs*, and peeps again.

Cawthorne. *The Antiquarians*.

SNUG, } A. S. *snuc*, the past participle of *snic-*
SNU'GNESS. } *an*, to sneak, to creep; a *snug* spot, a spot into which any one has sneaked, has gone creepingly, covertly, closely; and hence *snug*, close, covert, sheltered, secreted.

Betwixt them two the peeper took his nest,
Where *snugging* well he well appear'd content,
So to haue done amiss, so to be shent.

Sidney. *Arcadia*, book i.

Did I not see you, rascal, did I not?
Where you lay *snug* to snap young Damon's goat?

Dryden. *Virgil. Pastoral* 3.

Ordered the carpenters to cut down our quarter-deck to make the ship *snug*, and the fitter for sailing.

Dampier. *Voyages*, vol. i. ch. xiv. p. 280.

This treasure will suffice, and more,
To place me handsomely on shore,
In some *snug* manor.

Wilkie. *The Fishermen*.

From me fair health's fresh fountain springs,
O'er me soft *snugness* spreads her wings;
And innocence reflects her ray
To gild my calm sequester'd way.

Warton. *The Phaeton and the One-Horse Chaise*.

SO, Skinner says, from A. S. *swa*; D. *soo*; Ger. *so*; and Junius thinks *so* is the Gr. *ως*, reversed. Tooke affirms that the Ger. *so*, the English *so*, (though in one language it is called an adverb or conjunction, and in the other an article or pronoun,) are yet both of them derived from the Goth. article *sa*, *so*; and have in both languages retained the original meaning, viz. *it* or *that*. Tooke has shown that *it*, (*q. v.*) or as it was anciently written, *hit*, means *said*, and *that*, *taken*. From the manner in which he has traced these words to their meaning, it seemed pretty plain that he would conclude "*so* (for *sa*) to be the past participle of the A. S. verb *sæg-an*, to say; *so*, in the *said* manner;" and this is one of the additions from his papers. See the 8vo. Ed. vol. ii. p. 351. See *As*, and *SUCH*. It is worthy of remark, that in Ger. *es* is also an article or pronoun, and in Eng. *as* is an adverb or conjunction. The various usages of *so* may be explained by substituting *it* or *that* and supplying the ellipsis of cause, or state, or condition, sort or kind, &c.

For he was *so* god knygt, and also *so* noble kyng,
He beod for to geue hym ys dogter in spousesyng.

R. Gloucester, p. 65.

It was in a housend ger, & fourty & tuo,
After þat God anerþe com, þat he was crowned *so*.

Id. p. 330.

þe Duke Roberd fulfilled, *so* did William þe kȳng.

R. Brunne, p. 86.

— So riche armes was neuer sene with sight.

Id. p. 54.

I praye God if it wer *so* I strangle of þis brede.
& putte a morselle in his mouth with þat ilk worde,
Bifor þe kyng & þam alle he strangled at þe borde.

Id. p. 55.

SNUFF.

SO.

SO.

SOAL.

So me God helpe.

Piers Plouhman. Vision, fol. 38.

And so dude ich nevere.

Id. Ib. fol. 87.

And if it falle that he fynde it, treuly I seye to you, that he schal have joie therof more than on nynty and nyne that erriden not. So it is not the wille before youre fadir that is in hevenes, that oon of these litil perische.

Wiclif. Matthew, ch. xviii.

If it happen that he fynde hym, verelye I saye vnto you; he reioyseth more of that shepe, the of the nynty and nyne which wente not astray. Euen so it is not the wyl of your father in heauen, that one of these lytel ones shoulde perysh.

Bible, Anno 1551.

But Jhesus answerde no moore, so that Pilat wondride.

Wiclif. Mark, ch. xv.

Jhesus yet answered neuer a worde, so that Pylate merueled.

Bible, Anno 1551.

And shortly, whan the sonne was gone to reste,

So hadde I spoken with hem everich on,

That I was of hir felawship anon.

Chaucer. Prologue to the Canterbury Tales, v. 30.

A yeman hadde he, and servantes no mo,

At that time, for him luste to ride so;

And hee was cladde in cote and hode of grene.

Id. Ib. v. 101.

The thyng so open is at the eie,

That every man it maie beholde.

Gower. Conf. Am. Prologue.

I thynke for to touche also

The worlde, whiche neweth every daie,

So as I can, so as I maie.

Id. Ib.

ABDAL. I must submit;

On what hard terms soe'er my peace be bought.

Dryden. The Conquest of Granada.

For thus I speak, and what I speak shall stand;

What power soe'er provokes our lifted hand,

On this our hill no more shall hold his place;

Cut off, and exil'd from th' ethereal race.

Pope. Homer. Iliad, book viii.

SOAK, or

SOKE, v.

SO'AKER,

SO'AKING, n.

A. S. *soc-ian, macerare, humectare;*

To wet or moisten thoroughly; to

keep in any liquid till thoroughly

wetted or drenched.

To drench, to drink, to imbibe copiously.

And by that breache, it soketh so,

That all my face is styll on flowe.

Gascoigne. Dan Bartholmew of Bathe.

I pray let the Sydonian merchant J. Buckhurst be at the eating of them, and then I know they will be well *soak'd*.

Howell. Letter 2. book i. sec. 5.

When they appear, it is not unlikely but that they *soak* their vehicles in some vaporous or glutinous moisture or other, that they may become visible to us at a more easy rate.

More. Immortality of the Soul, part iii. book iii. ch. viii. p. 176.

This promontory, for it shoots out so far into the sea, and thereby lies so exposed to the sea-breezes and the currents, that *soak* down between Africa and Brazil, that it is quite contrary to reason to think there should not always be a strong current setting to the N. W.

Dampier. Voyages, vol. ii. part iii. ch. viii. p. 103.

In the next place, by a good-natur'd man, is usually meant neither more nor less than a good fellow, a painful, able, and laborious *soaker*.

South. Sermon 3. vol. vi.

But Jove ordain'd that Boreas' blast should blow,

While moist Arcturus *soak'd* the vales below.*Fawkes. Apollonius Rhodius, book ii.*

The wind at the same time was variable and squally; which obliged the people to attend the decks, so that few in the ships escaped a good *soaking*.

Cook. Voyages, vol. iii. book i. ch. i. p. 8.

SOAL. See SOLE.

SOAP, or

SOPE,

SO'APY.

A. S. *sape, sap-an; D. seepe, seepen;*Ger. *seiff, seiffen; Sw. sapa; Lat. sapa.*Wachter derives from Ger. *suben*, (still

existing in *saubern, seubern*,) to cleanse. Skinner from the A. S. *sippan*, to sop. Pliny says that *soap*, Lat. *sapo*, was made *ex sebo*, (or *sevo*,) &c. See the first Quotation from him, and that from Arbuthnot.

At Herford schep & orf, & fuyt at Wircestre,

*Sope a boute Couyntre, yrn at Gloucestre.**R. Gloucester, p. 6.*

Some may present thee with a pounce or twaine

Of Spanishe *soape* to washe thy linnen white.*Gascoigne. Councell to Master Withpoll.*

There is much good done with *sope*; an invention derived by the French for to colour the haire of the head yellow; made it is of tallow and ashes; the best of all other is that which they make of beech-wood, ashes, and goat's sewet; and the same after two manner of wayes; either thicke and hard, or else liquid and soft; but the one as well as the other is verie much used in Germanie, and a great deale more indeed by men than women.

Holland. Plinie, book xxviii. ch. xiii.

Any salt, whatsoever it is, serveth well for those *sope-bals* which are to polish the skin and to rid it from wrinckles.

Id. Ib. book xxxi. ch. ix.

The same, [tar water,] as a *soapy* medicine, dissolves the grumous concretions of the fibrous part.

Berkeley. Works, vol. ii. fol. 511. Siris.

All *soaps* and *soapy* substances, and consequently ripe fruits, the juices of pungent and aromatical plants; all those substances resolve solids, and sometimes attenuate or thin the fluids.

Arbuthnot. On Diet, ch. i.

All these means, employed under the Messiah's covenant for the reformation of men, are expressed under the image of a fuller's *soap*, which restores a soiled garment to its original purity.

Horseley. Sermon 32. vol. iii.

SOAR, v.

SO'ARING, n.

Fr. *essorer; It. sorare, per auras**volitare. Menage. Gr. σὺρ-εἶν, trahere.*

Junius. It is, perhaps, *sor* (*sur*) *aire*, *sor* (*sopra*) *aria*, upon the air; mounting upon the air.

To mount, to rise, along or upon, the air; to rise on high, to reach or attain great height or elevation.

Or if you list to flee as high in the aire,

As doth an egle, whan him list to *sore*,

This same stede shal bere you evermore

Withouten harme.

Chaucer. The Squieres Tale, v. 10436.

Repreue me no more,

I have no cause I wote well for to *sore*,

As doeth an hawke that listeth for to play.

Id. Troilus and Creseide, book i.

What he will make lesse, he lasseth.

What he will make more he moreth.

And as a gentill faucone *soreth*,

He fleeth, that no man hym reclaimeth.

Gower. Conf. Am. book vii.

Thus to the fresh clarion, being readie dight,

Unto his iourney did himselfe addresse,

And with good speed began to take his flight;

Over the fields, in his franke lustinesse,

And all the champaine o're he *soared* light.*Spenser. Muirpotmos.*Thy love's high *soaring* cannot be a crime;

Nor can we if a spinster loves a king,

Say that her love ambitiously does climbe:

Love seeks no honour, but does honour bring.

Davenant. Gondibert, book iii. can. 5.

With steddie wing

Now on the polar windes, then with quick fann

Winnows the buxom air; till within *soare*

Of lowring eagles, to all the fowles he seems

A phoenix.

Milton. Paradise Lost, book v.

Warm'd with more particles of heavenly flame,

He wing'd his upright flight, and *soar'd* to fame.*Dryden. Segismonda and Guiscardo.*

SOAR.

SOBER.

It is not till the wings have acquired strength and agility that it leaves the branches or the ground, and dares to *soar* undauntedly in the fields of air, unmindful of the nest and the fostering feathers which lately supplied it with warmth and protection.

Knox. Works, vol. ii. Winter Evenings, No. 25.

Proverbs were ambitiously seized by the lyric and by the epic Muse in their most rapid career, and their sublimest *soarings*.

Parr. On Education, p. 2.

SOB, v.

SOB, n.

SOBBING, n.

Somner says, perhaps from the A. S. *seof-ian, lugere, queri*, to mourn, to lament, to complain, to make moan; but *sob* seems to express a physical action, probably *supping* up strongly, convulsively, the breath. See the Quotations from Bacon and Goldsmith. To *sob* is also to *sop*; to soak. A tree being *sobbed* and wet swelis. Mortimer.

And thus she spake, *sobbing* in her compleint.

Chaucer. Troilus and Creseide, book iv.

The lasse wofull of hem bothe nist
Where that he was, ne might o word outbring,
As I said erst, for wo and for *sobbing*.

Id. Ib.

In my right honde my penne I holde,
And in my lefte my swerde kepe,
And in my barme there lieth to wepe
Thy chylde and myn, whiche *sobbeth* fast.

Gower. Conf. Am. book iii.

There heare hanged about their eares,
With *sobbinge*, and with sorye teares
This lorde goth then an humble pas,
That whilom proude and noble was.

Id. Ib. book i.

Forthwith the scaling ladders come,
and to the walls are set,
Then sighs and *sobbes* begin to clime,
but they are quickly met.

Turbervile. Of the Louer's Estate.

Sighing is caused by the drawing in of a greater quantity of breath to refresh the heart that labourereth; like a great draught when one is thirsty. *Sobbing* is the same thing stronger.

Bacon. Natural History, Cent. viii. sec. 714.

And all her sister nymphes with one consent
Supplide her *sobbing* breaches with sad complement.

Spenser. Faerie Queene, book iii. can. 4.

A wonderous bag with both her hands she binds,
Like that where once Ulysses held the winds;
There she collects the force of female lungs,
Sighs, *sobs*, and passions, and the war of tongues.

Pope. The Rape of the Lock, can. 4.

Her hand she shifted to her blubberd face
With prudish modestie, and *sob'd*.

Mickle. Syr Martyn.

This, [sigh,] when the mind is strongly affected, is repeated; sorrow succeeds these first emotions; and tears are often seen to follow; *sobbing* is the sigh still more invigorated.

Goldsmith. History of the Earth, part ii. ch. v.

SOBER, adj.

SOBER, v.

SOBERLY,

SOBERNESS,

SOBRIETY,

SOBERIZE, v.

Fr. *sobre*; It. *sobrio*; Sp. *sobrio*; Lat. *sobrius*, opposed to *ebrius*, *qui multas hausit brias*, one who drinks many cups. *Bria*, a kind of cup, from the Gr. *βρυ-ειν*, *scatere*, *abundare*: *sobrius*, i. se, i. e. *sine bria*.
Abstinent or abstaining from drunkenness or ebriety; from any thing intoxicating, any excess; temperate, moderate, well regulated; regular, steady, collected, unimpassioned, sedate, serious.

Thenne hadde pacience as pilgrimes have. in here poke vitales
Sobrete and symple speche.

Piers Plouhman. Vision, fol. 252.

But we that ben of the dai ben *sobre*, clothid in the haburioun
of feith and of charite.

Wiclif. 1 Tessal. ch. v.

But let vs which are of the daye, be *sober*, armed with the brest
plate of fayth and loue.

Bible, Anno 1551.

For I sei 'bi the grace that is ghounn to me to alle that ben
among ghou, that ghe sauere not more than it bihoueth to sauere,
but for to fauere to *sobrenesse*, and to ech man as God hath de
partid the mesure of feith.

Wiclif. Romaynes, ch. xii.

Men must enqueren (this is min assent)
Wheder she be wise and *sobre*, or dronkelewe,
Or proud, or elles other waies a shrew.

Chaucer. The Marchantes Tale, v. 9416.

And after diner Dan John *soberly*
This chapman toke apart, and prively
He said him thus.

Id. The Shipmannes Tale, v. 13185.

Sobrenesse also, that restreinet the outrage of drinke.

Id. The Persones Tale, p. 164.

He came, and did her reuerence.
And she hym asketh in silence,
From whens he cam, and what he wolde,
And he with *sobre* wordes tolde.

Gower. Conf. Am. book vi.

Wherefore Pope July was wroth and cast how to bring the
Frenchmen downe, yet *soberly*, lest while he brought him lower he
should geue an occasion to lift vp y^e emperour higher.

Tyndall. Workes, fol. 369. The Practise of Popish Prelates.

With their fast they destroy the fast which God commaundeth,
that is a perpetuall *sobrenesse* to tame the fleshe.

Id. Ib. fol. 244. Matthew, ch. vii.

Of all God's workes, which doe this worlde adorne,
There is no one more faire and excellent
Then is man's body, both for pæure and forme,
Whiles it is kept in *sober* government.

Spenser. Faerie Queene, book ii. can. 9.

Who therefore wisely did submit each birth
To knowing Beaumont e'r it did come forth,
Working again, untill he said 'twas fit,
And made him the *sobriety* of his wit.

Cartwright. Upon the Dramatic Poems of Mr. John Fletcher.

But, meant he well, or mus'd he yil,
My mother comming in,
Mends all amys, and *soberly*
The fryer did thus begin.

Warner. Albion's England, book ix.

With Thracian wines recruit thy honour'd guests,
For happy counsels flow from *sober* feasts.

Pope. Homer. Iliad, book ix.

They must first deny a God, and despise an immortal soul, they
must conquer their own reason, and cancel the law written in their
hearts, they must hate all that is serious, and yet *soberly* believe
themselves to be no better than the beasts that perish, before men
can come to make a scoff at religion, and a mock at sin.

Stillingsfleet. Sermon 2. vol. i.

Nature imparting her satiric gift,
Her serious mirth to Arbuthnot and Swift,
With droll *sobriety* they rais'd a smile
At folly's cost, themselves unmov'd the while.

Cowper. Table Talk.

Sobriety is sometimes oppos'd in scripture to pride, and other
disorders of the mind. And sometimes it is opposed to sensuality.

Gilpin. Hints for Sermons, vol. i. p. 378.

And when we met a shepherd old and lame,
Cold and diseased it seemed my blood to tame;
And I was thankful for the moral sight,
That *soberized* the vast and wild delight.

Crabbe. Tales of the Hall, book vi.

SOBOLEWSKIA, in *Botany*, a genus so called in
honour of Gregor Sobolewski, a Russian botanist, author
of *Flora Petropolitana*. It belongs to the class *Tetra-*
dynamia, order *Siliculosa*, and natural order *Cruciferae*.
Generic character: silicle oblong, compressed, one-
celled, one-seeded, valveless, membranous; seed oblong,
pendulous; cotyledons linear, a little curved; flowers as
in other cruciferous plants.

This genus consists of one species, *S. lithophila*, a
native of Tauria; it is a branched, biennial herb, with

SOBER.
—
SOBO-
LEWS-
KIA.

SOBO
LEWS-
KIA.

kidney-shaped, toothed leaves, and racemes of white flowers.

SOCAGE. **SOBRALIA**, in *Botany*, a genus so called by Ruiz and Pavon, in honour of F. M. Sobral, a distinguished Spanish botanist. It belongs to the class *Gynandria*, order *Monandria*, and the natural family of *Orchideæ*. Generic character: perianth large, rather fleshy, spreading; sepals and petals nearly equal; labellum cucullate, involving the column, narrowed at the base, two-lobed; column erect, elongated, marginate, clavate, winged on both sides at the apex; anthers two-celled; cells free from the broad connective; pollen masses two, with a linear caudicula.

This genus consists of about five species, all natives of South America; they are tall, coalescent, terrestrial, orchideous plants, with plicate, sheathing leaves, and axillary and terminal showy flowers.

SOBREYRA, in *Botany*, a genus so called by Ruiz and Pavon from a Spanish botanist. It belongs to the class *Syngenesia*, order *Segregata*, and natural order *Compositæ-Senecionideæ-Flaveriæ*. Generic character: heads many-flowered; female flowers in many series in the circumference; corollas of the male florets filiform; achenia enveloped by a bractea.

This genus contains only one species, a native of Peru, it is a procumbent, fleshy herb, with oblong, ovate, sessile leaves, and solitary heads of flowers.

SOC, { A. S. *soc*, *soca*, *sequela*, *secta*; *sc. ho-*
SO'CAGE. } *magiorum*, from the verb *soc-an*, *sec-an*, *adire*, *sequi*, to follow; to attend upon. Somner describes *soc* to be, the power, authority, or liberty to minister justice and execute laws; (he should have added, among his followers, or *associates*, vassals, tenants.) Also the shire, circuit, or territory wherein such power is exercised by him that is endued with such a privilege or liberty. Whence our law Latin word of *soca*, for a seignory or lordship enfranchised by the King with the liberty of holding or keeping a court of his *socmen* or *socagers*, *i.* his tenants, whose tenure is hence called *socagium*, in English *socage*.

I cannot but assent to Mr. Somner's etymology of the word; who derives it from the Saxon appellation *soc*, which signifies liberty or privilege, and, being joined to a usual termination, is called *socage*, in Latin *socagium*, signifying thereby a free or privileged tenure.

Blackstone. Commentaries, vol. ii. book ii. ch. vi. p. 80.

Britton also, from such their freedom, calls them absolutely *sokemans*, and their tenure *sokemanies*. *Id. Ib.*

SOCAGE, in *Law*, denotes a tenure of land by some fixed service. The military services were uncertain in their nature, but the services of Socage tenure are determinate and unvarying. The name is said to be derived from *soca*, an old Latin word signifying a plough, and the meaning is explained by the supposition that anciently the services performed were services in husbandry, such as ploughing, and that these were commuted for a permanent money rent. Another derivation is from *soc*, a Saxon word signifying *privilege* or *liberty*, which agrees with the supposition that the tenure by Socage was originally a free or privileged tenure. The weight of authority is in favour of the derivation from the plough. Almost the whole of the freehold land in England is now held by *free* and *common* Socage, the military tenures having in the reign of Charles II. been converted into it. Sometimes there is a small fixed rent payable annually; but in the great majority of cases the antiquated service of fealty is the only service re-

VOL. XXVII.

maining, and the only real interest which the sovereign or other lord of whom the lands are holden has in them, is the possibility of escheat.

SO'CIABLE, or
SO'CIAL,
SO'CIABLY,
SO'CIABLENESS,
SOCIABI'LITY,
SOCIA'LITY,
SO'CIATE,
SOCI'ETY.

Fr. *sociable*; It. *sociabile*; Sp. *sociable*; Lat. *sociabilis*, from *soc-iare*, *socius*, from *sequi*, to follow, to accompany. See *Soc*, *ante*.

That may be followed, accompanied; accessible, conversible; that seeks followers or companions; is desirous of them; friendly; seeking or pursuing, uniting for, the common weal or good, the weal of the community; the advantage, happiness, pleasures of others.

If ye would consider those things with pure simple mindes, it should come to passe that ye would geue fayth to my wordes too, and doubt no more, but that the father is in me. and I in y^e father, that both we, the one and the other, are *sociate* and adherent together naturally and vnseparably.

Udall. Erasmus. St. John, ch. x. fol. 472.

A common-wealth is called a *society* or common doing of a multitude of free men, collected together, and vnited by common accord and couenants among themselves, for the conseruation of themselves as well in peace as in war.

Smith. Common-Wealth, book i. ch. x.

A mind that's honest, pure, and just,
A *sociable* life and free,
A friend that dares not break a trust,
Yet dares die if occasion be.

Brome. Satisfaction.

Had she persever'd just, there would have been
Some that would sin, misthinking she did sin.
Such as would call her friendship love, and feign
To *sociableness* a name profane.

Donne. On Mistress Boulstred.

Yet not terrible,
That I should fear, nor *sociably* mild,
As Raphael, that I should much confide,
But solemn.

Milton. Paradise Lost, book xi. l. 233.

Thou in thy secesie although alone,
Best with thyself accompani'd, seekst not
Social communication. *Id. Ib.* book viii. l. 427.

And he still on was led, but with such thoughts
Accompanied of things past and to come
Lodg'd in his brest, as well might recommend
Such solitude before choicest *society*.

Id. Paradise Regained, book i. l. 299.

There entertain him all the saints above,
In solemn troops, and sweet *societies*,
That sing, and singing in their glory move,
And wipe the tears for ever from his eyes.

Id. Lycidas, l. 178.

God having designed man for a *sociable* creature, made him not only with an inclination, and under a necessity to have fellowship with those of his own kind; but furnished him also with language, which was to be the greater instrument and common tie of *society*.

Locke. Of Human Understanding, vol. i. book iii. ch. i.

We have implanted in our original constitution inclinations to love, pity, gratitude, *sociableness*, quiet, joy, reputation.

Barrow. Sermon 9. vol. i.

Rather he was a man of great benignity, and pleasantness, and *sociableness* in his conversation, witness his frequent vouchsafing, his presence at feasts and entertainments.

Sharp. Works, vol. vi. p. 248. *Sermon 13.*

One sort will not *sociate* with the rest of their neighbours.

Shelford. Learned Discourse, p. 58

Be delighted and satisfied with this one thing; in doing one action after another, tending to a common good, or the good of humane *society*; together with the remembrance of God.

Cudworth. Intellectual System, fol. 431.

SO-
CIABLE.
—
SOCI-
NIANS.

Nor does there need much penetration to observe how *sociably* the two faculties lead one another as I may say hand in hand, not only in entering upon our works, but through all the steps necessary to compleat them.

Search. Light of Nature, vol. i. part i. ch. ii. p. 37.

Such then was the root and foundation of the *sociability* of religion in the ancient world, so much envied by modern pagans.

Warburton. The Divine Legation, book ii. sec. 6.

A scene of perfect easy *sociality*.

Boswell. Life of Johnson.

SOCIETIES, RELIGIOUS AND CHARITABLE. See UNIONS.

SOCINIANS. This term is usually applied to all those who deny the divinity of our blessed Saviour; but it more correctly belongs to the immediate followers of *Socinus*. The person who is considered to have been the earliest public advocate of antitrinitarianism, is Martin Cellarius, a native of Stutgard. He was born in 1499, and educated in the university of Wittemburg. His learning secured for him the friendship of Luther and Melancthon, whose principles he embraced. He afterwards, however, renounced the Catholic doctrine respecting the Holy Trinity, and died at Basil, in Switzerland, in 1564. Contemporary with Cellarius was Michael Servetus. This remarkable individual was born in 1509 at Villanueva, in Arragon; he removed in 1530 to Basil, and from thence in 1531 to Strasburg. After again changing his residence more than once, he settled in Vienne, in Dauphiny, where he practised as a physician, and entered upon the correspondence with Calvin which brought down upon him the wrath of that stern reformer. Early in June 1553 he went to Geneva, where he was recognised in the month of August, and, at the instigation of Calvin, committed to prison. Proceedings were immediately instituted against him for his blasphemies, and on the 26th of the following October he was condemned to be burnt to death, which sentence he underwent in the forty-fourth year of his age.

The *Anabaptists* of Germany and Holland appear to have been the first of the reformed who, in any numbers, impugned the doctrine of the Trinity; but the spirit displayed towards them by the more orthodox reformers, both in Germany and Switzerland, soon compelled them to seek a safer asylum in Poland; and to one of them named Spiritus, a native of Holland, is the introduction (in 1546) of antitrinitarianism into Poland to be ascribed. About the same time, a society was formed at Vicenza, (a small town in the district of Venice,) which maintained that *Christ* was, as to his nature, a man, but not merely a man, having been conceived of the Holy Spirit by the Virgin Mary. The deliberations of this society were suddenly interrupted by the Inquisition; three of its members were seized, and the rest sought safety in flight. One of these, *Lælius Socinus*, (who was born at Sienna in 1525, and educated for the law, which he abandoned for theological pursuits,) the uncle of the great heresiarch, proceeded to Zurich, in Switzerland, and in 1551 journeyed to Poland, which he revisited in 1558. On the former occasion, he brought over to his own doctrinal opinions Francis Lismain, a Corsican monk and confessor to Bona Sfortia, the Queen of Segismund I.; another accession to the heretics about this period was made by the conversion of Gregory Paul, a preacher of the reformed party in the suburbs of Cracow. One Peter Gonezius, or Conyza (at a synod held at Seceminia in

1556) was the first person who, in a public assembly, opposed the doctrine of the Trinity. Till 1566, all the synods held in Poland were composed indiscriminately of the members and teachers of all the reformed societies, Lutheran, Calvinistic, and Antitrinitarian; and continual disturbances resulted from this heterogeneous union. In the above year, however, the heretical party were thenceforth excluded from these public assemblies, and from that time formed a separate religious body in the country.

The heterodox all concurred in maintaining the supremacy of the Father; but with respect to *Jesus Christ*, some thought him to be a God of an inferior nature derived from the supreme Deity; others held the doctrine of Arius; and a third party believed him to be a human being. These last were also divided into two sections, of which one believed the miraculous conception of Christ, and the other considered him to be the son of Joseph as well as Mary. Another point upon which these persons differed among themselves was the worship due to the Redeemer. Some, even among those who maintained his simple humanity, contending that he was entitled to divine honours, while others held that divine worship was to be paid to the Father alone. All these parties denied the personality of the Holy Ghost. Their chief settlement was at *Racow*, a city which was built for them in 1569 by J. Siemienius, Palatine of Podolia. Here they had a collegiate and printing establishment, and besides these, others on a smaller scale, in other towns. Their houses for worship were built in all the chief cities, towns, and villages of the kingdom; but the principal were at *Racow*, *Cracow*, *Pinczow*, *Lublin*, and *Lubeck*. They were first distinguished by the name of *Pinczovians*, from the town where they had their earliest settlement. Some of the body were called *Farnovians*, others *Budnæans*; but the name by which they were afterwards commonly known was derived from their principal city, *Racow*.

In the year 1579 *Faustus Socinus* arrived in Poland. He was born at Sienna, on the 6th of November, 1539, and at a very early age imbibed the sentiments of his uncle *Lælius*, of whom mention has been before made. Quitting his native country, he resided some time in Switzerland, from thence he went to Transylvania, and shortly afterwards withdrew, as above stated, to Poland, where his writings brought nearly the whole body of the heterodox to his own sentiments (a sketch of which will be found below) respecting the person of *Christ*. He died at a village near Cracow in his sixty-fourth year, A. D. 1604.

In the year 1638 a deadly blow was given to the cause of Socinianism in Poland. Some students of the college of *Racow* desecrated a cross which had been set up over one of the city gates, and in consequence of this sacrilegious act the Diet of Warsaw, in the same year, passed a decree, commanding that the Socinian place for worship at *Racow* should be closed, the college broken up, the printing-house demolished, and the teachers and professors proscribed and banished. This stroke was followed by an invasion of the Cossacks, who marked out the heretics as the especial objects of their vengeance. In 1655 a formal accusation of aiding the King of Sweden in his late invasion of the kingdom was brought against them at the Diet held at Warsaw, and a decree was passed forbidding the dissemination of their sentiments in any way whatever, under pain of death. A new and more rigorous edict was put forth against

SOCI-
NIANS.

SOCI-
NIANS.

them on the 20th of July 1660; they fled in large numbers from Poland, and took refuge, some in Transylvania and Hungary, some in Prussia, Silesia, and Moravia, others in Holland and the Low Countries, and some in England. Thus terminated the public profession of Socinianism in Poland, about one hundred and twenty years after its first introduction into that country.

For several years previously to its suppression in Poland, Socinianism had made considerable progress in Transylvania. It was introduced into that country by *George Blandrata*, a native of Piedmont and physician to Bona Sfortia. In 1558 he went to Poland, and was appointed one of the elders of the reformed society in Cracow, and in 1563 removed into Transylvania to attend Segismund II., who was labouring under a dangerous disorder. At the time of his arrival, the reformed party in Transylvania were under the superintendence of *Francis David*, who was soon persuaded by Blandrata to exchange the Calvinistic for the (so called) Unitarian system. To the joint efforts of these two individuals the growth of the latter heresy in Transylvania may be ascribed. In 1574, however, its progress was arrested by a rupture which took place between them. The question in dispute was the invocation of Christ. Blandrata (who is allowed, even by the historians of his own party, to have been an infamous character) maintained that our Saviour *ought* to be worshipped; David, the contrary. In 1578 Socinus was invited by Blandrata to oppose the objections of David. He came, but his visit was unsuccessful. David was brought before the Diet, assembled at Wiesenburg in June 1579, and condemned for blasphemy. He died in the castle of Deva in the November following. From this time the cause of Socinianism in Transylvania declined. Dr. Thomas Rees (in 1818) estimated the number of Socinians in that country at about 60,000. Poland and Transylvania are the only countries on the Continent where Socinianism obtained an extensive and public establishment.

Even as early as the first dawns of the Reformation, antitrinitarianism appears to have been not without its advocates in England. Bartholemew Legatt and Edward Wightman were burnt for this heresy, the one in West Smithfield and the other at Litchfield, in the year 1611; but Socinianism seems to have been first openly avowed in this country by *John Biddle*, in the time of the usurpation. He narrowly escaped being sentenced to the stake by the Westminster "Assembly of Divines," and died in prison in 1662. The founder of the modern school of Unitarianism in England was Dr. Priestley. He retired to the United States in 1794, and died there in 1804. To his writings and influence the progress of Socinianism during the latter part of the last century must be chiefly ascribed. Among his principal coadjutors may be mentioned the Rev. Theophilus Lindsey, a beneficed clergyman, who, in 1773, resigned his living, and afterwards collected a society of persons of his own principles in Essex Street, Strand. Several other clergymen embraced the same system; viz. Drs. Chambers, Jebb, and Disney; Messrs. Evanson, Gilbert Wakefield, and Stone. All the efforts of Priestley, Lindsey, and others, however, accomplished little more than the conversion of the teachers of Arianism among the Dissenters into Socinians, who exerted themselves with tolerable success to disseminate their principles in their respective congregations. Of the places now occupied by Socinian congregations

throughout England, amounting to 206, only 36, or little more than a sixth, have been erected by persons of those sentiments. The greater part are maintained by the old Presbyterian endowments; and out of the whole number not more than six can boast of large congregations. In London, the Arians and Unitarians, calling themselves English Presbyterians, are reduced to ten congregations, of which all but three or four are very inconsiderable. Their colleges at Hackney, Exeter, and Warrington are extinct; and that at York, which alone survives, is said to be in a declining state. (See Josiah Conder's *Analytical and Comparative View of all Religions*, 8vo. 1838, p. 562, 563.)

In the United States of America the Socinians have 170 congregations. Of these, 130 are concentrated in the State of Massachusetts. In the principal towns of the eastern part of that State the Socinians embrace most of the wealth, and literary and political influence. In Boston they have 12 societies, averaging about 600. Elsewhere their congregations are very small, and their influence is scarcely felt.

The doctrine of the modern Socinians varies greatly from that maintained by Socinus and his immediate followers. Socinus held that our blessed Lord was a man, but conceived by the Holy Ghost, and on this account God's only begotten Son, and was moreover constituted the Son of God by his resurrection. He believed that Christ is entitled to divine worship, and that after he was born, and before he entered upon the office assigned him by his *Father*, he was in heaven and remained there some time; that nothing can be more incompatible than a free pardon and satisfaction; and that in remitting the punishment of our sins by Jesus Christ, no propitiation intervened; but God hath from his free-will exhibited himself so propitious to us in Christ, as not to exact the punishment of our sins, though he might justly have done it. Socinus allowed not only that the death of Christ and the shedding of his blood for us, was an offering and sacrifice to God, but that this sacrifice may be said to have been offered up for our sins in order to their being forgiven; and this sacrifice, so far as it was expiatory, was not offered on the cross, but in heaven itself after the resurrection.

The modern Socinians deny not only the miraculous conception, but also that any worship is due to Jesus Christ. They assert that our Lord had no existence until born of the Virgin Mary; and that, being a man like ourselves, though endowed with a large portion of the divine wisdom, the only objects of his mission were to teach the efficacy of repentance without an atonement, as a medium of the divine favour—to exhibit an example for our imitation—to seal his doctrine with his blood, and, in his resurrection from the dead, to indicate the certainty of our resurrection at the last day. The modern Socinians also deny "utterly" the *universal* inspiration of the writers of the Old and New Testament.

See *The Racovian Catechism*, edited by Dr. T. Rees, 8vo. 1818; Toulmin, *Life of Socinus*, 8vo. 1777; Lindsey, *Historical View of the State of the Unitarian Doctrine and Worship*, &c. 8vo. 1783; *Manchester Socinian Controversy*, 1825; Belsham, *Calm Inquiry and Answer to Wilberforce*.

SOCK, } D. socke; Ger. sock; Sw. socka; A.
SOCKLESS, } S. socc; Fr. socque; It. socco; Lat.
SOCKING. } soccus, which Vossius derives from the Hebrew, and Wachter from the Phrygian: Σοκχοι, he

SOCI-
NIANS.

SO-
CRATIC.

observes, *sunt calceamenta Phrygia apud Hesychium*.
See the Quotation from Kennett.

For that low *sock* wherein she us'd to tread,
Marching in greaves, a helmet on her head.
Drayton. The Barons' Wars, book ii.

— And be it said of thee,
Shakespeare, thou hadst as smooth a comic vein,
Fitting the *sock*, and in thy natural brain,
As strong conception, and as clear a rage,
As any one that traffic'd with the stage.
Id. To Henry Reynolds, Esq.

Then to the well-trod stage anon,
If Jonson's learned *sock* be on,
Or sweetest Shakespeare, fancy's child,
Warble his native wood-notes wild.

Milton. L'Allegro, v. 131.

Amongst the rest you shall behold one pair, the feet of which
were, in times past, *sockless*, but are now through the change of
time (that alters all things) very strangely become the legs of a
knight and a courtier.

Beaumont and Fletcher. The Woman-Hater, act i. sc. 3.

It was his [Borde's] custom to drinke water three days in a week,
to wear constantly a shirt of hair, and every night to hang his
shroud and *socking* or burial-sheet at his bed's feet, according as
he had done, as I conceive, while he was a Carthusian.

Wood. Athenæ Oxonienses, part i. p. 74.

Great Fletcher never treads in buskins here,
Nor greater Jonson dares in *socks* appear.

Dryden. Mac-Flecknoe.

The soccus was a slight kind of covering for the feet, whence
the fashion and name of our *socks* are derived. The comedians
wore these.

Kennett. Roman Antiquities, part ii. book v. ch. vi.

SOCKET, Fr. *souchette*, diminutive of *souche*, the
stock or trunk. See the first Quotation from Plinie.

The stem or trunk; that in which any thing is set or
fixed, ingrafted or inserted.

Two goodly beacons, set in watches stead,
Therein gave light, and flam'd continually;
For they of living fire most subtilly
Were made, and set in silver *sockets* bright,
Cover'd with lids deviz'd of substance sly,
That redily they shut and open might.

Spenser. Faerie Queene, book ii. can. 9.

And lastly, that the impe stand so close barke to barke in the
socket, that a man may not see betweene it and the stocke.

Holland. Plinie, book xvii. ch. xiv.

And both of them (as well the blacke as the white) [ellebore]
serve in a collution to strengthen and keepe them fast in their
sockets, if they be boyled in vinegre.

Id. Ib. book xxv. ch. xiii.

7 Besides these also he found sundrie pillars of brasse, and *sockets*
of latton.

*Holinshed. The Description of England, vol. i. p. 322. book ii.
ch. xiii.*

Dry sorrow in his stupid eyes appears,
For, wanting nourishment, he wanted tears;
His eye-balls in their hollow *sockets* sink.

Dryden. Palamon and Arcite, book i.

When they change tacks they throw the vessel up in the wind,
ease off the sheet, and bring the heel or tack-end of the yard to
the other end of the boat, and the sheet in like manner; there are
notches or *sockets* at each end of the vessel in which the end of
the yard fixes.

Cook. Voyages, vol. iv. book iii. ch. ii. p. 16.

SOCRATIC, *adj.* } For the application of these
SOCRATICAL, } words to a mode of discourse,
SOCRATICALLY, } commonly pursued by Socrates,
SOCRATIST. } see the Quotation from Watts.

There arose a great question between Pythagoras's disciples and
the scholars of Socrates, for that the *Socratism* said it was better
and more commodious that all things should be in commotion.

Martin. Marriage of Priestes, (1554.)

SO-
CRATIC.
—
SOEFUL.

There are three sorts of disputation, in which there are some
forms and orders observed, and which are distinguished by these
three names, viz., *Socratic*, forensic, and academic, that is, the
disputes of the schools.

Watts. On the Mind, part i. ch. xii.

The *Socratical* way is managed by questions and answers in
such a manner as this, viz., If I would lead a person into the be-
lief of a heaven and a hell, or a future state of rewards and punish-
ments, I might begin in some such manner of inquiry, and suppose
the most obvious and easy answers.

Q. Does not God govern the world? &c.

Id. Ib. ch. xi.

It is such a pleasure to be non-plus'd in mood and figure, that
you had rather be snapped in the mouse-trap of a syllogism, than
treated *socratically* and genteely.

Goodman. Winter Evening Conference, part iii.

It has been usual, among the admirers of *Socratic* morality, to
compare it with the evangelical.

Knox. Works, vol. ii. p. 378. Winter Evening 17.

SOD, *sodden*, past participle of *seethe*.

And as a smith to harden any tooles
(Broad axe or mattocke) in his trough doth coole
The red-hot substance, that so feruent is.
It makes the cold waue strait to seethe and hisse;
So *sod*, and hizz his eye about the stake.

Chapman. Homer. Odyssey, book ix.

2 Boy. All the rest,
Except the captain, are in limbo patrum,
Where they lye *sod* in sack.

Beaumont and Fletcher. The Captain, act iv. sc. 2.

The knight caused him to be kept certeine daies and nights
from the sea, meat set afore him he greedilie deuoured, and did eat
fish both raw and *sod*.

*Holinshed. The History of England, vol. ii. p. 290. King John,
Anno 1204.*

SOD, D. *sode*, *soode*. It is perhaps *sod*, the past par-
ticipule of *seethe*, to boil; and, consequentially, wetted,
soaked, or steeped in water; and applied to

Lumps of wet, or moist, or damp turf.

She therefore to encourage her people against the enimies,
mounted vp into an high place raised vp of turfes and *sods* made
for the nonce, out of the which she made a long and verie pithie
oration.

Holinshed. The History of England, book iv. ch. x.

He [Adrian] caused a great trench to be cast ouerthwart the
land from the mouth of Tine to the riuer of Eske, and a wall to
be made on the inner side of the same, of turfe and *sods*.

Id. The History of Scotland, vol. v. p. 88. Mogall.

Yellow sheaves from rich Ceres her cottage had crown'd,
Green rushes were strew'd on her floor,
Her casement, sweet woodbines crept wantonly round,
And deck'd the *sod* seats at her door.

Cunningham. Content.

SODALITY, Fr. *sodalité*; It. *sodalizio*; Lat. *sodales*,
quasi sedales, quod una sederent essentque: because
they sit and take meat together. Festus.

Companionship at meat, at the table; generally
companionship, fellowship, society.

Sodalities of all sorts and conditions whatsoever, either secular
or ecclesiastical.

Parth. Sacra, 1633, p. 180.

A new confraternity was instituted in Spain, of the slaves of the
Blessed Virgin, and this *sodality* established with large indulgencies.

Stillingfleet. Sermons.

SODER. See SOLDER.

SOEFUL, Fr. *seau*; Scotch *say, saye*; Ger. *sau*,
saw; Sw. *saa*; *Vas*,

A pail, a bucket. Ray calls a *so* or *soa* a tub with
two ears, to carry on a stang or wooden bar.

No more than a pump grown dry will yield any water, unless
you pour a little water into it first, and then for one bason-ful you
may fetch up so many *soefuls*.

More. An Antidote against Atheism, part i. book ii. ch. vi.

SOFA. **SOFA**, Arabic *soffah*; a sofah, a low seat, a small bank of earth. Thomson. The A. S. *swæf-ian* (see **SWEVEN**) is *dormire*, to sleep, to lull to sleep.

The king seeing his brother enter the room with Belsora in his hand, he leaped off from the *sofa* on which he sat and cry'd out, 'Tis he! 'tis my Abdalla!

The Guardian, No. 198.

Thus first necessity invented stools,
Convenience next suggested elbow-chairs,
And luxury th' accomplish'd *sofa* last.

Cowper. The Task, book i.

SOFA is a slight alteration of the Arabic word *soffah*, "a bench," originally signifying a stone-bench in front of a house on which the visitors sat *in order*, for the notion of "arrangement in order," of "drawing out in array," is that from which this word is derived. This indispensable and almost only article of furniture in an Asiatic saloon, has undergone a considerable change in its transit to an European apartment. In the East it consists of a broad platform not four inches high, projecting from the wall on three sides of the room; on this are laid closely stuffed mattresses, and large pillows or cushions about six feet in breadth and four in height are placed against the wall. These cushions and mattresses are covered with chintz or brocade, according to the means of the master of the house. Such Sofas, though very inconvenient as seats according to our fashion, are well adapted for a reclining posture or sitting cross-legged, as is usual in the East, where they serve as beds by night and as seats by day. In the houses of the great, the whole area of the principal apartment, with the exception of a narrow space on the side of the door, is filled by a platform about four feet in height, and ascended by three or four steps, which is in fact the *diván* or "place of assemblage," surrounded on three sides by a *Soffah* and separated from the rest of the room by a low balustrade on the fourth. The floor is covered with a fine mat, and the *Sofa* sometimes with rich carpeting, usually with silk or chintz. Hence apartments so fitted up, and the *Sofa* itself, are commonly, but incorrectly, called *diván* by the Europeans established in Turkey. The word *Sofa* seems to have been introduced into the French and English languages about the latter end of the XVIIth century, but in the former it is now little used, and seems to have signified a very wide bed, or a raised and carpeted platform, rather than a couch. An exact representation of the Turkish *Soffa* is given in the plates (particularly pl. lxiii.) of Murádjah d'Othson's *Tableau de l'Empire Othoman*, (iv. 174. 8vo. Ed.) *Dictionnaire de l'Académie*, v. *Sofa*, *Canapé*.

SOFI, more properly *Súfí*, the general name of the mystical ascetics so numerous in the East, is either a corruption of the Greek word *sophos*, or derived from the woollen robe worn by those devotees, as has been already observed in the account of the different orders of *Dervishes* given in a former part of this work, (*Encyc. Metrop.* xx. 713.)

SOFT, *adj.* } **D.** *sæft*, *saft*; **Ger.** *sanft*; **A. S.**
SO'FTEN, *v.* } *soft*, perhaps from *swef-ed*, *swest*,
SO'FTLY, } *sopitus*, past participle of *swef-ian*,
SO'FTNESS, } (see **SWEVEN**,) *sopire*, *lenire*.
SO'FTENER, } Gentle, quiet, placid, lulling,
SO'FTENING, *n.* } soothing; tender, delicate, effemi-
SO'FTLING. } nate; pliant or pliable, (met. sim-
ple.)

To *soften*; to mollify, to soothe, to assuage, to relax, to melt.

We reverence Reson. and romed forth *softeliche*
And mette with a mayster.

Piers Plouhman. Vision, fol. 243.

Or what thing wenten ye out to se, A man clothid with *softe*
clothis? Lo thei that ben clothid with *softe* clothis ben in housis
of kyngis.

Wiclif. Matthew, ch. xi.

Other what went ye oute for to se? A man clothed in *softe* ray-
ment? Behold they that weare *soft* clothyng are in kynges houses.

Bible, Anno 1551.

Britheren, if a man be ocupied in ony gilt, ghe that ben
spyrtual enforme ghe such oon in spyrt of *softnesse*, biholdyng
thisilf lest that thou be temptid.

Wiclif. Galathies, ch. vi.

And I my silf Poul biseche ghou bi the myldenesse and *soft-*
nesse of Crist, which in the face anie meke among ghou, and I
absent triste in ghou.

Id. 2 Corynth. ch. x.

I Paule my selfe besech you by the mekenes and *softnes* of
Chryste, whiche when I am presente amonge you am of no
reputacion, but am bolde towarde you beyng absent.

Bible, Anno 1551.

Under a shepherd *soft* and negligent,
The wolf hath many a shepe and lambe to rent.

Chaucer. The Doctoures Tale, v. 11971.

Fro Jerusalem vnto Burgoine
Ther nis a fairer necke iwis
To fele how smooth and *soft* it is.

Id. The Romant of the Rose, p. 175.

And *soft* unto himself he sayed: Fie
Upon a lord that wol have no mercie.

Id. The Knightes Tale, v. 1724.

Out at the dore he goth ful prively,
Whan that he saw his time, *softely*.

Id. The Reves Tale, v. 4056.

Now were they easie, now were they wood,
In hem I felt both harme and good,
Now sore without alleggement,
Now *softening* with the ointement,
It *softened* here, and priked there,
Thus ease and anger together were.

Id. The Romant of the Rose, p. 185.

In harde weyes men gone *softe*,
And er thei climbe auise them ofte.

Gower. Conf. Am. book iii.

The waters fall with difference discreet,
Now *soft*, now loud, unto the wind did call;
The gentle warbling wind low answered to all.

Spenser. Faerie Queene, book ii. can. 12.

Whiles every sence the humour sweet embayd,
And slombring *soft* my hart did steale away,
Me seemed by my side a royall mayd
Her daintie limbes full *softly* down did lay.

Id. Id. book i. can. 9.

Because he mark'd and saw
The free spectators, subject to no law,
Having well eat and drunke, the rites being done,
Were to be staid with *softnesses*, and wonne
With something that was acceptably new.

Ben Jonson. Horace.

The sirens will so *soften* with their song,
(Shrill, and in sensuall appetite so strong.)
His loose affections, that he giues them head.

Chapman. Homer. Odyssey, book xii.

Asp. Thou art some prating fellow,
One that hath studyed out a trick to talk
And move *soft-hearted* people.

Beaumont and Fletcher. The Maid's Tragedy, act v.

The *softest* body in the world will as invincibly resist the coming
together of any other two bodies, if it be not put out of the way,
but remain between them, as the hardest that can be found or
imagined.

Locke. Of Human Understanding, vol. i. book ii. ch. iv. p. 102.

A lady all in white, with laurel crown'd,
Who clos'd the rear, and *softly* pac'd along,
Repeating to herself the former song.

Dryden. The Flower and the Leaf.

SOFT.
—
SOJA.

There being only some few Dithiests to be excepted, (such as Plutarch and Atticus,) who out of a certain *softness* and tenderness of nature, that they might free the one good God from the imputation of evils, would needs set up besides him an evil soul or dæmon also in the world self-existent, to bear all the blame of them.
Cudworth. Intellectual System, book i. ch. iv. fol. 369.

Those *softners* and expedient-mongers shake their heads so strongly, that we can hear their pockets jingle.

Swift.

Upon more mature consideration they came at last to this conclusion: to impose the creed as before, and to qualify the seeming harshness of the damnatory clauses by a *softening* rubrick.
Waterland. Works, vol. iv. p. 306. *The Reasonableness of Retaining the Athanasian Creed.*

Some of them now and then got up, and said something after the manner of their first harangues; and one sung a very agreeable air, with a degree of *softness* and melody which we could not have expected.

Cook. Voyages, vol. vi. book iii. ch. xiii. p. 244.

It [polite learning] has a secret, but powerful influence in *softening* and meliorating the disposition.

Knox. Works, vol. iii. p. 284. *Liberal Education.*

SOGALGINA, in *Botany*, a genus so called by Cassini; the name is an anagram of *Galinsoga*, a nearly related genus. It belongs to the class *Syngenesia*, order *Superflua*, and natural order *Compositæ-Senecionideæ-Heleniææ*. Generic character: florets of the ray, female, bilabiate; lips of the disk fastigiate, the rays very unequal, outer ones linguæform; achenia triquetrously turbinate; branches of the styles in the hermaphrodite florets terminating each in a long, filiform appendage; pappus in one series conforming to the pinnate paleæ.

This genus is separated from *Galinsoga*, and contains but one known species, *S. balbisoides*, a trichotomous, branched herb, native of Mexico, with entire or dentately jagged leaves and yellow flowers.

SOGGY. Gifford had not met with the word elsewhere: "I have heard it applied (he adds) to hay that has been cut too early, and sweats as it lies in heaps." Perhaps from A. S. *suggan*, to suck, to absorb.

COR. How now, Mitis! what's that you consider so seriously?

MIR. Troth, that which doth essentially please me, the warping condition of this green and *soggy* multitude.

Ben Jonson. Every Man out of his Humour, act iii. sc. 2.

SOGINES, in *Zoology*, a genus of *Coleopterous* insects.

Generic character. *Antennæ* compressed, the third and fourth joints longer than the remainder, the former longest, all with an elevated line above; *palpi* six, robust, the terminal joint of the external maxillary ones obtusely truncated, and longer than the third, which is clavate; *labrum* very narrow, transverse, obsoletely notched; mandibles stout, rather obtuse, striated above; head large; *thorax* with an elevated line on each side near the posterior angle; body depressed; *elytra* with the tip narrowed and emarginated; wings two, ample; *tarsi* pentamerous, anterior pair in the males with three dilated joints.

Type of the genus, *Carabus punctulatus*; Illiger, *Kaf. Preus.* vol. i. p. 175; *S. punctulatus*, Stephens, *Britt. Ent. (Mandibulata)*, vol. i. p. 112. Found in Europe, and, but very rarely, in the west of England.

SOJA, in *Botany*, a genus so called from Sôyja, the name of a sauce prepared from the seeds by the Japanese. It belongs to the class *Diadelphia*, order *Decandria*, and natural family *Leguminosæ*. Generic character: calyx furnished with two bractæas at the base, five-cleft, having two of the teeth approximate or combined at the base; corolla papilionaceous; vexillum ovate, with a short claw; keel oblong, straight; stamens diadelphous;

legume oblong, two to five-seeded; seeds intercepted by cellular substance, ovate, compressed.

One species is known of this genus, *S. hispida*; it is an erect, hispid, annual plant, a native of Japan, Moluccas, &c. The leaves are trifoliate, and the corollas violaceous, and somewhat racemose.

SOIL, *i. e. assoil*, *q. v.*

But now because he speaketh of oure sophystrie; let vs consider how substanciallye the man *soyleth* the first reason, that he woulde were rekened so lyghte.

Sir Thomas More. Workes, fol. 626. *Against Tyndall.*

SOIL, Fr. *sol*; It. *suolo*; Lat. *solum*.

The earth, land, ground; land, with reference to its produce.

I saw Troye fall down in burning gledes;
Neptunus town clene razed from the soil.

Surrey. Virgil. Æneis, book ii.

Whereof if some but simple seeme, consider well the soyle.
They grew not all at home, some came from forreyne fieldes,
The which (percase) set here againe, no pleasant sauouryeeldes.
G. W. In prayse of Gascoigne.

'Twas said of old, a saint once curst the soil,
So barren and so hungry, that no toil
Could ever make it any thing to bear,
Nor would aught prosper that was planted there.

Drayton. The Moon-Calf.

Nor every plant on every soil will grow;
The sallow loves the watery ground, and low;
The marshes, alders; nature seems t' ordain
The rocky cliff for the wild ash's reign;
The baleful yew to northern blasts assigns;
To shores the myrtles, and to mounts the vines.

Dryden. Virgil. Georgics, book ii.

The vine is more affected by the difference of soils than any other fruit-tree.

Smith. Wealth of Nations, vol. i. book i. ch. xi.

SOIL, } Goth *sauljan*; A. S. *syl-ian*; Ger.
SOIL, } *salen*; Sw. *soola*; Fr. *souiller*; It.
SOI'LING, } *sogliare*. To soil or sully is
SOI'LINESS, } To dirt, to file, or defile, to pollute,
SOI'LURE. } to stain, to tarnish.

A soiled horse; a horsed cleansed or purged of his foulness by spring grass.

Besides them both upon the soiled gras
The dead corse of an armed knight was spread,
Whose armour all with blood besprinkled was.
Spenser. Faerie Queene, book ii. can. 1.

The whiles my handes I [Pilate] washt in purity
The whiles my soule was soyled with fowle iniquity.
Id. Ib. book ii. can. 7.

Which fleshy accustoming without the soul's union and commixture of intellectual delight is rather a *soiling* than a fulfilling of marriage-rites.

Milton. Works, vol. i. fol. 206. *The Doctrine and Discipline of Divorce.*

Make proof of the incorporation of silver and tin, and observe whether it yield no *soiliness* more than silver.

Bacon. Physiological Remains.

It will be sweeter and cleaner than brass alone, which yieldeth a *soiliness*.
Id. Ib.

He merits well to haue her, that doth seeke her,
Not making any scruple of her *soylure*.
Shakspeare. Troilus and Cressida, act iv. sc. 1. fol. 95.

The fitchew, nor the soyled horse, goes to't
With a more riotous appetite.
Id. King Lear, act iv. sc. 6. fol. 303.

The place which is shown for the haven, is on a level with the town, and has probably been stopped up by the great heaps of dirt that the sea has thrown into it; for all the soil on that side of Ravenna has been left there insensibly by the sea's discharging itself upon it for many ages.
Addison. Italy, p. 76.

Sojourned han these marchants in that toun
A certain time, as fell to hir plesance.

Chaucer. The Man of Lawes Tale, v. 4568.

With Delight she halt *sojour*,
For both they dwellen in o' tour,
As long as youth is in season,
They dwellen in one mansion.

Id. The Romant of the Rose, p. 207.

And there he dwelte for a while,
Till afterwarde in to that yle,
Fro when he cam, ayene he tourneth,
Where all his life that he *soiourneth*
Amonge the Grekes, till that he dyde.

Gower. Conf. Am. book v.

PRINCE. Good Lords, make all the speedie hast you may.
Say, vnclé Gloucester, if our brother come,
Where shall we *soiourne*, till our coronation?

Shakspeare. Richard III. act iii. sc. 1. fol. 186.

Thee I revisit now with bolder wing,
Escap't the Stygian pool, though long detain'd
In that obscure *sojourn*.

Milton. Paradise Lost, book iii. l. 13.

Thy life hath yet been private, most part spent
At home, scarce view'd the Gallilean towns,
And once a year Jerusalem, few days
Short *sojourn*.

Id. Paradise Regained, book iii. l. 232.

For we are strangers before thee, and *soiourners* like all our
fathers; our dayes are like the shadowe vpon the earth, and there
is none abiding.

Bible, Anno 1583. 1 Chronycle, ch. xxix. v. 15.

Now the *sojourn*ing of the children of Israel, who dwelt in
Egypt, was four hundred and thirty years.

Bible, Exodus, ch. xii. v. 40.

Within the fane a stone of sable hue
Stood where the Amazons their victims slew;
Who held it lawless, when they *sojourn'd* here,
To slay the sheep, or sacrifice the steer;
Instead of these the full-fed, pamper'd steed
Was doom'd, a victim at this fane, to bleed.

Fawkes. Argonautics of Apollonius Rhodius, book i.

Henry Byram was born near Dunster in Somersetshire on the
last of Aug. 1580, and in Act term 1597 was sent to Exeter
Coll., where he continued in the condition of a *sojourner* till he
was elected a student of Ch. Ch. 21 December, 1599.

Wood. Athenæ Oxonienses, part ii. p. 429.

SOKEN, A. S. *socne*, (see Soc, ante,) toll. Tyrwhitt.
Privilege assumed of taking toll.

Toll for grinding corn. Cowell says, "There is bond
socome and love *socome*; bond, where tenants are
bound to grind at the lord's mill: love, where they do it
freely out of love to their lord." Perhaps where the
lord allows it to be done freely or without paying toll.

Gret *soken* hath this miller out of doute
With whete and malt of all the land aboute.

Chaucer. The Reves Tale, v. 3986.

SO'LACE, v. } Fr. *solacier*; It. *sollazzare*; Sp. SOLACE
SO'LACE, n. } *solaza*; Lat. *solatium*, from *sola-*
SOLA'CIOUS. } *tum*, past participle of *solari*, i. e. *ei*,
qui solus ac derelictus est, bonam spem facere, to give
hope, to encourage the solitary and forsaken. Gene-
rally,

To encourage, to cheer, to comfort, to soothe, to re-
create, to console, q. v.

Home forto wend to childe & to wife,
To visitte þer londes, to *solace* þer life.

R. Brunne, p. 4.

His *solace* was alle reft, þat scho fro him was gon,
Ne no sonne him left, bot ging Edward alon.

Id. p. 252.

And sýnful ben *solacede*. and saved by þat name
And ge callen hym Crist.

Piers Plouhman, fol. 367.

And britheren I preie ghou, that ghe suffre a word of *solace*.
Wiclif. Ebrewis, ch. xiii.

And thus he walketh to *solace*
Him and his folke, for sweeter place
To playen in, he may not finde.

Chaucer. The Romant of the Rose, p. 175.

For if your good will I lese,
I mote be dead, I may not chese,
And if that thou foryete me,
Mine herte shall neuer in liking be
Nor elsewhere find *sollace*.

Id. Ib. p. 203.

For he kepte reuell, daunsyng, and *solas*, and euery day it was
newe to begyn.

Lord Berners. Froissart. Cronycle, vol. ii. ch. 160. p. 443.

In Chaucer I am sped,
His tales I have red,
His mater is delectable,
Solacious, and commendable.

Skelton. Philip Sparow.

The Romysh clergy satled them selues all the worlde ouer, in
the aboundaunt pleasures of Sodome, whych were (as the prophet
reheareth) pryde, plenty of feadyng, *solacyouse* pastymes, ydel-
nesse, and crueltie. Bale. English Votaries, part ii. fol. 18.

Thus they awhile with court and goodly game
Themselves did *solace* each one with his dame,
Till that great lady thence away them sought
To vew her castles other wondrous frame.

Spenser. Faerie Queene, book ii. can. 9.

Unkindnesse past, they gan of *solace* treat,
And bathe in pleasaunce of the ioyous shade,
Which shielded them against the boyling heat,
And, with greene boughes decking a gloomy glade,
About the fountaine like a girlond made.

Id. Ib. book i. can. 7.

Did he open so to us this hazardous and accidental door of
marriage, to shut upon us like the gate of death, without retract-
ing or returning, without permitting to change the worst, most in-
supportable, most unchristian mischance of marriage for all the
mischiefs and sorrows that can ensue, being an ordinance that
was especially given as a cordial and exhilarating cup of *solace*,
the better to bear our other crosses and afflictions?

Milton. The Doctrine and Discipline of Divorce, book ii. ch. ix.

A cause supreme, that might all nature steer,
Avert our danger, and prevent our fear,
Who when implor'd might timely succour give,
Solace our anguish, and our wants relieve.

Blackmore. Creation, book v.

But the mind having a natural propensity to pleasure loves to
solace herself in the contemplation of whatever belonging to her
she conceives will do her honour.

Search. Light of Nature, vol. ii. part ii. ch. xxiv.

The ingenious biographer of the poet Gray has informed us
that the most approved productions of his friend were brought
forth soon after the death of one whom the poet loved. Sorrow
led him to seek for *solace* of the muse.

Knox. Works, vol. i. p. 274. Essays, No. 50.

SOLAN
DRA.
—
SOLD.

SOLANDRA, in *Botany*, a genus so called in honour of Daniel Charles Solander, LL.D., a disciple of Linnæus, and companion of Sir Joseph Banks in his voyage round the world. It belongs to the class *Pentandria*, order *Monogynia*, and natural order *Solanaceæ*. Generic character: calyx spathaceous, splitting on one side, cleft at apex; corolla large, clavately funnel-shaped; tube long; throat inflated; lobes fringed; berry or capsule globosely conical, four-celled, many-seeded.

This genus consists of four species, climbing and erect shrubs, natives of tropical America. They are very showy, the flowers being large and handsome, usually of a pale yellow colour.

SOLANUM, in *Botany*, a genus so called from a name given by Pliny. It belongs to the class *Pentandria*, order *Monogynia*, and natural order *Solanaceæ*. Generic character: calyx five, rarely four-cleft; corolla rotate, rarely campanulate, five, rarely four-cleft; stamens five; anthers oblong, connivent, dehiscing by two pores at apex; berry almost globose, two, three, or four-celled.

This genus consists of above four hundred species, herbs or shrubs, natives of warmer parts of the globe. The principal species are *S. tuberosum*, the potato; *S. melongena*, the egg-plant; *S. dulcamara*, the bitter-sweet.

SO'LAR, } Fr. *solaire*; It. *solare*; Sp. *solar*; Lat.
SO'LARY. } *solaris*, from *sol*, the sun.

Sunny; of or pertaining to the sun. And see the Quotation from Locke.

Ve Adar was an intercalary month, added, some years, unto the other twelve, to make the *solar* and *lunary* year agree.

Raleigh. *History of the World*, book ii. ch. iii. fol. 144.

Moneths are not onely *lunary*, and measured by the moon, but also *solar*, and determined by the motion of the sun; that is, the space wherein the sun doth pass thirty degrees of the ecliptic.

Sir Thomas Brown. *Vulgar Errours*, book iv. ch. xii. p. 263.

Our *solar* system consists of the sun, and the planets and comets moving about it.

Locke. *Elements of Natural Philosophy*, ch. iii.

The corpuscles that make up the beams of light be *solar* effluvia, or minute particles of some ethereal substance, thrusting on one another from the lucid body.

Boyle.

His soul proud science never taught to stray
Far as the *solar* walk, or milky way;
Yet simple nature to his hope has given,
Behind the cloud-topped hill, an humbler heaven.

Pope. *Essay on Man*. Epistle 1.

Careless of earth, exulting lifts his eyes,
Spreads his firm wing, and gains upon the skies!
By her instructed, meets the *solar* ray,
And grows familiar with the blaze of day!

Boyle. *To the Duke of Gordon*.

SOLARIUM, in *Zoology*, a genus of *Trachelipodous Mollusca*.

Generic character. Shell orbicular, in form of a depressed cone, deeply umbilicated; pillar cavity spreading and crenulated at the edge of the whorls; aperture wide; mouth quadrangular.

Type of the genus, *Trochus perspectivus*, Linnæus; Lamarck, *Lister*, pl. 636, fig. 24. Inhabits the Indian Ocean; other recent, and a few fossil, species are known; of the latter, six occur in England, in the London clay.

SOLD, *n.*, Ger. *sold*; It. *soldo*; Sp. *soldada*; Fr. *sould*; *souldier's* lendings, entertainment, or pay, (an old word.) Cotgrave. See **SOULDIER**. Her *solde*, to entertain, *i. e.* to take or receive her pay.

An he seide to hem, Smyte ye no man wrongfully, nether make ye fals challenge and be ye a payed with youre *soudis*.
Wiclif. *Luke*, ch. iii.

SOLD.
—
SOLDIER

Sayd Guydon, Noble lord, what meed so great,
Or grace of earthly prince so souveraine,
But by your wondrous worth and warlike feat
So well may hope, and easily attaine?
But were your will her *sold* to entertaine,
And numbred be mongst knights of Maydenhed,
Great guerdon well I wote should you remaine,
And in her favor high be reckoned.

Spenser. *Fuerie Queene*, book ii. can. 9.

SO'LDAN, or } Gr. of the Lower Ages *σουλτανος*;
SO'UDAN, } Lat. *soldanus*; Fr. *soldan*, *souldan*,
SO'UDANNESS. } *sultan*; Sp. *soldan*; It. *sultano*.

See **SULTAN**.

Soudan, in the Egyptian and Moorish tongues, doth signifie a king, prince, or sovereign. Cotgrave.

Now fell it, that these marchants stood in grace
Of him that was the *soudan* of Surrie;
For whan they came from any strange place
He wold of his benigne curtesie
Make hem good chere.

Chaucer. *The Man of Lawes Tale*, v. 4618.

This *soudannesse*, whom I thus blame and warrie,
Let prively hire conseil gon hir way;
What shuld I in this tale longer tarie?
She rideth to the *soudan* on a day,
And sayd him, that she wold reneie hire lay,
And Cristendom of prestes hondes fong,
Repenting hire she hethen was so long.

Id. *Ib.* v. 4729.

Though like a cover'd field, where champions bold
Wont ride in arm'd, and at the *soldan's* chair
Defi'd the best of Panim chivalry
To mortal combat or carreer with lance.

Milton. *Paradise Lost*, book i. l. 768.

— The *soldan*, as he fled,
Oft call'd on Alla, gnashing with despite
And shame, and murmur'd many an empty curse.

Philips. *Cider*, book ii.

SOLDANELLA, in *Botany*, a genus so named from *solidus*, a shilling, on account of the shape of the leaves. It belongs to the class *Pentandria*, order *Monogynia*, and natural order *Primulaceæ*. Generic character: calyx five-parted; corolla campanulate, with multifidly jagged mouth; stamens five; filaments exceeding the anthers, which are adnate, sagittate, and bifid at apex; stigma one; capsule many-valved at top, many-seeded.

This genus consists of four species, all natives of the Alps, Switzerland, and Bohemia. They are pretty, early flowering, alpine, scapigerous plants, with nearly orbicular, radical, coriaceous, crenated leaves, and blue flowers.

SOLDEVILLA, in *Botany*, a genus so called by Lagasca after his friend Soldevilla, a Spanish botanist. It belongs to the class *Syngenesia*, order *Æqualis*, and natural order *Compositæ-Cichoraceæ-Lapsaneæ*. Generic character: achenia oblong, bald.

This genus consists only of one species, *S. hispida*, a dwarf, annual herb, a native of Spain. It is covered with branched bristles; the leaves are entire, and the flowers yellow.

SO'LDIER, } Fr. *souldoyer*; It. *soldato*; Sp.
SO'LDIERY, } *soldado*; D. *soldaet*; Ger. *soldat*;
SO'LDIERSHIP, } one who served for pay; Ger. *sold*,
SO'LDIERY, } which Wachter derives from *sel-en*,
SO'LDIERESS. } to give, (to *sell*, *q. v.*)

Others derive from the Lat. *soldurii*, *qui salario conducuntur*; those who are hired for a salary. (See **SALARY**.) But the *soldurii* (Cæsar) do not appear to

SOLDIER have served for pay. See the Quotation from Smith. Others again derive the It. *soldo* (the pay) from *soldo*, the coin, Lat. *solidus*; *menstruum stipendium*, their monthly pay; Low Lat. *solidare, stipendium præbere*. Solidata, *stipendium unius solidi, quod datur militi*. See Du Cange, Vossius, *De Vitiis*, Wachter, Kilian, and Menage; and see the Quotation from Smith.

Aniowe with per *souders* was alle biseged & set.
R. Brunne, p. 109.

But he was ioyous and gladde of theyr cōmyng, for so moche as he had nede of suche *sowdyours* to defende hym and his lande agayne his enemyes.

Fabyan. *Chronycle*, ch. lxxxii. p. 60.

The worde *souldier* now seemeth rather to come of *sould*, a paiment, and more to betoken a waged or hired man to fight, thā otherwise, yet Cæsar in his cōmentaries called *soldures* in the tongue Gallois, men who deuoted and swore themselues in a certaine band or othe one to another, and to the capitaine.

Smith. *Commonwealth*, book i. ch. xviii. p. 32.

Whiche to expresse, who could refraine from teres?

What Myrmidon? or yet what Dolopes?

What stern Vlysses' waged *soldiar*?

Surrey. *Virgil. Æneis*, book ii.

He had been brought up in some *soldiery*, which he knew how to set out with more than deserved ostentation.

Sidney. *Arcadia*, book iv. p. 786.

Hys apparell is *souldier-lyke*, better knowen by hys feare doynge then by his gay goyng.

Ascham. *Workes*, fol. 26. *A Report and Discourse of Germany*.

For nothing deckes a *souldier* so, as doth an honour'd wound.

Chapman. *Homer. Iliad*, book iv.

Soldieress

That equally canst poize sternness with pity,
Whom now I know has much more power on him,
Than ever he had on thee, who ow'st his strength,
And his love too.

Beaumont and Fletcher. *The Two Noble Kinsmen*, act i. sc. 1.

The ape clad *souldier-like*, fit for th' intent,
In a blew iacket with a crosse of redd
And manie slits, as if that he had shedd
Much blood throg many wounds therein receaved.

Spenser. *Mother Hubbard's Tale*.

Conclude we therefore *souldior-like*,

And let a combate yeeld

Vnto the hardier of vs twaine

The honour of the field.

Warner. *Albion's England*, book iii.

Where was your *souldiership*? why went not you out?
And all your right honourable valour with ye?
Why met ye not the Tartar, and defi'd him?
Drew your dead doing sword, and buckl'd with him?

Beaumont and Fletcher. *The Loyal Subject*, act iv. sc. 5.

And I perswade me God hath not permitted
His strength again to grow up with his hair
Garrison'd around about him like a camp
Of faithful *souldiery*, were not his purpose
To use him further yet in some great service.

Milton. *Samson Agonistes*, l. 506.

What kings decree, the *souldier* must obey,
Wag'd against foes; and when the wars are o'er,
Fit only to maintain despotic power;
Dangerous to freedom, and desir'd alone
By kings, who seek an arbitrary throne.

Dryden. *Sigismonda and Guiscardo*.

"Be silent, or I shall no longer style you *soldiers*, but citizens, if those, indeed, who disclaim the laws of Rome, deserve to be ranked among the meanest of the people."

Gibbon. *Decline and Fall*, vol. i. ch. vi. p. 252.

How, in the name of *souldiership* and sense,
Should England prosper, when such things, as smooth
And tender as a girl, all essenc'd o'er
With odours, and as profligate as sweet;
Who sell their laurel for a myrtle wreath,
And love when they should fight; when such as these
Presume to lay their hand upon the ark
Of her magnificent and awful cause?

Cowper. *The Task*, book ii.

VOL. XXVII.

SOLE, Fr. *sole, soulier*; It. *suola*; Sp. *suela*; Lat. *SOLE. solea*; D. *sole*; A. S. *sol, sole*: all manifestly, says Lye, from the Goth *sulya*, a sandal; from *sulyan, ga-sulyan, fundare*. See SILL.

Sole of the foot; the bottom of it; that part upon which we move or tread. *Sole* of the shoe, the bottom of it.

Sole, a fish, so called from its flatness, in which it resembles the *sole* of the foot.

Most vertuous virgin, borne of heavenly berth,
That, to redeeme thy woeful parent's head
From tyrant's rage and ever-dying dread,
Hast wandred through the world now long a day,
Yett ceassest not thy weary *soles* to lead.

Spenser. *Faerie Queene*, book i. can. 10.

DORIDA. Had I that foot hid in those shoes,

(Proportion'd to my height,)

Short heel, thin instep, even toes,

A *sole* so wondrous strait.

Drayton. *The Muses' Elysium. Nymphal* 2.

Such be the dog, I charge, thou mean'st to train,
His back is crooked, and his belly plain,
Of fillet stretch'd, and huge of haunch behind,
A tapering tail, that nimbly cuts the wind;
Truss-thigh'd, straight-ham'd, and fox-like form'd his paw,
Large leg'd, dry *sol'd*, and of protended claw.

Tickell. *A Fragment on Hunting*.

O patron of Soractes' high abodes,
Phœbus, the ruling power among the gods;
Whom first we serve, whole woods of unctuous pine
Are fell'd for thee, and to thy glory shine;
By thee protected, with our naked *soles*,
Through flames unsing'd we march, and tread the kindled coals.

Dryden. *Virgil. Æneid*, book xi.

The dresses for the feet and legs amongst the Greeks and Romans were nearly the same; they had both shoes and sandals, the former covered the whole foot, the last consisted of one or more *soals*, and were fastened with thongs above the foot.

Beloe. *Herodotus*, book i. note.

Here's the fattest of carp, shall we dress you a brace?

Would you chuse any *soals*, or a mullet, or plaice?

Cambridge. *The Fable of Jotham*.

SOLE, } Fr. *seul*; It. *solo*; Sp. *solo*; Lat. }
So'LELY, } *solus*, which (Vossius) may be from }
So'LENESS, } the Gr. *ὅλος*, *totus*, the whole, *entire*, }
So'LESHIP. } the whole undivided into parts; or it }
may be *se, i. e. sine aliis*, and, therefore, alone.

Alone, only, single; without any other.

Trewly she was to mine eye,

The *solein* fenix of Arabie.

Chaucer. *The Dreame*, p. 327.

The aforesaid tenement standing in the parisshe of Seynt Mighell forsaide, (I will and bequeth) unto the said Elizabeth my wif, terme of her life, upon condicion that she lyve *soole* and woute an husband.

Fabyan. *Chronycle. Preface*, p. xi.

To whom god Neptune, softly smyling, thus;
Daughter, me seemes of double wrong ye plaine,
'Gainst one that hath both wronged you and us;
For death t' adward I ween'd did appertaine
To none but to the seas *sole* souveraine.

Spenser. *Faerie Queene*, book iv. can. 12.

The laurel importing conquest and sovereignty, and so by consequence *soleness* in that faculty.

Fuller. *Worthies*, vol. i. p. 28. *General Worthies of England*.

Lord Chief Justices. This power was sometime *sole* in a single person, and sometimes equally in two together. *Id. Ib.*

Now all the youth of England are on fire,
And silken dalliance in the wardrobe lyes:
Now thriue the armorers, and honor's thought
Reignes *solely* in the breast of euery man.

Shakspeare. *Henry V.* fol. 72.

LIEU. Yet I wish, sir,

(I meane for your particular) you had not

Joyn'd in commission with him; but either have borne

The action of your selfe, or else to him, had left it *soly*.

Id. Coriolanus, fol. 25.

SOLE.

SOLEA.

This ambition of a *sole* power; this dangerous *soleship* is a fault in our church indeed. *Sir E. Dering. Speeches, p. 134.*

But of this be sure,
To do ought good never will be our task,
But ever to do ill our *sole* delight,
As being the contrary to his high will
Whom we resist.

Milton. Paradise Lost, book i. l. 168.

God is the oldest of all things, because he is unmade. From whence it may be concluded, that all Thales his other gods were generated, and the offspring of one *sole* unmade deity.

Cudworth. Intellectual System, book i. ch. iv. fol. 370.

Every state hath not only its inconveniences, but its consolations; and the discontented would see this, if they did not perversely look *solely* at the former in their own case, and the latter in that of others.

Secker. Works, vol. iii. p. 152. Sermon 10.

France has an advantage, over and above its abilities in the cabinet and the skill of its negociators; which is (if I may use the expression) its *soleness*, continuity of riches and power within itself, and the nature of its government.

Lord Chesterfield.

We enter not into the manner in which the death of Christ saves us from the effects of sin. This is a matter *solely* with God.

Gilpin. Sermon 17. vol. iii.

SOLEA, from the Latin *solum*, the sole of a shoe, Cuv.; *Sole*, Flem. In Zoology, a genus of animals belonging to the family *Pleuronectidæ*, order *Malacopterygii Subbrachiales*, class *Pisces*.

Generic character. Both eyes and dark colour on the right side; mouth distorted to the left, on which side the head is generally covered with cirrhi of greater or less length; muzzle rounded, and the upper jaw projecting more or less beyond the lower; both jaws furnished with delicate velvet-like teeth on the left side, but not on the right; body oblong; dorsal and anal fins extending to or nearly to the tail; in some species the pectoral fins extremely small.

This is one of the genera into which the comprehensive genus *Pleuronectes* of Linnæus has been divided by Cuvier. It is distinguished from the Plaice, *Platessa*, by having no bony tubercles on the skin; from the Halibuts, *Hippoglossus*, by the small size of the teeth in its jaws; from the Turbots, *Rhombus*, by its eyes being on the right side, and the dorsal fin not commencing so far forward, and both it and the anal reaching to the tail; and from the *Achirus* by having pectoral fins. Cuvier has also formed another genus, *Monochirus*, which includes those Soles of which one of the pectoral fins is extremely small or deficient; this, however, does not appear to be necessary, as it merely forms the transition from the *Soleæ* to the *Achiri*; and to compensate for this the Soles may be divided into two sections, those in which the pectoral fins are of equal length, and those in which they are unequal.

I. *With pectoral fins of equal length.*—*Solea*, Cuv.

S. Vulgaris, Flem.; *Pleuronectes Solea*, Lin.; *la Sole*, Cuv.; *Common Sole*. Usually from twelve to eighteen inches in length, and its greatest breadth not equal to half its length; length of the head half the breadth of the body; snout obtuse, rounded, and projecting beyond the mouth, the under side of which only is furnished with fine velvet-like teeth; eyes small, the lower immediately above the corner of the mouth, their irides yellow; under side of the head bearded with white cirrhi; scales small, of an oblong form, and edged with about ten denticles; dorsal fin commencing from just above the mouth and extending to the tail, the rays

simple, compressed, and covered with scales the greater part of their length; pectoral fins just behind the upper part of the branchial opening, narrow, rounded, and their middle rays longest; ventral fins very small and just in front of the vent; anal corresponding to the dorsal, but not commencing till opposite the root of the pectoral; caudal fin slightly rounded; lateral line arched on the head, and thence running straight to the tail; upper surface brown, and the scales edged with a deep tinge giving a reticular appearance; under surface white; tip of the upper pectoral fin black. The Common Sole is found extending from the Scandinavian and Baltic Seas southward, and along the Spanish and Portuguese coasts into the Mediterranean, and also on the American coast; it is also commonly found on the Scotch, Irish, and English coasts, but those on the southern and western coasts are most esteemed both on account of their size and flavour, where they are sometimes of six or seven pounds; one, mentioned by Mr. Yarrell, weighing nine pounds, and measuring twenty-six inches in length and eleven and a half in width, was sold at Totness market in 1826; on the Scarborough coast they are generally of a pound weight, and but very rarely two. A correspondent of Lacepede's informed him that Soles are taken at the mouth of the Seine; that during summer they ascend with the tide as high as the Lac de Tôit, but that in winter they return to the deeper parts of the sea. They also breed in the river Arun in Sussex, which they frequent for five miles above its mouth, and remain there throughout the whole year, burying themselves in the sand during the cold weather. Dr. Macculloch, in a paper on *Changing the Residence of certain Fishes from Salt Water to Fresh*, in the *Quarterly Journal of the Royal Institution for July, 1824*, makes mention of a Sole which had been kept in a pond for many years; and also that in a pond at Guernsey, the Sole acquires double the thickness of one of the same length in the sea. They are gregarious, live almost entirely at the bottom, and feed on the eggs and fry of other fishes. They are caught almost entirely with the trawl, the principal fisheries being at Brixham and Torbay, where trawling-nets of from thirty to thirty-six feet in beam are used. They are packed in baskets, the sides of which are lined with the smaller fish called *slips*, whilst the larger and more valuable are placed in the middle. Mr. Yarrell states, that in the course of one twelvemonth within the last few years eighty-six thousand bushels of Soles were sold in Billingsgate market alone. Lacepede mentions that the French fishermen sometimes take them in bright weather, when they can be seen upon the sand-banks, by dropping upon them a plummet studded with hooks and attached to a small line, which easily penetrates into the skin and holds them; occasionally, also, they are taken with a harpoon, if the water be not very deep. They are in full season about the latter end of February, after which for a few weeks they are watery and soft, but soon recover the firmness and flavour for which they are so much esteemed. Sometimes, and not unfrequently, Soles are met with having the eyes and brown colour on the left instead of the right side, and are called *Reversed Soles*. More rarely both sides are of a dark colour, and such are called by the French *Doubles*.

S. Pegusa, Yarr.; *Lemon Sole*. From eight to ten inches in length, wider and thicker in proportion to its length, and the head smaller than the last species; its under surface smooth and not covered with papillæ,

SOLEA.

SOLEA. and the nostril on that side situated in a prominent, tubular projection; scales of a different character and more strongly marked on the under than on the upper surface; lateral line less strongly marked; upper surface mingled orange and brown freckled over with numerous small, round, dark nutmeg-brown spots; under surface white; tip of the pectorals black. It is occasionally caught in the trawl with the Common Sole, about sixteen miles off the Brighton coast, upon a soft sandy bottom, towards France, whence it is called by some of the fishermen the *French Sole*, but by others the *Lemon Sole*, on account of its colour.

S. Oculata, Cuv.; *Pleur. Ocellatus*, Schneid.; *la Pégouze*, Lacep.; *Ocellated Sole*. About four and a half inches long and two wide; head small; upper jaw rather longer than the lower, and furnished with a filiform appendage at its base; eyes rather prominent, their irides saphirine, and the pupils amethystine; body covered with little, hard, rough scales; its upper surface yellowish, with glossings of dusky red, and marked with four round, ebony-black spots encircled with golden-yellow, and with three other black ones surrounded with brown; under surface fleshy-white merging into azure-blue towards the fins, which are dusky, zigzagged with reddish and violet spots, and their edges carmine; caudal fin rounded, flesh-coloured, its base marked with a black band, and the tip deep grey. This fish spawns in September at the foot of the rocks; its eggs are of a deep yellow colour. It is found in the Mediterranean, in the neighbourhood of Nice, and it has, according to Rondelet, its vulgar name *Pégouze*, on account of the scales adhering to the skin as fast as pitch, so that they cannot be easily detached except after immersion in hot water. It is also found in the sea off Surinam.

S. Lascaris, Cuv.; *Pleur. Lasc.* Riss.; About twelve inches in length; muzzle rounded, and the upper covering the lower jaw like a Parrot's beak, and both toothless; under surface of the head covered with little, whitish, silk-like cirrhi surrounding a long tube which exudes a glairy secretion; eyes round, far apart, their irides spotted, and pupils blue; body covered with small, ciliated, closely adhering scales, of a tawny colour, spotted with black, glossed with violet and sprinkled with greyish points on the upper surface, whilst on the under the scales are rough and bluish-white; lateral line curved on the head, and straight upon the body; dorsal and anal fins large, spotted with red, black, and white; upper pectoral deep yellow, with a black spot in the middle, the under yellowish-white. It is caught in the Mediterranean.

The following species are distinguished by the dorsal and anal fins running to the caudal without being confounded with it.

S. Commersonii, Cuv.; *la Pleuronecte Commersonien*, Lacep.; *Commerson's Sole*. Nine inches in length; head very small and short; muzzle carinated, near which and close on the corner of the mouth are the small orbicular eyes; nostrils double, the anterior valved; body oblong and ovate, the right side dark and the left whitish; lateral line, first arching over the eyes, passes straight along the middle of the tail; dorsal fin commencing near the mouth and terminating close to the tail, which is small and rounded; anal fin corresponding to the dorsal, and both narrow, of a darkish brown, narrowly edged with white; ventrals very small and partly adipose. It is caught off the Coromandel coast, and called

by the natives *Jerree Potoo*, in common with some others of this genus. **SOLEA.**

S. Jerreus, Cuv.; *Russel's Sole*. About five and a half inches in length; head and body much compressed, the right side of the latter dusky brown, striped transversely with thirteen or fourteen narrow bands of a lighter brown, which is continued on the dorsal and anal fins; lateral line commencing a little above the pectoral fin, and curving back gently towards the tail; dorsal fin commencing opposite the eyes, and the anal immediately behind the vent; along the roots of both these fins on the coloured side run a row of minute spinules; caudal fin pointed, marked with five oval spots, white mingled with black and yellow. Is also found on the same coast as the last species and bears the same name, but it is very rare.

S. Zebra, Cuv.; *Pleur. Zebra*, Bl.; *Zebra Sole*. Head small; eyes very small, the irides green and the pupils merely black specks; body lengthy, its upper right side brownish towards the edges and white in the middle, marked with numerous transverse brown bands, two of which often coalesce; dorsal, anal, and caudal fins banded with brown and yellow; the rays of the caudal fin forked, but those of the other fins simple; the pectoral fins very minute. Is found in the Indian Seas.

S. Plagiusa, Cuv.; *Pleur. Plag.* Lin.; *Carolina Sole*, Shaw. Its colour greyish-brown; has the dorsal and anal fins running to the tail. It is found on the Carolina coast.

S. Orientalis, Cuv.; *Pleur. Orient.* Schneid.; *Oriental Sole*. In this species the ventral fins are very small and pointed; caudal fin rounded and nearly entirely covered with scales; the colour leaden. Found at Tranquebar.

SECTION II.—*Right pectoral fin very small; the left almost imperceptible or entirely deficient.*—*Monochirus*, Cuv.

S. Variegata, Flem.; *Pleuron. Microcherus*, Laroche; *Pleur. Maugilii*, Risso; *Variegated Sole*, Donovan. From six to nine inches in length; it differs remarkably from the Common Sole in the size of its pectoral fins, which are much smaller, that on the upper consisting of but four rays, and that on the under side of only two, scarcely visible; the scales are larger, rough, their edges ciliated, and their division more strongly marked; eyes rather nearer, their irides blue and pupils black; lateral line straight; upper surface reddish-brown, clouded on the body and fins with a darker brown; under surface white; dorsal and anal fins not reaching the tail, and many of their rays projecting beyond the connecting membrane; dorsal, anal, and caudal fins marked with brown or blackish spots. Risso states that it is found on the shores of Nice in June and December; Laroche, that it is found off Majorca, where it is called *Pelud* or *Peludet*, and also at Barcelona; and Pennant, that it appears at Plymouth in the spring; according to Reinhardt it is also found on the shores of Scandinavia, and it has been caught at Rothsay in Scotland, but it is very rare.

S. Pegusa, Cuv.; *le Monochire Pégouse*, Risso; *Black-spotted Sole*. About eight inches in length; mouth small, armed above with a beard or appendage; body oblong, oval, of a reddish-brown colour on the right side, and irregularly marked with black spots and stripes, and on the left white with an azure tinge; right

SOLEA. pectoral fin long and blackish, but the left deficient; dorsal and anal fins varied with brown, black, and reddish; caudal fin round, of a dingy red, and marked with a black crescent at its base. It is found among the fuci on the coast of Nice throughout the year.

S. Trichodactyla, Cuv.; *Pleur. Trichod.* Lin; *Hair-finned Sole*. This species Cuvier considers should be placed in this division; it was described by Artedi, who says it is of a grey colour varied with dusky, and that the pectoral fins consist, the right only of four filiform rays, and the left of but a single ray. It is found at Amboina.

Cuvier includes also in this division Risso's *Turbot Theophile*, but without assigning any reason.

S. Pan. Cuv.; *Pleur. Pan.* Buchan.; *Gangetic Sole*. Is nearly oval in shape, and from four to six inches in length; at the right angle of the upper lip is a short, blunt tendril; no teeth in either jaw; eyes convex, small, and the iides even covered with scales; upper surface brown marked with many dots, irregular black spots, and five or six transverse short lines, terminating at the upper edge of the lateral line; pectoral fins very minute and blunt, consisting of five hair-like rays, of which the second is the longest. It is found in the Ganges. Hamilton Buchanan, who mentions it in his *Fishes of the Ganges*, says that it bears all the marks ascribed by Linnæus to *S. Plagiusa*, and that it is strange if the same species were found inhabiting the mouths of the Indian and Carolina rivers; no mention, however, is made of the peculiar character of the pectoral fins of this species in that of Carolina.

See Linnæi *Systema Naturæ* a Gmelin; Lacepede, *Histoire des Poissons*; Bloch, *Ichthyologia* a Schneider; Cuvier, *Règne Animal*; Russel, *Fishes of the Coromandel Coast*; Risso, *Ichthyologie de Nice*, and *Histoire Naturelle de l'Europe Méridionale*; Yarrell, *British Fishes*.

SOLEA, in *Botany*, a genus so called in honour of William Sole, an acute English botanist, author of *Mentha Britannica*. It belongs to the class *Pentandria*, order *Monogynia*, and the natural order of *Violariæ*. Generic character: calyx hardly equal; lower petal large, with a gibbous base; stamens approximate, with a nectarial gland on the outside of each of two of the filaments.

This genus consists only of one species, *S. concolor*, an erect, pilose herb, with small green flowers, a native of Pennsylvania.

SOLECISM, **SOLECIZE**, **SOLECIST**, **SOLECISTICAL**, **SOLECISTICALLY**. } Fr. *solecisme*; It. *solecismo*; Sp. *solecismo*; Lat. *soloicismus*; Gr. *σολοικισμος*, so called from *Soli*, a town of Ciliciæ, said to have been founded by Solon and peopled by the Athenians, who were afterwards charged with corrupting the language of their parent state.

The word is not only applied to—

A corruption or impropriety of speech, but to any impropriety or incongruity.

This [being too loose a principle—to fancy the holy writers to solecize in their language, when we do not like the sense.

More. Mystery of Godliness, (1660,) book i. ch. ix.

My mind lately prompted me, that I should commit a great solecism, if among the rest of my friends in England I should leave you unsaluted.

Howell. Letter 40. book i. sec. 1.

T. Ca. buzz'd me in the ear, that the Ben. had barrell'd up a great deal of knowledge, yet it seems he had not read the ethicks, which, among other precepts of morality, forbid self-commendation, declaring it to be an ill-favour'd solecism in good manners.

Id. Letter 13. book ii.

The learned doctor represents it as a great solecism to speak of an ell or a mile of consciousness.

Waterland. Works, vol. i. p. 209. *A Defence of some Queries.* Query 19.

Shall a noble writer, and an inspired noble writer, be called a solecist, and barbarian, for giving a new turn to a word so agreeable to the analogy and genius of the Greek tongue?

Blackwall. Sacred Classics, vol. i. p. 159.

According to this hypothesis, the use of these combinations, with respect to the pronouns, is almost always solecistical: but not more so than that of *himself* in the nominative case, which has long been authorised by custom.

Tyrrwhitt. Glossary to Chaucer, in v. *Self*.

I have attempted, by recollecting old meditations, and consulting a few scattered papers, in which I had formerly for my own use set down some of them, (briefly, and almost solecistically,) to give an answer to the two first of your questions, together.

Wollaston. Religion of Nature. Introduction.

SO'LEMN,

SO'LEMNLY,

SO'LEMNESS,

SOLE'MNITY,

SO'LEMNIZE,

SOLE'MNIZATE,

SOLEMNIZA'TION.

Fr. *solennel*, *solennizer*; It. *solenne*, *solennizare*; Sp. *solemne*, *solemnizar*; Lat. *solennis*. *Solenne*, dicitur quod sollis, hoc est, omnibus singulisque annis fit; because it (sc. a solemn rite or ceremony) is performed in all

years, or in every year.

Sollus (an old Oscan word) means *totus, omnis*. See Vossius. *Solemn* is now commonly applied to ritual or ceremonial (observances) at stated times, regular periods; at any one time or more; ritual, formal, ceremonious, serious, grave; causing a feeling of seriousness, devotion, reverence, awe.

Whan William was coruned kyng so solemply,
& had taken homage of barons bi & bi,
He turned ouer þe se vnto Normundi.

R. Brunne, p. 73.

And his fadir and modir wenten ech yere into Jerusalem in the solempne day of pask.

Wiclif. Luke, ch. ii.

While at the last vpon a solempne daye,
As custome was, the people ferre and nere
Before the noone vnto the temple went,
With sacrifice devout in their manere.

Chaucer. The Testament of Creseide, p. 295

His resons spake he ful solempnely,
Souning alway the encrease of his winning.

Id. Prologue to the Canterbury Tales, v. 257.

Duk Theseus, with all his compaignie,
Is comen home to Athenes his citee,
With all blisse and gret solempnite.

Id. The Knightes Tale, v. 2702.

If that ye liste to taken hede,
Thereof a solempne tale I rede,
Which I shall tell in remembrance.

Gower. Conf. Am. book iv.

And happeneth thilke tyme so,
The lordes both, and the commune
The high festes of Neptune
Upon the stronde at riuage,
As it was custome and vsage
Solempneliche thei be sigh.

Id. Ib. book viii.

So that in to the large strete
This horse with great solempnitee
Was brought within the citee.

Id. Ib. book i.

Whether they, and every of them, have solemnized matrimony between his parishioners, or any other persons, the banes not before asked, three several Sundays or holydays.

Burnet. Records, part ii. book ii. No. 15.

And whether touching the solemnization and use of this sacrament of matrimony, and also of all other the sacraments of the church, they have kept and observed the old and laudable custom of the church, without any innovation or alteration in any of the same?

Id. Ib.

That they, nor any of them from henceforth, do presume to solemnize matrimony in their churches, chappels, or elsewhere, between any persons, that have been married before.

Id. Ib. book iii. No. 26.

SOLE-
CISM.

SOLEMN.

SOLEMN.

SOLEN.

— Yield; and we will mediate such accord,
As shall dispense with rigour and the laws;
And interpose this *solemn* faith of our
Betwixt your fault and the offended pow'r.
Daniel. History of Civil Wars, book vi.

The ruin'd wals he did reedifye
Of Troynovant, gainst force of enemy,
And built that gate which of his name is hight,
By which he lyes entombed *solemnly*.
Spenser. Faerie Queene, book ii. can. 10.

A diligent decency in Polycletus above others; to whom though
the highest praise be attributed by the most, yet lest he should
go free from exception, some think he wanted *solemnness*.
Reliquiæ Wottonianæ, p. 55.

Then gan they sprinkle all the posts with wine,
And made great feast to *solemnize* that day;
They all perfumde with frankincense divine,
And precious odours fetcht from far away.
Spenser. Faerie Queene, book i. can. 12.

And all these mighty wonders, they *solemnly* did avow, they
performed by the power of Jesus Christ, who was crucified at
Jerusalem, and who was now alive at the right hand of God.
Sharp. Works, vol. ii. p. 159. Sermon 8.

Plutarch well condemns the vulgar, both amongst the Egyp-
tians and Greeks, for that in their mournful *solemnities* they sot-
tishly attributed to the gods the passions belonging to the fruits
of the earth.
Cudworth. Intellectual System, book i. ch. iv. fol. 508.

As we have an instance in the feast of the dedication, for the
solemnizing of which we find our Saviour making a journey to
Jerusalem, tho' yet that festival was only of human appointment.
Sharp. Works, vol. v. p. 266. Discourse 9.

But they, who have the misfortune to be of this make, should
by no means trust to their own most *solemn* purposes, or even
vows. Their chief safety is in flight.
Secker. Works, vol. i. p. 427. Sermon 27.

In that trying hour, just before he retired to the garden, where
the power of darkness was to be permitted to display on him its
last and utmost effort, Jesus gave it *solemnly* in charge to the
eleven apostles, (the twelfth, the son of perdition, was already
lost; he was gone to hasten the execution of his intended treason,)
to the eleven whose loyalty remained as yet unshaken, Jesus in
that awful hour gave it *solemnly* in charge, "to love one another,
as he had loved them."
Horsley. Sermon 12. vol. i. p. 261.

SOLEMYA, in *Zoology*, a genus of *Mollusca*.

Generic character. Shell equivalve, inequilateral,
elongated transversely, obtuse at the extremities, with
the epidermis glossy; beaks indistinct, one primary tooth
in each valve, dilated, compressed, very oblique, slightly
concave above, receiving the ligament, which is partly
external, partly internal; animal with the foot small and
compressed.

Type of the genus, *S. Australis*; Lamarck, *Anim.
sans vert.* vol. v. p. 489. The type inhabits the seas of
New Holland; other species occur in the Mediterrane-
an and Indian Seas.

SOLEN, in *Zoology*, a genus of *Mollusca*.

Generic character. Shell bivalve, transversely elon-
gated, the dorsal and ventral margins nearly parallel,
the extremities gaping; primary teeth small and variable
in number, projecting; cuticle strong; in the type the
hinge is terminal; other species, which probably form
a distinct genus, have the hinge central.

Type of the genus, *S. vagina*; Linnæus, *Syst. Nat.*
vol. i. p. 113. Rather an extensive genus; the species
of which usually reside in sandy shores, and their place
is distinguished by a dimple in the sand; when ap-
proached or alarmed, they descend; the *S. pellucidus*
(a beautiful shell) is the type of the second division of
the genus, and is most common in sandy bays, on the
southern coasts of England.

SOLENANTHA, in *Botany*, a genus so called from
the Greek *σωλην*, a tube, and *ανθος*, a flower, on account
of the petals converging into a tube. It belongs to the
class *Pentandria*, order *Monogynia*, and the natural order
of *Rhamneæ*. *Generic character*: calyx persistent, five-
cleft; petals five, conniving into a tube, deciduous;
anthers five, two-celled, each inserted under a scale;
ovary two-lobed.

This genus, which is nearly allied to *Cryptandra*,
consists of one species, *S. spinosa*, a native of New
Holland. It is a stiff-branched, spiny shrub, with ob-
long, slightly serrated, fascicled leaves, and axillary and
lateral white flowers.

SOLENANTHUS, in *Botany*, a genus so called
from the Gr. *σωλην*, a tube, and *ανθος*, a flower, in re-
ference to the tubular corolla. It belongs to the class
Pentandria, order *Monogynia*, and the natural order of
Boragineæ. *Generic character*: calyx five-parted; corolla
tubular, five-toothed, furnished with five arched processes
in the throat; stamens five, exserted; nuts four, de-
pressed, echinated, adnate to the central column towards
the top.

This genus consists of but one species, a native of
Altaia. It is a robust, erect, hairy plant, with broadish
leaves, and racemose panicles of purple flowers, nearly
allied to *Rindera*.

SOLENIA, in *Botany*, a genus so called by Hoff-
mann, from the Gr. *σωλην*, a tube, on account of the
plant being tubular. It belongs to the class *Crypto-
gamia*, order *Fungi*. *Generic character*: fungus tubu-
lar, small, erect, having the orifice at first closed but at
length open and contracted; ascidii none; sporidia
very minute, elastic.

This genus is nearly allied to *Peziza* and *Stictis*, and
contains a single known species, a native of Europe.

SOLENOCARPUS, in *Botany*, a genus so called
by Wight and Arnott, from the Gr. *σωλην*, a tube, and
καρπος, a fruit, on account of the shape of the cells of
the fruit. It belongs to the class *Decandria*, order
Monogynia, and the natural family of *Terebinthaceæ*.
Generic character: flowers hermaphrodite; calyx small,
cleft, deciduous; petals five, sessile, inserted between
the calyx and the disk, valvular in æstivation; stamens
ten, unequal; ovary free, sessile, one-celled, one-ovu-
late; style one; stigma oblique; fruit somewhat reni-
form, hairy; pericarp with several longitudinal, linear
cells full of fragrant oil; seed solitary, pendulous.

This genus, which is nearly allied to *Pegia*, consists
of a single species, an East Indian tree, with fascicled,
unequally pinnate leaves, and terminal, fascicled pa-
nicles of flowers.

SOLENOGYNE, in *Botany*, a genus so called by
Cassini, from the Gr. *σωλην*, a tube, and *γυνη*, a female,
on account of the tubular style. It belongs to the class
Syngenesia, order *Superflua*, and the natural family
of *Compositæ-Asteroidæ*. *Generic character*: herma-
phrodite florets numerous, disposed in many series in
the radius, the rest male; achenia oblong-obovate,
compressed, beakless: male florets without any ovaria;
corolla of the male flower tridentate.

There is only one species of this genus known, *S. bel-
lidioides*, a native of New Holland. It is a small plant,
with the habit of *Bellis*.

SOLENOPUS, in *Zoology*, a genus of *Coleopterous*
insects.

Generic character. *Antennæ* rather long and slender,
geniculated, inserted below the middle of the rostrum;

SOLEN-
ANTHA.SOLE-
NOPUS.

SOLE-
NOPUS.
—
SOLE-
NOSTO-
MUS.

tuniculus seven-jointed, with the two basal joints clavate, the remainder very short and obconic; the terminal one annexed to the club, which last is oblong-ovate, acute; head produced in front into a long, cylindric, slightly curved, and slender rostrum; eyes lateral, ovate; *thorax* rounded on the sides, attenuated from the middle to the apex; *scutellum* flat, with the tip rounded; *elytra* oblong, convex, cylindric; *tibiæ* compressed, rather dilated within, and deeply channeled without; *tarsi* tetramerous, broad, spongy beneath, the terminal joint elongate-clavate.

Type of the genus, *Odontoderes Cacicus*, Sahlburg. Inhabits Brazil.

SOLENORHINUS, in *Zoology*, a genus of *Coleopterous* insects.

Generic character. *Antennæ* long, slender, geniculated; *funiculus* seven-jointed, its two basal joints elongate, the remainder gradually shortening, and obconic; club oblong, somewhat fuciform, four-jointed; head produced in front into an elongate, stout, linear, curved rostrum, with a groove in the middle and on each side; eyes lateral, ovate, rather prominent; *thorax* long, truncate behind and before, with the sides equally rounded; *elytra* oblong-ovate, attenuated towards the apex; legs stout, rather long, anterior approximating; *femora* unarmed; *tibiæ* straight, truncate, and unarmed at the apex; *tarsi* tetramerous, long, the first and second joints somewhat heart-shaped, the third bilobed.

Type of the genus, *Curculio sporifer*, Sparrmann; Schönherr, *Disp. Meth. Curc.* p. 257. One species only.

SOLENOSTERNUS, in *Zoology*, a genus of *Coleopterous* insects.

Generic character. *Antennæ* rather short, inserted before the middle of the rostrum, broken; scape short, clavate; *funiculus* slender, seven-jointed, its basal joint elongate, obconic, remainder very short, coarctate, and gradually widened; club ovate, acuminate; head produced in front into a rounded, bent rostrum, with its base rather gibbous above, and compressed on the sides; eyes large, ovate, incurved; *thorax* somewhat conic, narrowed in front, and bisinuated behind, above convex, and distinctly grooved beneath; *elytra* rather broader than the thorax, oblong-subquadrate, the tip obtusely rounded; *pygidium* prominent; legs short, stout, compressed; *tarsi* tetramerous, rather long, the terminal joint dilated, bilobed, ciliated.

Type of the genus, *S. puncticollis*; Schönherr, *Disp. Meth. Curc.* p. 277. One species, an inhabitant of South America.

SOLENOSTIGMA, in *Botany*, a genus so called by Endlicher, from the Gr. *σωλην*, a tube, and *στιγμα*, a stigma, on account of its form. It belongs to the class *Polygamia*, order *Monoecia*, and the natural family of *Urticeæ*. *Generic character:* flowers polygamous: male flowers; calyx of five sepals, imbricate in æstivation; stamens five, opposite the sepals; anther two-celled, bursting inwards: hermaphrodite flowers having the calyx and stamens as in the male; stigma oblong, nearly square; drupe unequal sided, one-seeded; seed pendulous.

This genus, which is nearly allied to *Celtis*, consists of a single species, a tree, native of Norfolk Island, with alternate, ovate-lanceolate, three-nerved, quite entire leaves, and axillary, paniced flowers.

SOLENOSTOMUS, from the Gr. *σωλην*, a tube, and *στωμα*, a mouth, Lacep. In *Zoology*, a genus of animals belonging to the order *Lophobranchiati*, class *Pisces*.

Generic character. Jaws narrow, much elongated, and tubular; the mouth at the tip of the muzzle; body and tail covered with plates, and their edges beset with little spines; ventral fins very large, and united behind the pectorals; first dorsal deep, having but few rays, and placed near the nape, second very small, and on the base of the tail; caudal fin large and pointed.

The large ventral fins uniting with each other and to the body like an apron behind the pectoral fins distinguishes this from the genus *Syngnathus*; this apron serves the same purpose as the pouch of that genus, viz. to support the spawn. The difference in the form of their gills, which are hoop-shaped and not comb-shaped, distinguishes them from the *Fistulariæ*, among which they were placed originally by Pallas.

S. Paradoxus, Lacep.; *Fistularia Parad.* Pall. From two to four inches in length; beak long, straight, compressed, sharp above, bicarinated below, and armed on each side with a small conic spine near the base, close to which are the eyes; mouth small, the upper lip rather more projecting than the lower; the plates covering the body so arranged that anteriorly it forms a prism of nine or ten sides, but posteriorly only of six; general colour cinereous or yellowish-white, with dusky brown undulations, becoming darker or blackish on the first dorsal fin and tail. It is found at Amboina.

See Pallas, *Spicelegia Zoologica*; Lacepede, *Histoire des Poissons*.

SOLERT, Lat. (*sollers*, *sollus*, (see SOLEMN,) *et ars*, *qui totam artem callet*. Vossius.)

Crafty, subtle.

It was far more reasonable to think, that because man was the wisest (or most solert and active) of all animals, therefore he had hands given him.

Cudworth. *Intellectual System*, book i. ch. v. fol. 685.

SOLEURE, or SOLOTHURN, a Canton of Switzerland, extends from 47° 5' to 47° 37' North latitude, and from 7° 11' 15" to 7° 53' 15" East longitude. It is bounded on the North by the Canton of Bâle; on the North-East and East by that of Aargau; and on the South-East, South, and West by that of Bern; two small blocks of land belonging to the territory of the Canton lie North-West of it, between the Canton of Bern and the French Department of the Upper Rhine. The shape of the Canton is very irregular; its greatest length is about 30 miles, its extreme breadth about 25, and its least breadth under two miles, so that its superficial area cannot be estimated at more than about 280 square miles. It is traversed by the chain of the Jura, whose highest point here is the Wessenstein, 1590 yards above the level of the sea, and belongs to the basin of the Rhine; its principal river is the Aare, which is fed in its course through the Canton by the rivers Emmen and Dünern. Its only plains are on its Southern side, where the Jura inclines towards the Aare; but it is one of the most fertile and best cultivated of the Swiss Cantons, and exports corn to a considerable amount. The vineyards alone cover 325 acres, the forests 15,000; and the pasture lands occupy about 37,400, so that the breeding of cattle contributes largely to the wealth of the country. The cheese made here is in general esteem; particularly the goat's milk cheese termed *geisskäs*. The manufacturing industry of the Canton is on the decline, especially its woollen and cotton manufactures. There are some iron-works, however, actively carried on, one manufactory of wire, one of combs, and four paper-mills. The Canton has likewise a good transit trade.

SOLE-
NOSTO-
MUS.
—
SO-
LEURE.

SO-LEURE. The Canton of Soleure is divided into the nine Bailiwicks of Balsthal, Bucheggberg, Dornek, Gösigen, Kriegstetten, Lebern, Olten, Soleure, and Thierstein; each of which has its Court of Requests, (*Tribunal de Première Instance*.) The population of the Canton is estimated at 54,380 inhabitants; of which number 50,040 are Catholics, and 4340 belong to the Reformed Church. The clergy constitute three rural chapters under the jurisdiction of the Bishop of Soleure; and there are two Collegiate Churches, one Abbey of Benedictines, four Monasteries, and three Convents.

Civil divisions. The government was formerly aristocratic, but since 1830 it has been a mixture of aristocracy and democracy. The sovereign power is exercised by a grand council, composed of 101 members, whilst the executive and administrative are in the hands of a smaller council, consisting of 21 members. Two *Avoyers*, annually chosen, preside in turn over these two councils; and 13 members elected from the grand council form a Court of Appeal. The revenue is estimated at 180,000 florins.

Government. *Soleure*, the chief town of the Canton, lies at the foot of Mount Jura, and is agreeably situated on the banks of the Aare, by which it is divided into two unequal parts, communicating together by two wooden bridges. It is a well-built town, with spacious streets, adorned by several beautiful fountains, and strongly fortified. Its schools are decidedly inferior to those of the country districts; but its public prison and hospital are excellently regulated. The public library contains about 10,000 volumes; and there is a literary society established here. In its arsenal is a collection of 2000 cuirasses, considered one of the most complete yet formed. The antiquities found here depone to its having been a Roman station. The Cathedral, which is dedicated to St. Ours, is accounted one of the handsomest in Switzerland. Soleure is a busy, trading town, with manufactories of cotton, paper, some iron-works, tanneries, breweries, &c. The walks in its neighbourhood are highly picturesque, and the villas around extremely beautiful. Population 3840. North latitude 47° 9', East longitude 7° 30'.

Norrmann, *Geogr. Statist. Darstellung des Schweizerlandes*; Schoch, *Darstellung der Schweiz in Tabellarischer form*; *Dictionnaire Géographique Universel*.

SOLICIT, v. Fr. *soliciter*; It. *sollecitare*; **SOLICITA'TION**, Sp. *solicitar*; Lat. *solicitare*; **SOLICITOR**, *solicitare, sub* and *lactare*, from **SOLICITOUS**, *lacere*, to entice, to allure. Nam **SOLICITOUSLY**, *sollicitare dicuntur qui alliciunt* **SOLICITOUSNESS**, *spe aliqua, aut metu*. Vossius. **SOLICITUDE**, See the Quotations from Martin **SOLICITRESS**, and Holland.

To entice, to allure, to tempt; to entreat, to implore, to sue for; to tempt, to incite, to excite, to arouse; to urge earnestly, importunately, anxiously. And, hence, *Solicitude* is, earnestness, eagerness, carefulness, anxiety.

He will send thither, with all speed, the Bishop of Bayton to further, *sollicite*, and set forth the same.

Burnet. Records, book ii. No. 22.

So as ye may be sure to have of him effectual concurrence and advise in the furtherance and *sollicitation* of your charges, whether the Pope's holiness amend, remain long sick, or (as God forbid) should fortune to die. *Id. Ib.*

He became, of a *solleiter* to corrupt her, a most devout exhorter, and a most earnest persuader, that she should all her life-daies persiste in her most godlye profession of perpetuall virginitie.

Martin. Marriage of Priestes, (1544.) A a. 4.

Solicitors are such, as being learned in the lawes, and informed of their maister's cause, doe informe and instruct the counsellors in the same. *Smith. Common Wealth*, book ii. ch. i.

What diligence can here suffyse us? What *solicitude* can we thynke here ynough, agaynste the cummyng of thys Almightye King?

Sir Thomas More. Workes, p. 1266. *Treatise to receue the Blessed Body of our Lord*.

Who fail not to advise the Duke with speed, *Soliciting* to what he soon agreed.

Daniel. History of Civil Wars, book i.

And not onely we men are *sollicited* and moved by salt more than by any thing else to our meat; but muttons, bæufes, and horses also have benefit therby in that respect.

Holland. Plinie, book xxxi. ch. vii.

THA. Let me embrace thee with a sister's love,
A sister's love, Cleophila! for should
My brother henceforth study to forget
The vows that he hath made thee, I would ever
Solicit thy deserts.

Ford. The Lover's Melancholy, act v. sc. 1.

Must she
Who hath preserv'd her spotless chastity
From all *solicitation*, now at last
From agues and diseases be embrac'd?

Carew. Upon the Sickness of E. S.

And (this is that, if any thing, that has made) those that have been well, give a visit to their sick friends, of whose health they have been over-desirous and *solicitous*.

More. Immortality of the Soul, book ii. ch. xv.

Beauty is a good *solicitress* of an equal sute, especially where youth is to be the judge thereof.

Fuller. Worthies, vol. ii. p. 161. *Northampton-Shire*.

So long as men are perswaded that there is an understanding Being infinitely powerful, having no law but his own will, (because he has no superiour,) that may do whatever he pleases at any time to them, they can never securely enjoy themselves or any thing, nor be ever free from disquieting fear and *solicitude*.

Cudworth. Intellectual System, p. 83.

With gentle touches he performs his part,
This way and that, *soliciting* the dart,
And exercises all his heavenly art.

Dryden. Virgil. Æneid, book xii.

We usually blame the body to an high degree, as the great clog and hindrance of the soul; the obstructor of its free and natural motions, the offerer of impious, of filthy, of vain images; the *solicitor* to every evil act, all that defiles the man.

Atterbury. Sermon 7, vol. iv.

My Lord Chamberlain himself, in restoring my play without any alteration, avow'd to me that I had the most earnest *solicitress* as well as the fairest; and that nothing cou'd be refus'd to my Lady Hyde.

Dryden. Cleomenes. Ep. Ded.

The boat was sent away to examine the anchoring ground and the produce of the place; and we were not a little *solicitous* for her return, as we conceived our fate to depend upon the report we should receive.

Anson. Voyages, book iii. ch. i. p. 407.

The apostle doth most *solicitously* enjoin that which is in all the churches most piously observed, that God should be implored for all men.

Barrow. Sermon 3, vol. i.

Let not the greater difficulty of another's cure lessen the *solicitousness* of thy care for thine, nor make thee less earnest in the imploring and labouring for relief.

Boyle. Works, vol. ii. fol. 362. *Occasional Reflections*.

And hence we are bid to work out our salvation with fear and trembling, *Phil.* ii. 12. i.e. with a holy *solicitude* and jealousy, lest one time or other we should be tempted and overcome, and at the last, finally miscarry.

Scott. Christian Life, part i. ch. iv. fol. 126.

To *solicit* by labour what might be ravished by arms, was esteemed unworthy of the German spirit.

Gibbon. Decline and Fall, vol. i. ch. ix.

While the merchant and the mariner are *solicitous* in describing currents and soundings, the naturalist is employed in observing

SOLICIT.
—
SOLID.

wonders, though not so beneficial, yet to him of a much more important nature. The saltness of the sea seems to be the foremost.
Goldsmith. History of the Earth, vol. i. ch. xv.

He who *solicitously* inquires what is said of him, will certainly hear something which will render him uneasy.
Knox. Works, vol. i. p. 136. Essay, No. 25.

SO LID, *adj.* Fr. *solide*; It. *solido*; Sp. *solido*; Lat. *solidus*, from *sollus*, i. e. *totus*: *Quæ nulla parte laxata cavaque sunt, solida nemiuntur.*
SO'LID, *n.*
SO'LIDATE, *v.*
SOLI'DITY,
SO'LIDLY,
SO'LIDNESS. Festus. See Vossius. See also the Quotation from Locke.

Solid is opposed to superficial; to hollow, to liquid or fluid: generally, *solid* is

Firm, strong; weighty, grave, important.

And vnderstande well, that euermore this cerle equinoctiall tourneth iustlie fro very easte to very weste, as I haue shewed in the sphere *solid*.
Chaucer. The Astrolabie, p. 456.

But the sword
Of Michael from the armorie of God
Was giv'n him temper'd so, that neither keen
Nor *solid* might resist that edge.
Milton. Paradise Lost, book vi. l. 320.

The earth,
Though in comparison of heav'n, so small,
Nor glistening, may of *solid* good containe,
More plenty then the sun that barren shines,
Whose vertue on itself workes no effect,
But in the fruitful earth. *Id. Ib. book viii. l. 91.*

It is above the wit of a man to imitate our Homer's wit; of Ajax for giving such a force to it, [the stone,] as could not spend itselfe upon Hector, but turne after upon the earth in that whirlwinde like violence; of Hector, for standing it so *solidly*; for without that consideration, the stone could never have recoild so fiercely.
Chapman. Homer. Iliad, book xiv. Comment.

It [the oake] beareth also misseltoe, though rarely. The cause of all these may be, the closeness and *solidness* of the wood, and pith of the oake; which maketh severall juyces find severall eruptions.

Bacon. Natural History. Cent. vii. sec. 635.

There was an olive tree, that had his grought
Amidst a hedge, and was of shadow proud;
Fresh, and the prime age of his verdure, show'd.
His leaues and armes so thicke, that to the eye
It shew'd a colunne for *solidity*.
Chapman. Homer. Odyssey, book xxiii.

But had my wisdom reacht so farre, to know of this euent,
When to the *solid*-ported depths of hell his sonne was sent,
To hale out hatefull Plutoes dogge, from darksome Erebus,
He had not scapt the streames of Styx, so deepe and dangerous.
Id. Ib. book ix.

This shining piece of ice,
Which melts so soon away
With the sun's ray,
Thy verse does *solidate* and crystallize.
Cowley. The Muse.

An animal consists of *solid* and fluid parts, unless one should reckon some of an intermediate nature, as fat and phlegm.
The *solids* seem to be earth, bound together with some oil. For if a bone be calcined so as the least force will crumble it, being immersed in oil, it will grow firm again.
Arbuthnot. Nature of Aliments, ch. iv.

Upon careful inquiry, this appears to be only a groundless surmise; as is largely and *solidly* proved by the judicious Bishop Bull.
Waterland. Works, vol. ii. p. 165. Sermon 7.

It is plainly set down by Aristotle, an horse and all *solidungulous* or whole hoofed animals have no gall; and the same is also delivered by Pliny; which notwithstanding we finde repugnant unto experience and reason.

Sir Thomas Brown. Vulgar Errors, book iii. ch. ii.

The idea of *solidity* we receive by our touch; and it arises from the resistance which we find in body to the entrance of any other body into the place it possesses, till it has left it.
Locke. Works, vol. i. fol. 41. Of Human Understanding, book ii. ch. iv.

How *solid* a science soever may be erected on ideal qualities it rests in speculation only, and contributes nothing to our better accommodation, unless relating to such qualities wherein mankind has some concern.

Search. Light of Nature. Introduction, p. xxviii.

He [our adversary] has brought himself into a disgraceful and unpleasant situation for a man who asserts with confidence, and would affect *solidity* of argument.
Horsley. Sermon 18. vol. ii.

SOLIDAGO, in Botany, a genus so named by Linnaeus from *solido*, to unite, on account of the supposed vulnerary quality of the species. It belongs to the class *Syngenesia*, order *Superflua*, and the natural order of *Compositæ-Asteroideæ-Astereæ*. Generic character: female rays in one series; disk hermaphrodite; pappus pilose, in one series; achenia nearly terete, many-ribbed.

This genus is composed of numerous species, commonly tall perennial herbs, mostly natives of North America, very few of Europe and Asia. The leaves are alternate, the flowers small and yellow, and disposed in scorpid secund cymes. *S. virgaurea* is the only species native of Britain.

SOLIFI'DIAN, *adj.* Lat. *solus*, alone, and *fides*, faith. The Quotations from
SOLIFI'DIAN, *n.* }
SOLIFI'DIANISM. } Hammond and Tillotson explain the usage of the word.

A *solifidean* Christian is a nullifidean pagan; and confutes his tongue with his hand.
Feltham, part ii. Resolve 47.

Such is first the perswasion of the *solifidians*, that all religion consists in *believing* aright, that the being of orthodox (as that is opposed to erroneous) opinions, is all that is on our part required, to render our condition safe, and our persons acceptable in the sight of God.
Hammond. Works, vol. i. fol. 480.

That we may be able to answer the Papists, who charge us with *solifidianism*; as if we were of this opinion, that if a man do but trust in Christ, that is, be but confidently persuaded that he will save him and pardon him, this is sufficient; and, consequently, he that is thus persuaded, need not take any farther care of his salvation, but may live as he list.
Tillotson. Works, vol. iii. fol. 465. Sermon 174.

SOLIFORM, Lat. *solis*, of the sun, and *forma*, form or shape.

For light, and sight, and the seeing faculty, may both of them rightly be said to be *soliform* things, or of kin to the sun, but neither of them to be the sun it self.

Cudworth. Intellectual System, book i. ch. iv. fol. 204.

SOLI'LOQUY, } Fr. *soliloque*; It. *soliloquio*; Sp.
SOLI'LOQUIZE, v. } *soliloquio*; Lat. *soliloquium*; *solus*, and *eloquium*, a speech by one, i. e. alone.

A speech alone, a speaking or talking, a discourse, alone; or of any one to himself; a monologue.

Soliloquies, or holy selfe conferences of the devout soul, upon sundry choice occasions.
Hall. Works, vol. iii. fol. 419.

Hold, mighty man, I cry, all this we know,
From the pathetic pen of Ingelo,
From Patrick's Pilgrim, Sibb's *Soliloquies*.
Rochester. Satire against Mankind.

First a *soliloquy* is calmly made;
Where every reason is exactly weighed,
Where, once perform'd, most opportunely comes
Some hero frighted at the noise of drums.

Buckinghamshire. Essay on Poetry.

He could petition Heaven for grace
With sanctimonious voice and eyes,
And at a proper time and place
Religiously *soliloquize*.

Cooper. Ver-Vert. can. 2.

SOLIMOES, a Province of South America. See BRAZIL.

PEDE.
—
SOLI-
TARY.

For *solipeds* or firm-hoofed animals, as horses, asses, mules, &c. they are also in mighty number, so is it delivered that Job had a thousand she-asses; that the Midianites lost sixty-one thousand asses.

Sir Thomas Brown. *Vulgar Errours*, book vi. ch. vi. p. 372.

SOLITARY,
SO'LITARY,
SOLITA'RIAN, *n.*
SO'LITARILY,
SO'LITARINESS,
SO'LIUDE,
SOLITARI'ETY,
SOLITA'IRE.

Fr. *solitaire*; It. *solitario*;
Sp. *solitario*; Lat. *solitarius*,
from *solus*, alone, (*sine aliis*,
without others. See *SOLE*.)

Being alone; or one, any one,
being all; single, secluded, re-
tired; remote from publicity;
private.

Holy writ whittesep. þer were suche eremytes
Solitarie by þemself. and in here selles lyveden
Whip oute borwynge oþer begginge.

Piers Plouhman. *Vision*, fol. 285.

O thou maistresse of all vertues, discended from the souerain
seate, why art thou commen into this *solitarie* place of myne exile.

Chaucer. *Boecius. De Consolatione*, book i.

A man myght preach long enough without persecution, yea and
get fauour to, if he would not medle with the pope, byshops, pre-
lats, and holy ghostly people that lyue in contemplation and *soliti-*
tarines, not wyth great men of the worlde.

Tyndall. *Workes*, fol. 196. *Matthew*, ch. v.

So choosing *solitarie* to abide

Far from all neighbours, that her diuylsh deedes
And hellish arts from people she might hide,
And hurt far off unknowne whomever she enuide.

Spenser. *Faerie Queene*, book iii. can. 7.

Who out of smallest things could without end
Have rais'd incessant armies to defeat
Thy folly; or with *solitarie* hand
Reaching beyond all limit at one blow
Unaided could have finisht thee, and whelmd
Thy legions under darkness.

Milton. *Paradise Lost*, book vi. l. 137.

By these and many other advantages, he that holds his peace,
and he that cannot speak, may please themselves; and he may at
least have the rewards and effects of *solitariness*, if he misses some
of the pleasures of society.

Taylor. *Sermon* 22. vol. i.

At which this honest man,
Finding that nought but hate and scorn he wan
Amongst these idiots and their beastly kind,
The poor small remnant of his life behind,
Determineth to *solitude* to give,
And a true hermit afterward to live.

Drayton. *The Moon-Calf*

Let but thy wicked men from out thee go,
And all the fools that crowd thee so,
Even thou who dost thy millions boast,
A village less than Islington wilt grow,
A *solitude* almost.

Cowley. *Of Solitude*.

This man gathered together all the dispersed monks and other
solitarians of Italy, so that in a short time he had no less than
twelve monasteries about him.

Sir R. Twisden. *Monastic Life*, p. 8.

It hath been disputed which is a state of greater perfection, the
social or the *solitary*; whereas, in truth, neither of these estates is
compleat without the other; as the example of our blessed Lord
(the unerring test and measure of perfection) informs us.

Atterbury. *Sermon* 10. vol. i.

You describe so well your hermitical state of life, that none of
the ancient anchorites could go beyond you, for a cave in a rock
with a fine spring, or any of the accommodations that befit a *soliti-*
tary.

Pope. *Letter* 11. To E. Blount.

According to the Egyptians, before all entities and principles
there is one God, who is in order of nature before (him that is
commonly called) the first God and King; immoveable, and always
remaining in the *solitarity* of his own unity.

Cudworth. *Intellectual System*, book i. ch. iv. fol. 336.

Along these lonely regions, where, retir'd
From little scenes of art, great Nature dwells
In awful *solitude*, and nought is seen
But the wild herds that own no master's stall,
Prodigious rivers roll their fattening sea.

Thomson. *Summer*.

VOL. XXVII.

Before, a *solitaire*; behind,
A twisted ribbon, like the track
Which Nature gives an ass's back.

Shenstone. *The Progress of Taste*.

As soon as a person was seized with the distemper, [small-pox,]
he was removed to some *solitary* place, very remote from any ha-
bitation, where the disease was left to take its course, and the
patient supplied with daily food by reaching it to him at the end
of a long pole.

Cook. *Voyages*, vol. ii. book iii. ch. ix.

SOLIVA, in *Botany*, a genus so called by Ruiz and
Pavon, in honour of Salvator Soliva, a Spanish phy-
sician and botanist. It belongs to the class *Syngenesia*,
order *Necessaria*, and natural family *Compositæ-Seneci-*
onideæ-Artemesieæ. Generic character: corollas or female
florets in many series, those in the circumference filiform,
persistent, and continuous with the ovarium; achenia
truncate at apex, two-winged, the wings marginal.

This genus is composed of three species, small creeping
herbs, natives of New Holland and Europe, with alter-
nate, simple, or bipinnate leaves; axillary, sessile, glo-
merate heads, many-leaved campanulate involucra, and
flat naked rachi.

SOLIVAGANT, Lat. *solus*, alone, and *vagans*, wan-
dering. A solitary wanderer.

A description of the impure drudge; that is to say, a *solivagant*,
or solitary vagrant.

Granger. *On Eccles.* 1621, p. 99.

SOLLAR, *n.* Lat. *solarum*; Ger. *soller*; *locus tabu-*
latus in quacumque ædium parte. *Ab obsoleto* Sul-en,
tabulari. Wachter. See *SILL*.

A *soler* seems originally (says Tyrrwhitt) to have sig-
nified an open gallery, or balcony at the top of the
house; though latterly it has been used for any upper
room, loft, or garret.

And whanne he was comen thei ledde hym into the *soler*.

Wiclif. *Devis of Apostlis*, ch. ix.

Gamelyn sought his brother tho'
Whither he was yflowe,
And saugh where that he loked out
At a *solere* window.

The Cokes Tale of Gamelyn.

And leste that nyght myghte haue bene occasion to breake of
this delectable and pleasaunt sermon, there were many candelles
in the *sollare*, (edition 1551 *solar*,) wheras we were then assembled.

Udall. *Actes*, ch. xx.

And ordeyned me to stæde in chambres and *solers* to throwe
stonys, and by theyr ordenaunces and pollycy to haue destroyed y^e
duke and his company.

Fabyan. *Cronycle.* Henry the Sixt, Anno 1426.

Another thing there is in our markets worthie to be looked vnto,
and that is the recariage of graine from the same into lofts and
sollars.

Holinshed. *Description of England*, book ii. ch. xviii.

SOLLYA, in *Botany*, a genus so called after Mr.
R. H. Solly, a patron of the arts and sciences. It be-
longs to the class *Pentandria*, order *Monogynia*, and the
natural family of *Pittosporeæ*. Generic character: calyx
small, five-parted, the hind segment rather the largest; pe-
tals five, ovate, rather campanulate; stamens five; anthers
sagittate, fixed by the base, conniving into a cone, ad-
hering at top, dehiscing inwardly; style short; stigma
obsoletely two-lobed; berry fusiform, dry, many-seeded.

This genus, which is separated from *Billardiera*,
contains two known species; they are shrubs, indigenous
to the south-west coast of New Holland and Van Die-
men's land. The leaves are alternate, ovate-elliptic, the
lower ones usually serrated, and the upper ones quite
entire; flowers blue, disposed in cymes, the cymes
opposite the leaves.

SOLORINA, in *Botany*, a genus so called by

4 x

SOLI-
TARY.
—
SOLO-
RINA.

SOLO-
RINA.

SOLVE.

Acharius from the Greek *σολος*, a disk, and *ρινος*, a shield, on account of the orbicular, shield-like fructification. It belongs to the class *Cryptogamia*, and order *Lichenes*. Generic character: thallus foliaceous, coriaceous, lobed, free beneath, having fibrous or woolly veins; apothecia adnate, sometimes immersed, orbicular, distant from the margin, not bordered.

This genus is nearly related to *Peltidea*, and hardly differs from it except in the situation of the apothecia: there are two known species, natives of Britain.

SO'LISTICE, } Fr. *solstice*; It. *solstizio*; Sp. *sol-*
SOLSTI'TIAL, } *sticio*; Lat. *solstitium*; *solis statio*.
SO'LSTEAD, n. } The sun stead, or stay of the sun,
(Cotgrave,) because the sun then appears to stay or stop.

About the summer *solstice* it sheweth a red floure.

Holland. *Plinie*, book xxvi. ch. v.

If it be gathered about the summer *solstead*.

Id. *Ib*.

Now three circles there be enfolded within the zones afore-named, which distinguish the inequalities of the daies; namely, the summer *solstitial* tropicke, from the highest parte of the zodiacke in regard of us, toward the North clime.

Id. *Ib*. book ii. ch. lxx.

The sun

Had first his precept so to move, so shine,
As might affect the earth with cold and heat
Scarce tollerable, and from the north to call
Decrepid winter, from the south to bring
Solstitial summer's heat.

Milton. *Paradise Lost*, book x. l. 651.

For now the fields

Labour'd with thirst; Aquarius had not shed
His wonted showers, and Sirius parch'd with heat
Solstitial the green herb.

J. Philip. *Cider*, book i.

Then, in exchange, a month or more

The sun with fierce *solstitial* gleams,
Darting o'er vales his raging pow'r,
Like ray collecting mirrors, beams.

Harte. *Contentment, &c. under the Divine Will*.

SOLVE, v.

SO'LVABLE, or

SO'LVIBLE,

SO'LUBLE,

SOLUBI'LITY,

SO'LVENT, adj.

SO'LVENT, n.

SO'LVENCY,

SOLU'TE, v.

SOLU'TION,

SO'LUTIVE.

Fr. *souldre*; It. *solvere*; Sp. *soltar*; Lat. *solvere*; to disjoin, to loosen. See DISSOLVE.

To loosen or release, to relax, to disjoin, to disunite; to destroy the solidity; to melt; to free from, sc. restraint, difficulty; to clear, to explain. And *solvent*, loosening the solidity; melting, releasing, sc. from debt; paying or able to pay.

Without the blynde bussings of a papist, may no sinne be *solved*, for that is the vpholding of their kyngdome.

Bale. *Image*, part ii. *Reuelation*, ch. xiii.

Here M. Harding taketh in hand to answer the authorities by mee alleged, and that with this special note of remembrance in the margin, M. Juel's allegation *solved*. It appeareth, his *solutions* be very shorte.

Jewell. *Replie*, p. 168.

Notwithstanding I will not thus leaue his booke, although I might full well, but I will declare vnto you what *solutions* he maketh to these seuē weake reasons which he hath propounded hym selfe.

Frith. *Workes*, fol. 8. *Answer vnto Rastel's Dialogue*.

Intellective memory, which I call an act of the intellective faculty because it is wrought by it, though I do not inquire how or where, because it is not *solvable*.

Hale. *Origination of Mankind*, fol. 56.

And as that Theban monster, that propos'd
Her riddle, and him, who *solu'd* it not, devour'd;
That once found out and *solu'd*, for grief and spight
Cast herself headlong from th' Ismenian steep,—
So strook with dread and anguish fell the fiend.

Milton. *Paradise Regained*, book iv.

As for the fruit called pompions or melons, being eaten as meat, they coole the bodie mightily, and make it *soluble*.
Holland. *Plinie*, book xx. ch. ii.

Porridge is poison, they hate a kitchen as they hate a counter, and show 'em but a feather-bed they swoond. Ale is their eating and their drinking surely, which keeps their bodies clear, and *soluble*.

Beaumont and Fletcher. *The Scornful Lady*, act iv. sc. 1.

He put to study, and not knowing how
To giue fit answer; Hellen tooke on her
Th' ostents *solution*, and did this prefer.

Chapman. *Homer. Odyssey*, book xv.

A fourth sort therefore of speculators there is, who conceive that after this *solution* of the souls or spirits of wicked men and dæmons from their vehicles, that their pain is continued to them even in that separate state.

More. *Immortality of the Soul*, book iii. ch. xviii.

Though it would not be abstersive, opening, and *solutive* as mead, yet it would be more lenitive in sharp diseases.

Bacon.

He [the good man] thinks God abundantly *solvent*, and himself never the poorer for laying out in his behalf.

Barrow. *Works*, vol. i. fol. 433. *Sermon* 31.

Having joined the ideas of substance, yellow, malleable, most heavy, and fusible, it takes that complex idea to be the complete idea of gold, when yet its peculiar fixedness and *solubility* in aqua regia are as inseparable from those other ideas or qualities of that body, as they are from one another.

Locke. *Of Human Understanding*, vol. i. book ii. ch. xxxii. p. 417.

No one can show a reason why the word gold, signifying that sort of body the ring on his finger is made of, should determine that sort rather by its colour, weight, and fusibility, than by its colour, weight, and *solubility* in aqua regia.

Id. *Ib*. vol. i. book iii. ch. ix.

On the first appearance of the Anna Pink, it seemed wonderful to us how the crew of a vessel, which came to this rendezvous two months after us, should be capable of working their ship in the manner they did, with so little appearance of debility and distress; but this difficulty was soon *solved* when she came to an anchor.

Anson. *Voyages*, book ii. ch. iii.

I commend the ancients for their way of *solving* the unity, as taking the best that human wit could invent or rest upon.

Waterland. *Works*, vol. iv. p. 46. *Of Christ's Divinity*.

I remember, that being in a place where we could not procure good vitriol to make aqua fortis with, after the manner of our English refiners, by a substitution of burnt alum for vitriol, but in a far less proportion, we made *solvents* for silver, as good as theirs, if not much better.

Boyle. *Works*, vol. iii. fol. 450.

Homer has divided each of his poems into two parts, and has put a particular intrigue, and the *solution* of it, into each part.

Pope. *Homer. Of the Action of the Epic Poem*.

What could induce the great Lord of heaven and earth to create a world abounding with all these circumstances of imperfection, hath ever been one of the most difficult of all questions. Nor could this difficulty have been *solved*, if the Scriptures had not *solved* it for us.

Gilpin. *Sermon* 24. vol. iii.

For *solvable* and colourable we might say *solvent* and apparent.

Tooke. *Diversions of Purley*, part ii. ch. viii.

Why should these nations of commerce and economy enter into any pecuniary dealings with a people who attempt to reverse the very nature of things; amongst whom they see the debtor prescribing at the point of the bayonet the medium of his *solvency* to the creditor; discharging one of his engagements with another; turning his very penury into his resource; and paying his interest with rags.

Burke. *On the Revolution in France*.

So sung Philander, as his friend went round
In the rich ichor, in the generous blood
Of Bacchus, purple God of joyous wit,
A brow *solute*, and ever-laughing eye.

Young. *The Complaint. Night* 2.

They contemplate nothing: two sentences, "It is very common," or "It is very strange," make at once the sum and the detail of their philosophy and of their belief, and are to them a *solution* of all difficulties.

Horseley. *Sermon* 11. vol. i.

SOMER-
SET-
SHIRE.

S O M E R S E T S H I R E.

SOMERSETSHIRE, a Maritime County of England, is bounded by Gloucestershire on the North-East; on the East by Wiltshire; by Dorsetshire on the South-East; by Devonshire on the South-West; and on the North-West by the Bristol Channel. It extends from 50° 48' to 51° 27' North latitude, and from 2° 35' to 4° 5' West longitude, and covers a superficial area of 1642 square English miles, or 1,050,880 square acres. It is of oblong form, stretching lengthwise from North-East to South-West about 80 miles, its extreme breadth from East to West being about 36 miles, and its circumference somewhat above 200 miles.

Surface.

In so large a County the character of the surface may be expected to be varied; and the natural features of Somersetshire are such that it may conveniently be divided into three districts. The first comprehends the North-Eastern portion of the County, lying between the harbours of Uphill and King's Road on the West, and the towns of Bath and Frome on the East; the next, or central division, includes the entire middle portion of the County from the borders of Wiltshire and Dorsetshire to the Bristol Channel, being defined and bounded by the Mendip Hills on the North-East, and on the South-West by the Quantock Hills and the forest of Neroche; the third district takes in the remaining Western portion of the County. Lofty hills, commanding the fertile plains which extend beneath them, give a picturesque character to the North-Eastern district, and the lovely valleys by which they are intersected are well known to the British artist. Yet, Westward, this district consists of low moorlands, which are exposed to frequent inundations, and at times lie under water for months together; but their vegetation, when they are cleared, is remarkably luxuriant. In the central division, the lands bordering Wilts and Dorset are high, and are chiefly occupied as sheep-walks, or laid down in corn.

The marshes, or fen-lands, form a distinguishing feature of this division. They are divided into two districts, called the Brent Marsh, and the Bridgewater or South Marsh. The greater part of the first, to the extent of about 20,000 acres, has been drained and converted into fine grazing and dairy grounds; but there still remains a large quantity of unreclaimed bog. Many thousand acres of the South Marsh are frequently overflowed by the river Parret, which likewise acts as its drain; that portion of it which has been more recently drained, an improvement effected about the close of the last century, is called King's Sedgmoor, and contains nearly 14,000 acres. The two principal masses of the Brent Marsh lie to the Westward of Glastonbury, on either side of the river Brue. The South Marsh lies South of the Polden Hill, extending to the river Parret, and as far Westward as Bridgewater Bay. The third, or last division of the County, has almost an equal proportion of lofty hills and fertile slopes and vales. Here the mountainous tracts to the North-West, which include the bold elevation of the Quantock Hills and the long range of the Brendon, are distinguished by their wild and picturesque scenery, whilst in the vales the prospect is agreeably relieved by a mixture of arable and pasture ground.

The coast-line is extremely irregular, in some parts projecting into large, lofty, and rocky promontories, and in others receding into fine bays with flat and level shores. Beginning at its Western extreme, at the point where the County confines with Devonshire, the coast presents a vast succession of huge, inaccessible rocks as far as Porlock Bay, a convenient road for shipping. This bay terminates Northward in Horestone Point, an immense headland, from which there is a continued range of high cliffs to Minehead. From the latter promontory, which rises 690 feet above the level of the sea, to the parish of Old Cleeve, the shore is flat and forms

SOMER-
SET-
SHIRE.

a curve of seventy degrees of a circle; when again from this parish as far as that of Watchet the coast rises in cliffs, varying from 50 to 200 feet in height, till it at length gradually distends into the fine bay of Bridgwater, where, at the extremity of Stert Point, a long and narrow peninsula, the river Parret falls into the Channel. From this point Northward the coast is flat and composed of vast sand-banks, over which the sea used formerly to flow, inundating the country and submerging the marshes above described. The frequency of these visitations led, as early as the reign of Edward I., to the establishment of *Commissioners of Sewers*, who should examine and inspect the sea-banks, ditches, gutters, and sewers connected with the sea, and order the requisite cleansings and reparations; which offices are in some measure extended to this day. At the North-East end of Bridgwater Bay the elevation of the coast again begins with the rocky promontory of Brean Down, which rises bluffly out of the sea and forms one of the most conspicuous headlands on the coast. A little to the Westward of this lies the island of Steep-Holmes; and, to the East, at the influx of the river Axe into the Channel, the remarkable hill and village of Uphill. A flat sandy strand extends for about two miles Northward of Uphill, as far as Anchor Head, the Western extreme of Worle Hill, which is another noted landmark. Northward from this rocky eminence are the headlands of Sand Point and St. Thomas's Head; and from the latter the coast once more flattens as far as Clevedon. Here the rocks resume their grandeur and continue, almost uninterruptedly, to Walton, Black-Nore, and Portishead Point, which is the last promontory Northward, and which "protrudes its lofty brow, covered with fine coppices, into a boisterous sea continually raging round its craggy base." From this point the coast declines gradually to King's Road, at the confluence of the Avon with the Bristol Channel.

Soil.

Somersetshire is eminently fertile, and, from its extent, contains almost every variety of soil. That of the moorlands in the North-Eastern division is chiefly of marine deposit, and is a rich deep mixture of clay and sand. The soil of Leigh and Broadfield Downs is thin and gravelly, being often not more than three inches in depth; it overlies limestone. The Mendip Hills offer a deep loamy soil, with occasional tracts of a lighter and inferior quality; whilst that of the Polden and Ham Hills is altogether poor, and a very thin staple. The moors of the central districts are generally fertile, and their soil may be classified into four kinds, the most valuable of which is a strong, dry, productive clay, of considerable depth; the other kinds are a red earth, a black moory earth, and the peat which forms the common fuel of the district. In the South of this vast level extends a high, fertile tract, with a soil chiefly composed of sea sand and shells, well adapted for tillage. The soil of the fine vale of Taunton Dean is a rich loam, interspersed here and there with clay and sand, and that of other parts of the Western division almost equals it. The Quantock Hills have various thin soils covering a thin straty rock, and occasionally limestone. The soil of Whitedown is also very various; that of Elackdown consists of a thin layer of black earth on sand and gravel.

Agriculture, crops, &c.

The largest proportion of the arable land of the County lies in the Western division, where is the vale of Taunton, and on its Northern side approaching Watchet; the arable land of the central division lies almost wholly on its South-Eastern side; the proportion of arable land

in the North-Eastern division is very small. The rotations of crops are various, as is the produce; but the supply is far inferior to the consumption, many thousand quarters of corn being annually brought from Dorset and Wilts. The grain commonly raised is wheat, barley, oats, beans, and peas. Potatoes are largely cultivated; and in the North-Eastern district the teasel is extensively grown for the supply of the cloth manufactures of the County, as well as for exportation to the adjoining County of Wilts, and to Yorkshire. Woad of excellent quality is also raised in the same district, chiefly in the vicinity of Keynsham. Flax and hemp are raised in large quantities on the rich tract extending from Wincanton, by Yeovil, to Crewkerne. From the above it may readily be inferred that Somersetshire is mainly a grazing and pastoral County. The London, Bristol, Salisbury, and other markets are supplied by it with large quantities of fat oxen, sheep, hogs, besides cider, cheese, and butter, &c. Nearly the whole of the rich marsh lands of the County are under grass, and applied partly to grazing and partly to dairying; and the plains are remarkable for their luxuriant and almost perpetual verdure. In the vicinity of the larger towns, the meadows are almost universally mown; whilst in more remote districts grazing, or dairying, prevails. The most common of the artificial grasses is the broad clover, and next to it sainfoin. Lime is the principal manure.

The neat cattle of Taunton Dean are of the North Devon breed, and are highly esteemed by the graziers. They are almost universally red, are yoked at three years old, and worked until they are five or six. The summer fattened oxen are mostly of the same breed, and are bred either in the Northern parts of Devon, or the lower parts of Somerset. The winter fattened cattle are of inferior kinds, and partly home-bred, partly from Wales. Cattle fairs are numerous in the County, and, during the summer months, a large market is held every three weeks at Somerton, to which are brought numerous lean cattle and sheep, with fat cattle also. The native sheep of the Mendips are a hardy race, yielding fine wool, and their flesh is of excellent flavour. An improved sort of the Dorsetshire breed is common in the County, and some of the Leicestershire have been introduced. A native breed prevails in the neighbourhood of Dulverton, Bampton, Wiveliscombe, &c., which somewhat resembles the Leicester; it is without horns, well-made, and has a thick fleece weighing about seven or eight pounds: these are highly esteemed by the graziers in the marshes, and many are taken to the Bristol market. The two-year old fat wethers weigh about twenty-five pounds per quarter. A small-horned sort, bought when young at South Molton, Devonshire, is kept on Exmoor Forest, on the adjoining hills, for the sake of the wool, the fleece seldom weighing above four pounds; and in the neighbourhood of Bath is a valuable breed of large sheep which will weigh, when fattened, from thirty to forty pounds per quarter. The hogs, large numbers of which are fattened in the North-Eastern district, are mostly Welsh, bought at the Bristol market. Few horses are bred in the County.

Orchards abound in the Northern district, and indeed are general over the County. The finest cider is made in the vale of Taunton Dean.

The North-Eastern district is but partially wooded; Woods, and the woods here are cut at very irregular intervals, according to the demand from the collieries. Kingswood covers about 230 acres, and its timber is chiefly

SOMER-
SET-
SHIRE.

SOMER-
SET-
SHIRE.

oak. There are some good coppices on both sides of the Mendips; but those on the Northern declivity are the finest. Some large and productive woods occur in the Eastern part of this district, as well as many thriving plantations. The timber here is very valuable from the vicinity of the collieries. The Eastern part also of the central division presents an extensive chain of woodland, running for several miles in length, from the parish of East Cranmore, through Downhead, Cleford, Whatley, Elm, &c. Of the large forest of Selwood, on the borders of Wiltshire, which once covered a vale of twenty thousand acres, about eighteen thousand acres have been cleared; the rest continues in coppice woods. This forest extended from Penselwood to within three miles of Frome: it was disforested in the reign of Charles I. Numerous plantations have been made in this tract, in which the Scotch fir has been found to thrive best. Coppices, likewise, abound on the Quantock and other hills in the Western part of the County.

The chief wastes occur on the Mendip Hills, in the forests of Neroche and Exmoor, among the marshes, and on the various downs, as Lansdown, Broadfield Down, and White Down, &c.

Climate.

In so large a County the climate of course must differ. Generally speaking, it may be called mild and genial; but though along the sea-coast the winters are usually light, yet elsewhere they are often severe, particularly in the Northern districts. The air, too, is mostly keen and piercing, and much severe weather is experienced on the hills and high lying downs. Hence there is often a difference of a month, or more, between the seed-time and harvest in the vales, and in the uplying districts. Thus the farmers about the Mendip, the Quantock, and the Brendon Hills, and in some other elevated situations, usually sow a fortnight earlier in the autumn, and as much later in the spring, than is customary in other parts of the County.

Geology.

The appearance and structure of the Western part of the County, and particularly of the district of Exmoor, which lies partly in Devon, are very analogous to great part of Devonshire and Cornwall. Exmoor is divided into several ranges of hills, which are distinguished by their respective names, and the most conspicuous of which are Dunkery Beacon, Brendon Hill, Croydon Hill, Grabbist Hill, and the Quantock Hills. With the exception of the latter, their longitudinal direction lies East and West, or nearly so; and from each central ridge diverge numerous lateral branches, forming small, steep valleys or gullies, which terminate in the larger valleys that divide and are parallel with the principal ranges. These valleys, vernacularly called *combes*, form, when well-wooded, some of the most striking features for which the coast, Westward of the river Parret, is celebrated. The Quantock Hills, although separated from the main body of this mountainous tract by a wide and cultivated valley, yet belong to it in a geological point of view. The name, as applied in the Ordnance Map, is given to the loftiest part only of the range, extending for about eight miles from North-West to South-East; at which latter extremity the mass is divided into several distinct ridges, which spread out fan-wise, having one end at North Petherton, and the other at West Monckton, with a gradual fall to the alluvial land on the banks of the Parret and Tone. The rocks throughout this region differ considerably in mineralogical characters; but the repeated alternations of the several varieties and their insensible gradations

into one another, connect them into what has been termed the *grauwacke* formation. Quartz and clay, in different proportions, are the essential component parts of all the varieties. This formation is surrounded either by a conglomerate, or by a red sandstone, which assume very various appearances, but which show the same materials under every form of aggregation. One of the most remarkable features of the South-West portion of the coast, the remains of a forest considerably below the level of the sea and now only to be seen at low water, occurs on the sea-shore about three miles Westward of the river Parret.

The North-West of Somersetshire, included between the Bristol Avon on the North and the Parret on the South, may be described as composed of three ranges of hills, with intervening valleys, running nearly from East to West: these are Leigh Down, Broadfield Down and Dundry, and the Mendips. The first and second of these chains are separated by the vale of the Avon, Ashton, and Nailsea; the second and third by that of the Yeo; while South of the Mendips are the extended plains through which flow the Axe, the Brue, and the Parret. These tracts, connected with the Southern parts of Gloucestershire, are in like manner composed of the first and second series of the *sedimentary* class, and, in part, of the third series. The highest part of the Western portion of the Mendips, which includes Black Down, presents a smooth surface for a considerable way down both its Northern and its Southern declivity, after which ravines begin to appear, which subsequently enlarge into defiles or *combes*. On the Southern side the range is intersected by the deep defile of the Cheddar cliffs, which, in its ascent to the North, ramifies into those sinuous dells and ravines which mark the Southern face of Mendip. On the Northern side are the two deep *combes* of Burrington and Dolborough, both of which enter Mendip nearly at right angles with the vale of the Yeo, and subsequently run almost parallel with the range, to the South of East, with a broken escarpment facing the South; but in ascending Eastward they merge into the general surface. Two ravines, furrowing the Northern face of Mendip, find their way into Burrington *combe*, and a third enters Dolborough *combe*, East of the village of Roborough. West of this meridian, the aspect of Mendip changes. A continuous ridge, having a corresponding dell on either side, projects to the Westward: it declines gradually to the neighbourhood of Sidcot, where the two dells merge into a valley, which finds an outlet, on the South of West, between Crook's Peak and Bleadon Hill. To the North and South of this valley and its Eastern dells there run two ridges, with broken escarpments, that respectively face the South and North. Westward, the vale is bounded by Bleadon Hill, which stands in immediate connection with the Northern ridge.

The nucleus of Mendip is formed by the old red sandstone, which occupies the highest part of the range in Blackdown, and supports on its Northern and Southern flanks a body of slate-clay, which is succeeded by continuous carboniferous limestone, all in a conformable position. Some beds of sandstone conglomerate occur in the lowest visible portions of the old red sandstone; and, where adjacent to the superincumbent slate-clay, it is sometimes traversed by numerous small filamentous veins of calcareous spar. In some places, it contains portions of carbonate of lime. The slate-clay alternates with subordinate beds of greyish and reddish sandstone

SOMER-
SET-
SHIRE.

SOMER-
SET-
SHIRE.

and limestone; and the purest limestone beds in it are found in the vicinity of the continuous limestone, the most sandy being near the fundamental sandstone. It is more partially penetrated than the latter with carbonate of lime. The limestone is commonly of a bluish-grey colour, sometimes tinged with black, and, more rarely, mottled with red: it is not unfrequently fetid. It contains incidentally slight layers and masses of hornstone and Lydian stone, and also beds of magnesian limestone, of variable thickness. The organic remains observed in it have been those of vertebrated animals, of crustacea, univalves not chambered, bivalves, echinites, crinoides, and coralloids.

The Broadfield Down range is a vaulted inflection of limestone, probably reposing on the old red sandstone, which is distinctly shown to be the case in the Leigh Down range by the banks of the river Avon.

The *lias* formation first occurs on the coast, a short distance to the West of Watchet, and forms some very high cliffs Eastward of this place. The Polden Hills chiefly consist of it. Inland, it passes from Dorsetshire by Bath, and occupies a large extent of the County.

Minera-
logy.

The chief mineral productions are coal, lead, calamine, limestone, freestone, and various other kinds of stone, fullers' earth, marl, and ochre. The celebrated lead and *lapis calaminaris* mines of Mendip are now nearly exhausted; or, at least, the deep working is so encumbered with water that little can be done in them. Copper, in the state of sulphuret and of malachite, and veins of hematite are frequently met with; and nests of copper ore, of considerable magnitude, have been found in the subordinate beds of limestone. The largest quantity of freestone is raised at Coombe Down, near Bath, where the ground has been undermined for several miles. The coal beds are the nearest to London of any yet discovered, and are the most Southern deposit of the mineral in England. The Somersetshire coal basin is an extension of that of South Gloucestershire, and is about twenty-five miles in length; the width of this area, from the collieries near Bath to those of Bedminster, near Bristol, is about eleven miles. The principal places in which the coal is mined, belonging to the Somersetshire part of the basin, are Nailsea, Bedminster, Timsbury, Poulton, Radstocke, Upton, Newton, and Leigh Down. The deepest of these, and, we believe, the deepest of any of the coal-pits of England, is that on Clan Down near Radstocke, which is sunk 200 fathoms before its horizontal adits are driven. The stratification of the coal measures in this basin is so deranged that they have very different levels; their principal subdivisions, beginning with the highest of the measures, are, the upper coal shale, the Pennant grit, (sandstone,) the lower coal shale, and the millstone grit. The number of mines in this district is less than formerly, but, owing to improved methods of working, the produce is greater. So thin indeed are the seams that they would not be considered worth the working in the great Northern coal fields. But their situation renders them valuable, and great part of the area of the basin is still untouched.

Rivers and
canals.

The rivers are of inconsiderable size, rising chiefly in the high grounds within the County. The chief are the Lower Avon, Parret, Tone, the Brue, and the Axe. The Lower Avon enters from Wiltshire, and, between Bath and Bristol, forms the boundary line between Somersetshire and Gloucestershire. The Parret and Tone form a junction to the North of Langport; and near

their point of confluence, a small spot of rising ground marks what was once the Isle of Athelney, in which Alfred found a shelter from the Danish invader. Its entire length is about 40 miles. The Axe, which has its source in the Mendips, has been made navigable as far as the village of Lower Weare, near Axbridge, or for about nine miles. The other rivers are also partially navigable, and enter more or less into the canal lines of the County. Thus, the Ilchester Canal, which runs from the town of that name to Langport on the river Parret, a distance of nearly seven miles, has part of its line formed by the river Ivel or Yeo; and the Glastonbury Canal, which serves to shorten the communication between that town and the sea, includes the Brue in part of its course. The Somersetshire Canal is connected both with the Kennet and Avon, and the Wilts and Berks Canals, and, running from the heart of the coal district to Bath, supplies that city and the respective places on the lines of the above canals with coal at a cheap rate. There is a canal between Bridgwater and Taunton; and the Grand Western Canal, still incomplete, is intended to open a communication between the Exe, near Topsham in Devonshire, and the Tone near Taunton. Its length, when finished, will be 35 miles.

SOMER-
SET-
SHIRE.

The Great Western Railway will traverse the County from Bath to Bristol, terminating at the Temple Mead, in the latter town. Here it will communicate with the Bristol and Exeter Railway, the course of which will be first South-Westerly to the coast, near Weston-super-Mare, then South to Bridgwater and Taunton, whence it will again incline to the West, passing through Wellington, Sampford Peverell, Collumpton, and Bradwinch to Exeter. Its termination here will be on the bank of the Exe river, near the new basin and ship canal on the Western side of the city. The entire length of the line will be $75\frac{1}{2}$ miles, and only one tunnel will be required in the whole distance, *viz.* at White Ball Hill, Wellington. There is a small railway which branches off from the Somerset Canal, in the parish of South Stoke, to the collieries at Walton and Clandown.

Fine woollen cloth is extensively manufactured in the County, principally at Frome, where 730 men are employed in it: Road contains 59 such manufacturers; Beckington 32; Charter House Hinton 24; at the Tiverton Mills, near Bath, are 284; at Lipscombe and Widcombe 565; at Freshford 32; at Wellington 258; at Milverton and elsewhere, in small numbers, to the amount of 200. Sheepskins are dyed or tanned at Street for hearth-rugs and gig-rugs. About 300 men are employed in the manufacture of sail-cloth, sacking, and girt-web at Crewkerne and its vicinity, at East Coker, Merriott, West Hatch, and North Perrott; at Ilminster 21 men are variously employed in silk or lace machinery; at Chard 478, several at Bruton, and at Taunton 109 men. At Shepton Mallet as many are variously employed in making woollen cloth, serge, sailcloth, and silk goods. Dowlas and ticking are manufactured at Corbon Denham, Wincanton, and Stoke-Trister. The flax manufactories at Keynsham employ 79 men. About 600 men are employed in the glove trade, of whom 300 are at Yeovil, 150 at Milborne Port, 45 at Stoke-under-Hamdon, Montacute, and Martock. Edge-tools are made at Mell by 56 men, and by several at Whatley, Emborrow, and other places. The glass manufacture employs 94 men at Nailsea. Paper-making and tanning employ 59 men at Cheddar; and the Parliamentary

Manufac-
tures, &c.

SOMER-
SET-
SHIRE.

SOMME.

Returns mention a few manufactures in iron, calamine, copper, brass, paper, and snuff, in various parts of the County. A variety of small articles are made at Bath.

The Returns of 1831, from which the above are taken, furnish the following classification of persons employed in agricultural, mechanical, and other pursuits. Occupiers of land employing labourers 6032; occupiers of land not employing labourers 3731; labourers employed in agriculture 28,107; employed in manufacture 4350; employed in retail trade or handicraft 26,762; capitalists, bankers, &c., 4676; labourers not agricultural 12,183; other males, 20 years of age, 7074; male servants 3801; female servants 18,333.

The salmon and herring fisheries employ many hands at Watchet, Minehead, Porlock, and other places along the coast.

It has been observed that the superficial area of the County is 1,052,800 statute acres. This is the number according to the aggregate measurement; which, however, according to the Population Returns, is reduced to 1,028,090 statute acres. About 900,000 acres are supposed to be arable, meadow, and pasture. Representing the entire area of England and Wales by 1000, the relative proportion of Somersetshire to this will be 28.454,300.

Antiqui-
ties, &c.

The remains of antiquity in the County are various and numerous. That singular line of fortification called Wansdyke may be traced in several places, and *celts* and ancient instruments of war have been discovered in the vicinity of its course. The huge remains of a Druidical temple are extant in the parish of Stanton-Drew. Of the Roman roads the chief was the Fosse-way, which extended across the County from Bath in a South-Westerly direction to Perry Street, on the confines of Devonshire. Ancient encampments are still to be traced in nearly every direction, and, independently of

the Roman cities of Bath and Ilchester, there are many others whose Roman origin is attested by the remains they yield. In the antiquities discovered are included temples, sudatories, tessellated pavements, altars, hypocausts, and coins of different ages. (See BATH.)

The number of religious houses before the Reformation, according to Tanner, was about 44. Interesting specimens of ecclesiastical architecture, from the age of Alfred downwards, exist either in ruin or in fine preservation. Remains are extant of many of the ancient castles, and the County is adorned with numerous handsome modern seats of the nobility and gentry. Among its natural features may be cited the extensive cavern of Wokey Hole in the Mendips, and the rugged and picturesque Cheddar cliffs.

Somersetshire is divided into forty hundreds, containing seven liberties and 472 parishes, two cities, Bath and Wells, with part of another, (Bristol,) and 32 market towns. It is politically divided into two divisions, East and West, each of which returns two Members to Parliament, and eleven are returned by six of its boroughs, *viz.* two Members each by Bath, Bristol, Bridgwater, Taunton, and Wells, and one by Frome.

The population of the County, in 1831, was 403,908 souls. The sum expended for the relief of the poor in 1832 was £184,595. The annual value of real property, according to the assessment of 1815, was £2,308,723; and the profits of trade and professions, by the same estimate, £1,329,266.

Collinson, *History of Somersetshire*; Billingsby, *General Survey*, published as far back as 1797; Lewis, *Topographical Dictionary of England and Wales*, vol. xiii.; *Beauties of England and Wales*, vol. xiii.; *Transactions of the Geological Society*, vols. iv. and v., First Series, vol. ii., Second Series.

SOMER-
SET-
SHIRE.SOMMER-
FELTIA.

SOMME, a Maritime Department of the North of France, is bounded on the North by the Department of the Pas de Calais; on the North-East by the English Channel; on the East by the Department of Aisne; on the South-East by that of Oise; and on the West and South-West by that of the Seine-Inférieure. It is wholly formed out of the ancient Province of Picardy, and derives its name from the Somme which traverses it from South-East to North-West.

The soil of this Department consists chiefly of chalk, sand, and clay; and the chalky plains, watered by the Somme and its affluents, are of extreme fertility. It exports nearly a million hectolitres of corn to the adjoining Departments, and its annual produce of hemp and flax amounts to between five and six millions of kilogrammes of each. A considerable number of cattle are reared in the Department, and the breeding of sheep is particularly attended to. The greater part of the coast has been reclaimed from the sea, or rather has been abandoned by it, and is preserved by numerous dikes; the most productive tract of this reclaimed land lies in the Arrondissement of Abbeville, and is termed the *Marquenterre*, a corruption of *Mare-en-terre*. Notwithstanding the fruitful nature of the soil, this Department is more encumbered with poor than most others of France; and yet it affords numerous sources of employment in its manufactures as well. Its social condition

would seem to be low in other respects; since, in the Santerre, a fertile tract which lies in the Arrondissement of Montdidier and Amiens, and which is called the granary of Picardy, incendiarism and murder are not unfrequently resorted to to prevent strangers from taking farms over the heads of the old occupants. The climate is variable and humid, and hence the Department is unfit for the cultivation of the vine, but orchards, especially cider-orchards, are numerous. The chief mineral productions are common marble, turf, the pits of which are numerous and extensive, coal, freestone, potter's clay, with some pyrites and vitriolic earths.

The manufactures consist of woollens, cottons, linens, hardware, stockings, caps, paper, mineral acids, and chemical products; and the commerce is mostly in grain and cattle, with the foregoing and colonial goods.

The population of this Department, according to the census of 1836, is 552,706 souls. Its superficial area covers 604,456 hectares, of which 55,000 only are occupied by woods. The average rent of land per hectare is about 45½ francs, and the territorial revenue, about 30,000,000 francs.

ABBEVILLE and AMIENS, the chief towns of the Department, have been given in alphabetical order.

Malte-Brun; *Guide Pittoresque du Voyageur en France*.

SOMMERFELTIA, in *Botany*, a genus so named

SOMMER- by Lessing, after M. Sommerfelt, who has written on
FELTIA. the flora of Norway. It belongs to the class *Syngenesia*,
— order *Superflua*, and the natural order of *Compositæ*-
SOM- *Asteroidæ-Astereæ*. Generic character: ray of herma-
Nambu- phrodite florets in one series; disk sterile; pappus

S O M N A M B U L I S M.

SOMNAMBULISM, *somnus*, sleep, *ambulare*, to walk. If strictly limited to the definition which its etymology demands, the term Somnambulism would be merely applicable to that form of disturbed sleep in which the subject of the affection walks. Such limitation, however, does not exist in the common acceptance of the word; but it is employed to denote that deviation from ordinary sleep in which the vague impressions or accidental conceptions of a dream are realized under the influence of a misapplied or ill-regulated exercise of the voluntary functions; or, in other words, if the co-operation of the physical organs be superadded to the activity of the mental faculties, the result is that the dream is partially or completely acted: such phenomenon is then termed Somnambulism. There exist various modifications of this affection, from the simplest form of giving utterance to thoughts which are flitting transiently across the brain, to those more complex varieties in which both mind and body are vigorously exerted in the execution of some relatively difficult task, such as the solution of a mathematical problem, or the attainment of some desired object by the performance of a toilsome and intricate journey. The subject will resolve itself into two heads, the first comprising *simple* and *ecstatic Somnambulism*; in the second *artificial Somnambulism* or *animal magnetism* will be discussed.

According to the preceding definition it may be inferred, that the condition which constitutes Somnambulism (as indeed that likewise of dreaming) holds some analogy to insanity; nor would such conclusion be altogether unjust. The two affections resemble each other, as Dr. Abercrombie has indicated, in these features; that mere impressions are in both believed to be real existences, and the images which arise are subservient to certain associations over which no control is exercised. Thus it is evident that the influence of both judgment and volition are in part suspended, and that the aggravation of symptoms is proportioned to the amount of imperfection which these faculties exhibit.

VOL. XXVII.

There are, however, certain forms of delirium and madness, (those, for example, according to Dr. Prichard, which leave no impression on the patient's mind of what has occurred during the attack,) and protracted fits of stupor, as well as that variety of trance termed catalepsy, which, from the close affinity between their leading symptoms and those that characterise Somnambulism, might with propriety be classed under one head; but a sufficiently comprehensive term for such purpose is still a desideratum.

There are many phenomena presented in common by dreaming and Somnambulism—a fact which has given rise to the popular impression that the one is merely a modified form of the other; but this conclusion does not necessarily result from the resemblance alluded to: for, although the definition given above is just in its application to ordinary cases, there are nevertheless certain extraordinary forms of Somnambulism occasionally to be met with, in which the co-operation of nearly all the mental faculties and organs of volition tends to produce a condition so far anomalous, as to exclude it from being classified with either the sleeping or waking state. This question leads to the essential preliminary inquiry relating to the peculiarities which characterise the exercise of the mind during sleep.

It has been remarked of dreaming and Somnambulism, that the conceptions which simply arise in the one instance and prompt an action in the other, are the consequence of previously received impressions recurring singly or in combination. As an abstract fact this cannot be doubted; but if intended to mark a distinction between the relative activity of the mental faculties, and their capacity for exertion during sleeping and waking, it can scarcely be admitted to possess any weight. It is through the external senses alone that the imagination can have its being; and thus the proposition, that a train of thought during sleep results alone from previous impressions, holds equally good of thought at any time; and no doubt can exist that, even in dreams, conceptions

SOM-
Nambu-
LISM.

may be modified, or their tendency altered by external impressions made at the time, as by appeals to the senses of touch and hearing. But from the usual absence of such impressions, and the indisposition on the part of the senses to take cognizance of them when they occur, the imagination, if active at all during sleep, is commonly abandoned to its own stores and resources, and is thus left to run riot without the controlling rein of judgment. From this cause nearly every one has, when dreaming, experienced the curious variety of objects and scenes which present themselves in fantastic or orderly array before the imagination: strange and familiar faces mingle and play a natural or an inconsistent part in the fancied events which are passing before us; and the heterogeneous materials thus collected are moulded into the most improbable and whimsical forms. These indeed must be old impressions revived and combined at random during the temporary usurpation of the throne of reason; yet this is not always so: a conception may be erroneous, but the train of action consequent upon the uncorrected impression may be perfectly just and consistent; thus, the dreamer, fancying himself shipwrecked and in danger of being drowned, attempts to save himself in imagination or reality by acting the motions of swimming: or he is invited to the consideration of some interesting question, which he will reason upon systematically and justly. This process of the mind is doubtless resulting from knowledge previously obtained; but from that source alone can the requisite data be acquired when reason is in full activity. Therefore in dreaming, judgment and volition appear to be suspended, and the external senses are usually dormant; whilst conception or imagination and the power of combining thoughts or impressions may be in greater or less activity: as regards the influence of these faculties upon the sleepwalker, in proportion as the associations are methodical or vague, so are the resulting actions consistent or incongruous.

In simple dreaming, then, voluntary power and the means of holding commune with the external world are usually and almost completely suspended. That such is not altogether the case is sufficiently proved by the altered position which most individuals are induced to assume during sleep, from a sense of discomfort attending an uneasy posture. In Somnambulism these faculties are more decidedly exerted, a predetermination evidently often guiding the sleepwalker to the performance of complicated efforts. Such actions, it must be admitted, partake in most cases of an instinctive character, especially in those whose imaginations might be presumed to be least influential. Thus a servant will perform the usual household duties, the mechanic will work at his trade, or the farmer will saddle his horse and ride to market; of this order many authentic instances are recorded: other Somnambulists again wander forth in some instances without apparent object; in others committing extravagances or acting on the accidental suggestions of the moment: this last class is perhaps the least numerous. The external senses seem to be variously affected in different individuals who are the subjects of this complaint: thus, some take no heed of what is going on around them, whilst others retreat from injury or threatened danger, and may be even encouraged to hold a conversation, without expressing alarm or awaking.

The eye, which is usually open, rarely transmits the impressions received upon the retina to the sensorium;

but the fixed, unmeaning gaze on vacancy betrays the mysterious influence under which the night-wanderer is impelled unwittingly to quit his couch: and the tongue will often unconsciously betray to the alluring confidence of the querist the most cherished secrets of the heart.

An occasional and interesting feature of both dreaming and Somnambulism is, that the concentration of the faculties upon any given object, undisturbed as they are by extraneous sources of derangement, frequently admits of a more active display of power than during waking. Thus, the imaginative individual will picture to himself combinations of the most lovely forms and scenes amongst which he moves conspicuously; the learner of a language will summon his small stock of knowledge to hold fancied conversations which he would be unequal to when awake; the orator will be more than usually eloquent, and the poet more happy in his compositions; or impressions may be realized by the performance of tasks which have frustrated the endeavours of the waking faculties. In like manner is it that long lost associations are recalled when to all appearance obliterated for ever. The excited movements of brutes during sleep render it highly probable that they also are subject to dreams: thus the dog will start and bark as if acting the day's chase over again. *Night-mare* may be defined as merely that form of dreaming in which the sufferer is usually impressed with the idea that some threatening danger is about to overwhelm him, accompanied by a consciousness of perfect helplessness resulting from suspended voluntary power. The cause in most cases may be ascribed to repletion of stomach, and consequent turgescence of the vessels of the brain: some individuals can rarely sleep immediately after taking food without suffering more or less from night-mare.

It is expedient here to notice certain deviations from a sound exercise of the mental faculties, which may be considered as holding an intermediate relation between waking and Somnambulism. It has been shown that inaction of judgment, suspension of volition, whether in relation to mental processes or physical exertions, and dormant senses are more or less characteristic of both dreaming and Somnambulism. Relatively of each or the above conditions, the following peculiarities of character appear to be modifications, viz.: 1. certain forms of eccentricity and absence of mind; 2. waking dreams or castle building; 3. unconsciousness of passing events or external impressions when wrapped in thought. Instances of each of these temporary declensions from a healthy tone of mind are familiar to every one, and few are altogether exempt from their influence. Thus an object may be distinctly presented to the eye, or a sound to the ear, without any corresponding acknowledgment of the impression by the sensorium: and thus likewise the abstracted day-dreamer yields his faculties to the uncontrolled sway of a voluptuous imagination. The effect of opium upon its habitual consumer appears to be a further modification of that mental condition which distinguishes Somnambulism: indeed all the forms alluded to are in different degrees referable to the same source, viz. suspension of the will over the train of thought.

Here, however, the line must be drawn, (arbitrary though it be,) as a further prosecution of the subject would lead to a consideration of those morbid tendencies which are referable to unsoundness of mind.

Nambu-
LISM.

SOM-
Nambu-
LISM.

Ecstatic or cataleptic Somnambulism are terms employed to denote a form of disease which combines the characteristics peculiar to Somnambulism and catalepsy. (See CATALEPSY.) This affection was first described by Sauvages and Lorry in 1742, and an account of the cases which were witnessed by them will be found in the *Histoire de l'Académie des Sciences* of that year. These cases are quoted by Bertrand, who gives a full account of the complaint in his *Traité du Somnambulisme*, published in 1823. The attacks are marked by the same general insensibility to external objects and forgetfulness of what has occurred, as characterise simple Somnambulism, the stream of thought appearing to hold onwards an unguided course, and accepting as tributaries such impressions alone as may happen to fall in with the existing current of thought or impulse of the moment. The fits usually occur during the day, and are of various duration: they are not necessarily connected with sleep, but are for the most part immediately preceded or followed by the coma of catalepsy. A singular phenomenon connected with this form of Somnambulism is the perfect recollection which patients commonly retain of the events which had occurred, or the conversations which had been held by them (probably with some imaginary acquaintance) during their previous attack. In some instances, where the fits have even been of long duration, this symptom has been so peculiarly marked as to suggest the resemblance to a single body endowed with two independent minds: thus, a conversation which had been abruptly terminated at the onset of a paroxysm, has been renewed on its cessation at the very sentence or even word at which it was interrupted. Dr. Abercrombie mentions an interesting example illustrative of this position, in the person of a young lady of cultivated mind, whose attack began by a protracted fit of somnolency, on recovering from which she was found to have lost every kind of acquired knowledge. She then applied herself to the elements of education, and was making some progress, when a second and similar fit restored her to all her original knowledge, the interval being a perfect blank. A third attack again threw her back to the same state as after the first, and in this way she suffered alternations of these conditions for four years. Some interesting and remarkable cases are described by Professor Silliman in the *American Journal of Science*: in one, a lady who was engaged in a piece of needlework, which occupied much of her attention, became suddenly delirious, in which state she remained for seven years: on as sudden a recovery, she immediately made inquiry respecting her needlework. As another instance, the same writer mentions the case of a farmer who was seized with delirium on his return from the fields, where he had left some agricultural implements hidden in a hollow tree: after the lapse of many years he recovered suddenly, and immediately asked whether his sons had brought in the implements alluded to; and on receiving an evasive answer he rose from bed and proceeded to the spot, where he found the ironwork of his tools, but the wood had mouldered away.

In some instances of ecstatic Somnambulism the vivacity of the imagination and energy of the intellect are, during the attacks, augmented to an extraordinary degree, and knowledge carelessly acquired has been most accurately retained; as evinced, for example, in the recitation of long and difficult passages of poetry, music, or other composition, the repetition of conversa-

tions, &c. The paroxysms are usually succeeded by extreme languor, and even more weariness than would result from a simple want of sleep. In seeking the causes of these affections, a peculiarity of temperament, connected sometimes with hereditary predisposition, habitual intoxication,* &c. may be enumerated: they are, moreover, occasionally dependent on the functional derangement of important organs, but more often exist without any apparent cause. Lastly, unique attacks of deep reverie, connected with spectral illusions, have been known as the harbingers of approaching dissolution: such forms of this affection are probably to be regarded as the first indications of fatal disturbance in the great nervous centre, the brain. (For illustrative cases and further information on this interesting subject, reference may be made to the following works: Bertrand, *Traité du Somnambulisme*; Abercrombie, *On the Intellectual Faculties*; Muratori, *über Einbildungskraft*, the German translation from the Italian, by Richert; and the various Medical Cyclopedias, English and Foreign, article "Somnambulism.")

Artificial Somnambulism, or Animal Magnetism.—The present state of this subject requires that it should be approached with extreme caution; but, although supported by the few, and decried and ridiculed by the many, it is not therefore to be dismissed without discussing its claims to credence. It is requisite, however, in entering upon an investigation of this character, that the judgment should be equally free from the trammels of superstitious credulity and preconceived prejudice, which are alike destructive of an unbiassed consideration of the subject. To hesitate in the absence of proof, or where a recognised natural law is contradicted, is indeed a characteristic of philosophical inquiry; but to reject without examination a question which possesses, at the least, the pretension of having been and still being advocated by men of acknowledged talent and information, is scarcely consistent with a simple love of truth.

It would perhaps be difficult to assign a date to the origin of animal magnetism; for, although the name is of comparatively recent coinage, the existence of some latent and all pervading fluid was credited by the ancients, who attributed to its mysterious agency many phenomena analogous to those which are now ascribed to animal magnetism. As instances of this presumed influence, may be cited, the prophetic delirium of the priestess of Apollo, the ecstasies of Dervishes, &c. A theory with the ancients was, that the souls of men and animals were emanations from this universal fluid, in which at death they were once more merged. This idea is thus noticed by Fénelon in his *Télémaque*: *L'âme universelle est un vaste océan de lumière; nos âmes sont autant de petits vaisseaux qui y prennent leur source et retournent s'y perdre.* Such likewise is the leading feature of the Brahmin theology.

The history of animal magnetism is divided by

* That form of delirium to which habitual drunkards are frequently subject (known by the name of *delirium tremens*) presents in its character much that is analogous to the mental aberration of the Somnambulist. The sufferer is in nearly incessant conversation with imaginary beings around him, or he is actively occupied with some task which he supposes he is actually engaged in, whilst he is stretched out bound and powerless in bed. The false impressions upon both eye and ear are frequently in these cases most vivid, and would doubtless be acted on were the patient left to go at large. This affection is peculiar to drunkards, and not inflammatory.

Bertrand* into three epochs: the *first* being about the end of the XVIth and commencement of the XVIIth centuries, at which period it ranked amongst its advocates many illustrious names, such as Paracelsus, Van Helmont, &c.; the *second* epoch was introduced by Mesmer; and the *third* was marked by the discovery of artificial Somnambulism. It was not then until the time of Mesmer that animal magnetism laid claim to being classed among the sciences. This singular individual was a native of Switzerland, and born in 1734: he took his medical degree at Vienna in 1766, presenting as his inaugural dissertation a treatise *On the Influence of the Planets upon the Human Body*, for which he was only ridiculed. A love of eccentricity induced him to pursue these studies, his professed object being, to elucidate the nature and attempt the employment of that subtle fluid which he believed to pervade the universe. His researches led to an acquaintance between him and a Jesuit named Hehl, who was professor of astronomy at Vienna, and by whose assistance Mesmer obtained magnetic plates, through the medium of which he conceived he had the power of willing the action of the magnetic fluid. The derision with which the publication of his experiments and their results was treated in Germany, induced him to try his fortune at Paris, where he professed animal magnetism as a distinct science. The notoriety he soon obtained here gained him many adherents as well as patients, and the wealth which he thus accumulated seems to have been very considerable; for we are informed by Bertrand, that when his pupil Deslon commenced the practice of the art on his own account at Paris, Mesmer's love of money prompted him to sell his secret instructions at the rate of 100 Louis d'or to each individual who desired to purchase them: a body of magnetizers was thus formed, the members of which styled it the *Société de l'Harmonie*: the proceeds from this source and from his practice were estimated at the enormous sum, for the time, of 340,000 livres. At this critical period the famous royal commission was appointed to investigate the claims of animal magnetism; and the unbiassed examination of the subject by such men as Franklin, Bailly, Lavoisier, &c., cannot fail to carry great weight even in the present day.†

The method of operating employed by Mesmer, Deslon, and their contemporaries was the following: the patient or patients (for numbers were usually operated on together) were ranged in a vessel (*baquet*) in form like a large tub, provided with numerous movable rods of iron which projected inwards; the magnetizers had similar rods, which were supposed capable of concentrating the magnetic fluid; thus the patient aided by directing one of the movable rods towards any given part of his body, at the same time that the operator emitted the magnetic fluid; pressure on the affected region, and the influence of the eye, were also employed as accessories. The effects produced varied according to the temperament or affection of the patient on the one hand, and the intensity and persistence of the operation on the other. Nor was this influence confined to the human body, for, as we learn from Mesmer, the fluid was capable of being transmitted, like electricity, by intermediate conductors, such as wood, water, glass, &c.

Animals also could be affected, and trees were made the depositories of this subtle agent, in the way that jars are charged with the electric fluid. At the conclusion of their report, the royal commissioners state that "their experiments demonstrate that the effects obtained by M. Deslon" (the operator appointed to exhibit before and with them) "are due to compression, imagination, and irritation; and may therefore be judged to be the causes of magnetism generally. The observations of the commissioners have convinced them that these convulsive crises and the violent means employed can only act in medicine as poisons; and that independent of theory, the repeated production of such convulsions must have the pernicious tendency of rendering them habitual, and may even result in their epidemic diffusion and extension to future generations."

This was a severe, but not a deathblow to the practice of animal magnetism; indeed, the seed had been scattered too widely by Mesmer amongst the purchasers of his secret, to allow of its easy extinction. These individuals formed themselves, as has been observed, into a society for the purpose of promulgating their doctrines, and although the art, in common with literature and science generally, was for a time smothered during the convulsions of the civil war which followed, it was revived early in the present century, and has since been practised, with variable success and fluctuating popularity, up to the present period.

There has been no allusion yet made to that characteristic of the magnetic state which entitles it to a place in this Article, *viz.* Somnambulism. This result was not procured by Mesmer and his immediate contemporaries, but was subsequently displayed, together with various attendant phenomena, in 1784, by the Marquis Puységur, who was a member of the *Société de l'Harmonie*; the discovery was therefore made after the report of the royal commissioners had been presented. Patients prescribed for themselves, and were said to possess the power of *clairvoyance*, by which they were enabled to discover the alterations produced by disease in the internal organs of others.*

In 1813, M. Deleuze, of Paris, wrote a *History of Animal Magnetism*, which conduced much to recall attention to the subject; "The talents and temperate style of the author," says Bertrand, "his knowledge of the natural sciences, and high moral character, all contributed to enhance the favourable reception and success of his work." In 1825, the same author published a treatise entitled *L'Instruction Pratique sur le Magnétisme Animal*. By this time the theory and mode of operating originally adopted by Mesmer were materially modified, and the believers thus became divided into two independent classes, the one attributing the phenomena to the soul, and mixing up their doctrines with questions and explanations equally irrelevant and profane; whilst the other sect, of whom Puységur may be regarded as the founder, ascribed the magnetic effects to a subtle fluid, of which the brain was the depository and the nerves were the conductors. This fluid they believed to be under the influence of the will, and so capable of being transmitted at pleasure from one body to another. Thus the vague hypothesis, the *baquet* and the public exhibitions of Mesmer and Deslon yielded to

the more simple theory and private operation of the modern school of magnetizers.

At this period of its history, when many new advocates arose in the persons of talented and practical men of acknowledged veracity, both in Paris and elsewhere, when lectures were delivered and experiments exhibited in the Hôtel Dieu and other public hospitals, the importance of the subject and its claims to public favour again became matter of question in the French Academy of Medicine, where, after some delay, it was determined, in 1827, to appoint another commission once more to institute the requisite inquiries respecting the credibility and pretensions of animal magnetism. This was accordingly carried into effect, the investigations occupying nearly five years; at the end of which period (June, 1831) the report* made by M. Huston, one of the committee, was read before the Royal Academy of Medicine. In their concluding paragraph the commissioners state that "they think they have communicated in their report facts of sufficient importance to encourage the investigations into the subject of animal magnetism, as a very curious branch of psychology and natural history." From this it may be gathered that the general tenour of this second report was favourable; indeed, in it the supporters of animal magnetism recognise the strongest testimony in favour of the art they profess.

The attention of the British public has recently been more especially called to the subject by the investigations and writings of the Baron du Potet, Dr. Elliotson, Mr. Mayo, and others. In introducing a brief notice of the present mode of proceeding in eliciting the phenomena ascribed to animal magnetism, it is requisite to preface the sketch with this remark,—that whatever may be the explanatory hypotheses of those who profess and practise the art, (and the theorists both here and in France are principally followers of Puységur,) such surmises, however fanciful and visionary they may be, cannot interfere with or negative the *facts*; and further, whether the agent be the imagination of the patient or an emanation from the operator, the *practical results* may be, and if produced must remain, the same. The recital of a supposed case will serve to illustrate the usual method of proceeding, and will supply a type of the majority of examples which are met with.

A hysterical or epileptic female, totally ignorant of the existence of such an art as animal magnetism, is placed in a chair and submitted to the following manipulations: the operator stands before her and commences by directing one or both hands, with the fingers extended, towards the forehead; the next step is to carry them with a waving action slowly downwards, without touching the patient, to the lower part of the trunk; the hands are then withdrawn and this manipulation is repeated, an occasional variation consisting in holding the extended fingers for a period of some seconds towards the forehead; during the proceedings the patient's eyes may be closed or open. When these *passes* have been continued for a length of time, varying from a few seconds to several minutes, or even half an hour, the patient will either complain of drowsiness and stupor, accompanied, perhaps, by pain in the head, or other anomalous sensations, or else falls into the state termed artificial Somnambulism. If this latter effect fail to

succeed the first operation, the second or third generally produces it. Whilst in this state the magnetized individual presents all the appearances described under the head of natural Somnambulism: the fixed eye, if open, stares on vacancy; the ear refuses to take cognizance of loud and sudden appeals, but may be in some instances roused by the still whisper of the operator or any one present; the sense of touch seems to be literally annihilated, for severe tests may ordinarily be practised without eliciting complaint or any evidence of sensibility. Questions, if attended to, are answered more or less coherently; and in some instances the somnolent passes into a delirious paroxysm; in such cases inconsistent or whimsical remarks are volunteered: again, at other times, the patient will follow the operator about the room, or the separate limbs may be attracted as by a magnet.* Such are some of the more ordinary effects of animal magnetism, all of which are occasionally witnessed in the same individual. The liability to deception from various sources has suggested the following test: after being repeatedly submitted to this same operation, both before the face and behind the back, the magnetizer shall one day profess to go through the ordinary routine, whilst he really withdraws himself from the scene or remains motionless; in many cases precisely the same results have ensued under these circumstances as when the magnetizing process has been really exercised; and even the converse position has been likewise proved by experiment. There is, however, to set against these facts, the authority of those who have practised the art, and the testimony of accredited eye-witnesses, to prove that all the ordinary effects, such as those recounted above, have ensued when the magnetized person could not possibly have been acquainted with the proceedings. The mode by which patients are brought out of this condition, or, in other words, awakened, is by passing the thumbs rapidly from within outwards across the eyebrows, by blowing smartly in the face, by pressing the forehead or chest, and moving the hands rapidly over the limbs, &c. The recovery is frequently preceded (as we are informed) by a low and feeble action of the heart; and the respiration, after protracted stupor, becomes converted into a series of slow and deep sighs: the after prostration is in such case very great. We subjoin, as a matter of curiosity, the several particulars which are alluded to by Bertrand as characterising individually or collectively the condition of artificial Somnambulism; they are these: 1. forgetfulness on waking; 2. exact appreciation of time; 3. external insensibility; 4. exaltation of imagination; 5. developement of intelligence; 6. instinct of remedies for diseases; 7. prevision; 8. moral inactivity; 9. knowledge of maladies; 10. communication of ideas, (without apparent means;) 11. vicarious perception; 12. a peculiar influence possessed by individuals over the functions of their own organs, (which are ordinarily independent of volition.†)

The limits of this article forbid extension or critical examination of details; a brief summary will therefore close the preceding sketch of animal magnetism. It will be remarked that the position originally assumed

* Although the case here narrated is fictitious, the symptoms described are such as have been repeatedly witnessed by impartial spectators.

† It is now stated that wood is a nonconductor of magnetism, and that certain metals, water, bread, &c., are chargeable with this fluid.

* Translated by Mr. Colquhoun, Edinb. 1833.

has been borne out by the facts narrated, *viz.* that the subject under consideration has received the sanction of some men of talent and sound judgment, and has been thought worthy of the patient investigation of many more. It will thus become apparent in discussing the merits of animal magnetism and its claims upon our faith, that the questions resolve themselves into the following: 1. Has the public been duped by the professors of this art, or are all the patients to be set down as impostors? 2. Are the effects to be attributed to any extraneous agent emanating from the *magnetizer*, or do they alone result from the influence exercised over the organs of the *magnetized* individual by his or her *own* imagination? The first of these questions cannot admit of a moment's hesitation in answering it. The high character of the individuals who have at various times professed their belief in animal magnetism, and the impossibility of their being involuntarily deceived by simple matters of fact, leave us the only alternative of crediting the reality of many of these conditions which are characteristic of artificial Somnambulism, whilst we are still left in the dark regarding the agent or its *modus operandi*. That the imagination can and does produce similar effects to the magnetic influence (admitting such to exist) cannot be questioned; but it is far from philosophical to conclude that, therefore, there is no other agent ever brought into operation. The existence of what is usually termed "nervous influence," (in the absence of a more definite expression,) and the probability of its being some such subtle agent as electricity, of which the nerves are merely the coarse conductors, is a generally received opinion, although we are just as ignorant of its actual existence as we were ages back. There is nothing excessively extravagant in the idea, that the same tendency to an equilibrium might determine the transmission of this fluid from one living organized body to another, as influences and controls the distribution of electricity in inorganic bodies; a surmise which would be favoured by the fact that the phenomena can alone result where the conditions indicating an absence of equilibrium are

apparent; nor is such hypothesis inconsistent with any known law of nature. But here we pause:—to speculate upon the other and more astonishing phenomena connected with the Mesmeric sleep would be irrelevant to the object of this article. Consistently with acknowledged facts of an analogous nature, the probability may be admitted that an exalted sense of touch might be capable (as in blind persons) of acting to a certain extent vicariously of the other dormant senses of the Somnambulist; but to give any credit to the assertion that individuals in that state have been known to read with the extremities of the fingers or epigastrium, and to prophecy coming events, is more than can be reasonably demanded of any one who has not been a satisfied witness of these wonders. To affirm that such things may not be, amounts to nothing more than an empty declaration of opinion; yet, in the absence of *undeniable demonstrative evidence*, the fact that these phenomena are obviously at variance with all recognised physiological and psychological laws, should not only operate as an antidote against a too easy faith, but fully justify a prejudiced scepticism.

In conclusion, if the *cui bono* be asked, the answer is this. The patients most readily acted upon are those who are afflicted with hysteria and epilepsy, both of which are nervous diseases. The fact that cases belonging to each of these classes have been either temporarily or permanently benefited by the magnetizing treatment is well authenticated: thus, whether we coincide with Bertrand in ascribing all to the imagination, or take the modified view of believing much attributable to that source, whilst we possess our doubts respecting the possible existence of some unknown agent as co-operative with it, it seems highly desirable that some public inquiry should be instituted in this country, whether by commission or otherwise, for the purpose of setting on its proper footing the claims of a practice which must be either beneficial or pernicious in its tendency and consequences.

CHUS.
—
SONG OF
BIRDS.

SONCHUS, in *Botany*, a genus so called by Linnaeus from the Greek *σπογγος*, spongy, on account of the spongy, hollow stems of the species. It belongs to the class *Syngenesia*, order *Æqualis*, and natural order *Compositæ-Cichoraceæ-Lactuceæ*. Generic character: Achenia like each other, without wings, truncate at apex, plano-compressed, and transversely wrinkled; pappus in many series.

This genus consists of many species, inhabitants of the colder parts of the globe. They are coarse annual or perennial herbs, very polymorphous in their habits, usually hairy, and the leaves pinnatifid; the heads of flowers are aggregate, blue, or yellow. *S. oleraceus* is the common Sow Thistle.

SONERILA, in *Botany*, a genus so called from *Sootli-Soneri-ila*, the name of one of the species in the Khasseelanguage. It belongs to the class *Triandria*, order *Monogynia*, and the natural family of *Melastomaceæ*. Generic character: calyx with an oblong and somewhat trigonal tube, usually muricated, and adhering to the ovary; limb trifid, deciduous; petals three; stamens three; anthers linear-oblong, emarginate at the base, and opening by two pores at apex; ovary glabrous at apex; capsule turbinate, three-celled, three-valved; seeds numerous cuneate, angular, of two forms.

A genus consisting of nine known species, small shrubs or annual plants, natives of the East Indies. The flowers of all are rose-coloured; the ternary number of the parts of the flower is sufficient to distinguish them from all other melastomaceous plants.

SONG, SONNET, &c. See **SING**.

SONG OF BIRDS. The Song of Birds is defined by Daines Barrington to be a succession of three or more different notes, prolonged for the space of a four-crotchet bar, or upwards. This definition appears to be scarcely comprehensive enough, at least it would exclude the cuckoo, the greenfinch, the reed-sparrow, and several others, commonly reputed to be song-birds. Particular species of birds produce notes of a festive character during the pairing and breeding season, and those, we apprehend, may be properly termed their *song*, whatever the quality or number of the notes. The ordinary *cries* of birds appear to be innate; but their song, like the speech of the human race, is wholly imitative; it being well known that a young bird taken from the nest and reared in a cage never has the parent song, unless it is allowed the opportunity of hearing it. This imitative faculty is shown by the readiness with which they acquire the notes of totally distinct species when in a state of captivity. They are even occasionally taught to articulate words. Pliny mentions instances of thrushes and nightingales: *Græco atque Latino sermone dociles, præterea meditantés in diem et assidue nova loquentes, longiore etiam contextu*, (l. x. c. 42.) We believe there are also modern examples of linnets, bulfinches, and canary birds being taught to pronounce a few words. Many species may be brought by artificial culture to a pitch of improvement which they never reach in their natural state. The common house-sparrow may be trained to a tolerable imitation of the linnet or the canary; and the most docile of all caged musicians are bulfinches and starlings, which have scarcely any song of their own.

In birds the musical faculty appertains exclusively to the male, the female having no song either natural or acquired. Nearly all the best songsters are to be found in temperate climates, very few tropical birds being

comparable in melody to the common European thrush, much less to the nightingale or woodlark. The Song of a Bird is gradually formed in the interval between its leaving the nest and the next pairing season. During this period the young males may be heard practising their native notes, or those artificially substituted, first beginning with short easy passages, and gradually attempting longer ones as their powers and experience increase. These early attempts are technically termed *recording*; and it is during this time that care must be taken to let domesticated birds hear good models, as they seldom acquire new notes after the expiration of the first year.

Many attempts have been made to reduce the songs of particular species to musical notation, but without much success. The two notes of the cuckoo form a pretty correct minor third, but those of other singing birds do not seem capable of accurate analysis. Detached notes corresponding to the diatonic and chromatic intervals of the ordinary concert pitch may occasionally be detected, but most of the divisions are too minute to be expressed even upon the enharmonic scale. The difficulty of analysis is increased by the rapidity of the transitions, and the extreme high pitch at which the smaller species of birds usually sing.

The following is a list of our indigenous British song-birds, generically arranged.

<i>Turdus viscivorus</i> ,	Missel-bird.
„ <i>musicus</i> ,	Thrush or throistle.
„ <i>merula</i> ,	Blackbird.
„ <i>torquatus</i> ,	Ring-ouzel.
<i>Cinclus aquaticus</i> ,	Water-ouzel.
<i>Sylvia phragmitis</i> ,	Sedge-warbler.
„ <i>arundinacea</i> ,	Reed-warbler.
„ <i>Luscinia</i> ,	Nightingale.
„ <i>atricapilla</i> ,	Blackcap.
„ <i>hortensis</i> ,	Greater petty-chaps.
„ <i>cinerea</i> ,	White throat.
„ <i>provincialis</i> ,	Dartford-warbler.
„ <i>rubecula</i> ,	Redbreast.
„ <i>phænicurus</i> ,	Redstart.
„ <i>hippolaïs</i> ,	Lesser petty-chaps.
„ <i>sibilatrix</i> ,	Wood wren.
„ <i>trochilus</i> ,	Yellow wren.
„ <i>locustella</i> ,	Grasshopper-warbler.
<i>Troglodytes Europæus</i> ,	Wren.
<i>Saxicola ænanthe</i> ,	Wheatear.
„ <i>rubicola</i> ,	Stonechat.
„ <i>rubra</i> ,	Whinchat.
<i>Accentor modularis</i> ,	Hedge-sparrow.
<i>Anthus aquaticus</i> ,	Shore-pipit.
„ <i>pratensis</i> ,	Titlark.
„ <i>arboreus</i> ,	Tree-pipit.
<i>Alauda arvensis</i> ,	Skylark.
„ <i>arborea</i> ,	Woodlark.
<i>Fringilla chloris</i> ,	Greenfinch.
„ <i>cælebs</i> ,	Chaffinch.
„ <i>cannabina</i> ,	Linnet.
„ <i>carduelis</i> ,	Goldfinch.
„ <i>domestica</i> ,	House-sparrow.
<i>Pyrrhula vulgaris</i> ,	Bullfinch.
<i>Sturnus vulgaris</i> ,	Starling.
<i>Motacilla boarula</i> ,	Grey wagtail.
<i>Hirundo rustica</i> ,	Chimney swallow.
<i>Emberiza miliaris</i> ,	Common bunting.
„ <i>citrinella</i> ,	Yellowhammer.
„ <i>schaeniculus</i> ,	Reed-sparrow.
„ <i>cirlus</i> ,	Cirl bunting.

SONG OF
BIRDS.

SONG OF
BIRDS.

The fieldfare, (*Turdus pilaris*), the redwing, (*Turdus iliacus*), the siskin, (*Fringilla spinus*), and a few others, are occasionally heard to sing in this country, but are not *natives*. The canary-bird is excluded from the above catalogue for the same reason. The different species of titmouse (*Parus*) utter a few harsh notes during the pairing season, but as they are apparently destitute of all imitative faculty, they do not seem entitled to rank among song-birds, properly so called. The golden-crested wren (*Regulus auricapillus*) seems to come under the same predicament.

An attempt to classify singing birds according to their respective merits, must necessarily be in a great measure arbitrary, as no two tastes are exactly alike in all points. For example, Wood is inclined to allot the second place to the blackbird, which is commonly reputed much inferior to the thrush, and is placed by Barrington at the very bottom of the scale, we do not say justly. The supremacy is by common consent awarded to the nightingale; the next rank is usually given to the skylark, by the admirers of a brilliant and vivacious style, and to the woodlark, by those who prefer sweetness and delicacy of modulation. The thrush, the blackcap, the linnet, the goldfinch, and the tree-pipit may be reckoned among the leading songsters; and a respectable station is also due to the blackbird, the greater petty-chaps, the redbreast, the wren, the hedge-sparrow, the titlark, the chaffinch, and the grey wagtail. The song of the water-ouzel has been heard by comparatively few, but it deserves to be better known, being sweet and varied, and moreover commonly uttered in January and February, when almost every other songster is silent.

The Song of Birds is, in most cases, confined to the breeding season, being seldom heard much beyond the middle of July. In a cage they sing longer, particularly if supplied with abundance of food. The autumnal notes of the redbreast are supposed by Selby to be the efforts of young birds, there being a marked difference between them and the song which they utter in spring. The linnet may be often heard in winter, especially on sunny days, but the song is inferior in quality, probably for a similar reason. The wren occasionally sings with great animation in the very depth of winter, and seemingly quite as well as in spring.

Notwithstanding the imitative powers of birds, they almost invariably confine themselves to their native notes, when in a wild state. A few imitative notes may be sometimes heard from the skylark; and the song of the sedge-warbler is almost entirely composed of borrowed materials. It does not appear to imitate the *song* of its neighbours, but only their ordinary cries or chirpings. It pours forth its song with great fluency and perseverance from the midst of a thick bush or tuft of sedge, and may be heard in the course of a few minutes to mimic the cries of the swallow, the wagtail, the sparrow, the titlark, and, in short, of almost every small bird which it is in the usual habit of hearing, interposing at every change a brief and rather harsh note of its own. The butcher-bird also imitates the calling notes of other birds, in order to lure them within its reach. The various species of *Pica* are easily taught to articulate words, but their vocal organs seem to disqualify them from warbling or singing. The starling, which forms a sort of connecting link between the families *Pica* and *Turdus*, may be taught to speak and to whistle tunes with almost equal facility. A little education is advantageously bestowed on this last-mentioned bird, as well as on the

bullfinch and greenfinch, but most other birds are best left to their natural teachers. It would be indeed the extreme of bad taste to debase the notes of the nightingale, or other first-rate song-birds, by any foreign admixture.

SONNERATIA, in *Botany*, a genus so called by Linnæus the younger, in honour of Mr. Sonnerat, a celebrated traveller. It belongs to the class *Icosandria*, order *Monogynia*, and the natural family of *Myrtaceæ*. Generic character: calyx campanulate, four or six-cleft, adhering to the ovary, valvate in æstivation; petals four or six, or wanting; stamens numerous; style filiform; stigma subcapitate; base of berry adnate to the calyx, many-celled; seeds numerous, nestling in the pulp.

This genus consists of three known species, small trees, natives of the hotter parts of Asia, with tetragonal branches, entire, opposite leaves, and terminal, generally solitary, large red flowers.

SONNISH, *i. e.* like the sun or beams of the sun. Mr. Tyrwhitt refers to the two following lines in illustration:—

And Phebus died hath her tresses grete,
Like to the stremes of his burned hete.
Chaucer. The Doctoures Tale, v. 11971.

With hir salte teres
Her breast and face ibathed was ful wete,
Her mightie tresses of hir sonnish heres,
Unbroiden, hangen all about her eares.
Id. Troilus and Crescide, book iv.

to ghou.
Id. Ebrewis, ch. xiii.

For pitee renneth *sone* in gentil herte.
Chaucer. The Knightes Tale, v. 1712.

Se that it proueth well therfore,
The strength of man is *sone* lore.
Gower. Conf. Am. book i.

But ah! who can conceive his destiny,
Or weene by warning to avoyd his fate?
That when he sleepes in most security
And safest seemes, him *soonest* doth amate.
Spenser. Faerie Queene, book i. can. 4.

'Tis *sooner* past, 'tis *sooner* done
Than summer's rain, or winter's sun;
Most fleeting, when it is most dear;
'Tis gone, while we but say 'tis here.
Carew. Persuasions to Love.

A mason meets with a stone that wants no cutting, and, *so only*,
approving of it places it in his work.

More. Antidote against Atheism, book ii. ch. iii.

As to the second sense of the question, Why the world, though
it could not possibly be from eternity, yet was no *sonner*, but so
lately made? we say, that this is an absurd question; both be-
cause time was made together with the world, and there was no
sooner or later, before time.

Cudworth. Intellectual System, book i. ch. v.

Make yoor *soonest* hast,

So your desires are yours.

Shakspeare. Antony and Cleopatra, fol. 353.

They who are *soonest* in a condition to enjoy the sweets of
[labour] it, are likely *soonest* to conceive a relish for it, and to
acquire the early habit of industry.

Smith. Wealth of Nations, vol. i. book i. ch. x.

SOOP, v., A. S. *sweop-an*, to swoop or sweep,
verrere, exhaurire.

To *sweep* off or away; to clear out or away; to move
with full *sweep* or sway, like the train of stately robes,
like the course of wind or water.

— If it must off

Like a wild overflow, that *soops* before him
A golden stack, and with it shakes down bridges,
Cracks the strong hearts of pines, whose cable roots
Held out a thousand storms, a thousand thunders,
And so made mightier, takes whole villages
Upon his back, and in that heat of pride,
Charges strong towns, towers, castles, palaces,
And layes them desolate.

Beaumont and Fletcher. Philaster, act v. sc. 1.

Whenas generally we pronounce by the confession of strangers
as sweetly, smoothly, and moderately, as any of the northern
nations of the world, who are noted to *soupe* their words out of
the throate with fat and full spirits.

Camden. Remaines. Languages.

Now *souping* in side robes of royalty,
That erst did skrub in lowly brokery.

Hall. Satire 3. book i.

SOOT, } Fr. *soye*; D. *soet*; A. S. *soot*, *sooth*,
SOO'TY, } which Skinner derives from the A. S.
SOO'TIED. } *seoth-an*, G. and D. *sied-en*, to boil, to
seethe; but his reason is too remote. *Soot* may be
smoke, *sod*, or *sodden*, together; condensed.

See the Quotation from Boyle.

VOL. XXVII.

Sooty is, consequentially, black.

I can no more, but of these ilke tway,
(To whom this tale sugre be or *sote*.)

Chaucer. Troilus and Creseide, book iii.

For *sooty* was hire boure, and eke hire halle,
In which she ete many a slender mele.

Id. The Nonnes Preestes Tale, v. 14848.

But it is the prettiest spectacle to see her stroaking with her
ivory hand his collied cheeks, and with her snowy fingers combing
his *sooty* beard.

Carew. Caelum Britannicum, p. 628.

Soot also, though thinne, spread in a field or garden, is tried to
be a very good compost.

Bacon. Natural History, Cent. vi. sec. 597.

Then can he term his dirty ill-fac'd bride,
Lady and queen, and virgin deify'd:
But she all *sooty* black, or berry brown,
She's white as marrow's milk, or flakes new blown.

Hall. Satire 7. book i.

Then (for his own weeds) shirt and coat all rent,
Tann'd and all *sootied* with noisome smoke,
She put him on; and over all a cloke.

Chapman.

When wood being burned in a chimney is dissipated by the fire
into smoke and ashes, that smoke composes *soot*, which is so far
from being any one of the principles of the wood, that you may
by a further analysis separate five or six distinct substances from it.

Boyle. Works, vol. i. fol. 526. *The Sceptical Chymist*.

But see the fading many-colour'd woods,
Shade deepening over shade, the country round
Imbrown; a crowded umbrage, dusk, and dun,
Of every hue, from wan-declining green
To *sooty* dark.

Thomson. Autumn.

The distant Seres first behold thee flow;
Nor yet thy spring the distant Seres know.
'Midst *sooty* Ethiops, next, thy current roams;
The *sooty* Ethiops wonder whence it comes.

Rowe. Lucan. Pharsalia, book x.

With the dirt they appear nearly as black as a negroe; and,
according to our best discoveries, the skin itself is of the colour of
wood *soot*, or what is commonly called a chocolate colour.

Cook. Voyages, vol. ii. book ii. ch. vi. p. 203.

SOOTE, i. e. sweet, q. v.

Whanne that April with his shoures *sote*
The droughte of March hath perced to the rote,
And bathed every veine in swiche licour,
Of whiche vertue engendred is the flour.

Chaucer. Prologue to the Canterbury Tales, v. 1.

A chambre had he in that hostelrie
Alone withouten any compaignie,
Ful fetisly ydight with herbes *so'e*,
And he himself was swete as is the rote
Of licoris, or any setewale.

Id. The Milleres Tale, v. 3121.

But first he cheweth greine and licorise,
To smellen *sote*, or he had spoke with here.

Id. Ib. v. 3690.

The *soote* season, that bud and blome forth brings
With greine, hath clad the hill, and eke the vale.

Surrey. Description of Spring.

Lo, how finely the Graces can it foote

To the instrument;

They dauncen deffly, and singen *soote*,
In their meriment.

Spenser. The Shepherd's Calendar. April.

SOOTH, or

SOTH,

SOO'THLY,

SOO'THFAST,

SOO'THFASTNESS,

SOO'THNESS,

SOOTH,

SOO'THSAW,

SOO'TH SAY,

SOO'TH SAYER,

SOO'TH SAYING.

A. S. *soth*, true; *ge-soth-ian*,
to affirm, to prove, to verifie, or
averre. Somner.

Truth is that which a man
troweth or thinketh; and *soth* or
sooth may be that which a man
sayeth.

To *soothsay* is to tell or say
the truth, to foretell or predict
(the truth,) generally—to foretell.

SOOTH.

For, as me may þe soþe segge, by fore hym no beter nas.
R. Gloucester, p. 73.

Vor þe soþuast God, þo he yse, þat we nolde, vor noþyng,
Fram oure sýnne vs wyþ drawe, ne þat non prince, ne kyng,
Ne mygte brýnge vs out of þe lond. Id. p. 253.

Mid wuche bodi dar y come in þi sigt ene,
þat bi nom þe myn frenschipe for þi soþnesse al clene?
Id. p. 35.

He ligges at Wýnchestre, þe soth it is to seie.
R. Brunne, p. 28.

Hit is no science sothliche. both a sothfast bý lýve.
Piers Plouhman. Vision, fol. 190.

Gregore wist þist wel. and wilnede to mý soule
Savacion for þe sothness. þat he seih in myn werkes.
Id. Ib. fol. 205.

Sothely, sothely, I seye to you, he that bileueth in me, hath
euerlasting lyf. Wicklif. John, ch. vi.

Which camen and seyen to him, Maister we witen that thou art
sothfast and reckist not of ony man for neither thou biholdist
into the face of man but thou techist the way of God in truthe.
Id. Mark, ch. xii.

Therefore stonde ghe and be ghe gird aboute ghoure leendis in
sothfastnesse, and clothid with the haburioun of rightwysnesse.
Id. Effesies, ch. vi.

He was, I trow, a twenty winter old,
And I was fourty, if I shal say soth,
But yet I had alway a coltes toth.
Chaucer. The Wif of Bathes Prologue, v. 6182.

Some saiden, that we ben in herte most esed
Whan that we ben yflatered and ypreised.
He goth ful nigh the sothe, I wol not lie;
A man shal winne us best with flaterie.
Id. The Wif of Bathes Tale, v. 6510.

Right as the Friday, sothly for to tell,
Now shineth it, and now it raineth fast,
Right so gan Venus overcast.
Id. The Knightes Tale, v. 1536.

"Loke than," (quod she,) "in this case to none other persone
be committed: Loke than" (quod she) "thou perseuer in my
seruice, in whiche I haue thee grounded, that thilke skorne in thy
enemies mowe this on thy person be not sothed."
Id. The Testament of Loue, book i.

But now know I in very sothfastnesse,
That in gret lordship, if I me wel avise,
Ther is gret servitude in sondry wise.
Id. The Clerkes Tale, v. 8671.

Sothly, a man may change his purpos and his conseil, if the
cause ceseth, or whan a newe cas betideth.
Id. The Tale of Melibeus, p. 111.

Tiburce answered; Saith thou this to me
In sothnesse, or in dreame herken I this?
Id. The Second Nonnes Tale, v. 15738.

Thou must discover all thy worching,
How thou seruest, and of what thing,
Though that thou shuldest for thy sothsaw
Ben all to beaten and to draw.
Id. The Romant of the Rose, p. 216.

Both sothsawes and lesings.
Id. The House of Fame, book ii.

And netheles to sey a sooth,
The cause why that he so dooth,
Is for to stele an herte or two
Out of the churche er that he go.
Gower. Conf. Am. book v.

And all his wittes he foryete,
The whiche is to hym suche a lete,
That he wote neuer what he dooth,
Ne whiche is fals, ne whiche is sooth.
Id. Ib. book vi.

For sotheliche I leue,
And durst setten it in preue,
In none so wise, that shulde asterte
But he were lustles in his herte.
Id. Ib. book ii.

SOOTHE

This paynim wote none other waie,
But on the grounde he kneleth euen,
His handes vp to the heuen,
And saide: O highe sothfastnes,
That louest all rightwisenesse,
Unto thy dome lorde I appele.
Gower. Conf. Am. book vi.

Thus manie yeares were spent
with good and sothfast life,
'Twixt Arhundle that worthie knight
and his approued wife.
Turbervile. Vpon the death of Elizabeth Arhundle.

Yea, and howe warneth he to beware of witchcraft, sorcerie,
enchantment, nicromancie, and all craftes of the deuill, and of
dreamers, sothsayers, and of miracle doers to destroy the word,
and that they should suffer none such to lyue.
Tyndall. Workes, fol. 8. Prologue vpon the Fyue Bookes of Moses.

Now I bethink me,
Some other means I have which may be us'd,
Which once of Melibæus old I learnt,
The sothest shepherd that e'er pip'd on plains.
Milton. Comus, l. 820.

Ne sothliche it is easie for to read
Where now on earth, or how, he may be fownd;
For he ne wonneth in one certeine stead,
But restlesse walketh all the world arownd.
Spenser. Faerie Queene, book iii. can. 2.

And it came to passe, as we went to prayer, a certain damosell
possessed with a spirit of divination met us: which brought her
masters much gain by sooth-saying. Acts, ch. xvi. v. 16.

All those were idle thoughtes and fantasies,
Devices, dreames, opinions unsound,
Shewes, visions, sooth-sayes, and prophesies;
And all that fained is as leasings, tales, and lies.
Spenser. Faerie Queene, book ii. can. 9.

As when a gryfon, seized of his pray,
A dragon fiers encountreth in his flight,
Through widest ayre making his ydle way,
That would his rightfull ravine rend away:
With hideous horror both together smight,
And souce so sore, that they the heavens affray;
The wise southsayer, seeing so sad sight,
Th' amazed vulgar telles of warres and mortal fight.
Id. Ib. book i. can. 5.

Had any earthly spirit
Giuen this suggestion: if our priests, or soothsayers, chal-
lenging merit
Of prophets, I might hold it false; and be the rather mov'd
To keepe my pallace, but these eares, and these selfe eyes
approv'd
It was a goddessse.
Chapman. Homer. Iliad, book xxiv.

Theophilus, a learned bishop of Alexandria, having fallen into
their hands, was so roughly used by them, that ere he could get
out of their fingers he was fain to use his wits and to crave aid of
his equivocating sophistry, and soothly to tell them, I haue seen
your face as the face of God.

Or what trueth can be spoken of a lyar? Sothsainge, witch-
crafte, sorcery, and dreamynge is but vanyte.
Bible, Anno 1551. Ecclesiasticus, ch. xxxiv.

Many report that a certain soothsayer forewarned him of a great
danger which threatened him on the Ides of March, and that
when the day was come, as he was going to the senate-house, he
called to the soothsayer, and said, laughing, "The Ides of March
are come;" to which he answered, softly, "Yes; but they are not
gone."
Langhorne. Plutarch. Cæsar.

Dear was the kindlie love which Kathrin bore
This crooked ronion, for in soothly guise
She was her genius and her counsellor.
Mickle. Syr Martyn, can. 1.

SOOTHE, v. } A. S. ge-sothian, assentiri, blan-
SOOTH, n. } diri; Skinner thinks from the A. S.
SOO'THER, } soth, verus, true, (see SOOTH, infra.)
SOO'THING, n. } q. d. to receive as true, to assent to or
SOO'THINGLY. } approve as true, whatever another

SOOTHE. says. The Goth. *sothyan*, *ga-sothyan*, *saturare*, *satiare*, to satisfy, may be the origin.

SOP. To assent to, to please, flatter by assenting; to flatter; to please, to gratify; to assuage, to lull, to allay. Words of *sooth*; *soothing* words. Shakspeare.

The laughter-loving dame discern'd her mov'd mind, by her grace,
And (for her mirth sake) set a stoole full before Paris face,
Where she would needs have Hellen sit; who (though she durst not chuse,
But sit, yet) lookt away for all the goddesses poure could use,
And usde her tongue too, and to chide, whom Venus *sooth'd* so much,
And chid too, in this better kinde.

Chapman. *Homer. Iliad*, book iii.

Nor now no more 'smell-feast Vitellio
Smiles on his master for a meal or two,
And loves him in his maw, loaths in his heart,
Yet *soothes*, and yeas and nays on either part.

Hall. *Satire* l. book vi.

But whilst we strive too suddenly to rise,
By flatt'ring princes with a servile tongue,
And being *soothers* to their tyrannies
Work our much woes by what doth many wrong,
And unto others tending injuries.

Drayton. *Legacy of Thomas Cromwell*.

This affirmation of the Archbishop being greatlie *soothed* out with his craftie utterance (for he was lerned) confirmed by the French freends.

Holinshead. *Description of England*, vol. i. book ii. p. 223.

RICH. Oh God! oh God! that ere this tongue of mine,
That layd the sentence of dread banishment
On yon proud man, should take it off againe
With words of *sooth*.

Shakspeare. *Richard II.* fol. 36.

Herewithal Anselmo rested the most *soothingly* and contentedly deceived that could be found in the world.

Skelton. *Translation of Don Quixote*, part iv. ch. vii.

— The godlike man they found
Pleas'd with the solemn harp's harmonious sound;
(The well-wrought harp from conquer'd Thebæ came
Of polish'd silver was its costly frame;)
With this he *soothes* his angry soul, and sings
Th' immortal deeds of heroes and of kings.

Pope. *Homer. Iliad*, book ix.

The three Spanish Indians, who were very shy at first, began to be more bold, and, drawing nearer, asked many silly questions; and our men did not stick to *sooth* them up with as many falsehoods, purposely to draw them into their clutches.

Dampier. *Voyages*, vol. i. p. 113. Anno 1684.

— Ideal sounds,
Soft-wafted on the zephyr's fancy'd wing,
Steal tuneful *soothings* on the easy ear.

Thompson. *Sickness*, book v.

Sacred history has acquainted us with the power of music over the passions, and there is little doubt but the verse as well as the lyre of David was able to *soothe* the troubled spirits to repose.

Knox. *Works*, vol. i. p. 274. *Essay on the Multiplication of Books*.

SOP, *n.* } *Sop*, the noun upon which the verb is
SOP, *v.* } formed, is (Tooke) the past participle of
the A. S. verb "*sip-an*, or *syp-an*, to soften by steeping
in liquor, to soke or wash in water or other liquor."
Somner.

That which is soked or steeped, met., a sweet or savoury morsel. See the Quotation from Dryden for the origin of this latter application.

Jhesus answeride, He it is, to whom I schal areche a *sop* of breed. And whanne he had wett bred, he gaf to Judas of Symount of Scarioth.

Wiclif. *John*, ch. xiii.

Jesus aunswered, He it is to whom I geue a *soppe*, when I haue dypt it. And he wet a *soppe*, and gaue it to Judas Iscarioth, Simon's sonne.

Bible, Anno 1551.

Thus laboureth he, til that the day gan dawne,
And than he taketh a *sop* in fine clarre,
And upright in his bed than sitteth he.

Chaucer. *The Marchantes Tale*, v. 9716.

O *soppe* of sorrowe sonken into care.

Chaucer. *The Complaint of Creseide*, p. 297.

A frankleyn was in this compaignie;
White was his berd as is the dayesie.
Of his complexion he was sanguin.
Wel loved he by the morwe a *sop* in win.

Id. *Prologue to the Canterbury Tales*, v. 314.

The bathes weren than araied
With herbes tempred and assaied,
And Jason was vnarmed soone,
And did, as it befelle to doone.
Into his bathe he went anone,
And wisshe hym cleane as any bone,
He toke a *soppe*, and out he cam,
And on his best araye he nam.

Gower. *Conf. Am.* book v.

His cheeks, as snowy apples *sop*t in wine,
Had their red roses quencht with lilies white.

Fletcher. *Christ's Triumph on Earth*.

I KEEP. Here comes my master; to the spit ye whore,
And stir no more abroad, but tend your business;
You shall have no more *sops* i' th' pan else, nor no porridge;

Besides, I'le whip your breech.

Beaumont and Fletcher. *The Pilgrim*, act iii. sc. 6.

The double daisy, thrift, the button-bachelor,
Sweet-william, *sops-in-wine*, the campion.

Drayton. *Poly-olbion*, song 15.

Even Cerberus, when he had received the *sop*, permitted Æneas to pass freely to Elysium.

Dryden. *Postscript to the Æneid*.

There are, however, several kinds of fruit, besides those which have been already mentioned; particularly the sweet *sop*, which is well known to the West Indians.

Cook. *Voyages*, vol. ii. book iii. ch. ix. p. 249.

SOPH,
SO'PHI,
SO'PHIC,
SO'PHISM,
SO'PHIST,
SO'PHISTER,
SO'PHISTER, *v.*
SOPHI'STICK,
SOPHI'STICAL,
SOPHI'STICALLY,
SOPHI'STICATE, *v.*
SOPHI'STICATE, *adj.*
SOPHISTICA'TION,
SOPHI'STICATOR,
SO'PHISTRY.

Fr. *sophie*, *sophisme*; It. *sophisma*; Sp. *sophismo*; Lat. *sophisma*; Gr. σοφισμα, from σοφια, wisdom, σοφιστης, a teacher of wisdom, a name arrogated to themselves by a set of pretenders. See the Quotations from North and from Sydenham's Plato; and a specimen from Sir Thomas More.

And as these men supplied their want of wisdom and useful knowledge by subtlety of disputation; hence a *sophism*

is—

A subtle fallacy; a fallacy, a deception in argument. To *sophisticate*—

To practise fallacy or deception; to counterfeit (the truth;) to counterfeit, to falsify, to corrupt the purity or genuineness, to adulterate.

The foule chorle, that for his couetise,
Had him betraied, with his *sophistrie*.

Chaucer. *Prologue to the Legend of Good Women*.

First, I say, that in their owne *sophistry* a similitude is the worst and feblest argument that can be, and proueth lest and soonest deceaueth.

Tyndall. *Workes*, fol. 171. *The Obedience of a Christian Man*.

Although this argument be a very *sophisme*, yet is there neither one rule in *sophistry* that can proue this argument, nor yet one *sophister* so foolish as to graunt it.

Erith. *Workes*, fol. 44. *Answer vnto to Sir Thomas More*.

For lyke wyse as though a *sophyster* woulde with a fonde argumente proue vnto a symple soule, that two egges wer thre, because that there is one, and there be twayne, and one and twayne make three; y^t simple vnlearned man, though he lacke learning to soyle

SOPH.

hys fond argument, hathe yet ynough to laugh thereat, and to eat the two egges himself, and byd the *sophyster* take and eate the thynde.

Sir Thomas More. Workes, fol. 475. The First Part of the Confutation of Tyndall.

Unto whome the Lord Cobham thus answered; It is well *sophistred* of you, forsooth. Preposterous are your iudgements euermore. For as the prophet Esay saith, ye iudge euill good, and good euill.

Foxe. Actes and Monuments, fol. 517. King Henry V.

By your workes we iudge you and your zeale to righteousnes, and not by your *sophisticall* suttile reasons, with which ye would claw our eares, bleare our eyes, and beguile our wittes, to take your tyrannous, couetous crudelitie for the zeale of righteousnes.

Tyndall. Workes, fol. 193. Vpon Matthew, ch. v.

Howe be it, it were harde to construe this lecture *Sophisticated* craftely is many a confecture.

Skelton. The Crowne of Laurell.

The angels caroll'd loud their song of peace,
The cursed oracles were stricken dumb,
To see their shepherd, the poor shepherds press
To see their king, the kingly *sophies* come.

Fletcher. Christ's Victory in Heaven.

Come fight with me, that on my helmet weare
Apolloes laurell both for learnings laude,
And eke for martiall praise; that in my shield
The seuen-fold *sophie* of Minerue contain
A match more mete, syr king, than any here.

Poems of Uncertain Auctores. The Death of Zoroas.

So tickle be the termes of mortall state
And full of subtile *sophismes*, which doe play,
With double sences, and with false debate,
T' approve the unknownen purpose of eternall fate.

Spenser. Faerie Queene, book iii. can. 4.

Fourthly, that though necessary existence be included in the idea of God, yet our inferring from thence that he does exist, is but a *sophism*; because a being absolutely evil, as well as absolutely perfect, includes necessary existence in the idea thereof.

More. Appendix to Antidote against Atheism, part i. ch. ii.

But those that came sithence, having mingled it [philosophy] with art of speech, and by little have translated the exercise of deeds unto bare and curious words; whereupon they were called *sophisters*, as who would say, counterfeit wise men.

North. Plutarch. Lives, fol. 96. Themistocles.

A mystery [the Trinity] indeed in their *sophistic* subtleties, but in Scripture a plain doctrine.

Milton. Of Toleration.

But, oh! thy actions were too temporal,
Thy knowledge had too much preheminance,
Thy reason subtle, and *sophistical*.

Drayton. The Barons' Wars, book iii.

Lastly, that these arguments whereby we prove the incorporeity of the soul of man, will also conclude the incorporeity of the soul of a beast, and that therefore they are *sophistical*.

More. Appendix to Antidote against Atheism, part i. ch. ii.

It is a crime of a high nature to mingle or *sophisticate* any wine here.

Howell. Letter 38. book i. sec. 6.

And now since a great part of our scientific treasure is most likely to be adulterate, though all bears the image and superscription of verity; the only way to know what is *sophisticate* and what is not so, is to bring all to the examen of the touchstone.

Glanvil. The Vanity of Dogmatizing, ch. viii.

Our senses are here feasted with the clear and genuine taste of their objects; which are all *sophisticated* there, (in courts and cities,) and for the most part overwhelmed with their contraries.

Id. Essay on Agriculture.

All this while we have no more of reason then the *ιδωλον ψυχης* (as Plotinus calls it) amounts to. And besides our easie submission to the *sophistications* of sense, and inability to prevent the miscarriages of our junior reasons; that which strikes the great stroke toward our after-deceptions, is the pertinacious adherence of many of these first impressions to our graduate understandings.

Glanvil. The Vanity of Dogmatizing, ch. viii. p. 70.

I cordially commend that the *sophisticators* of wine may suffer punishment above any ordinary thief.

Whitaker. Blood of the Grape, (1654,) p. 107.

This narrow search which all their soules must sift,
No subtle wit by *sophistry* can shift.

Stirling. Doomes-Day. Seventh Houre.

All those books which are called *sophical*, such as the Wisdom of Sirach, &c., tend to teach the Jews the true spiritual meaning of God's economy.

Dr. Harris. On the Fifty-third Chapter of Isaiah, p. 256.

Reduce it to syllogism, and it will be found a *sophism*, with four terms in it.

Waterland. Works, vol. iv. p. 46. Vindication of Christ's Divinity.

A set of men, smitten, not with the love of wisdom, but of fame and glory, men of great natural abilitys, notable industry and boldness, appeared in Greece; and assuming the name of *sophists*, a name hitherto highly honourable, and given only to those by whom mankind in general were supposed to be made wiser, to their ancient poets, legislators, and the gods themselves, (see our notes on the Minos,) undertook to teach, by a few lessons and in a short time, all the parts of philosophy to any person, of whatever kind were his disposition or turn of mind, and of whatever degree the capacity of it, so that he was but able to pay largely for his teaching.

Sydenham. Plato. Dialogues, vol. i. p. 19. The Greater Hippidas, note 6.

But since I recollect that Mr. Locke has insisted on a solution of the difficulty, which, I think, and am not afraid to call inconclusive and *sophistical*, it is worth my while to bestow a few words upon it.

Lord Bolingbroke. Works, vol. viii. p. 3. Fragments.

Tussis pro crepitu, an art
Under a cough to slur a f—t,
That would *sophistically* imply
Both are unlawful, I deny.

Butler. Hudibras, part i. can. 1.

DUKE. Speak plainly your intent.
I love not a *sophisticated* truth,
With an allay of lye in 't.

Dryden. The Assination, act v. sc. 4.

Even when the materials imployed about experiments are no way *sophisticated*, but genuine, and such as nature has produced them, or art ought to prepare them; even then, I say, there may be a very considerable disparity betwixt concretions of the same kind and name.

Boyle. Works, vol. i. fol. 321. Of the Unsuccess. of Experiments.

It is scarcely imaginable to him that has not been very conversant with the drugs and simples sold in shops, how generally they are adulterated by the fraudulent avarice of the sellers, especially if they be such whose preciousness may make their *sophistication* very beneficial to them that practise it.

Id. Ib. vol. i. fol. 319. Of the Usefulness of Experiments.

Last see him waging with the fools of rhyme
A wanton, harmless war. Dunce after dunce,
Beaux, doctors, templars, courtiers, *sophs*, and cits,
Condemn'd to suffer life.

Thompson. On Mr. Pope's Works.

When I was a *soph* at Cambridge, Pope was about his translation of Homer's Ilias, and had published part of it.

Jortin. Adversaria.

We need not fear truth should lie long overwhelmed under the *sophisms* of falsehood; it will always rise at last triumphant over the strongest opposition.

Search. Light of Nature, vol. i. p. 1. Introduction.

This branch produced the *sophists* of Greece, the academies of after times who would maintain the *pro* and *con* upon any subject proposed, the schoolmen and popish doctors in the dark ages of Christianity.

Id. Ib. vol. ii. ch. xxiii. p. 2.

If in the tent retir'd, or battle's rage,
Britannia's sighs shall reach great Fred'ric's ear,
He'll drop the sword, or shut the *sophic* page,
And pensive pay the tributary tear.

Cunningham. On the Death of his late Majesty George II.

The wicked man who is resolved not to part with his vices, and yet finds himself crossed and disturbed by these opinions which he had imbibed in his education, and afterwards approved in his judgment, by *sophistical* reasonings against the truth of his opinions.

Warburton. Works, vol. x. p. 278. Sermon 33.

SOPH.

SOPH. He is rattling over the streets of London, and pursuing all the *sophisticated* joys which succeed to supply the place where Nature is relinquished.

Knox. Works, vol. i. p. 39. Essays, No. 7.

Gross *sophistry* has scarce ever had any influence upon the opinions of mankind, except in matters of philosophy and speculation; and in these it has frequently had the greatest.

Smith. Wealth of Nations, vol. iii. book v. ch. i. p. 179.

SOPHORA, in *Botany*, a genus so called from *sophera*, the Arabic name of a papilionaceous tree now unknown. It belongs to the class *Decandria*, order *Monogynia*, and the natural family of *Leguminosæ*. Generic character: calyx five-toothed; corolla papilionaceous; petals of the keel usually concrete at the apex; legume somewhat moniliform, wingless, many-seeded.

This genus consists of about sixteen species, natives of all parts of the globe; they are either trees, shrubs, or herbs, with imparipinnate leaves and terminal racemes or panicles of yellow, white, or blue flowers. *S. Japonica* is a common tree in the gardens.

SOPHRONANTHE, in *Botany*, a genus so called by Bentham from the Greek *σωφρων*, *modest*, and *ανθος*, *a flower*. It belongs to the class *Diandria*, order *Monogynia*, and natural order *Scrophularinæ*. Generic character: calyx of five rather unequal sepals; tube of corolla elongated, slender, afterwards recurved; limb flat, somewhat bilabiate; stamens two, fertile; anthers two-celled; capsule four-valved.

This genus, which is said to be intermediate between *Buchneræ* and *Gratiolæ*, consists of one species, *S. hispida*, a native of North America. It is a dwarf, perennial, stiff plant, with revolute edged leaves, and axillary, sessile flowers.

SOPHRONITIS, in *Botany*, a genus so called from the Greek *σωφρων*, *modest*, on account of the appearance of the species. It belongs to the class *Gynandria*, order *Monogynia*, and the natural family of *Orchideæ*. Generic character: sepals nearly equal, imbricate, free at the base; labellum entire, cucullate, tongue-shaped, combined with the column at the base, furnished with a transverse crest in the middle; column free, winged on both sides at the apex; wings entire, conniving above the crest of the labellum; stigma concave, with a blunt beak; anthers terminal, opercular, eight-celled; pollen masses eight, parallel at both ends.

This genus contains only one known species, a small one-leaved epiphyte, with axillary, few-flowered racemes of red flowers.

SOPITE, *v.*

SOPORATED, *adj.*

SOPOROUS,

SOPORIFEROUS,

SOPORIFICK.

(*Vossius.*)

Soporiferous, bearing or bringing sleep, or sleepiness, drowsiness; sleepy, drowsy.

Sopite, to lull to sleep; to still, to quiet, to set at rest.

It is more *soporiferous* than opium, and sooner casteth a man into a dead sleepe, that he shall never rise againe.

Holland. Plinie, book xxi. ch. xxxi.

But I suppose that the *soporiferous* medicines are likest to do it; which are henbane, hemlock, mandrake, moon-shade, tobacco, opium, saffron, poplar-leaves, &c.

Bacon. Natural History. Cent. x. sec. 975.

Many differences and disputes arising concerning religion, which were then not quite *sopited*, our author Puccius, who was only a spectator, laid aside his trade, and totally applied himself to the study of sacred letters.

Wood. Athenæ Oxonienses, part i. p. 235.

His Grace hath formerly shewed his dislike of them both, and hearing that you take up the bucklers in a theam of so small necessity, and of so great heat and distemper, which will draw a new reply (for Prynne will not sit down as an idle spectator) and beget bitterness and intestine contestations at home among our selves, he is much offended that you do stickle and keep on foot such questions, which may be better *sopited* and silenced than maintained and drawn into sidings and partakings.

Wood. Athenæ Oxonienses, part ii. p. 332.

Of such a resurrection as this Plotinus (though perhaps mistaking it for the true Christian resurrection) might have some cause to affirm, that it would be but a resurrection to another sleep; the soul seeming not to be thoroughly awake here, but as it were *soporated*, with the dull steams and opiate vapours of this gross body,

Cudworth. Intellectual System, book i. ch. v. fol. 795.

In small syncopes it may perhaps rouse the spirits a little, but in *soporous* diseases it is commonly an uncertain and ineffectual remedy.

Greenhill. Art of Embalming, p. 58.

For the colour and taste of opium are, as well as its *soporific* or anodyne virtues, mere powers depending on its primary qualities, whereby it is fitted to produce different operations on different parts of our bodies.

Locke. Of Human Understanding, vol. i. book ii. ch. xxiii. p. 294.

Pleas'd if my rhyme just measure keeps,
And stretch'd at ease my reader sleeps.
Hibernian matrons thus of old,
Their *soporific* stories told.

Somerville. The Fortune Hunter, can. 4.

The clear harangue, and cold as it is clear,
Falls *soporific* on the listless ear.

Cowper. Progress of Error.

SOPUBIA, in *Botany*, a genus so named from the *Nawaricé*, name of one of the species *Sopubi-Siva*. It belongs to the class *Didynamia*, order *Angiospermia*, and the natural order *Scrophularinæ*. Generic character: calyx campanulate, five-toothed; corolla campanulate, with a spreading, five-lobed, nearly equal limb; stamens four, exserted, nearly equal in length; cells of anthers free, spurred at the base, the one fertile and the other sterile; stigma undivided; capsule two-celled, two-valved; valves usually bifid; dissepiment complete, placentiferous on both sides; seeds numerous.

A genus nearly allied to *Gerardia*, consisting of six species, natives of the East Indies; perennial herbs, with generally cut leaves, and solitary, axillary, purple or yellow flowers.

SORANTHUS, in *Botany*, a genus so called from the Greek *σωρος*, *a heap*, and *ανθος*, *a flower*, on account of the close capitate umbels. It belongs to the class *Pentandria*, order *Monogynia*, and the natural family of *Umbelliferae*. Generic character: margin of calyx obsoletely toothed; petals broad-oval, permanent, each furnished with an inflexed point; fruit a little compressed at the back, crowned by the styles; mericarps with five hardly prominent equal ribs, lateral ribs marginating; vittæ one in each furrow, and four in the commissure, carpophore bipartite.

A genus consisting of one species, a native of Siberia; it is an erect, perennial herb, with a habit between *Seseli* and *Ænanthe*.

SORBONNE. This celebrated institution was originally a college for the education of secular clergymen at the University of Paris; it was named from its founder, Robert de Sorbon, a distinguished theologian, and chaplain to St. Louis. In the year 1250 Robert applied to the King and obtained a charter of institution for this college, which he endowed with an income from his private fortune; several ecclesiastical dignitaries followed his example, and the funds of the college soon amounted to a large sum. The teachers were always

SOPITE.

**SOR-
BONNE.**

SOR-
BONNE.

doctors and professors of theology, and to this subject they paid almost exclusive attention; they acquired so much fame that the name of the college was extended to the whole theological faculty of Paris, which was called *Sorbonne* till the end of the XVIIIth Century. From the very commencement the doctors of the Sorbonne were eminent for their dialectic skill, but unfortunately they employed it too much in the refinements of dogmatic theology and the subtleties of casuistry; hence Butler, describing the useless lumber which Hudibras possessed as a substitute for learning, says,

For he a rope of sand could twist
As tough as learned Sorbonist,
And weave fine cobwebs fit for skull
That's empty when the moon is full.

The opinions and decrees of the Sorbonne produced a marked influence on the character of Roman Catholicism in France. The monarchs of that country seldom took any steps affecting religion or the church without having asked the opinion of this theological body; and even beyond the limits of France its decisions on controverted points were more respected than those of any other academy. Though rigid adherents to all the peculiar tenets of the Romish Church, the Sorbonists were frequently opposed to the supremacy of the Popes both in spiritual and temporal matters; they steadfastly maintained the liberties of the Gallican Church, and while they opposed the Reformation, they were far from receiving implicitly the doctrines of the Council of Trent. They were among the most formidable enemies whom the Jesuits had to encounter; they protested against the admission of the Order into France, they opposed the Bull *Unigenitus*, (q. v.) and in the Jansenistic disputes, though the Sorbonne could not be said to take part with the Society of Port Royal, it aided that body by joining in the exposure of Jesuit artifices. In later times the Sorbonne devoted itself much more to the defence of the rights of the Church than the perfection of its doctrines and practice. Its spirit often degenerated into pedantic obstinacy, and not unfrequently into blind zeal for the literal interpretation of ancient doctrines; its influence and the tenacity with which it clung to the Romish creed prevented the gradual reform of the Gallican Church, eagerly desired by some of its most eminent prelates, who would gladly have moderated their exclusive dogmas, and rendered the French Church as comprehensive as the Church of England. This obstinate resistance to all improvement formed a striking contrast to the zeal for innovation which sprung up in France with amazing rapidity during the XVIIIth Century; the Sorbonists hastily entered into a warfare with the spirit of the age, without a due appreciation of the means by which that spirit might be met. They published a solemn condemnation of the writings of Helvetius, Rousseau, and Marmontel, which not only excited general derision, but contributed to render the dangerous principles of the infidel philosophers popular, and deterred more moderate men from exposing their pernicious tendency through the fear of being charged with the prejudices of the Sorbonne. The institution had long outlived its fame and its influence when the French Revolution put an end to its existence, and the efforts since made for its restoration have signally failed. The candidates for the degree of doctor in the Sorbonne were subjected to a severe trial of their patience. They were obliged to defend their theses from six o'clock in the morning to six

in the evening uninterruptedly, and were merely allowed a slight refreshment in their desk.

SO'RCERER,

SO'RCERESS,

SO'RCEROUS,

SO'RCERY.

Fr. *sorcier*; Lat. *sortitor*, a caster of lots; (*sortes*;) *sors*, from *σὺρ-ειν*, *trahere*, to draw. Witches, in fore time called *lot-tellers*, now commonly called *Sorcerers*. *Catalogue of English Printed Books*, 1595. Cited by Tooke.)

A teller of lots, of fortune, of fates; a witch or wizard; an enchanter.

And some Jewes seiden, whith *sorcerie* he wrouhte.

Piers Plouhman. Vision, p. 312.

The mother was on elfe by aventure

Ycome, by charmes or by *sorcerie*,

And everich man hateth hire compaignie.

Chaucer. The Man of Lawes Tale, v. 5174.

To wynde, to ayre, to sea, to londe

She preide, and eke held vp her honde

To Echates, and gan to crie,

Whiche is the goddessse of *sorcerie*.

Gower. Conf. Am. book v.

I saw there some of other porte,

And that was Circes, and Calypse,

That couthen do the moone clypse,

Of men, and chaunge the liknesse,

Of artmagike *sorceresse*!

Id. Ib. book viii.

She that was prompte and redy to all euyl, cast in her mynde that this chylde was slayne by poyson, or by some other purposyd malice, for the which lastly was accusyd a baylyfe, or lefe officer, callyd Monuole, with dyuerse witchis and *sorseryes* that shulde imagyn this childis deth.

Fabyan. Chronycle, ch. 116.

This *sorcerous* worker to make hym Pope, in the space of xiii. yeres, poysoned vi. of his predecessours one after another.

Bale. English Votaries, part ii. p. 40.

Warm ashes from the furnace Moses took;

The *sorcerers* did with wonder on him look,

And smil'd at th' unaccustom'd spell,

Which no Egyptian rituals tell.

Cowley. The Plagues of Egypt.

O pardon me, my souveraine lord, to shew

The secret treasons, which of late I know

To have bene wrought by that false *sorceresse*:

Shee, onely shee, it is, that earst did throw

This gentle knight into so great distresse,

That death him did awaite in daily wretchednesse.

Spenser. Faerie Queene, book i. can. 12.

Whither, alone, by these hill-confines, goes

Thy erring foote? Th' art entring Cerce's house,

Where (by her med'cines, blacke and *sorcerous*)

Thy soulders all are shut, in well-arm'd sties,

And turn'd to swine.

Chapman. Homer. Odyssey, book xx.

How unlikely is it that God should make use of this *sorceress* as a prophetess, and should give her the honour of revealing his counsels. *Waterland. Works*, vol. ix. p. 413. *Sermon* 33.

The civil law punishes with death not only the *sorcerers* themselves, but also those who consult them, imitating in the former the express law of God, "Thou shalt not suffer a witch to live." And our own laws, both before and since the conquest, have been equally penal; ranking the crime in the same class with heresy, and condemning both to the flames.

Blackstone. Commentaries, vol. iv. book iv. ch. iv. p. 61.

SORCERER, SORCERY. According to Lord Coke a Sorcerer is a person *qui utitur sortibus et incantationibus dæmonum*, but this definition appears rather loose, for it would include every species of magical arts. In the proper and restricted sense of the word a Sorcerer is one who possesses the power of commanding the elementary spirits by certain charms and invocations, and who possesses the means of acquiring supernatural knowledge by mystic spells. He differs from the wizard and

SOR-
BONNE.

SOR-
CERER.

SOR-
CERER.

witch in having formed no compact with the powers of evil, and from the magician in rarely attempting material miracles or prodigies in the physical world.

The belief in elementary spirits presiding over air, earth, water, and fire, controlling and directing the operations of nature, forms part of the mythology of every ancient nation; these mysterious beings are sometimes represented as mild and beneficent, as in the poetic system of the Greeks, where the nymphs of the wood, the mountain, and the wave are invested with human sympathies, and appear the better sisters of our race; but at other times we find them gloomy and treacherous demons, as in all the Oriental systems and in the old mythology of Latium, where the operations of the Sorcerer are directed not to win their friendship, but to avert their wrath. The belief in local deities seems to have been intimately connected with that in elementary spirits; the Syrians when defeated by the Hebrews attributed their overthrow to the place in which they fought, declaring that Jehovah was the God of the mountains; and hence we find among the earliest mystic operations which may be classed under the head of Sorcery, the efforts made to conciliate the tutelary deity of some place or country. It was supposed that this could be effected by only some peculiar rite or sacrifice, and we frequently find in ancient authors that invaders were anxious to discover the secret ceremony by which the national god of their enemies might be won over to their side. This species of Sorcery did not quite disappear with the extinction of paganism; local saints succeeded to tutelary deities, and were quite as strict in requiring special prayers for their shrines as their predecessors were in demanding peculiar ceremonies; nay, the same saint was not satisfied with the same forms at all his shrines; they should vary according to the epithet applied to his name; St. Peter in Chains was not to be addressed with the same prayers as St. Peter the Martyr, and when called Peter with the Keys, he required a third ceremonial different from both the others. This attribution of peculiar efficacy to certain special forms of words in religious services greatly strengthened, if it did not originate, the belief in spells and incantations.

Many diseases were attributed to the influence of evil spirits, and Sorcerers were invited to heal them, as they were supposed to be acquainted with the peculiar rite most influential over each class of demons. Thus, in the book of *Tobit*, we find an account of an evil spirit who could only be expelled by a particular fumigation; he fled to the remote parts of Egypt when he smelled the burnt liver of a fish. Among the ancient Sorcerers there was a vast variety of spells applicable to almost every variety of disease; indeed Sorcery long continued to be the foundation of all the medical science known to Oriental nations. This superstition is not yet banished from modern Europe; in Ireland the belief in spells and charms is still very common, and is far from being confined to the lowest vulgar. Almost every disease has its demon and its patron saint; the latter of whom is ever ready to undertake the cure, if addressed in a prescribed form of words, but if the form have one syllable too much or too little, the saint will have nothing to do with the case. The writer has in his possession a spell for the cure of the tooth-ache, over which St. Thomas is supposed to preside; it was given to him with an assurance that the repetition of the spell three times while rubbing the tooth with the middle finger of the right hand would induce the saint to grant him instant

relief. He inserts it in the hope that it might be more efficacious with others than it has been with him.

As St. Thomas was sitting upon a marble stone,
The Lord Jesus came up to him all alone,
Saying, Thomas, Thomas, do this for my sake,
And you never will be troubled with the tooth-ache.

SOR-
CERER.

The use of Sorcery in curing diseases was not regarded as a crime unless the operator had exercised supernatural power for less innocent objects, and then skill in the healing art was regarded as subsidiary evidence. Sir Walter Scott, with his usual skill in representing the minute circumstances of past times, has depicted the use made of Rebecca's success in relieving Higg the son of Snell; by itself the charge would have been of little consequence, but combined with the other circumstances of accusation, its effect was decisive.

A less innocent application of Sorcery was the consultation of spirits, either to discover hidden treasures or to obtain a knowledge of future events; they were also employed to detect thieves, recover stolen goods, and to give news of absent friends. In almost every legend of Sorcery we find that some species of mirror was used for these revelations. The Arabs ascribed wonderful properties to a gem of crystal or beryl, which the conjuror prepared by a variety of incantations, and placed before a pure virgin, or a youth who had not known woman; to such a person, at the Sorcerer's option, was revealed either the future or the distant. This superstition travelled into England. Lilly describes one of these beryls: "it was of the largeness of a good big orange," he says, "set in silver with a cross on the top, and another on the handle, and round about engraved the names of those angels, Raphael, Gabriel, Uriel." He describes the use made of such a mirror by one William Hodges, in an anecdote too characteristic to be omitted. "In things which required curiosity Hodges repaired to the crystal; his angels were Raphael, Gabriel, and Uriel. Being contemporary with me, I shall relate what my partner, John Scott, affirmed of him. Scott having some occasions into Staffordshire, addressed himself for a month or six weeks to Hodges, assisted him to dress his patients, let blood, &c. Being to return to London, he desired Hodges to show him the person and features of the woman he should marry. Hodges carries him into a field not far from the house, pulls out his crystal, bids Scott set his foot to his, and after a while wishes him to inspect the crystal and observe what he saw there. 'I see,' saith Scott, 'a ruddy complexioned damsel in a red waistcoat drawing a can of beer.' 'She must be your wife,' said Hodges." Lilly then tells us that this prophecy was literally fulfilled. The same author informs us that the persons employed to look into the crystal could occasionally hear the angels speak, and he informs us that the pronunciation of the angels was "very like that of the Irish, much in the throat."

The fluid mirror in various forms was even more celebrated than the crystal or the beryl; indeed so common was this species of Sorcery among the Greeks that it received a distinct name, Hydromancy. A natural basin of rock, kept constantly full by a running stream, was supposed to offer the most favourable opportunities for the operation of the Sorcerer. Indeed many learned men have plausibly conjectured that this was the form of divination practised by the witch whom Saul consulted, for Endor, the name of her residence, signifies, literally, "a perpetual fountain;" and the belief that

SOR-
CERER.

by magical incantations futurity may be mirrored in a rocky pool was common to the Jews, the Arabs, and the Syrians. It has not quite disappeared from civilized Europe; a gloomy lake is viewed with superstitious horror in Scandinavia, and in Ireland, the Devil's Glen, in the County of Wicklow, has received its name from the belief that wizards practise their unhallowed arts at the rocky basin into which a cataract falls at the upper end.

Another form of this Sorcery has recently engaged a more than ordinary share of public attention, divination by fluid, as practised in Egypt and Hindústan. Mr. Lane having heard some extraordinary anecdotes of the supernatural skill displayed by one of these Sorcerers, resolved to witness his performance. The magician commenced his operations by writing forms of invocation to his familiar spirits on six slips of paper, a chafing-dish with some live charcoal in it was then procured, and a boy summoned who had not yet reached the age of puberty. Mr. Lane inquired who were the persons that could see in the fluid mirror, and was told that they were a boy not arrived at puberty, a virgin, a black female slave, and a pregnant woman. To prevent any collusion between the Sorcerer and the boy, Mr. Lane sent his servant to take the first boy he met. When all was prepared, the Sorcerer threw some incense and one of the strips of paper into the chafing-dish; he then took hold of the boy's right hand, and drew a square with some mystical marks on the palm; in the centre of the square he poured a little ink, which formed the magic mirror, and desired the boy to look steadily into it without raising his head. In this mirror the boy declared that he saw, successively, a man sweeping, seven men with flags, an army pitching its tents, and the various officers of state attending on the Sultan. The rest must be told by Mr. Lane himself. "The Sorcerer now addressed himself to me, and asked me if I wished the boy to see any person who was absent or dead. I named Lord Nelson, of whom the boy had evidently never heard; for it was with much difficulty that he pronounced the name after several trials. The magician desired the boy to say to the Sultan, "My master salutes thee, and desires thee to bring Lord Nelson; bring him before my eyes that I may see him speedily." The boy then said so, and almost immediately added, "A messenger has gone and brought back a man dressed in a black (or rather, dark blue) suit of European clothes; the man has lost his left arm." He then paused for a moment or two, and looking more intently and more closely into the ink, said: "No, he has not lost his left arm, but it is placed to his breast." This correction made his description more striking than it had been without it; since Lord Nelson generally had his empty sleeve attached to the breast of his coat; but it was the right arm that he had lost. Without saying that I suspected the boy had made a mistake, I asked the magician whether the objects appeared in the ink as if actually before the eyes, or as if in a glass, which makes the right appear left. He answered, that they appeared as in a mirror. This rendered the boy's description faultless. . . . Though completely puzzled, I was somewhat disappointed with his performances, for they fell short of what he had accomplished in many instances in presence of certain of my friends and countrymen. On one of these occasions, an Englishman present ridiculed the performance, and said that nothing would satisfy him but a correct description of the appearance

of his own father, of whom he was sure no one of the company had any knowledge. The boy, accordingly, having called by name for the person alluded to, described a man in a Frank dress, with his hand placed on his head, wearing spectacles, and with one foot on the ground and the other raised behind him, as if he were stepping down from a seat. The description was exactly true in every respect; the peculiar position of the hand was occasioned by an almost constant headache, and that of the foot or leg by a stiff knee, caused by a fall from a horse in hunting. On another occasion Shakspeare was described with the most minute exactness, both as to person and dress; and I might add several other cases in which the same magician has excited astonishment in the sober minds of several Englishmen of my acquaintance." Mr. Lane professes himself unable to solve the mystery of these exhibitions, and we have never heard any explanation of them which was not encumbered with almost insuperable difficulties.

The last species of Sorcery which merits notice is the power of commanding animals by certain spells. In the middle of the last century a person named Sullivan professed to have a charm by which he could tame the wildest and fiercest horses. From the mode in which he proceeded to operate, he was usually called the *Whisperer*. We have before us a manuscript account of one of his performances, written by an eye-witness, one of the most able statesmen in the Irish Parliament. A gentleman in the County of Cork had a horse which defied all the skill of the jockeys; no one could ride him, and it was even dangerous to enter his stable. Sullivan was summoned, and led to the place where the horse was kept. When the company entered the stable, the horse began to kick and lash as usual, but when Sullivan spoke the animal showed signs of terror and permitted the Whisperer to come near and grasp his head. Sullivan affected to whisper something in the animal's ear; the horse trembled violently, permitted itself to be bridled and saddled, and was rode tranquilly up and down the avenue in presence of a crowd of astonished spectators. Sullivan always declared that it was out of his power to explain the source of his influence. Many pretenders have at various times affected possession of his secret, but they have all failed when brought to trial.

The pretensions of the serpent charmers in the East have been celebrated from the remotest antiquity; the best account we have seen of their performances is in Mr. Lane's volumes on *Modern Egypt*, and we shall avail ourselves of a portion of his description. "The charmer professes to discover, without ocular perception, (but perhaps he does so by a peculiar smell,) whether there be serpents in the house, and if there be to attract them to him, as the fowler by the fascination of his voice allures the bird into his net. As the serpent seeks the darkest place in which to hide himself, the charmer has, in most cases, to exercise his skill in an obscure chamber, where he might easily take a serpent from his bosom, bring it to the people without the door and affirm that he found it in his apartment; for no one would venture to enter with him, after having been assured of the presence of one of those reptiles within; but he is often required to perform in the full light of day, surrounded by spectators, and incredulous persons have searched him beforehand, and even stripped him naked, yet his success has been complete. He assumes an air of mystery, strikes the walls with a short palm-stick, whistles, makes a clacking noise with his tongue; and

SOR-
CERER.

SOR-
CERER.

SORDID.

generally says, "I adjure you by God, if ye be above, or if ye be below, that ye come forth; I adjure you by the most great name, if ye be obedient, come forth; and if ye be disobedient, die! die! die!" The serpent is generally dislodged by his stick from a fissure in the wall, or drops from the ceiling on the floor. I have often heard it asserted that the serpent-charmer, before he enters a house in which he is to try his skill, always employs a servant of that house to introduce one or more serpents; but I have known instances in which this could not be the case, and am inclined to believe that the Durweeshes are generally acquainted with some real physical means of discovering the presence of serpents without seeing them, and of attracting them from their lurking-places."

Many other forms of Sorcery have existed in different ages and countries, but those we have noticed sufficiently illustrate this branch of human credulity. Sorcery was made a capital crime in England by Statutes passed in the reigns of Henry VIII. and James I.; these have been long since repealed, but pretenders to conjuring and fortune-telling may still be punished as impostors and vagabonds at common law.

SORD, *i. e.* sward, *q. v.*

PAL. This is the prettiest low-borne lasse that euer
Ran on the greene-sord; nothing she do's or scemes
But smackes of something greater than her selfe,
Too noble for this place.
Shakspeare. The Winter's Tale, act iv. sc. 3. fol. 292.

I' th' midst an altar as the land-mark stood
Rustic of grassie sord.

Milton. Paradise Lost, book xi. l. 432.

Piers Plouhman. Vision, fol. 305.

For what cause blame hem sore, that thei be hoole in feith.

Wiclif. Tyte, ch. i.

And thei ful sorry bigunnen ech bi him self to seye, Lord, wher I am?

Id. Matthew, ch. xxvi.

And they were excedynge sorowful, and beganne euerye one of them to saye vnto hym, Is it I maister?

Bible, Anno 1551.

Though thilk pistle made ghou sori at an hour, now I haue ioie, not for ghe weren maad sorowful, but for ghe weren maad sorowful to penaunce.

Wiclif. 1 Corynth. ch. vii.

SORE.

Sorrow, sorrowful; A. S. *sorge*, *sorgfull*; D. *sorghe*, *sorghvuldigh*; Ger. *sorg*; Sw. *sorg*. Skinner says of *sore, adj.*, from A. S. *swær*, *swar*; Dan. *svar*; D. *swaer*; Ger. *schwer*, *gravis*, *molestus*, *difficilis*; all, I believe, contracted from the Lat. *severus*. *Sore*, the noun, and *sore*, the *adv.*, he refers to the adjective. Junius has three Greek origins, *σωρος*, *cumulus*, *ψωρα*, *scabies*, or *σπ-ειν*, *trahere*. Under the words *sorrow* and *sorry*, Skinner refers to the A. S. verbs *sarian*, *sargian*, *dolere*, *sorgian*, *curare*, and to

SORE.

Wherfor though I made you *sory* with a letter, I repent not; though I dyd repent. For I perceave that that same epystle made you *sory* though it were but for a season. But I nowe reioyce, not that ye were *sory*, but that ye so *sorowed*, that ye repented.

Bible, Anno 1551.

And greet wepyng of alle men was maad, and they felden on the necke of Poul and kissiden hym, and *sorewiden* moost in the word that he seide, for thei schulen no more se his face.

Wiclif. The Dedis of Apostlis, ch. xx.

And they wepte all aboundantly and fell on Paul's necke and kyssed hym, *sorowing* moste of all for the wordes whiche he spake, that they shoulde se his face no more.

Bible, Anno 1551.

And whanne the younge man had herde these wordis he wente away *sorrowful*, for he hadde many possessiouns.

Wiclif. Matthew, ch. xix.

The *sorowe* that is affir God worchith penaunce into stidefast heelthe, but *sorowe* of the world worchith deeth.

Id. 2 Corinth. ch. vii.

For godly *sorrow* causeth repentaunce vnto saluacion not to bee repented of; when worldly *sorrow* causeth death.

Bible, Anno 1551.

Only the intellect, withouten more,
That dwelled in his herte sike and *sore*
Gan feillen, whan the herte felte deth;
Dusked his eyen two, and failled his breth.

Chaucer. The Knightes Tale, v. 2805.

For certes the fleshe coveiteth ayenst the spirite; and ever the more strong that the flesh is, the *sorier* may the soule be.

Id. The Persones Tale, p. 155.

She said, certes, that she *sorry* was,
That he hath had such perill and such caas.

Id. The Legende of Dido.

For in swiche cas wimmen have swiche *sorwe*,
Whan that hir housbonds ben fro hem ago,
That for the more part they *sorwen* so
Or elles fallen in swiche maladie,
That atte laste certainly they die.

Id. The Knightes Tale, v. 2824.

How gret a *sorwe* suffereth now Arcite
That deth he feleth thurgh his herte smite;
He wepeth, waileth, crieth pitously.

Id. Ib. v. 1151.

Hast thou not had thy lady as thee liketh?
No, no, quod he, and *sorowfully* he siketh.

Id. The Frankeleines Tale, v. 11893.

This Hercules hym threwe to grounde
So *sore*, that thei haue hym founde
Lyggende there vpon the morowe.

Gower. Conf. Am. book v.

But were hem lief, or were hem loth,
The women and the children both
In to the palais forth he brought,
With many a *sorie* hertes thought
Of hem whiche of her body bore
The children had.

Id. Ib. book ii.

She sawe hir father *sorowe* and sike,
And wist not the cause why.

Id. Ib. book i.

For though I be my seluen strange,
Ennie maketh myn hert change,
That I am *sorrowfully* bestadde
Of that I see another gladde
With hir.

Id. Ib. book ii.

Wherefore the Scripture was geuen, that we may applye the medicine of the Scripture, euery man to his own *sore*s.

Tyndall. Workes, fol. 3. Prologue vpon the Fiue Bookes of Moses.

And incontynēt he was taken, and his heed stryken off, wherof many folkes were *sorie*, and were *sore* dyspleased with the erle.

Lord Berners. Froissart. Cronycle, vol. i. ch. xxx. p. 44.

For with the *soreness* of the fall, if she had not had breath given her, she had deliuered a foolish soul to Pluto.

Sidney. Arcadia, book iv. p. 726.

Amaz'd with this speech, he turned his eye full of humble *sorrowfulness* to Philoclea.

Id. Ib. book iii. p. 561.

The cruell steele, which thild her dying hart,
Fell softly forth, as of his owne accorde;
And the wyde wound, which lately did dispart
Her bleeding brest and riven bowels gord,
Was closed up, as it had not beene *sor'd*.

Spenser. Faerie Queene, book iii. can. 12.

But she to none of them her love did cast,
Save to the noble knight, sir Scudamore,
To whom her loving hart she linked fast
In faithfull love, t' abide for evermore
And for his dearest sake endured *sore*,
Sore trouble of an hainous enemy.

Id. Ib. book iii. can. 6.

He now, to prove his late-renewed might,
High brandishing his bright deaw-burning blade,
Upon his crested scalp so *sore* did smite,
That to the scull a yawning wound it made;
The deadly dint his dulled sences all dismaid.

Id. Ib. book i. can. 11.

He from that deadly throw made no defence,
But to the wound his weake heart opened wyde;
The wicked engine through false influence
Past through his eies, and secretly did glyde
Into his heart, which it did *sorely* gryde.

Id. Ib. book iii. can. 9.

There also those two Pandionian maides,
Calling on Itis, Itis evermore,
Whom, wretched boy, they slew with guiltie blades;
For whome the Thracian king lamenting *sore*,
Turn'd to a lapwing, fowlie them upbraydes,
And fluttering round about them still does *sore*.

Id. Virgil's Gnat.

Nay, this removing and replanting of them is the proper cure of many *sorances*, for from that time forward, subject they will not be to those injuries that use to infest them.

Holland. Plinie, book xix. ch. xii.

Wroth was the prince, and *sory* yet withall,
That he so wilfully refused grace.

Spenser. Faerie Queene, book ii. can. 8.

When I awoke, and found her place devoyd,
And nought but pressed gras where she had lyen,
I *sorowed* all so much as earst I ioyd,
And washed all her place with watry eyen.

Id. Ib. book i. can. 9.

Mourne not, except thou *sorrow* for my good.
Shakspeare. Henry VI. First Part, act ii. sc. 5. fol. 105.

ANT. The miserable change now at my end,
Lament nor *sorrow* at; but please your thoughts
In feeding them with those my former fortunes
Wherein I lived.

Id. Antony and Cleopatra, act iv. sc. 13. fol. 363.

She heard with patience all unto the end;
And strove to maister *sorrowfull* assay,
Which greater grew, the more she did contend,
And almost rent her tender hart in tway.

Spenser. Faerie Queene, book i. can. 7.

Such is the weakenesse of all mortall hope;
So tickle is the state of earthly things,
That, ere they come unto their aymed scope,
They fall to short of our fraile reckonings,
And bring us bale and bitter *sorrowings*.

Id. Ib. book vi. can. 3.

Why yeeld I thus to plaints and *sorrowings*,
As if all hope and helpe were perisht quite?

Fairefax. Godfrey of Bulloigne, book vi. st. 86.

Sorrows are well allow'd, and sweeten nature,
Where they express no more than drops on lilies;
But when they fall in storms, they bruise our hopes;
Make us unable, though our comforts meet us,
To hold our heads up.

Massinger. A Very Woman, act iii. sc. 4.

Yet goodness, whose inclosure is but flesh,
Holds out oft times but *sorribly*.

Baumont and Fletcher. The Nice Valour, act ii. sc. 1.

SORE.

SORE.

But that which gladdened all the warrior train,
Though most were *sorely* wounded, none were slain.
Dryden. Palamon and Arcite, book iii.

For do their very best, they cannot fly,
But often each way look, and often *sorely* sigh.
Thomson. Castle of Indolence, can 1.

Grief seiz'd the thunderer, by his oath engag'd;
Stung to the soul, he *sorrow'd*, and he rag'd.

Pope. Homer. Iliad, book xix.

Sorrow is uneasiness in the mind, upon the thought of a good lost, which might have been enjoy'd longer; or the sense of a present evil.

Locke. Of Human Understanding, vol. i. book ii. ch. xx. p. 96.

It may be comfortable thought to us, that, amidst our *sorrowings* for the ravages made by avarice at home, and our consternation at the advances of a pestilence abroad, there are yet many great and excellent designs on foot, many commendable charities going on, promoted and encouraged by some of all ranks and orders of men, through the whole nation.

Waterland. Works, vol. viii. p. 427. Sermon preached before the Sons of the Clergy.

We must also look to the undoing, as well as we can, our fore-past sins, in order to the obtaining God's forgiveness of them. But this is no way in the world to be done, but by meekly and *sorrowfully* confessing them.

Sharp. Works, vol. v. p. 163. Discourse 6.

This fort was but *sorrily* governed when I was there.

Dampier. Voyages, Anno 1690.

Nay indeed, under colour of relaxations, they [pleasures] are, to those who engage thoroughly in them, *sore* fatigues.

Secher. Works, vol. i. p. 69. Sermon 5.

Such is the good man's triumph over a calamity which, of all those which afflict poor mortals, is indeed the *sorest*, the most afflictive.

Knox. Sermon 2.

Sorrow is the direct opposite of joy. It expresses a mental suffering, under the privation of some good we actually possessed, or concerning which we entertained a pleasing expectation.

Cogan. On the Passions, vol. i. ch. ii. p. 45.

In such a fine mould or soil as that of those more southern regions, agriculture is an easy art; and one man, with a couple of *sorry* horses, will be able, in a season, to cultivate as much land as will pay a pretty considerable rent to the proprietor.

Hume. Essay 1. part ii. p. 263.

SORE.

SOREX.

SORE, OR

SOARE, n.

SO'REL.

Fr. *saur*; It. *sauro*, which Ferrari derives from *subrufus*, nearly or approaching to red: *subrufo, sabro, savro, sauro*. See Menage, *Le Origini della Ling. Ital.*

A stag of four years old is called a *sore*, and of three a *sorel*; and so named (Skinner) from their colour, a *saturo colore*, a strong or deep colour.

Fowre yoked stedes full different of hewe;

The first was *sord*, with mane as reed as rose.

Chaucer. The Testament of Creseide.

Of the *soare* falcon so I learne to flye,

That flags a while her fluttering wings beneath,

Till she her selfe for stronger flight can breath.

Spenser. Of Heavenly Beautie.

Now, sir, a bucke the first yeare is a fawne, the second yeare a pricket, the third yeare a *sorell*, the fourth yeare a *soare*, the fift a buck of the first head, the sixt yeare a compleat buck.

Anonymous. The Returne from Pernassus, act ii. sc. 5.

The young males which our fallow deere doo bring foorth, are commonlie named according to their seuerall ages: for the first yeere it is a fawne, the second a pricket, the third a *serell*, the fourth a *soare*, the fift a bucke of the first head.

Holinshed. Description of England, ch. iv.

His horse was of fiery *sorrel*, with black feet.

Sidney. Arcadia, book iii. p. 481.

Our prey was rich and great,
Twise five and twentie flocks of sheepe, as many herds of neat;
As many goats, and nastie swine; an hundred fiftie mares,
All *sorrel*, most with sucking foals.

Chapman. Homer. Iliad, book xi.

S O R E X.

SOREX, from the Gr. *ῥπαξ*, a rat or mouse, Lin.; *Shrew, Penn.* In *Zoology*, a genus of animals belonging to the family *Insectivora*, order *Sarcophaga*, class *Mammalia*.

Generic character. Front teeth in each jaw two, in the upper bicuspid, in the lower very long, horizontal, and denticulated above; on each side, in the upper jaw, five or four false molar, the first and last larger than the intermediate, in the lower jaw two false molars; true molar teeth with pointed crowns, three on a side, in each jaw; muzzle long and conical; eyes very small; ears small, rounded, and not always apparent; body covered with soft fur, and on each flank a row of odoriferous glands; tail varying in length, and but rarely equalling that of the body; feet plantigrade, toes distinct, five on each foot.

This genus, as established by Linnæus, included those individuals which form the genera *Condylurus*, *Chrysochloris*, *Mygale*, and *Scalops*, and one species which belongs to the genus *Didelphis*; all of which now excluded still leave about eighteen or nineteen species of *Shrews*. In form and habits they have a general resemblance to the small kinds of *Mice*, but are less vivacious. They are of small size, and among them are found the smallest *Mammalia*, such as the *S. Etruscus*, *Pulchellus*, *Personatus*, and *Religiosus*, which scarcely exceed the smallest Humming-bird in bulk.

The teeth of this genus are, as remarked by Isidore

Geoffroy, extremely interesting, as being intermediate between those of the true carnivorous and those of the rodent animals, and linking them together. Their front teeth, in form and disposition, differ materially from the incisives of *Carnivora*, although generally considered as analogous to them; but Is. Geoffr. considers them as really cuspid teeth, on account of their being turned outwards instead of forwards, and having a void space between them, a similar example of which deficiency and arrangement is often met with in the order of *Bats*, and that the incisive are deficient in this genus; behind these are four on each side, a large one, two smaller ones, and then another, the largest of the four, which resemble those of the *Mole*, and are now generally called false molar teeth; behind these on each side and in each jaw are three pointed molar teeth. The limbs of this genus are not so short as they seem to be, arising from their feet being of the plantigrade kind, that is, the fore feet resting on the ground as far as the wrist, and the hind so far as the heel. The toes are all distinct and have no indication of web, not even in those species which are aquatic, some of which have them, however, fringed with strong hairs, which serve the same purpose as the loose fringes on the toes of the *Grebes* and *Divers*; the inner and outer toe of each foot is deeply cleft from the others, by which they are enabled to be far spread and the breadth of the paw much increased, an analogy to which has been observed

SOREX. by Geoffroy in some of the Marsupial animals; the claws are short, curved, compressed, and sharp. The tail is always shorter than the body, sometimes scaly, and sometimes covered with fur. Like the Bats they possess the remarkable power of rendering themselves deaf at will, and thus preserving their auditory organs from injury by sudden and violent noise. This is effected not by means of the tragus, as in the Bats, but by the antitragus, "which," says Geoffroy St. Hilaire, "remarkable for its size, is placed before the auditory passage like a door in its case; the hairs which cover its exterior are, besides, pressed down by the helix, which, turning over above, forms a second shutter; a double thickness which allows neither noise nor any thing else to penetrate into the ear." The eyes are so extremely small, that the same writer has designated them as "*véritablement un organe tombé en atrophie*," a peculiarity which belongs to all the subterraneous carnivorous animals. The Shrews are remarkable for their strong musky odour, which arises from a series of odoriferous glands situated along the flanks, and nearer the fore than the hind limbs.

Some of the Shrews are found in both the Old and New World, but others are not, and whilst some prefer dry soils, others are found only in wet or marshy districts. Generally they live in holes, but sometimes make their way into granaries or cellars, where their presence is soon known by their musky odour.

S. Araneus, Lin.; *la Musaraigne Commune ou Mussette*, Cuv.; *Fetid Shrew*, Pen.; *Common Shrew*, Shaw. Length of the head and body from two inches to two and a half inches in length, of which the former measures one inch; length of the tail an inch and a half, sometimes more, sometimes less, but always shorter than the body, disposed to a quadrangular form, but rather rounded, equally thick throughout, with a blunt extremity, covered with short, close, stiff, dusky hair, but not fringed on its under surface; colours variable; usually mouse-brown above, more or less tinged with red, and beneath greyish, darker or lighter, and tinged with deeper or paler yellow; ears small, having within two folds or lobes, one beneath the other, and edged with hair; feet small, the hinder not fringed. In the English species the incisive teeth are brown, but M. Geoffroy St. Hilaire speaks of them as being white in the French species; this has given rise to a doubt as to their being the same species: Mr. Jennings is disposed to think they are distinct, but Mr. Bell is inclined to believe them the same, and that the observation of Geoffroy is incorrect. It is common upon dry soils in Europe, feeding on worms and insects, which its long flexible snout enables it to rout up from beneath the surface of the soil with great facility. The cry of this species is a shrill whistle. In spring the female brings from five to seven young ones, which she deposits in a slight hole lined with soft herbage, and being covered at the top is entered on the side. Towards autumn they are found dead in great numbers, but without any assignable reason. They are extremely pugnacious, and if two be put in a box a contest takes place which terminates only in the death of one, the greater part of which is eaten up by the survivor. They have a peculiarly strong musky smell, which renders them so offensive, that though cats will kill they will not afterwards meddle with them. The Shrew was formerly considered venomous, and vulgar tradition assigned to it such malignity, that it was said to lame the foot over which

it ran. Edward Phillips, in his *World of Words*, says, **SOREX.** it is "very mischievous to cattel, which going over a beast's back will make it lame in the chine; and the bite of it causes the beast to swell at the heart and die." "Our ancestors," says Dr. Johnson, "looked on her with such terrour, that they are supposed to have given her name to a scolding woman, whom for her venom they call a *Shrew*." Gilbert White states, "It is supposed that a Shrew Mouse is of so baneful and deleterious a nature, that wherever it creeps over a beast, be it horse, cow, or sheep, the suffering animal is afflicted with cruel anguish, and threatened with the loss of the use of the limb." These absurd suppositions were to be remedied by equally absurd antidotes in the shape of the twigs or branches of a Shrew Ash, gently applied to the limbs of cattle, which are immediately relieved of the pains caused by the running of a Shrew Mouse over them. This Shrew Ash was made thus, according to Gilbert White: "Into the body of the tree a deep hole was bored with an auger, and a poor devoted Shrew Mouse was thrust in alive, and plugged in, no doubt with several quaint incantations long since forgotten."

S. Fodiens, Pall.; *S. Daubentonii*, Desm.; *la Musaraigne d'Eau*, Daub.; *Water Shrew*, Pen. Length of the head and body three and a quarter inches, of the former an inch, and of the tail rather more than two inches. This species differs from the preceding in having the muzzle thicker, the tips of the incisive teeth brownish; the ears shorter, and having three instead of two lobes, one of which is tufted with white hair, which rising up marks by a white spot the situation of the ear; body rather more bulky; tail more slender and square throughout, its under surface fringed with white hairs; the feet broader, the toes fringed with stiff white hairs; the fur of this species is short, soft, and silky, of a deep brown, nearly approaching to black on the upper parts, head, sides, and outer surfaces of the limbs, and beneath pale ash, nearly white. It is common throughout many parts of Europe, in the neighbourhood of streams and marshy ground; and in the spring produces six or eight young. It is well adapted for swimming by the fringing of its toes, and moves in the water with great speed. Mr. Doverston states that "it dived and swam with great agility and freedom, repeatedly gliding from the bank under water, and disappearing under the mass of leaves at the bottom, doubtless in search of its insect food. It very shortly returned and entered the bank, occasionally putting its long sharp nose out of the water, and paddling close to the edge. This it repeated at frequent intervals from place to place, seldom going more than two yards from the side, and always returning in about half a minute. Sometimes it would run a little on the surface, and sometimes timidly and hastily come ashore, but with the greatest caution, and instantly plunge in again." It is to this species that the fossil specimen found in Sardinia, and described by Cuvier, is believed to belong.

S. Remifer, Geoffr.; *S. Ciliatus*, Sowerby; *la Musaraigne Porte-rame*, Desm.; *Oared Shrew*, Yarr. Length of the head and body rather more than three inches, of the former one inch, and of the tail two inches, which is fringed, quadrangular for two-thirds its length, and the remaining third compressed, where the fringe is longer; the muzzle is broader and more obtuse than in either of the preceding species; the incisive teeth brown at their tips, and the body thicker and more bulky; all the upper parts, sides of the belly, and pubic region

SOREX. black; the throat, breast, and middle of the belly dusky ash, tinged with yellow, and sometimes upon the ear a white spot; feet and tail dusky grey, the hairy fringe beneath the latter of the same colour as that above. This species has been found in some parts of England and also in France. It was first described in England as *Sorex Ciliatus* by Sowerby, but it was subsequently shown to be the same as the *S. Remifer* of Geoffroy. Cuvier seems to think that the Oared Shrew is, with some others which he enumerates, only the Water Shrew at different age.

S. Leucodon, Herm.; *la Leucode*, Daub.; *White-toothed Shrew*. Of the same size as *S. Araneus*, but has a shorter tail; its incisive teeth are white only whilst the animal is young, but in the adult their little points are brown; the back is brown, the belly and sides white; the upper surface of the tail resembles the back, and the under surface the belly, in colour. It is found in the neighbourhood of Strasburg. Cuvier thinks this does not differ from *S. Araneus*.

S. Constrictus, Heim.; *la Musaraigne Plaron*, Daub. About the same size as the last species; the cartilages of the nose overspread with straight hairs, giving the snout a more bulky appearance; ears short and entirely hid in the fur; the fur long and soft, blackish, tipped with ferruginous above; throat ashy; belly greyish; tail flat, narrow, and as it were constricted at its root, becoming thick and roundish in the middle and flattened at the tip, where the hair collects into a pencil. It is found in Europe, in the neighbourhood of Strasburgh, Chartes, and Abbeville, and, according to Harlan, also in the United States. Cuvier considers the last two species, as well as *S. Remifer*, to be merely different ages of *S. Fodiens*.

S. Tetragonurus, Heim.; *la Musaraigne Carrelet*, Is. Geoffr.; *Square-tailed Shrew*. Is of the same size as the common species, from which it is distinguished by the square form of its tail, the angles of which are well defined, and it terminates in a delicate pencil of hairs like the point of a shoemaker's needle; the ears, though much shorter, are not hidden in the fur; the fur of the upper parts is blackish, and of the under ashy-brown. It has much the same habits as the common species.

S. Fosteri, Richards. *Foster's Shrew*. Two and a quarter inches long to the root of the tail, and the length of the latter an inch and a quarter; muzzle very slender; ears not projecting beyond the fur; upper surface greyish or clove-brown, under dull yellowish-brown; tail four-sided, and gradually tapering towards the tip, which terminates in a pencil of hairs. It is common in the fur countries of North America as far as the 67th degree of latitude.

S. Palustris, Richards; *American Marsh Shrew*. Three and a half inches long, and the tail an inch and a half more; ears shorter than the fur, their lower margins folded in, and the superior covered with thick tufts of hair; upper parts of the body and tail black, with a hoary tinge when turned to the light; under parts of the same ash-coloured; tail rounded or slightly four-sided at the root and onwards toward the tip, which is compressed and terminated with a pencil of hairs. It frequents the borders of the lakes in North America, and often takes up its abode in the beaver houses.

S. Lineatus, Geoffr.; *White-faced Shrew*. Very similar to *S. Constrictus*, but distinguished from it by a white streak extending from the forehead to the nos-

trils; upper surface blackish-brown, belly paler, and throat white; position of the ears marked by a little white spot formed by the white hairs arising from their interior; tail imperfectly square, strongly carinated beneath; anterior teeth tipped with brown. Is found in the neighbourhood of Paris.

S. Brevicaudus, Say; *Short-tail Shrew*, Godm. From the tip of the nose to the root of the tail three inches and five-eighths; length of the tail one inch; muzzle short; nose livid-brown; teeth blackish; ears white, hidden beneath the fur; upper surface blackish, and when viewed against the light tinged with hoary, under parts paler; feet white, the front ones nearly devoid of hair; the claws almost as long as the toes; tail but little hairy, thickest in the middle, and depressed. It is found in Missouri.

S. Parvus, Say; *Small Shrew*. Nearly two and a half inches from the muzzle to the root of the tail; length of the latter three-quarters of an inch; head lengthy; eyes and ears concealed; teeth blackish; upper parts brownish, under ash-coloured; feet whitish; tail somewhat rounded; rather thicker in the middle and whitish beneath. Is found in Missouri near Council Bluffs. Dr. Richardson mentions a specimen nearly resembling this which was caught on the shores of Behring's Straits.

S. Etruscus, Savi; *la Musaraigne de Toscane*, Isid. Geoffr.; *Tuscan Shrew*. Is the smallest of the European species, measuring only an inch and ten lines from the tip of the muzzle to the root of the tail, the latter being about an inch in length; it has the ears large, rounded, and covered with whitish fur; upper surface of the body greyish-brown, under greyish; tail terminating abruptly in a point of similar colour to the back, but having at each of its joints a pair of whitish verticillated hairs, about two lines in length. It has a musky smell, and is found in Tuscany under the roots and in the trunks of old trees, among heaps of leaves or straw, and in the holes of banks; in the winter it is found in the dunghills, where it both finds food and protection from the cold.

S. Pulchellus, Lichtenst.; *la Musaraigne Gentile*, Is. Geoffr.; *Beautiful Shrew*. An inch and ten lines in length to the root of the tail, which is three-quarters of an inch; muzzle very pointed; ears slaty-grey; top of the head light grey, spreading over the back, becoming deeper, and forming a parallelogram distinct from the white flanks and tail, and in the middle of the grey a white patch. It is found in the sandy desert near Bokhara.

S. Personatus, Is. Geoffr.; *Masked Shrew*. Two inches to the root of the tail, the length of which is one inch; is very similar in proportions and colour to the Common Shrew, but a little browner on the hind part of the back towards the rump and tail; and the ears are very small, and hidden in the fur; the throat and under parts of the body are ashy, and the paws light ferruginous; the tail is reddish-white, scaly, and not furred beneath, but above it is covered with deep brown fur, and tipped with pretty long blackish-brown hairs. The anterior teeth are white excepting their tips, of which the upper are reddish and the lower blackish; the whole anterior part of the muzzle except the lips is blackish-brown. It is found in the United States.

S. Religiosus, Is. Geoffr.; *Sacred Shrew*. About the same size as the last species, but distinguished by the greater length of its tail, which when turned over

SOREX. reaches rather further forwards than the occiput, and is distinctly four-sided; ears large; thumbs very small. **SORIN-DEIA.** This was discovered, with other species of this genus, among the sacred animals found in the tombs of Thebes by M. Passalacqua.

S. Collaris, Geoffr.; *la Musaraigne noire à collier blanc*. Is. Geoffr. *White-collared Shrew*. This species has been merely indicated by Geoffroy as having black fur, with a white collar around the throat. It is found at the mouths of the Scheldt and the Meuse.

S. Giganteus, Is. Geoffr.; *Perfuming Shrew*, Pen. Nearly six inches in length from the tip of the muzzle to the root of the tail, the latter about three and a half inches long; upper parts cinereous, slightly tinged with rufous, under pure ash colour; auricles rather large and distinct from the fur. It is found in the same parts as *S. Indicus*, and bears with it among the natives the same name, *Mondjourou*; is very common in the houses at Pondicherry, which it renders very offensive by its strong musky smell, and is said even to communicate the same to the water in the tanks merely by running along the gutters. It is a nocturnal animal, and as it runs utters a shrill cry like the syllable *kouik*. This is one of the species found among the sacred animals both at Aquisir and Thebes, but so far as is known is not at present met with alive in Egypt.

S. Indicus, Geoffr.; *Indian Shrew*. Length of the head and body rather less than five and a quarter inches, and of the tail an inch and a half; the fur is very short, greyish-brown, and tinged on the upper surface with ferruginous; the tail is round, and the teeth white. It is a land animal, living in the fields and occasionally entering houses, on the continent of India, in Sumatra, and other isles of the Indian Archipelago. Isidore

Geoffroy thinks that the *S. Capensis* of Geoffroy St. Hilaire is probably the same species, and Cuvier concurs in this opinion. **SOREX.**
SORREL.

S. Flavescens, Is. Geoffr.; *Flaxen Shrew*. Four inches and a half in length to the root of the tail, the latter not more than an inch and a half long; teeth entirely white; head and upper part of the body flaxen, with a reddish tinge, becoming very light reddish-ash on the upper surface of the tail; the under parts of the head, body, and tail, the insides and lower parts of the limbs, and the margin of the mouth, white, slightly tinged with ash; upon the forehead a longitudinal streak of brown. This species is found in Caffreland and in the country of the Hottentots.

S. Myosurus, Pall.; *Mouse-tailed Shrew*. Length to the root of the tail four inches and four lines, and of the tail nearly an inch and a half; it very much resembles *S. Indicus* in its size, and the form and largeness of the ears, but is distinguished by the muzzle being shorter, the tail longer, thicker, less covered with hair, but having more silky bristles; it is entirely white. Its country is unknown; Pallas has described it by the specific name here given, and states that Linnæus had mentioned it previously as *S. Murinus*, and brought from Java.

The four preceding species are all considered by Cuvier as most probably the same at different age, or varieties.

See Linnæi *Systema Naturæ* a Gmelin; Geoffroy, in *Annales du Muséum d'Histoire Naturelle*, vol. xvii.; Isid. Geoffroy, in *Dictionnaire Classique d'Histoire Naturelle*, vol. xi.; Pallas, in *Acta Acad. Scient. Imper. Petropolit.* 1781; Richardson, *Fauna Boreali-Americana*; Godman, *Natural History of America*.

SORGHUM, in *Botany*, a genus so called by Persoon, from *sorghi*, the Indian name of one of the species, according to Bauhin. It belongs to the class *Polygamia*, order *Monoecia*, and the natural order of *Gramineæ*. Generic character: axis panicled; panicles compound, usually crowded or capitate; florets two, one of which is pedicellate and one-flowered, male or neuter, with membranous paleæ; the other sessile and two-flowered, the lower flower male or neuter, the upper one hermaphrodite; the glumes coriaceous and shining, lower one tridentate at apex, and awned between the teeth; the awns plicate and twisted; scales emarginate; style two-parted; seed inclosed within persistent, coriaceous paleæ.

This genus consists of about twelve species, mostly natives of India and Africa, where they are also cultivated as grain.

SORINDEIA, in *Botany*, a genus so named by Petit Thouars. It belongs to the class *Polygamia*, order *Dioecia*, and the natural family of *Burseriaceæ*. Generic character: flowers polygamo-dioecious; calyx urceolate, five-toothed; petals five, valvate in æstivation; male flower with about twenty stamens, inserted in the bottom of the calyx; hermaphrodite flower with about five fertile stamens on short filaments, and three sessile stigmas; drupe containing a spreading, oblong, compressed nut.

This genus contains two species, natives of Africa; they are trees, with impari-pinnate leaves, and branched axillary and terminal panicles of small purple flowers.

SORITES, Gr. σωρείτης, from σωρος, a heap, which Cicero considered to be equivalent to the Lat. *acervalis*, from *acervus*, a heap. See the Quotation.

The word *sortes* denotes an heaping up together; the syllogism that bears this name contains, as it were, a heap of premisses, ranged in such a manner, that the attribute of the preceding becomes always the subject of the following, till the conclusion is formed of the subject of the first of the premisses, and the attribute of the last of them reciprocally.

Crousaz. *Art of Thinking*, vol. ii. part iii. ch. ix. p. 283.

SOROCEPHALUS, in *Botany*, a genus so called by R. Brown from the Greek σωρος, a heap, and κεφαλή, a head, on account of the heads of flowers being in clusters. It belongs to the class *Tetrandria*, order *Monogynia*, and the natural family of *Proteaceæ*. Generic character: calyx four-cleft, equal, wholly deciduous; stigma vertical, clavate; nut ventricose, on a very short pedicel, or emarginate at the base; involucre almost simple, three or six-leaved, one or few-flowered; receptacle without paleæ.

This genus contains about ten species, all natives of the Cape of Good Hope. They are shrubs, with twiggy branches, and scattered, filiform, or flat, undivided leaves, the lower ones rarely bipinnatifid; involucra nearly sessile, unibracteate, crowded into head-formed spikes, sometimes furnished with bracteas at the base; flowers purplish.

SORREL, Fr. *sorel*, *surette*; A. S. *sure*, *sower*. Skinner.

SORREL. A herb so called from the sourness of its taste.

SORT.

Sorrel and white-wine, if you costive prove,
And muscels, all obstructions shall remove.

Francis. Horace. Satire 4. book ii.

SORT, v. Fr. sortir, to issue, come, or go forth.

To issue, to come or bear to an issue or event; to the issue or event, aimed at or expected.

The opinions of some of the ancients, that blown aires do preserve bodies longer than other aires, seemeth to me probable; for that the blown aires, being overcharged and compressed, will hardly receive the exhaling of any thing, but rather repulse it. It was tried in a blown bladder, whereinto flesh was put, and likewise a flower, and it sorted not.

Bacon. Natural History, sec. 351.

John Cumin (after that he and Bruse were thus agreed vpon articles, and departed the one from the other) began to doubt, least this conspiracie devised betwixt them would not sort to anie luckie conclusion for his purpose.

Holinshed. Chronicles, vol. v. p. 337. The Historie of Scotland.

Princes, in regard of the distance of their fortune from that of their subjects and servants, cannot gather this fruit, [friendship,] except, to make themselves capable thereof, they raise some persons, to be as it were companions, and almost equals to themselves, which many times sorteth to inconvenience.

Bacon. Essay 27. Of Friendship.

For where destruction I do once pretend,
All that man doth, still sorteth to that end.

Drayton. Legend of the Duke of Normandy.

I am sure, sweet Kate, this kindness merits thanks.
What not a word? Nay, then, thou lou'st it not;
And all my paines is sorted to no prooffe.

Shakspeare. The Taming of the Shrew, act iv. sc. 3.

BER. I think, it be no other, but even so:

Well may it sort, that this portentous figure
Comes armed through our watch; so like the king
That was, and is, the question of these wars.

Id. Hamlet, act i. sc. 1.

SORT, n. } Fr. *sort*; It. *sorte*; Fr. *sorte*;
SORT, v. } It. *sorta*, kind, both from the Lat.
SO'RTABLE, } *sors*, perhaps from *σὺρ-ειν*, to draw
SO'RTAL, } lot, luck; state or condition al-
SO'RTANCE, } lotted. *Sort*, used literally from
SO'RTER, } the Lat. *sors*.
SO'RTING, n. } Lot, allotment, fortune, fate; state
SORTITION, } or condition allotted or assigned;
SORTILE'GIOUS. } or to which any one, any thing is

assigned, apportioned, or appropriated; or in which it is arranged, ranked, placed, or classed; class or kind; degree, manner, form or fashion.

To sort; to have, or take, or give by lot; to happen or befall.

To sort, or assort; to arrange, separate, dispose, or distribute into destined classes or kinds, into orders; into their proper or peculiar kinds or species; to adapt, to accommodate, to suit.

And forth he went, shortly for to tell,
There as Mercurie sorted him to dwell.

Chaucer. Troilus and Creseide, book v.

Anon to drawn every wight began,
And shortly for to tellen as it was,
Were it by aventure, or sort, or cas,
The sothe is this, the cutte felle on the knight,
Of which ful blith and glad was every wight.

Id. The Knightes Tale, v. 844.

That Paris now with his vnmanly sorte,
With mitred hats, with oynted bush and beard,
His rape enioyeth.

Surrey. Virgil. Æneid, book iv.

Why then, quoth she, vnwroken shal we die?
But let vs die; for this! and in this sort
It liketh vs to seeke the shadowes darck!

Id. Ib. book iv.

A man cannot speake to his sonne but as a father, to his wife but as a husband, to his enemy but upon tearmes, whereas a friend may speake as the case requires, and not as it sorteth with the person.

Bacon. Essay 27. Of Friendship.

And when my careful eye I cast upon my sheep,
I sort them in my pens, and sorted so I keep.

Drayton. The Muses' Elysium. Nymphal 6.

The world indifferently
Disposde betwixt us; every one his kingdome; I, the seas,
Pluto the blacke lot; Jupiter the principalities
Of broad heaven, all the skie and clouds, was sorted out; the earth
And high Olympus, common are, and due to either's birth.

Chapman. Homer. Iliad, book xv.

LAM. Where is he?

CHARL. Receiving entertainment in your house
Sorting with his degree.

Beaumont and Fletcher. The Honest Man's Fortune, act iii. sc. 1.

Can the Gaules be sorted in the same raunge with the Ægyptians?

Holland. Plinie, book xix. ch. i.

There on a day, as he persew'd the chace,
He chaunst to spy a sort of shepherd groomes
Playing on pypes and caroling apace,
The whyles their beasts there in the budded broomes
Beside them fed, and nipt the tender bloomes.

Spenser. Faerie Queene, book vi. can. 9.

Which when those knights beheld, with scornfull eye
They sdeigned such lascivious disport,
And loath'd the loose demeanure of that wanton sort.

Id. Ib. book iii. can. 1.

No, make a lott'ry,
And by deuce let blockish Ajax draw
The sort to fight with Hector.

Shakspeare. Troilus and Cressida, act i. sc. 3. fol. 84.

A trim exploit, a manly enterprize,
To coniure teares vp in a poore maid's eyes,
With your derision; none, of nobler sort,
Would so offend a virgin.

Id. A Midsummer Night's Dream, act iii. sc. 2. fol. 154.

What good got you by wearing out your feet,
To run on scurvy errands to the poor,
And to bear money to a sort of rogues,
And lousy prisoners?

Massinger. The Virgin Martyr, act iii. sc. 3.

For if there be considered on the one side, the truth of religion established; the constant peace and security; the good administration of justice; the temperate use of the prerogative, not slackened, not much strained; the flourishing state of learning, sort-able to so excellent a patroness; the convenient state of wealth and means, both of crown and subject; the habit of obedience, and the moderation of discontents.

Bacon. Works, vol. i. fol. 29. Of the Advancement of Learning.

If he were partaker of them, they would draw more inconveniences upon him than benefit, being nothing sortable either to his disposition or breeding.

Howell. Letter 6. book ii.

Here doth hee wish his person, with such powers
As might hold sortance with his qualitie,
The which hee could not lenie.

Shakspeare. Henry IV. Second Part, act iv. sc. 1. fol. 89.

The remainders of thy sacred person are not yet free; the shoulders have parted thy garments, and cast lots upon thy seamlesse coat, (those poore spoiles cannot so much enrich them, as glorifie thee; whose Scriptures are fulfilled by their barbarous sortitions.)

Hall. Works, vol. ii. fol. 273. The Crucifixion.

Horace makes the blood of frogs an ingredient in sortilegious charms.

Daubuz. On the Rev. Ed. by P. Lancaster, p. 216.

From whence it is easy to observe, that the essences of the sorts of things, and consequently the sorting of this, is the workmanship of the understanding, that abstracts and makes those general ideas.

Locke. Works, vol. i. fol. 187. Of Human Understanding.

But it being evident that things are rank'd under names into sorts or species, only as they agree to certain abstract ideas, to

SORT.

—
**SORTI-
LEGE.**

which we have annex'd those names; the essence of each genus, or *sort*, comes to be nothing but that abstract idea, which the general or *sortal* (if I may have leave so to call it from *sort*, as I do general from genus) name stands for.

Locke. Works, vol. i. fol. 187. *Of Human Understanding*.

The proportion of the average quantity of all *sorts* of grain imported into Great Britain to that of all *sorts* of grain consumed, it has been computed by the author of the Tracts upon the Corn Trade, does not exceed that of one to five hundred and seventy.

Smith Wealth of Nations, vol. ii. book iv. ch. v.

The shepherd, the *sorter* of the wool, the wool-comber or carder, the dyer, the scribbler, the spinner, the weaver, the fuller, the dresser, with many others, must all join their different arts in order to compleat even this homely production.

Id. Ib. vol. i. book i. ch. i.

SORTILEGE. The divination by lots (*sortilegium*) is one of the most ancient and common superstitions; we find it used among the Oriental nations to detect a guilty person, as when Saul by this means discovered that Jonathan had disobeyed his command by taking food, and when the sailors by a similar process found Jonah to be the cause of the tempest by which they were overtaken. Various forms of lots for this purpose are still used by the vulgar, of which the Bible and key is perhaps the most common. When any thing is stolen and the thief escapes detection, a Bible is balanced on a key and the names of all the persons suspected mentioned in succession, and it is believed that when the guilty person is named the Bible will be overbalanced. A sieve and shears are in some places substituted for the Bible and key.

Sortilege is more commonly applied to various attempts to discover future events by means of lots. We shall briefly notice the most remarkable. *Sortes Sagittariæ*, or divination by arrows, was a common practice among Eastern nations; the prophet Ezekiel describes the King of Babylon employing it to guide his choice between the two roads leading to Jerusalem. "The King of Babylon stood at the parting of the way, at the head of the two ways, to use divination, he made his arrows bright," or rather, as the Vulgate renders it, "he shook his arrows together." (*Ezek. xxi. 21.*) St. Jerome, in his commentary on the passage, says, that the Kings of Babylon before engaging in any expedition cast arrows marked with the names of different nations into a quiver, that they might see whose arrow might come forth, and which people they ought first to attack. A similar custom prevailed in Greece, and also another form of divination, in which arrows were cast into the air, and the inquirer steered his course the same way that the arrow inclined in its descent. Though divination by arrows is strictly prohibited in the *Koran*, it was long practised by the Arabs: they generally used three arrows; on the first was written, "God hath commanded me," on the second, "God hath forbidden me," and the third was blank. If the first was drawn, they looked on it as an approbation of the enterprise in question; if the second, they regarded it as a prohibition; but if the third, they mixed the arrows and drew over again until a decisive answer was obtained.

Sortes Thriacæ, or Thriæan lots, were chiefly used in Greece; they were pebbles or counters distinguished by certain characters which were cast into an urn, and the first that came out was supposed to contain the right direction. This form of divination received its name from the Thriæ, three nymphs supposed to have nursed Apollo, and to have invented this mode of predicting futurity.

Sortes Viales, or street and road lots, were used both in Greece and Rome. The person that was desirous to learn his fortune carried with him a certain number of lots, distinguished by several characters or inscriptions, and walking to and fro in the public ways desired the first boy whom he met to draw, and the inscription on the lot thus drawn was received as an infallible prophecy. Plutarch declares that this form of divination was derived from the Egyptians, by whom the actions and words of boys were carefully observed as containing in them something prophetic. It is singular that the modern Egyptians still attribute peculiar power to boys below the age of puberty in divination, as we have shown under the head of *SORCERY*. Another form of the *Sortes Viales* was exhibited by a boy, but sometimes by a man, who posted himself in a public place to give responses to all comers. He was provided with a tablet on which certain fatidical verses were written; when consulted, he cast dice on the tablet, and the verses on which they fell were supposed to contain the proper direction. Sometimes instead of tablets they had urns, in which the fatidical verses were thrown, written upon slips of parchment. The verse drawn out was received as a sure guide and direction. To this custom Tibullus alludes:

*Illa sacras pueri sortes ter sustulit, illi
Retulit e trivis omina certa puer.*

Thrice in the streets the sacred lots she threw,
And thrice the boy a happy omen drew.

This form of divining was often practised with the Sibylline oracles, and was hence named *Sortes Sibyllina*.

Sortes Prenestinæ, or the Prenestine lots, were used in Italy; the letters of the alphabet were placed in an urn and shaken, they were then turned out upon the floor, and the words which they accidentally formed were received as omens. This superstitious use of letters is still common in Eastern nations. The Mussulmans have a divining table, which they say was invented by the prophet Edris or Enoch. It is divided into a hundred little squares, each of which contains a letter of the Arabic alphabet. The person who consults it repeats three times the opening chapter of the *Koran* and the 58th verse of the 6th chapter: "With Him are the keys of the secret things; none knoweth them but Him; He knoweth whatever is on the dry ground or in the sea, there falleth no leaf but He knoweth it; neither is there a single grain in the dark parts of the earth, nor a green thing, nor a dry thing, but it is written in a perspicuous book." Having concluded this recitation he averts his head from the tablet and places his finger upon it; he then looks to see upon what letter his finger is placed, writes that letter; the fifth following it; the fifth following that again; and so on until he comes back to the first he had touched: the letters thus collected form the answer.

Sortes Homericæ and *Sortes Virgilianæ*, divination by opening some poem at hazard and accepting the passage which first turns up as an answer. This practice probably arose from the esteem which poets had among the ancients, by whom they were reputed divine and inspired persons. Homer's works among the Greeks had the most credit, but the tragedies of Euripides and other celebrated poems were occasionally used for the same purpose. The Latins chiefly consulted Virgil, and many curious coincidences are related by grave historians, between the prediction and the event; thus the elevation of Severus to the empire is supposed to have been foretold by his opening at this verse,

**SORTI-
LEGE.**

SORTI-
LEGE.

SOT.

Tu regere imperio populos, Romane, memento.
Remember, Roman, with imperial sway
To rule the nations.

It is said that Charles I. and Lord Falkland made trial of the Virgilian lots a little before the commencement of the great civil war. The former opened at that passage in the fourth book of the *Aeneid* where Dido predicts the violent death of her faithless lover; the latter at the lamentation of Evander over his son in the eleventh book; if the story be true, the coincidences between the responses and events are among the most remarkable recorded.

Sortes Biblicæ, divination by the Bible, which the early Christians used instead of the profane poets. Nicephorus Gregoras recommends the Psalter as the fittest book for the purpose, but Cedrenus informs us that the New Testament was more commonly used. St. Augustine denounces this practice in temporal affairs, but declares in one of his letters that he had recourse to it in all cases of spiritual difficulty. Another form of the Biblical lots is to go to a place of worship, and take as an omen the first passage of Scripture read by the minister, or the text from which he preaches. This is no uncommon practice in modern times, and it is frequently vindicated by persons who ought to know better.

The Mussulmans consult the *Koran* in a similar manner, but they deduce their answer from the seventh line of the right-hand page. Others count how often the letters *kha* and *shin* occur in the page; if *kha* (the first letter of *kheyr*, "good") predominate, the answer is deemed favourable; but if *shin* (the first letter of *shin*, "evil") be more frequent, the inference is that the projects of the inquirer are forbidden or dangerous.

It would be easy to multiply examples of these efforts to obtain guidance from blind chance; they were once so frequent, that it was deemed necessary to denounce them from the pulpit as being clearly forbidden by the divine precept, "Thou shalt not tempt the Lord thy God."

MEL. How does that laugh become my face?
 PHIL. *Sovereignty* well, madam.
 MEL. *Sovereignty*! Let me die, that's not amiss.
 That word shall not be yours; I'll invent it, and
 bring it up myself.
Dryden. Marriage A-la-Mode, act iii. sc. 1.

For the serious persuasion of a witness, who seeth in secret, of
 an omnipotent *Sovereign* equally benevolent, wise, just, and holy,
 must inconceivably animate to every thing good, and deter from
 every thing evil.

Secker. *Works*, vol. ii. p. 402. *Sermon* 27.
 The parliaments ador'd on bended knees
 The *sov'reignty*, they were conven'd to please;
 Whate'er was ask'd, too timid to resist,
 Complied with, and were graciously dismiss'd.
Cowper. Expostulation.

They [the Israelites] would have a king who would determine
sovereignty, and command their armies.
Warburton. Works, vol. v. p. 88. *The Divine Legation*, book v.
 sec. 3.

SOUGH, *n. i. e.* a sew or sewer.

But if there be, yet could not such mines, without great pains
 and charges, if at all, be wrought; the delfs would be so flown
 with waters, (it being impossible to make any addits or *soughs* to
 drain them,) that no gins or machines could suffice to lay and
 keep them dry.
Ray. On the Creation, part ii.

SOUL, *n.* } Chaucer writes also *saule*; Goth.
 SOUL, *v.* } *saiwala*; A. S. *sawel*, *sawl*, *sawul*, *saul*;
 SOU'LESS. } D. *siele*; Ger. *seele*; Sw. *siæl*. Junius
 suspects it to be an elegant compound to denote the *well*
 of life, from Gr. *ζωω*, I live, and *wala*, a well or foun-
 tain. Ihre suspected some etymological connection be-
 tween *siæl*, *anima*, and *siælf*, *ipse*, self. We use *soul* as
 equivalent to

The spirit, the breath of life; the animating or vital
 principle or power; an animated, intellectual, or in-
 telligent being.

Soul-scot, A. S. *sawel-sceat*, *sawl-sceat*, money paid
 at the opening of the grave to the parish priest for the
 good of the deceased's *soul*. Somner.

þe Pope here of was glad, & twei holy men hym sende,
 Fagan and Dimian, hys *soule* for to amende
 þat rygt bi leue hym tagte, and gef hym Cristendom.
R. Gloucester, p. 73.

ge seggeþ soþ bý mý *soule* quap ich, ich have seýen hit ofte
 Her smýt no þynge so smerte. ne smelleþ so foule
 As shame. *Piers Plouhman. Vision*, p. 228.

Such a barn was ýbore. in Bethleem þe cyte
 þat mannes *soule* sholde save. and sýnne destrúye.
Id. Ib. p. 352.

SOUL.

For what profitith it to a manne if he wyne al the world and suffre peyryng of his soule? or what chaungyng schal a man give for his soule?
Wiclif. Matthew, ch. xvi.

What shall it profyt a man, thoughe he should wyne all the whole worlde yf he loose his owne soule? Or els what shall a man giue to redeme hys soule againe with all?
Bible, Anno 1551.

And all that wrought is with a skilful thought,
 The gost, that from the fader gan procede,
 Hath souled hem withouten any drede.

Chaucer. The Second Nonnes Tale, v. 15795.

Who so can wel vnderstand, is shapen to be saued in souled blysse.
Id. The Testament of Loue, book iii.

For thy good is whyle a man may
 Echone to sette peace with other
 And louen at his owne brother
 So maie he wyne worldes welthe,
 And aftirwarde his soule helthe.

Gower. Conf. Am. Prologue.

The perfitt forme, that God hathe geuen to ether man,
 Or other beast, dissolve it shall to earth wher it began;
 And who can tell yf that the soule of man ascende,
 Or with the body of it dye, and to the groun descende.

Surrey. Ecclesiastes, ch. iii.

Thou hast giv'n me to possess
 Life in myself for ever, by thee I live,
 Though now to death I yield, and am his due
 All that of me can die, yet that debt paid,
 Thou wilt not leave me in the loathsom grave
 His prey, nor suffer my unspotted soule
 For ever with corruption there to dwell.

Milton. Paradise Lost, book iii. l. 243.

Woman is her name, of man
 Extracted; for this cause he shall forego
 Father and mother, and to his wife adhere;
 And they shall be one flesh, one heart, one soule.

Id. Ib. book viii. l. 496.

But to guide nations in the way of truth
 By saving doctrine, and from error lead
 To know, and, knowing, worship God aright,
 Is yet more kingly, this attracts the soul,
 Governs the inner man, the nobler part.

Id. Paradise Regained, book ii. l. 473.

Who, comming to that soule-diseased knight,
 Could hardly him intreat to tell his grief;
 Which knowne, and all, that noyd his heavey spright,
 Well searcht, eftsoones he gan apply relief
 Of salves and med'cines, which had passing prief.

Spenser. Faerie Queene, book i. can. 10.

By East and West let France and England mount,
 Their battering canon charged to the mouthes,
 Till their soule-fearing clamours haue braul'd downe
 The flintie ribbes of this contemptuous citie.

Shakspeare. King John, act ii. sc. 2. fol. 6.

Oh slaue, of no more trust
 Then loue that's hyr'd? What goest thou backe, yⁿ shalt
 Go backe I warrant thee; but lle catch thine eyes
 Though they had wings. Slaue, soule-lesse villain, dog.

Id. Antony and Cleopatra, act v. sc. 2. fol. 366.

Unto the first of these [parts of human knowledge] the consideration of the original of the soul, whether it be native or adventive, and how far it is exempted from laws of matter and the immortality thereof, and many other points do appertain; which have been not more laboriously inquired than variously reported; so as the travel taken there, seemeth to have been rather in a maze than in a way.

Bacon. Advancement of Learning, vol. i. part ii. fol. 71.

Yea we are guilty of soul-murder, which is so much the more heinous by how much the soul is more precious than the body.

Hopkins. Works, fol. 367. Brotherly Admonition.

But taking, as we ordinarily now do, (in the dark concerning these matters,) the soul of man for an immaterial substance independent from matter, and indifferent alike to it all, there can from the nature of things be no absurdity at all to suppose that the same soul may, at different times, be united to different bodies, and with them make up, for that time, one man.

Locke. Works, vol. i. fol. 152. Of Identity and Diversity.

When we speak of the soul as created naturally immortal, we

mean that it is by the divine pleasure created such a substance, as not having in itself any composition or other particles of corruption, will naturally, or of itself continue for ever; that is, will not by any natural decay, or by any power of nature, be dissolved or destroyed; but yet nevertheless depends continually upon God, who has power to destroy or annihilate it, if he should so think fit.

Clarke. Letter to Mr. Dodwell.

My survey of man I shall begin with the soul of man by reason it is his most noble part, the copy of the divine image in us; in which we have enough to fill us with admiration of the munificence, power, and wisdom of the infinite Creator, when we contemplate the noble faculties of this our superiour part.

Derham. Physico-Theology, book v. ch. i.

Yet still you travel with unwearied toil,
 And range around the realm without control,
 Among my sons for proselytes to prowl,
 And here and there you snap some silly soul.

Dryden. The Hind and the Panther, part ii.

And sure, if aught below the seats divine
 Can touch immortals, 'tis a soul like thine;
 A soul supreme, in each hard instance try'd,
 Above all pain, all anger, and all pride;
 The rage of power, the blast of public breath,
 The lust of lucre, and the dread of death.

Parnell. To the Earl of Oxford.

In like manner he resolved that the soul of the world (for such a thing is always supposed by him) was not made by God out of nothing neither, nor out of any thing inanimate and soulless pre-existing, but out of a pre-existing, disorderly soul, was brought into an orderly and regular frame.

Cudworth. Intellectual System, book i. ch. iv. fol. 215.

To say, that though none of the parts alone have life in them, yet the conjunction of them altogether maketh life, is absurd; it being impossible that life and soul should result from a congeries of lifeless and soulless [soul-less] things; or that mindless things put together should beget mind.

Id. Ib. book i. ch. v. fol. 823.

Four different opinions have been entertained concerning the origin of human souls. 1. That they are eternal and divine: 2. That they were created in a separate state of existence, before their union with the body: 3. That they have been propagated from the original stock of Adam, who contained in himself the mental as well as the corporeal seed of his posterity: 4. That each soul is occasionally created and embodied in the moment of conception.

Gibbon. Decline and Fall of the Roman Empire, ch. xlvii.

The second best chattel was reserved to the church as a mortuary; and in the laws of King Canute this mortuary is called soul-scot, (sawt-sceat,) or symbolum animæ.

Blackstone. Commentaries, vol. ii. book ii. ch. xxviii.

SOULAMIA, in Botany, a genus so called by Lamarck from Soulamon, the native name of the plant. It belongs to the class Monadelphica, order Hexandria, and the natural family of Polygalææ. Generic character: calyx of five sepals, three outer ones small, two inner ones larger and concave; petal one, concave; stamens six; capsule compressed, suberose, orbicular, emarginate, two-celled, not opening; seeds exalbuminous.

This genus contains only one known species, *S. amara*, a shrub, a native of the Moluccas and Java. The leaves are quite entire, and crowded; the racemes short and axillary, and the flowers white.

SOULANGIA, in Botany, a genus so called by Brogniart after M. Soulange Bodin, a nurseryman near Paris. It belongs to the class Pentandria, order Monogynia, and the natural family of Rhamnææ. Generic character: tube of calyx obconical, adnate to the ovary; limb five-cleft; petals five, cucullate; stamens hidden under the petals; anthers reniform, one-celled; disk epigynous, pentagonal, fleshy; style simple, crowned by a three-toothed stigma; fruit inferior, marked above by a large areola, containing three seeds.

A genus divided from *Phyllica*, consisting of about twelve species, all shrubs, natives of the Cape of Good Hope, with alternate, usually cordate, or lanceolate

Lord Berners. *Froissart. Cronycle*, vol. i. ch. xviii.

Dismayed with so desperate deadly wound
And eke impatient of unwonted payne
He lowdly brayd with beastly yelling *sound*,
That all the fieldes rebellowed againe.

Spenser. *Faerie Queene*, book i. can. 8.

The league was in solemne wise confirmed, and such punished
as had doone anie thing *sounding* to the breach of the same.

Holinshed. *Historie of Scotland. Feritharis.*

And what you know we take delight to hear,
That you are ever *sounding* in our ear;
And yet so shameless, when you tempt us thus,
To lay the fault on beauty and on us.

Drayton. *Epistle of Mrs. Shore to Edward IV.*

The nature of *sounds* hath in some sort been inquired, as far as
concerneth musick, but the nature of *sounds* in general hath been
superficially observed. It is one of the subtlest pieces of nature

Bacon. *Natural History*, sec. 114.

But for your words, they rob the Hibla bees,
And leaue them hony-lesse.

ANT. Not stinglesse too.

BRU. O yes, and *soundlesse* too;

For you haue stolne their buzzing, Antony,
And very wisely threat before you sting.

Shakspeare. *Julius Cæsar*, act v. sc. 1. fol. 127.

That which is conveyed into the brain by the ear is called
sound; though, in truth, till it come to reach and affect the percep-
tive part, it be nothing but motion. The motion, which produces
in us the perception of *sound*, is a vibration of the air, caused by an
exceeding short, but quick, tremulous motion of the body, from
which it is propagated; and therefore we consider and denominate
them as bodies *sounding*.

Locke. *Elements of Natural Philosophy*, ch. xi.

Our author seems to *sound* a charge, and begins like the clangor
of a trumpet.

Dryden. *Dedication to the Æneis*.

Every articulate word is a different modification of *sound*; by
which we see, that from the sense of hearing by such modifications
the mind may be furnished with distinct ideas to almost an infi-
nite number.

Locke. *Of the Human Understanding*, book ii. ch. xviii.

Keep to your subject close in all you say;
Nor for a *sounding* sentence ever stray.

Dryden. *The Art of Poetry*, ch. i.

Where each old poetic mountain
Inspiration breath'd around;
Every shade and hallow'd fountain
Murmur'd deep a solemn *sound*.

Gray. *The Progress of Poesy*.

SOUND, *v.* } A. S. *sund*, *mare*, *fretum*, *vadum*.
SOUND, *n.* } Fr. *sonde*, *sonder*; Sp. *sondar*. To
SO'UNDING, *n.* } prove, try, feel, search the depth or
SO'UNDLESS. } bottom of. The A. S. *sundrian*,

syndrian, (to *sunder*,) is to separate, to divide, to dis-
tinguish; and, consequently, to discriminate, to investi-
gate, to examine, and hence, (as Cotgrave,)

To prove, try, feel, search. the depth or bottom of.

Sound, a bay or frith, (*sinus*,) the Glossarist to G.
Douglas says, "is any great indraught of the sea betwixt
two headlands, where there is no passage through, as
the entrance into the Baltick between Denmark and
Norway is eminently called;" (betwixt two headlands,
i.e. dividing, separating them.) Wachter rejects this
Etymology, without reason.

Sound of a fish, the swimming bladder; A. S. *sund*,
natatio, is probably from the A. S. verb *swimman*.
The Pool of Siloa (*natoria*) is in the Goth. version
swumsa.

A *sond*, Fr. *sonde*, is also a probe.

And from alofte the stewarde of our state,
(The *sounding* plumbe) in haste poste hast must raunge,
To trye the depth and goodnesse of our gate.

Gascoigne. *Voyage into Hollande. Anno 1572.*

And whyles I hearken what the saylers saye,
The *sownder* sings, fadame two full no more.

Id. Ib.

PEM. Then I, as one that am the tongue of these
To *sound* the purposes of all their hearts.

Shakspeare. *John*, act v. sc. 2.

JAM. Though there were an ambush

Laid for my life, I'll on and *sound* this secret.

Beaumont and Fletcher. *The Spanish Curate*, act iii. sc. 4.

Your shallowest help will hold me up afloat,
Whilst he upon your *soundless* deep doth ride.

Shakspeare. *Sonnet 80.*

SOUND.

Much like a man, who dreaming in his sleepe
That he is falling from some mountaine steepe
Into a *soundlesse* lake, about whose brim
A thousand crocodiles doe waite for him.

Browne. Britannia's Pastorals, book ii. song 2.

We continued this course till the following night, and then frequently brought to, to try if we were in *soundings*; but it was the 5th of November, at nine in the morning, before we struck ground, and then we had forty-two fathom, and a bottom of grey sand mixed with shells.

Anson. Voyages, book iii. ch. vi. p. 462.

'Tis very probable that the great bending between New Holland and New Guinea may have both rivers and lagunes, which may cause these great tides; or else there may be a passage of the sea between both places, as it is laid down in some draughts; or if neither of these, there may be at least a large and deep *sound*.

Dampier. Voyages, part iii. ch. viii. p. 98.

My orders to Mr. Burney were first to look well into East Bay, and then to proceed to Grass Cove, the place to which Mr. Rowe had been sent; and if he heard nothing of the boat there, to go further up the *sound*, and come back along the west shore.

Cook. Voyages, vol. iv. book iv. ch. viii. p. 229.

SOUND, adj. } A. S. *sund, gesund*; D. *ghesond*,
So'UNDLY, } Ger. *sund, gesund*; Sw. *sund*. Wach-
So'UNDNESS. } ter refers to the Gr. *σως*, and Lat. *sanus*; Ihre to the Lat. *sanus* only. In A. S. it is also *sund-full, gesund-full, integer, sanus, prosperus*. It may be from the A. S. *sunder, divisus, distinctus*, divided, distinct, or separate, sc. from all other, and consequently, entire, whole.

Whole; wholesome; healed or healthy; robust, strong; fixed or fast: *sound* is also used as equivalent to *sane*,—wise, judicious.

Lo, he seide, þei clepude me sam ded kyng some,
And get ich habbe leuer sam ded hem ouercome,
þan hol and *sond* be ouercome.

R. Gloucester, p. 163.

So fareth hit by þe ryghtful
þauh he falle he falleþ nat. bote as ho fulle in a bote
þat aý is saf and *sounde*. þat suteþ with ýnne þe borde
Sot hit fareþ quaþ þe frere. by ryghtful mannes fallýnge.
Piers Plouhman. Vision, fol. 168.

To Rome is come this holy creature,
And findeth ther hire frendes hole and *sound*.

Chaucer. The Man of Lawes Tale, v. 5569.

Now God that art of trouth souveraine,
And seest how I lie for trouth bound,
So sore knit in loues fyrie chaine,
Euen at the death through gyrt with many a wound.
That likely are neuer for to *sound*.

Id. The Complaint of the Black Knight, p. 341.

And when she syth withouten drede
Hir lorde vpon his owne grounde,
That he was come safe and *sounde*,
In all this worlde ne might be
A gladder woman than was she.

Gower. Conf. Am. book vi.

The cruell steele, which thirld her dying hart,
Fell softly forth, as of his owne accorde;
And the wyde wound, which lately did dispart
Her bleeding brest and riven bowels gor'd,
Was closed up, as it had not beene sor'd;
And every part to safety full *sound*,
As she were never hurt, was soone restor'd.

Spenser. Faerie Queene, book ii. can. 12.

But if pride now
Should catch a fall in what I am attempting,
'Tis but a proverb *sound* and a neck broken.

Beaumont and Fletcher. Women Pleas'd, act i. sc. 3.
Nor will it ought empaire a king to give a *sound* content
To any subject *soundly* wrong'd.

Chapman. Homer. Iliad, book xix.

Hast thou a living soul, a human sense,
To like, dislike, prove, order, and dispense?
The depth of reason *soundly* to advise,
To love things good; things hurtful to despise?
Drayton. The Black Prince to the Countess of Salisbury.

BER. My thanks and dutie are your maiesties.

KIN. I would I had that corporall *soundnesse* now,
As when thy father, and my selfe, in friendship
First tride our souldiership.

Shakspeare. All's Well That Ends Well, fol. 232.

I will not answer for the acuteness, much less for the *soundness* of his distinction.

Waterland. Works, vol. viii. p. 238. The Sacramental Part of the Eucharist explained.

So the French, when our generals *soundly* did pay 'em,
Went triumphant to church, and sang stoutly Te Deum.
Swift. A Left-handed Letter.

Courteousness is the skin and outside of virtue, and though a man would wish in the first place to enjoy vigour of limbs and *soundness* of constitution, yet if he can have a good skin too it is no detriment to his person.

Search. Light of Nature, vol. i. part ii. ch. xxxiv. p. 322.

SOUNDING, in *Navigation*, denotes the act of taking the sea's depth by means of the line and lead.

Though this practice must have been, in some degree, coeval with the art of navigation, it is very sparingly noticed by ancient authors. It is, however, mentioned by Herodotus, ii. 5. and 28. where the name of the sounding-line occurs, (*καταπειρητηρη*, see Lambin in Plaut. Aulul. p. 184.) and in the account of St. Paul's shipwreck at Melita, where the verb occurs (*βολιζω*) which expresses the act of sounding. By modern navigators it is justly regarded as an operation of paramount necessity, especially when near the coast, during the night, or in foggy weather, or where there is a suspicion of rocks or shoals in the neighbourhood. In many parts of the ocean the depth is too great to be explored by the methods commonly employed on shipboard, in which localities a vessel is said to be "out of Soundings." In others, as for example in the Channel, the German Ocean, over the Bank of Newfoundland, &c., where the average depth is moderate, the line and lead are in frequent requisition; and the depth, as ascertained by a number of observations, is marked on the best mariners' charts.

The lead used in Sounding is commonly of the shape of a lengthened cone, with a sort of handle at the top to which the line is secured, and a hollow space at the bottom, which, when the lead is used, is generally *armed*, that is to say filled with tallow, in order to ascertain the nature of the bottom by means of the shells, sand, ooze, or other substances adhering to it when brought up. Two kinds of plummet are employed; the hand-lead of eight or nine pounds for moderate depths, and the deep-sea lead, weighing twenty-five pounds or upwards, where many fathoms of line are required. The process of taking the depth with the hand-lead is very simple, as will be perceived from the following description, extracted from Falconer's Dictionary.

"Sounding by the hand-lead, which is by seamen called heaving the lead, is generally performed by a man who stands in the main-chains to windward. Having the line all ready to run out without interruption, he holds it nearly at the distance of a fathom from the plummet, and having swung the latter backwards and forwards three or four times in order to acquire the greater velocity, he swings it round his head, and thence as far forward as necessary; so that, by the lead's sinking while the ship advances, the line may be almost perpendicular when it reaches the bottom. The person sounding then proclaims the depth of the water in a kind of song, resembling the cry of hawkers in a city. Thus, if the mark of five fathoms is close to the surface of the water, he calls "By the mark five!" And, as there is no

SOUND.

SOUND
ING.

SOUND. mark at four, six, eight, he estimates those numbers, and calls "By the dip four!" &c. If he judges it to be a quarter or a half more than any particular number, he calls 'And a quarter five!' 'and a half four!' &c. If he conceives the depth to be three quarters more than a particular number, he calls it a quarter less than the next; thus, at four fathoms and three quarters, he calls 'A quarter less five!' and so on."

ING.

SCUR.

In order to sound with the deep-sea lead a little more precaution is requisite. It is usual to bring the ship to, to retard her course, the lead is then thrown as far as possible from the ship on the line of her drift, so that as it sinks the ship drives more perpendicularly over it. Sometimes a number of men are stationed at intervals along the deck, each holding a coil of line in his hand. When the lead is thrown, these coils are let go in succession until the bottom is found. The difficulty of obtaining correct Soundings in deep water is much increased by a gale of wind. In this case the lead is usually passed from the weather quarter round the stern to leeward; the ship is then brought to in such a manner as to back near to the spot where the lead is thrown, by which means a great deal of line may be run out, almost perpendicularly. The lead being armed with tallow shows whether the bottom has been reached, and what is the nature of it. In all cases, the depth in fathoms and the quality of the bottom, whether rock, shells, sand, mud, or weeds, are to be entered on the ship's log-book, and constitute an important part of its contents. Indeed, in continued foggy weather, when there are no means of determining the latitude by a solar observation, the Soundings often help materially to determine the actual position of a ship.

When the depth of the sea amounts to many hundred fathoms, it becomes impossible to determine it by the methods usually employed at sea, the sinking of the lead being prevented, not only by the extreme density of the water, but by the counterpoise of the line. Several ingenious machines have been invented for the purpose of determining the sea's *altitude*, as it is termed, at extraordinary depths; but the employment of them relates more properly to experimental philosophy than to practical navigation.

SOUP. See **SUP.**

SOUR, adj.

SOUR, v.

SO'URISH

SO'URLY

SO'URNESS.

To trouble, to distress; to be, or cause to be, harsh, unpleasing, unkind; morose, severe.

Sour, applied to the taste, is equivalent to acid; and the Lat. *tristis* is so used,

Be ye war of the *sour* dough of Farisees and of Saduceis: thanne thei undirstonden that he seide not to be war of *sour* dough of looves; but of the techyng of Pharisees and Saducees.

Wiclif. *Matthew*, ch. xvi.

For wailed wine and meates thou had tho,

Take moulded bread, pirate, and sider *soure*.

Chaucer. *The Complaint of Creseide*.

Thus maie a man's wit be lerned

Of hem, that so delites taken;

Whan thei with death ben ouertaken,

That erst was swete is than *soure*.

Gower. *Conf. Am.* book vi.

Why looke you so *sowerly* good brethren? Why do you not rather giue hym great thankes.

Frith. *Workes*, fol. 79. *Ppon M. William Tracie's Testament*.

And as thou couldest not see leauen though thou brakest up a

loafe, except thou smelledst or tastedst the *sourenes*, eue so couldest thou neuer see true faith or loue, except thou sawest workes.

Tyndall. *Workes*, fol. 225. *Exposition of Matthew*, ch. vi.

The tartnesse of his face, *soures* ripe grapes.

Shakspeare. *Coriolanus*, fol. 28.

His lovely words her seem'd due recompence

Of all her passed paines; one loving houre

For many yeares of sorrow can dispenge;

A dram of sweete is worth a pound of *soure*.

Spenser. *Faerie Queene*, book i. can. 3.

Gom. Have you never

Heard of a Roman lady (Oriana)

Remembred as a president for matrons,

(Chaste ones, I pray you understand,) whose husband,

Tax'd for his *soure* breath by his enemy,

Condemn'd his wife, for not acquainting him

With his infirmity?

Beaumont and Fletcher. *The Knight of Malta*, act iii. sc. 2.

All greatest sweetes were sugred first with *soures*,

The headlesse course of vncontrolled houres,

To all difficulties a way vnlockes.

Stirling. *Aurora*, song 79.

When pleasing Bourdeaux falls unto his lot,

Some *sourish* Rochelle cuts thy thirsting throate.

Hall. *Satire* 2. book v.

As touching the nature of leuain, certain it is that it proceeded of *sourenesse*.

Holland. *Plinie*, book xviii. ch. xi.

To torment and afflict ourselves needlessly, is not more unnatural in itself, than it is displeasing to God, who delights in the happiness of his creatures, and chooses rather an easy and cheerful, than an austere and *sour* obedience.

Waterland. *Works*, vol. ix. p. 47. *Sermon* 3.

To this reply'd the stern Athenian prince,

And *sourly* smil'd; In owning your offence

You judge yourself; and I but keep record

In place of law, while you pronounce the word.

Dryden. *Palamon and Arcite*, book ii.

It takes off the *soureness* and moroseness of our spirits, and makes us affable and courteous, gentle and obliging, and willing to embrace with open arms, and an hearty love, all sorts and conditions of men.

Sharp. *Works*, vol. i. p. 41. *Sermon* 2.

They, who run into such extremities, make religion appear uninviting to others, and lay a heavier burthen on themselves than they will be able to bear, at least without *souring* their tempers.

Secker. *Works*, vol. ii. p. 347. *Sermon* 23.

All hardships under which men put themselves of their own accord, not being enjoined in Scripture, nor evidently needful to preserve them from sin, and to raise their thoughts to a better world, (especially if they tend to promote rigour and *sourness* rather than mildness and humility,) hurt instead of benefiting them, and discredit religion with others.

Id. *Ib.* *Sermon* 2.

SOURCE, n. Fr. *source*, *sourceer*; Menage thinks from *sourgir*, Lat. *surgere*, to arise. It has probably proceeded immediately from the It. *sorsi* or *sursi*, preterperfect of *sorgere*, to arise, to spring.

That from which any thing rises or springs, takes its origin; the origin or beginning, the spring or fountain. See the Quotation from Stewart.

Therefore right as an hauke upon a *sours*
Up springeth into the aire, right so praieres
Of charitable and chast besy freres,
Maken hir *sours* to Goddes eres two.

Chaucer. *The Sompnoures Tale*, v. 7520.

Me fleyng at a swappe he hent,
And with his *sours* againe vp went,
Me caryng in his clawes starke.

Id. *The House of Fame*, book ii.

Wher as the Poo out of a welle smal
Taketh his firste springing and his *sours*,
That estward ay encreseth in his cours.

Id. *The Clerkes Prologue*, v. 7924.

The faded lockes fall from the loftie oke,
The fouds doe gaspe, for dried is their *sourse*,
And fouds of teares flow in theyr stead perforce.

Spenser. *The Shepherd's Calendar*. November

SOUR

SOURCE

SOURCE.

SOUSE.

This was to me that overflowing *source*,
From whence his bounties plentifully spring,
Whose speedy current with unusual force
Bare me into the bosom of the king.

Drayton. The Legend of Thomas Cromwell.

The head or *source* thereof ariseth at the foot of the utmost mountains of the Pelignians.

Holland. Plinie, book xxxi. ch. iii.

This *source* of ideas every man has wholly in himself; and though it be not sense, as having nothing to do with external objects, yet it is very like it, and might properly enough be called internal sense.

Locke. On Human Understanding, vol. i. book ii. ch. i.

All rivers have their *source* either in mountains or elevated lakes; and it is in their descent from these that they acquire that velocity which maintains their future currents.

Goldsmith. History of the Earth, vol. i. ch. xiv. p. 115.

If there is any one English word which is now become virtually literal, in its metaphorical applications, it is the word *source*. Who is it that ever thought of a spring or fountain of water in speaking of God as the *source* of existence; of the sun as the *source* of light and heat; of land as one of the *sources* of national wealth; or of sensation and reflection as the only *sources* (according to Locke) of human knowledge; propositions which it would not be easy to enunciate with equal clearness and conciseness in any other manner?

Stewart. Philosophical Essays, ch. iv. fol. 203. Essay 5.

SOURDE, v. } Fr. *sourdre*, from *sourger*; Lat.
SOURDEN, v. } *surgere*, to arise.

To arise, to raise; to spring, to issue; to have or take its *source*.

The spices that *sourden* of pride, sothly whan they *sourden* of malice imagined, avised, and forecaste, or elles of use, ben dedly sinnes, it is no doute.

Chaucer. The Persones Tale, p. 154.

Now sith that so is, that ye have understand what is pride, and which be the spices of it, and how mennes pride *sourdeth* and springeth; now ye shul understand which is the remedie ayenst it.

Id. Ib. p. 155.

But to all this was the towne of Gaunt repugnaunt in so moche y^t mortall warry begane to *sourde* atwene y^e sayd and the towne of Brugys and other.

Fabyan. Chronicle. Caroli V. Anno 3.

For the whiche murdre *sourdyd* great warre atwene Kynge John [of France] and the sayde Kynge of Nauerne, whiche contynued many yeres after.

Id. Ib. John, Anno 3.

Tha the Cristen prynces seinge that they were thus deluded, toke theyr aduyce how they myghte contynewe theyr pylgrymage vnto the holye cytie of Jerusalem; but, in this cōsayll, *sourdened* and quykened so many opynyons, that eche was contrarious vnto other.

Id. Ib. ch. 234.

SOUSE, v. } From the Lat. *salsum*, as the Dutch
SOUSE, n. } from *salitum*; D. *soute*, *soute-bryn*,
soute-pekkel; salt, salt-brine, salt-pickle.

To salt or immerge, steep, sink or soak in salt water; to immerge, plunge, throw into any liquid. It is also written *soos*. See the Quotation from Swift, and also from Tusser, in v. *Slab*.

To *souse*, Ger. *saussen*, *strepitum edere*, from the sound of wind, or of falling water, says Wachter: it may be of any thing falling, plunging, splashing, into water; and thus,

To dash against, to plunge or make a plunge; to throw or fall precipitately.

Why doe not I my wery Muses frame,
(Although I bee well *soused* in this shoure,)

To write some verse in honour of his name?

Gascoigne. Psalme of De Profundis.

As when a griffon, seized of his pray,

A dragon fiers encountreth in his flight,
Through widest ayre making his ydle way,
That would his rightfull ravine rend away;

With hideous horror both together smight,
And *souce* so sore, that they the heavens affray.

Spenser. Faerie Queene, book i. can. 5.

In which his worke he had sixe servants prest,
About the andvile standing evermore
With huge great hammers, that did never rest
From heaping stroakes which thereon *soused* sore.

Spenser. Faerie Queene, book iv. can. 5.

Sending the King woord that he had prouided at his brother's manor, against his coming, good plentie of *souse* and powdred meat, whatsoeuer he should find beside.

Holinshed. The Historie of England, vol. i. book viii. ch. vii. p. 753.

But when the falconers take their hawking poles in hand,
And crossing of the brook, do put it over land;
The hawk gives it a *souse*, that makes it to rebound,
Well near the hight of man, sometimes, above the ground.

Drayton. Poly-olbion, song 20.

DIO. But what shall we do the whilst?

GET. Kill swine, and *souse* 'em,

And eat 'em when we have bread.

Beaumont and Fletcher. The Prophetess, act i. sc. 3.

How like a wildfire
She'll leap into your bosom; then seeing me,
Her conscience and her fears creeping upon her,
Dead as a fowle at *souse*, she'll sink.

Id. The Chances, act iv. sc. 1.

I am of that opinion, and will dye in't,
There is no understanding, nor can be
In a *soust* souldier.

Id. The Captain, act i. sc. 2.

JAG. I'll tell you in a word, I am sent to lay
An imposition upon *souse* and puddings,
Pasties, and penny custards.

Id. The Woman's Prize, act i. sc. 3.

GET. Shall he be roasted whole,
And serv'd up in a *souce-tub*?

Id. The Prophetess, act i. sc. 3.

Do you think, master, to be Emperour
With killing swine? you may be an honest butcher,
Or allied to a seemly family of *sowce-wives*.

Id. Ib.

Come on then, satire! general, unconfin'd,
Spread thy broad wing, and *souse* on all the kind.

Pope. Epilogue to Satires. Dialogue 2.

From wholesome exercise and air,
To *sossing* in an easy chair.

Swift. Stella at Wood-Park.

Between these two extendeth

A slit from ear to ear,

That every hour

Gapes to devour

The *sowce* that grows so near.

Butler. Ballad on Oliver Cromwell, p. 1.

These, Nature's commoners, who want a home,
Claim the wide world for their majestic dome;
They made a private study of the street;
And, looking full on every man they meet,
Run *souse* against his chaps.

Young. Epistles to Mr. Pope. Epistle 1.

SO'UTER, } A. S. *sutere*, *sutor*, a shoe-maker,
SO'UTERLY, } Lanc. *Sowter*, Somner. Still used in
SO'UTAGE. } Scotland.

Soutage, the material in which any thing is sowed up, packed up; in which hops are packed up.

The diuel made a reve for to preche,
Or of a *souter*, a shipman, or a leche.

Chaucer. The Reves Tale, v. 3901.

Or being a simple *sowter*, will find fault at the shape of the legge; or if they be not there stopped, they will not spare to step up higher, and saie, that Apelles painted dame Venus verie deformed and euill fauoured.

Gascoigne. To the Youth of England.

Take *soutage*, or hair, that covers the kell.

Tusser. August's Husbandry, p. 193.

Some close them up dry in a hogshhead or fat,
Yet canvas or *soutage* is better than that.

Id. Ib. p. 194.

And as too the special bassawes of that proude *souterly* Sowdan,
may we well consyder the worlde and the fleshe.
Sir Thomas More. Workes, fol. 1296. Upon the Passion of Chryste.

SOUSE.

SOUTER.

SOUTER.

SOUTH.

For else to wander up and downe awaited on
And unregarded in my place and project,
Is for a *souter's* soule, not an old souldier's.
Beaumont and Fletcher. The Mad Lover, act ii. sc. 1.

SOUTERRAINE, Fr. *souterrain*, subterrane.

Defences against extremities of heat, as shade, grottoes, or *souterrains*, are necessary preservatives of health. *Arbuthnot.*

SOUTH, } Fr. *sud*; It. *sud*; Sp. *sur*. Wachter
SO'UTHERN, } suggests the Ger. *sieden*, *æstuar*,
SO'UTHERLY, or } *fervere*; A. S. *seoth-an*, to seeth;
SO'UTHERNLY, } this is adopted in the Dictionary of
SO'UTHLY, } Menage. And Tooke considers
SO'UTHWARD, } *south* to be the past participle of
SO'UTHING, n. } the A. S. verb *seoth-an*, *coquere*.

South, geographically, the point at which the sun is seen by us at mid-day.

From *souþ* to norþ he ys long eigte hondred myle.
R. Gloucester, p. 1.

& cleymed him for þer chefe of west & of est,
Of north and of *south* in length & in brede.
R. Brunne, p. 19.

Hit was not longe þer aftur þat þis Picars ne come
Out of Scotland *souþward*, and townes faste noma.
R. Gloucester, p. 413.

And whanne the *south* blew thei gessiden hem to holde pur-
poos. *Wiclif. The Dedis of Apostlis, ch. xxvii.*

When the *south* winde blewe, they supposinge to obtayne their
purpose lowsed vnto Asson. *Bible, Anno 1551.*

And eke Nero gouerned all the peoples, that the violent wind
northus skorclith, and baketh the brennyng sandes by his drie
heate, that is to saie, all the peoples in the *southe*.
Chaucer. Boecius, book ii. met. 6.

But trusteth wel, I am a *sotherne* man.
Id. The Persones Prologue, v. 17289.

And therefore vnderstande wel, than any two degrees that ben
ylyke far from any of these two heades, trust wel that thilke two
degrees ben lyke declinacion, be it *southward* or northwarde.
Id. Astrolabie, p. 460.

He lyueth *southly*, for deth which he not drede,
Hath hym hense tane, but yet he hoped sure.
Fabyan. Chronycle, ch. 117.

And evidently it appeareth, that when she is northerly, and retired
higher and farther from the earth, the tides are more gentle than
when shee is gone *southerly*; for then shee worketh neerer hand,
and putteth forth her full power.
Holland. Plinie, book ii. ch. xcvi.

It is the generall opinion of moderne astronomers, that the sun
in our time goeth not so farre *southerly* from vs in winter, as it
did in the time of Ptolomy and Hipparchus, neither in summer
commeth so much northerly towards vs as then.
Bainbridge in Hakewill. Apologie, book ii. ch. iv. sec. 4.

I will myself conduct thee on thy way,
When next the *southing* sun inflames the day;
When the dry herbage thirsts for dews in vain,
And sheep, in shades, avoid the parching plain.
Dryden. Virgil. Georgics, book iv.

Here the warm planet ripens and sublimes,
The well-baked beauties of the *southern* climes.
Id. Don Sebastian, act ii. sc. 2.

Not far from hence, if I observ'd aright
The *southing* of the stars, and polar light,
Sicilia lies; whose hospitable shores
In safety we may reach with struggling oars.
Id. Æneis, book v.

SOUTHAMPTON, a Borough Town and a County SOUTH-AMPTON.
in itself, is situated in Hampshire, at the union of the
rivers Test and Itching, which forms the large estuary
called Southampton Water. It is a handsome town of
considerable size, well built, well paved, and equally
suited for permanent residence and for the accommoda-
tion of the numerous visitors who resort thither to en-
joy the benefit of the air, which is considered particu-
larly healthy, and to drink the waters of a chalybeate
spring near the Bar Gate. Southampton is not of
Roman origin, and is first named in the Saxon Chronicle.
The venerable remains of the ancient walls are yet
standing in many places, but the early Saxon castle has
almost wholly disappeared, and of its few ruins a pros-
pect tower has been built, which commands a fine view
of the town, river, and beautiful adjacent country. The
Bar Gate is a very interesting relic of antiquity. It has
originally been a fortified gate-house, and part of it is
probably older than the Conquest, but it has received
great subsequent improvements, and has been greatly
enlarged in the reign of Edward III. On the North
front are two gigantic figures, said to represent Sir
Bevis of Southampton and the giant Ascupart, whom
he slew. Over the arch of the gate is the Town-hall.
There are five parish Churches in Southampton, of
which St. Michael's is the most worthy of note. It is a
very ancient structure, bearing evident marks of its
Saxon origin; but of the old columns every other one
has been removed, and those which remain now support
pointed arches. The central tower, which rises above
four low, massive, circular arches, is surmounted by a
lofty modern spire, forming a sea-mark to vessels enter-
ing the harbour. The other public buildings are five or
six dissenting chapels, public baths, assembly rooms,
a handsome theatre, a grammar-school, and several
charitable institutions, in particular the Domus Dei, a
hospital founded by two brothers in the reign of Henry
III., and given by Edward III. to Queen's College,
Oxford. The situation of Southampton well adapts it
for commerce, and it carries on a considerable trade,
principally import. Its manufactures are not important,
and consist chiefly of silks and carpets. Little histo-
rical interest is connected with Southampton, and no
circumstance in its annals appears worthy of mention,
except that it was the port whence the army of Agin-
court embarked, and the scene of the detection and
punishment of "those English monsters," the Earl of
Cambridge, Sir Thomas Grey and Lord Scrope, the
beloved and trusted friend of the monarch he, "for a
few light crowns, lightly conspired" to murder. They
were executed near the Domus Dei, and their bodies
interred in the chapel belonging to that establishment,
where a stone, set up within the last century, bears an
inscription recording the event. Southampton beach,
or its neighbourhood, it is said by Henry of Hunting-
don, was the scene of the well-known reproof given by
King Canute to the flatterers who would have persuaded
him that the waves were obedient to his voice. South-
ampton has sent two Members to Parliament from the
time of Edward I. Population, in 1831, 19,324. Dis-
tance from Winchester 12, from London 75 miles.

SOUTH SEA.

SOUTH SEA. "SOUTH SEA," (The,) an improper but familiar

appellation of the "Great Pacific Ocean," occupies so large a portion of the Western hemisphere that it has been proposed by some geographers to consider it as a fifth division of the globe, under the name of *Oceania* or *Oceanica*; (Malte-Brun, *Précis*, tom. iv. liv. lxxiv. 228.) but as that term applies to the ocean in general, as contradistinguished from the continents which it embraces, the restriction of it to one portion of the sea, however inconsiderable, appears to be objectionable.

Polynesia. *Polynesia*, another name derived from the numerous groups of islands scattered over this vast expanse of sea, is not liable to that objection, and has therefore been very generally adopted. It has consequently been mentioned in this work, in a former part of which (xxvi. 465.) its four great subdivisions were noticed. Of them the first, or *Polynesia Proper*, comprehends all those groups which are commonly known by the name of "the South-Sea Islands;" it therefore necessarily belongs to a description of the South Sea or Great Eastern Ocean. The meridians of 80° and 200° West longitude, and the parallels of 50° North and 80° South latitude, are the boundaries of the Pacific Ocean, commonly called "the South Sea," because the Southern portion of it was first traversed by European navigators; but it is divided by the equator into the Northern and Southern Pacific, each having an area of nearly the same magnitude.

Pacific Ocean. In the Southern Pacific, or South Sea properly so called, is found the greater number of those groups of islands which are comprehended under the term *Polynesia*, (Many Islands.) Their general direction from North-West to South-East seems to indicate two very extensive chains of submarine mountains, of which some of them are the summits; others may have been thrown up by submarine volcanoes; but many of the islands owe their origin, incredible as it may appear, to the work of almost gelatinous worms, which to a careless observer would appear the frailest and most insignificant production of the Creator. Extensive reefs formed by forests of millepores, madrepores, and other corallines, rising from unfathomable depths to the surface of the ocean, are in very many cases the substratum of these islands; and it may be truly said, that in this sea, habitable ground may be seen in every period of its progress, from the summits of the coral rock just peeping above the surface to the bed of shells and sand affording in calm weather a resting-place for sea birds and turtles, the dry level raised a few feet above the tide, the nascent islet covered with vegetable mould, and the habitable isle affording shelter, clothing, and sustenance in its overshadowing palm groves. Whoever has observed the polypus, often called the sea anemone, so common on our shores, or the jelly-fish, thrown upon the beach by a storm, will have a just notion of the substance of those animals whose calcareous nests form the coral reefs which are so much dreaded by navigators in the Eastern and Pacific Oceans; nor will he wonder that such structures can be formed by animals apparently so inadequate to the task when he recollects that most of these corallines are at first, and in their minuter parts, far more delicate and brittle than the

shell which is continually secreted by the snail, an animal almost as pulpy and inarticulate as the polypus.

SOUTH SEA. Four principal groups comprehend all the islands belonging to *Polynesia Proper*: 1. The Sandwich; 2. The Society; 3. The Friendly Isles; and 4. New Zealand. Of the second division an account will be found under the head of *TAHITI*, as Otaheite is now correctly named. The third will be given under *VAVAO*, one of the islands in that group; and the fourth under *ZEALAND*, as much new information may be expected respecting that, in several respects the most important division of *Polynesia Proper*.

The Sandwich Islands, stretching from 18° 50' to Sandwich 22° 20' N., and lying between 154° 45' and 160° 20' W., in a direction nearly from South-East to North-West, are ten in number, two of them being mere uninhabitable rocks. 1. The largest and Southernmost is *Hāwaii*, or *Hāwayi*, which, with the article, sometimes prefixed, becomes *O-Hwayi*, spelt *Owhy'hee* by its first European discoverers, who were singularly unfortunate* in their mode of expressing the sounds of names and words used by the *Polynesians*. 2. *Mawí* or *Mau-í*, to the North-West of *Hāwayi*, is somewhat larger than, 3. *Owahú* or *O-ahú*, but not so fertile or picturesque. 4. *Tawai* or *Tau-āi*, still in the same direction, but about 75 miles distant from *O-ahú*, is mountainous, and has finer scenery than the latter, but is less fertile and extensive. 5. *Morokái*, North-West of *Mawí*. 6. *Ranaí*, due South of *Morokái*. 7. *Nihau*, nearly due West of *Tawai*, and 8. *Tahuráwe*, South of the centre of *Mawí*, the remaining habitable islands in this group, are here arranged in the order of their respective magnitudes. 9. *Morokini*, between the two isles last named, and 10. *Taúra*, at some distance South-West of *Nihau*, are rocky, unproductive islets.

Ha-wai-í or *Hawayi*, and, with the article, *O-Hawayi*, the largest of these islands, is nearly triangular in form, and somewhat less than 300 miles in circumference, measuring about 97 miles from North-West to South-East, and about 78 from South-West to North-East. It may be considered as one large volcano, which has four craters, the largest of which, *Mauna Roa*, is not very far from its South-West extremity, and the other two, *Hwararái* and *Mauna Kea*, are nearly under the same parallel, the former on the Western, the latter on the Eastern side, and somewhat further from the Northern extremity of the island than *Māuna Roa* is from its Western angle. The great elevation of these mountains makes them visible at a very considerable distance, though they do not terminate in a slender cone like the

* The British missionaries, to whose unwearied zeal these islanders were first indebted for a knowledge of Christianity, among other far more important services to literature as well as religion, have added that of introducing an uniform and convenient mode of expressing the words of the *Polynesian* language. Fortunately some of them were natives of Wales; and as the ancient Britons have preserved the powers of the Roman alphabet little if at all altered, the Welsh was taken as the basis, and thus led to a far more simple and certain system of orthography than the anomalous one of the modern English tongue. Unhappily in one or two instances the fundamental principle is abandoned, so that the system is not invariably uniform, and as the long vowels are not marked, the reader is left to guess where the stress should be laid,

- SOUTH SEA.** Peak of Teneriffe. (Ellis, iv. 4, 5.) To the North-East of Māuna Roa, but at a much lower elevation, is the fourth crater, the singular and terrific volcanic lake of Kirawéa. Of these, the late Mr. David Douglas found, by a careful barometrical measurement, that the summit of Māuna Kéa is 13,587 feet, that of Māuna Roa 13,175 feet, and Kirawéa 3846 above the level of the sea. (*Geogr. Journ.* iv. 343.) Hwararāi is probably at least 10,200 feet in height, as Captain Otto Von Kotzebue, by an angle taken with his sextant, estimated its height at 1687·1 toises.* (*Entdeckungs-Reise*, ii. 22.) This, indeed, can only be considered as an approximation to the truth, but it may suffice to give some idea of the relative height of the lowest of the three principal mountains. At the foot of the hills there is a level belt of greater or less width, the ascent from which is in many places gradual, well watered either by streams descending to the sea, or by artificial channels formed for the purpose of inundating the fields of Taro or long-rooted arum, (*Arum macrorrhizon*.) At the height of 1500 feet above the sea commences the woody region, if it may be so termed, as its trees are principally ferns from four to forty feet high, clothed to their summits with other ferns of a more diminutive size. (Douglas in *Geogr. Journ.* iv. 333.) This verdant region, for such it is in the strictest sense, extends to the height of 8700 feet above the sea, and consists of beds of lava indescribably rugged, and continually moistened by fogs or showers. The woody tract terminates abruptly in the base of a more distinctly volcanic region broken by deep chasms, and presenting many small extinct craters, rising 1300 feet above the woody belt, and crowned, at a further height of 700 feet, by an extensive table-land covered with sand, gravel, broken lava, and ashes. This is the basis whence the conical peaks forming the summit of Māuna Kéa spring, only one of which is inaccessible from the steepness of its sides. (*Id.* 334.) From this point, in 19° 50' N., Māuna Hwararāi bears about West by South, and Mauna Róa South by West, a little to the North and East of which is the sunken crater or burning volcanic lake of Kirawéa. The intermediate tract of table-land is intersected by valleys, and covered with forests principally of Ohia, (*Eugenia Malaccensis*.) It is inhabited only by herds of wild cattle, sprung from those originally introduced by European navigators; the natives having neglected to rear them as domestic animals. The volcanoes, which may be said to encircle this central region, are not only the most striking features in its scenery, but are in some instances accompanied by phenomena peculiar to themselves.
- Kiraneah.** The lowest of them, Kirawéa, which has an elevation of not quite 4000 feet, has been visited by several Europeans, and is well described by Mr. Ellis; (*Polynes. Res.* iv. 229. *Journal*, &c. p. 125;) but as the account given by that accurate observer, the justly lamented Mr. David Douglas, is not only more concise, but, scientifically considered, more complete, it has been preferred in the following abridged extract. The volcano of Kirawéa, he observes, (*Geogr. Journ.* iv. 335.) instead of terminating, like most others, in a truncated cone, at the summit of which is the crater, is a vast sunken pit of an irregularly oval shape, the sides of which are almost perpendicular. Its activity is prodigious and almost incessant, though the last recorded eruption followed by a stream of lava occurred in 1787, and continued for a whole week. The last surviving priest of Pélé, the goddess presiding over the abyss, declared that he saw 5405 of his countrymen overwhelmed by the burning torrent. There are two black ledges or stages within the borders of this vast caldron; the first 715 feet, the second about 1000 feet from the upper rim or summit of the mountain, and 43 above the surface of the fluctuating liquid masses which Mr. Douglas very aptly terms volcanic lakes. The position of his tent at the North-West end of the basin, in 19° 25' 42" N., he calculated to be 1062 feet perpendicularly above the boiling surface. At the bottom of this abyss, which is seven miles and a half in circumference, (Ellis, iv. 254.) there are two lakes of liquid lava; the smaller, which is nearly circular, with a diameter 957 feet, lies at the Northern and broadest end of the basin, and can be approached within a few feet, when a strong wind drives away the vapour issuing from it. The larger lake at the South-West extremity is nearly 3600 feet in length, and heart-shaped, with a breadth of about 2100 feet between the lobes; but the heat near it is so intense that it is impossible to reach its brink. The ledge whence these lakes are viewed is itself a terrific spectacle,—an area of five miles square, presenting to the eye the surface of a black molten sea broken into vast ledges and crested masses of every size and shape, from the semblance of gigantic cables to threads of the finest hair. Over the surface of the lower ledge there are numerous chimneys or vents, some of which throw up slag, smoke, or steam. There are also three cones upwards of 20 feet high, and about 360 feet in diameter at their base, with lateral openings like the doors of an oven, into which it is possible to look and witness a terrific spectacle, a red-hot atmosphere, through which the volcano is discharging its ignited matter by a terminal vent-hole above. In each of these burning lakes there is a steady current Southwards, at the rate of about three miles and a quarter in an hour. The South end of both lakes thus presents one of the most magnificent spectacles in nature: a vast caldron of lava in furious ebullition, sometimes spouting up to the height of 70 feet, rolling and tossing in fiery waves, hurrying onwards, and at length precipitated down an elliptical fiery arch, of which the smaller has a span of about 426 feet, with a height of about 43 feet. In this awful arch the force of the lava is in some degree arrested by the escape of the gases, and large blocks are thrown back and literally spun into glassy filaments, which are carried by the wind all round the crater like the refuse of a flax-mill. The sound issuing at the same time from the archway can hardly be described; the thunder of all the steam-engines in the world would be a whisper to it. At night the scene is indescribably grand; “and never,” continues Mr. Douglas, (p. 337.) “can I forget that, in particular, which I witnessed on the 23d of January, (1834.) The sun set in all the glory of a tropical sky behind the majestic dome of Māuna Roa clothed in snow for 2000 feet from the summit; and as he crept behind the mountain the brilliancy and splendour of the volcano became more manifest. But when the nearly full moon rose
- SOUTH SEA.** Sunken crater.
- Burning lakes.**

* Captain Von Kotzebue's measurements of the other mountains are considerably in excess: Mauna Roa, according to him, measuring 2482·4 toises, and Mauna Kea 2180·1. He has also misapplied their names, for he says (ii. 110.) that “Mauna Roa is on the North-East side of O Waihi;” but the Map given by Mr. Ellis (iv. 1.) and the American missionaries (*Journ.* p. 13.) shows that he should have said Mauna Kea. The latter therefore, according to him, is 14,894·10 feet above the sea, and Mauna Roa 13,080·6 feet; a measurement differing only by 95 feet from that of Mr. Douglas.

SOUTH SEA. in silvery brightness from the bosom of the ocean, and, as if this was insufficient, the splendour of Sirius and Canopus was added, the whole gave the heavenly vault an indescribable magnificence, especially when contrasted with the perpetual, lurid, electric-like cloud which overhung the volcano. I sat for hours, and enjoyed the scene." On the 24th of January the temperature on the Northern brink of this crater was 66° , and the dew point 42° , while on the black ledge the thermometer stood at 89° and the drosometer at 41° . On the lava the mercury in the thermometer rose to 112° in the shade, and only three degrees higher in the sun; on the brink of the small lake it marked 124° . Here the dew point could not be found in three trials. The dryness was intense beyond description, and the heat overpowering. Mr. Douglas's "eyelids felt scorched and dried up," and dreadful head-aches were occasioned by his exertion and exposure. "The outlet of Kirawéa, called Punahala, i. e. 'Broken in,' is in $19^{\circ} 11' 51''$ N. latitude, and nearly in the same meridian as the volcano. In the course of fourteen miles of latitude many overflowings have taken place; and in some of the deep chasms seventeen layers may be counted, between each of which there is a fringed matting of fern bushes. The whole Eastern point of Hawáyi is one entire sheet of lava from the volcano."

The danger attending these laborious and instructive explorations is placed in a strong light by a circumstance mentioned by Mr. Douglas. "To the East of the crater just described,* at the distance," he adds, (p. 337.) "of 370 yards, there is a very perfect circular one of much smaller dimensions, which has enjoyed a long repose, for on the same level with its black ledge are found living trees with 120 concentric rings or annual layers† of timber. In June, 1832, on the neck between the two volcanoes, and on the exact spot where Lord Byron pitched a temporary house when, in 1825, he visited Kirawéa, called by him the volcano of Peli, the ground opened and discharged liquid lava for the period of three days into both craters which considerably filled them up. This was preceded by earthquakes; all vegetables touched by the lava were destroyed, except the ferns, which after a lapse of nineteen months rose strong through the fissures from one to ten feet deep, and have sent forth luxuriant fronds as though nothing had happened to them, much less that they had been deluged with fire.

Of the other mountains, the highest, Māuna Kéa, (i. e. White Mount,) has at first a gentle ascent, richly clothed with esculent fruit trees and plantations of taro (*Arum esculentum* and *macrorrhizon*) and other culinary vegetables. At the height of 1500 feet a thickly wooded region commences, abounding in large acacias, and an almost endless variety of ferns, some of which shoot up to the height of 40 feet; the upper boundary of this tract is 7200 feet above the extremity of the fertile belt, and, as it is continually watered by mists or showers, its perennial and feathery verdure is unrivalled in beauty. At its upper limit the forest breaks off abruptly; a more rapid ascent commences, and the flank of the mountain

is broken into deep chasms intermingled with small extinct craters. The last traces of vegetable life are marked by a whortle-berry, (*Vaccinium*), a thistle, and a rush, the second a singular plant of the syngenesious family. For 3300 feet this rugged ascent continues, and at 70 feet higher is the commencement of a vast table-land covered with sand, gravel, and stones, slag and ashes, to the depth of several feet; from which rise 11 peaks or ridges. One of these peaks, too steep to be ascended, rises 700 feet above the table-land. By the means of several observations the latitude of this plain was found to be $19^{\circ} 50' N.$; the elevation is 13,587 feet above the sea; and the dip of the magnetic needle was 45° on the 29th of January, 1834. Though of so great an elevation, the summit of this mountain is often bare of snow.

The summit of Māuna Róa (Great Mountain) is a vast dome of lava, indescribably rugged, the centre of which has a slight convexity, and is itself a very broad table-land, the highest part of which is on the North rim and East side of the great terminal crater. Its latitude is $19^{\circ} 27' 4'' N.$, and the snow upon it in winter is from three to five feet deep. The circumference of the great crater is rather more than six miles; that of the ancient, now extinct, orifice not less than 24 miles. In the Northern part there are appearances of more recent volcanic action, and wide unfathomable chasms. The Southern part, obviously the outlet to the lava, has probably been long in a state of repose.

The population of Hawáyi is estimated by Mr. Ellis at 85,000. The Western and Southern parts of the inhabited belt are the most populous districts; but as better harbours have carried trade, and consequently the court and most of the chieftains, to Oahú, the numbers on the former island are likely to decrease, unless the universal establishment of Christianity, by checking war, infanticide, and human sacrifices, more than compensates for the consequences of emigration. (Ellis, iv. 7.)

Oahú, the most fertile island belonging to this group, lies about 120 miles in a straight line nearly North-West of Hawáyi. It is about 30 miles from North-West to South-East, and 20 from East to West, and is traversed by a lofty chain of volcanic mountains, divided by the Plain of Eva (Pearl River) in the North-West into two branches, the former being the most elevated, but not above one-fourth of the height of the mountains in Hawáyi. The Southern branch terminates in the South-Eastern point. Large extinct craters of volcanoes may frequently be found, but they are now so overgrown with trees as generally to escape notice. The plain or vale of Hono-ruru, nine or ten miles long, and in some places two miles broad, one of the most fertile tracts in the island, has no productive mould more than two or three feet deep, beneath which there is a layer of volcanic ashes of a depth from 14 to 16 feet, resting on a bed of coral rock.* Water is found at the depth of 12 or 13 feet, but though fresh, it is evidently sea water filtered

* "Solid rock, by no means volcanic, but evidently calcareous," says Mr. Ellis, (iv. 12.) though he immediately afterwards adds, "in which branches of white coral, bones of fish, &c. are found." No doubt the consolidation of the coral by pressure deceived him. "The elevated islands," according to Chamisso, (ii. 40.) "are universally volcanic." "Beds of calcareous stone, formed of perpendicular strata of coral-sand or fragments of madrepores, are deposited at the foot of all the higher islands, and are the base of the plains and reefs with which most of them are surrounded." (Id. Ib.)

* The reader, to form a complete notion of this stupendous spectacle, should also read the accounts collected in many visits, and well given, by Mr. Ellis, (*Polyn. Res.* iv. 219—269. *Tour*, p. 207. *Journ.* p. 123—147.) The plate in Mr. Ellis's work, (frontispiece,) though much superior as an engraving, does not probably give so just an idea of the appearance of the volcano as that in the American edition of his *Journal*, (p. 136.)

through this porous rock, for it rises and falls with the tide. The vale of Hono-ruru or Hana-ruru is separated by a very difficult pass called Ka Pari, "the Precipice," from the valley of Anu-anu. This route, which in the upper regions is almost impassable, presents an endless variety of rich and picturesque scenery, the lower tracts being clothed in all the splendour of tropical vegetation, the upper a terrific assemblage of perpendicular black or ferruginous rocks. Hono-ruru has the best harbour in the whole of this range of islands, and has thence become their great mercantile port, and in a great measure the King's favourite residence. The principal river in Oahú is the Eva or Pearl river, about 12 miles North-West of Hono-ruru, and rather more than half way between them there is a small lake which furnishes, twice every year, more than two hundred barrels of salt. To the North-West of Hawaií is Mawí, in 20° 45' N., and 156° 30' W., an island formed of two peninsulas united by a broad isthmus. It is nearly 50 miles from East to West, but not 30 from North to South in its widest part; entirely volcanic, and in its Southern and largest portion has craters still probably in a state of activity. The Northern and smaller peninsula is highly cultivated. Its highest peaks are never covered with snow. About 75 miles North-West of Oahú is the Island of Tawáí, near the extremity of this group. In form it is elliptical, and measures 41 miles from East to West, and 23 from North to South. It is very mountainous, and less fertile than Oahú. Its roadstead at the mouth of the Waímea river is frequented by ships, and is now commanded by a fort.* Morokaí, a long, narrow island, North of Ranáí, and North-West of Maw-í, is the next in magnitude, and consists of a long line of volcanic mountains, stretching out for about 40 miles from East to West, its greatest breadth not being more than seven miles. Its steep and rugged mountains are nearly as high as those of Mawí. Ranáí, South of Morokaí, Tahaurawe, South of Maw-í, and Ni-hau or Niyi-háu, West of Tawáí, are the only remaining islands of any magnitude in this group; the first and last being nearly of the same size. Ranáí, though less elevated than its neighbours, is volcanic and barren, being liable to long droughts. Tahauráwe is low, almost bare, unproductive, and has few inhabitants. Ni-hau, measuring about 20 miles from North to South, and not more than seven in breadth, is thinly inhabited by people of the same stock as those of Tawáí, and famed for their manufacture of fine party-coloured mats, and for the culture of large yams, (*Dioscorea*.) Morokiní, between Maw-í and Tahauráwe, and Taúra at the Western extremity of the group, are uninhabited rocks.†

The natives of these islands, though more athletic and manly than those of the Society Isles, are, as their language, religion, and customs prove, derived from the same stock, as well as the inhabitants of the Friendly Isles and New Zealand. The breadth and flatness of their noses are ascribed to their mode of salutation, by touching nose to nose. Though ferocious when highly irritated, they are generally simple, lively, good-humoured, and cheerful, docile and patient of labour. The Erís or Aríís, (*i. e.* Chiefs,) whose athletic make

has led to the supposition that they are the descendants of conquerors sprung from a race superior in strength to the original inhabitants, exercise an almost absolute authority over their inferiors. It is to be feared that their intercourse with Europeans has tended to thin their numbers. The estimates, however, made by Captain Cook and his companions were doubtlessly exaggerated and erroneous; and the introduction of Christianity and civilization has acted as an effectual check on the warfare by which these islands were formerly depopulated.

The government is essentially despotic, but some established usages, which are rarely disregarded, operate as a restraint on the King and his ministers. Each island is subdivided into districts, governed by their respective Chiefs, from whose sentence in any dispute there is an appeal to the governor, and from him to the King. The King and Chiefs enjoy an hereditary rank, and it appears that there were originally four distinct classes or castes: 1. the royal; 2. the military or chiefs; 3. the priests; and 4. the labourers; a circumstance which seems to indicate an early intercourse with Hindús. The prime minister, from whatever class he may have sprung, ranks in dignity and authority next to the King, on whose pleasure all places of power and authority depend. The persons of the highest classes are considered as sacred, and not to be touched by one of the lowest. At the King's demise his principal friends and favourites were put to death. To this they willingly submitted, considering such distinction as an honour; but the adoption of the Christian faith has put an end to those barbarities. The soil is considered as the property of the King, and is held on a military tenure, and the payment of a certain proportion of the produce, so that the holders are much in the condition of the Indian zemíndárs (landholders) under the Hindú Rájás and Moghul Emperors. The contributions from the cultivators claimed, first by the King, next by the governor of the island, thirdly by the District Chief, and fourthly by the village Headman, were all paid in kind till the value of Spanish dollars and sandal wood was learned from intercourse with Europeans. These taxes, which depend "entirely on the caprice or necessities of the Chiefs," (Ellis, iv. 416.) together with the customary presents, such as the first fruits of ponds and orchards required at certain seasons, leave a bare subsistence to the labourer, which sufficiently accounts for the wretched condition of the lowest classes, so strongly depicted by Dr. Meyen (ii. 170.) and Captain Beechey, (ii. 420.) The people of the lowest class are *adscripti glebæ*, but liable to be occasionally removed by the King, whose power is almost unlimited. Arbitrary seizures are frequently made by the more powerful Chiefs when they take a liking to the goods of their weaker neighbours. The harbour-dues levied at Oahú are also another new and considerable source of revenue; but the expenditure is proportionally increased. Useless forts, arms and accoutrements for the soldiers, guns and ammunition, formerly neither known nor wanted, have lately occasioned the expenditure of large sums. A taste for European luxuries has become prevalent in the royal and noble families; hence the people have been burdened with exorbitant contributions. How little this has contributed to the good of the community may be collected from Dr. Meyen, who remarks (ii. 70.) that when he was at Hono-ruru, in 1831, Kwakini, usually called John Adams, then governor of Oahú, levied a yearly tribute of 3000 Spanish dollars in specie, and an extraordinary quantity of provisions for

ment.

* T and k, l and r, are used almost promiscuously by the Polynesians; hence "taata" in Tahiti, "tangata" in Tonga-tabu and New Zealand, "kanaka" in Hawaií, signify "man;" but in this island t is always substituted for k, and kanaka becomes tanata.

† Oreehoua, in the old lists, is merely a local pronunciation of O Niháwa, and means the islet off the Northern extremity of Ni-hau.

SOUTH
SEA.

himself and his soldiers, who are the torment of the islanders, and often rob them of their provisions and necessities in the open highway with complete impunity. (ii. 165.) Cruel and excessive punishments are also to be classed under the usages which it might have been hoped the influence of the missionaries would have repressed. Dr. Meyen himself (ii. 152.) saw a poor wretch unmercifully flogged at a cart's tail for having circulated a false report of the sudden return of Boki, the King's uncle, who was lost in the royal brig *Ta-méha-méha*, of which he had the command. The culprit was evidently insane, and therefore ought to have been treated as such; and as the missionaries had at that time a very extraordinary sway over the King and his advisers, a word from them would have prevented such a grievous violation of justice.

Religion.

The abolition of idolatry with its sanguinary rites, and the establishment of Christianity, even when not in its brightest form, are events the most auspicious and mark the dawn of a glorious day, though that dawn may be obscured for a time by mists and clouds. The contrast between the religion of Christ and the gloomy idolatry formerly prevalent in these islands is indeed most striking. With no distinct ideas of moral responsibility, no notion of a beneficent Deity, their adoration was addressed to idols which were apt representations of the rapacious, selfish, and cruel beings whose power and malignity they dreaded. Nothing could well be more misshapen or hideous than these images; placed sometimes in rows outside, sometimes in a semicircle at the further end of the *Marâë*—burial-place or temple—where at certain periods festivals were held in honour of these gods; roasted pigs were then presented as offerings, litanies with alternate responses were sung at intervals, and the intermediate periods were passed in feasting and merriment; (Chamisso, i. 225. Plant, ii. 467.) for the native hilarity and kindheartedness of the Polynesians stripped even their gloomy faith of a portion of its terrors. During these festivals, which lasted from sunset till sunrise of the third day, whoever had entered the *Marâë* was under *tabú* or a ban, so that it was almost a mortal offence to touch him, especially if the offender were a woman; the women being rigidly prohibited from entering the temple or eating at the same table with men. Certain meats were forbidden to the female sex, and they were depressed by endless distressing restrictions. The hymns used in these rites seem to be now forgotten, so completely has idolatry been abolished, and so soon are such relics lost by an illiterate people. On one account this is to be regretted, as such compositions were probably the oldest specimens of the language now extant, and related to superstitions handed down from their ancestors, so that they might have aided in furnishing a clue to the earlier history of this people. The religion as well as the language of all the Polynesian nations was evidently at some remote period the same throughout; and though from ignorance of the art of writing, and from the instability of mere oral tradition, there were many local differences of faith and worship, a similarity of character and origin may be traced, especially between the mythology of Tahiti and Hawayí. *Tangaraoa*, *Tanaraoa*, or *Taaroa*, (the same word differently pronounced,) the principal god in both islands, was believed to have sprung from darkness, a sort of primeval chaos, (*bo* or *po*,) but whether he were the Creator, or nothing more than a deified hero, was doubtful.

Tangaraoa.
Taaroa.

Mythology.

The gods of Polynesia, like those of Greece, were ranged in different ranks, and Oro, the first-born of *Tang-aróa*, belonged only to the fifth class. Earth, air, and water were peopled by their traditions with invisible beings, whose power was feared and anger dreaded; for though the gods were not supposed to be essentially malevolent, demons or evil spirits, imagined to be almost under the command of sorcerers, were believed to delight in mischief. All diseases, and death itself, were ascribed to demoniacal agency, particularly violent, inflammatory attacks, accompanied by excruciating pain, and terminating speedily in death. (Ellis, i. 365.) Pyramidal altars, like those of the Mexicans, and like the Buddhist temples; libations of oil over their idols, like those of the Hindús; sacred pigs (*Id.* 345.) running loose like the Brahmaní bulls; *Miru* or heaven, like the Indian *Meru*, and the expectation of a sort of metempsychosis, all seem to point, as was before remarked, to an ancient communication with Hindús. Nor is their custom of offering up human victims on extraordinary occasions, or self-immolation on the death of their sovereign, at all inconsistent with that supposition (*Id.* 358.) As their deities appear to have had no benevolent attributes, it is not wonderful that they did not look to the invisible world as a state of retribution; (*Id.* 397;) their notions respecting moral good and evil seem, indeed, to have been almost as vague and indistinct as their ideas respecting the soul, which, after all, were rather those of an intangible, invisible body than of any living agent distinct from matter. These observations respecting their moral and theological opinions, strictly speaking, apply only to the Polynesians of the Southern and Eastern islands, but in all essential points the people of the Sandwich islands, as was before stated, agreed with the former.

SOUTH
SEA.

The history of these islanders cannot be traced beyond the period of their discovery by Captain Cook, in January, 1778, though it is highly probable that they had been visited by the Spaniards in their annual voyages from Mexico to the Philippine Islands; as yet, however, no authentic records of such visits have come to light. *Tarayopú*, who was King of *Oahú* at the time of its discovery, was succeeded by his eldest son *Kawike-auli*, also called *Kivara-ao*, who, in 1780 or 1781, was slain* in battle after a severe contest for seven days with his cousin *Ta-méha-méha*, (Ellis, iv. 146.) a chief whose Tammea-acuteness and warlike propensities were inferred from mea. a bargain for daggers made by him on board of the *Discovery*, just before the assassination of Captain Cook. (Samwell, *Death of Captain Cook*.) The army of *Kawike-auli*, after he fell, was dispersed, and the victor, from being master of only two districts, became sovereign of the whole island. (Ellis, iv. 146.) At the time of Captain Vancouver's visit, in 1792, *Ta-méha-méha* had conquered *Mawí*, and he afterwards† subdued *Oahú*, and received the voluntary homage of the chiefs of *Tawai* and *Nihau*, thus becoming sole ruler of the whole group. From the moment of his having effected that object, he gave his whole attention to the civilization and improvement of his dominions; adopted the European dress and customs; and on the arrival of Captain Vancouver, in 1792, gladly availed himself of the assistance afforded to him by the gift of a decked

* By *Na-rima-erua*, not by *Ta-méha-méha* himself. (Ellis, iv. 147.)

† Mr. Ellis says (iv. 16.) that this occurred in or about 1790.

vessel and instructions in ship-building to his subjects; and in gratitude for these benefits he placed his territories under the protection of Great Britain. He even attempted to carry on a trade in sandal wood with Canton; but though unsuccessful in that project, his equity and fair-dealing soon brought fleets of merchantmen into the port of Hono-ruru, in Oahú, an excellent harbour and a very convenient place of resort for all vessels cruising in the Pacific Ocean. This extraordinary man, who has been justly called the Alfred of the Polynesians, though not hostile to Christianity, in which, by the way, he seems never to have been instructed, was favourable to Christians, encouraged them to settle in his territories, and derived great assistance from two respectable seamen, Davis and Young, both of them Englishmen. He was also much indebted to the fidelity and good sense of his favourite Karaïmokú, nicknamed by English sailors Billy Pitt. Though ambitious and successful in war, Ta-méha-méha was neither cruel nor suspicious. When Captain Kotzebue arrived at Oahú, the Master of a Russian merchantman had just been attempting to take possession of Tawai, and was encouraging its chief to rebel; the appearance of an armed Russian ship therefore created great alarm, but Ta-méha-méha listened calmly to Kotzebue's apology, and answered in terms that would not have disgraced the most enlightened prince: "As I understand that you, like Cook and Vancouver, are not engaged in trading but in discovery, I will not take any thing in return for the supplies you will receive, but will give you every thing which my islands can furnish; but tell me, is it your Emperor's pleasure that his subjects should come to distress me in my old age? Since Ta-méha-méha has been King of these islands no European has ever had cause to complain of his doing him a single act of injustice." And when Captain Kotzebue assured him that the offenders would be punished as soon as the Emperor knew what they had done, Ta-méha-méha drank his Majesty's health with the utmost cordiality, "and we could not," adds Captain Kotzebue, "have desired a more agreeable or obliging host." On showing his Maráë (temple) to the Russians, "These," said he, "are our gods, to whom I pray; whether I am right or wrong in doing so I know not; but I follow my religion, which cannot be bad, as it commands me never to do what is unjust." (*Ibid.* 19.) Ta-méha-méha* died at the age of sixty-three years, in 1819, and was succeeded by his eldest son, Riho-riho, then about twenty-three years old. Though apparently heavy, and possessing little of his father's energy and sagacity, he had a strong thirst for knowledge, and probably greater powers of mind than were perceived by cursory observers. His first public act was the decided abandonment of idolatry and the tabu or prohibitions connected with it, which reduced the women to a state of extreme degradation. He was probably stimulated by his mother Keopuolani, who appears to have been a woman of unusual strength of mind, as well as by Karaïmokú, his father's favourite. The American missionaries, therefore, who arrived in the following year, found the field ready prepared to their hands. The voyage of Riho-riho or Ta-méha-méha II. with his Queen Ta-méha-manu to England,

* A portrait of him by M. Choris is given in Captain Kotzebue's work; (ii. 15.) and that it is a strong likeness is evident from the eagerness with which the Americans got copies of it made in China for sale among the islanders. (Chamisso, i. 225.)

in 1824, and their early decease, the one being about twenty-eight, and the other twenty-six years old, were the occasion of admiration and grief to his people; admiration at his courage in undertaking so long a voyage for the purpose of seeing and receiving instruction from his protector the King of Great Britain; and grief for the early death of him and his Queen whose kindness had made them universally beloved. The honours paid by the British Government to the memory of the deceased were highly gratifying to their subjects; and Kawike-auli, the younger brother of Riho-riho, then (in 1825) about ten years old, was unanimously proclaimed his successor, and placed under the guidance of his step-mother, Ka-ahu-manu, widow of Ta-méha-méha I. She died in June, 1832; subsequently to which, her ward Kawike-auli took the reins of government into his own hands, and was crowned by the title of Ta-méha-méha III. It is to be hoped that the unreasonable and vexatious restrictions enforced by the American missionaries, through the influence of Ka-ahu-manu, were not sufficient to alienate the mind of the young King, and endanger the permanency of his adhesion to the Christian faith. That the power of the missionaries still prevails may be inferred from repeated refusals on the part of the King to allow any Roman Catholic missionaries to settle on the islands. It has been stated, indeed, (*Miss. Reg.* 1838, p. 190,) that this was done by the islanders as a nation; but Dr. Meyen's account of the application to Captain Wendt to remove the French missionaries creates some apprehension that the above statement is not quite correct, and that in such matters misrepresentations are not confined to religionists of one persuasion. The missionaries, it should be added, charge the writers here cited with want of truth and candour; but as writers of different nations and professions, who visited the islands at different periods, agree in the main as to the mischievous consequences of the needless and injudicious restrictions enforced, it requires something more than a mere contradiction on the part of those who enforced them, to disprove the charge. At all events the expulsion of Roman Catholics is utterly inconsistent with a regard for religious liberty, a zeal for which is so loudly proclaimed by the very association by which those missionaries were sent out.

Many questions deserving of inquiry, and many particulars which could not be introduced into this brief abstract, will be found well elucidated in the authorities cited, particularly in M. de Chamisso's remarks in his second volume; his Memoir also on the language of these islanders (*Ueber die Hawaiische Sprache*) will not disappoint those readers who consider language as a key to the structure of the human intellect, or a clue to the remote affinities of nations.

SOUTH
SEA.
—
SOW.

SOUTHWELLIA, in *Botany*, a genus dedicated by Salisbury to Sophia Southwell, Lady De Clifford, a great lover of plants. It belongs to the class *Monœcia*, order *Monadelphia*, and the natural family of *Sterculiaceæ*. Generic character: calyx cup-shaped; segments five, joined at top into a tiara: male flower, anthers ten, glomerate, on the top of pedicel-formed torus: hermaphrodite flower, having the anthers as in the male; perianth coriaceous; lobes three to five, at length free; seeds sessile, each with a caruncle at the apex.

A genus separated from *Sterculia*, consisting of three known species, natives of Asia and Africa. *S. nobilis*, the *Sterculia balanghas*, Smith, and *S. pubescens*, and *S. monosperma*, the *S. balanghas*, Lin. They are all trees, with simple oblong leaves, and having the stipulas distinct from the petioles. Flowers disposed in long racemes, which rise from the axils of the fallen leaves.

SOUTHWOLD, a Market Town in Suffolk, pleasantly situated on an eminence overlooking the sea, and nearly surrounded by the river Blyth, which here discharges itself into the German Ocean. It contains many good houses, and is resorted to for sea bathing. In the reign of King John a chapel was built in Southwold, by the monks of Thetford, which was destroyed by fire about 220 years afterwards. The present church, a very fine building, appears to have been then commenced, and finished about the year 1460. It has two aisles, which are separated from the nave by seven arches and six pillars of elegant workmanship; the tower-steeple is 100 feet in height, constructed of freestone and variegated flints; the porch is much decorated, and over it is a vacant niche, which probably contained the image of St. Edmund, to whom the building was originally dedicated. Both the exterior and interior of the church are profusely ornamented, and the carvings in wood of the rood-loft and seats of the magistracy must, when uninjured and undefaced, have borne a strong resemblance to the interior of the Chapel of Henry VII. in Westminster Abbey; but the whole building appears to have suffered greatly from the ignorant zeal of the early reformers. It has been remarked that larger numbers of swallows arrive at and depart from Southwold than from any other place on the Eastern coast; and in the autumn they may be seen covering the roofs of the houses, waiting for a favourable wind to assist their passage, and taking flight immediately after its arrival. In Southwold Bay or Solebay, occurred, A. D. 1666, a most desperate engagement between the British and Dutch fleets, in which the latter were defeated, with the loss of 70 ships; and six years afterwards the combined fleets of France and England were surprised in the same place by the Dutch, when the English, deserted by their French allies, maintained during a whole day an obstinate defence against an enemy greatly their superior. The result was doubtful, both fleets being dreadfully shattered and unable to renew the contest. The Earl of Sandwich, refusing to strike his colours or to desert his vessel, was blown up in it with a few sailors who resolutely adhered to him, and many other valuable lives were sacrificed

on both sides. Southwold has much risen in importance since the decline of the once flourishing town of Dunwich in its neighbourhood. It has a considerable trade in herrings and salt, and a good and commodious harbour for shipping. Population, in 1831, 1875. Distance from Yarmouth 20 miles, from London 105.

SOUVENANCE, Fr. *souvenir*, *souvenance*; It. *souvenire*, to remind or remember. Menage derives from *sub-venire*, to succour, to occur, to come into, *sc.* the mind or memory.

They must provide for meanes of maintenaunce,
And to continue their wont countenaunce;
But shepherd must walke another way,
Sike worldly sovenance he must for-say.

Spenser. *The Shepherd's Calendar*. May.

Now somewhat sing, whose endlesse sovenance
Among the shepheards swaines may aye remaine.

Id. *Ib.* November.

SOW. See **SWINE**.

Sow, } Goth. *saian*; A. S. *saw-an*; Ger.
So'WER, } *saen*; D. *saeyen*; Sw. *så*, *serere*, *se-*
So'WING, *n.* } *minare*. To sow, generally, is—

To set, to place, that which will grow, germinate, vegetate; that which will bear, propagate, or produce its like; any fruit; to spread or scatter.

Ne that bailif, ne forester, ne soffrede hom nower come,
To sowe, ne to other thing, that hor bestes nere inome.

R. Gloucester, p. 499.

And he spak to hem many thingis in parablis and seide, Lo he
that *sowith* ghede out to *sowe* his seed.

Wiclif. *Matthew*, ch. xiii.

And he spake many thinges to them in similitudes, saying;
Beholde, the *sower* went forth to *sowe*.

Bible, Anno 1551.

And summe seiden what wole this *sower* of wordis seie?

Wiclif. *The Dedis of Apostlis*, ch. xvii.

But Isis, as seith the cronike,
Fro Grece in to Egypte cam,
And she than vpon honde nam
To teche hem for to *sowe* and ere,
Whiche no man knewe tofore there.

Gower. *Conf. Am.* book v.

For he fonde of his owne wit
The fyrst crafte of plough tyllynge,
Of earynge, and of corne *sowynge*,
And how men shulde set vines,
And of the grapes make wines.

Id. *Ib.* book v.

This monster blithe with many a tale gan *sow*
This rumor then into the common ears.

Surrey. *Virgil. Aeneis*, book iv.

O happy queene of faries, that hast fownd,
Mongst many, one that with his prowesse may
Defend thine honour, and thy foes confownd!
True loves are often *sown*, but seldom grow on grownd.

Spenser. *Faerie Queene*, book i. can. 9.

Well may overtinely and hastie *sowing* oftentimes faile, but
late *sowing* shall ever misse and deceive the maister.

Holland. *Plinie*, book xviii. ch. xx.

What makes a plenteous harvest, when to turn
The fruitful soil, and when to *sow* the corn;
The care of sheep, of oxen, and of kine;
And how to raise on elms the teeming vine;
The birth and genius of the frugal bee;
I sing, Mæcenæ, and I sing to thee.

Dryden. *Virgil. Georgics*, book i.

SOW.
—
SOY-
MIDA.

An acre of potatoes is cultivated with less expense than an acre of wheat; the fallow, which generally precedes the *sowing* of wheat, more than compensating the hoeing and other extraordinary culture which is always given to potatoes.

Smith. *Wealth of Nations*, book i. ch. xi.

SOWAYLEE. See ZANGUEBAR.

SOWERBÆA, in *Botany*, a genus dedicated by Smith to James Sowerby, the celebrated botanical artist. It belongs to the class *Hexandria*, order *Monogynia*, and the natural family of *Asphodeleæ*. Generic character: perianth persistent, inferior, six-cleft; stamens six, three of which are fertile and biantheriferous, and the other three alternate ones sterile.

A genus nearly allied to *Allium*, consisting of single known species, *S. juncea*, a native of New South Wales; it is a rushy, inodorous herb, with fibrous roots, naked scapes, and many-flowered umbels. The bractees are scarious, and the flowers are purple.

SOWLE. To *sowle* one by the ears. Lincolnshire. To pull by the ears as dogs pull *swine*. Grose. The word is common in Nottinghamshire and other parts northerly, as well as in Suffolk. See Moor's *Suffolk Words*. I believe, says Skinner, from *sow*, to seize and pull by the ears as dogs do (*sowen*) *swine*. This Ray adopts.

He'el go, he sayes, and *sole* the porter of Rome gates by th' eares.
Shakspeare. *Coriolanus*, act iv. sc. 1. fol. 23.

SOY. See the Quotation, and SOJA.

I have been told that *soy* is made partly with a fishy composition, and it seems most likely from the taste; tho' a gentleman of my acquaintance, who was very intimate with one that sailed often from Tonquin to Japan, from whence the true *soy* comes, told me that it was made only with wheat and a sort of beans mixt with water and salt.

Dampier. *Voyages*. Anno 1688.

SOYERIA, in *Botany*, a genus so called by Monning, probably from the name of some naturalist. It belongs to the class *Syngenesia*, order *Æqualis*, and the natural family of *Compositæ-Cichoraceæ-Hieraciæ*. Generic character: the beak shorter than the achenia; pappus in many series; rachis bractless.

This genus, which is separated from *Hieraceum*, consists of about eight species, natives of Europe and Siberia; they are all hardy, perennial herbs, with the upper leaves half stem-clasping, and deeply toothed; the heads of flowers large, yellow, and corymbose. The involucre are composed of two or three series of linear leaves, the outer leaves smaller and spreading. *S. blattarioides* and *S. sibirica* are the most common species in the gardens.

SOYMIDA, in *Botany*, a genus so called by Adrian De Jussieu, from the Indian name of the tree. It belongs to the class *Decandria*, order *Monogynia*, and the natural family of *Cedreliaceæ*. Generic character; calyx five-leaved, imbricate; petals five, spreading, on short claws; stamens ten; filaments joined into a short cup-shaped tube, divided into ten bidentate lobes, and bearing one anther each between the teeth; style short, prismatically pentagonal; stigma thick, peltate, pentagonal; fruit capsular, oblong-ovate, five-celled, five-valved; seeds pendulous, imbricated, flat.

This genus, which is separated from *Swietenia*, consists of a single known species, a native of the East Indies; it is a tall tree, with very dense, reddish-brown wood, abruptly pinnated leaves, which are crowded at the top of the branches, and large terminal panicles of flowers.

SPACE,
SPA'CEFUL,
SPA'CIOUS,
SPA'CIOUSLY,
SPA'CIOUSNESS,
SPA'TIATE, v.

See EXPATiate.

Fr. *espace*, *spatieux*; It. *spazio*; Sp. *espacio*; Lat. *spatium*, Æolic *σπαδιον* for *σταδιον*, απο της στασεως, denoting the place or station for the spectators of athletic contests.

Stadium was then applied generally to any place; and hence, as we judge of size or magnitude from the place or room occupied, space was extended by usage to express—

Size, room, magnitude; a portion of, extent of place; it is also applied to time, a portion of time, duration of time. See the Quotation from Locke.

About þei gan him chace, & hunted him als haÿre,
Long had he no *space* to duelle no wele fare.

R. Brunne, p. 210.

Grace God gaf him here, þis lond to kepe long *space*.

Id. p. 213.

Vitailed was the ship, it is no drede,
Habundantly for hire a ful long *space*.

Chaucer. *The Man of Lawes Tale*, v. 5226.

Howe can you be comfortlesse in anye tribulacyon, when Chryst and hys Holye Spirite, and with them theyr vnseparable Father, (if you putte full truste and confidence in them,) bee neuer neyther one finger breadth of *space*, nor one minute of time from you?
Sir Thomas More. *Workes*, fol. 1140. *Dyalogue of Comfort agaynst Tribulacyon*.

So had his sword made him so *spacious* a room, that Amphialus had more cause to wonder at the finding, than labour for the seeking.

Sidney. *Arcadia*, book iii.

But she, as fayeres are wont, in privie place,
Did spend her dayes, and lov'd in forests wyld to *space*.

Spenser. *Faerie Queene*, book iv. can. 2.

Lo thus they rode, till at the last they spide
Two armed knights that toward them did pace,
And ech of them had ryding by his side
A ladie, seeming in so farre a *space*;
But ladies none they were. Id. *Ib.* book iv. can. 1.

By him I sweare (then whom none more in view)
That what I now shall utter is as true
As past beliefe. The ship in those profound
And *spacefull* seas, so stuck as on dry ground.
Sandy. Ovid. *Metamorphoses*, book iii.

But faire before the gate a *spacious* playne
Mantled with the greene, it selfe did spredden wyde.
Spenser. *Faerie Queene*, book iii. can. 1.

Most *spaciously* we dwell, where we possess
All sinless pleasures Nature did ordain;
And who that all may have, yet will have less,
Wiser than Nature, thinks her kindness vain.
Davenant. *Gondibert*, book i. can. 6.

So I North-Riding am, for *spaciousness* renown'd,
Our mother Yorkshire's eld'st, who worthily is crown'd
The queen of all the shires on this side Trent.

Drayton. *Poly-olbion*, song 28.

For astonishment, it is caused by the fixing of the minde upon one object of cogitation, whereby it doth not *spatiate* and transurre, as it useth.

Bacon. *Natural History*, Cent. viii. sec. 720.

This *space* consider'd barely in length between any two beings, without considering any thing else between them, is call'd distance; if consider'd in length, breadth, and thickness, I think it may be call'd capacity. The term extension is usually apply'd to it in what manner soever consider'd.

Locke. *Works*, vol. i. fol. 63. *Simple Modes of Space*.

From the upper part of the island to the town of Guiaquil is almost a league, and near as much from one side of the river to the other. In that *spacious* place ships of the greatest burthen may ride afloat.

Dampier. *Voyages*. Anno 1684.

Thus avarice and prodigality are at an immense distance; but there is a *space* marked out by virtue between them, where frugality and generosity reside together.

Lord Bolingbroke. *Works*, vol. i. p. 209. *The Occasional Writer*.

SPACE.

SPACE.

SPAIN.

Here Ouse, slow winding through a level plain
Of spacious meads with cattle sprinkled o'er,
Conducts the eye along his sinuous course
Delighted.

Cowper. *The Task*, book i.

SPADE, } A. S. *spadu*, *spada*; D. *spade*, *spaye*;
SPA'DDLE. } Ger. *spate*; Sw. *spada*. Wachter from
the Gr. *παῖς*, others from *παῖν*, *trahere*. It appears
to be merely the A. S. *spæt-an*, to spit, i. e. to throw out,
to throw up; a *spade's* depth thrown out in digging is
still called a spit. See SPIT. A *spade* is

That which (a tool which) throws out, sc. earth,
gravel, &c.

Spaddle, (i. e. *spade-dæl*), the diminutive of *spade*.

Spadille, the ace of spades; cards so called from the
shape of the figure impressed.

Ech man to pleye w^t a plouh. a pýcoýse op^r a *spade*.

Piers Plouhman. *Vision*, fol. 61.

His berd as any sowe or fox was rede,
And therto brode, as though it were a *spade*.

Chaucer. *Prologue to the Canterbury Tales*, v. 554.

They neither gaue vs meate to feede vpon,
Nor drinke, nor powder, pickar, toole nor *spade*.

Gascoigne. *The Fruites of Warre*.

Her dainty hands (not us'd to such a trade)
She with a mattock toils, and with a weary *spade*.

Fletcher. *The Purple Island*, can. 9.

By th' shoulder of a ram from off the right side par'd,
Which usually they boil, the *spade-bone* being bar'd.

Drayton. *Poly-olbion*, song 5.

With his broad sabre next, a chief in years,
The hoary majesty of *spades* appears,
Puts forth one manly leg, to sight reveal'd,
The rest, his many-colour'd robe conceal'd.

Pope. *The Rape of the Lock*, can. 3.

Others destroy moles with a *spaddle*, waiting in the mornings
and evenings for them.

Mortimer. *Husbandry*.

Her happy lord is cuckold'd by *spadille*;
And if she's brought to bed, 'tis ten to one,
He marks the forehead of her darling son.

Young. *Love of Fame*. *Satire* 6.

So that a transverse section of it has somewhat the appearance
of the mark upon cards called a *spade*, the whole being much
wider in proportion to its length.

Cook. *Voyages*, vol. i. book i. ch. xviii. p. 207.

And, where the peacock shews
His azure eyes, is tinctur'd black and red
With spots, quadrangular, of diamond form,
Ensanguin'd hearts, clubs typical of strife,
And *spades*, the emblem of untimely graves.

Cowper. *The Task*, book iv.

SPADICEOUS, Low Lat. *spadiceus*, from *spadix*, a
branch torn from the palm tree, (*παῖν*, *trahere*), and
from the colour of the fruit; applied generally to
A light red, a bright bay colour.

Of these five [unicorn's horn] which Scaliger beheld, though
one *spadiceous* or of a light red, and two enclining to red, yet was
there not any of this complexion among them.

Sir Thomas Brown. *Vulgar Errours*, book ii. ch. xxiii. p. 203.

SPADONIA, in *Botany*, a genus so called by Les-
sing, from the Greek *παῖς*, a eunuch, on account of
the dioecious heads of flowers. It belongs to the class
Syngenesia, order *Superflua*, and the natural family
of *Compositæ-Mutisiaceæ*. Generic character: heads
dioecious, homogamous, few-flowered; pappus setaceous,
in two series; achenia beakless; corolla regular; an-
thers tailed; style of the male flower very smooth.

This genus, which is nearly allied to *Cochnatia* and
Mutisia, consists of three known species, natives of
Brazil; they are shrubs with petiolate, alternate, entire
leaves, tomentose beneath, and small, few-flowered, ag-
gregate heads; involucre imbricated.

SPA'GYRICK, } Fr. *spagirie*, *spagirique*; Low
SPAGY'RICAL, } Lat. *spagirus*, *spagiricus*; used,
SPA'GYRIST. } says Vossius, for *alchemista*.

Puto autem, *spagiricas dici a duobus artes officiis; quæ
sunt resolvere composita, et resoluta componere. Nam
παῖν*, *trahere*, *extrahere*; ἀγειρ-ειν, *congregare*. A
spagyrist is

A chymist, or alchymist.

It was a huge diligence and care of the divine mercy that dis-
covered to man the secrets of *spagyric* medicines, of stones, of
spirits.

Taylor. *Sermon* 26. vol. ii. p. 467.

Those only know how to want that have learnt to frame their
mind to their estate; like to a skilful musician, that can let down
his strings a peg lower when the tune requires it; or like to some
cunning *spagyrick* that can intend or remit the heat of his furnace,
according to occasion.

Hall. *Works*, vol. viii. p. 8. *Of Contentation*.

I have endeavoured to deliver matters of fact so faithfully, that
I may as well assist the less skilful readers to examine the chy-
mical hypothesis, as provoke the *spagyric* philosophers to illus-
trate it.

Boyle. *Works*, vol. i. fol. 463. *Preface to Physiological Consi-
deration*.

Most of those [philosophers and the chymists] (on the one
hand) looking upon the *spagyrist*s as a company of mere irrational
operators, whose experiments may indeed be servicable to apothec-
aries, and, perhaps, to physicians, but are useless to a philoso-
pher, that aims at curing no disease but that of ignorance; and
most of the *spagyrist*s (on the other hand) looking upon the
corpuscularians (if I may so call them) as a sort of empty and ex-
travagant speculators, who pretend to explicate the great book of
Nature without having so much as looked upon the chiefest and
difficest part of it, namely, the phenomena that their art has
added to the former edition of this vast and obscure volume.

Id. *Ib.* vol. i. fol. 358. *Preface to Physico-Chymical Essay*.

S P A I N.

SPAIN, a kingdom of Europe, is bounded on the
North by that part of the Atlantic which is known by
the name of the Bay of Biscay; on the North-East by
the Pyrenean mountains; on the East and South-East
by the Mediterranean; on the South by the Mediterra-
nean and the Straits of Gibraltar; on the South-West by
the Atlantic Ocean; and on the West by the kingdom of
Portugal and the Atlantic. It extends from Tarifa, in
35° 57' North latitude to Cape Ortegal, its most Northern
point, in 43° 44' North latitude, and lies between the
meridians of 3° 8' East longitude (Cape Creus, near

VOL. XXVII.

the South-Eastern extreme of the Pyrenees) and 9° 18'
West longitude, (Cape Finisterre.) Thus Spain is alto-
gether comprised in the Southern part of the temperate
zone of Europe, and lies almost under the same parallels
with Sardinia, Naples, Sicily, and Greece. Its greatest
length, calculated according to the above points, is from
East to West, and is 566 geographical, or 640 English
miles; its extreme breadth is from North to South, and
is 465 geographical, or 530 English miles. However,
computing from North-East to South-West, from
Llanza, North of Rosas in Catalonia, to Ayamonte at

SPAIN. the mouth of the Guadiana, in the Intendancy of Seville, its greatest length is about 667 English miles; and its greatest breadth, measured from Cape Prior, near Ferrol in Galicia, to Cape de Gata, that is from North-West to South-East, is about 570. Exclusive of Portugal, its surface is estimated by Hassel at 25,145 square leagues, of 25 to the degree; by Balbi at 137,400 Italian square miles, of 15 to the degree; and by the Baron Von Malchus, at 8446.9 German square miles, of 15 to the degree.

General
view.

The Iberian peninsula was aptly compared by the ancients to the distended hide of a bullock, its boundary line with France forming the neck of the hide; and a glance at the map will show that they must have had a good notion of its geography, since the resemblance is easily discoverable without much aid from the fancy. In many respects the situation of Spain is superior to that of any other European nation. Its climate, tempered in winter by the waters of the Atlantic, is on the whole preferable to that of Greece or Italy; and separated from France by the Pyrenees, and traversed by lofty mountains intersected by difficult ravines and defensible passes, it is naturally secured from invasion by the most formidable obstacles, and presents every means of internal resistance to a hostile army. Its sea-coast affords considerable commercial facilities; and though its harbours on the iron-bound coast of Biscay are generally intricate, and the sand-bars at the entrance of those on the Western coast and within the Mediterranean render access difficult, yet the same is the case with many of the active commercial sea-ports of France and England. The rivers are neither so numerous nor so great as might be expected from the number and elevation of the mountains; and little has been done to improve their navigation, or to facilitate internal transport by means of canalization. The soil of the peninsula exhibits great diversities. The interior consists of dry and elevated plains traversed by lofty mountains, which are swept by cold blasts in winter, and scorched by intolerable heat in the summer. Its coast region, less elevated, and sloping gradually towards the sea, is varied by an agreeable succession of mountains and valleys, enjoying for the most part a climate of happy temperature, and affording a delightful contrast with the monotony of the interior; it is everywhere fertile, or may be easily rendered so by means of irrigation. Generally speaking, the surface of Spain exhibits huge mountains, elevated table lands, rich and broad valleys, rapid rivers, deep ravines, vast pastures, and few or no enclosures. Occasionally luxuriant forests are met with; but the picturesque beauty of the country is greatly defaced by the destruction of timber trees. Indeed, from Bayonne to Cadiz not a single forest is to be seen; and, with the exception of several patches in Biscay, the groves and avenues of Aranjuez, and some valleys or rather gorges in Andalusia, which are partially studded with trees, the rest of the country in this direction is of a whitish, arid aspect, which wearies the eye and depresses the spirit. Some of the loftier mountains, indeed, are covered with wood, supplying charcoal, the chief fuel used in the country, and abundance of fine ship timber. The productions of Spain are rich, various, and universal; the soil yielding almost every known produce, and its mineral riches being, perhaps, superior to those of any other country in Europe.

Progress of
the popula-
tion.

We find in the old historians, that during the time of the Visigoths and Moors, in 1380, the population was

estimated as follows: 11,000,000 of inhabitants in the States of Castile; 7,700,000 in those of Arragon; 3,000,000 in the kingdom of Granada; total 21,700,000: 2,000 inhabitants per square league.

SPAIN.

The various returns on record give the following results:—

In 1618,	9,000,000,	according to Cevallos.
"	7,500,000,	" Ustariez.
In 1700,	8,000,000,	at the death of Charles II.
In 1723,	7,625,000,	from official recensement.
In 1726,	5,423,000,	according to the quit-rent re- turns ordered by Philippe V., but exclusive of privileged orders.
In 1769,	9,301,728,	under Charles II., from a quit- rent return, comprehending all the classes of the popula- tion, with the Canary Islands, and the Presidencies of Africa.
In 1770,	9,307,000,	Ditto.
In 1788,	10,143,000;	10,409,879, with the Canary Islands.
In 1803,	10,351,000,	without, from the general re- censement.
In 1821,	11,248,000,	Ditto.
In 1826,	13,712,000,	Ditto.
In 1834,	14,660,000,	by estimate.

"If we adopt," observes M. Moreau de Jonnes, in his excellent work on Spain, "with confidence the corrections by Ustariez, of the evaluation of Cevallos, and if we throw the vague estimate of 8,000,000 attributed to the first year of the XVIIIth Century, we find that, for 216 years, the population of Spain has constantly increased; but by a singularly low progression, the results of which are so meagre that during more than 100 years, from 1618 to 1723, the number of inhabitants only increased from 7,500,000 to 8,000,000. It is only during the last 25 to 30 years that the population has rapidly augmented."

According to the same authority, the population of towns and villages have greatly decreased, a certain sign of decline, in the same ratio, of the industry and prosperity of the kingdom.

"The three-fourths of the villages only exist in name."

"The large and secondary towns have submitted to similar effects.

"Segovia in 1525 contained 5,000 families; at present no more than 2000.

"Toledo had 200,000 inhabitants; at present no more than 25,000.

"Malaga has decreased from 80,000 to 50,000; and of the villages, formerly in its vicinity, 16 only remain.

"In the bishopric of Salamanca, there were formerly 127 towns, of these 13 only exist; and the corn fields, once so productive, have all been long transferred into sheep pastures.

"In the XVIIth Century, the population of Seville was equal at least to 300,000; 130,000 of which were employed in manufactures; its present population is 96,000. Merida, in room of 40,000, has now 5000 inhabitants. Medina-del-Campo has only 6000 in place of 30,000; and Valentia, according to the authority of Escolano, had, in 1600, 100,000 houses, and between 500,000 and 600,000 inhabitants; its present population amounts to 130,000.

"Before the conquest in 1487, Granada had 70,000

SPAIN. houses, and 400,000 inhabitants, 60,000 of whom were armed. It was defended by ramparts flanked by 1030 towers and two vast fortresses, each of which could receive in garrison 40,000 men. The kingdom of which it is the capital was only 30 leagues in breadth by 70 in length, but it contained 32 large cities and 97 towns, and 3,000,000 of inhabitants. The whole population at present does not exceed 83,000.

"The city of Cordova, under the Moors, occupied nearly eight leagues of the banks of the Guadalquivir, and contained 600 grand Mosques, 3837 small Mosques or Chapels, 4300 minarets or towers, 900 public baths, 28 superb, 80,455 shops, 213,070 dwelling-houses, 60,300 hotels or palaces."

The foregoing account may be exaggerated. According to it, Cordova was much larger than London is at present. All accounts, however, agree as to the magnificence and splendour of Cordova, and the extraordinary and rapid decline in the power and prosperity of Spain after the expulsion of the Moors. The last official census states that 1511 towns and villages were then totally uninhabited and abandoned.

Much uncertainty exists as to the actual division of Spain into kingdoms and provinces, since the authorities on the subject mostly differ. The following Table is from Mr. McGregor's *Resources and Statistics of Nations*.

SPAIN.

(a) Official Census; (b) Cadastral Census, (official,) as given by M. Moreau de Jonnes in his Statistics for 1834. It is generally believed that the census of 1803 is much below the actual number of inhabitants; and that, according to the returns of 1723, it would appear that in 103 years the population had increased from 7,925,000 to nearly 14,000,000; it also appears from the observations of most persons, that the actual population of Spain had increased more slowly than that of any other country, particularly before losing her South American empire. M. Moreau de Jonnes estimates the population in 1834 at 14,660,000. According, however, to a return of the number of senators and deputies to the Cortes, from all Spain, corresponding to the population of the provinces, which appeared in the royal decree of the 3d of August, 1837, the exact population of Spain was 12,168,572.

The ensuing Tables, for which we are still further indebted to *The Resources and Statistics of Nations*, furnish as complete a body of information on the subject of the population of Spain, its distribution in towns and country, and classification according to its different social conditions, as can be collected. The foreign pos-

sessions of Spain, since the establishment of their independence by her colonies on the continent of South America, are confined to the great and fertile islands of Cuba and Porto Rico in the West; the Philippines in the East Indies; and some unimportant countries in Africa.

POPULATION of TOWNS and COUNTRY in 1826.

Provinces.	Inhabitants in the		Total Population.	Proportion of the Inhabitants of the Towns to the Total Population.
	Towns.	Country.		
Andalusia	608,000	935,000	1,543,000	Two-fifths.
Murcia	179,000	279,000	458,000	Two-fifths.
Balearic Isles.	98,000	152,000	250,000	One-third.
Malaga	300,000	808,000	1,108,000	Two-sevenths.
Valencia.	255,000	793,200	1,048,000	One-fourth.
New Castile	301,000	1,314,000	1,615,000	One-fourth.
Catalonia	219,000	906,000	1,125,000	One-fifth.
Arragon	123,000	647,000	770,000	One-sixth.
Biscay, Guipuscoa.	45,000	300,000	345,000	One-seventh.
Navarre.	34,000	238,000	272,000	One-eighth.

Galicia	114,000	1,687,000	1,801,000	One-sixteenth.
Asturias	22,000	398,000	420,000	One-nineteenth.
Total	2,532,000	11,010,000	13,562,000	One-fifth.
	Ecclesiastics		150,000	
	Total Population		13,712,000	Inhabitants.

DIVISION of the POPULATION, according to the different Social Conditions, in 1803.

Clergy of cathedrals and of parishes	86,546	203,298	1 in 50
Officers of the Inquisition and of the crusade	8,659		
Monks	69,664		
Nuns	38,429		
Nobles	1,440,000	1 in	7
Civil and military employments	343,047	1 in	30
Advocates, notaries, students	199,566	1 in	50
Administration, army, and navy	590,000	1 in	18
Domestics	840,276	1 in	12
Merchants	103,017	1 in	100
Manufactures	119,250	1 in	90
Artisans	812,967	1 in	12
Labourers	2,721,291	1 in	4
Journeyman	2,893,713	1 in	4

Total Population . . . 10,268,000.. Inhabitants.

According to Miñano, (see his *Diccionario Geogr. Estadístico de España y Portugal*.) the number of clergy in Spain amounted to 150,000.

The OFFICIAL RETURNS of the POPULATION for 1826.

<i>Householders having the Qualification of Electors.</i>	
Nobility, including men, women, and children.	1,440,000
Citizens and farmers, &c.	1,560,000

Heads of Families, viz.

Magistrates and advocates	5,883
Notaries	9,683
Attorneys and other clerks of Law courts	13,274
Medical men	17,990
Public functionaries and clerks	27,243
Merchants	6,824
Agricultural proprietors	364,514
Heads of families	445,411
Women and children	1,128,275
Citizens and householders	1,573,686

Agricultural Population.

Agricultural proprietors	364,514
Farmers	527,423
Labourers	805,235
Proprietors of flocks and herds	25,530
Shepherds	113,628

Heads of families and others	1,836,330
Women and children	6,777,140

Total agricultural population 8,613,470

Merchants and Manufacturers.

Wholesale merchants	6,824
Retail merchants	18,851
Manufacturers and labourers	489,493
Heads of families	515,168
Women and children	1,803,088
Total manufacturing population	2,318,256

SPAIN.

Mountain system.

The chain of the Pyrenees, properly so called, runs from East South-East to West North-West, but the direction of its Western elongation towards Galicia is more Westerly. It forms two parallel lines, the Eastern of which is thrown a little to the North, without, however, being any where separated from the Western line. The relative situation of the Basque chain to that of the Asturias is precisely similar; and the former is distinguished from the true Pyrenees both by its inferior elevation and by other characters. It is a gross, but common error, to suppose that the principal mountain chains in Spain are branches of the Pyrenees; an error which has induced various geographers to lay down a great Iberian chain, which, stretching from the mountains of the Asturias to the West of the sources of the Ebro, inclines to the South-West as far as the frontiers of Arragon and Old Castile, and thence runs uninterruptedly Southward to Cape Gates: the other chains are supposed to be offsets of this. Now this error arises from taking the water-shed betwixt the Atlantic and Mediterranean, which follows this direction, for a continuous chain, of which not only does the line of separation afford no indications, but several isolated mountains occur on the very course it traces. The supposition of the principal chains of Spain being members of one great system is also opposed by the interior formation of its soil.

The direction of the principal Spanish chains is, in general, from West South-West to East North-East. The most Northerly of these begins on the Western frontier of Arragon, and, under the names of Sommo Sierra and the mountains of Guadarrama, forms the boundary between Old and New Castile; hence it runs, under the names of Sierra del Pico, Montana de Gricgos, and Sierra de Gata, to join the Serra de Estrella in Portugal. This chain, remarkable for its form and elevation, is much less continuous than that of the Pyrenees. Its Eastern part, whose indented crest commands

the plain of Madrid, rises to 8202 feet above the level of the sea; but its apparent height is considerably lessened by the elevation of the surrounding plains, which are themselves from 2132 to 2624 feet above the same level. This chain runs between the Douro and the Tagus; and the next to it, inferior both in length and height, extends similarly to Portugal, between the latter river and the Guadiana, under the successive names of Montes de Consuegra, Sierra de Jevenes, Montana de Toledo, and Sierra de Guadalupe.

More uniformity is exhibited by the long but lower chain of the Sierra Morena, which next stretches between the Guadiana and the Guadalquivir. It commences on the Eastern frontier of La Mancha, and, a little beyond Llerena, turns off to the South, running nearly parallel with the Guadiana in the latter part of its course. Its base is much less elevated on the Northern than the Southern side, so that following the route from Madrid to Andalusia the summit is insensibly attained at 2395 feet above the sea, whilst the descent on the other side is extremely rapid.

The last and most Southerly chain determines the direction of the Southern coast of Spain; and the mountains which constitute it present in their formation, internal as well as external, much more connection than the other chains. They are remarkable both in form and height; and even the secondary chains, which are numerous, and, running parallel with the main range, form longitudinal valleys, attain a considerable elevation; yet the crest line of this chain is far from being uninterrupted. Its Eastern part, the loftiest points in which go under the name of the Sierra Nevada, is completely separated from its Western, the Sierra de Ronda; and it is equally distinguished from the latter by its extent and height, its principal summits soaring beyond the loftiest of the Pyrenees. And, notwithstanding their advanced position to the South, they rise beyond the limits of perpetual snow, which is here found at the height of about 8000 feet. Northwards, the base of the Sierra Nevada is bordered by the high plains of Guadix and Granada; whilst to the South the mountains slope rapidly to the sea. The most Eastern of the secondary chains is the Sierra de Aljamilla, to which succeeds the Sierra de Gador, rich in minerals; there follow the Contraviesa, the Sierra de Pujar, and the Sierra de las Almijuras. These mountains, thus thrown forward, are not in continuation, but are separated from each other by transversal valleys. The most Southern points of Spain are formed by the last branches of the Sierra de Ronda.

On casting a glance at these several chains, their continuation into Portugal inclusive, it is observable that they decrease in length in proportion as they advance to the South, to which quarter also their extremities deviate at the same time, thus causing the rivers to change their direction as they approach the sea. This is more particularly exemplified by the Guadiana and the Guadalquivir, which do not cut the chains to find a readier exit to the sea, like some of the rivers from the Sierra Nevada, but follow their inclination until they meet the sea.

Besides the above, several minor chains occur, equally independent, though far inferior in extent and height. Some of these have a marked influence on the formation of the Eastern outlets of Spain, on the figure of the coast, and on the direction of the water-courses falling on this side into the Mediterranean. The most im-

SPAIN.

SPAIN. portant is that which lies to the South of the Ebro, on the frontiers of Arragon, the Two Castiles, and the kingdom of Valencia; it is divided into numerous branches, which overspread the country in various directions. The mountains of Jaen, which are situated between the valley of the Guadalquiver and the plains of Granada, are equally worthy of remark.

Spain, however, is not so much distinguished by its numerous and important mountain chains, as it is characterised by the *plateaux* or table-lands, extending between these chains. "If on entering Spain," says a lively and instructive author, "I was surprised to find the Western horizon everywhere bounded by lofty mountains, my astonishment was much greater when, on abandoning the sea at Valencia, and toiling up these inland mountains, I beheld, instead of the valley, a weary, arid plain, extending on a level with their summits as far as the eye could reach. In fact, I continued travelling on this vast plain for hundreds of leagues until I reached the Sierra Morena, and thence descended suddenly by the Despeña Perros into the regions of Andalusia." These vast plains are strikingly contrasted with the precipitous rocks which surround them; and, by producing the effect of a higher latitude, they occasion a great uniformity in the climate of one part of the country. All the temperate parts of the kingdom are included, on one side, between the Ebro and the Sierra de Morena; and, on the other, between Portugal and the water-shed dividing the two seas. In fact, the whole interior of Spain, to use M. de Humboldt's characteristic expression, may be considered a large table, variously furrowed by the mountains, but presenting a series of plains, all of which rise to a level of from 2100 to 2600 feet above the sea. However, it must be observed that the plateau of Old Castile is sensibly more elevated than that of New Castile. Some plateaux occur in the

South, beyond the central part as just defined and totally unconnected with it. Their extent is comparatively trifling. SPAIN.

In the *Orographie de l'Europe*, published in the third volume of the *Recueil de Voyages et de Mémoires* of the Paris Geographical Society, the Hesperian mountains are classified into three insulated groups, which are distinguished by the names of Southern, Central, and Northern. The Southern group includes the three great ranges of the Sierra Nevada, the Sierra Morena, and the Sierra de Toledo; it stretches from Cape St. Vincent to Cape de Gata, and contains the highest mountains of the peninsula. The Central group is about 150 leagues in extent, from its commencement at the rock of Lisbon to Cape St. Martin; it is formed of two great chains, separated by plains which are considered the highest in Europe, being 2200 to 2800 feet above the level of the sea. The Northern group, or Pyrenean chain, stretches across the North of Spain from the Mediterranean to the coast of Galicia; but the chain known exclusively by the name of the Pyrenees commences at Cape Creus, to the North of the Gulf of Rosas, and terminates near Fuenterrabia, forming the natural frontier between France and Spain, and branching out its long arms both North and South. The length of the Pyrenees is about 90 leagues, and their greatest breadth, which is near the centre, where also they are highest, is nearly 30 leagues. The whole surface of the ground covered by this chain is about 1200 square leagues. The valleys of the Pyrenees are different from those of the Alps, many of which run nearly in the direction of the range for 15, 20, and 25 leagues; whereas most of these cross the direction of the range transversely. The following are the heights of the Hesperian mountains, as far as they have been yet ascertained, according to the *Orographie*.

The Balearic Islands belong to the Hesperian Mountains. The Silla Torellos, which crosses the Northern part of the Isle of Majorca from North-East to South-West, is about 5,114 feet high. Mount Toro, in Minorca, is said to be 4,793 feet.

VOL. XXVII.

In the above Table, the letters *a* and *b* in the third column stand respectively, *a* for approximate height, and *b* for barometrical measurement; the sign Δ stands for trigonometrical operation.

SPAIN.
Geology.

The mountain chains of Spain are equally distinguished by their internal connection, and external formation. Each constitutes an independent system; and, though the nucleus of all consists of primitive and intermedial rocks, still these differ in their nature and connection. A great body of granite, which seldom reaches the highest points of the country, and containing gneiss and other primitive rocks, ranges through the Pyrenees, and is surrounded by much more considerable masses of crystalline, schistous, and transition rocks. The primitive rocks, on the contrary, are not much developed in that part of the chain lying Westward of the *Pays Basque*; and, according to Humboldt, it is only in the extremity of the chain in Galicia that granite, accompanied by crystalline, schistous rocks appear to any extent. Gneiss and granite form the bulk of the greater number of the mountains that separate the Two Castiles. According to Link, the granite predominates in the chain extending from the Tagus to the Guadiana; transition schist is the principal rock in the long chain of the Sierra Morena; but granite crops out at the Southern extremity, and continues as far as the Guadalquivir. Granite, however, is not met with in the lofty chain of the South, the central range of which consists of a mica slate, which becomes less crystalline in the lateral branches, and passes to talcous slate and argillaceous chlorites, which inclose extensive calcareous formations, compact and crystalline, of dolomite and serpentine. On the South coast, the primitive schistous rocks which form the nucleus of the lesser mountains there, are covered by transition slate and greywacke, containing lesser beds of flinty slate: these constitute the base of the rock of Gibraltar.

The structure of the chains generally coincides with their principal direction; and, since the alternation of the rocks, and the stratification of the beds are in every respect alike, the direction of the beds, in the greatest part of the kingdom, is South-West, or West South-West. The Pyrenees alone take a West North-Westerly direction. On the contrary, the line of inclination is found to be variable. In the Pyrenees, the slope of the beds is conformable with that of the *versans* on the two acclivities of the range; in the Sommo Sierra, and the mountains of Guadarama, the principal mass of gneiss dips to the South-East, towards the granitic formation. The schistous beds of the Sierra Morena usually incline to the North-West, so as apparently to overlie the granite which breaks out beneath them. In the Sierra Nevada, the dip of the strata conforms with either *versant* of the chain; and it is highly singular to observe how the curvature of the Southern coast, and in particular the formation of the far projecting point of land which stretches to the extreme South, are influenced by the direction of the strata. The beds at the base of the rock of Gibraltar run nearly North and South, with a rapid dip to the East, and thus the gut of Gibraltar is almost at right angles to the direction of the slaty strata, so that the convulsion which gave birth to it must have been directed perpendicular to their course, and must have encountered the utmost possible resistance from the rocky barrier which once parted the Mediterranean from the Atlantic.

The primitive and transition formations are rich in ores in various parts of the kingdom, but the mines at present worked are limited to the provinces situated to the South-East and South-West. The principal veins of lead, as the mighty lead-glance veins of Sinares, are found

in granite. The colossal deposit of galena, which yielded 600,000 quintals of lead in the course of the year 1829, lies in irregular masses in a limestone, which may be referred to the oldest of the intermedial formations; and the rich mercury mines of Almaden are wrought in the clay slate. The secondary rocks also assist, though in different ways, in the formation of the principal chain. They rise to a great height on the Spanish side, in some parts occupying the most elevated summits, and they form the greater portion of the Western elongation of the Pyrenees in the Pays Basque. It is probable, indeed, that the high calcareous chain, which separates the Asturias from the Kingdom of Leon, is a continuation of the same formation. Upon both sides of the Sommo Sierra, those beds which belong to the same age, rest on the oldest rock, but they are distant from the centre of the chain, and appear only on the sides. On the route from Madrid to Andalusia the secondary formations do not disappear until reaching the defiles of the Sierra Morena, formed of clay slate, but on the opposite side they are not met with until after a considerable descent. The high mountains of Jaen are secondary; and deposits of the same age occur in the branches on the North of the Sierra Nevada, between Grenada and Cadiz, which, however, do not rise to the loftier ridges. They reappear in the vicinity of Malaga, overlying the primitive rocks, and forming the summits of the chain which extends from the hills of Ronda to the Southern points of Spain. The celebrated peak of Gibraltar is mostly composed of these rocks, which are not confined to the vicinity of the loftier chains, but extending between them, sometimes level, and at others undulating, constitute the vast *plateaux* already mentioned.

The chief of the Spanish secondary formations are variegated sandstone, the gryphite limestone, and mountain limestone; the first of these is identical with the new red sandstone and red marl of Britain. The muschel-kalk, or shell limestone of Germany, is wanting in Spain as it is in England. The sandstone and marl are rich in gypsum and rock salt; and meerschau, with nests of silicious minerals, rests upon this formation in single beds at Vallecas near Madrid and elsewhere. The lias attains a remarkable importance in the North of Spain, reaching to a great height on the Southern or Spanish side of the Pyrenees, and being so widely distributed over the Pays Basque as almost wholly to cover the older formations. It is here extraordinarily rich in excellent iron ore; and the enormous deposit of carbonated iron, passing into brown and red hematite, which occurs at Solomostro near Bilboa, belongs to this species. It is probable that the ironstone hills mentioned by Pliny in the 34th book of his *Natural History*, refer to this formation. The extensive coal beds of the Asturias are supposed to be subordinate to it. The mountain limestone appertaining to the most widely distributed secondary formations, is also of great geognostic importance in Spain. In many places it immediately covers the sandstone and marls; and it forms independent chains and considerable mountains in the North, as well as in the East and South of the kingdom. The characteristic physiognomy of the rocks of this formation is strikingly exhibited in the defile of Pancorbo in Old Castile, in the mountains of Jaen, and in the insulated acclivities of Gibraltar. Wherever it occurs, it is easily discoverable by the tawny colour of the superincumbent soil, in the same manner

SPAIN.

SPAIN.

as the reddish-brown colour of the high table-lands of Old and New Castile, and the wearisome uniformity of their surface are owing to the sandstone formation so widely diffused there.

The sandstone of the rocks of the Southern coast between Cadiz and Gibraltar, and the limestone of the district Los Barrios, closely resemble the rocks of the Saxon Switzerland; the former is analogous to the *Quader-sand-stein* of Germany, and the latter with the *Planer* of Saxony, which is equivalent to pure chalk.

The flötz formation is not rich in Spain, although tertiary deposits occur in different parts. In the South, and more particularly near the coast, there is a stratification which abounds in marine organic remains, and is composed of pebbles and calcareous particles in some parts completely disintegrated, and in others united by a calcareous cement of various consistency. To judge of it from the fossils, and still more from the beds of oyster-shells that are met with, this deposit, on which Cadiz stands, and which presents an uneven surface, belongs to the upper tertiary marine formation. Probably the tertiary strata observed by M. Brogniart in the neighbourhood of Barcelona, belong to the same deposit. A calcareous breccia, penetrated by ferruginous veins, which belongs to the latest antediluvian deposits, is rather remarkably developed on the Southern coasts, sometimes filling the cavities, and at others being encrusted on the mountains belonging to various formations. The remains of quadrupeds, no longer met with there, are occasionally found in it on the calcareous rocks of Gibraltar, which have arrested the attention of naturalists, and are mostly referred to a catastrophe that must have affected the whole of the Mediterranean coasts. Professor Haussman, to whose labours we are indebted for this view of the geology of Spain, did not visit Murcia, and therefore we are without his opinion on the formations of this province, which are usually regarded by Spanish geologists as volcanic; but these rocks, probably brought from the interior, are met with only in few places. A well-defined basalt is found in Catalonia; but the porphyritic rocks, which resemble the basalt of Caso, of Geta, and of D'Avila, on the Southern declivity of the mountains of Guadarama, are still of a doubtful nature. Hypersthene rock has been found by Professor Garcia in the environs of Salinas de Poza in Old Castile; and M. Haussman met with a greenstone adjacent to a variegated marl in the mountains of Jaen, similar to the rock remarked in the Pyrenees by Messrs. Plasson, Charpentier, and Boué, but was unable to determine its relations with the secondary formations.

M. Haussmann's observations on the prevailing character of the geological features of Spain, and on the influence of soil and climate on the animal and vegetable kingdoms, are well worthy of being recorded.

"A coup-d'œil cast on Spain," remarks the Professor, "permits us easily to perceive three grand divisions. The zone of the North, which extends to the Ebro, presents a character entirely distinct from that of the centre; and this, which is bounded by the Sierra Morena, is in its turn completely different from the zone of the South. The Northern zone, which incloses Galicia, the Asturias, the Pays Basque, Navarre, the North of Arragon, and of Catalonia, is a vast country of mountains. In one part the snows and glaciers of the Pyrenees, in others the North and North-West winds, contribute powerfully to lower the temperature, and produce an abundant irrigation. The humidity of the country

SPAIN

is favourable to vegetation, which in general is affined to that of the South of France; and the frequent alternation of the sandstone, limestone, and clay rocks produces a light soil equally favourable with the climate to agriculture, which is vigorously carried on both in the Basque provinces and in Catalonia. The central zone, comprising the Two Castiles, with part of Arragon, of Leon, and of Estremadura, is far from being as bountifully treated by nature. In general it offers neither the charm of beauty nor of variety, and its elevated plains, destitute of trees, spread their monotonous surface on every side till lost to the sight. The horizontal stratification of the plains, and the scarcity of rivers, cause a developement of the plateaux to a great extent; they unite without being furrowed by valleys of any depth or magnitude. The rivers, considering the extent of the country, and the number of its mountains, are few and mostly sluggish, and streams are equally scarce. Indeed, it is remarkable to see how little water is supplied by the mountains, even when the rocks of which they are composed are favourable to the production of springs. The chief causes of this great scarcity are the singular dryness of the atmosphere, the small quantity and the short duration of the snow on the mountains, the scarcity of frosts, the absence of miry fens on the heights, and lastly, the small developement of the mountain chains in width. The South and South-Eastern zone, which include Andalusia and the kingdoms of Granada, Murcia, and Valencia, differ widely from the foregoing region. No sooner is the Sierra Morena crossed, than the country assumes a more novel and meridional aspect. An African tint is diffused not only over vegetation, but over man and animals. This great difference of climate is produced by the Southern situation, the exposure of the acclivity on the South and South-West to the African winds, and the strong reflection of the solar rays from its steep, naked, and elevated mountains. The mountains are so compacted, and the valleys so deeply cut, that the plains have not space to unfold themselves, and the smaller ones that occur advancing Southward, like those of Grenada, are much better watered than is the case in the central region. Altogether the country presents a greater diversity both in the nature and in the position of its rocks. Hence it results that the South of Spain possesses not only a much higher temperature, one fit for the orange and palm, but also a more varied and more favourable soil for cultivation. Were the air less dry, and the moisture more uniformly distributed, the influence of these advantages would be experienced in a far higher degree. From this deficiency of moisture arise the absence of phenogamous vegetation on nearly all the slopes and mountains; and it equally results that the decomposition of the rocks and the reforming of the original surface of the mountain summits, present considerable differences from what is observed in a country more humid and more abundantly covered with vegetation."

In its physical relations, the Iberian peninsula may be divided into five large and five smaller basins; under the first category will fall those of the Ebro, Duero, Tagus, Guadiana, and Guadalquivir; and under the second, those of the Guadalaviar, Jucar, the Segura, the Mondego, and the Minho. The basin of the Ebro is the least considerable of those of the first class, but yet the most important of those which pour their waters into the Mediterranean, into which inland sea the three first-named of the second class are likewise poured, whilst

SPAIN. the four remaining large basins, and two of the second class, carry the mass of the waters of the peninsula to the ocean. Hence it may be conjectured that, previously to the outlet given to the waters of the Mediterranean by the Straits of Gibraltar, all the Eastern and Southern land-falls of the peninsula must have been submerged, and those alone uncovered which incline towards the ocean.

The basin of the Tagus, the largest of all comprised in the peninsula, drains an area of about 29,854 English square miles. This river rises in the mountains of Albarracin, and runs a course of 520 miles. On the right, its affluents are the Molina, which rises in the Sierra of that name; the Jarama, which bears to it the waters of the Tajuna as well; the Guadarama, which descends from the mountains so named; the Alberche, which rises between the mountains of Gredos and those of D'Avila; the Tietar, which has its rise in a branch of the Sierra de Gredos; the Alagon, which has its source in the Sierra de Francia; and the Zezere, which springs from the foot of the Sierra de Estrella: on the left, the Tagus is chiefly fed by the Rio del Monte and the Salar, the first of which descends from the Sierra of Guadalupe, and the other from that of Montanches; but its minor tributaries are very numerous. The Tagus, after winding through the plains of New Castile in a direction varying from West to South to Toledo, there bends more decidedly Westward, flows by Talavera, Alcantara, and Abrantes, and finally, expanding into an estuary, falls into the Atlantic seven miles below Lisbon. The navigation is not at present practicable above Abrantes, in Portugal.

In the name of Guadiana is still preserved that of Anas, the ancient designation of this river; the word Guadiana being an Arabic periphrasis signifying "the Water of the Ana." This river, whose course is about 460 miles, rises in the mountains of Cuenca under the name of Rio de Gijuela; though the origin of its main stream is yet a contested point, since it is by some supposed to have its source in the lagunes of Ruydera, whence there issues a rivulet which, after a course of 15 miles, is lost under ground for about the same distance, and then reappears near a spot named the Ojos de Guadiana. These Ojos, or "Eyes," are large openings, whence the water issues with considerable violence, and form, after its junction, a channel to which the name of Guadiana is given in the district it runs through. Whatever be its source, the river assumes little importance till below the stream of Gijuela, where it receives on its right bank the Bullague, and, on its left, the Jabalon from the mountains of La Mancha. Lower down the Guadalema and the Zuja, which rise in the mountains appertaining to the Sierra Morena; the Matachel, issuing from the Sierra Costantina; and the Ardila and the Chanza, falling from the Sierra d'Aracena, complete the sum of the principal rivers which flow into the Guadiana and give it sufficient velocity to form below Martola a cascade called *Salto del Lobo*, "the Wolf's Leap."

The Duero, the Durus of the ancients, and which is called the Douro by the Portuguese, drains a considerably wider basin than either of the two preceding, and its affluents are proportionably important. One of the most considerable of these on its right bank, is the Pisuerga, which is formed by the junction of several streams that descend from the Sierra Oca and the Pyrenees; further on it receives the Esla, itself the

receiver of numerous tributaries, and the Tamega. Its chief affluents on the left bank are the Eresma from the *parameras* of Avila; the Tormes, which issues from the lofty peaks of Gredos; and the Rio Coa, which descends from the Sierra de Gata. Although parts of this large basin are not destitute of fertility, yet in many places the soil is at once transformed by rains into a thick, slimy mud, and, in others, the soil is a shifting sand, productive of the pine tribe alone. The course of the Duero is about 455 miles; and directly on issuing from the mountains, it traverses vast, monotonous, and sterile *parameras*, which have a mean elevation of about 2500 feet.

The Guadalquivir recalls its name of *Guad-al-Kebir*, (Great River,) given to it by the Arabs, who were struck by its imposing stream; its Roman appellation was the Bætis. According to the popularly received notion, this river rises on the Western slope of the Sierra Sagra; but, strictly speaking, the river Guardamena, which rises in the Sierra d'Alcaraz, must be considered the main source of the Guadalquivir, being the furthest from its embouchure; and thus this river has its origin within the basin of the Guadiana. Two other important streams which issue from the same basin form its chief affluents on the right; the one is the Jandula, which runs across the Sierra Morena, the other is the Viar, which forces its passage through the Sierra Costantina. Its largest tributary on its left bank is the Genil, the Singilis of the ancients, which comes from the Sierra Nevada, and which through part of its course traverses a soil impregnated with salt to a considerable depth; during summer the salt is crystallized on the surface to an extent injurious to vegetation. After receiving this affluent, the Guadalquivir runs through a highly fertile country until within a short distance of Seville, but hence, as far as the salt-mines of San Lucar, it traverses a belt of land of from three to six miles in width, which assimilates both in its name *Marisma* and its insalubrity to the *Maremma* of Italy. This district is watered by some rivulets of brackish water, which, falling from the slopes of Moron and Montellano, transform it into a marsh land, which supplies merely plants fit for the fabric of soda; whilst the Guadalquivir itself divides into several branches, forming the fertile islands of Menor and Major, whose rich meadows pasture large herds of cattle. "The Guadalquivir," says the author of *A Year in Spain*, "below Seville, passes through a level plain, and divides itself into three branches, which reunite before it empties itself into the sea, near the port of San Lucar. These lowlands are almost entirely without cultivation and inhabitants, if you except a few herdsmen who tend the cattle and horses that graze in large droves upon the meadows. As there are no dikes the river sometimes overflows its banks, and covers the country with devastation. Towards the mouth, the meadows give place to sand-banks thrown up by the sea, and covered with pine woods that furnish abundance of charcoal. On the right, the course of the stream is followed by a single continuous hill, which is a minor branch of the Sierra Morena, holding out to the last, and dying only in the ocean. The river is no longer navigable to Seville for vessels drawing more than nine feet of water, but vessels of three or four hundred tons may enter the river. This, however, is now a matter of little importance, since few vessels of any class are found to profit by it. The Guadalquivir abounds in excellent fish; and the shad so

SPAIN.

SPAIN. much esteemed in America, makes its annual visits here." The course of this spacious stream is about 280 miles.

The Ebro, the ancient Iberus, has its source in the valley of Reynosa, in the North of the province of Leon. For the greater part of its course it is enclosed by mountains, through whose transversal valleys are poured its numerous affluents. On its left bank, the Pyrenees contribute to it the Agra, the Aragon, the Gallego, the Cinca, and the Segre; and on its right the Oca mountains, the Sierra de Moncayo, and the Peñagolosa supply it, among other important affluents, with the Jalon, the volume of which has been compared with that of the Marne, and the Guadalupe, whose waters, employed by the Arabs in the canalization of the basin of the Ebro, still run in the channel of the *Canale de los Moros*. The sinuosities of the Ebro give it a length of upwards of 400 miles; but the rocks brought down by its tributary mountain streams so often impede its course that it has been found necessary to construct a canal which runs parallel with it from Tudela to Sas-taga. Another canal follows the line of the Segre from Mequinenza to Lerida; but, though the canalization of the basin of the Ebro has been most advantageous to this part of Spain, it still falls short of the wants of the country. The earthy deposits brought down by the river to the Mediterranean have formed a considerable delta at its mouth, and rendered its channel here so shallow, that a canal has been required for the admission of ships up to the little town of Amposta, about 15 miles from its junction with the sea.

Although the remaining basins of the peninsula are comparatively unimportant, our description would be imperfect without them. South of the basin of the Ebro extends that of the Guadalaviar, a small river which rises between the Sierra Molina and the Sierra d'Albarracin, and of which the Alhambra is the most considerable feeder. It has a course of above 150 miles: and the basin which it waters is limited Northwards by the Peñagolosa, and by other mountain-branches extending as far as the Ebro, and, Westwards, by that chain of which the Sierra d'Albarracin is a prolongation. To the South of this basin is that of the Jucar, flanked on either side by mountain ranges. This river, which rises on the Western inclination of the Sierra d'Albarracin, is about 240 miles long. Southward again of the foregoing is the basin of the Segura, which is of greater width than either. It is bounded by hills only to the North and East; but to the North-West rises the mountain group called the *Peñas de San Pedro*, and, to the West, the chains of the Sierra Alcaraz, and of the Sierra Sagra. The Segura receives the waters of the Rio Mundo, the Quipar, and the Sangonera; for upwards of the first half of its course its banks are desert and wild, but from the valley of Ricote to the Mediterranean they are blooming and productive.

Of the two small basins which pour their waters into the ocean, the larger is that of the Minho, which river rises in the Sierra de Mondonedo, and, though having a course of about 120 miles only, it is of considerable breadth. It runs from North to South until it joins the Sil, then it turns Westward, and flows in a valley formed by the Sierras of Penagache and Estrica on the South, and by the chain of Barcia on the North. The other and the sole remaining basin is that of the Mondego, which river rises to the South of the Duero, and flows in the valley formed by the Sierras of

Alcoba and of Estrella. Its course is about 150 miles. **SPAIN.**

It has been justly remarked that the division of the peninsula into basins, however satisfactorily it may depict the physical features of the country, is insufficient for the geographer who seeks for something more than the external limits at once obvious to the eye. Although such a division marks the course the waters have followed in abandoning the land, yet it leaves unexplained the various questions relative to the phenomena presented by the vegetation of this fine territory. Its productions in this kind are, indeed, rich and various. Wheat of the finest quality is produced in most of the provinces, and all who have tasted it will be ready to acknowledge the superior excellence of the Spanish bread. Vines are raised in great abundance all over Spain. The other principal productions of the soil are oats, barley, maize, rice, oil, honey, sugar, hemp, flax, esparto or sedge, cork, cotton, silk, sumach, and barilla. The forests with which some of the loftier mountains are covered, and which, from their elevation, have escaped the destructive propensities of the people, supply the charcoal which constitutes the chief fuel used in the country, and also furnish timber for ship-building. Flowers and medicinal herbs grow wild on all the mountains, and in the night season load the air with the rich fragrance of their perfumes. Nor is Spain excelled by any country in the abundance, variety, and delicious flavour of its fruits. Besides the different species common to the temperate climates, there are many which naturally belong to the tropical regions; and in addition to the fig, pomegranate, orange, lemon, and citron, the date, plantain, banana, and cheremoya, find a congenial soil and climate in some portions of the peninsula. With a view then to afford a correct general idea of this copious variety of the vegetable kingdom in Spain, we give the following classification of the differences observable in its soil, for which we are indebted to M. Huot, who, to this end, divides the whole country into six regions.

I. The *Central* or *Celtiberian*, which comprises the two vast plateaux of Old and New Castile, to wit, the sierras of Gata, Gredos, and Avila, and the mountains of Somosierra, to the North of the Tagus; and, South of this river, the Sierra de Mamès and the mountains of Toledo as far as the defiles of the Sierra Molina, together with the Western acclivities of the Sierra Morena and of the Albarracin mountains as far as those of Martes. This immense region, although including isolated summits and forests, contains as well extensive, sterile, and monotonous plains, forming a union of plateaux very analogous to the central table-land of Asia Minor. None of the apple tribe are seen here; the olive begins to show itself only towards the South, but the vine is found all over it. Here, too, flourishes the ilex, whose large, sweet acorns may well be supposed to have furnished a palatable food to the early races of man.

II. The *Southern* or *Bætic*, which extends from East to West from Cape Palos to Cape St. Vincent, and from North to South from the Southern acclivities of the Sierra Morena, including the mountains of Algarve, to the ocean on the one hand and the Mediterranean on the other. The climate here exceeds that of Sicily in the intensity of its warmth; those tracts which border on the sea forming a zone that may be denominated African, characterised as it is by the banana, the dwarf-

SPAIN. palm, and the cactus, whilst the more stony tracts are covered with the wild fig. A second zone, always clad in verdure, rises above this, which embraces the Flora of Italy and Sicily; where the cystus, the myrtle, the orange and the lemon tree, the agnus castus and the tamarisk bloom in rich profusion. To this zone succeeds that of the products which form the staple of European cultivation. The pine forests form another zone, above which rises that of the Alpine plants, which, in its turn, gives way to the regions of eternal snow.

III. The *Oriental* or *Iberian*, which occupies the space comprised between Cape Palos and Cape Crux from North to South, and from East to West that covered by the basin of the Ebro, and the tracts extending between the summits of the Sierras of Molina, Albarracin, and Martès, and the mountains of Palomera, Orihuela, and the Mediterranean. This magnificent portion of the peninsula embraces all the plants of Sicily, the Archipelago, and the Levant. The olive flourishes throughout its entire extent; the carob grows close to the mastich tree; the myrtle, laurel, fig-tree, date, and mulberry mingle their various foliage; the vine yields a richly-coloured, but heady wine; and, like the preceding region, this presents several zones, each with its various vegetation, from the low valleys to the lofty summits of the Pyrenees.

IV. The *Lusitanian* extends from South to North from Cape St. Vincent to Cape Roca; its width being determined by the Southern branch of the Sierra d'Estremos, and North of this by the Sierra de Mames. The mountains lying North of the Tagus shelter this region against the cold winds, and its lower tracts are covered by sandy downs. Here, too, we have the zone of the orange and olive; but, in its Southern range, numerous plants occur long supposed peculiar to the Azores and Madeira, and even those of the Canary Isles are met with. Many of the plants of the South American Flora likewise thrive here; and some may be considered indigenous even.

V. The *Gallegian* offers a different aspect of nature, being the country of the chestnut and the oak, though of the vine as well. The olive and orange are only found on its inferior verge, South of the Duero. This region stretches from South to North, and occupies the space comprised between Cape Roca and Cape Finisterre.

VI. The *Northern* or *Cantabrian*, which includes the territory stretching from Cape Finisterre to the sources of the Adour, is intersected by valleys which run at times from East to West, at others from South to North. Its plains are therefore of small extent, and occur only towards the coast. This region is characterised by the absence of the cystus and laurestinus, and the difficulties which impede the successful cultivation of the orange, the olive, and the vine; yet are its mountains and valleys covered with fine forests, abundant pasturage, and fields enamelled with flowers. The constant humidity of the air co-operates with its rich and fertile soil to maintain this delightful verdure; and its plentiful orchards yield a more refreshing beverage than the teeming grape of the sunnier regions.

M. de Mirbel considers the whole of this peninsula, with the exception of the Northern part of Spain, which forms the shores of the Gulf of Gascony, and which belongs to the temperate zone, as entering into the transition zone. If, therefore, its vegetation has any affinity with that of France, it is only where its mountainous

parts, especially the Pyrenees, resemble the mountains of France, and its warm districts are like the extreme South of France. In East Valencia and Murcia, in the South of Andalusia and Algarves, in Western Alentejo and South Estremadura, the rich and varied vegetation calls to mind the fertile plains of Syria. In Andalusia frosts are unknown, and the snow, if it ever falls, melts the moment it touches the soil; so that it is not surprising that, in the cultivated parts, the Spaniards, long famous for their voyages, should have introduced many vegetables from remote parts of the world; thus giving a perfectly tropical appearance to the country. The *Erythrina corallodendron*, or coral tree, with its brilliant scarlet blossoms; the *Schinus molle*, with its gracefully pinnated foliage, and the *Phytolacca dioica*, are introduced, with many other plants, from South America. Even the bananas are common to the South of the Guadalquivir, as are also the Cayenne pepper; and, in gardens, the *Convolvulus batatas*, or sweet potato. Everywhere about the rural habitations of the Spanish peasantry the date, the orange, the lemon, the olive, the pomegranate, the fig, and the mulberry flourish nearly as well as in the native soil. Formidable fences are made of the *Cactus tuna* and the *Agave Americana*, or American aloe. The former is often mixed with the pomegranate, but of itself it constitutes a hedge almost impervious to cattle. In Portuguese it is called, on account of its prickles, *Fijo do inferno*; the flowers are yellow and the fruit esculent; the latter is by no means unpalatable, and is regularly sold in Lisbon. Where pasturage is scarce, as in Algarve, the cattle eat the foliage of this plant if cut into thin transverse slices. In La Mancha grows the Esparto grele, (*Stipa tenacissima*), of which cords are made, and the foliage is sent in large quantities into Portugal for this purpose. To prevent the careless destruction of these valuable plants, penalties are inflicted on any person who ventures to gather them before the month of May, when they are in perfection. The carob tree Link reckons the most beautiful of European trees. It attains a considerable height, forming with its large, evergreen, pinnated foliage a head of considerable dimensions, and yielding a welcome shade. Among the foliage hang down the numerous long pods, which, when ripe, are used as fodder for cattle, especially the mules, and as meat for swine, though inferior to the acorns of the evergreen oak. Before the expulsion of the Moors the sugar-cane was cultivated to a considerable extent, and lately it has been reintroduced at San Lucar into a garden "d'acclimation," together with coffee, indigo, and gum Arabic. A vast extent of country is covered by the *Chamærops humilis*, (dwarf-palm or palmetto,) growing in waste places. This vegetation, in part exotic, follows the coasts of the Spanish peninsula to the East and to the West. It is diffused in all its luxury in the delicious territory of Valencia, where the agriculture of the Moors is still held in respect. With the species already named are here cultivated the *Aloë perfoliata*, *Yucca aloifolia*, *Cassia tomentosa*, *Medea azedarach*, many kinds of mimosa, annona, &c. In the environs of Alicante the date harvest is very abundant. This palm there grows in large plantations, and often attains the height of 120 feet. It reaches along the entire coast to the fortieth degree, and perhaps higher. The agave abounds in the environs of Tarragona in the forty-first degree, and the olive continues to the shore of France. The most common vegetable productions of the plains of Spain are the cork

SPAIN.

SPAIN. tree, the ilex, and Kermes oak, the bay-tree, the myrtle, the *Phillyrea media* and *angustifolia*, *Juniperus sabina*, *Celtis australis*, *Pistacia terebinthus* and *lentiscus*, *Rhamnus alaternus*, and many other species of this genus, *Viburnum tinus*, *Osyris alba*, *Paliurus australis*, the strawberry-tree, the common and shrubby jessamines, the caper plant, and a great number of cisti, with other shrubs, whose foliage is of an evergreen and coriaceous nature. Immense plains are clothed with *Lygeum spartum*, and the running streams are bordered with *Bupleurum spinosum* and *Nerium oleander*. But it has been justly remarked, that no country in Europe presents a more sorrowful aspect than the interior of the peninsula. "No man, perhaps, saving a botanist," says Link, "could travel with any pleasure in the barren tracts of Old Castile; but this pursuit can render travelling both instructive and interesting, even in these, apparently, sterile wastes. Where forests have existed there, they have yielded to the stroke of the axe; and the naked soil remains without any culture. Vast chains of mountains spread out in all directions, and between them are extended the parameras, more or less elevated plains, frequently as naked as the Steppes of Siberia." M. Bory estimates at from 1800 to 2000 feet the elevation of the Pyrenees which divides the sources of the Douro and the Ebro. In the valleys formed by these rivers and their tributary streams a vegetation of great beauty is found, partaking of that in the more temperate climates of the North. Here are seen small fields of maize, and even of rye and barley, more rarely of wheat, surrounded by lofty oaks, chestnuts, and poplars, every tree supporting a vine, which spreads over it, and not unfrequently reaches to the very summit of the highest oaks; while a cool refreshing shade usually abounds, adorning a cultivated, populous country, every valley resembling a fairy land, enclosed between dark and rocky mountains. The great mass of the forests which have escaped destruction are mostly formed of evergreen oaks; among which, besides the other species already enumerated, are found the *Quercus ballota*, *ægilopifolia*, *faginea*, *prasina*, *crenata*, *rotundifolia*, *humilis*, &c. The *Tilia Europæa*, (*platyphyllos*?) *Fagus sylvatica*, *Castanea vesca*, *Taxus baccata*, *Pinus sylvestris*, *Fraxinus*, *Ornus*, &c. The commonest forest tree on the plains of the temperate zone, namely, the oak, (*Quercus robur*,) inhabits the Southern slope of the Pyrenees. It is said that this tree occurs also in some other parts of the peninsula; and we are the more inclined to credit it because the learned and accurate M. Desfontaines has ascertained its existence on the chain of the Atlas. The vegetation which prevails on the lofty mountains in the interior of Spain is almost wholly unknown to us; and it is much to be regretted that this country, so favourably situated in regard to climate, lying in latitudes in which the palm trees grow upon the plains, and presenting the majestic spectacle of a chain of mountains, the tops of which shoot up into the region of everlasting snow, should have been so little investigated in regard to its botanical productions. M. Ramond has made some interesting observations on that of Pic du Midi, one of the highest of the Pyrenees, and has compared the plants of its most elevated summit, estimated at 10,000 feet, with that of Melville Island, as described by Mr. R. Brown. The similarity is very striking.

Of these, eight of the Melville Island *lichens* and one of its *mosses* are found on the summit of the Pic du Midi; five others of the lichens and one of its two *hepaticæ*, and six of its mosses grow on the crags of the peak, or in its immediate vicinity.

The foregoing account of the botany of Spain is altogether borrowed from the able article furnished by Dr. Hooker to Murray's *Encyclopedia of Geography*, as is the following account of the zoology from Mr. Swainson's contribution to the same work.

The native zoology has been so little investigated that **Zoology** nothing beyond a meagre list could be furnished of indigenous animals. In the mountains of Asturias the ibex is not uncommon, and the alpine squirrel (*Sciurus alpinus*) is only found in the Pyrenees. In the Southern parts, bordering on the African shore, a few species of warblers have recently been found, which are as yet unknown to the rest of Europe. The European bee-eater frequents the vicinity of Gibraltar in large flocks during the season of migration. Among the domesticated animals, the horse and sheep of Spain deserve particular notice, as having been long celebrated throughout Europe. The best horses are generally about four feet six or eight inches high; they have all the fire, docility, grace, and action of the beautiful Arabians of Barbary, (generally

SPAIN. called barbs,) and there can be no doubt of these noble animals having been introduced by the Moors and crossed with the native breed; those of Andalusia, Granada, and Estremadura are the most distinguished. At Xeres are found two perfectly distinct races; the one, which possesses the fine qualities above mentioned, is still preserved in all its purity at the Chartreux. The other race is larger, stronger, less elegant, and used for common purposes. Latterly but little care has been bestowed in keeping up the more noble breed, so that fine horses are not so common in Spain as formerly. The mule in so mountainous a country is particularly useful, and, with the ass, is principally used for conveying goods in the interior; the breeds of the latter are very fine, and are hardly excelled by those of Egypt. Spain is still famous for its merino race of sheep. The flocks are kept constantly travelling during the greater part of the summer, but are carefully pent up in winter. This race, subdivided into breeds, is extended over the greater part of Spain; but those of *Cavage* and *Negrata* are the best. A third breed, the *souan*, appears more hardy, and passes the winter in Estremadura, Andalusia, and New Castile; these three constitute the *transhumante*, or travelling race, to distinguish them from the *estantes*, or those of a somewhat inferior breed, who do not migrate. The best fleeces are those which appear almost black on their surface, caused by the dust adhering to the peculiar greasy pile, for it is invariably found that such fleeces are of the purest white beneath. The merinos dispersed by George III. over England have incalculably improved our own races. By great care and expense on the part of the native graziers this valuable race has likewise been introduced in the distant regions of Australia with equal success. There is a very large breed of oxen in the country round Salamanca; but the cattle of Spain have been much neglected, the mountaineers deriving all their milk and butter from goats. The spaniel appears to be a breed of dogs originating from this country; and the Spanish pointer is considered to have a greater acuteness of scent than that of Britain.

Agriculture.

Generally fertile as Spain is, and although enjoying every advantage of climate, yet is it in a state of deplorable backwardness in all the branches of rural economy. This is attributable to a variety of causes, amongst which the tenure of property, the law of succession, the ignorance of the proprietors, the poverty of the occupiers, and what has been appropriately termed the curse of the *mesta*, are the most prominent. The greater part of the land of Spain belongs to the nobility, the church, and towns or corporate bodies, and is settled according to the law of Majorat or *Mayorazgos*. Strictly speaking, this term implies the right possessed by the eldest born (*mayor*) to inherit certain property on condition of transmitting it entire and undiminished to those possessed of the same right on his decease. This law of settlement originated in the desire of the greater houses to perpetuate their family name, and to preserve an estate proportioned to their rank and dignity; and, through the influence of the same desires extending to the classes beneath them, the law of majorat has grown to have a much wider range than it possessed when first introduced. Thus, according to an usage which has become prescriptive, the term majorat, which was at first confined to the right of succession to a perpetually entailed estate in virtue of primogeniture, now includes, in addition, the cause that produces the right or the accident of birth, the

property subjected to its operation, the actual possessor of the property, and the person who stands next in order of succession. The law of majorat has thus come to embrace five distinct kinds of succession, each of which again has its anomalies and varieties. The greater part of the *mayorazgos* are constituted in favour of the first-born; some, nevertheless, are settled on the second children, and, in many families, there are both principal and secondary majorats. Property held in *mayorazgo* cannot be alienated, sold, disposed, or divided by the possessor either in favour of a wife or of children who are not called to the succession; in fact, it is an entail constituted on nearly the same principle with Scotch tailzies, but subject to conditions and limitations even more absurd and ruinous to the holders and to the country at large. This monstrous law leads to frequent litigation; and even where this is avoided, the estate will be often burdened by the various *mayorazgos* saddled upon it with annuities amounting to five-twelfths of its clear yearly rental. Contrary to the hopes in which it originated, this system of entail, instead of perpetuating the great houses, has powerfully contributed to their extinction; as in case of failure of the male line the property passes away in the female to entire strangers, whilst the collateral branches sink into obscurity and die away or are forgotten.

Now the injurious effects of this system on agriculture are felt in numberless ways; and, to instance only in one, in the not uncommon case of the possessor of a *mayorazgo* being childless, it must be obvious that one so situated can have little interest in the improvement of the property. The buildings are dilapidated, the land neglected; and to increase still further the evils of this system of tenure, it has become the usage for leases to expire on the demise of the lessor. Nor does the ill stop here. Habits of idleness and dissipation are engendered amongst those of the younger part of the community who have any future claims on property by virtue of this multiplied system of entail; and the selfish and unsocial feelings which result from the family-severing institution of *mayorazgos* have been the death-blow to those sweet charities of home which most contribute to the happiness and virtue of a nation.

The farms throughout the country are small, and the farmers, generally speaking, notwithstanding the lowness of rents and cheapness of living, live worse than the labourers in towns. Their only means of raising the funds which they require for their farming operations, is by mortgaging their crops; and this is not only true of the tillage farmers, but holds good with respect to the oil and wine growers. The farmers usually live in wretched huts, crowded together in villages. The operations of treading (threshing) and cleaning the corn are performed in the open air, and the grain is left in heaps in the field until it can be sold. In Castile it is often preserved in caves, dug for the purpose, for five or six years. The implements of husbandry in use are of the rudest description; and *fanners* are almost unknown, except in a few of the sea-ports into which they have been introduced from this country. After the tenant had paid tithe, *primicios*, *frutos civiles*, &c., he has little more than half the produce left to pay rent and labour, and to support his family; and hence it must be evident that the farmers have neither the means nor the enterprise requisite to undertake an improved system of husbandry. Even had they both, they would be stopped by the want of a market, since the produce of the soil,

SPAIN

SPAIN. even with the slovenly culture applied to it, is more than sufficient for the demands of the people.

In the vast plains of Leon, Castile, and Andalusia, agriculture is almost entirely confined to the growth of wheat. There is no rotation of crops; and the wheat is sown at the commencement of the rains, after a slight ploughing. The most careful cultivation is to be found in the *huertas* of Granada, Murcia, and Valencia, which are of considerable extent, and which are abundantly supplied with the means of irrigation by the waters of the Xenil, the Segura, and the Xucar. These, indeed, are accounted the gardens of Spain, and yield two, three, and even four crops in the year, principally of vegetables, maize, and the mild red pepper. The latter is the chief produce of the *huerta* of Murcia, as rice is that of Valencia. Agriculture has also been much improved in the provinces of Arragon, Navarre, and Biscay; more especially in the latter. Here, from the mountainous nature of the country, the plough is superseded by spade husbandry; and the arable ground is carefully laboured. Rye, maize, wheat, barley, and oats are the produce of these provinces, which enjoy many privileges through their separate administration and local laws, by which they are exempted from many of the burthens that oppress the kingdom at large.

It is almost impossible to estimate the rent of land by the English acre, owing to the extreme uncertainty and irregularity of the measures. The Spaniards value their arable land by the *fanega*, or space of ground requiring 90 pounds of wheat for its sowing; and their vine and olive lands by the *aranzada*, or number of vine and olive plants that are planted over a certain extent; but these extents of ground and numbers of plants vary in nearly every province. The corn lands of Andalusia and Castile may pay on an average from 3s. to 5s. the *fanegada*, or space in which a *fanega* of wheat is grown; and the vine-lands yield for every three *aranzadas* a rent equivalent to a *fanega* of wheat, or from 3s. to 4s. But, in the richly irrigated lands round Granada, Murcia, and Valencia, the *fanegada* lets, according to circumstances, at from 12s. to double that amount. Altogether land is not supposed to yield the proprietors more than from one and a half to two per cent.

There are few territorial families in Spain distinguished by their wealth; and even the great land-owners, as the Dukes of Medina-Celi, Alba, Altamira, Ossuna, Montellano, Frias, Benavente, Del Infantado, San Carlos, &c., whose rentals are commonly valued at from half a million to a million of dollars, are for the most part deeply in debt. The incumbrances on their estates, arising from the system of tenure already referred to, and the custom of the country, by which they are compelled, in addition to the large establishments which their rank obliges them to keep up, to maintain also all the domestics of their deceased relations, keeps them constantly embarrassed, and converts their large revenues into premiums for general idleness.

Notwithstanding the progress which has certainly been made in later years in the path of improvement, scarcely a quarter of the surface is applied to any profitable use; more than three-fifths are devoted to pasturage, a much greater extent than is required by the number of cattle in the kingdom; and about a twelfth only of the superficies is occupied by wood. Yet were no more than those vast and fruitful plains, which extend East and South of Seville, properly cultivated, the produce might supply all Spain. As it is, the

VOL. XXVII.

population of these districts is so scanty and so little inclined to industry, that the price of wheat there is generally higher than in the other agricultural districts. "The kingdoms of Old Castile and Leon," says a writer in the *Foreign Quarterly Review* for 1829, "are justly considered the granaries of Spain. They have their outlets in the North by various ports from Gijon to St. Sebastian, the principal being Santander and Bilbao. The provinces of Burgos and Palencia are the nearest points from which these ports get any considerable supply; the distance being from 130 to 140 English miles from each. The elevated and rich *campos*, which extend from Logroño to Burgos, and thence on each side of the Arlanza and Pisuerga, and along the Canrion and numerous other streams which water the provinces of Palencia, Valladolid, and Zamora, yield immense quantities of wheat; and further to the West, and on the South side of the Douro, the provinces of Toro and Salamanca may be considered as forming a portion of the richest wheat-country in Spain, or, perhaps, in the world. The crop is often so abundant for a series of years, that the produce of the fields at a distance from the villages, is sometimes allowed to rot on the ground, the expense of conveying it home being considered beyond its value! It was calculated that the accumulated surplus of four or five successive years in the *silos* and granaries of these plains amounted at the close of the harvest of 1828 to 6,000,000 of *fanegas*, or 1,200,000 Winchester quarters. The ordinary cost of carriage does not exceed seven or eight shillings a quarter for every 100 miles, but the means of transport are so defective and badly organized that when any extraordinary demand for exportation takes place, the rates advance accordingly. Thus, in September, 1828, the usual price was seven or eight shillings, but in consequence of extensive demands from England and France, it rose two months after to 14s. and 16s. per quarter."

With the exception of the few tracts which enjoy facilities of water-carriage, the corn is usually conveyed on the backs of mules and asses, or in small carts drawn by oxen; and this imperfect means of transport is entirely conducted by the *arrieros*, (carriers or muleteers,) who, indeed, are the travelling merchants of the country, and who supply the markets of the interior with every kind of produce in demand. The difficulties in the way of the transport of other merchandise in this country are diminished in the case of corn by the establishment in most districts of *positos* or granaries, where it may be placed until disposed of without paying the municipal duties of the towns. Before the French invasion there were above 5000 of these establishments dispersed over the country; and, in times of scarcity, to provide against which they were originally founded, the corn was sold at a reduced price, and the proceeds handed over to the farmers. Still the means of carriage are so deficient, that when the foreign demand is at the briskest the supply is very limited. In January, 1829, when the export to England was carried on with unusual activity, no more than 18,000 quarters a month were delivered at Bilbao from the interior, working on Sundays.

The following Table of the average prices of corn, in the various provinces of Spain, during the year from September, 1827, to September, 1828, is made up from notices published monthly in the *Madrid Gazette*. The prices must be considered as merely approximative, since each province makes the return in its own peculiar weights, measures, and money, and the returns are not

5 F

SPAIN. only irregularly sent in, but there is a material difference taken into account in others. The prices are stated in SPAIN. in the prices in towns of the same province. Duties, *reals vellon*, and represent pretty nearly shillings sterling per quarter.

Average Prices in each Province for the whole Year.

The gross agricultural produce of the kingdom was estimated by Miñano, in 1826, at £76,965,000, and the net produce at £28,403,666.

The *mesta*, to which reference has been already made in this article as one of the curses of the country, is the name given to an incorporated company of proprietors of migratory sheep, invested with exclusive privileges. It originated in a compact entered into between the inhabitants of the mountains and those of the valleys, about the year 1556, for the mutual protection of their sheep and cattle. Gradual encroachments, the procuring of successive immunities, and the assertion of pretended rights, secured to it in course of time a monopoly of the finest pasturage in the kingdom, and, consequently, a monopoly of the wool trade of Spain. These privileges have been digested into a regular code, entitled *Leges y Ordenanzas de la Mesta*; and as the association consists of the greater nobles, persons in power, members of rich monasteries and ecclesiastical chapters,

it has the power as well as the will to enforce the provisions of this monstrous code with the utmost severity. The association owns half the flocks of the country, and employs about 60,000 persons, chiefly taken from the provinces which are most deficient in the population required for the culture of the soil. This is the first evil. The second is the prohibition of enclosures and the conversion of large tracts of the finest arable land in Spain into open pasture, thereby destroying the stationary cattle, and vitally injuring agriculture. During the migration of the flocks belonging to the *mesta*, a breadth of pasture is accorded them, as they journey from station to station, of about 250 feet; and when they are settled in the spots fixed upon, its proprietors are paid according to a rate fixed by the *mesta* itself. The migration takes place in flocks of about 10,000 each, which are led from the mountains of Old Castile in the month of October, and are turned, like the plague of locusts, over the plains of Estremadura and Andalusia. In

SPAIN. May they are driven back to their mountain pastures. In their route either way, the cultivated lands are seldom respected; the pastures in common are so devastated that the flocks of the vicinity can scarcely find a bare subsistence after they have passed; they are never folded on arable lands, so contribute nothing to the fertilization of the soil, and, to complete the catalogue of ills, the directors and shepherds of the *mesta* are more dreaded than robbers or brigands in every place through which they pass.

Miñano estimates the number of the cattle, &c. in Spain, in the year 1826, as follows: horned beasts, 2,944,885; horses, 400,495; mules, 223,646; sheep, 18,687,159; goats, 5,187,668; asses, 641,788; swine, 2,728,283; bee-hives, 1,697,593.

Commerce
and manu-
factures.

"Low as agriculture has fallen," says the author of *A Year in Spain*, "manufactures being of less instant necessity are still lower. With the exception of a few expensive establishments, which form appendages to the Crown, and serve to check private industry, there are few fine commodities wrought in the Peninsula. Watches, jewellery, lace, and almost every thing requiring taste and ingenuity in the production, are brought from abroad. In general, each little place, deprived of all facilities for carrying on that internal trade and commerce of exchanges so invaluable to a country, produces, advantageously or disadvantageously, as the case may be, the few narrow necessities which are indispensable to life. If we exclude, then, the establishments which are forced into sickly prosperity by royal protection, a few coarse fabrics of wool, cotton, silk, hemp, flax, paper, leather, and iron, compose the productions of Spanish industry. Spain is now the exporter of scarcely a single manufactured article. Thus we see the country, which in the XVth Century furnished the rest of Europe with fine cloths, silks, and other luxurious commodities, now reduced in turn to a like condition of dependence. As for the foreign commerce, which once spread itself over two oceans and into every sea, it is at present restricted to an occasional arrival from Cuba, Porto Rico, or the Philippines, at an uninsurable risk, and an exchange of raw commodities, such as silk, wool, oil, figs, raisins, almonds, salt, and barilla, for the manufactured articles of foreign countries. Even that internal trade and free exchange of domestic productions, which constitute the most valuable branch of commerce, are no longer enjoyed without molestation. The poverty of communications, from the defective state of roads and utter absence of canals, with a single contemptible exception; the want of uniformity in weights, measures, and commercial regulations; the insecurity and fluctuating policy proper to despotism; the destructive imposts levied at every step; the authorized and systematic vexations of mercenary custom-house creatures and policemen—all tend to check, and even arrest, circulation within; whilst the South American corsairs, pushed on by cupidity, interrupt the coasting trade at every headland, and force it to take refuge under a foreign flag."

This is a sombre picture. The one which we now present, painted by an anonymous but skilful hand, exhibits a more cheering scene and brighter colours.

"The coast of Spain is inhabited by a race of men whose character is perfectly distinct from that of the inhabitants of the inland provinces. Indolence is generally assumed to be the constitutional failing of the Spaniards, but it is peculiar to the latter class; the former are, on the contrary, bold and enterprising. The moun-

taineer is also distinguished by many good qualities, which only require some exciting cause to develop them. Let us inquire briefly into what account these qualifications are turned in a commercial and manufacturing point of view. Barcelona and the coasts of Catalonia are enriched by a flourishing trade; that carried on by St. Felice de Guixols extends as far as the Antilles and the Black Sea. The excellent dock-yards of Lloret, Tosa, Malgrut, and Arenys-de-Mar lend great facilities to the trade of these places, which are noted for the solid manner in which their vessels are constructed. Their female, infirm, and aged population are actively employed in the manufacture of blonde and stockings by machinery. Palamos, Rosas, St. Felice, and the neighbouring ports, trade in cork, which is almost a source of wealth to Gerona. This neighbourhood is the focus of operations of the most enterprising race of Spanish smugglers. From Vinaroz, Murviedro, Peniscola, and Valencia, and from the Balearic Isles, wines, oils, and oranges are exported to distant places; nor is the commerce carried on by Alicante, Carthage, Almeria, Malaga, Cadiz, and the ports of the South, less brisk. On the Northern coast Corunna is, by its commercial transactions, closely connected with America; Ribadeo and Viviero trade with Hamburg, Dantzic, and Riga; Ferrol, one of the three naval arsenals of Spain, is likewise a commercial town. The pilchard fishers of Vigo cover the waters of Galicia with their vessels, and convey their spoil to all parts of Europe. Lastly, Gijon, Bilbao, Santander, and St. Sebastian have from a remote period exported the wool and iron which are brought to these places from neighbouring provinces to France and America.

"The staple commodity of Valencia is silk, which forms an important branch of trade in its raw state, and affords also profitable employment to the home manufacturer. The looms of Valencia produce tissues, gauzes, and ribands, which rival the French in beauty. The silk manufactures of Talavera de la Reyna and Zaragoza are also in high repute. In the North, Bilbao and Santander, in the South, Seville and Cadiz, are the great entrepôts for the exportation of wool, which is also spun and woven in Catalonia, and manufactured into cloth and flannel; in this branch of industry Barcelona, Manresa, and Castel Tersol participate. The fine cloth of Zaragoza, of which the company of Guadalajara have had the monopoly until of late years, is in great request. Galicia annually imports 20,000 hundred-weight of flax, which is conveyed to Santiago, and thence dispersed throughout the villages of this province, to be converted into linens and then sold in the Castiles. An extensive export of Gallician linen is made to Cadiz, where the produce is applied in purchasing French and colonial exports. Biscay, Guipuzcoa, Galicia, and Catalonia, abound in iron, which is exported to France and America, or, having been wrought, is consumed in the inland and Southern provinces. Bilbao and Cumana are the entrepôts for the exportation of iron, and Vittoria for the excellent kind produced in Biscay. The manufacture of arms in Spain is carried on to a considerable extent; there are two large factories in Biscay: at Abbaceté and Toledo swords, &c. are made: at Segovia fire-arms are manufactured, and at this place, as well as at Seville and Placencia, there are good foundries. In the neighbourhood of Ribadeo, in Galicia, there are numerous forges of iron for the sea-service. Seville has an extensive trade in leather, a species of which, prepared with gall-nuts, is that so much sought after

SPAIN

SPAIN. under the name of Spanish leather. Ferrol and Vittoria possess a considerable number of tanneries, and the former has an establishment where varnished leather is made. Besides the Malaga and Alicante wines, and those produced at the mouth of the Ebro, the dark, coarse wines of Murviedro are extensively exported. Reus, Torrento, and some other places on the coast, between Valencia and Barcelona, are celebrated for their brandy. The dried fruits of Spain give activity to the commerce of Alicante, Malaga, Valencia, Seville, and Gijon. Valencia is noted for its beautiful dyes, and for its strong and tasteful cotton manufactures. At Manires, a small town near Valencia, there is a manufactory of glazed pottery; this is a monopoly in the hands of a few families, who pretend that their process is a secret which descended to them from the Moors. The preparation of the varnish, which is in the imitation of gilding, is the important part of the secret, for the pottery of Manires is in itself of no great value."

The net produce of commerce and manufactures was valued by Minaño (1826) at £14,660,000.

Roads.

The *caminos reales*, or King's highways, are far from numerous in Spain, and, with few exceptions, are kept in very indifferent repair. The two roads which run from Madrid to Burgos, one through Valladolid, and the other through Aranda de Douro, are said to be kept in very good condition; but the great Eastern roads from the capital to Valencia and Barcelona are in a wretched state. The road to Burgos is continued by Vittoria and Irun to France; and, taking into account the mountainous nature of the country through which it runs, it is well preserved. A *camino real* leads from Madrid to the North-West to Corunna and Ferrol, through Galicia, but it is in many places impassable for loaded carriages or carts; Southward, a high road leads over the Sierra Morena to Seville, through Andujar and Cordova, which is kept in a tolerable state. There is a very good road from Valladolid to the port of Santander, through Palencia and Reynosa, and also one of comparatively recent construction between Leon and Gijon, which serves to connect the corn-country of Leon and Castile with the Asturias. The roads in Catalonia are asserted to be in general superior to those of the other provinces. The expenses of the making and of the repair of roads are defrayed in part by tolls, and partly by local taxes. The principal lines are under the superintendence of a board, belonging to the department of the finance minister; and it appears from the published abstracts of its operations during the years 1826 and 1827, that the sum expended in the former year in repairing and improving 3,100 miles of old road and 17 bridges, and in constructing and repairing 175 miles of new road and 18 bridges, was £92,400. In 1827, £89,240 were devoted to the same objects, being not a twentieth part of the money laid out annually for the same purpose in this country.

Canals.

Canal communication, so much required in Spain from the circumstance of few of its rivers being navigable, is in a still more deplorable state than the roads, though the maps and geographies give the names of several lines as cut, which are only projected. The most important is the *Imperial Canal*, which was begun by Charles V. It is about 66 miles long, and was at first designed for purposes of irrigation solely. It runs from Tudela in Navarre to about 15 miles below Saragossa, and exhibits in its course some interesting triumphs over hydraulic difficulties. The *canal of Castile* connects the port of

Santander with the Duero; and the *canal of Segovia* runs from the town whence it takes its name to the same river. The *canal of San Carlo* is constructed to give a port to Tortosa; and the remaining canals are either unfinished, or have no existence except on paper.

There are few establishments in Spain for the diffusion of the first rudiments of knowledge. The lower classes seldom learn to read and write, whilst those above them are as seldom in any thing else save these and the elements of arithmetic. Such as are intended for the learned professions attend a Latin school for two or three years; but establishments of the kind are far from numerous. The branches of knowledge taught in the Spanish Universities are philosophy, including logic, physics, and metaphysics, theology, Roman law, canon law, medicine. The usual age for matriculation is between fourteen and fifteen. No student can proceed to any of the higher faculties without two years' attendance, at the least, in the philosophy schools. The first of these two years is devoted to logic; the second to the elements of natural philosophy, and such a slight knowledge of geometry as is necessary to understand the general laws of motion, and some theorems of mechanics. At the end of these two years, the student has to undergo a public examination for the degree of bachelor of arts. The study of divinity takes up five scholastic years, (the scholastic year begins in October and ends in May;) the first is employed on the work of Melchior's Causes, *De Locis Theologicis*, the other four in attendance at lectures, morning and afternoon, on dogmatic, moral, and expository divinity. In fact, study is still in great measure conducted on the plan of the schoolmen; and the extent of the improvements brought about by the utmost exertions of those patriotic individuals who, since the time of Campomanes, have laboured in the cause of education, may be in some degree estimated by the fact that medicine and surgery are in so degraded a state that the barber still very generally combines both professions with his own more peculiar one. Botany is almost the only science which has been successfully cultivated in Spain; and yet its *Flora*, as has been shown, may still be considered an unexplored mine. The most frequented universities are those of Santiago, Valencia, Valladolid, Saragossa, and Seville. The academies exist rather in name than in substance. There is one of the Spanish language, founded on the model of the French academy; one of history; and one of the fine arts, at Madrid. The latter, especially, would seem to be a sinecure establishment. The names of numerous others in the provinces might be cited, but the catalogue could throw no light on their real state, nor be a gauge of their efficiency.

The religion is the Roman Catholic, and no other is tolerated. The number of archbishoprics in Spain is eight, of bishoprics fifty-one; the Archbishop of Toledo is the primate.

According to the statistical table given in the last Revenue edition of Malte-Brun's Geography, the income of Spain in 1833 was £6,750,000; its expenditure £7,402,500. The public debt amounts to about £165,000,000.

Occupied successively by the Phœnicians, Carthaginians, Romans, and Arabs, foremost in the great discoveries of the XVth Century, and startling Europe in the XVIth with the fears of universal monarchy, to Spain may emphatically be applied the sad proverb, *Roma fuit*. The glories of her conquests, of her literature, and of her school of arts are numbered with the past. Her national character is the theme of romance

SPAIN.

Education.

Concluding Remarks.

SPAIN. writer and novelist, and though proofs might be cited that "even in her ashes live her wonted fires;" to trace the characteristics of the Spaniard of the day, would be to string together a series of paradoxes. Her government, constitution, and laws are alike fluctuating with the events of the hour; and to describe their present state would be like writing on the sand what the next tide would efface. The physical features of Spain alone are stamped in a permanent type, and on these we have dwelt largely. Her political fortunes are in the womb of time.

SPALANGIA, in *Zoology*, a genus of *Hymenopterous* Insects.

Generic character. *Antennæ* lengthy, inserted upon the anterior superior or oral margin of the head, much broken, and gradually swelling towards their tip; head depressed; maxillary and labial *palpi* biarticulate; anterior segment of the corselet long, and narrowed in front; *abdomen* ovate, abruptly pedunculate.

This genus belongs to Latreille's *Pupivorous* family. Its type is *S. nigra*, pubescent, black, and spotted; *abdomen* smooth and shining; *anus* pointed; wings white, rather hairy; *tarsi* brown; *antennæ* in the male as long as the body, their second joint shorter than in the female. Is found in the neighbourhood of Paris and Genoa; common in human ordure and in umbellate flowers.

See Latreille, *Genera Crustaceorum et Insectorum*.

SPALAX, from the Greek *σπαω*, *I root out*. Guldenst. *Slepez*. In *Zoology*, a genus of animals belonging to the family *Murides*, order *Rodentia*, class *Mammalia*.

Generic character. Incisive teeth in each jaw two, chisel-shaped, with a broad edge, the lower twice as long as the upper; molar teeth three on a side in each jaw, tubercular, and gradually diminishing in size from fore to behind in the upper, but of equal size in the lower jaw; aperture of the mouth very narrow, and upper lip deficient; muzzle flat above and rounded in front; no external aperture in the skin for eyes; no auricles, but the auditory passage surrounded with a cartilaginous ring, and almost entirely hidden in the fur; neck very short, and of equal bulk with the cylindrical body; tail deficient; legs short, five-toed, their nails weak, flat, and slightly curved.

This animal was included under the Linnæan genus *Mus*, till its peculiar generic characters had been pointed out by Guldenstaedt, who applied to it the name of *Spalax*, by which Aristotle had described it. From its burrowing habits resembling those of the Mole, the Latin writers have confused it with that animal, and translated *σπαλαξ* by the word *talpa*. The Mole, however is not found in Greece; and although the *Slepez* burrows like it, yet it is not insectivorous, but feeds entirely upon roots. It is distinguished specially from the true Rats by the absence of a tail, by the deficiency of upper lip, by the breadth of the incisive teeth, by the absence of eyes and auricles, and by the fore feet having no thumb nail. When the skin is removed from the head, a tendinous expansion is seen spread over the orbits, beneath which is found a little oblong glandular body, about the middle of which is a black spot representing the globe of the eye, which, when cut into, exhibits the proper coats and humours.

S. Typhlus, Illig.; *S. Microphthalmus*, Guldenst.; *Mus Typhlus*, Pall.; *le Zemni*, Buff.; *Blind Slepez*. Length from the point of the muzzle to the extremity of the body from seven and a half to eight and a half inches, of which the head measures about one-fourth; fur soft, close, and lengthy, but shorter about the muzzle; front of the head and all the under parts mouse-grey; the upper parts rufous-grey inclining to yellowish, the base of each hair being grey and its tip ferruginous; whiskers white; feet whitish flesh-colour. It is found in Asia Minor, Syria, Mesopotamia, Persia, and Southern Russia, between the Tanais and Volga, and west of the latter river, and according to Pallas is called *Slepez*, which in the Russian language signifies blind. Buffon states that it is also met with in Poland, and there called the *Zemni*.

From the absence of any aperture in the skin for the eyes, it is of course totally blind, but as a compensation its hearing is remarkably acute, and at the least noise it raises its head and expands its ears to the utmost, so as readily to catch the sound and convey it to the internal organs of that sense, which are very largely developed. When fearful of injury it opens the mouth, utters a stridulous noise like a person breathing with difficulty, and shows its teeth, with which it bites hard. Its motions are quick, its step irregular and hurried; and it walks backwards nearly as well as forwards. Like the Mole, it lives in the most fertile plains in burrows at but little depth below the surface of the soil, loosening the earth with its muzzle as it moves along, and biting off the roots which intercept its passage; with its fore feet it flings the loosened earth backwards, which is then thrown out by the hind feet into heaps like a molehill, at the distance of two or three feet. From this burrow or gallery it makes other collateral branchings, which enter at an angle; and on the approach of winter, it burrows more deeply, and forms for itself a chamber, in which it hibernates. But when frightened, it immediately burrows perpendicularly, nor would its hiding-place be known but for the loose earth. It feeds entirely upon roots, especially those of umbelliferous plants and grasses, and is a great plague to the agriculturist. They consort in summer, and are then seen upon the surface; and the female produces two or four young at a birth.

Cuvier mentions another species,

S. Javanicus, about the size of a rabbit, of a deep grey colour, with a longitudinal white streak upon the head, and which is found in the Isles of Sonda.

See Guldenstaedt in *Novi Commentarii Acad. Scient. Imp. Petr.*; Pallas, *Novæ Species Quadrupedum e Glirium ordine*; Cuvier, *Règne Animal*; Olivier in *Bulletin de la Société Philomathique*, vol. ii.

SPALLAN-
ZANIA.
—
SPAN.

SPALLANZANIA, in *Botany*, a genus so called by De Candolle, in honour of Abbé Spallanzani, an Italian, celebrated for his researches in natural history. It belongs to the class *Pentandria*, order *Monogynia*, and the natural family of *Rubiaceæ*. Generic character: limb of calyx five-parted, persistent, longer than the tube of the corolla; corolla with a slender tube, a naked throat, and a five-lobed limb; stamens five, free, exserted; anthers oblong; style one; stigmas two, slender; capsule ovate-globose, ribbed, crowned by the limb of the calyx; valves semibifid; placentas adnate to the dissepiment; seeds tubercular.

This genus consists of one species, *S. corymbosa*, a native of Madagascar. It is very nearly allied to the *Rondeletia* and *Mussaenda*.

SPALL, Fr. *espaule*; It. *spalla*, a shoulder. See **EPACLET**.

Who, soon prepar'd to field, his sword forth drew,
And him with equall vawle countervayld;
Their mightie strokes their haberieons dismayld,
And naked made each others manly *spalles*.

Spenser. Faerie Queene, book ii. can. 6.

SPALT, *adj.*, *spales* or *spalls*, are chips; and *spalt* (Ger. *spalten*) is *split*; easily spilt, split, or severed into small parts. See **SPELT**, and **SPILL**.

Of all oke growing in England, the park oke is the softest, and far more *spalt* and brickle than the hedge oke.

Holinshead. Description of England, book ii. ch. xxii.

SPAN, *n.* } D. *spanne*, *spannen*; Ger. *spanne*,
SPAN, *v.* } *spannen*; Sw. *spann*; Fr. *espan*; It.
spanna; A. S. *span*, *spannan*, to measure by *spans*, *i. e.*
by the hand extended from the thumb to the little finger.
Somner. Also, he adds, to stretch out, to knit or tie
straight; whence our *spanning* of an house, as also of a
cart-wheel. Skinner suggests, doubtfully, the Ger. verb
spannen, *tendere*, *extendere*; and Tooke thinks a *span*
is merely the past tense, and therefore the past participle
of the A. S. *spin-an*, to spin, to extend, or stretch
out, to draw out. *Span-new*. See **SPICK** and **SPAN**.

To *span* (formed upon the noun) is to stretch or draw
out, to extend, to measure, by extension, *sc.* of the
hand, to mete or measure. A *span* is usually re-
stricted to a short extent (of space or time.)

This tale was aie *span newe* to begin,
Til that the tale departed hem a twinne.

Chaucer. Troilus and Creseide, book iii.

My hande is the foundation of the earthe, and my right hande
spanneth over the heauens.

Bible, Anno 1550. Esaye, ch. xlvi.

Who hath measured heauen with his *spanne*, and hath compre-
hended all the earth of the worlde in thre fyngers?

Id. Ib. ch. xl.

BUCK. My surueyor is falce; the ore-great Cardinal,
Hath shew'd him gold; my life is *span'd* already;
I am the shadow of poore Buckingham.

Shakspeare. Henry VIII. act i. sc. 1. fol. 207.

Harry, whose tuneful and well measured song
First taught our English music how to *span*
Words with just note and accent, not to scan
With Midas' ears, committing short and long.

Milton. Sonnet 13. v. 1.

And if you would plant fig-sets or sions, they ought verily to
be a *span* long, and then to be prickt into the ground.

Holland. Plinie, book xvii. ch. i.

There in the stocks of trees, white faies do dwell,
And *span-long* elves that dance about a pool,
With each a little changeling in their arms!

Ben Jonson. Sad Shepherd, act ii. sc. 2.

Am I not totally a *span* new gallant,
Fit for the choycest eyes?

Beaumont and Fletcher. False One, act iii. sc. 1.

LAZA. Faith, you may intreat him to take notice of me for
any thing; for being an excellent farrier, for playing well at *span-*
counter or sticking knives in walls.

Id. The Woman-Hater, act i. sc. 3.

The officers all exceedingly well horsed, and every man, officer,
and soldier having a pistol ready *spann'd* in one hand, that he re-
solv'd not to pursue that design.

Clarendon. Rebellion, vol. iii. p. 248.

But still Avignon, and the pleasing coast
That holds thee banish'd, claims my care the most;
Oft on the well-known spot I fix my eyes,
And *span* the distance that between us lies.

Tickel. An Epistle.

The mind having got the idea of the length of any part of ex-
pansion, let it be a *span*, or a space, or what length you will, can,
as has been said, repeat that idea; and so, adding it to the
former, enlarge its idea of length, and make it equal to two *spans*,
or two paces, and so as often as it will, till it equals the distance
of any parts of the earth one from another, and increase thus till
it amounts to the distance of the sun or remotest star.

Locke. On Human Understanding, book ii. ch. xv. vol. i. p. 180.

We are not told the year is coming, or the day is coming, but
the hour is coming; which intimates to us, that we should accus-
tom ourselves to measure our lives by the shortest *span*.

Gilpin. Sermon 22. vol. i. p. 267.

SPANANTHE, in *Botany*, a genus so named by
Jacquin, from the Greek *σπανος*, *rare*, and *ανθος*, *a*
flower, on account of the few flowers contained in each
umbel. It belongs to the class *Pentandria*, order *Mono-*
gynia, and natural family of *Umbelliferæ*. Generic cha-
racter: calyx five-toothed; petals five, elliptic, entire,
each with a straight point. Fruit ovate, compressed on
the back; mericarps flat, without vittæ, but furnished
with five very slender ribs, the three middle ones on the
back, and the two lateral ones in the commissure.

This genus contains one known species, *S. paniculata*;
it is an annual, erect, branched plant, a native of South
America, with cordate, toothed leaves, and proliferous
umbels of white flowers; involucre of many leaves.

SPANG, *n.* } A. S. *spange*, *ge-spong*; D. *spanghe*;
SPA'NGLE, *n.* } Ger. *spange*; Sw. *spann*, all explained to
SPA'NGLE, *v.* } mean *fibula*, a button (of metal); D.
spenghel, *spanghe*, *emblema*, and derived from *span*, to
stretch, to draw. But Tooke asserts *spange* to mean
any thing shining, though he produces no authority:
we certainly so use it.

Any thing shining, sparkling, glittering (small bits of
bright shining metal.)

Our bumbast hose, our treble double ruffles,
Our sutes of silke, our comely garded capes,
Our knit silke stockes, and Spanish lether shoes,
(Yea velvet serues, oft times to trample in,)
Our plumes, our *spangs*, and al our queint aray,
Are pricking spurres, prouoking filthy pride.

Gascoigne. The Steele Glas.

The other knight was all in milk white, his attiring else all cut
in [stars, which made of cloth of silver, and silver *spangles*, each
way seemed to cast many aspects.

Sidney. Arcadia, book iii. p. 527.

The colours that shew best by candle-light, are white, carna-
tion, and a kinde of sea-water-greene; and oes or *spangs*, as they
are of no great cost, so they are of most glory.

Bacon. Essay of Masques and Triumphs.

A vesture, sprinkled here and there
With glittering *spangs*, that did like stars appear.

Spenser. Faerie Queene.

And when the golden glorious sun goes down,
Would she put on her star-bestudded crown,
And in her masking sute the *spangled* sky,
Come forth to bride it in her revelry.

Drayton. King John to Matilda.

SPAN.
—
SPANG.

SPANG.
—
SPANI-
OPTI-
LCN.

Ah! look if this be he, Almighty King,
Before Heav'n's spangled were with stars of gold,
Ere world a center had it to uphold,
When from eternity thou forth didst bring.

Drummond. *On the Virgin Mary.*

There they doe finde that godly aged sire,
With snowy lockes adowne his shoulders shed;
As hoary frost with spangles doth attire
The mossy braunches of an oke halfe-ded.

Spenser. *Faerie Queene*, book i. can. 10.

And to the sun displays his plumes,
Which, like the Heaven's o'er-arching skies,
Are spangled with a thousand eyes.

Gay. *The Peacock*, &c.

But his is a pleasure that is not more great than unquiet, for it makes him querulous and unruly, and because he cannot by his struggling, and reaching forth his little hands, get possession of these shining spangles, that look so finely, their fires produce waters in his eyes, and cries in his mouth, that are very little of kin to the musick the Platonists fancied in the spheres he looks at.

Boyle. *Works*, vol. ii. fol. 443. *Occasional Reflect.* 8.

On the rude cliffs with frosty spangles gray,
Weak as the twilight gleams the solar ray.

Micke. *Luciad* 3. book iii. v. 59.

SPA'NIEL, *n.* } *It. can di Spagna*; *Fr. espagneul.*

SPA'NIEL, *v.* } See the Quotation from Pennant.

A Spanish dog, or breed of dogs, very docile and fond; hence *spaniel* is used for a fawning, obsequious person.

And if that she be foul, thou sayst, that she
Coveteth every man that she may see;
For as a *spaniel* she wol on him lepe,
Til she may finden som man hire to chepe.

Chaucer. *The Wife of Bathes Prologue* v. 5777.

Then shall you see those slaves, aloof before that stood,
And would have let him starve, like *spaniels* to him crouch,
And with their glavering lips his very feet to touch.

Drayton. *Poly-olbion*, song 28.

— All come to this? The hearts
That *spaniel'd* me at heels, to whom I gave
Their wishes, do discandy.

Shakspeare. *Antony and Cleopatra*, act iv. sc. 10.

— Be not fond
To thinke that Cæsar beares such rebell blood
That will be thaw'd from the true quality
With that which melteth fooles, I meane sweet words,
Low-crooked curtsies, and base *spaniell* fawning.

Id. *Julius Cæsar*, act iii. sc. 1. fol. 118.

During my stay at home, every body this cur chanced to meet,
made so much of their landlord's *spaniell*, that they seemed to
have added to oracles that proverb of Love me love my dog.

Boyle. *Works*, vol. ii. fol. 384. *Occasional Reflect.* 3.

The *spaniel* lover, like a sneaking fop,
Lies at our feet; he's scarce worth taking up.

Dryden. *To the Princes of Cleves*. *Prolog.* 32.

The third division of the more generous dogs comprehends those which were used in fowling; first, the Hispaniolus or *spaniel*; from the name it may be supposed that we were indebted to Spain for this breed.

Pennant. *British Zoology*. *The Dog*, vol. i. p. 78.

SPANIOPTILON, in Botany, a genus so called by Lessing, from the Greek *σπανιος*, rare, and *πιλον*, a feather, on account of the pappus being in one series. It belongs to the class *Syngenesia*, order *Æqualis*, and the natural family *Compositæ-Cynareæ-Carduineæ*. Generic character: head homogamous; pappus in one series; ovarium quite glabrous.

This genus, which is separated from *Carduus*, consists of only one known species, a native of Japan; it is an herb, with a woody base, and glabrous, crowded, linear spinosely-toothed leaves. Leaflets of involucre dry, pungently mucronate. Heads of flowers nutant.

SPAR, *n.* } A. S. *sparran*; D. *sparre*; Ger. *sparr*,
SPAR, *v.* } *sperran*; to stop, close, or shut up; to
make fast.

A *spar*, that which fastens, usually a bar or beam.

Better were Roberd, in pes haf holden him stille,
þan layn in prison *sperd*, & at his fomen wille.

R. Brunne, p. 91.

He tought it (my herte) so him for to obey
That he it *sparred* with a key.

Chaucer. *The Romant of the Rose*, v. 3320.

And so befell, by aventure or cas,
That thurgh a window thikke of many a barre
Of yren gret, and square as any *sparre*,
He cast his eyen upon Emelia.

Id. *The Knightes Tale*, v. 1076.

And to Creseides house they gan wende,
But lorde this sely Troilus was wo,
Him thought his sorowful herte brast atwo,
For when he saw her doores *sparred* all,
Well nigh for sorow adoun he gan to fall.

Id. *Troilus and Creseide*, book v.

The dore thereof oft tymes opened and *speared* again.

Bale. *Acts of English Notaries*, part ii.

The gilt *sparres*, and the beames then threw they down,
Of old fathers the proud and royal workes.

Surrey. *Virgil. Æneis*, book ii.

And if he chaunce come when I am abroad,
Sperre the yate first, for fear of fraude;
Ne for all his worst, nor for his best,
Open the dore at his request.

Spenser. *The Shepherd's Calendar*. *May*.

When, chased home into his holdes,
Theare *sparred* vp in gates,
The valiant Thebane, all in vaine,
A following fight awaites.

Warner. *Albion's England*, book ii.

— Priam's six-gated city,
Dardan, and Tymbria, Ilias, Chetas, Trojan,
And Antenorides, with massy staples,
And corresponsive and fulfilling bolts,
Sperr up the sons of Troy.

Shakspeare. *Prologue to Troilus and Cressida*.

MAD. I've heard you have offer'd, sir, to lock up smoke,
And calk your windows, *spar* up all your doors,
Thinking to keep it a close prisoner with you,
And wept when it went out, sir, at your chimney.

Ben Jonson. *The Staple of News*, act ii. sc. 1.

— But that which did the good,
Was God's good inspiration, that gaue
A spirit beyond the spirit they vsde to haue;
Who tooke the oliue *sparre*, made keene before,
And plung'd it in his eye.

Chapman. *Homer. Odyssey*, book ix.

SPAR, *n.* } Skinner calls it the bark or coat of rude
SPA'RRY. } metal or mineral, perhaps from *sparran*,
to close or inclose, because the mineral is inclosed in it.
See *ante*, to SPAR.

The clear *spar*, which in most of our lead mines in England is found next to the metalline veins, be at least semi-diaphanous, and be of so glassy a contexture, that it usually breaks into smooth and glossy superficies.

Boyle. *Works*, vol. iii. fol. 538. *Essay about the Origin and Virtues of Gems*.

In which manner *spar* is usually found herein, and other minerals, or such as are of some observable figure, of which sort are the *sparry* stræ, or icicles called *stalactitæ*.

Woodward.

Hence with th' ascending springs let me advance,
Thro' beds of magnets, minerals, and *spar*.

Smart. *The Immensity of the Supreme Being*.

SPARACTES, from the Greek *σπαρακτης*, a butcher, Illig. In Zoology, a genus of animals belonging to the family *Dentirostres*, order *Passeres*, class *Aves*.

Generic character. Beak large, strong, hard, slightly depressed at the base, and much dilated laterally, without any ridge, slightly curved and compressed at the

SPAR.
—
SPA-
RACTES.

SPA-
RACTES.
—
SPA-
RAXIS.

point, with a small tooth in the upper mandible, and without any distinct nasal pit; lower mandible strong, broad, everted, and obtuse at the tip; nostrils basal, lateral, and partially covered with recumbent bristles; wings long, the first quill short, the second shorter than the third and fourth; legs long, the tarsi much longer than the middle toe; toes divided, the lateral ones of unequal length.

This species was separated from the *Lanii* by Illiger, on account of the lateral expansion of the upper mandible, and its slight curving at the tip. But one species is known, which, from the strength of its beak, was named by Le Vaillant *Bec-d-e-fer*.

S. Superbus, Illig.; *Lanius Superbus*, Shaw; *le Bec-de-fer*, Le Vaill. Is about nine inches long, and stouter than a Blackbird; general colour of the plumage black; upon the forehead an erect crest of unequal feathers, inclining forward over the beak; chin and throat deep red, tinged with yellow; middle of the belly crossed by a broad band of fine yellow, with streaks of red, and on the sides a few black dots; secondary alar quills fringed with white; rump and upper tail-coverts greenish-yellow; tail three inches long, and the closed wings reaching near to its middle; legs bluish; claws black. Its country is unknown.

See Illiger, *Prodromus Mammalium et Avium*; Le Vaillant, *Histoire Naturelle des Oiseaux d'Afrique*.

SPARAGUS, *i. e.* Asparagus.

Next that, shall mountain *sparagus* be laid,
Pull'd by some plain, but cleanly country-maid.
Congreve. Juvenal. Sat. 11. v. 119.

SPARASION, in *Zoology*, a genus of *Hymenopterous* Insects.

Generic character. *Antennæ* twelve-jointed, filiform in the *male*, thick at the extremity in the *female*; vents rounded; mandibles bidentate at the tip; maxillary *palpi* five-jointed, filiform; labial *palpi* three-jointed; head trigono-globose, forehead elevated; *abdomen* depressed elliptically, transversely truncated at the base, widely attached to the metathorax.

This genus belongs to the tribe *Oxyuri* of the *Pupivorous* family of Latreille. The type of the genus is *S. frontale*, Latr.

See Latreille, *Genera Crustaceorum et Insectorum*.

SPARASSIS, in *Botany*, a genus so called by Fries, from the Greek *σπαρᾶν*, to *tear* or to *lacerate*, on account of the lacerated appearance of the plant. It belongs to the class *Cryptogamia*, and order *Fungi*. *Generic character*: receptacle fleshy, much branched; branches dilated, flat, smoothish, compound, connected by double membranes, ascigerous on both sides; asci elongated; sporidia white.

This genus, which is nearly allied to *Clavaria*, consists of a single known species, a native of Silesia; it is a plant about a foot in height, of a pale yellowish colour.

SPARAXIS, in *Botany*, a genus so called by Ker, from the Greek *σπαρᾶσσω*, to *tear*, on account of the lacerated spathes of the species. It belongs to the class *Triandria*, order *Monogynia*, and the natural order *Irideæ*. Spathe membranous, ample, aristately jagged, withered; perianth erect, funnel-shaped; tube slender, short; limb six-parted, regular, equal; stellately flattened; stamens three, adnate to the tube, inclosed; anthers linear, hanging, or attached by the back; style slender, in the same direction as the stamens; stigmas three, narrow, linear, a little recurved; capsule mem-

branous, oblong, roundly trigonal, torulose, three-celled, three-valved; valves septigerous; seeds in two rows, numerous, subglobose.

There are about ten known species of this genus, all pretty plants, natives of the Cape of Good Hope. The root is a bulbo-tuber, covered with a netted fibrous coat; the leaves are numerous, distinct, ensiform, and striated; the cauline ones generally bearing bulbs in the axils; stems simple or paniculately branched; flowers rarely solitary, usually few together, large, showy, of various colours, from red to yellow, either spotted or striped; inflorescence distinctly spicate, remotely two-valved, spathaceous.

SPARBLED. See DISPERBLYD.

Wherefore the people of that cōntre sette vpon theym, and slewe theyr captayne and the more parte of theyr company, where, thorough that symple feleshyp whiche named theym self shepherdes, was disseueryd and *sparbelyd*.

Fabyan. Chronicles. Lodouici IX.

But after longe fyght, the vycory fell vnto the Erle of Salesbury, and the other lordys vpon his partye, and kynges hoost was *sparbled* and chasyd, and many of his noble men slayne.

Id. Anno 1461.

SPARE, *n.*

SPARE, *v.*

SPA'REFULNESS,

SPA'RELY,

SPA'RENESS,

SPA'RINGLY,

SPA'RINGNESS,

SPA'RY,

SPA'RER.

A. *S. sparian*; D. *spaeren*; Ger. *sparen*; Sw. *spara*; Ihre and Skinner from *parcere*; Wachter prefers *waren*, to guard. It is probably a consequential application of *spar-an*, to shut up, to keep fast or safe.

To preserve, to reserve; to keep or withhold from, or from the use;

to forbear; to abstain; to give, use, employ reservedly, abstinently; with parsimony, frugality, moderately, temperately, gently, leniently, kindly; to forbear or abstain from punishment, or from the severity of punishment.

To forbear to punish, hurt, or injure; to forgive.

Spare, adj., abstinent, scanty, lean, poor.

Spare time, &c., time to *spare*; *i. e.* to withhold or withdraw from one purpose and bestow upon another.

Sparje he wolde myld men, and harde chasty þe proute.
R. Gloucester, p. 428.

What myd fure, wat myd suerd, hii destrude al þat hii founde,
Hii ne *sparde* prest, ne chyrche, that hii ne brogte to grounde.
Id. p. 226.

For lefe ne for loth, folc wild þei not *spare*,
R. Brunne, p. 220.

Thýng þat al þe worlde wot. wherefore sholdest þow *spare*
To rehercen hit by retoryk.
Piers Plouhman. Vision, fol. 203.

Spiritus justicia, *spareþ* nat to spille
Hem þat beoþ gultý.
Id. Ib. fol. 381.

For if God *sparide* not the kyndeli braunchis, lest perauenture
he *spare* not thee.
Wiclif. Romaynes, ch. x.

Y^t God *spared* not the naturall braunches, lest happye he also
spare not thee.
Bible, Anno 1551.

Pees, with mischance and with misaventure,
Our hoste saide, and let him tell his tale.
Now telleth forth, and let the Sompnour gale,
Ne *spareth* not, min owen maister dere.
Chaucer. The Freres Tale, v. 6916.

Of this love heare what I saie;
The riche men are loved aie,
And namely tho that *sparand* beene,
That woll not wash hir hertes cleene
Of the filth, nor of the vice
Of greedy brenning auarice.
Id. The Romant of the Rose, p. 210.

For who that lawe hathe vpon honde,
And *spareth* for to do iustice
For mercy: doth not his office,
That he his mercy so bewareth;

SPARE.

SPARE.

Whan for one shrewe, which he *spareth*,
A thousand good men he greueth.

Gower. *Conf. Am.* book iii.

SPARGANO-
PHORUS.

After whiche requeste thus to the mayre and to the cytezens
made, after aduyce and counceyll amonge them selfe takyn, they de-
syred a *sparynge* of y^e lordys till they myght speke w^t the kynge,
and knowe his pleasure in that behalfe; but fynalle no *sparynge*
at that tyme myght be grauntyd.

Fabyan. *Chronicles.* Henry III. Anno 1258.

Largess his hands could never skill of *sparefulness*.

Sidney. *Arcadia*, book ii. p. 394.

O *spare* thy happy daies, and them apply
To better boot, but let me die that ought.

Spenser. *Faerie Queene*, book iii. can. 11.

For life, I prize it
As I weigh grieve (which I would *spare*,) for honor
'Tis a deriuative from me to mine,
And onely that I stand for.

Shakspeare. *The Winter's Tale*, act iii. sc. 2. fol. 286.

Or are they *spare* in diet,
Free from grossie passion, or of mirth, or anger.

Id. Henry V. fol. 75.

She [Nature] good cateress,
Means her provision only to the good,
That live according to her sober laws,
And holy dictate of *spare* temperance.

Milton. *Comus*, v. 764.

There arose strong and great winds from the south, with a point
fast, which carried us up (for all that we could do) towards the
north; by which time our victuals failed us, though we had made
good *spare* of them.

Bacon. *New Atlantis*, p. 1.

From the time that they begin to dismarch, their motion in-
creaseth by little and little more *sparely*.

Holland. *Plinie*, book ii. ch. xvi.

Homer, being otherwise *sparie* ynough in speaking of pictures
and colours, yet commendeth the ships painted therewith.

Id. *Ib.* book xxxiii. ch. vii.

For otherwise they [bees] are very thriftie and over great *sparers*,
and such as at other times will drive out those that wast prodi-
gally and be glutinous, no lesse than such as be idle luskies, and
slow at worke.

Id. *Ib.* book xi. ch. xix.

(There is some pain) of returning the gross habit of sin to a
spareness and slenderness of stature.

Hammond. *Works*, vol. iv. fol. 478. *Sermon* 2.

And justly, what unjustly they abuse,
Shall unto them more *sparingly* be lent.

Stirling. *Doomes-day.* *Second Houre*.

Be mindful of those limbes in russet clad
Whose toil to yours is warmth and graceful pride;
And, oh! be mindful of that *sparing* board,
Which covers yours with luxury profuse,
Makes your glass sparkle, and your sense rejoice!

Thomson. *Autumn*.

Since no man is infallible, let him use this licence very *spar-
ingly*; for if too many foreign words are poured in upon us, it looks
as if they were designed, not to assist the natives, but to conquer
them.

Dryden. *Dedication to the Æneis*.

This opinion, I say, Mr. Hobbes mentions as possible; but he
does it with such hesitancy, diffidence, and *sparingness*, as shows
plainly that he meant it only as a last subterfuge to recur to.

Clarke. *On the Attributes*.

Irony is the keenest weapon of the orator. The moralists,
those luminaries of the Gentile world, have made it the vehicle
of their gravest lessons; and Christ, our great Teacher, upon
just occasions, was not *sparing* in the use of it.

Bishop Horsley. *Sermon* 31. vol. iii. p. 38.

And taught at schools much mythologic stuff,
But sound religion *sparingly* enough.

Cowper. *Tirocinium*.

SPARGANOPHORUS, in *Botany*, a genus so
called by Gartner, from the Gr. *σπαργανον*, a fillet, and
φορεω, to bear, on account of the resemblance in the
seed. It belongs to the class *Syngenesia*, order *Æqualis*,
and the natural family of *Compositæ-Vernoniaceæ*.
Generic character: head many-flowered; pappus in one

VOL. XXVII.

series, crown-formed, cartilaginous, and crenated. co-
rolla trifid.

This genus consists of three known species, natives
of America and Africa in bogs; they are annual herbs,
with glabrous serrated leaves, and small axillary heads
of white flowers. Involucra imbricated, and the recep-
tacle naked.

SPARGANUM, in *Botany*, a genus so called by
Linnæus, from the Gr. *σπαργανον*, a little band, on
account of its long narrow leaves. It belongs to the
class *Monoecia*, order *Triandria*, and natural family of
Aroideæ. Generic character: flowers in spherical dense
heads; barren flowers; perianth single, of three leaves;
fertile flowers; perianth single, of three leaves; drupe
dry, one-seeded.

This genus contains three British species, *S. ramosum*,
S. simplex, and *S. natans*, the branched, simple and
floating Bur-reed; they are aquatic plants with grassy
leaves, and bur-like heads of flowers.

lustre: met. with animation or vivacity.

Sparkle, (*spark-dæl*,) the diminutive of *spark*. See
the Quotations from Leland, Fabian, Beaumont and
Fletcher.

A *spark*; met. a glittering, showy person.

As fire is wont to quicken and go
From a *sparkle* sprongen amis,
Till a citie brent vp is.

Chaucer. *The Complaint of Mars and Venus*.

A mantelet upon his shouldres hanging,
Bret-ful of rubies red, as fire *sparkling*.

Id. *The Knightes Tale*, v. 2231.

Like the *sparke* fired
Up in thy rooffe, whiche for a throwe
Lieth hid, til whan the windes blowe
It blaseth out on euery side.

Gower. *Conf. Am.* book i.

The liuely *sparkes*, that issue from those eyes,
Against the which there vailleth no defence,
Have perst my hart, and done it none offence,
With quaking pleasure, more than once or twice.

Wyat. *The Louer describeth the sight of his Loue*.

The Danes had preparid a navy to come to rob in England; but
it was *sparkelid*, and greate ship of them taken by the English
men.

Leland. *Collectanea*, vol. ii. p. 691.

Serle, yoman of the robys to King Richard, *sparkelid* rumors,
as he cam owte of Scotland, that King Richard was yet alyve.
But at the last he was hangid at London.

Id. *Ib.* vol. ii. p. 485.

The whiche [this Hengiste and all the other Saxons whiche
ruled the other vii. pryncipates of Brytayne, as after shall be
shewed,] whan he had thus rule of the foresayd iii. prouinces, he
sent for moo Saxons, and gaderid that were *sparkled* abroad; so
that in thyse prouinces the faythe of Criste was all quenched and
in slepe.

Fabyan. *Chronicle*, ch. xci.

The philosophers to whome God had enspired certaine *sparchles*
of truthe, knowledged that the cheefest poynte of wisdom and di-
rection of a mannes lyfe, was to know hym selfe.

PHORUS
SPARK.

SPARK.

Fayre is my love, when her fayre golden haire,
With the loose wynd ye waving chance to marke;
Fayre, when the rose in her red cheekes appeeres,
Or in her eyes the fyre of love does sparke.
Spenser. Sonnet 81.

Delight upon her face, and sweetnesse shin'd;
Her eyes do *spark* as starres, as starres do move.
P. Fletcher. Thomaſin. Eclogue 6. st. 19.

Who, thereat wondrous wroth, the sleeping *spark*
Of native vertue gan eftsoones revive.
Spenser. Faerie Queene, book i. can. 2.

Hitherto will our *sparkfull* youth laugh at their great grand-
father's English, who had more care to do wel, than to speake
minion-like.
Camden. Remaines. Languages.

Whom when the prince to batteill new addrest,
And threatning high his dreadfull stroke, did see,
His *sparkling* blade about his head he blest,
And smote off quite his left leg by the knee,
That downe he tumbled.
Spenser. Faerie Queene, book i. can. 8.

— What's become, Post,
Of my lieutenant?
Post. Beaten and 't please your grace,
And all his forces *sparkled*.
Beaumont and Fletcher. The Loyal Subject, act i. sc. 5.

The *sparkles* seem'd vp to the skies to flie,
The horses ney, and clattring armours sowne,
Pursue the echo ouer dale and downe.
Fairefax. Godfrey of Bulloigne, book i. st. 13.

I most humbly confess, that though my fortunes are poor, and
my studies private, yet I cannot deny certain *sparkles* of honest
ambition remaining in me, whereby I desire the world should
know, that my most vertuous and most dear and royal master
hath not utterly forgotten me.
Wotton. Letter to the King, Anno 1637.

Spread o'er the earth thy sable veil,
Heaven's twinkling *sparklets* to conceal,
That darkness seems to day t' improve.
Cotton. The Night.

Desire of power, on earth a vicious weed,
Yet sprung from high, is of celestial seed;
In God 'tis glory; and when men aspire,
'Tis but a *spark* too much of heavenly fire.
Dryden. Absalom and Achitophel.

The florid fustian of a rhyming *spark*
Whose random arrow ne'er comes near the mark,
Can't on her judgment be impos'd, and pass
For standard gold, when 'tis but gilded brass.
Pomfret. Strephon's love for Delia justified.

A daw, to be *sparkish*, trick'd himself up with all the gay fea-
thers he could muster.
L'Estrange.

Vouchsafe, illustrious Ormond, to behold
What power the charms of beauty had of old;
Nor wonder if such deeds of arms were done,
Inspir'd by two fair eyes, that *sparkled* like your own.
Dryden. To the Duchess of Ormond.

The weighty shock his neck and shoulders feel;
His eyes flash *sparkles*, his stunn'd senses reel
In giddy darkness.
Pope. Homer. Iliad, book xvi.

My thoughtless youth was wing'd with vain desires,
My manhood, long misled by wandering fires,
Follow'd false lights, and when their glimpse was gone,
My pride struck out new *sparkles* of her own.
Dryden. The Hind and the Panther.

But what wou'd you say, should you see the *sparkler* shaking
her elbow for a whole night together, and thumping the table with
a dice-box.
Guardian, No. 120.

She affirmed to me, that she had divers times observed the like
alterations in some diamonds of hers, which sometimes would look
more *sparklingly* than they were wont, and sometimes far more
dull than ordinary.
Boyle. Works, vol. i. fol. 452.

I have, I know not how often, seemed to myself to observe a
manifestly greater clearness and *sparklingness* at some times than
at others.
Id. Ib.

Sir John [Suckling] threw his repartees about the table with
much *sparkliness* and gentleness of wit, to the admiration of them
all.
Aubrey. Anecdotes, vol. ii. p. 551.

SPARK.

SPARSE.

For why should I the gallant *spark* command,
With clean white gloves to fit his ready hand?
Or in his fob enlivening spirits wear,
And pungent salts to raise the fainting fair?
Jenyns. The Art of Dancing.

But their eyes, especially those of the women, are full of expres-
sion, sometimes *sparkling* with fire, and sometimes melting with
softness.

Cook. Voyages, vol. i. book i. ch. xvii. p. 176.

SPARMANNIA, in *Botany*, a genus so named by
Thunberg, in honour of Andrew Sparmann, M.D., a
Swedish botanist, who accompanied Captain Cook in his
second voyage round the world. It belongs to the
class *Polyandria*, order *Monogynia*, and natural family
Tiliaceæ. Generic character: calyx of four sepals;
petals four, roundish; stamens numerous, intermixed
with threads; capsule echinated, five-angled, six-celled,
six-valved; cells two-seeded.

This genus consists of one species, *S. Africana*, a
native of the Cape of Good Hope. It is a large shrub,
with broad lobed, hairy leaves, and panicles of white
flowers.

SPARROW, Goth. *sparwa*; A. S. *spearwa*; D.
sparre; Ger. *spier*; Sw. *sparf*. In Fr. *esparvier*; It.
sparviere; Low Lat. *sparvarius*, is a spar-hawk, or
sparrow-hawk. The Lat. Vossius (*De Vit. lib. ii.*)
derives from the Ger. *sparwer*, and this so called, as of
spar-var, that is *spreading* its wings far,—*procul spar-*
gens pennas. Sparrow, anciently written *sparwe*, A. S.
spearwa, may be from the A. S. *spyr-ian*, to search
after, from the active disposition of the bird.

Whethir two *sparrowis* (A. S. *twegen spearwan*) ben not sold
for an halpenny; and oon of hem schal not falle on the erthe
withoute your fadir?
Wiclif. Matthew, ch. x.

Are not two *sparowes* sold for a farthyng? And none of them
doth lyght on the ground, withoute your father.
Bible, Anno 1551.

This frere ariseth up ful curtisly,
And hire embraceth in his armes narwe,
And kisseth hire swete, and chirketh as a *sparwe*.
Chaucer. The Somnours Tale, v. 7384.

This haue I heard oft in saying,
That man may for no daunting
Make a *sperhauke* of a bosarde.
Id. The Romant of the Rose, p. 200.

The cocke *sparrow* (by report) liveth but one yeare: the reason
why men so thinke is, because in the spring there is not one of
them found with a blacke bill, and yet in summer before it began
to be blacke.
Holland. Plinie, book x. ch. xxxvi.

Use exercise and keep a *sparrow-hawk*, you can shoot in a
tiller.
Beaumont and Fletcher. Philaster, act ii. sc. 1.

Sparrows are proverbially salacious; they breed early in the
spring, make their nests under the eaves of houses, in holes of
walls, and very often in the nests of the martin, after expelling
the owner.
Pennant. British Zoology. The Sparrow Finch, p. 457.

SPARSE, } Fr. *espars*; Lat. *sparsus*; past par-
SPA'RSLEDY. } ticipale of *spargere*, which Vossius de-
rives from the Gr. *εσπαρον*, (with g inserted,) *σπειρειν*,
to sow. It has probably the same Gothic origin as the
English *spark*, *sparkle*, *q. v.*, and to *speak*.

To scatter, to spread.

And I am assured, that the rumoure of this thing beeyng
sparsed (as it is) throughout all Jewry, is heard among you also,
howe that Jesus walked ouer all partes of Jewery, exhorting all
men to repentance, bearing witnesse that the kyngdome of God
is euen at hande.
Udall. Erasmus. The Actes of the Apostles, ch. x. fol. 561.

SPARSE.
—
SPATA-
LAN-
THUS.

He, making speedy way through *spersed* ayre,
And through the world of waters wide and deepe,
To Morpheus house doth hastily repaire.

Spenser. Faerie Queene, book i. can. 1.

And like a raging flood they *spersed* are,
And ouerflow each countrey, field, and plaine.

Fairefax. Godfrey of Bulloigne, book vi. st. 1.

There are doubtless many such soils *spersedly* throughout this nation.

Evelyn. Pomona. Preface.

The operation was performed by *spargefaction* in a proper time of the moon.

Swift. Tale of a Tub, sec. 4.

SPARTINA, in *Botany*, a genus so called by Schreber, from the Greek *σπαρτον*, a rope made from broom, on account of some of the species being used in making ropes. It belongs to the class *Triandria*, order *Monogynia*, and natural order *Gramineæ*. Generic character: axis spicate; spike compound; spikelets alternate, florets unilateral, disposed in two rows, sessile; glumes unequal, very acute; longer paleæ emarginate or toothed; scales subtruncate, fringed; style simple, very long, stigmas villous.

There are above ten species of this genus, all coarse grasses, natives of North America and Europe. *S. stricta* and *S. alterniflora* are natives of Britain.

SPARTIUM, in *Botany*, a genus so called from the Greek *σπαρτον*, cordage, on account of the use which the plant was put to in early ages. It belongs to the class *Monadelphia*, order *Decandria*, and the natural order of *Leguminosæ*. Generic character: calyx spatheaceous, five-toothed at apex; cleft above, sub-bilabiate; corolla papilionaceous, with a roundish, complicated vexillum, and an acuminate keel; stamens monadelphous; legume compressed, many-seeded, glandless.

This genus, as it is now constituted, contains only one species, *S. junceum*, the well known Spanish Broom. It is a large, smooth, branchy shrub, with green, nearly terete, branches, a few lanceolate leaves, and loose terminal racemes of large yellow flowers.

SPASM, } Fr. *spasme, spasmatique*; It.
SPASMA'TICK, } *spasmo*; Lat. *spasmus*; Gr. *σπασ-*
SPASMA'TICAL. } *μος, nervorum contractio*, from *σπᾶν*,
trahere, contrahere, to draw together.

A contraction or drawing together: a convulsion, a convulsive contraction.

It cureth those who have their necks drawne backward to their shoulders with the *spasme*.

Holland. Plinie, book xx. ch. v.

Being taken with salt and oile, it [rost garlick] is a soveraigne remedie for them that bee bursten or *spasmatike*, that is to say, vexed with the crampe.

Id. Ib. book xx. ch. vi.

For my part, the ligaments and sinews of my love to you have been so strong, that they were never yet subject to such *spasmatical* shrinkings and convulsions.

Howell. Letter 20. book ii.

Now in the guise of horrid *spasms*, they [worms] writhe
The tortur'd body, and all sense o'erpower.

Grainger. The Sugar-Cane.

SPATALANTHUS, in *Botany*, a genus so called by Sweet, from the Greek *σπαταλος*, delicate, and *ανθος*, a flower. It belongs to the class *Monadelphia*, order *Triandria*, and the natural family of *Irideæ*. Generic character: spathe rigid, terminal, one-flowered, two-valved; valves convolutely-lanceolate, conduplicately opposite, entire; perianth spreading; tube very short; limb six-parted, regular; segments nearly equal; stamens three; filaments short, combined into a tube; anthers oblong-sagittate; ovary roundish, warted at top; stigmas three, flat, bipartite at top.

A genus consisting of a single known species, an elegant plant, native of the Cape of Good Hope. The root is a roundish-oval, depressed, bulbo-tuber, which is oblique at the base, covered with a fibrous, reticulated coat; having the principal fibres thickened and fusiform; leaves numerous, somewhat filiformly-clavate, acute, dilated at the base, and sheathing; scapes one-flowered, shorter than the leaves; flowers red, striped, and stellately spreading.

SPATALLA, in *Botany*, a genus so called by Salisbury, from the Greek *σπαταλαω*, on account of its ample stigma. It belongs to the class *Tetrandria*, order *Monogynia*, and natural order *Proteaceæ*. Generic character: calyx quadrifid, the inner segment the largest, all deciduous; stigma oblique, dilated; nut ventricose, on a short pedicel; involucre in a single series of two to four leaves, one or few-flowered; receptacle not chaffy.

This genus consists of about fifteen known species, all natives of the Cape of Good Hope; they are shrubs with scattered, filiform, undivided leaves; involucre terminal, spicate or racemose, unibracteate, hardly changed in the fructiferous state; flowers purplish; anthers larger than the largest segment of the calyx.

SPATANGUS, in *Zoology*, a genus of *Echinodermatous Radiaries*.

Generic character. Body irregular, ovate or cordiform, subgibbous, covered with very small spines; *ambulacra* four or five, short, unequal, and circumscribed; mouth toothless, transverse, lipped, and near the edge; vent lateral, and opposite the mouth.

This genus belongs to Lamarck's *Echinidous* section, of which only it and the genus *Ananchites* have the mouth lateral, and unprovided with any dental apparatus; their body is oval or heart-shaped, and always wider than it is high. The *ambulacra* vary in depth, and are short, some have four and other species five of them. They bury themselves in the sand, and being unfurnished with teeth feed only upon such soft matters as are borne to them by the water. Lamarck enumerates ten species with four, and ten with five *ambulacra*; of the former one only, *S. Purpureus*, is a European species, and of the latter three only at present exist, neither of them belonging to Europe, and the other seven fossil.

See Lamarck, *Histoire Naturelle des Animaux sans Vertèbres*.

SPATHELIA, in *Botany*, a genus so called by Linnæus, from the Greek *σπαθη*, a palm tree, on account of the upright habit and want of branches of *S. simplex*, which has caused it to be likened to a palm-tree. It belongs to the class *Dioecia*, order *Pentandria*, and the natural family of *Terebinthaceæ*. Generic character: flowers of separate sexes; female flower with a five-parted, coloured calyx, five petals, five short three-pointed filaments, and three stigmas; drupe oblong, three-celled, trigonal, sometimes two-angled; angles winged; seeds solitary in the cells.

This genus consists of two species, *S. simplex* and *S. rhoifolia*, the one a native of Jamaica, and the other of Mexico; they are trees with impari-pinnate leaves, and nearly terminal racemose panicles of red flowers.

SPATHICARPA, in *Botany*, a genus so named by Hooker, from the Greek *σπαθη*, a spathe, and *καρπος*, a fruit, on account of the spathe bearing the fructification in the centre. It belongs to the class *Monoecia*, order *Monandria*, and the natural family of *Aroideæ*. Ge-

SPATHI-
CARPA.

SPATHI-
CARPA.SPA-
THODEA.

neric character: spathe linear-oblong, acuminate, somewhat boat-shaped, with involute edges, bearing on the inside in a longitudinal line the male and female flowers, intermixed and covered by sterile, lentiform stamens; spadix none; male with intermediate stamens, the filaments articulated at the base, and peltately dilated at top; cells of anthers six or eight, oval, dehiscing by a pore in the middle; female with a marginal pistil; ovary ovate, one-celled; ovula erect; style thickened at top; stigma subcapitate, halberd-shaped.

This genus consists of a single species, *S. hastifolia*, a native of South America; it is a plant with a solitary radical leaf on a long petiole, and a solitary spathe on a long scape.

SPATHIOSTEMON, in *Botany*, a genus so called by Blume, from the Greek *σπαθη*, a *spathe*, and *στημων*, a *stamen*, on account of the filaments being combined into a sheath. It belongs to the class *Dioecia*, order *Monadelphia*, and the natural family of *Euphorbiaceæ*. Generic character: flowers dioecious; male, calyx three-parted, spreading; petals none; filaments numerous, verticillately branched, combined into a sheathing column at bottom; anthers didymous; female flower, calyx three-parted; ovary three-celled, each cell containing one ovulum only; styles three, long, plumose inside; fruit capsular, trilocular, muricated.

A genus nearly related to *Adelia* and *Rottlera*, consisting of a single known species, *S. Javense*, a native of Java; it is a shrub with alternate, entire leaves, and axillary and lateral, solitary and twin spikes of tribracteate flowers; the male ones sessile, and the female ones pedicellate.

SPATHIPHYLLUM, in *Botany*, a genus so called by Schott, from the Greek *σπαθη*, a *spathe*, and *φυλλον*, a *leaf*, on account of the leaf-like persistent spathe. It belongs to the class *Monoecia*, order *Polyandria*, and the natural family of *Aroideæ*. Generic character: spathe foliaceous, persistent; spadix pedicellate, short, the florets pentandrous and octandrous; ovaria three-celled, each cell containing two ovula, which are suspended from the axis of the ovaria; stigma three-lobed; berry three-celled, each cell containing either one or two seeds; seeds albuminous.

Separated from the genus *Arum*, and consisting of only two known species, *S. lancæfolium*, the *Dracontium lancæfolium* of Jacquin, and *S. sagittæfolium*, the *Arum sagittæfolium* of Link; they are tropical American stemless plants, with oblong and sagittate entire leaves, which stand on long petioles; these petioles sheath the peduncle a great way up, where they are kneed at the apex; the flowers are sweet scented.

SPATHIUM, in *Botany*, a genus so called from *σπαθιον*, a *small spathe*, on account of the form of the calyx. It belongs to the class *Hexandria*, order *Trigynia*, and the natural family *Saururaceæ*. Generic character: calyx a one-leaved, pedicellate, roundish, one-flowered spathe; corolla none; stamens six; filaments short; anthers two-celled, roundish; ovary roundish, four-horned; stigmas four, sessile, oblong, reflexed; berries four, ovate, acuminate, one-seeded, seed roundish.

This genus consists of a single known species, a native of China, in marshes. It is an erect, herbaceous plant, with cordate-lanceolate, five-nerved, glabrous, scattered leaves, on stem-clasping petioles; and having the flowers disposed in linear terminal spikes.

SPATHODEA, in *Botany*, a genus so named by

Beauvois, from the Greek *σπαθη*, a *spathe*, on account of the spathaceous form of the calyx. It belongs to the class *Didynamia*, order *Angiospermia*, and the natural family of *Bignoniaceæ*. Generic character: calyx spathaceous, cleft on one side, and toothed or entire on the other; corolla funnel-shaped, with a five-lobed rather unequal limb; stamens four, didynamous, with the rudiment of a fifth sterile one; capsule silique-formed, false, falsely four-celled; dissepiment contrary, corky.

This genus, which is separated from *Bignonia*, consists of about twenty known species, natives of all the tropical parts of the globe; they are erect trees and shrubs, with simple, conjugate, but usually imparipinnate leaves, and subpanicked inflorescence. The flowers are large and showy, and are either orange-coloured, yellow, or purple.

SPATHOGLOTTIS, in *Botany*, a genus so called by Blume, from the Greek *σπαθη*, a *spathe*, and *γλωττις*, a *tongue*. It belongs to the class *Gynandria*, order *Monandria*, and natural family of *Orchideæ*. Generic character: sepals spreading, equal; petals a little broader and more membranous, spreading or connivent; labellum articulated with the base of the column, sometimes saccate and tripartite, the middle segment unguiculate, tubercled or crested at the base, generally furnished with a single tooth on each side; column winged or petaloid; anther two-celled; pollen masses eight.

There are four species known of this genus, natives of Ava and Java; they are terrestrial *Orchideæ*, with bulbous roots, ensiform, plicate leaves, and yellowish flowers.

SPATHULEA, in *Botany*, a genus so called by Fries, from *spathula*, a little spoon, on account of the form of the plant; it is the *Spathularia* of Persoon. It belongs to the class *Cryptogamia*, and order *Fungi*. Generic character: receptacle vertical, compressed, running down on either side into the distinct stem.

This genus, which is nearly allied to *Clavaria*, consists of only one known British species; it is a gregarious plant, with a hollow, yellow, much compressed pileus, which is more or less of an obovate form, sometimes inclining to be lobed; and the sporules are discharged elastically. It is to be found only in pine-groves.

SPATIATE. See **SPACE**.

SPA'TTER, or

SPU'TTER, v.

SPA'TTERDASH.

Formed upon *spat* or *spate*, the past tense of *spit*, q. v. to throw out. To throw out; to throw out upon; sc. any dirt or filth; to besprinkle, to asperse.

Spatter-dash; against which *dirt* thrown up in walking *dashes* or strikes.

The noise he made, being a man of no few words, joined to the yelping sound of Miso, and his unpleasant inheretrix, brought together some number of the shepherds, to whom he, without any regard of reserving it for the king's knowledge, *spattered* out the bottom of his stomach, swearing by him that he never knew that Zelmane, whom they had taken all to be a woman, was as arrant a man as himself was.

Sidney. Arcadia, book iv. p. 733.

Sir Edw. told him, he fear'd that fort would be the cause of the loss of the town; the grave *spatter'd* and shook his head, saying, 'twas the greatest error he had committed since he knew what belong'd to a soldier.

Howell. Letter 15. book i. sec. 4.

They fondly thinking to allay
Thir appetite with gust, instead of fruit
Chew'd bitter ashes, which th' offended taste
With *spattering* noise rejected.

Milton. Paradise Lost, book x. l. 564.

Where famish'd dogs, late guardians of my door,
Shall lick their mangled master's *spatter'd* gore.

Pope. Homer. Iliad, book xxii.

SPATTLE. See SPIT.

SPATULA, Fr. *spatule*; It. *spatola*; Sp. *espatula*;
Lat. *spathula*, *spatha*; Gr. *σπαθῆ*, from *σπᾶν*, *trahere*,
to draw, (to draw off, to skin.) Now applied to

An instrument with which surgeons or others draw
out or spread out salves, ointments, &c.

Some used to put thereunto (the juice of mulberries) myrrhe
and cypresse, setting all to frie and take their fermentation in the
sun, untill it grew to hardnesse in the foresaid vessell, stirring it
thrice a day with a *spatule*.

Holland. *Plinie*, book xxiii. ch. xvii.

SPATULARIA, from the Lat. *spatula*, Shaw. In
Zoology, a genus of animals belonging to the family
Sturionides, order *Chondropterygii branchiis liberis*,
class *Pisces*.

Generic character. Muzzle very long and expanded;
mouth apparently near the middle of the animal; upper
jaw armed with two rows of small pointed teeth; the
lower has but one row and is received within the upper
jaw; palate irregular, with rugosities and grooves, co-
vered with rough skin; throat wide and furnished with
small teeth; branchial aperture large, covered with a
large gill-flap extending nearly to the middle of the
body; skin smooth and scaleless; dorsal fin single, fal-
ciform; pectoral small; ventral opposite the origin of
the dorsal; anal large; caudal crescentic, its upper
lobe longest.

The remarkable animal upon which this genus is
founded was first described by Mauduit in 1774, who
considered it as belonging to the genus of Sharks, from
which, however, it is distinguished by having only a
single branchial aperture on each side of the neck,
and states that it was known to the settlers on the Mis-
sissippi by the name *Spatule*, from its resemblance to
an apothecary's spatula. Subsequently it was formed
into a genus by Lacepede under the name of *Polyodon*,
on account of the number of its teeth; and more recently
Dr. Shaw applied to it the name *Spatularia*, in refer-
ence to the form of its muzzle. Only one species is
known.

S. Reticulata, Shaw; *le Polyodon Feuille*, Lacep.
The size to which this animal attains is very doubtful.
Mauduit's specimen was little more than five inches, but
he states that they were sometimes twenty inches long.
Lacepede states that the largest of those which he had
examined did not exceed ten or twelve inches; but Shaw
mentions that there is in the British Museum a speci-
men of the spatula-like muzzle, which alone measures
fifteen inches, and therefore, as this organ is as long as
the head, body, and tail together, the animal to which it
belonged must have been thirty inches in length. The
spatula-like muzzle is about four or five times as long as
its breadth, and upon its upper surface has a middle
keel-shaped ridge, which is gradually lost about two-
thirds from its base, resembling the midrib of a leaf, and
the resemblance is rendered more close by the reticular
ridges observed on each side, and hence Lacepede has
given the specific name *feuille*, leaf; on its under sur-
face the membrane covering it forms a hollow in which
the lower jaw is received. The body is smooth and
scaleless, and does not seem to have any markings, except

on the gill-flaps, which have little round spots; the
lateral line is well marked, extending from the gills to the
tail. This fish has only been found in the Mississippi,
but of its habits nothing is known.

See Mauduit in *Journal de Physique*, 1774; Lace-
pede, *Histoire des Poissons*; Shaw, *General Zoology*.

SPATULARIA, in *Botany*, a genus so named by
Auguste St. Hilaire, from *spatula*, a spatula, on account
of the form of the petals. It belongs to the class *Pen-
tandria*, order *Monogynia*, and natural family of *Vio-
larieæ*. Generic character: calyx five-parted, unequal,
deciduous; petals five, rather unequal, inserted in the
base of the calyx, with long, spatulate claws, which are
connivent; stamens five; anthers drawn out each at
the tip into a membrane; capsule one-celled, many-
seeded; seeds fixed to three parietal placentas.

This genus contains only one known species, a native
of Brazil. It is a shrub with simple leaves, and one to
three-flowered terminal peduncles, and white or pale
blue flowers.

elen, to throw forth, and thus

To utter, *sc.* sounds, to utter,
to enounce, or pronounce articulate sounds; the tongue
or language.

To talk, to discourse, to converse; to address in words
or language, to accost; to announce, to make known,
to declare, to proclaim, to pronounce.

First lord he [Bruyt] was in Engolond, of whom mē *spekeþ* zet.
R. Gloucester. p. 11

Now ne kouþe þe Britones non Englisch y wys,
Ac þe Saxones *speche* it was, & þorw hem y-come yt ys.
Id. p. 125.

Now of Steuen to *speke* turne we eft agefn,
Our tale wille we no brek, bot telle forth þe certefn.
R. Brunne, p. 111.

S. Dunstan tille him *spak* wrothfulle wordes.
Id. p. 37.

No non so faire of face, of *spech* so lufly. Id. p. 30.

And when ich flee fro þe body, and (in) feye leve þe caroþgne
Then am ich a spirit *specheles*.
Piers Ploughman. Vision, fol. 274.

And anon his mouth was openyd and his tunge, and he *spak*
and blesside God. Wiclif. Luke, ch. i.

And his mouthe was opened immediatly, and his tonge also,
and he *spake* lawdyngge God. Bible, Anno 1551.

But in priyng nyle he *speke* myche, as hethene men don for
thei gessen that thei ben herd in her myche *speche*.
Wiclif. Matthew, ch. vi.

But Jhesus seith to hem, If God were youre fadir, fortheli ye
schulen loue me; for I passide forth of God, and cam; for neither
I cam of my silf, but he sente me. Whi knowen ye not my
speche? for ye moun not here my word. Id. John, ch. viii.

Jesus sayde vnto them, Yf God were youre father, then woulde
ye loue me. For I proceaded forth, and come from God. Ney-
ther came I of my selfe, for he sente me. Why do ye not knowe
my *speche*? Euen because ye can not abyde the hearynge of my
wordes. Bible, Anno 1551.

And whanne thei take you and leede you forth nyle ye bifore
thinke what ye schulen *speke*, but *speke* ye that thing that schal
be gyuen to you in that our, for ye ben not the *spekeris*, but the
Holy Goost. Wiclif. Mark, ch. xiii.

Or what profyt of circumcisioun? mych bi al wise, first for the
spekyngis of God weren bitaken to hem. And what yf summe of
hem bileuyden not? Id. Romaynes, ch. iii.

Lordinges, (quod she,) now herkeneth for the beste;
But take it nat, I pray you, in disdain;
This is the point, to *speke* it plat and plain,
That eche of ye to shorten with youre way,
In this viage, shall tellen tales tway.

Chaucer. *Prologue to the Canterbury Tales*, v. 790.

O goode God! how gentil and how kind
Ye samed by your *speche* and your visage,
The day that maked was oure marriage.

Id. *The Clerkes Tale*, v. 8729.

And shortly, whan the Sonne was gone to reste,
So hadde I *spoken* with hem everich on
That I was of hir felawship anon.

Id. *Prologue to the Canterbury Tales*, v. 30.

Some menne there been, that no goodnesse *spoken*; (ed. 1598,
spoken.) and where euer your words been heard and your reasons
been shewed, soche euill *speakers*, ladie, by authoritie of your ex-
cellence shallen been stopped and ashamed.

Id. *Testament of Loue*, book ii.

SPEAK.

Als for to *speake* of time ago
The cause why it changeth so,
It nedeth nought to specifie,
The thyng so open is at the eie
That euery man it maie beholde.

Gower. *Conf. Am. Prologue*, p. 1.

— And whan thei comen were,
And sette at supper there,
Amonge her other wordes glade
Arrous a great *spekyng* made,
Who had tho the best wife
Of Rome, and thus began a strife.

Id. Ib. book vii.

— For certes, sir,
I trowe in all this worlde to seche
Nis woman, than in dede and *speche*,
Woll better auise hir, what she dooth,
Ne better, for to saie a soothe,
Kepe hir honour at all tide.

Id. Ib. book ii.

And that was at midnight tide,
The worlde was stille on euery side,
With open head, and foote all bare,
Hir heare to sprad, she gan to fare,
Upon hir clothes gyrt she was,
All *specheles* vpon the gras
She glode forth, as an adder doth,
None other wise she ne goth.

Id. Ib. book v.

And then they willed to choose an able and discrete man, to be, as it were, the mouth of them all, and to *speake* for and in the name of them, and to present him so chosen by them to the prince.

Smith. *Commonwealth*, book ii. ch. iii. p. 49.

The *speaker* is he that dooth commend and preferre the bills exhibited into the Parlement, and is the mouth of the Parlement.

Id. Ib. p. 47.

The *speaker* hath no voyce in the House, nor they will not suffer him to *speake* in anie bill to mooue or dissuade it.

Id. Ib. book ii. ch. iii. p. 52.

The other losinge his moneye, and heapinge othes upon othes one in another's necke, most horrible, and not *speakeable*, was rebuked of an honest man which stoode by for so doinge.

Ascham. *Workes*, p. 87. *Toxophilus*.

Lette all bytternes, fearsnes and wrathe, rorynge and cursed *speakyng*, be put awaye from you, with all maliciousnes.

Bible, Anno 1551. *Ephesians*, ch. iv.

And [frere Barns] meaneth not to *speake* of them, onely whyle they lye a dying *spechelesse*, and geuyng vp the ghost.

Sir Thomas More. *Workes*, fol. 803.

JAM. This soul I *speake* of,

Or rather salt to keep this heap of flesh
From being a walking stench, like a large inn,
Stands open for the entertainment of

All impious practices; but there's no corner
An honest thought can take up.

Beaumont and Fletcher. *The Spanish Curate*, act v. sc. 1.

— I dare tell you,
To your new cerus'd face, what I have *spoken*
Freely behind your back, what I think of you:
You are the proudest thing, and have the least
Reason to be so that I ever read of.

Id. Ib.

— I, ere thou *spak'st*,
Knew it not good for man to be alone,
And no such company as then thou saw'st
Intended thee, for tryal onely brought,
To see how thou couldst judge of fit and meet.

Milton. *Paradise Lost*, book viii. l. 444.

Redouble then this miracle, and say
How cam'st thou *speakeable* of mute, and how
To me so friendly grown above the rest
Of brutal kind, that daily are in sight?

Id. Ib. book ix. l. 562.

Upon his hasty knock the door was opened, and he commanding his attendants to stay without, himself entred into the House; at which the *speaker* rose out of his chair, and stood below, and the king stept up, and looked round about the House to see if the five members, or any of them, were there.

Whitelock. *Memorials of Charles I.* fol. 52.

It is not at all harsh, in the reading of Moses, to understand the *speaking*s of God according as the circumstances of the matter naturally apply.

More. *Defence of the Philosophical Cabbala*, ch. iii.

The last [Meneves] and most notable instance of those that entituled their laws divine, and made themselves *spokesmen* betwixt God and the people.

Id. Introduction to the Defence of the Literal Cabbala, p. 47.

Here is *speech* that Sculterus is to make the next Latin sermon; but when we know not.

Hales. *Remains. Mr. Hales to Sir D. Carlton*, p. 26.

Ne in her *speech*, ne in her haviour,
Was lightnesse seene or looser vanitie,
But gracious womanhood, and gravitie,
Above the reason of her youthly yeares.

Spenser. *The Faerie Queene*, book ii. can. 2.

From his slack hand the garland wreath'd for Eve
Down drop'd, and all the faded roses shed;
Speechless he stood and pale, till thus at length
First to himself he inward silence broke.

Milton. *Paradise Lost*, book ix. l. 892.

Catching and grasping hard, gnashing with the teeth, speaking hollow, trembling of the neather lip, palenesse of the face, the memory confused, *speechelesnesse*, cold sweats.

Bacon. *History of Life and Death*, sec. 30.

The Muscovits doo write vnto S. Nicholas to be a *speech-man* for him that is buried, in whose hand they bind a letter, and send him with a new paire of shooes on his feet into the graue.

Holinshed. *The Description of Britaine*, vol. i. p. 35.

Laertes' son

Look'd down awhile, and paus'd e'er he begun;
Then to th' expecting audience rais'd his look,
And not without prepar'd attention *spoke*;
Soft was his tone, and sober was his face;
Action his words, and words his actions grace.

Dryden. *Ovid. Ajax and Ulysses*.

Awhile your loud, untimely joy suspend,
And let your rash, injurious clamours end;
Unruly murmurs, or ill-tim'd applause,
Wrong the best *speaker*, and the justest cause.

Pope. *Homer. Iliad*, book xix.

It [discourse] wins and engages those, whom *speechless* or sententious gravity might not only displease, but prepossess against every thing good.

Secker. *Works*, vol. i. p. 145. *Sermon 10.*

These two ancient commentators have taken upon them to assert that St. Peter, upon this occasion, was but the *spokesman* of the company, and replied to our Lord's question, "Whom say ye that I am?" in the name of all.

Horsley. *Sermon 13.* vol. i. p. 283.

And he seide to hem, make ghe redi twei hundride knyghtis that thei go to Cesarie, and horse men seuenti, and *spere* men twei hundride fro the thridde our of the nyght.

Wiclif. *The Dedis of Apostlis*, ch. xxiii.

And he called vnto him two vnder captaynes, saying, Make redy two hundred souldiers to go to Cesarea, and horsmen thre-score and ten, and *speare* men two hundred, at the thyrd houre of the nyght.

Bible, Anno 1551.

And fell in speche of Telephus the king,
And of Achilles for his queinte *spere*,
For he coude with it both hele and dere.

Chaucer. *The Squieres Tale*, v. 10552.

For longe tyme it so befelle,
That, with his swerd, and with his *spere*,
He might not the serpent dere.

Gower. *Conf. Am.* book v.

His *spear*, to equal which the tallest pine
Hewn on Norwegian hills, to be the mast
Of some great ammiral, were but a wand,
He walkt with to support uneasie steps.

Milton. *Paradise Lost*, book i. l. 297.

A pensioner, a gentleman about his prince, alwaie redie with his *speare*; a *spearer*.

Baret. *Alvearie*.

But where the blue claie aboundeth (which hardlie drinketh vp the winter's water in long season) there the grass is *spearie*, rough, and verie apt for brushes.

Holinshead. *Description of Britaine*, ch. xviii.

The expert *speare-men*; euey myrmidon
(Led by the braue heire of the mightie sould
Vnpeerd Achilles) safe of home got hold.

Chapman. *Homer. Odyssey*, book iii.

The principal of their offensive weapons in later ages was *spear*, or pike, the body of which was composed of wood, in the heroic times most commonly of ash.

Potter. *Antiquities of Greece*, vol. ii. book iii. ch. iv. p. 35.

Our diversion was therefore changed to *spear*ing of salmon which we saw pushing in great numbers through the surf into a small river.

Cook. *Voyages*, vol. vii. book v. ch. v. p. 268.

Lo, while the moon through midnight azure rides,
From the high wall adown his *spear-staff* glides
The dauntless Gerrald.

Mickle. *Lusiad*, book viii.

SPECIAL CASE, in *Law*, is the statement of the facts of some case which is pending before one of the Courts of Common Law, with the view of taking the opinion of the court upon some point of law arising out of them. It often happens that the facts may be admitted by both the litigant parties, and the legal inference is alone in dispute. When this is the case, the parties may, by the Statute of 3 and 4 William IV. cap. 42, state the facts, and bring the case at once before the court without sending it to trial at *Nisi Prius*. Before the passing of that Statute there was frequently no mode of bringing the question of law before the court without bringing on the cause for trial, and then the judge who presided at *Nisi Prius* would reserve the point of law for the court above; so that the trial was an unnecessary and an expensive proceeding. By the above Statute, when the parties can agree upon a statement of facts, they can bring the matter to a close in a cheap and expeditious manner. The only objection to a Special Case is, that the decision of the court in which it is first argued is final. There is no appeal or writ of error, as the case does not form part of the record. Sometimes this objection is obviated by the court allowing the Special Case to be turned into a special verdict, and then the decision of the court may be reviewed upon a writ of error.

SPECIALTY, in *Law*, denotes an instrument in writing under seal, such as a deed; and in truth the

terms Specialty and deed are almost co-extensive in their import. Debts by Specialty are those that are secured by a bond, or by a covenant in a deed of mortgage, or by any other deed, and these must be satisfied by an executor out of the estate which he has to administer, before debts due upon simple *contract*, an expression denoting all the ordinary debts not secured by deed. If an executor with notice of a Specialty satisfies a simple contract debt, and has not sufficient assets for the other, he must pay it out of his own monies. Again, debts due by simple contract are generally barred by the lapse of six years, while debts due upon Specialty may be recovered at any time within twenty years after they accrue, or after some part payment, or written acknowledgment, signed by the party to be charged, or his agent. It is therefore prudent in all cases, where the amount of a debt is material to the parties, to have it secured by a bond or other Specialty, rather than to leave it upon the simple promise of repayment, even though such promise be in writing; for all writings not under seal, even bills of exchange and promissory notes, are simple contracts and not Specialties.

SPE'CIOUSLY.

Fr. *special*, *specifier*, *specieux*; It. *specie*; Sp. *especie*; Lat. *species*, from the old *specere*, *videre*, to see; derived by Scaliger from *specus*, whence the ancient Latins viewed or observed the motions of their enemies; *De Caus.* c. lxxxvi. and *species* (which Lucretius uses *pro aspectu*) is any thing seen; and then applied to any particular class of objects causing the same or similar sensations to the sight. *Species* is declared by Cicero to be equivalent to the Gr. *îdeâ*. See *IDEA*.

That which, any thing which, is seen or is the object of sight: any sensible form, appearance, representation, image.

A class, order, division or disposition of things causing the same or similar sensations to the sight; having or showing particular or discriminating qualities—the same; having or showing the same form or appearance.

To *specify*, to name the particular or distinct thing or things; to particularize, to discriminate, to distinguish; to denote or signify particularly or distinctly.

Speciousness is not an uncommon word.

The King of Almayne sende *specialliche* inou

Than he toke four C. speares of the moost *speciallest* and surest
men of warr of all his company.
Lord Berners. Froissart. Chronycle, vol. i. ch. 304.

The *specialtees* wherof do so ferforth in the first chapter of this
boke appere, that we shall here nede no rehersall therof.
Sir Thomas More. Works, fol. 105. A Dialogue.

Than to brynge this storye to effecte, whereof, if I shuld declare
y^e *specyalties* thereof, wolde aske a longe tyme.
Fabyan. Chronycle, ch. 161. p. 154.

From forests, fields, from rivers, and from ponds,
All that have webs, or cloven-footed ones;
To the grand ark together friendly came,
Whose several *species* were too long to name.
Drayton. Noah's Flood.

Those pretty mirrors, like a crevice in a wall, through a narrow
perspective, transmit the *species* of a vast excellency.
Taylor. Sermon 5. vol. ii. p. 77.

— by which [bridge] the spirits perverse
With easie intercourse pass to and fro
To tempt or punish mortals, except whom
God and good angels guard by *special* grace.
Milton. Paradise Lost, book ii. l. 1030.

Special Providence in relation to the acts themselves, are those
special actings of the Divine power and will, whereby He acts
either in things natural or moral, not according to the rules of
general Providence, but above, or besides, or against them; and
these I call the imperate acts of Divine Providence.
Hale. Origination of Mankind, fol. 36.

[Christ] the Physician and the Saviour, that hath promises of
long life annexed to some *specials* of his service.
Hammond. Works, vol. iv. fol. 579. Sermon 3.

And therefore Tranio, for the time I studie,
Vertue and that part of philosophie
Will I applie, that treats of happinesse,
By vertue *specially* to be atchieu'd.
Shakspeare. The Taming of the Shrew, act i. sc. 1. fol. 210.

The *specialty* of rule hath beene neglected.
Id. Troilus and Cressida, act i. sc. 3. fol. 82.

Our Saviour *specialising* and nominating the places.
Sheldon. Mirror of Antichrist, (1616,) p. 261.

Matter being of one simple homogeneal nature, and not distin-
guishable by *specificall* differences, as the schools speak, it must
have every where the very same essentiall properties.
More. Immortality of the Soul, book i. ch. xi. p. 44.

But it is rather manifest that the essence of spirits is a substance
specifically distinct from all corporeal matter whatsoever.
Id. Antidote against Atheism, book iii. ch. xii. p. 125.

And hence it is that the will of man by the instituted law of his
creation, and the common influence of the Divine goodness and
power, is enabled to act as a reasonable creature, to determine it-
self, and to govern its proper actions according to the law of his
creation, without any particular, *specificating*, concurrent, new im-
perate act of the Divine special Providence to every particular de-
termination of his will.
Hale. Origination of Mankind, fol. 40.

In the mean time that scion alters the nature of that stock; *SPECIES.*
and while the root gives fatness to the stock, and the stock yields
juice to the scion, the scion gives goodness to the plant, and a
specification to the fruit.

Hall. Works, vol. viii. p. 221. Christ Mystical.

Were these three supposed to be perfectly coequal, and to have
no essentiall dependence one upon another, they could not by these
Platonists be concluded to be any other than three co-ordinate
gods, having only a generical or *specificall* identity; and so no
more one, than three men are one man.

Cudworth. Intellectual System, book i. ch. iv. fol. 590.

This said, warr's cause these priests no more debate;
They knew, warr's justice none could ere decide;
At that more *specious* name they open strait,
And sacred rites of fun'ral they provide.
Davenant. Gondibert, book ii. can. 1.

That the *species* of things to us are nothing but the ranking
them under distinct names, according to the complex ideas in us;
and not according to precise, distinct, real essences in them, is
plain from hence, that we find many of the individuals that are
rank'd into one sort, call'd by one common name, and so receiv'd
as being of one *species*, have yet qualities depending on their real
constitutions, as far different one from another as from others, from
which they are accounted to differ *specifically*.

Locke. Works, vol. i. fol. 201. Names of Substances.

This general rule of justice is always at hand, and we carry it
about us in our own breasts; for this is the peculiar advantage of
this rule, that by it we may very easily discern all the *specialities*
of our duty, without looking abroad, or having recourse to exter-
nal instructions.

Scott. Christian Life, part iii. ch. ix. fol. 609.

The *παιδαγωγος*, and interior generation, are two *specialities*
taught by the Catholics, and heavily complained of by your
friend Dr. Whitby, as unscriptural definitions.

Waterland. Works, vol. i. p. 228. A Defence of some Queries.
Query 21.

What assistance I received from them, was made known in
general to the public in the original proposals for this work, and
the particulars are *specified* at the conclusion of it.

Pope. Postscript on Homer's Odyssey.

And to talk of *specifick* differences in nature, without reference
to general ideas and names, is to talk unintelligibly.

Locke. Works, vol. i. fol. 201. Names of Substances.

In short, the *specification* of our worship, and the right direction
of it, are nearly concerned in this doctrine.

Waterland. Works, vol. v. p. 27. Doctrine of the Holy Trinity.

Tho' the Divine nature abounds with innumerable virtues and
perfections, yet 'tis impossible for us, by our own natural light, to
discover any other of them than those of which he himself hath
imprinted some *specimens* upon created beings.

Scott. Christian Life, part ii. ch. vi. fol. 306.

Who truth from *specious* falsehood can divide,
Has all the gownsman's skill without their pride.

Dryden. Absalom and Achitophel.

To these considerations may be added, that we are commanded
to walk decently or *speciously*, which implies a regard to men's
opinion.

Barrow. Sermon 12. vol. ii. p. 292.

I know what may be said *speciously* enough to persuade, that
such an increase of dominion would not have augmented, but
would rather have weakened the power of France.

Lord Bolingbroke. Works, vol. iv. p. 95. On History. Letter 8.

After he [Gainsborough] had invented a new *species* of dra-
matic painting, in which probably he will never be equalled, and
had stored his mind with infinite materials to explain and illus-
trate the domestic and familiar scenes of common life, which were
generally, and ought to have been always, the subject of his
pencil; he very imprudently, or rather presumptuously, attempted
the great historical style, for which his previous habits had by no
means prepared him.

Sir Joshua Reynolds. Works, vol. ii. p. 163. Discourse 14.

The non-payment of these is an injury, for which the proper
remedy is by action of debt, to compel the performance of the
contract and recover the *specificall* sum due.

Blackstone. Commentaries, vol. iii. book iii. ch. ix. p. 155.

Here the intended punishment is explained *specifically*, that is,
with its circumstances.

Warburton. Works, vol. iv. p. 342. The Divine Legation.

SPECIES. A specification of a few improvements will add but little to the sum of my transgressions.

SPECK-LINIA. Knox. *Works*, vol. iv. p. 271. *On the University of Oxford.*

We are thankful to the adversary that he hath invited us to meet him on such advantageous ground, by comparing what may justly be deemed the most indefinite of the Scripture prophecies, with the best specimen of the power of accident for the completion of prophecy which his extensive reading could produce.

Horsley. *Sermon* 17. vol. ii. p. 75.

I propose next to describe the *specious* or decent man. By the decent man, I mean him who governs all his actions by appearances.

Gilpin. *Sermon* 5. vol. i. p. 54.

SPECK, n. } A. S. *specce*; *macula*, *labes*, *nota*,
SPECK, v. } a spot, a blot, a blemish, a mark; D.
SPECKLE, n. } *spickelen*; *maculis distinguere*, *varie-*
SPECKLE, v. } *gare*, to distinguish, to diversify or

variegate with spots. *Spot* is that which is *spit* or thrown out, and *speck* may have the same meaning. See **SPEAK**.

A small spot, (distinguished by colour from the surface it is upon.)

Speckle, the diminutive of *speck*.

Like him that wand'ring in the bushes thick,
Tredes on the adder with his rechlesse foote,
Rered for wrath swelling her *speckled* neck,
Dismay'd, geues back all sodenly for fere.

Surrey. *Virgil. Aeneis*, book ii.

— Oft stooping to support
Each flour of slender stalk, whose head though gay
Carnation, purple, azure, or *spect* with gold,
Hung drooping unsustain'd.

Milton. *Paradise Lost*, book ix. v. 427.

But in these so little bodies, (nay prickles and *specks* rather than bodies indeed,) how can one comprehend the reason, the power, and the inexplicable perfection that nature had therein showed? How hath she bestowed all the five senses in a gnat?

Holland. *Plinie*, book xi. ch. ii.

Therewith enrag'd she loudly gan to bray,
And turning fierce her *speckled* taile advaunst,
Threat'ning her angrie sting, him to dismay.

Spenser. *Faerie Queene*, book i. can. i.

For at his wonted time in that same place
An huge great serpent, all with *speckles* pide,
To drench himselfe in moorish slime did trace,
There from the boyling heate himselfe to hide.

Id. *Virgil. Gnat*.

With vinegre alone, it [Cumin] cureth the blacke spots and *speckles* appearing in any part of the bodie, if the place be bathed therewith.

Holland. *Plinie*, book xx. ch. xiv.

When I some antique-jar behold,
Or white, or blue, or *speck'd* with gold;
Vessels so pure, and so refin'd,
Appear the types of woman-kind.

Gay. *To a Lady. Epistle* 13.

Here we struck ground with sixty-five fathom of line, the bottom consisting of grey sand, with black *specks*.

Anson. *Voyages*, book ii. ch. vii. p. 291.

This probability is increased by the hills that bounded it toward the land, being covered with thick snow, when those toward the sea, or where we lay, had not a *speck* remaining on them.

Cook. *Voyages*, vol. ii. book iv. ch. ii. p. 265.

The bushes toward the sea were frequented by infinite numbers of a sort of moth, elegantly *speckled* with red, black, and white.

Id. *Ib.* vol. vi. book ii. ch. iii. p. 250.

SPECKLINIA, in *Botany*, a genus so called in honour of Rudolph Specklin, a wood engraver. It belongs to the class *Gynandria*, order *Monandria*, and the natural family of *Orchideæ*. Generic character: sepals connivent, equal, distinct; lateral ones saccate at the base, and gibbous outside; petals similar to the sepals, but much smaller; labellum free, conform to the petals, saccate at the base; column short, free, mem-

branaceously winged; anther one-celled; pollen masses two, plano-convex.

This consists of five species, natives of America; they are small, epiphytcal plants, with filiform, one-leaved stems, coriaceous leaves, and axillary, capillary, few-flowered peduncles. See **SPECIES**.

SPECTACLE, } Fr. *spectacle*, *spectateur*; It.
SPECTACLED, } *spettacolo*, *spettatore*; Sp. *espec-*
SPECTACULAR, } *taculo*, *espectator*; Lat. *specta-*
SPECTATOR, } *culum*; from *species*, any thing
SPECTATORIAL, } seen. See **SPECIES**.
SPECTATORSHIP, } Any thing that may be seen,
SPECTATRESS, } or viewed, looked at, or beheld;

a sight, a show; an exhibition to the sight.

Glasses to aid the sight are called *spectacles*.

For we ben maad a *spectacle* to the world and to aungelis and to men.

Wiclif. 1 *Corynth.* ch. iv.

Povertie a *spectakel* is, as thinketh me,
Thurgh which he may his very frendes see.

Chaucer. *The Wif of Bathes Tale*, v. 6786.

Such is a kynges power
To make within an hower
And worke such a miracle
That shalbe a *spectacle*
Of renowne and worldly fame.

Skelton. *Why come Ye not to Court?*

And [he] thought no eyes of sufficient credit in such a matter, but his own, and therefore came himself to be actor and *spectator*.

Sidney. *Arcadia*, book ii. p. 239.

Pitifull *spectacle* of deadly smart,
Beside a bubling fountaine low she lay,
Which shée increased with her bleeding hart
And the cleane waves with purple gore did ray.

Spenser. *Faerie Queene*, book ii. can. 1.

BRU. All tongues speake of him, and the bleared sights
Are *spectacled* to see him.

Shakspeare. *Coriolanus*, act ii. sc. 1. fol. 10.

The whiles to me the treachour did remove
His craftie engin; and, as he had sayd,
Me leading, in a secret corner layd,
The sad *spectatour* of my tragedie.

Spenser. *Faerie Queene*, book ii. can. 4.

It hath been said of old, that plays are feasts,
Poets the cooks, and the *spectators* guests;
The actors, waiters.

Carew. *Of Mr. William Davenant's Play*.

If thou stand'st not i' th' state of hanging, or of some death more long in *spectatorship*, and crueller in suffering, behold now presently, and swoond for what's to come vpon thee.

Shakspeare. *Coriolanus*, act v. sc. 2. fol. 26.

The *spectacular* sports were concluded.

Hickes. *Sermon* 30, p. 4. Jan. 1681-2.

Have ye no griefs at home to fix you there;
Am I the only object of despair?
Am I become my people's common-show,
Set up by Jove your *spectacle* of woe?

Pope. *Homer. Iliad*, book xxiv.

Two powers divine the son of Atreus aid,
Imperial Juno, and the martial maid;
But high in heaven they sit, and gaze from far,
The tame *spectators* of his deeds of war.

Id. *Ib.* book iv.

I mean the fraternity of *spectators* who live in the world without having any thing to do in it; and either by the affluence of their fortunes, or laziness of their dispositions, have no other business with the rest of mankind but to look above them.

Spectator, No. 10.

But I must appeal to your *spectatorial* wisdom, who, I find, have passed very much of your time in the study of women, whether this is not a most unreasonable proceeding.

Id. No. 492.

SPECK-LINIA.

SPECTACLE.

SPECTA-
CLE.
—
SPEC-
TRE.

I am afraid the most charitable will hardly think it possible for me to be a daily *spectatress* of his vices without tacitly allowing them, and at last consenting to them.

The Idler, No. 42.

The paralytic, who can hold her cards,
But cannot play them, borrows a friend's hand,
To deal and shuffle, to divide and sort
Her mingled suits and sequences; and sits
Spectatress both and *spectacle*, a sad
And silent cipher, while her proxy plays.

Cowper. The Task.

SPECTRE, Fr. *spectre*; It. *spettro*; Sp. *espectro*;
Lat. *spectrum*, from *specere*, to see. See SPECIES.

Any thing seen; a vision, an apparition; a fantasm,
a ghost or spirit.

Thus pass'd the night so foul, till morning fair
Came forth with pilgrim steps in amice gray;
Who with her radiant finger still'd the roar
Of thunder, chas'd the clouds, and laid the winds,
And grisly *spectres*, which the fiend had rais'd
To tempt the Son of God with terrors dire.

Milton. Paradise Regained, book iv. l. 423.

The ghosts of traitors from the bridge descend,
With bold fanatic *spectres* to rejoice:
About the fire into a dance they bend,
And sing their sabbath notes with feeble voice.

Dryden. Annus Mirabilis.

Com'st thou alive to view the Stygian bounds,
Where the wan *spectres* walk eternal rounds;
Nor fear'st the dark and dismal way to tread,
Throng'd with pale ghosts, familiar with the dead?

Pope. Homer. Odyssey, book xi.

— Rous'd from their slumbers,
In grim array the grisly *spectres* rise,
Grin horrible, and, obstinately sullen,
Pass and repass, hush'd at the foot of night.

Blair. The Grave.

SPECTRE, the ghost of a deceased person, or a super-
natural being, rendered visible to human sight.

It is well known that there has been a great deal of controversy respecting the reality of spectral apparitions. The advocates of it plead the universality of the belief; and profess to adduce evidence affording rational and sufficient grounds for the adoption of it. Those who espouse the opposite side of the question maintain that the prevalence of the idea merely proves the prevalence of human weakness, ignorance, and superstition; and that all the instances brought to establish it may be resolved into fraud, credulity, or pure physical causes. They allege that immaterial beings cannot be made objects of sense; that the narratives concerning them are almost invariably incongruous and improbable, and that there scarcely ever appears on the face of them a sufficient cause why such a violation of the ordinary course of nature should be allowed. They observe that such manifestations are generally said to be made in the night, though no rational reason can be given why they should not equally or even preferably occur during the day; and they are usually seen by ignorant, credulous, or enthusiastic persons; precisely those who are strongly predisposed to believe in them. It must be allowed that the above arguments are weighty; and, in fact, conclusive against a vast majority of the cases that have been brought forward in support of the doctrine; still, it may be doubted whether they are applicable in every instance. Abstractedly speaking, there is nothing absurd or impossible in the supposition that a spectral illusion may be caused by a direct interference of Providence for promoting some important purpose; and there are a few instances on record of which it seems difficult to

give any other solution, provided the facts are correctly stated. The whole, as was observed under APPARITION, resolves itself into a question of evidence. The aggregate amount of direct evidence in favour of the hypothesis is not very considerable; but there is perhaps enough to justify a prudent and pious man in suspending his judgment, and refraining from pronouncing a dogmatic decision on the one side or the other.

There is sufficient scope for curiosity in tracing the cause of such spectral phenomena as are confessedly mere illusions, referable either to natural and physical causes, or to fraudulent contrivance. Among those belonging to the former class, some very remarkable ones have been satisfactorily shown to be optical deceptions, originating in a peculiar refraction, or reflection, or both combined. The inhabitants of the Hartz district, in Germany, had for ages believed in a gigantic Spectre, said to appear at sunrise on the summits of mountains near the Brocken. The supposed phantom was, towards the close of the last century, discovered to be nothing more than the projection of the spectator's own shadow upon the clouds or mist. The following extract from the account given by M. Haue, who appears to have first discovered the cause of the phenomenon, will place the matter in a clearer light.

"After having been here (on the Brocken) for the thirtieth time, and having procured information respecting the above-mentioned atmospheric phenomenon, I was at length so fortunate as to have the pleasure of seeing it. The sun rose about four o'clock, and the atmosphere being quite serene towards the east, his rays could pass without any obstruction over the Heinrichshöhe. In the south-west, however, towards the Achtermannshöhe, a brisk west wind carried before it thin transparent vapours, which were not yet condensed into thick heavy clouds. About a quarter past four I went towards the inn, and looked round to see whether the atmosphere would permit me to have a free prospect to the south-west, when I observed, at a very great distance towards the Achtermannshöhe, a human figure of a monstrous size. A violent gust of wind having almost carried away my hat, I clapped my hand to it, by moving my arm towards my head, and the colossal figure did the same. The pleasure which I felt on this discovery can hardly be described; for I had already walked many a weary step in the hope of seeing this shadowy image, without being able to satisfy my curiosity. I immediately made another movement by bending my body, and the colossal figure before me repeated it. I was desirous of doing the same thing once more, but my colossus had vanished. I remained in the same position waiting to see whether it would return, and in a few minutes it again made its appearance in the Achtermannshöhe. I paid my respects to it a second time, and it did the same to me. I then called the landlord of the Brocken, and having both taken the same position which I had taken alone, we looked towards the Achtermannshöhe, but saw nothing. We had not, however, stood long, when two such colossal figures were formed over the above eminence, which repeated our compliment by bending their bodies as we did, after which they vanished."

Similar phenomena are doubtless often exhibited in mountainous districts, where the localities are favourable. The writer of this article has seen the shadows of persons carrying torches in a foggy night distinctly portrayed upon the mist, in an upright position, and

SPEC-
TRE.

SPEC-
TRE.

magnified to a gigantic stature. Some years ago, two peasants on the borders of Knaresborough forest asserted that they saw on an adjoining eminence an army of soldiers, which went through various evolutions, and then vanished. There seemed no reason to question the veracity of the relators: what they saw was probably a refracted and reflected image of a number of persons at a distance, magnified by their fears into a large army. The phantom ship, popularly termed by sailors the Flying Dutchman, is not improbably an apparition of the same class. At least it is very possible that seamen may occasionally see a reflection of their own ship, or a refracted image of a distant one, and as those images appear to move in a direction opposite to that of their prototypes, they of course seem to possess the supernatural attribute of sailing in the wind's eye; a regular adjunct to the stories about the phantom frigate.

The second class of illusions, namely, those originating in physical causes, and connected with a morbid or excited state of the body or mind, doubtless constitutes the largest proportion of the whole. Many of the recorded stories of apparitions are evidently feverish dreams or attacks of the nightmare. In the latter the impressions are frequently so vivid, and the consciousness of the actual locality so strong, that the vulgar in many countries are firmly persuaded that it is a supernatural visitation. It is easily recognised in many of the narratives of the Romish hagiology: for example, in the life of St. Francis Xavier, we are told that he frequently had a vision of an Indian lying upon his chest, whom he could not shake off. This is regarded by his biographers as a presage of his missionary expedition; but there are few modern physiologists who would hesitate to attribute it to a natural cause. In many cases, however, Spectral illusions are presented to individuals while perfectly awake, and even fully conscious that there is nothing really supernatural in the phenomena witnessed by them. Sometimes they may be traced to mental excitement, but more frequently to a morbid state of the circulation, or of the nervous system. Many curious and well-authenticated instances are given in Dr. Hibbert's *Sketches of the Philosophy of Apparitions*. The doctor's theory is, that Spectres of this description are mere revivals of past impressions upon the nervous system, rendered vivid by disease or excitement of the mind; bearing, in fact, a certain analogy to dreams, which it is well known are in most cases repetitions of ideas previously presented to the mind. When impressions of this sort are strong—ignorant, credulous, and enthusiastic persons are sufficiently prone to regard them as realities; and a very large proportion of the ghost stories on record may be readily traced to this source. In the well known instance of the apparition seen by Tasso, and a number of similar ones, there was probably a combination of physical derangement with mental aberration. Opium and spirituous liquors frequently produce analogous results. Patients labouring under *delirium tremens*, brought on by habitual intoxication, almost invariably fancy that they see Spectres.

Many of the stories of apparitions on record afford good reason to believe that those who profess to have witnessed them were the dupes of some fraudulent contrivance. The spirits exhibited by the Sicilian necromancer to Benvenuto Cellini and his companions are, with great probability, supposed by Mr. Roscoe to have been effects of a magic lantern, or some similar appa-

ratus. About thirty years ago, a wizard, residing in the wild district called Rombald's Moor, in the West Riding of Yorkshire, was frequently applied to by his credulous neighbours to discover thieves and other offenders. The consulting parties were placed under a coverlet in a dark room, with a small aperture to look through; and all concurred in stating that they saw figures analogous to the objects of their inquiries. It was supposed, by the more enlightened part of the community, that the conjuror extracted as much information from his customers as they were able to give, and contrived to exhibit, by means of a magic lantern or phantasmagoria, such figures as he thought suitable, and which in fact there would be little difficulty in passing off as portraits of unknown persons. The strange sights and sounds at Woodstock, after the execution of Charles I., which terrified the parliamentary commissioners out of their senses, and are gravely narrated by Dr. Plot as undoubtedly supernatural, were eventually discovered to be the contrivance of Joseph Collins; who, being acquainted with the secret passages of the house, and various chemical processes not generally known, and having, as a royalist, no great affection for the commissioners, or the business of confiscation on which they came, adopted this method of getting rid of them.

A plentiful collection of analogous instances might be made from the lives of Romish saints, especially those of Spain and Portugal; indeed, in many cases, the fraud is so clumsily concealed that there is no great difficulty in perceiving the process actually employed.

SPECTRUM, in *Zoology*, a genus of *Orthopterous* insects.

Generic character. *Antennæ* setaceous, often very numerously jointed; *palpi* subcylindrical; *labium* quadrifid, its external divisions the longest; head oval, rather oblique; body very long, cylindrical or filiform; *thorax* cylindrical, its second segment much elongated; *elytra* very short, sometimes deficient; legs long, slender, and far apart.

This genus belongs to the family *Mantida* of Lamarck, and is distinguished from the others of the same division by the cylindrical form of its body, which often resembles a piece of stick, and is sometimes almost as fine as a thread. The *elytra* of the three species which have wings are very short, and the inner edge of the wing itself is more coriaceous than its other part. They are all natives of either the continent or isles of India, and *S. Gigas* may be taken as their type. The second division is entirely wingless, and includes five species, all of which are natives of South America or the West Indies, excepting one, *S. Rossii*, which is found in Italy and in the south of France, and may be taken as the type of this section.

See Lamarck, *Histoire Naturelle des Animaux sans Vertèbres*.

SPECULARIA, in *Botany*, a genus so called by Heister, from the ancient name of one of the species, *Speculum Veneris*, or *Venus's Looking-glass*. It belongs to the class *Pentandria*, order *Monogynia*, and the natural family of *Campanulaceæ*. *Generic character*: calyx five-lobed; tube long, prismatic; corolla rotate, five-lobed; stamens five; filaments short, membranous, and pilose; anthers longer than the filaments; style inclosed; stigmas three, filiform; capsule long, prismatic, three-celled, dehiscing by three valves at apex, or a little above the middle; seeds rather compressed, shining.

SPECU-
LATE.

This genus, which is separated from *Campanula*, contains seven known species; they are all annual plants, natives of Europe and America, with alternate leaves, and terminal and axillary blue, white, or rose-coloured flowers. *S. speculum* is the common *Venus's Looking-glass* of the gardens, and *S. hybrida* is a native of Britain.

SPE'ULATE, v.

SPECULA'TION,

SPE'ULATIST,

SPE'ULATIVE,

SPE'ULATIVELY,

SPE'ULAR,

SPE'ULATOR,

SPE'ULATORY,

SPE'ULUM.

Fr. *speculer*, *speculaire*; It. *specolare*; Sp. *specular*; Lat. *speculari*, to see, to view. See SPECIES.

To see, to view, to look out or about; to observe, to consider, to contemplate; to look, or search, or examine into, to form or frame theories; to look

forward to consequences; to try, venture, risk, or hazard, to form or frame schemes, upon a *view* or prospect (*sc.*) of beneficial or profitable results.

Lat. *specularis*; Fr. *speculaire*; that may be seen into or through, transparent; aiding or helping the sight.

Such wisdom, that in her lives *speculation*;

Such goodness that in her simplicity triumphs.

Sidney. *Arcadia*, vol. i. book ii. p. 419.

[They] understood not Plato when he said that man doth *sursum aspicere*; for thereby was not meant to gape, or look upward with the eye, but to have his thoughts sublime; and not only to behold, but *speculate* their nature, with the eye of the understanding.

Sir Thomas Brown. *Vulgar Errours*, book iv. ch. i.

But now to goe on still with our astrologie and *speculation* of heaven as wee have begun.

Holland. *Plinie*, book xviii. ch. xxviii.

For *speculation* turnes not to it selfe,

Till it hath trauail'd and is married there

Where it may see it selfe: this is not strange at all.

Shakspeare. *Troilus and Cressida*, act iii. sc. 3. fol. 93.

No, when light wing'd toyes

Of feather'd Cupid seele with wanton dulnesse

My *speculative* and offic'd instrument,

That my disports corrupt, and taint my businesse,

Let house-wiues make a skillett of my helme,

And all indigne, and base aduersities,

Make head against my estimation.

Id. *Othello*, act i. sc. 3. fol. 315.

You teach (though we learn not) a thing unknown

To our late times, the use of *specular* stone,

Through which all things within without were shown.

Donne. *To the Countess of Bedford*.

Look once more ere we leave this *specular* mount,

Westward much nearer by south-west.

Milton. *Paradise Regained*, book iv. l. 233.

Although lapidaries and questuary enquirers affirm it, yet the writers of minerals and natural *speculators* are of another belief, conceiving the stones which bear this name [toad-stone] to be a mineral concretion.

Sir Thomas Brown. *Vulgar Errours*, book iii. ch. xiii.

My privileges are an ubiquitary, circumambulatory, *speculatory*, interrogatory, redargutory immunity over all the privy lodgings.

Carew. *Caelum Britannicum*, p. 627.

For who would not more readily learn to draw, by setting a good picture before him, than by merely *speculating* upon the laws of perspective.

Barrow. *Sermon* 5. vol. ii. p. 126.

Furthermore Aristotle declares, that this *speculation* concerning the Deity, does constitute a particular science by itself, distinct from those other speculative sciences of physiology, and the pure mathematicks, so that there are all in all, three speculative sciences, distinguished by their several objects, physiology, the pure mathematicks, and theology or metaphysicks.

Cudworth. *Intellectual System*, book i. ch. iv. fol. 416.

Divers other instances might be produced, to manifest the re-

quisiteness and advantageousness of some knowledge in mathematicks to a *speculative* naturalist.

Boyle. *Works*, vol. iii. fol. 431. *The Usefulness of Mathematicks*.

For if the light of reason may itself be extinguished, much more may the voice of conscience be drowned; which being a practical principle, is perpetually warred upon by our lusts, and passions, and sinful habits; whereas the other being a more *speculative* power, hath no contrary in the mind of man to struggle with.

Atterbury. *Sermon* 4. vol. iv. p. 119.

It may be thought that in the three first chapters, I have discours'd more *speculative* than 'tis fit in a book that is design'd for common use and edification.

Scott. *Christian Life*. Preface.

Thy *specular* orb

Apply to well-dissected kernels; lo!

Strange forms arise, in each a little plant

Unfolds its boughs; observe the slender threads

Of first beginning trees, their roots, their leaves,

In narrow seeds describ'd.

Philips. *Cider*, book i.

The object in our case served for a *specular* body, to reflect that colour to the eye; and you (must) not be startled, Pyrophilus, that I should venture to say, that a rough and coloured object may serve for a *speculum*, to reflect, &c.

Boyle. *Works*, vol. i. p. 693.

Whatever preference therefore, in *speculation*, he might give to the republican form, he could not, with these principles, be practically an enemy to the government of kings.

Horsley. *Sermon* 44. *Appendix*, vol. iü. p. 325.

Sudden fortunes, indeed, are sometimes made in such places, by what is called the trade of *speculation*. The *speculative* merchant exercises no one regular established or well-known branch of business.

Smith. *Wealth of Nations*, vol. i. book i. ch. x. p. 155.

The very ingenious *speculatist*, Mr. Hume, seems to wish as well as think, that as death is unavoidable by the political as well as the animal body, the British constitution may die in the arms of despotism.

Knox. *Works*, vol. v. p. 349. *The Spirit of Despotism*.

Fresh confidence the *speculatist* takes

From ev'ry hair-brain'd proselyte he makes;

And therefore prints.

Cowper. *Progress of Errour*.

Now roves the eye;

And, posted on this *speculative* height,

Exults in its command.

Id. *The Task*, book i.

For conscience either signifies, *speculatively*, the judgment we pass of things upon whatever principles we chance to have; and then it is only opinion, a very unable judge and divider.

Warburton. *Works*, vol. xi. p. 85. *Comment. on Pope's Essay on Man*.

He, making *speedy* way through spersed ayre,
And through the world of waters wide and deepe,
To Morpheus house doth hastily repaire.
Spenser. Faerie Queene, book i. can. 1.

For which his faith with her he fast engaged,
And thousand vowes from bottome of his hart,
That, all so soone as he by wit or art
Could that atchieve whereto he did aspire,
He unto her would *speedily* revert.
Id. Ib. book iv. can. 6.

The sinew forged string
Did give a mighty twang; and forth the eager shaft did sing
(Affecting *speedinesse* of flight) amongst the Achive throng.
Chapman. Homer. Iliad, book iv.

All understanding Homer's intent was (as by the *speedinesse* o
a man's thought or minde) to illustrate Juno's swiftness in hast-
ing about the commandement of Jupiter, which was utterly other-
wise. *Id. Ib. book xv. Comment.*

Ulysses hastens with a trembling heart,
Before him steps, and bending draws the dart:
Forth flows the blood; an eager pang succeeds;
Tydides mounts, and to the navy *speeds*.
Pope. Homer. Iliad, book xi.

He saw a young Indian, whom he judged to be about nineteen
or twenty years old, come down from a tree, and he also ran away
with such *speed* as made it hopeless to follow him.
Cook. Voyages, vol. ii. book iii. ch. i. p. 84.

All was now fulfilled; and the world was *speedily* to see that
great personage, who had been more or less expected through every
age since the fall of man.
Gulpm. Sermon 15. vol. iii. p. 162.

SPEET. See SPIT.

SPELL, v. } Fr. *espeller*, to join letters or syl-
SPELL, n. } lables together. Cotgrave. D.
SPE'LFUL, } *spellen, explanare*, (Kilian,) Ger.
SPE'LLING, n. } *spel, spil, sermo, spellen*, to divide a
word into letters and syllables; Wachter, who derives
the verb from *spalten, findere*, and the noun from the
Gr. *πελειν, fieri*.

A. S. *spellian*, to declare, to tell an history or tale;
whence (by way of metaphor) our *spelling* of syllables or
words; also to teach, instruct, train up. Whence our
setting of one a *spell*, or lesson. *Spel*,—a story or his-
tory, a speech, a rumour, a fable, a discourse. Also,
learning, doctrine, knowledge, teaching. And hence our
spell, for a kind of incantation *per sermones vel verba*.
Somner. See GOSPEL.

To tell, to teach, to relate; to declare, to explain, to
interpret; to learn, to read: to speak or utter words, or
their separate and distinct syllables; to utter words of
charm or enchantment, (*incantare carmen*), to charm, to
inchant.

A *spell*,—a tale, &c., a charm; a *spell* or lesson, (as
Somner calls it,) *i. e.* a task to be performed; a task, a
set portion of work; a turn, or share of work.

Bot þat þise lowed men vpon English tellis,
Right story can me not ken, þe certeynte what *spellis*.
R. Brunne, p. 25.

Now hold your mouth pour charite,
Bothe knight and lady fre,
And herkeneth to my *spell*,
Of bataille and chevalrie,
Of ladies love and druerie,
Anon I woll you tell.
Chaucer. The Rime of Sire Thopas.

— Man may say ful soth in game and play,
Thou sayst ful soth, quod Roger, by my fay;
But soth play quade *spel*, as the Fleming saith.
Id. The Cokes Prologue, v. 4353.

SPELL.

FRI. O she knew well,
Thy loue did read by rote, that could not *spell*.
Shakspeare. Romeo and Juliet, fol. 61.

————— If I read aught in heaven,
Or heav'n write aught of fate, by what the stars
Voluminous, or single characters,
In their conjunction met, give me to *spell*,
Sorrows, and labour's opposition, hate,
Attend thee.
Milton. Paradise Regained, book iv. l. 379.

And may at last my weary age
Find out thy peaceful hermitage,
The hairy gown and mossy cell,
Where I may sit and rightly *spell*
Of every star that heav'n doth shew,
And every herb that sips the dew;
Till old experience do attain
To something like prophetic strain.
Id. Il Penseroso, l. 167.

————— A better senator ne'er held
The helm of Rome, when gowns not arms repell'd
The fierce Epirot and the African told,
Whether to settle peace, or to unfold
The drift of hollow states hard to be *spell'd*.
Id. To Sir Henry Vane, l. 2.

Cries the stall-reader, Bless me! what a word on
A title-page is this! and some in file
Stand *spelling* false, while one might walk to Mile
End Green.
Id. Ib.

And, as the old swain said, she can unlock
The clasping charm, and thaw the numming *spell*,
If she be right invok'd in warbled song.
Id. Comus, l. 852.

Which doen, he balmes and herbes thereto applyde,
And evermore with mightie *spells* them charmd;
That in short space he has them qualifyde,
And him restor'd to helth, that would haue algates dyde.
Spenser. Faerie Queene, book ii. can. 6.

AL. Nothing, madam,
But only thinking what strange *spells* these rings have,
And how they work with some.
Beaumont and Fletcher. The Loyal Subject, act ii. sc. 2.

[He] has made this a play for his children, that he shall win,
who, at one cast, throws most words on these four dice; whereby
his eldest son, yet in coats, has play'd himself into *spelling*, with
great eagerness, and without once having been chid for it, or
forced to it.

Locke. Works, vol. iii. fol. 69. Of Education.

————— Yet not all it's pride secures
The grand retreat from injuries impress'd
By rural carvers, who with knives deface
The pannels, leaving an obscure, rude name,
In characters uncouth, and *spell* amiss.
Cowper. The Task, book i.

Books are not seldom talismans and *spells*,
By which the magic art of shrewder wits
Holds an unthinking multitude enthral'd.
Id. Ib. book vi.

Here, while his eyes the learned leaves peruse,
Each *spelful* mystery explain'd he views.
Hoole. Orlando Furioso, book xv. v. 101.

SPELL, a written or spoken formula of words, supposed to be capable of producing magical effects.

The belief of certain words being endued with supernatural virtues is very ancient, particularly in the East. It seems to have originated in the idea that there is some natural and intimate connection between words, and the things signified by them; and, consequently, that enunciating the name of a noxious being, is likely to be attended with effects analogous to those produced by the being itself. Even at the present day the vulgar in many parts of Europe dare not call a beast of prey by its usual name, but employ some euphemism or circumlocution; a Swedish peasant, for instance, if he has

occasion to speak of a wolf, calls it the *gray one*, or the *old gray*. The idea was extended so far, as to suppose that particular words and titles had the power of propitiating superior beings, or causing their displeasure, or even, in many cases, of subjecting them to the will and authority of man. The opinions of the later Platonists on the subject, chiefly derived from Egyptian sources, may be seen at large in Jamblichus, *De Mysteriis*, and Proclus, *Theolog. Platonica*. The passages of Greek and Roman classical authors, ascribing power to Spells and invocations, are too numerous and too well known to be here particularized. Their virtue was supposed to be aided by the performance of corresponding symbolical actions, as may be seen in the *Pharmaceutria* of Theocritus, and the eighth eclogue of Virgil.

The later Jews have many extravagant opinions and legends relating to this subject, which they appear to have derived in a great measure from the Babylonians. Josephus affirms that it was generally believed by his countrymen that Solomon left behind him many Spells, which had the power of terrifying and expelling evil spirits. The Rabbins also almost uniformly describe Solomon as an accomplished magician. It is probable that the belief in the power of Spells and incantations became general among the Jews during the captivity, and that the invention of them was attributed to Solomon, as a more creditable personage than the deities of the Assyrians. Those fictions acquired currency, not only among the Arabs, Persians, and other Mahometan nations, but, in process of time, also in many Christian communities. They were first adopted by the Gnostics and similar sects, in whose creed heathenism preponderated over Christianity; and, in the dark ages, they found their way among the Catholics; principally by means of the pseudo-gospels, and fabulous legends of saints. An incident in the life of St. Margaret will suffice as a specimen. This holy virgin, having vanquished an evil spirit who assaulted her, demanded his name. "My name," replied the daemon, "is Veltis, and I am one of those whom Solomon, by virtue of his Spells, confined in a copper caldron at Babylon; but when the Babylonians, in the hope of finding treasure, dug up the caldron and opened it, we all made our escape. Since that time, our efforts have been directed to the destruction of righteous persons; and I have long been striving to turn thee from the course of life which thou hast embraced." The reader of the *Arabian Nights Entertainments* will be immediately reminded of the story of the *Fisherman*. The Oriental origin of many similar legends, e. gr., of St. George of Cappadocia, is equally obvious.

The Scandinavian and Teutonic superstitions with respect to *Spells* are well known. In the *Vegtam Quida*, or Descent of Odin, familiarized to the English reader by the paraphrase of Gray, the scald, describing Odin at the tomb of the prophetess, says—

He sung a song of incantation for the dead;
He looked towards the north;
He placed (magic) characters;
He began to utter words of wisdom;
He asked for oracles;
Till she unwilling rose, &c.

Another fine example occurs in the *Hervarar Saga*, viz. the invocation of Hervör at the tomb of her father Angantyr, in order to obtain the sword Tírfing. Many similar instances may be found in the Edda, and the early Icelandic sagas. The belief in the virtue of such

SPELL.

SPELL. incantations is still extensively prevalent among the peasantry of Finland, who seldom perform a veterinary operation upon their cattle, without chanting an appropriate rune to ensure its success.

Respecting the *Spells* of the Teutonic tribes, a great deal of information, illustrated by numerous examples, will be found in Grimm's *Deutsche Mythologie*, part ii. p. 126—150. Many Anglo-Saxon Spells are still extant, particularly in the MSS. collections of the Bodleian Library and the British Museum. One of the most remarkable, entitled *An Exorcism for rendering Lands fertile*, is given in Rask's *Anglo-Saxon Grammar*, and, more correctly, in the Appendix to Thorpe's *Analecta Anglo-Saxonica*. They are much of the same character as the exorcisms in the *Malleus Maleficarum*, and the collection usually appended to the Roman ritual, many of which furnish strong ground for suspecting their pagan origin.

It is commonly supposed that, practically speaking, this superstition has become extinct among us, or only exists in a few trivial charms against the toothache, cramp, and similar diseases. There is, however, reason to believe that this is not altogether the case; but that Spells of a rather dark and illicit character are still resorted to by a portion of the community. In Whitaker's *History of Richmondshire*, vol. i. p. 194—196, there is a remarkable narrative on the subject, from which the following extract is given:—

"In a heap of stones upon Gatherley Moor were found within memory, two leaden plates with the following inscriptions and some rude scratches, with planetary figures, both of which, in order to ascertain the date, are represented in the following engraving.

"I doe make this, that James Phillip, John Phillip his son, Christopher Phillip, and Thomas Phillip his sons, shall flee Richmondshire, and nothing prosper with any of them in Richmondshire.

"I doe make this, that the father, James Phillip, John Phillip, Arthur Phillip, and all the issue of them, shall come presently to utter beggary, and nothing joy or prosper with them in Richmondshire.

(Signed) "J. PHILLIP."

"As these plates were studiously concealed, the necessary inference is, that the malignant and wretched instruments of depositing them certainly believed themselves, or the authors, to have been possessed of secret powers of doing mischief by shortening life, and bringing families to gradual decay from unperceived diabolical agency. But the most extraordinary circumstance is that the event really followed, (I do not mean to confound causality and succession,) for the curiosity of some person led him to inquire into the real fate of the family of Phillip."

An examination of the engraving referred to above will show that the Arabic numerals occupying the obverse, form what are called *magic squares*, so arranged that the figures in each row amount to the sum of 369. This, we believe, is what astrologers call the square of Saturn; and the symbols on the reverse of the plates appear to be the seal and intelligence of the same planet. Lead was probably employed as the material, because, in the alchemistic theory, it is Saturn's appropriate metal; it being evidently the object of the framer of the Spell to subject his victims to the influences of a malignant planet. The writer of this article has seen

two similar Spells, but of much more recent manufacture, both found concealed in cattle sheds on the borders of Lancashire. They were, however, meant to have a protective influence; consequently the astrological symbols were different from those described above, being the Sun in Leo, accompanied by the magic square of the Sun, and the seal and intelligence of the same luminary; together with a number of unconnected, unmeaning words, and a Latin legend, in a sort of cipher, to the following effect:—"As it is said in the seventeenth chapter of *St. Matthew*, 'by faith ye shall remove mountains, be it unto you according to your faith;' therefore if any evil being comes here to hurt this place or these cattle, let it flee away in the name of the Father, and of the Son, and of the Holy Ghost." Many of the uneducated classes in our remote provinces are still firm believers in the power of witchcraft, especially as exercised upon their cattle; and this belief is of course encouraged by the impostors who make a profession of skill in astrology, for the sake of promoting their own trade. The progress of education will probably tend to diminish those mischievous superstitions; but it may be doubted whether they will ever be completely eradicated. There is, even among the educated portion of the community, a certain class of intellects to which mysticism and superstition are but too congenial; and there will always be plenty of designing knaves ready to take advantage of their credulity. The usual class of believers in animal magnetism, for example, are abundantly predisposed to become believers in astrology and witchcraft, or any other system equally repugnant to reason and common sense.

SPELT, } Fr. *espeaultre*; It. *spelda* or *spella*;
SPELTED, } Sp. *spelta*; D. *spelle*; Ger. *spelt*.
SPELTER. } Wachter says, the word to him denotes *granum fissum*, a split grain, from *spalten*, to split. *Spelled* beans are splitted or split beans.

Spelter,—Thomson calls a demi-metal. See **PEWTER**.

They that use *zea* or *spelt* have not the fine red wheat far.
 Holland. *Plinie*, book xviii. ch. viii.

Feed geese with oats, *spelled* beans, barley-meal, or ground malt mixed with beer.
 Mortimer.

I have sometimes made even these fall to the bottom of the vessel, by leaving a lump or two of *spelter* there for two or three days; for, not only those metalline corpuscles, that were just over or near to the determinate place where I put the *spelter*, but also all the rest, into how remote parts soever of the liquor they were diffused, did settle upon the *spelter*, as appeared both by its increase of bulk, and by their leaving the water clear and colourless.

Boyle. *Works*, vol. i. fol. 394. *History of Fluidity*.

SPEND, v. } It. *spendere*; Fr. *despendre*;
SPE'NDER, } Sp. *despender*; D. *spenden*; Ger.
SPE'NDING, n. } *spenden*; Sw. *spendera*; A. S.
SPE'NDTHRIFT, } *spend-an*, *aspendan*: Junius suggests the Gr. *σπευδ-ειν*, to pour, to offer a libation, (sc. to the gods,) and thence extended to any offering. Wachter has no doubt that all are from the Lat. *pendere*, (prefix *s*,) to weigh. See **EXPEND**.

To weigh out, to deal, distribute, dispose of, (in weighed portions;) to disburse, to part with; to bestow, employ, or lay out; to part with, (wholly,) to waste, to exhaust, to consume; to waste, to wear out; to wear away.

Spence is *expense*; also as Fr. *dispençe*, *despencerie*,—a store-room, from which the various articles in store were dispensed or distributed. *Spenser*, one who dispenses. See **DISPEND**, and **DISPENCE**; and *Spens* in Jamieson.

Spendthrift; a spendthrift heir (Locke.) One who

þe foure & twenty houres he *spended* in holy life.

R. Brunne, p. 23.

þe poraile þat went þider, þat had no *spendyng*,
þei suore þer oth togider, to lette for no þyng.

Id. p. 125.

— For an hydel man þow semest
A *spendour* þat *spende* mot.

Piers Plouhman. Vision, fol. 76.

And a womman hadde ben in the blodi flix twelue yeer, and hadde resseyved many thingis of ful many lechis, and hadde *spendid* al hir good, and was nothing amendid, but was rather the worse.

Wiclif. Mark, ch. v.

And there was a certayne woman, which was diseased of an yssue of blood xii. yeares, and had suffred many thynges of many phisicions, and had *spent* al y^t she had, and felt none amēdement at al, but waxed worse and worse.

Bible, Anno 1551.

For who of you willinge to bilde a tour, wher he first sitte not and kountith the *spencis* that ben nedeful, if he haue to perfourme?

Wiclif. Luke, ch. xiv.

Not auarice the foule caitife
Was halfe to gripe so ententife
As largesse is, to yeue and *spend*.

Chaucer. The Romant of the Rose, p. 179.

Fat as a whale, and walken as a swan;
Al vinolent as botel in the *spence*;
Hir praier is of ful gret reverence.

Id. The Sompnoures Tale, v. 7512.

And netheles me semeth so,
For ought that thou hast yet misdo
Of tyme, which thou hast *spended*,
It maie with grace ben amended.

Gower. Conf. Am. book v.

But the verye grounde
Was for to compounde
With Elynour in the *spence*
To paye for her expence.

Skelton. Elinour Rummung.

Yf that be trew, who may him selfe so happy call,
As I, whose free and sumptius [uous] *spence* doth shyne beyonde them all?

Surrey. Ecclesiastes, ch. iii.

For better is coste upon somewhat worth, than *spence* upon no-thinge worth.

Ascham. Toxophilus, book ii.

But if they wolde go forthe with hym, and to take suche fortune as falleth, other good or yuell, if good fortune and wynnyng fall, they to haue their part, so that they demaunde no wages, nor for losse of horse nor *spence*, nor damage that they maye happen to haue.

Lord Berners. Froissart. Chronicle, vol. i. ch. 206. p. 243.

But I in armes, and in atchievements brave,
Do rather choose my flitting houres to *spend*,
And to be lord of those that riches haue,
Then them to haue my selfe, and be their servile slave.

Spenser. Faerie Queene, book ii. can. 7.

For he that touched an article in the instructions to the commissioners, who were to leuie the beneuolence; that if they met with any that were sparing, they should tell them that they must needs haue, because they laid vp; and if they were *spenders*, they must needs haue, because it was seene in their port and manner of liuing.

Bacon. History of Henry VII. fol. 101.

Oh what a price would he [a barbell] haue borne among our gluttons here with us! what would he haue cost our prodigall *spendthrifts*, if hee had been taken upon our coasts neere Rome?

Holland. Plinie, book ix. ch. xviii.

The Trojans, worn with toils, and *spent* with woes,
Leap on the welcome land, and seek their wish'd repose.

Dryden. Virgil. Æneid, book i.

Most men, like *spendthrift* heirs, are apt to judge a little in hand better than a great deal to come; and so, for small matters in possession, part with greater ones in reversion.

Locke. Of Human Understanding, vol. i. book ii. ch. xxi. p. 261.

That portion of his revenue which a rich man annually *spends*, is, in most cases, consumed by idle guests and menial servants, who leave nothing behind them in return for their consumption.

Smith. Wealth of Nations, vol. ii. book ii. ch. iii.

VOL. XXVII.

This complaint, however, of the scarcity of money, is not always confined to improvident *spendthrifts*.

Smith. Wealth of Nations, vol. ii. book iv. ch. i.

SPENNERA, in *Botany*, a genus so called by Martius, after M. Spenner, author of a *Flora* of the environs of Fribourg. It belongs to the class *Octandria*, order *Monogynia*, and the natural family of *Melastomaceæ*. Generic character: calyx with a globose tube, and four or five short lobes; petals four or five, lanceolate; stamens eight or ten; anthers ovate, blunt, opening by a single pore at top, having the connectives long but not appendiculated; capsule free, two, rarely three-celled.

This genus consists of about twenty known species, all inhabitants of marshes in South America; they are either herbs or shrubs, with fibrous roots, three-nerved leaves, and terminal loose racemes of small white or rose-coloured flowers.

SPE'RATE, } See **DESPERATE**.

SPE'RATE. } Lat. *sperare*, to hope.

That may be hoped.

We may cast it away, if it be found but a bladder, and discharge it of so much as is vain and not *sperable*.

Bacon.

We have spent much time in distinguishing between the *sperate* and desperate debts of the clergy.

Repr. to Queen Anne, in Ecton's St. of Queen Anne's Bounty, (1721) p. 108.

SPERCHEUS, in *Zoology*, a genus of *Pentamerous Coleopterus* insects.

Generic character: *antennæ* short, six-jointed, inserted under the anterior edges of the clypeus, the last five joints forming a club; mandibles double-toothed at their tip; body oval, somewhat hemispherical, very convex; corselet emarginate in front.

This genus belongs to the *Hydrophilous* family, the second of the *Clavicorn* section of the *Pentamera*. It is nearly approached to *Hydrophilus*, but its hind legs are less proper for swimming, and the five joints of its *tarsi* are more distinct. The type of the genus is *S. Emarginatus*.

See Lamarck, *Histoire Naturelle des Animaux sans Vertèbres*.

SPERE, *D. speuren*; *Ger. spuren*; *A. S. spyr-ian*, to search out by the track or trace, to inquire and make diligent search. *Lanc. To spirre*, Somner. See *Spere* in Jamieson.

To search or seek, to inquire, to ask, to request, to desire.

Edward told William of Alfred alle þe case,
& praied him of help, for he dred harder pase,
& if he myght conquere Ingland, þat was his *spejre*.

R. Brunne, p. 53.

Of Robert is no *spejre* to mak of parlement.

Id. p. 104.

In Huntýngtonshire þe kýng in þat forest
A moneth lay, to *spire* for wod & wilde beste.

Id. p. 112.

For certes whan that betitte,
My wyll, myn herte, and all my witte
Ben fully sette to herken and *sper*,
What any man woll speke of her.

Gower. Conf. Am. book ii.

SPERGELLA, in *Botany*, a genus so called by Reichenbach, from its affinity to *Spergula*, or *Spurry*. It belongs to the class *Decandria*, order *Pentagynia*, and the natural family of *Caryophylleæ*. Generic character: calyx five-parted; corolla of five entire petals; stamens ten; styles five; capsule subglobose, one-celled,

SPEND

**SPER-
GELLA.**

SPER-
GELLA.

SPERM.

somewhat five-valved, dehiscent; seeds small, full of impressed dots.

This genus is separated from *Spergula*, and consists of four known species, three of which are natives of Britain, the *S. saginoides*, *S. nodosa*, and *S. subulata*; the *S. glabra* or *Spergula saginoides* of Allioni, is a native of Piedmont. They are all small plants, with subulate leaves, and white flowers.

SPERGULA, in *Botany*, a genus so called by Linnaeus, from *spargo*, to scatter, on account of the scattering of its seeds. It belongs to the class *Decandria*, order *Pentagynia*, and natural order *Caryophyllæ*. Generic character: calyx five-parted; petals five, entire; stamens five and ten; styles five; capsule one-celled, five-valved, many-seeded.

This genus contains about ten species, natives of Europe; they are small herbaceous plants, with awl-shaped, exstipulate leaves, and pedunculate, white flowers.

SPERGULARIA, in *Botany*, a genus so called by Persoon, and is an alteration of *Spergula*. It belongs to the class *Decandria*, order *Tri-Pentagynia*, and natural family of the *Caryophyllæ*. Generic character: calyx of five sepals, with membranous edges; petals five, entire; stamens generally ten, seldom five; styles three or five; capsule one-celled, three or five-valved, many-seeded; seeds compressed, marginate.

This genus, which has been separated from *Spergula* and *Arenaria*, is remarkable in the leaves being stipulate, and in the seeds being bordered by a wing; they are generally annual plants, with linear, opposite, and verticillate leaves, and pedunculate, cymose inflorescence, and white or purple flowers. *S. arvensis*, the *Spurry*, *S. pentandra*, *S. rubra*, and *S. media*, are natives of Britain.

SPERGULASTRUM, in *Botany*, a genus so called by Michaux, from *spergula*, and *astrum*, like, on account of its affinity with *Spergula*. It belongs to the class *Decandria*, order *Tri-Pentagynia*, and natural family of the *Caryophyllæ*. Generic character: calyx of five sepals; petals five, minute, entire, or wanting; stamens ten, perigynous; stigmas four, sessile, ligulately setaceous; capsule ovate, four-valved.

This genus consists of three species, North American herbs, having the habit of *Stellaria*, with narrow leaves, and panicles of white flowers.

SPERM,	{	Fr. <i>sperme</i> ; It. <i>sperma</i> , <i>spermo</i> ;
SPERMA'TICK,		Sp. <i>esperma</i> ; Lat. <i>sperma</i> ; Gr.
SPERMA'TICAL,		<i>σπέρμα</i> , from <i>σπείρ-ειν</i> , to sow.
SPE'RMATIZE, v.		The seed.

Lo Adam, in the field of Damascene,
With Goddes owen finger wrought was he,
And not begeten of mannes *sperme* unclene.
Chaucer. *The Monkes Tale*, v. 14053.

There passeth from them in steed a *sperme*, a certain whitish
humour like milke. Holland. *Plinie*, book ix. ch. li.

There in soft down the liquorous sparrow sat,
Pamper'd with meats, full *spermatik* and fat.
Drayton. *The Owl*.

A nerve is a *spermatik* part rising from the brain and the pith
of the back-bone. P. Fletcher. *The Purple Island*, ch. i. note.

Yet all this being only in the way of natural and not animal
perception, is indeed nothing but a dull and drowsie, plastick and
spermatik life, devoid of all consciousness and self-enjoyment.
Cudworth. *Intellectual System*, book i. ch. iii. fol. 106.

Now if the first principle and original of all things in the uni-
verse, be thus supposed to be body or matter, devoid of all ani-

mality, sense, and consciousness, then it must of necessity be
either perfectly dead and stupid, and without all manner of life, or
else endued with such a kind of life only, as is by some called
plastick, *spermatik*, and vegetative, by others the life of nature,
or natural perception. SPERM.
— SPERMO-
DON.

Cudworth. *Intellectual System*, book i. ch. iii. fol. 136.

The opinion of Aristotle extendeth further, from whose assertion
all men should be hermaphrodites; for affirming that women do
not *spermatize*, and confer a place or receptacle rather than essen-
tial principles of generation, he deductively includes both sexes in
mankind.

Sir Thomas Brown. *Vulgar Errours*, book iii. ch. xvii. p. 184.

You have hitherto existed as a part, (or have had a particular
existence;) you will hereafter be absolved and lost in the substance
which produced you: or rather, you will be assumed into the di-
vine nature, or the *spermatik* reasons.

Warburton. *Works*, vol. iii. p. 168. *The Divine Legation*.

SPERMACE, in *Botany*, a genus so named by Dillenius, from the Greek *σπέρμα*, a seed, and *ακμή*, a point, on account of the capsule being crowned by the teeth of the calyx. Generic character: calyx two or four-lobed, with sometimes accessory teeth in the recesses; tube ovate; corolla salver-shaped, four-lobed; stigma undivided or bifid; capsule crowned by the teeth of the calyx, two-celled; nuts one-seeded, dividing into two parts, from the apex, the one part closed, and the other open; seed oval, with a longitudinal furrow inside.

This genus contains about sixty-five known species; they are either herbs or subshrubs, natives of the tropical parts of the globe. The leaves are opposite, the stipules fringed, the flowers white, red, or blue, axillary, sessile, and appearing verticillate.

SPERMADICTYON, in *Botany*, a genus so named from the Greek *σπέρμα*, a seed, and *δικτυον*, a net, on account of the reticulated seeds. It belongs to the class *Pentandria*, order *Monogynia*, and the natural family of *Rubiaceæ*. Generic character: calyx five-parted, tube ovate; segments subulate, persistent; corolla funnel-shaped; lobes five, oblong; stamens five, inserted in the throat of the corolla; stigma five-cleft; capsule crowned by the calyx, dehiscing at apex, one-celled, inclosing five one-seeded nuts. Seeds covered by a reticulated membrane.

This genus consists of three known species, all shrubs, natives of Asia, with lanceolate leaves, short acute stipulas, and fascicles or umbels of sweet scented, white, or blue flowers.

SPERMAXYRUM, in *Botany*, a genus so called by Labillardiere, from the Greek *σπέρμα*, a seed, and *αἴχμη*, an anchor, on account of the form of the umbilical funicle. It belongs to the class *Triandria*, order *Monogynia*, and the natural family of *Olacineæ*. Generic character: calyx small, entire, afterwards increasing; petals five, four of which are united to the middle by pairs, as well as to the filaments; nectaries simple, fili-form; stamens three, two of which adhere to the connected petals; ovarium containing three ovula; drupe dry, one-seeded.

This genus contains three species, all natives of New Holland; they are shrubs whose branches are furnished with two rows of leaves, which are arranged like the leaflets of a pinnate leaf on their petiole; the flowers are small and axillary, and sometimes polygamous by abortion.

SPERMODON, in *Botany*, a genus so called by Palisot de Beauvois, from the Greek *σπέρμα*, a seed, and *ὄδον*, a tooth, on account of the caryopsis being bidentate. It belongs to the class *Triandria*, order *Monogynia*, and the natural family of *Cyperaceæ*. Ge-

SPERMO-
DON. neric character : spikelets polygamous or hermaphrodite,
one or many-flowered ; stamens three ; style bifid, with
a bulbous base ; perigynium tubular, truncate, combined
SPERMO- with the base of the fruit ; caryopsis bidentate at apex,
PHILUS. with a short beak, having the bulb of the style separated
between the teeth.

Two species of this genus are known, *S. setaceus*, the *Schœnus setaceus* of Vahl, and *S. edentulus*, Nees.

SPERMEDIA, in *Botany*, a genus so called by Fries, from the Greek *σπέρμα*, a seed, and *εἶδω*, to resemble, on account of its similarity. It belongs to the class *Cryptogamia*, and order *Fungi*. Generic character : substance subfarinaceous ; epidermis connate, squamulose, or subpruinose.

This genus consists of one species, *S. clavus*, the common ergot, or ergot of rye ; it is diffused in more or less abundance throughout Britain. It is celebrated for the dreadful diseases it produces when abounding amongst corn, and for its invaluable uses in medicine. It appears to be a diseased state of grain, and has scarcely a sufficient claim to be admitted amongst *Fungi*.

SPERMOLEPIS, in *Botany*, a genus so called by M. C. S. Rafinesque, from the Greek *σπέρμα*, a seed, and *λεπίς*, a scale, on account of the seeds being covered by scales. It belongs to the class *Pentandria*, order *Digynia*, and the natural family of *Umbelliferae*. Generic character : involucre none ; involucre of three lanceolate leaves ; petals ovate, obtuse, flat, entire ; fruit globose ; mericarps five-ribbed ; the ribs muricated by membranous scales.

Only a single species of this genus is known, *S. divaricata*, the *Ammi* of Persoon, and *Daucus* of Walter.

SPERMOPHILUS, from the Greek *σπέρμα*, a seed, and *φίλος*, one who loves, Fred. Cuv. *Spermophile*. In *Zoology*, a genus of animals belonging to the family *Claviculata*, order *Rodentia*, class *Mammalia*.

Generic character. Incisive teeth chisel-shaped, two in each jaw ; molar teeth five on a side above and four below ; cheek pouches ; pupils oblong and vertical ; auricles small and close to the head, their margins curled inwards towards the auditory passage ; tail short, often distichous ; legs long, with distinctly divided toes.

The species on which this genus is founded was included by Linnæus among his *Mures*, and subsequently made one of Schreber's genus *Arctomys*, from which it was separated by M. Fred. Cuvier, and the name *Spermophilus* applied to it, from his notion that it preferred seeds to other vegetable matters. Neither Pallas nor Richardson bear out this notion ; the former speaks of those species which are found in Russia, Siberia, and the neighbouring parts of the globe, as feeding upon grass, roots, and berries, with which they store their burrows for their food during winter ; and the observations of the latter are to nearly the same effect. Richardson describes them as a section of *Arctomys*, as does also Fischer, but Temminck and Lesson consider them as forming a distinct genus, differing from the Marmots in the following points noticed by Cuvier. Their form is smaller and more delicate ; their legs longer and more slender ; their toes almost completely divided with a single bare tubercle at the root of each ; their molar teeth are much narrower, and the anterior eminence on their crown contracted and connected with the posterior by a ridge placed more to the inner side ; the margin of the auricle is curled over into the ear, and is the only part loose from the head, consequently making the ears appear very small ; the pupils of the eyes

are vertical and oblong ; and the mouth is furnished with large cheek pouches, which, commencing at the corners of the mouth, extend down upon the neck ; the tail is generally short, and often distichous, that is capable of being spread out on the sides so as to assume a flat form like that of Squirrels. According to Cuvier, they are further distinguished from the Marmots by not living in societies ; this, however, appears only to refer to each animal being furnished with a distinct burrow of its own ; for both Pallas and Richardson speak of them as forming numerous burrows at no great distance apart. They form a transition from the Marmots, *Arctomys*, to the Ground Squirrels, *Tamias*, and are found in the northern parts of Europe, Asia, and America, and the intervening islands.

Pallas describes only one species, by the name of *Mus Citillus*, but speaks distinctly of two varieties which are now considered as separate species, and of a third, his description of which is not so plain. These all, according to his account, are known *en masse* by their provincial name, although distinct species are found in the same district, or near together ; thus, in Germany, the animal is called a *Zozel*, whence has been derived the term *Citillus* or *Mus Noricus*, by which Agricola described it ; in Poland it is known as the *Susel*, in Russia as the *Suslik* ; the Cossacks call it *Avraschka* ; and hence also, about the mouth of the Lena and in Eastern Siberia, it is called *Jevraska*. Among the Tartar tribes it is called *Symron*, probably a corruption of the old Parthian name *σῦρων*. Pallas describes the habits and manners of this species, and its varieties, as the same, of which the following is a short account.

They prefer lofty plains, or the slopes of sunny hills, where the soil is sandy and but little mixed with clay, for the purpose of making their burrow, which commences with a round hole of exactly the same size as the animal, descends vertically, and often so covered with herbage that it cannot be seen. The entrance to the burrow of the male is large enough to admit three fingers, but that of the female scarcely allows of two ; the passage is then continued obliquely down to two, three, or four feet, and that of the female is always much the deeper. The extreme part of the burrow runs more obliquely, and, after various turnings, is dilated into an oblong or roundish chamber, about a foot or less in diameter, rather flattened and lightly strewed with dried grass, and closed on every side, except the entrance, through which, and along the oblique gallery, the little labourer conveys the earth till it has rendered its cell sufficiently capacious.

On the approach of winter, the animal begins to make itself a new gallery, which leads to the surface, and throwing back all the earth it disturbs into the old passage, thus shuts itself up for the winter, but never so completely that the blind trace of that passage is obliterated at the surface. About the beginning of April, and so soon as the snows have melted, and the earth's surface has softened, the animal perfects its new passage to the surface, and comes to light. The entrance to the burrow is always single, and so often as a new gallery is formed, the old one is blocked up, the animal being probably impatient of the passing air. In these burrows the *Souslik* leads a solitary life, and even in feeding time a male is rarely found in the burrow of the female. At the earliest morning, and almost before sunrise, they leave their holes, and through the whole day, if the weather be fine, almost till sunset, may be observed running

SPERMO- about, feeding, and sporting with their mates; the **PHILUS.** whistling cry of the female is then frequently heard, but the male moves about more quietly. Often also they may be seen near the holes, sitting upon their hind legs looking about, but, on the slightest alarm, they utter a whistling noise, and immediately drop into their burrows. Their period of gestation is from twenty-five to thirty days, and early in April or May the female produces a litter of three, four, six, and even eight young, which, when first dropped, are blind, unshapeable, almost bare of fur, of a whitish colour, and of large size in comparison to the parent. They grow very quickly, and in a month's time are half as large as their mother, but they do not leave her to provide for themselves before the summer. Pallas states, that the Souslik is more easily tamed than almost any other animal; the old males become familiar in the course of a day, and the young in a few hours, but the females still remain snappish. In a few days they will follow about the house of their own accord, feed from the hand, and allow of handling. In Siberia their skins are used for lining garments, but elsewhere they are of little worth. They are caught either by springes set at the mouth of their burrows, or by filling the holes with water. In some parts of Siberia, during autumn, when fat, they are considered as delicacies, and the Calmucks eat them either raw or cooked up with sour milk.

S. Concolor, Tem. Fisch.; *Mus Citillus*, Pall.; *Zizel* and *Souslik*, Buff.; *Earless Marmot*, Pen. Two different animals are included under this specific name; the larger, which Pallas says he is almost inclined to call the *Monster Citillus*, as its female (in this genus usually less than the male) is nearly as large as a Marmot, has very coarse fur of an uniform yellowish-grey colour, and a bushy distichous tail. It is very fierce, and if the ground above its burrow be struck, the animal is heard snarling within. It will attack large dogs, biting severely, and holding on with closed eyes whilst the dog howls with pain. The smaller he calls the *Pigmy*, which does not exceed the size of a Water Rat, and has very soft yellow fur, with a short roundish tail. From the difference in the texture of the fur, and the different form of the tails of these two animals, together with their disproportionate size, there seems little doubt that they ought to be described as two distinct species. They are found in the elevated sunny fields of Bohemia, Austria, Hungary, Poland, Russia and Southern Siberia, also about the mouth of the River Yack, where it empties itself into the Caspian marshes.

His other two varieties are distinctly described, and form the two following species.

S. Undulatus, Tem.; *Mus Citillus*, α , Pall.; *Casan Marmot*, Pen. Length of the male from the muzzle to the root of the tail ten inches, and of the female about an inch less; the tail about three inches long in both, very hairy, the hair extending beyond its tip for an inch or more, and on each side are a few long hairs like those of a Squirrel's tail, which the animal spreads out when excited; the fur is short, loose, and softish, on the upper part of the body hoary, waved with brownish and yellow, and yellowish-white beneath; neck and feet ferruginous-yellow. The female has the back more yellow, and the tail more bushy. It is found in Russia and in Southern Siberia.

S. Guttatus, Tem.; *Mus Citillus*, β , Pall. The length of the male is above nine inches, but the female is much smaller; the head and back more inclined to dusky grey than the last species, but in both the head

is mottled; the ocular circlet is whitish, the badge above the eye slightly ferruginous, but that below it very deeply so; upon the back are numerous distinct round whitish spots; throat white; under parts deep yellow; sides of the neck and legs yellow; tail much shorter and very bushy, with close short hair. It is found about the Don, and in the country south of the Volga. The only difference from the manners of the last species, which Pallas observed, was that this burrowed deeper.

Dr. Richardson speaks of a specimen, probably of this species, brought from the western side of the Rocky Mountains, and in which the only difference he could ascertain was the greater number and indistinctness of the spots on the fur, and that the American animal had the facial line less arched, and the curve from the back of the head to the tip of the nose less regular.

S. Spilosoma, Bennett. Length of the head and body five inches and a quarter, and of the tail, with its hair, three inches; the body is marked nearly like that just mentioned as noticed by Richardson, but its tail is much longer, its tip black, except the very point, which is white. It is a native of California.

S. Ludovicianus, Cuv.; *Arctomys Ludov.* Say; *Prairie-Dog*, Lewis and Clarke; *Wishtonwish*, Pike. Sixteen inches in length, and of the tail two inches and three-quarters; of a light dirty reddish-brown, mingled with grey, and with a few black hairs above; under parts dirty white; whiskers moderately long and black. It is found in North America in the Missouri country, where it is known to the Anglo-Americans by the inappropriate name of the *Prairie-Dog*, from the supposed resemblance of its warning cry to that of a small dog, and which may be imitated by the rapid pronunciation of the syllables *cheh-cheh-cheh* in a hissing manner. They live in burrows, many of which are congregated together in one district, and hence are commonly known as *Prairie-Dog* villages, which sometimes occupy only a few acres, but at other times include an area of many miles. The burrows are sometimes level, or nearly so, with the ground, but more commonly form little mounds in shape of truncated cones, rarely exceeding the height of eighteen inches, and with a base of two or three feet, and usually about twenty feet apart; the whole external surface, particularly the summit, is well trodden and very compact, and the entrance is either at the top or at one side, whence the hole descends vertically for a foot or two, and then runs obliquely downwards. Within this hole they form a compact globular cell of fine dry grass, with a hole at top large enough to admit the finger. Probably each burrow has many tenants, as Say mentions he has observed seven or eight of these animals sitting on a single mound. About the entrance of their hole they delight to play in fine weather, and on the approach of danger instantly drop into it, and disappear; or if not too imminent, they remain at the edge, sitting erect, or flourishing their tail, and barking whilst on the look out. During winter they remain asleep, having carefully closed up the entrance to their cell, in order to resist the severity of the cold. The animal is known to the Indians by the name of *Wish-ton-wish*.

S. Hoodii, Less.; *Arct. Hood.* Sab.; *Sciurus Tri-decem lineatus*, Mitch.; *Striped and Spotted Ground Squirrel*, Say; *Leopard Marmot*, Richardson. In form this species resembles a Squirrel; its length is seven and a half inches, and its tail nearly two inches long; its colour is deep chestnut, striped above with six white lines alternating with a similar number of longitudinal

SPERMO- rows of white spots; white beneath; tail covered with
PHILUS. rather longer hairs than the body, rather bushy and whitish. This species inhabits a large part of North America, extending from the more northern lakes to the Arkansa river, and Harlan thinks, probably in that direction to Mexico, and westward to the Rocky Mountains. They appear to be confined to the level sandy country, and not to inhabit the rocky and more wooded parts. Their burrows often deep and vertical, admitting a stick to be thrust down four or five feet. They are bold, active, and irritable animals, and when driven to their holes, express their anger by a shrill harsh repetition of the syllables *seek-seek*.

S. Richardsonii, Less.; *Arctom. Rich.* Sabine; *Tawny American Marmot*, Godman. Length rather more than nine and a half inches; the tail, including the hair, three and a half long; upper parts yellowish-brown intermingled with black; under parts paler; tail flat, nearly linear, with a rounded extremity, its upper surface darker than the back, and the under part and buttocks tinged with rufous, its margins almost white. It is found on the grassy plains about the Saskatchewan river, and is very common about Carlton House, in the Hudson's Bay country. The number of burrows usually found together does not exceed three or four; they generally branch off just below the surface, and descend obliquely to a considerable depth. The earth which is excavated is usually thrown up in front of the hole, forming a little platform, from which the animal peers about before it ventures on its excursions; and little paths are often observed passing from one hole to the other. They do not place any common sentinel for the community, but each looks out for itself. They come out of their holes early in April, and are then very plump; move about quickly but awkwardly, jerking their tail up and down as they run along. In spring they feed upon the young buds and tender sprouts of herbaceous plants, and in autumn upon the seeds of grasses and leguminous plants.

S. Parryi, Less.; *Arctom. Parr.* Richardson. From twelve to fourteen inches long; and the tail, including the fur, four inches more; upper parts greyish or blackish, largely spotted with white; under parts pale ferruginous; face chestnut; tail flat, and capable of expansion laterally, rounded at the tip, edged with white, and ferruginous beneath. It is found in the barren grounds bordering the coast of Hudson's Bay, where its burrows are seen crowded together on the sandy hillocks among the rocks. Whilst feeding, one of the party acts as sentinel, and when the alarm is given they scramble off to their holes, where they remain chattering at the top till the approach of the enemy drives them to the bottom. If their retreat be cut off, they frequently seek shelter in some neighbouring crevice, into which they thrust their head and fore paws, leaving their tail spread out as usual when frightened, and uttering a cry not much unlike that of a watchman's rattle; hence their Esquimaux name *Seek-seek*.

S. Franklinii, Less.; *Arctom. Frankl.* Sabine. Length of the body ten and a half inches; and of the tail, including the hair, six inches and a quarter; upper parts yellowish-brown thickly spotted with black; under parts greyish-white; face black and white intermingled; tail cylindrical and tinged with black and white. Is found in the neighbourhood of Carlton House, Hudson's Bay, living in the sandy soil among the little thickets of brushwood.

S. Beecheyi; *Arctom. Beech.* Richardson. Eleven inches in length, and the tail six; upper parts blackish-brown waved with reddish-white; under parts pale brownish-yellow; tail black and white mingled. Is found in California, living close to the houses. In running it carries the tail straight out, but when passing over any little inequality, the tail is raised as if to prevent it being injured. They rarely come above ground in rainy weather.

S. Macrourus, Bennett. Eleven inches and a half long, and the tail eight and a half; head black, with white eyelids; back and sides black, with white, wavy, broken, transverse, white lines, blackest along the ridge of the spine, and white on the sides; under parts ferruginous varied with black; tail long and varied with black and white. Native of California.

S. Douglasii; *Arct. Dougl.* Richardson. Thirteen inches and a half long, and the tail, including the fur, more than seven inches. The specimen from which this species was described had neither cheek pouches nor teeth; but from other circumstances, Dr. Richardson is led to consider it a true *Spermophile*, and nearly allied to the last two species; upper and fore parts hoary, with a black stripe between the shoulders; hind parts pale brown, with dark markings; under parts dirty white, tinged with brownish on the throat, inside of the thighs, and close to the tail. From the banks of the Columbia.

See Pallas in *Novi Commentarii Petropolitani*, vol. xiv., and *Novæ Species Quadrupedum e Glirium ordine*; Fred. Cuvier in *Mémoires du Muséum*, vol. ix.; Cuvier, *Règne Animal*; Richardson, *Fauna Boreali Americana*.

SPET. See **SPIT.**

SPEW, *v.* } *D. spouwen*; *Ger. speyen*; *A. S.*
SPE'WING, *n.* } *spiwan*; *Goth. speiwan*; to spit or
SPE'WY. } throw out, (*Lat. spuere.*)

To throw out, to eject, to expel, to vomit (usually what comes from the stomach, as *spit* from the mouth.)

And Solomon sayth, "If thou hast founden hony, ete of it that sufficeth; for if thou ete of it out of mesure, thou shalt *spewe*, and be nedy and poure."

Chaucer. The Tale of Melibeus, p. 114.

And (I wyl as I say leaue) all hys deuelyshe lies which he spetteth and *speweth* out vpon honest men.

Sir Thomas More. Workes, fol. 736. *Against Barnes.*

For the cuppe of the Lordes ryghte hande shall compasse thee aboute, and shamful *spewing* in steade of thy worshype.

Bible, Anno 1551. Abacuck, ch. ii.

Therewith she *spewd* out of her filthie maw
A floud of poyson horrible and blacke,
Full of great lumps of flesh and gobbets raw,
Which stunk so vildly, that it forst him slacke
His grasping hold, and from her turne him backe.

Spenser. Faerie Queene, book i. can. 1.

The soil exhaling clouds of subtle dews,
Imbibing moisture which with ease she *spews*,
Which rusts not iron, and whose mould is clean,
Well cloth'd with cheerful grass, and ever green,
Is good for olives.

Dryden. Virgil. Georgics, book ii.

The lower vallies in wet winters are so *spewy*, that they know not how to feed them. *Mortimer.*

SPHACELARIA, in *Botany*, a genus so called by Lynchbach, from the Greek σφακελος, *gangrene*, on account of the withered apices. It belongs to the class *Cryptogamia*, and order *Algæ-Confervoidæ*. Generic character: filaments jointed; branches distich, rarely dichotomous, stiff. Fruit double on the same individual; the one an ovate-spherical capsule; the other a granular mass inclosed in the transparent vesicated apices of the branches.

There are ten known British species of this genus;

SPERMO-
PHILUS.

SPHACE-
LARIA.

SPHACE-LARIA. they are confervoid sea-weeds of an olive or greenish olive colour.

SPHÆ-RIA.

SPHACELE. in *Botany*, a genus so called by Ben-
tham, from the Greek *σφακος*, *sage*, on account of its
affinity to *Salvia*. It belongs to the class *Didynamia*,
order *Gymnospermia*, and the natural family of *Labiatae*.
Generic character: calyx campanulate, deeply five-
toothed; teeth nearly equal; corolla with an ample tube,
and a scarcely bilabiate limb; upper lobes sub-bifid,
lateral ones entire, and lower one larger and emarginate;
stamens four, didynamous, or nearly equal; anthers
two-celled; cells linear, distinct, diverging; style bifid
at top; lobes equal, stigmatiferous at apex; achenia
dry, smooth.

This genus, which is nearly allied to *Stachys*, with
the leaves of *Salvia*, consists of about ten known species,
all natives of South America; they are under shrubs
with wrinkled leaves, woolly beneath, and two or six-
flowered whorls.

SPHÆRALCEA, in *Botany*, a genus so called by
Auguste St. Hilaire, from the Greek *σφαῖρα*, *a globe*,
and *Alcea*, the Marsh-Mallow, on account of the dis-
position of the carpels in round heads, and its affinity
with the genus *Alcea*. It belongs to the class *Mona-
delphia*, order *Polyandria*, and the natural family of
Malvaceæ. Generic character: calyx five-cleft, girded
by a shorter, deciduous, three-leaved involucre; carpels
many, separable, verticillate, two or three-seeded, open-
ing by two little valves on the back, disposed into a
globular head; seeds kidney-shaped.

A genus divided from *Malva*, and contains seven
known species, natives of America; they are trees and
shrubs with toothed or lobed leaves, and axillary pedun-
culate red flowers.

SPHÆRANTHUS, in *Botany*, a genus so called by
Linnæus, from the Greek *σφαῖρα*, *a sphere*, and *ανθος*, *a
flower*, on account of the flowers being disposed in
globular heads like those of *Echinops*. It belongs to
the class *Syngenesia-Segregata*, and the natural family
of *Compositæ-Asteroidæ-Baccharidæ*. Generic char-
acter: heads globular, densely glomerate. Female
flowers in many series along the outside: male flowers
few in the centre; rachis bractless; corolla of the female
flower filiform, narrowed at top, and widened at the base;
achenia naked, beakless, pilose.

This genus consists of about six or eight known
species, natives of the tropical parts of Asia and Africa;
they are diffuse herbs with alternate, half-stem-clasping,
usually decurrent leaves, and nearly globose heads of
blue or white flowers.

SPHÆRASTRUM, in *Botany*, a genus so called by
Meyen, from the Greek *σφαῖρα*, *a sphere*, and *αστρον*, *a
star*, on account of the plants being globular and
radiated. It belongs to the class *Cryptogamia*, and
order *Algæ*. Generic character: plant globosely-radi-
ated, without a proper thallus, formed of cells, which are
regularly disposed in the rays of the globules; sporidia
of a rust colour.

A genus of sea-weeds, consisting of a single species,
S. pictum, nearly allied to *Protococcus*, &c.

SPHÆRIA, in *Botany*, a genus so called by Haller,
from the Greek *σφαῖρα*, *a sphere*, on account of the glo-
bularity of the plants. It belong to the class *Crypto-
gamia*, and order *Fungi*. Generic character: perithecia
rounded, entire, furnished at the apex with a minute
orifice; asci converging, at length dissolving.

This is a very extensive genus, consisting of above

two hundred British species; they are small, simple, or
branched, globular, red, or black fungi, generally growing
on decayed wood.

SPHÆRIDIDIUM, in *Zoology*, a genus of *Penta-
merous-Coleopterous* insects.

Generic character. *Antennæ* shorter than the thorax,
nine-jointed, the last three joints forming a perfoliate
club; mandibles rather short, simple, pointed; *max-
illæ* bilobed; *palpi* filiform; body hemispherical, flat
beneath; corselet transverse, posteriorly as wide as the
elytra; *tibiæ* spinous.

This is the only genus in the family *Sphæridia*; it
comprehends the little *Coleoptera* with hemispherical
bodies, glabrous, with a little head, inclined and partially
barred in the corselet; the five joints of the *antennæ*
are distinct, and the first is at least as long as the se-
cond; the maxillary palpi are very long, and their second
joint is very full. They are terrestrial animals, are found
mostly among the dung of herbivorous animals. La-
treille makes eight species of them, but Lamarck consi-
ders these merely varieties of *S. Scarabæoides*, which is
a European species, and the type of his genus.

See Lamarck, *Histoire des Animaux sans Vertèbres*.

SPHÆRINE, in *Botany*, a genus so called by Her-
bert, from the Greek *σφαῖρα*, *a sphere*, on account of the
shape of its capsule. It belongs to the class *Hexandria*,
order *Monogynia*, and the natural family of *Amaryllidæ*.
Generic character: calyx of six equal sepals; petals six,
equal; style and filaments straight; capsule indehiscent.

A genus separated from *Alstræmeria*, and probably
not distinct; it consists of five known species, elegant,
upright plants, with rigid leaves, simple peduncles, and
terminal umbels of elegant flowers. They are all na-
tives of Peru and Chili.

SPHÆROBOLUS, in *Botany*, a genus so called
by Tode, from the Greek *σφαῖρα*, *a sphere*, and *βαλλω*,
to project, on account of the internal membrane pro-
jecting elastically the globular sporangium. It belongs
to the class *Cryptogamia*, and order *Fungi*. Generic
character: subimmersed; peridium double, each burst-
ing in a stellate manner; internal membrane at length
inverted, and elastically shooting forth the globular spo-
rangium which contains the sporidia in its centre.

This genus, which is nearly allied to *Sphæria*, con-
tains only one known British species, *S. stellatus*. The
plants are at first connected by a web, but at length
smooth, subglobose, and yellowish. It is found on
rotten wood.

SPHÆROCARPUS, in *Botany*, a name given by
Michaux, from the Greek *σφαῖρα*, *a sphere*, and *καρπος*,
a fruit, on account of the form of the supposed cap-
sules. It belongs to the class *Cryptogamia*, and order
Hepaticæ. Generic character: capsules spherical, sur-
rounded by an obovate perianth, open at the summit.

This genus contains only a single known British
species. It is a pale green plant, with the habit of
Marchantia, inhabiting clover fields in Norfolk.

SPHÆROCARYA, in *Botany*, a genus so called
by Wallich, from the Greek *σφαῖρα*, *a sphere*, and *καρπον*,
a nut, on account of the roundness of the nuts. It be-
longs to the class *Pentandria*, order *Monogynia*, and
the natural family of *Rhamnææ*. Generic character:
calyx five-parted; petals five, inserted in the calyx, alter-
nating with the lobes of the calyx, and with five fringed
scales between the stamens and opposite the calycine seg-
ments; stamens five, inserted in the calyx; disk want-
ing; drupe pear-shaped, containing a smooth, round nut.

SPHÆ-RIA.

SPHÆ-ROCA-RYA.

SPHÆ-
ROCA-
RYA.SPHÆ-
ROLO-
BIUM.

This genus consists of only a single known species, *S. edulis*. It is a large tree, a native of Nepaul, with alternate, ovate, entire leaves, and terminal, villous racemes of small, greenish flowers. The fruit is pale brown, and the flesh is eaten by the Nepaulese.

SPHÆROCERA, in *Zoology*, a genus of *Dipterous* insects.

Generic character. *Antennæ* projecting, with the palette nearly hemispherical, transverse; head abruptly concave below the forehead, and raised towards the oval cavity; *proboscis* thick, projecting from a prominent, arched edge surrounding the mouth above; body depressed; *femora* of the hind legs sometimes compressed; the first two joints of the *tarsi* much broader than the others; second cellule of the hind edge of the wing closed in front of the posterior edge.

This genus belongs to the tribe *Muscida* of the *Athericerous* family of Latreille; its type is *S. Curvipes*, Latr. They are constantly found about dunghills.

See Latreille, *Genera Crustaceorum et Insectorum*.

SPHÆROCOCCUS, in *Botany*, a genus so called by Stackhouse, from the Greek *σφαῖρα*, a sphere, and *κόκκος*, a berry, on account of the globose fructification. It belongs to the class *Cryptogamia*, and order *Algæ-Inarticulatae*. *Generic character*: frond cartilaginous, compressed, two-edged, linear, distichously branched; capsules mucronate, containing a mass of ovate, mostly pedicellate red seeds.

There is only a single known species of this genus, *S. coronopifolius*, an inhabitant of rocks by the sea-side; it is nearly allied to *Fucus*.

SPHÆRODERUS, in *Zoology*, a genus of *Coleopterous* insects.

Generic character. *Antennæ* filiform; *labrum* bifid; mandibles narrow, projecting, and toothed internally; *mentum* deeply notched; last joint of the palpi strongly securiform, almost in shape of a spoon, and much dilated in the *male*; corselet roundish and not elevated on the sides; *elytra* connected, carinated laterally, and embracing part of the abdomen; first three joints of the anterior *tarsi* dilated in the *male*, the first two very much, the third less so.

This genus belongs to the tribe *Carabida* of the *Carnivorous Pentamerous Coleoptera* of Latreille; it was formed by Dejean, and is nearly allied to the genus *Cychrus*, from which, however, they are distinguished by their much smaller size, by the head being less long, and the *antennæ* being shorter and more delicate; the *elytra* are smaller and a little less convex. They are all natives of South America. The type of the genus is *S. Lecontei*.

See Dejean, *Iconographie et Histoire Naturelle des Coléoptères d'Europe*.

SPHÆROLOBIUM, in *Botany*, a genus so called by Smith, from the Greek *σφαῖρα*, a globe, and *λοβος*, a pod, on account of the spherical legumes. It belongs to the class *Decandria*, order *Monogynia*, and the natural family of *Leguminosæ*. *Generic character*: calyx five-cleft, bilabiate, bractless at the base; corolla papilionaceous; style beardless, furnished with a membrane at the apex; stigma terminal; legume spherical, one or two-seeded, pedicellate.

A genus nearly allied to *Dillwynia* and *Aotus*, and contains two species, both natives of New Holland; they are small, almost leafless shrubs, with racemose spikes of red or yellow flowers.

SPHÆROMA, in *Zoology*, a genus of *Isopodous Crustaceans*.

Generic character. *Antennæ* four, small, and unequal, of which the outer two are rather longest; two sessile eyes; body oblong, convex, with subimbricated transverse sections and contracting into a ball; tail with two segments, the last furnished with a pair of natatory scales attached to a single pedicle; legs fourteen.

This genus is one of the family *Assellida*, and is nearly allied to the *Armadillo*, from which, however, its four distinct *antennæ*, and the provision of fins to the tails, distinguish it. Their *antennæ* are slender, setaceous, and many-jointed. Dr. Leach's genera *Campecopea*, *Nasa*, *Cymodoce*, and *Dynamene* are included by Latreille and Lamarck in this genus, the type of which is *S. Cinerea*.

See Lamarck, *Histoire des Animaux sans Vertèbres*.

SPHÆRONÆMA, in *Botany*, a genus so called by Fries, from the Greek *σφαῖρα*, a sphere, and *ναῖμα*, gelatine, on account of the substance and shape of the plant. It belongs to the class *Cryptogamia*, and order *Fungi*. *Generic character*: perithecium opening by a pore including mucous sporidia in a very delicate sac, which at length ooze forth and harden into a globule.

This genus consists of one British species, *S. subulatum*; it is a small plant, between globular and awl-shaped, yellowish, and grows on hard, blackened Agarics. At first sight it resembles a species of *Stilbum*.

SPHÆROPHORON, in *Botany*, a name given to this genus by Acharius, from the Greek *σφαῖρα*, a sphere, and *φορεω*, to bear, on account of its globular fructification. It belongs to the class *Cryptogamia*, and order *Lichenes*. *Generic character*: thallus crustaceo-cartilaginous, branched, suffruticose; apothecia subglobose, sessile, terminal on the branches of the thallus, and formed of it, breaking with a torn border, and containing a pulverulent black mass collected into a ball.

This genus, which is separated from *Lichen*, contains two known British species; they are erect, branched plants, inhabitants on rocks and stones.

SPHÆROPHYSA, in *Botany*, a genus so called by De Candolle, from the Greek *σφαῖρα*, a globe, and *φύσα*, a bladder, on account of the spherical inflated legumes. It belongs to the class *Diadelphia*, order *Decandria*, and the natural order *Leguminosæ*. *Generic character*: calyx five-toothed; corolla papilionaceous, with a flat vexillum and blunt keel; stamens diadelphous; style bearded lengthwise; legume stipitate, inflated, spherical, one-celled.

This genus contains two species, both natives of Asiatic Russia; they are perennial herbs, with imparipinnate leaves, small stipulas, and axillary racemes of red flowers.

SPHÆROPLETHIA, in *Botany*, a genus so called by Duby, from the Greek *σφαῖρα*, a sphere, and *πλεος*, full, on account of the plant being full of sporules. It belongs to the class *Cryptogamia*, and order *Algæ*. *Generic character*: filaments capillary, short, flexuous, interwoven, continuous, membranous, simple, diaphanous, embracing or holding sporules inside, which are sometimes orange-coloured, sometimes pellucid and thick, sometimes crowded very densely, and at other times somewhat disposed in a single or double series, and wrapped by a pellucid, echinated integument.

A genus nearly allied to *Bangia* of Agardh; it consists of a single species, a native of Corsica, in marshes about Calvi, *S. Soleirolii*.

ROTI-
LUS.

SPHÆROPTERIS, in *Botany*, a genus so called by R. Brown, from the Greek σφαῖρα, *a sphere*, and πτερίς, *a fern*, on account of the fern bearing round pedicellate capsules. It belongs to the class *Cryptogamia*, and order *Filices*. Generic character: involucra dorsal, rising from the middle vein, pedicellate, spherical, closed, dehiscing vertically, two-valved; capsules pedicellate, seated on a common convex receptacle.

A genus of Ferns, consisting of a single known species, *S. barbata*, a native of Nepaul. It has the habit of *Aspidium*. The leaves are bipinnate, and the leaflets pinnatifid. The stipe is covered with lanceolate paleæ.

SPHÆROSTEMMA, in *Botany*, a genus so called by Blume, from the Greek σφαῖρα, *a sphere*, and στεμμα, *a crown*, on account of the stamens being seated on a globose disk. It belongs to the class *Monoecia*, order *Polyandria*, and natural family of *Schizandriaceæ*. Generic character: flowers monoecious or dioecious; calyx of three sepals, bracteate; petals about nine, by threes; stamens numerous, on a globose disk; filaments nearly connate: female flowers with numerous ovaries, seated upon a conical torus, which at length becomes elongated; berries two-seeded.

A genus nearly allied to *Schizandra*, consisting of two species, climbing shrubs, with simple leaves; and axillary, solitary flowers.

SPHÆROSTIGMA, in *Botany*, a genus so named by Seringe, from the Greek σφαῖρα, *a sphere*, and στίγμα, *a stigma*, on account of the globose, undivided stigma. It belongs to the class *Octandria*, order *Monogynia*, and the natural family of *Onagrariæ*. Generic character: tube of calyx scarcely drawn out beyond the ovary; limb four-parted, deciduous; petals four, sessile, undivided; stamens eight; stigma globose, undivided; capsule four-celled, four-valved, dehiscent; seeds numerous, erect, wingless, naked, one row in each cell.

This genus, which is separated from *Oenothera*, consists of about ten known species; they are generally annual, glabrous, or downy, branched, diffuse plants, with the habit of *Epilobium*, with undivided leaves, and axillary, solitary, sessile, small yellow flowers. Capsule curved or twisted; seeds minute, oblong, not angular.

SPHÆROTHECA, in *Botany*, a genus so called by Chamisso, from the Greek σφαῖρα, *a sphere*, and θήκη, *a case*, on account of the globular capsule. It belongs to the class *Didynamia*, order *Angiospermia*, and natural order *Scrophularinæ*. Generic character: calyx five-parted, persistent; corolla tubular; limb unequal, five-lobed, bilabiate; stamens four, didynamous, inserted a little beneath the throat of the corolla; anthers two-celled, approximating by pairs; style inclosed; stigma bilamellate; capsule globose, two-celled, dehiscing at the dissepiment, as also in the middle of the valves; dissepiment wholly placentiferous; seeds numerous, minute, angular.

This genus contains only a single known species, a native of Brazil; it is an erect, glabrous herb, with opposite dotted leaves, axillary, one-flowered peduncles, bibracteate calyx; and small corollas.

SPHÆROTILUS, in *Botany*, a genus so called by Kutzing, from the Greek σφαῖρα, *a sphere*, and τίλος, *dung*, in reference to the shape and habitat of the plant. It belongs to the class *Cryptogamia*, and order *Algæ*. Generic character: frond mucous, very tender, and very brittle, filamentose, constituting parallelly agglutinated threads, each thread disposed lengthwise from a hyaline globule, composed of sporaceous, mucous masses.

There is only a single species of this genus known, *S. natans*; it is a floating, yellowish-brown, plumose, confervoid plant.

SPHÆROTUS, in *Zoology*, a genus of *Heteromorous Coleopterous* insects.

Generic character. Antennæ externally thickish, with terminal, ovate, acute joints; labrum transverse, rounded and ciliated at the tip; labium minute, its tip truncated; mandibles slightly toothed; maxillary palpi thickish, the last joint the largest, hatchet-shaped; labial palpi, their last joint rather larger than the others, and slightly bell-shaped; mentum truncated at the tip, round at the base, very convex in the middle; corselet full above, ovoid, truncated at both ends, and narrower than the abdomen; legs slender, long, and curved or arched.

This genus, founded by Kirby, belongs to the tribe *Helopidæ* of the *Stenelytrous* family of Latreille. It nearly resembles *Moluris*, Latr., but is distinguished by its bifid labium, cordate mentum, subfiliform palpi, and by the termination of its antennæ in an ovate acute joint. It is a native of Brazil. The type of the genus is *S. Curvipes*.

See Kirby's *Century of Insects* in *Linnean Transactions*, vol. xii.

SPHÆRULITES, in *Zoology*, a genus of *Mono-myary Conchiferous Mollusca*.

Generic character. Shell inequivalve, globular, rather depressed above, exteriorly rough, with large, subangular, horizontal scales; upper valve smaller, planular, opercular, having on its inner side two unequal, subconical, curved, projecting tubercles; lower valve larger, somewhat bellied, its external edge radiated with scales, and its cavity obliquely conical, and forming upon one side, by a doubling of the inner edge, a crest or projecting keel; interior of the cavity striated transversely; hinge unknown.

This fossil genus belongs to Lamarck's family *Rudistes*, and is nearly allied to the genus *Radiolites*, from which it is distinguished by the large subangular scales, which give its exterior a foliaceous appearance. The type of the genus is *S. Foliacea*, the only one at present known.

See Lamarck, *Histoire des Animaux sans Vertèbres*.

SPHAGEBRANCHUS, from the Greek σφαγή, *a throat*, and βραγχία, *gills*, Bloch, Cuv. In *Zoology*, a genus of animals belonging to the family *Anguilliformes*, order *Malacopterygii Apodes*, class *Pisces*.

Generic character. Branchial openings small, close to each other, and beneath the throat; muzzle long and pointed; pectoral fins rudimentary or deficient; vertical fins in some commencing only near the tail; body and tail nearly cylindrical.

This genus is distinguished from the *Muraenæ* by the close approximation of the gill openings, which are placed beneath the throat, and each contain four branchial arches.

In some species there are not any pectoral fins, such are—

S. Rostratus, Bl. About a foot long; the muzzle is projected into a tube-like form, and the orifice of the mouth beneath the head; each jaw is furnished with seven little teeth; between the eyes are two elevated lines full of pores, and running to the tip of the muzzle, at which there are a pair of barbs; general colour brown. Is found in the rivers of Surinam.

S. Spallanzani, Cuv.; *Leptocephalus Spallaz.* Risso. From eighteen to twenty inches long, the body exceed-

SPHÆ-
ROTI-
LUS.

SPHAGE-
BRAN-
CHUS.

SPHAGE-
BRAN-
CHUS.

ingly transparent, so as to allow its internal structure to be seen; muzzle rounded, and mouth small; upper longer than the lower jaw, and both armed with small asperities; eyes large and silvery; lateral line straight, and consisting of consecutive pairs of black points; general colour bright fleshy-red; fins light violet; anal spotted with black; eyes large, with silvery irides. It is found near Monaco in the month of August, among the rocks, where it lives singly.

S. Coromandelensis, Cuv.; *Manti Bukaro Paumu*, Russel. A foot in length; head long and narrow, projecting into a sharp, pointed muzzle; trunk round; tail terminating in a point without any fin; colour of the back brown, with transverse streaks running towards the lateral line; between the latter and the belly a long bluish-grey streak; on the top of the head behind the eyes about a dozen very small white spots forming an arch, and sending forwards two lines towards the nose. Is found on the Coromandel coast.

S. Catostomus, Schneid.; *M. Cæca*, Forst.? Has the dorsal fin white, narrow, and long, and passing from the back of the head to the tail; at the extreme tip of the muzzle are two very small barbs close together, and other two single, short, and filiform at the middle of the nostrils; upper parts dusky, under white. It is found on the coast of Taheite, and known to the inhabitants by the name *Pararoutee*.

In others the pectoral fins are extremely small.

S. Imberbis, Laroche. From twelve to fifteen inches long, very slender, and nearly cylindrical; head small, and terminating in a pointed muzzle; mouth small; on each side of the lower jaw a single row of small pointed teeth, curved backwards; front of the upper jaw armed with five teeth disposed in the form of the letter V, and behind these in the palate two parallel rows of very small teeth; at the outer corners of the branchial openings is placed on each side a small rudimentary pectoral fin; dorsal and anal fins but little prominent; the upper parts are of a greyish-violet; under parts greyish-white, with silvery glossings; anal and dorsal fins white. Laroche states that its motions are very gentle, like those of a Snake; that it frequently rises to the surface of the water to respire, and voids large bubbles of air by the gills. Is a native of the Mediterranean, and found at Iviça.

S. Pterygea, Cuv.; *Cæcula Pterygea*, Vahl. According to Cuvier belongs to this genus, but to this and not to the first section, in which he has placed it, as it has small pectoral fins. In some species the dorsal and anal fins are entirely deficient, and hence Dumeril has formed his genus *Apterichthus*.

S. Cæcus, Bl.; *Muræna Cæca*, Lin.; *Apterichthus Cæcus*, Dum. Body very long and slender, nearly cylindrical, and a little flattened above; the head diminishes and terminates in a long pointed muzzle; not the least trace of a fin is visible, but in other respects it closely resembles this genus; it has no eyes visible, whence Lacepede formed of it his genus *Cæcilia*, but dissection shows their rudiments beneath the skin. The colour is a uniform, and rather deep brown, with some black spots upon the head; the lateral line is scarcely visible. It is found at Iviça; and though Linnæus's account of its existence had been doubted, Dumeril and Laroche have proved that his description, as far as it went, was correct.

See Bloch, *Ichthyologia a Schneider*; Risso, *Histoire Naturelle de l'Europe Méridionale*; Laroche, VOL. XXVII.

Sur les Espèces de Poissons observées à Iviça, in *Annales du Muséum*, vol. xiii.

SPHAGNUM, in *Botany*, a genus so called by Dillenius, from the same name in Pliny, given by him to some kind of tree moss or Lichen. It belongs to the class *Cryptogamia*, and order *Musci*. Generic character: receptacle pedunculated, its peduncle resembling a foot-stalk; capsule sessile on the receptacle; lid deciduous, naked; calyptra irregularly torn.

There are four known British species of this genus; they are all aquatic, and remarkable for their white colour, especially when dried.

SPHALANTHUS, in *Botany*, a genus so called by Dr. Jack, from the Greek *σφαλλω*, to overthrow, and *ανθος*, a flower, on account of the calyx being deciduous, and of the sessile, crowded flowers. It belongs to the class *Decandria*, order *Monogynia*, and natural family of *Combretaceæ*. Generic character: calyx tubular, gibbous on one side, deciduous; limb five-parted; corolla of five petals, which are inserted in the upper part of the tube of the calyx, and alternating with its segments; stamens ten, shorter than the corolla; style one, fixed to one side of the calyx; ovary one-celled; ovula few, hanging from the top of the cell; capsule five-winged, one-seeded; seed five-angled, without albumen; cotyledons plano-convex; radicle small, conical.

This genus consists of a single known species, *S. confertus*, a native of Sumatra. It is a shrub, with large, subcordate, entire, smooth leaves, and terminal, compound spikes of sessile flowers. The flowers are at first white, but afterwards they become red.

SPHALLEROCARPUS, in *Botany*, a genus so called from the Greek *σφαλλω*, to deceive, and *καρπος*, a fruit, on account of the fruit being liable to be mistaken for cumin seed. It belongs to the class *Pentandria*, order *Digynia*, and the natural family of *Umbelliferae*. Generic character: calyx five-toothed; teeth subulate; petals obovate, emarginate, each furnished with an inflexed point, outer ones of the umbels radiant; fruit elliptic, contracted at the sides, beakless; mericarps with five rather winged ribs, the lateral ribs marginating; vittæ two or three in each furrow, and four or six in the commissure; seeds marked by a furrow inside.

This genus consists of only one known species, *S. cyminum*, a native of Dauria; it is a biennial plant, with terete stems, compound leaves, and six or seven-rayed umbels of white flowers; involucre wanting, but the involucels are composed of five lanceolate leaves each.

SPHECODES, in *Zoology*, a genus of *Hymenopterous* insects.

Generic character. *Antennæ* of the male longer than in the female, knotty or moniliform, arched; *labrum* trigonal, depressed at the base, obtuse or truncated at the tip, not carinated in either sex, in the male entire, in the female more frequently emarginate; *maxillæ* and *labium* not twice as long as the head; *labium* short, straightish, its divisions of nearly equal length, the lateral ones tridentate at their tips; *abdomen* with its greater part smooth.

This genus belongs to the *Anthophilous* family of the *Aculeate* tribe of Latreille. Its type is *S. gibbus*, Latr., which bears a near resemblance to the genus *Sphex*. They make their nests in sunny banks, burrowing to the depth of nine or ten inches, where they deposit their eggs in a mass of pollen mixed with honey.

See Latreille, *Genera Crustaceorum et Insectorum*.

SPHENANDRA.
—
SPHENISCUS.

SPHENANDRA, in *Botany*, a genus so called by Bentham, from the Greek *σφην*, a wedge, and *ανηρ*, a male, on account of the wedge-shaped anthers. It belongs to the class *Didynamia*, order *Angiospermia*, and natural order *Scrophularineæ*. Generic character: calyx five-parted: corolla deciduous; tube short; limb rotate, nearly equal; stamens four, ascending; anthers cuneated, all similar.

A single species is only known of this genus; it is an erect shrub, clothed with clammy down, with oblong-lanceolate, toothed leaves, but the floral ones are quite entire; the stamens are by pairs, but nearly equal.

SPHENISCUS, from the Greek *σφηνισκος*, a little wedge, Brisson, Tem. In *Zoology*, a genus of animals belonging to the family *Brachypteres*, order *Palmipedes*, class *Aves*.

Generic character. Beak shorter than the head, compressed, very large, strong, hard, straight, curved at the tip, and grooved obliquely; the edges of both mandibles bent inwards, the lower feathered at its base, and obtuse at the tip; nasal pit very small, nostrils opening in the middle of the beak; wings unfeathered; legs very short, thick, and drawn up to the belly; four toes in front, three of which are connected, and the inner one having the very short thumb attached to it.

This genus is distinguished from *Aptenodytes*, from which it was separated by Brisson, by the shortness of its beak, by its upper mandible not being grooved longitudinally but obliquely, by its small nasal pit, and by the base of its lower mandible being feathered instead of covered only by a naked skin. Brisson and Cuvier have formed of this two genera, viz. *Spheniscus* and *Catarractes*, but they are both included by Temminck under one, by the former name, as the species on which the second is founded is ascertained to be only the young of one of the *Sphenisci*.

S. Demersus, Briss., Tem.; *Aptenodytes Demersa*, Gmel.; *Cape Penguin*, Lath. About twenty inches long; beak blackish, banded transversely with yellow near the tip; upper parts black, under parts white; sides of the head and throat dirty grey; wings black above, and black varied with white beneath; tail short and cuneiform; legs black. The male is distinguished by a white streak over each eye. They are very common in all the southern hemisphere, especially at the Cape of Good Hope and at the Falkland Islands, where they live in millions. This bird is sometimes called the Jack Ass from its cry, which resembles the braying of an Ass, and which it utters at nightfall. It burrows under the sword-grass or in the sides of the hills where there is none of this herbage, and lays two white eggs, which are considered good eating. They dive extremely well, but move awkwardly on land, hopping and fluttering along, and frequently stumbling if hurried.

S. Minor, Tem.; *Aptenodytes Minor*, Gmel.; *Little Penguin*, Lath. About fifteen inches long; upper mandible dusky, under with its base blue; upper parts ashy-blue; the tips of the feathers being of that colour, and their remaining part brown-black; under parts from the chin to the vent white; the eyes each surrounded with a pale brownish-ash-coloured streak; wings dusky above, white beneath; tail very short, and consisting of sixteen quills; legs dull red; webs dusky, claws black. Are found among the rocks on the southern parts of New Zealand. They make numerous deep burrows in the sides of the hills in which they deposit their eggs.

S. Chrysocoma, Tem.; *Aptenodytes Chrysocoma*, Gmel.; *Crested Penguin*, Lath. About twenty-three inches long; the bill three inches in length, red, with a dark furrow on each side; head, neck, and upper parts black; breast and under parts white; above each eye commences a streak of pale yellow feathers, which are about four inches long, and form a crest behind, usually recumbent, but capable of erection, whilst the feathers on the top of the head are erect; wings black above edged with white, and white beneath; legs orange. The *A. Catarractes* is only the young of this species, and has no crest. They are found in the Falkland Islands, in Van Diemen's Land, and New Holland, and were called by Cook's sailors Hopping Penguins or Jumping Jacks, from their leaping out of the water on meeting the least obstruction. They make their nests among the Pelicans, with which they live sociably, but are mostly found apart by themselves. The female forms a sort of burrow with her beak, throwing out the dirt with her feet, and deposits usually one white egg upon the ground. They are also found in the Isles of Amsterdam and Tristan da Cunha; in the former place basking on the rocks with the Seals, and in the latter hiding among the long grass or in the bottom of ravines which run down to the sea, and uttering a moaning noise which can be heard at a great distance.

M. Delano, in his voyage, mentions that this species, often called *Macaroni*, together with *S. Demersus* and *Aptenodytes Patagonica*, are found together at the Falkland Islands, and he gives an interesting description of their rookeries or camps. When they begin to camp, they choose a piece of ground in the neighbourhood of the sea as level and as free from stones as possible, arrange the soil in squares, the lines crossing at right angles as correctly as a carpenter could set them out, and sufficiently large to receive their nests, with a chamber between them for an alley. They lift all the stones they can find or grub from the earth, and carry them on the outside of the external walk, which is commonly from ten to twelve feet wide, and runs round three sides of the inclosure, the fourth being open to the sea. This promenade is as smooth as our streets, but occupies often a space of four acres, but some is of less size. Each then selects a square for its own nest, and takes possession of it. This they never leave till the young are sufficiently advanced to take care of themselves; the male remaining near whilst the female sits upon it, and directly she leaves, he slips on the nest, for if she uncover the eggs they are speedily stolen by the neighbouring birds. In this spoliation the King Penguin (*Aptenodytes Patagonica*) is the foremost, and never lets escape an opportunity to rob its neighbour. In walking they move about in couples, collecting into fours and sixes, like officers and soldiers on parade, whilst others pass up and down the alleys in search of their companions.

See Brisson, *Ornithologia*; Temminck, *Manuel d'Ornithologie*; Latham, *General History of Birds*.

SPHENISCUS, in *Zoology*, a genus of *Heteromorous Coleopterous* insects.

Generic character. *Antennæ* externally thicker, serrated, their last joint somewhat rhomboidal, obliquely truncated; *labrum* transverse, entire; *labium* minute, cuneiform; mandibles connivent at their tips; *maxillæ* open at the base; all the *palpi* having the last joint large, less compressed, obtriangular; chin oblong, con-

SPHENISCUS.

SPHENISCUS. vex, its apex sub-marginate; body ovate, obcuneiform; elytra gibbous.

SPHENOTOMA. This genus of Kirby's belongs to the tribe *Helopidae* of the *Stenelytrous* family of Latreille, and may be confused with the *Erotyli*, but is distinguished from them by being heteromorous. It is found in Brazil. The type is *S. Erotyloides*.

See Kirby's *Century of Insects in Linnæan Transactions*, vol. xii.

SPHENOCARPUS, in *Botany*, a genus so called by Wallich, from the Greek *σφην*, a wedge, and *καρπος*, a fruit, on account of the wedge-shaped seeds or carpels. It belongs to the class *Polyandria*, order *Polygynia*, and the natural family of *Magnoliaceæ*. Generic character: calyx of three sepals, green outside and white inside; petals six, disposed in a double series; anthers linear, incurved, furnished with a polliniferous groove on each side to within a very little of the base; style villous; stigma simple; carpels follicular, long-tailed, disposed into a cone-shaped strobile or spike, imbricated upwards, opening on the outside near the base, and exposing a large orange seed, which hangs by a slender silky funicle; seeds one or two to each carpel, subtriangular, the angles rounded; albumen soft and oily.

A genus separated from *Magnolia*, consisting of a single known species, *S. pterocarpus*, the *Magnolia pterocarpa* of Roxburgh; it is a middle-sized tree, a native of the vicinity of Silhet and Chittagong; the leaves are alternate, oblong, tapering most to the base, entire, and glabrous; the stipulas are sheathed; the flower-bud is inclosed by several deciduous spathe-like bracteas; the flowers are white, terminal, solitary, and fragrant.

SPHENODESME, in *Botany*, a genus so called by Dr. Jack, from the Greek *σφην*, a wedge, and *δεσμη*, a fascicle, on account of the shape of the leaves of the involucre. It belongs to the class *Didynamia*, order *Angiospermia*, and the natural family of *Vitices* or *Verbenaceæ*. Generic character: calyx tubular, five-toothed; corolla five-lobed, almost regular; stamens four or five, exserted; ovary four-celled, four-seeded; berry one-seeded; flowers disposed in involucre fascicles.

A genus consisting of a single known species, a native of Pulo-Penang; it is a shrub with oblong, glabrous leaves; the flowers are in involucre fascicles, which are disposed in panicles.

SPHENOGYNE, in *Botany*, a genus so called by R. Brown, from the Greek *σφην*, a wedge, and *γυνή*, a female, on account of the shape of the stigma. It belongs to the class *Syngenesia*, order *Frustranea*, and natural family of *Compositæ-Senecionideæ-Heleniæ*. Generic character: head radiate, ray neuter; pappus equal, in one series; paleæ awnless, very blunt, narrowed at the base, and spirally twisted before the expansion of the flower; achenia turbinate, narrowed a long way below, and woolly at the base; style not appendiculate.

This genus consists of about twenty species, all natives of the Cape of Good Hope; they are either herbs or shrubs, with alternate, entire, or cut leaves, solitary terminal heads of flowers; the rays of one or two colours; the involucre of many series, campanulate.

SPHENOTOMA, in *Botany*, a genus so called by R. Brown, from the Greek *σφηνωω*, to connect, and *τομος*, a section. It belongs to the class *Pentandria*, order *Monogynia*, and the natural family of *Epacrideæ*.

Generic character: calyx bibracteate; corolla salver-shaped, with a slender tube, contracted throat, and a five-parted, very blunt, spreading, beardless limb; stamens epipetalous; hypogynous scales five; capsule having the placentas hanging from the central column.

This genus consists of three known species, natives of Australia; they are dry shrubs, having the flowering branches almost naked near the top; the leaves are imbricated and cucullate at the base; and the flowers are white, disposed in terminal spikes.

SPHERE, *n.*

SPHERE, *v.*

SPHERICK,

SPHERICAL,

SPHERICALLY,

SPHERICALNESS,

SPHERICITY,

SPHERY,

SPHERULE.

Fr. sphere; *It. sfera*; *Sp. sfera*; *Lat. sphæra*; *Gr. σφαῖρα*, a globe or circle; any round figure or thing.

To *sphere*, (see **ENSPHERE**), to be or cause to be, to stand or be placed in a globe or sphere.

Spheroid, *spheroidal*, &c., are common words in mathematical

books.

And by his eighte *speres* in his werking,
He knew ful wel how fer Alnath was shove
Fro the hed of thilke fix Aries above
That in the ninthe *sperre* considered is.

Chaucer. The Frankeleines Tale, v. 11592.

Whereat he wondred much, and gan enquire,
What stately building durst so high extend
Her lofty toures unto the starry *sphere*,
And what unknown nation there empeopled were.

Spenser. Faerie Queene, book i. can. 10.

And as a voice is heard
With emulous affection, when any towne is *spher'd*
With siege of such a foe, as kils men's mindes, and for the towne
Makes sound his trumpet; so the voyce, from Thetis' issue
throwne,
Won emulously th' eares of all.

Chapman. Homer. Iliad, book xviii.

Would Diana pleas'd
To shoot me with a death no more diseas'd,
As soone as might be; that no more my mone
Might waste my blood in weepings neuer done;
For want of that accomplit vertue *spher'd*
In my lou'd lord, to all the Greekes prefer'd.

Id. Ib. Odyssey, book xviii.

And therefore is the glorious planet Sol,
In noble eminence, entron'd and *spher'd*
Amidst the other.

Shakspeare. Troilus and Cressida, act iv. sc. 5. fol. 82.

And [light] from her native east
To journe through the airie gloom began,
Sphear'd in a radiant cloud, for yet the sun
Was not; shee in a cloudie tabernacle
Sojourn'd the while.

Milton. Paradise Lost, book vii. l. 245.

What wicked and dissembling glasse of mine,
Made me compare with Hermia's *sphery* eyne?
Shakspeare. A Midsummer Night's Dream, act ii. sc. 3. fol. 151.

Mortals that would follow me,
Love Virtue. she alone is free,
She can teach ye how to climb
Higher than the *sphery* chime.

Id. Comus, l. 1018.

And upon Huntclipnab, you every where may find
(As though nice nature lov'd to vary in this kind)
Stones of a *spheric* form of sundry mickles fram'd.

Drayton. Poly-olbion, song 27.

We think the heav'ns enjoy their *spherical*,
Their round proportion embracing all.

Donne. Anatomy of the World.

And it [circle] seems beside, to have the approbation of nature
Then she worketh by instinct, which is her secret school; for birds
do build their nests *spherically*.

Reliquæ Wottonianæ, p. 14.

SPHERE. Suppose a man born blind, and now adult, and taught by his touch to distinguish between a cube and a *sphere* of the same metal, and nighly of the same bigness, so as to tell, when he felt one and then the other, which is the cube, which is the *sphere*.
SPHEX. Locke. *On Human Understanding*, vol. i. book ii. ch. ix. p. 124.

Neither can we conceive every thought to be of some certain determinate figure, either round or angular, *spherical*, cubical, or cylindrical, or the like.

Cudworth. *Intellectual System*, book i. ch. v. fol. 828.

And consequently all verities in us (they being but complex axiomatical thoughts) must of necessity be long, broad, and thick, and either *spherically* or angularly figurate.

Id. *Ib.* fol. 828.

Such bodies receive their figure and limits from such lets as hinder them from attaining to that *sphericalness* they aim at.

Digby. *On Bodies*.

And now we understand that Aristotle dealt not ingeniously with Xenophanes, when from that expression of his, that God was *σφαιροειδής*, or *spheryform*, he would infer that Xenophanes made God to be a body, and nothing else but the round corporeal world animated.

Cudworth. *Intellectual System*, p. 378.

Upon the taking the lead from off the fire, it is wont to be reduced to most of its former qualities, for it will not of itself recover its *sphericity*.

Boyle. *Works*, vol. iii. fol. 44. *Origin and Doctrine of Substantial Forms*.

There is but little variety of other vegetable productions, though, doubtless, several had not yet sprung up at the early season when we visited the place, and many more might be hid from the narrow *sphere* of our researches.

Cook. *Voyages*, vol. vi. book iv. ch. ii. p. 267.

More vapours still gathering as they are obstructed, their parts, or little *spherules*, become more neighbourly or contiguous than when they had a freedom of ranging wide from each other.

Brooke. *Universal Beauty*, book ii. note.

SPHEX, in *Zoology*, a genus of *Hymenopterous* insects.

Generic character. *Antennæ* filiform, slender, approximated at their insertion, often arched or spirally twisted; upper lip very short; mandibles either simple or toothed at their inner edge; four slender palpi; *promuscis* more or less long, trifid, flexed either in the middle or towards the tip.

This genus belongs to Lamarck's *Terriforous* section of Latreille's family *Prædones*. They are distinguished from the *Ichneumonides*, which they resemble by the long pedicle joining the abdomen to the corselet, by their female not having a true ovipositor, but a simple little piercer hidden in the last ring of the abdomen. From the genus *Pompilus*, which they are allied to by the great length of their hind legs, they are shown by Latreille to be distinct, their corselet being transverse and narrow, whilst the first segment of that of the *Pompili* is prolonged upwards to the root of the upper wings. They are carnivorous in their imperfect state, but subsequently feed only on the juices of flowers. The female digs her nest rather deep in the ground, where she deposits one egg, and puts beside it a caterpillar or a spider which she has previously killed, to provide nourishment for the young animal as soon as hatched, and then carefully covers it over with grains of sand, or even with a little bit of stone. This process is successively performed in the same nest till she has completed her incubation. In some the *promuscis*, consisting of the lower lip and jaws, forms a trunk, which is of much greater length than the head, but in others it is scarcely longer. The type of those species which have the mandibles toothed, is *S. Sabulosa*, Lin.; they form the genus *Ammophilus* of Kirby, and the type of those in which the mandibles are smooth, *S. Spirifex*, Lin.

See Lamarck, *Histoire des Animaux sans Vertèbres*.

SPHINCTOLOBIUM, in *Botany*, a genus so called by Vogel, from the Greek *σφιγκτος*, *constricted*, and *λοβιον*, *a pod*, on account of the legume being constricted between the seeds. It belongs to the class *SPHINX*. *Monadelphia*, order *Decandria*, and the natural order of *Leguminosæ Papilionaceæ*. *Generic character*: calyx campanulately urceolate, and five-toothed, teeth sometimes almost wanting, furnished with deciduous bracteas at the base; corolla papilionaceous; vexillum unguiculate, spreading; wings pressed to the keel, which is formed of two petals; stamens ten, connate, with an entire vagina; ovarium compressed, containing many ovula; stigma subcapitate; legume attenuated at both ends, somewhat uncinately mucronate at apex, coriaceous; valves adpressedly connate, indehiscent; seeds one to three, exalbuminous, rather compressed, with a lateral hilum.

There are three known species of this genus, all trees, with pinnate leaves and racemose flowers, natives of Brazil.

SPHINX, in *Zoology*, a genus of *Lepidopterous* insects.

Generic character. *Antennæ* swelling into a prismatic club at their upper part, sometimes subciliated, terminating in a point; two short, broad, very scaly *palpi*; tongue long; wings entire, or nearly so; upon the dorsal surface of the caterpillar a caudal horn; *abdomen* pointed.

This genus belongs to the family *Sphingides*, of the *Crepuscular* section of *Lepidoptera*. All of them belong to the Linnæan genus *Sphinx*, which however contains other genera, and all are natives of Europe. Their caterpillar resembles that of *Macroglossum* in having the caudal horn; and from its keeping the tail elevated when at rest has their name *Sphinx* been derived. They mostly undergo their chrysalid transformation either upon or beneath the ground, and construct a case of leaves and dirt connected together with threads of silk. The perfect insect is distinguished from the Butterflies by the hooks at the root of their lower wings, by the horizontal position of the wings when at rest, and by their thick antennæ, prismatic at their upper part. They fly rapidly, and make a remarkable humming noise in their flight. There are five species of them, of which *S. Convolvuli* is the type. But *S. Atropos*, the Death's Head Moth, is the most remarkable, from the dorsal surface of the thorax having upon it a pale greyish figure resembling somewhat the form of a skull. When disturbed, it makes a stridulous noise like the squeaking of a Bat or Mouse. And from these circumstances its appearance is popularly considered as an ill omen. It is found among potato flowers, and is considered rather rare.

See Lamarck, *Histoire des Animaux sans Vertèbres*.

SPHINX, a fabulous monster in the mythology of ancient Egypt and of Greece. Among the Egyptians it appears to have been an emblem of the generative powers of Nature, for while the head is that of a female all the other parts belong to the male sex; androgynous figures or images, displaying a mystic union of the two sexes in one individual, appear in all the ancient mythologies as types of production; among the Hindús, a creature somewhat like the Sphinx represents the reproductive power which is to bring forth a new heaven and a new earth from the wreck of the present world. The obscurity in which the Egyptian priests involved all their mysteries, especially the signification of their sacred

SPHINX. symbols, together with the licence granted to the poets in managing their legends, led to the Grecian fable of the Sphinx, which forms so important a part of the mythic history of Thebes.

—
**SPHO-
DRUS.**

According to the Grecian account the monster had the head and breasts of a woman, the body of a dog, the tail of a serpent, the wings of a bird, the paws of a lion, and a human voice; it sprang from the union of Orthos with Chimæra, or Typhon with Echidna. Juno, says the mythus, sent the Sphinx into the neighbourhood of Thebes, to punish the family of Cadmus which she persecuted with immortal hatred. The monster, equally remarkable for cruelty and wisdom, kept all Bœotia under continual alarms by propounding enigmas and devouring the inhabitants if unable to explain them. The Thebans in great consternation applied to the Oracles, and were told that the monster would commit suicide when one of her enigmas was solved. Creon, King of Thebes, issued a proclamation offering his crown, and the hand of his sister Jocasta, to any person who could explain the enigma and deliver the country. Tempted by so rich a prize, a young adventurer named Œdipus sought the dwelling of the Sphinx. The enigma proposed to him was, "What animal walks on four legs in the morning, two legs at noon, and three legs in the evening?" Œdipus replied, "It is man, who in the morning of infancy crawls on his hands and feet, in the noon of manhood walks erect, and in the evening of old age supports his infirmities with a stick." The Sphinx no sooner heard this explanation than she threw herself from a rock and instantly expired.

The Egyptian Sphinx does not appear to have possessed the same traits of character as the Grecian. It is represented with a human head on the body of a lion; is always in a recumbent posture with the fore paws stretched forwards, and has a head-dress of hair resembling an old fashioned wig, such as we find from the monuments to have been anciently worn by Egyptian ladies of rank. The features are like those of the ancient Egyptians depicted on the walls of the temples and tombs. The colossal Sphinx near the group of pyramids at Gizeh has recently been uncovered by Caviglia. It is about 150 feet long, and 63 feet high; the body is monolithic, and is one of the largest blocks ever used in statuary; the paws, which are thrown out 50 feet in front, are constructed of masonry. The Sphinx of Sais, a monolith formed of a block of red granite 22 feet long, is now in the Egyptian Museum in the Louvre. There are several fragments of colossal Sphinxes in the British Museum.

The name Sphinx is also given to a genus of insects commonly called Hawk-moth, belonging to the order *Lepidoptera*. See *ENTOMOLOGY*.

SPHODRUS, in *Zoology*, a genus of *Coleopterous* insects.

Generic character. *Antennæ* filiform, rather long, their third joint at least as long as the two following; *labrum* nearly transversely, almost square, or slightly notched; mandibles a little projecting, more or less arched and pointed; on the middle of the notch in the chin a bifid tooth; last joint of the *palpi* elongate, nearly cylindrical, and truncated at the extremity; corselet more or less cordiform; *elytra* of an elongated oval form; first three joints of the anterior *tarsi* dilated in the *male*, of equal length and thickness, triangular or cordiform; tarsal claws not denticulated beneath.

This genus, formed by Clairville, belongs to the *Simplicimanous* section of the *Carabidous* family of La-

marck's *Pentamerous Coleoptera*. They are found commonly under stones in damp places, especially in cellars and caverns. The type of the genus is *S. Planus*, Dej., common throughout Europe; besides which there are four found in Siberia, and another in Georgia.

See Dejean, *Iconographie et Histoire Naturelle des Coléoptères d'Europe*.

SPHYRÆNA, from the Greek *σφυρα*, a stake, Schneid. In *Zoology*, a genus of animals belonging to the family *Percoides*, order *Acanthopterygii*, class *Pisces*.

Generic character. Head oblong, lower jaw longer than the upper; a single row of very numerous small close-set teeth upon the edge of the intermaxillaries, and within them on each side two large curved and pointed teeth one behind the other; on the palatine bones three or four large pointed but not curved teeth, and behind them several small ones like those in the intermaxillaries; in the lower jaw two large teeth corresponding to the upper four, and behind each a row of small teeth; preopercle without denticles, and opercle without spines; branchial rays seven; dorsal fins two, in all except the European species, the first dorsal is opposite the pectoral, as are also the ventral fins.

The species upon which this genus is founded was included by Bloch among the Pikes, *Esox*, on account of the supposed resemblance of the teeth, which, however, have no other similarity than their size and sharpness. Schneider, who applied to it the name *Sphyræna* from its resemblance to a stake, has placed it between the *Cataphracti* and *Centrisci*, but Cuvier has put it among the Abdominal Perches, in which the ventral fins are placed behind the pectoral. They are fierce, voracious, and very active fishes, and all, excepting one species, are found in the tropical seas.

S. Vulgaris, Cuv.; *Esox Sphyræna*, Lin. Generally about eighteen, but sometimes attaining the length of thirty-six inches; in form it is lengthy and cylindrical; the back and sides are leaden and blackish, and the belly white, the colours being distinctly divided by the lateral line; irides silvery; dorsal and caudal fins brown, pectoral grey, ventral and anal pale tawny. The young fish have their back and sides marbled with brown. It is found throughout the Mediterranean, and is mostly known by the name of the Pike in the language of those countries on the shores of which it is caught; thus in Spain it is called *Espeto*, at Iviça and Montpellier *Espet*, or *Spet*, and throughout Italy by the names *Lussi*, *Luzzaro*, *Lucio di Mari*, *Luzzo*, *Aliozza*, *Lozzo*, all indicating its resemblance to the Pike.

S. Viridensis, Cuv. Is distinguished from the preceding by a zigzag line, which, running along the lateral line, separates the dorsal and abdominal colours. It is found at the Cape de Verd Islands.

S. Picuda, Bl.; *Esox Becuna*, Shaw. Is said to reach the length of four feet, and distinguished only from the European species by having the spots still remaining at a more advanced age. It is caught at the Antilles, and on the coast of Brazil; its flesh is very delicate, but said to be poisonous.

S. Guachanco, Cuv. About twenty inches in length; in form it resembles the European species; the back is of an umber-brown colour; the lateral line forms a little shining-white band; the caudal fin light green with its edge deeper. They are found in the same seas as the last species, living together in shoals, as oftentimes more than two hundred are taken at one cast of the

SPHO-
DRUS.

—
SPHY-
RÆNA.

SPHY-
RÆNA.

net. They are very palatable, and have not the bad qualities of the *Picuda*.

S. Barracuda, Cuv.; *Esox Barrac.* Shaw. In this species the large teeth are much broader than in the former and not curved; each palate bone supports from five or six to ten or eleven, and behind the teeth the bone is smooth and sharp; the bony opercle terminates in two points, the upper one blunt, and the lower sharpish though short; the first dorsal and the ventral fins are further forwards; and the head is proportionally deeper than in the former species. The size assigned to this fish is very different by different naturalists. Sloane in his *History of Jamaica* describes it as only fifteen inches. Cuvier mentions one of his specimens as only thirteen inches, and the other as three feet and a half; Rochefort, who calls it *Becune*, and Dutertre, speak of it as seven or eight feet long, that it darts with fury upon persons swimming, and that it is more dangerous than the Shark, not being alarmed, but rather attracted by noise and bustle. Catesby calls it *Barracuda*, says that he has seen it ten feet long, and has heard of it as still longer. It is found around the Bahamas, and in other passages of the torrid zone. According to Catesby its flesh is of a disagreeable taste, and it is poisonous, but Sloane says only at certain seasons of the year and from certain districts. In this respect his assertions are confirmed by M. Plee, from whose papers Cuvier has given some account of the disease called *Siguatera*, which occurs after eating the poisonous fishes of hot climates. M. Plee says that he has been informed that in the fisheries they have an infallible mark of the wholesomeness or not of the *Becuna* by cutting into it, and that if a kind of white water or sanies exudes it is a sure sign that the fish is unwholesome. The symptoms of poisoning from this cause are general trembling, vomiting, severe pain, especially in the joints of the arms and hands. If death do not supervene, as is usually not the case, the pains in the joints become more severe, the nails of the fingers and toes gradually fall off, and are followed by the loss of the hair. And these continue so circumstanced for many years; in one case it is mentioned for twenty-five years. It is remarkable that at Saint Croix they are eaten without inconvenience after having been salted for a day.

S. Jello, Cuv. Four feet in length, has the general form of the European species, but its bony opercle has two points, and the first dorsal and ventral fins are far forwards like the *Barracuda*; the dorsal and abdominal colours are separated by a wavy line which runs along the lateral line. Is found upon the Coromandel coast, where it is known by the name of *Jellow*, and is sometimes eaten, but not much esteemed.

S. Obtusata, Cuv. About twenty inches in length, and distinguished from the preceding by the absence of the pointed projection at the tip of the lower jaw; the teeth are less numerous than in the European species, and it has but three large palatine teeth; its preopercle has a rectilinear ascending edge, and towards the base projects in a rectangular form instead of being rounded and membranous; it is brown on the back and silvery upon the sides and belly; fins yellowish. It is found on the Malabar coast, where it is called *Oula*, also on the coast of New Holland, and at the Isle of Bourbon.

S. Commersonii, Cuv. About sixteen inches long; its head is shorter than that of the European species; the tip of the jaw very short and obtuse; its first dorsal

and pectoral fins far forwards; the brown colour of the back is not distinctly separated from the white belly, but is gradually lost in it.

The two following species are, perhaps, doubtful.

S. Forsteri, Cuv.; *Esox Sphyrænoïdes*, Forst. In form exactly similar to that of the European, but it is rather shorter, and has the first dorsal and the ventral fins far forwards. It is painted by Forster among the drawings in Sir Joseph Banks's library, and stated to have been found at Otaheite.

S. Japonica, Cuv. In this species Cuvier imagines that (from the drawings of Japanese fishes from which he has taken it) the teeth appear to be of a more equal length than in ours. Its Japanese name is *Kamasou*, and the Chinese call it *So-tseu-iu*. Cuvier thinks this species ought to be considered as the Japanese rather than the *Silurus Inermis* of Houttuyn, which is so named by Schneider.

See Bloch, *Ichthyologia a Schneider*; Cuvier and Valenciennes, *Histoire Naturelle des Poissons*.

SPHYROSPERMUM, in *Botany*, a genus so called by Poeppig and Endlicher, from the Greek σφυρα, a mallet, and σπέρμα, a seed, in reference to the form of the seed. It belongs to the class *Hexandria*, order *Monogynia*, and the natural family of *Ericaceæ*. Generic character: calyx four or five-toothed; corolla campanulate, four or five-cleft; stamens four to six, inserted into the limb of the calyx; filaments short; anthers two-celled, cells glandular, each tapering into a tube which is dilated and open at the mouth; ovary four-celled, four-valved, many-seeded.

This singular genus is composed of three or four species; they are shrubs, natives of Peru and Chili, with the habit of *Vaccinium*. Peduncles axillary, aggregate.

Olla Podrida.

Here stands a bak'd meat, he wants a little seasoning,
A foolish mistake; my *spice-box*, gentlemen,
And put in some of this, the maiter's ended.

Beaumont and Fletcher. *The Bloody Brother*, act ii. sc. 2.

They [the Dutch] are so careful to preserve it in their own
hands, that they will not suffer the *spice* to grow in the uninhabited
islands, but send soldiers to cut the trees down. Captain Rofy
told me, that while he lived with the Dutch, he was sent with
other men to cut down the *spice trees*; and that he himself did at
several times cut down 700 or 800 trees.

Dampier. *Voyages*, vol. i. ch. xi. p. 317.

Too busy senates, with an over care
To make us better than our kind can bear,
Have dash'd a *spice* of envy in the laws,
And, straining up too high, have spoil'd the cause.

Dryden. *Ovid. Metamorphoses*, book x.

Now lay fresh honey near their empty rooms,
In troughs of hollow reeds, whilst frying gums
Cast round a fragrant mist of *spicy* fumes.
Thus kindly tempt the famish'd swarm to eat,
And gently reconcile them to their meat.

Addison. *Virgil. Georgic* 4.

So when a ship well freighted with the stores,
The sun matures on India's *spicy* shores,
Has dropp'd her anchor, and her canvass furl'd,
In some safe haven of our western world;
'Twere vain inquiry to what port she went,
The gale informs us, laden with the scent.

Cowper. *Charity*.

The Venetians, during the fourteenth and fifteenth centuries,
carried on a very advantageous commerce in *spiceries* and other East
India goods, which they distributed among the other nations of
Europe.

Smith. *Wealth of Nations*, vol. ii. book iv. ch. vii.

SPICK AND SPAN NEW. "In Dutch they say
spickspelder nieuw. And *spyker* means a warehouse or
magazine. *Spil* or *spel* means a *spindle*; *schiet-spoel*,
the weaver's shuttle, and *spoelder*, the *shuttle thrower*.
In Dutch, therefore, *spickspelder nieuw* means new from
the warehouse and the loom. In German they say
span-new and *funckel-new*. *Spange* means any thing
shining; as *funckel* means to glitter or sparkle. In
Danish *funckelnye*. In Swedish *spitt*, *spangande ny*.
In English we say *spick and span new*; *fire-new*, *brand-*
new. The two last speak for themselves. *Spick and*
span new meaning shining new from the warehouse."
So far Tooke. They also say *brand-nieuw* and *vier-*
nieuw in Dutch. The German Etymologists, Wachter,

and the Swedish Ihre, give a different account. Wachter
is fanciful enough; he says, *span* means *novus*, and de-
riving it from *spenen*, to milk; he thinks *span new*
may be *new*, like the *first milk* after calving. Ihre that
spangande is from *spân*, a segment; and that the ex-
pression means—as *new as a chip just cut*. Junius
thought the expression borrowed from the fuller's art,
unfolding, extending, and smoothing his clothes on a
machine.

This tale was aie *span newe* to begin,
Til that the tale departed hem a twinne.

Chaucer. *Trilus and Creseide*, book iv.

Among other things, Black-friars will entertain you with a
play *spick and span new*, and the Cockpit with another.

MANNIA.

SPIEL-
MANNIA.
—
SPIKE

A genus consisting of a single species, *S. Africana*; it is a shrub, native of the Cape of Good Hope, having the lower leaves opposite and the upper ones alternate; the flowers are small, axillary, solitary, and white.

SPIGELIA, in *Botany*, a genus so called by Linnæus, in honour of Adrian Spigelius, a professor of anatomy and surgery at Padua, who died in 1625. It belongs to the class *Pentandria*, order *Monogynia*, and natural order *Spigeliaceæ*. Generic character: calyx five-parted; corolla funnel-shaped; limb five-parted; style articulated; capsule didymous, dicocous, cut round at the base; cocci two-valved, many-seeded; seeds attached to the central placenta.

This genus consists of sixteen known species, all natives of boggy or stony places in America; they are either perennial or annual herbs of considerable beauty when in blossom. The leaves are opposite or subverticillate, quite entire, sessile, or connate. The flowers are either rose-coloured or purple, and are disposed in secund spikes, which are revolute at top, the flowers expanding from the base. *S. Marylandica* is the Indian Pink or Worm Grass of the shops, a famous vermifuge.

SPIGOT, *D. spycher, spieker. Clavus in modum spicco vel spiculi acutus.* Kilian.

A spike or spiked peg.

PIST. O base Hungarian wight: wilt y^u the *spigot* wield.
Shakspeare. The Merry Wives of Windsor, act i. sc. 3. fol. 41.

Then take out the *spigot* with your left hand, and clap the point of it in your mouth, and keep your left hand to watch accidents.
Swift. Works, vol. xii. p. 24. Directions to the Butler.

SPIKE, *n.* } Fr. *spique, spiquenard*; It. *spiga*,
SPIKE, *v.* } *spiganardo*; Sp. *espiga, espia nardi*;
SPI'KY, } D. *spijch, spijch narde*.
SPI'KENARD, } Large iron nails called by seamen
SPI'CULATED. } *speeks*, perhaps, says Skinner, from
the Lat. *spica*, from Æol. *σπαχος*, for *σταχος*, (see Vossius,) and this perhaps from the old verb *stāw*, Lat. *sto*.

Spike of corn will then be so called from the erect position in which it stands; and the modern *spike*, a nail, from its resemblance.

Spike-nard, nardi spica; see the second Quotation from Holland's *Plinie*.

Bote yf þat sed þat sowen is. in þe sloh sterwe
Shal nevere *spir* springen up. ne *spik* on strawe curne.
Piers Plouhman. Vision, fol. 211.

A womman cam that hadde a box of alabastre of preciouise
oynement *spikenard*.
Wiclif. Mark, ch. xiv.

Another broughte a *spycke*
Of a bacon flicke. *Skelton. Elinour Rymming.*

In *spiked* corne, the leafe resembleth that which groweth to
reedes. *Holland. Plinie, book xviii. ch. vii.*

The head of *Nardus* spreadeth into certaine *spikes* or eares,
whereby it hath a twofold use, both of *spike* and also of leafe; in
which regard it is so famous. *Id. Ib. book xii. ch. xii.*

For the body of the ships, no nation of the world doth equal
England for the oaken timber wherewith to build them; and we
need not borrow of any other iron for *spikes* or nails to fasten them
together. *Bacon. Advice to Sir George Villiers.*

The gleaners spread around, and here and there,
Spike after *spike*, their scanty harvest pick.
Thomson. Autumn.

A youth about ten years of age, one day in the sessions yard,
leaning over the *spiked* pales to see the malefactors, was suddenly
frighted down by the marshal's men: in his falling he was catch'd
by one of those *spikes* in the middle of his wrist, it passing between
the bone and tendons; he hung thereby till he was taken down.
Wiseman. Treatises, vol. ii. book v. ch. ii. p. 74.

Dash'd from their hoofs, while o'er the dead they fly,
Black, bloody drops the smoking chariot dye:
The *spiky* wheels through heaps of carnage tore;
And thick the groaning axles dropp'd with gore.
Pope. Homer. Iliad, book xx

SPIKE.
—
SPILL.

Sometimes, however, nails much smaller than a *spike* would still
be taken in exchange for fruit.
Cook. Voyages, vol. vi. ch. viii. p. 124.

Whether you choose
The vernal blades that rise with seeded stem
Of hue purpleal; or the clover white,
That in a *spiked* ball collects its sweets.
Mason. The English Garden, book ii.

The weedy farrows let the plough pervade,
Till on the top th' inverted roots are laid;
There left to wither in the noontide ray,
Or by the *spiky* harrow clear'd away.
Scott. Amœbean Eclogues.

Next morning I made the natives another visit, accompanied by
Mr. Forster and Mr. Hodges, carrying with me various articles
which I presented them with, and which they received with a
great deal of indifference, except hatchets and *spike-nails*; these
they most esteemed.

Cook. Voyages, vol. iii. book i. ch. iv. p. 67.

Extend a rail of elm, securely arm'd
With *spiculated* paling.
Mason. The English Garden, book ii.

SPILANTHES, in *Botany*, a genus so called by
Linnæus from the Greek *σπιλος*, a spot, and *ανθος*, a
flower, on account of the brown disk of the head. It
belongs to the class *Syngenesia*, order *Æqualis*, and
natural family of *Compositæ-Senecionideæ-Helianthææ*.
Generic character: head radiate or homogamous; achenia
beakless, those of the disk plano-compressed and ciliated,
the outer ones emarginate at their apices, and crowned
by two hair-formed awns, which are pencilled at their
apices only.

All the species are small, annual, tropical plants. The
leaves are opposite, entire, and petiolate; the heads of
flowers are yellow, brown, or white, solitary and ter-
minating leafless branchlets. There are about fourteen
species known. *S. oleraceus* is edible. The genus is
nearly allied to *Sanvitalia*.

SPILL, *v.* } D. *spillen*; A. S. *spillan*; *privare*,
SPILL, *n.* } *consumere, corrumpere, vitiare*; to
SPI'LLING, *n.* } deprive, to destroy, to waste, to spoil,
to perish.

To destroy, to waste, to perish; to throw away, to
scatter, to effuse, to pour out, to shed.

Spill, the noun, seems to be a piece spilt or split
away, taken off. See **SPALT**. And

Spilt, in Spenser, seems to be—pieced; diversified
with pieces.

& gaf þam sonde at wille in Ingland forto fare,
Man & beste to *spille*, non ne suld þei spare.
R. Brunne, p. 114.

Withouten mo stours or blode *spilling* of men.
Id. p. 184.

And as an hounde þat ete gras. so gan ich to brake
And *spile* þat ich *spelide* myghte.
Piers Plouhman. Vision, fol. 109.

O mighty God, if that it be thy will
Sin thou art rightful juge how may it be
That thou wolt soffren innocence to *spill*,
And wicked folke regne in prosperitee?
Chaucer. The Man of Lawes Tale, v. 5234.

The quene and other ladies mo
So long praieden the king of grace,
Til he his lif him granted in the place,
And yaf him to the quene, all at hire will
To chese whether she wold him save or *spill*.
Id. The Wif of Bathes Tale, v. 6477

SPILL.

SPIN.

O thou vnkynde,
Here shalt thou through thy slouth finde,
(If that the liste to come and see)
A lady dede for loue of thee,
So as I shall my selue *spill*
Whom, if it had been thy will,
Thou mightest saue well enough.

Gower. *Conf. Am.* book iv.

If thou wilt go, quod she, and *spill* thyself,
Take vs with thee in all that may betide.

Surrey. *Virgil. Æneis*, book ii.

From thence he shootes his arrowes every where
Into the world, at random as he will,
On us fraile men, his wretched vassals here,
Like as himselfe us pleaseth save or *spill*.

Spenser. *Colin Clout's come Home again*.

Much more then that which was in Paphos built,
Or that in Cyprus, both long since this same,
Though all the pillours of the one were guilt,
And all the others pavement were with yvory *spilt*.

Id. *Faerie Queene*, book iv. can. 10.

For the flower of the rosin is taken greene and fresh, as it dis-
tilleth from the tree, together with a good quantitie of small,
thinne, and short *spils* or chips of the tree plucked away with the
same.

Holland. *Plinie*, book xvi. ch. xi.

But lay it to a sore with pitch, you shall see it fetch out *spils*
and ends of broken arrowes sticking still within the flesh.

Id. *Ib.* book xx. ch. vi.

The same meale draweth forth *spils* of broken and shivered
bones.

Id. *Ib.* book xxii. ch. xxv.

They seek to *spill* my blood; 'tis that alone
Must for the nation's crying sins atone.

Dryden. *Soliloquy of a Royal Exile*.

He who would have shuddered to *spill* a drop of blood in a
hostile contest, as a private man, shall deluge whole provinces as
an absolute prince, and laugh over the subjugated plains which
he has fertilized with human gore.

Knox. *Works*, vol. v. p. 201. *The Spirit of Despotism*.

SPILOCÆA, in *Botany*, a genus so named by Fries,
from the Greek *σπιλος*, *a spot*, on account of the appear-
ance of the plant. It belongs to the order *Cryptogamia*,
and order *Fungi*. Generic character: sporidia simple,
closely adnate to the matrix, and to each other, at first
covered by the epidermis.

This genus consists of a single known British species,
forming spots on the skin of the apple; the sporidia
pear-shaped.

SPIN, v.	} D. <i>spinnen</i> ; Ger. <i>spinnen</i> ; Sw. <i>spinne</i> ; Goth and A. S. <i>spinnan</i> ; to draw out. See WIFE, WOMAN.
SPI'NNER, n.	
SPI'NNING, n.	
SPI'NNY,	
SPI'NSTER,	
SPI'NSTRY,	
SPI'NDLE, v.	
SPI'NDLE, n.	To draw out or produce, to extend or stretch out, to lengthen or pro- long; to move or run round as a spinning wheel; to run out in length or in a long line or course.

Spinster, Skinner says, is the name given to un-
married females, because they are presumed to be
occupied in *spinning*. In Du Cange, *fusus*: *Mulier vel muliebris sexus, cui fusus, ut viro gladius et arma, competit*. And Spelman (*Gloss. in v. Spinster*) men-
tions one who upon his tomb had eleven sons por-
trayed, girt with swords, and as many daughters with
spindles (*fusus*.) And Alfred, in his will, calls the
female part of his family the *spindle-side*. Turner,
lib. vii. ch. xi.

To *spindle*, diminutive of *spin*, i. e. *spin-dael*, to *spin*
or draw out thinly, slenderly; to run out into length.

Spindle, the noun; that on which the thread is spun,
any thing drawn out as thread; thin, spare, as a thread.

Hue spak to þe *spinnesters*. to *spinnen* hit oute.Piers Plouhman. *Vision*, fol. 98.

VOL. XXVII.

Biholde ye the lilies of the feeld hou thei wexen: thei trauelen
not, nether *spynnen*.

Wiclif. *Luke*, ch. xii.

Consydre y^e lylies howe they grow: they laboure not: they
spin not.

Bible, Anno 1551.

Deceite, weping, *spinning*, God hath yeven
To woman kindly, while that they may liven.

Chaucer. *The Wif of Bathes Prologue*, v. 5980.

Or I was borne, my desteny was *sponne*
By Parcas susterne.

Id. *The Complaint of the Blacke Knight*, p. 342.

And some went so narrow
They laid to pledge their wharrow
Their ribskin and their *spindell*
Theyr nedel and their thimbell.

Skelton. *Elinour Rummung*.

And this effeminate love of a woman doth so womanize a man,
that, if he yield to it, it will not only make him an amazon, but a
launder, a distaff, a *spinner*, or whatsoever other vile occupation
their idle heads can imagine, and their weak hands perform.

Sidney. *Arcadia*, book i. p. 82.

She them saluting there, by them sate still
Beholding how the thrids of life they *span*.

Spenser. *Faerie Queene*, book iv. can. 2.

O friends,
Some one abides within here, that commends
The place to vs; and breathes a voice diuine;
As she some web wrought; or her *spindles* twine
She cherisht with her song.

Chapman. *Homer. Odyssey*, book x.

Howbeit no sooner commeth the spring but they [corne] begin
to grow up into straw, and to *spindle* upward pointwise.

Holland. *Plinie*, book xviii. ch. vii.

It frets me too,
I am fall'n away to nothing, to a *spindle*,
Grown a mere man of mat.

Beaumont and Fletcher. *Woman Pleas'd*, act iv. sc. 3.

Closter, the sonne of Arachne, taught the first making of the
spindle for woollen yearne: and Arachne her selfe was the first
spinner of flax thred, the weaver of linnen, and of nets.

Holland. *Plinie*, book vii. ch. lvi.

The picture of a companie of *spinsters*, so lively, that one would
imagine he saw every woman making hast to *spin* off her distaffe,
striving avie who shall have done her taske first.

Id. *Ib.* book xxxv. ch. xi.

But as a *spinster* poore and juste, ye sometimes see strait lac't
About the weighing of her web, who (carefull) hauing charge,
For which she would prouide some meanes, is loth to be too large
In giving, or in taking weight; but euer with her hand,
Is doing with the weights and wool, till both in just poise stand.

Chapman. *Homer. Iliad*, book xii.

How beautiful, saith Isaiah, are the feet of him that bringeth
good tydings, that publisheth salvation! Are the feet so beautiful,
and is the very bringing of these tydings so decent of itself?
What new decency can be added to this your *spinstry*?

Milton. *Works*, vol. i. fol. 64. *The Reason of Church Government*, book ii. ch. ii.

So long as we could busy ourselves in working out our salva-
tion, and furthering the salvation of others, we should think it but
a mean employment to spend our time in *spinning* fine nets, for
the catching of flies.

Sharp. *Works*, vol. i. p. 22. *Sermon* 1.

Quick and more quick he *spins* in giddy gyres,
Then falls, and in much foam his soul expires.

Dryden. *Ovid. Metamorphoses*, book viii.

Unbred to *spinning*, in the loom unskill'd,
She [Camilla] chose the nobler Pallas of the field.

Id. *Virgil. Æneid*, book vii.

As closely following as the running thread
The *spindle* follows, and displays the charms
Of the fair *spinster's* breast, and moving arms.

Pope. *Homer. Iliad*, book xxiii.

AN. Cry out with a hollow voice, what dost thou do in bed
with this *spindle-shanked* fellow?

Addison. *The Drummer*, act i. sc. 1.

SPIN.

SPIN.

SPINAX.

The *spinner* is almost always a distinct person from the weaver; but the ploughman, the harrower, the sower of the seed, and the reaper of the corn, are often the same.

Smith. *Wealth of Nations*, vol. i. book i. ch. i. p. 8.

The *spinning* of linnen yarn is carried on in Scotland nearly in the same way as the knitting of stockings by servants who are chiefly hired for other purposes.

Id. *Ib.* vol. i. book i. ch. x.

A long short-pointed prick has pierc'd my leg,
How high these thorns and *spindling* brambles grow!

Fawkes. *Theocritus*. *Idyl.* 4.

Full many Grecian maids, for charms renown'd,
While merrily they twirl the *spindle* round,
Till day's decline thy praises shall proclaim,
And Grecian matrons celebrate thy fame.

Id. *Ib.* *Idyl.* 24.

The prejudices and pride of man have long presumed the sword and *spindle* made for different hands, and denied the other sex to partake the grandeur of military glory.

Idler, No. 5.

I should indeed be unwilling to find that, for the sake of corresponding with the Idler, the smith's iron had cooled on the anvil, or the *spinster's* distaff stood unemployed.

Id. No. 2.

The race of formal *spintexts* and solemn saygraces is nearly extinct.

Knox. *Works*, vol. ii. p. 342. *Winter Evenings*.

SPINACIA, in *Botany*, a genus so called by Tournefort from *spina*, a spine, on account of the prickly integument of the seed. It belongs to the class *Dioecia*, order *Pentandria*, and the natural family of *Chenopodeæ*. Generic character: male flowers with a five-parted calyx; female flower with a four-cleft calyx, and four styles; seed covered by the hardened calyx, sometimes roundish, but usually furnished with two or four prickles.

This genus consists only of a single species, *S. oleacea*, the common Spinach; it is an annual or biennial plant, with alternate leaves, and axillary, glomerate, insignificant flowers.

SPINAX, from the Latin *spina*, a prickle, Cuv. In *Zoology*, a genus of animals belonging to the family *Plagiostomi*, order *Chondropterygii branchiis fixis*, class *Pisces*.

Generic character. Body long and tapering towards the tail; temporal apertures; jaws armed with three rows of small, sharp-pointed teeth, having two points at their base; at the front of each of the two dorsal fins a strong spine; no anal fin; ovoviviparous.

These were separated from the Linnæan genus *Squalus* by Cuvier, principally on account of the strong spine placed on the front of each dorsal fin, and hence the name *Spinax*. The genus *Centrina*, which is only distinguished by the second dorsal fin being rather further forwards than in the true *Spinaces*, and by their short tail, may without impropriety be made to form a section of this genus. The spines on their dorsal fins are very efficient offensive weapons, and in using them the fish bends itself up like a bow, and then, suddenly straightening itself, strikes them upwards with great force and precision.

S. Acanthias, Cuv.; *Squalus Acanth.* Lin.; *Picked Dog-fish*, Pen. From three to three and a half and sometimes four feet; has the skin rough if rubbed from the tail to the head, but smooth in the opposite direction; lateral line straight; first dorsal fin commencing at one-third of the total length from the muzzle, convex before, with a spine half as high as the fin, and concave behind; the second fin, midway between the first and the end of the tail, of small size, and having a spine on its front as high as itself, stronger and longer than the first; caudal

fin forked unequally, the upper lobe projecting beyond the lower; upper surface reddish-grey tinged with greenish; under parts whitish. The young are spotted with white. It is very common on the shores of the British Channel, and along the coast of Kent and Sussex is known commonly as the *Bone-dog*. It is the most abundant of all the Sharks, is extremely voracious, and is a great plague to the fishermen by the destruction it makes among their lines. As they are gregarious and appear in large shoals, they are often caught in great numbers, their flesh dried and eaten, oil obtained from their livers, and the refuse employed for manuring the land.

S. Nigriventris, Cuv.; *le Sagre*, Brouss. Is the smallest of all the Sharks, not exceeding sixteen inches in length; the nostrils are at the end of the muzzle; the under surface of the body is blacker than the upper, and furnished with little tubercles and smooth filaments, giving it a hairy appearance; along each side extends a silvery band; the second dorsal is whitish at its base; pectorals small and light brown; caudal fin black. It is found in the North Seas and in the Mediterranean, and according to Stewart, in his *Elements of Natural History*, is met with on the British coast. The female deposits from fifteen to twenty young in the course of the year.

S. Blainvillii, Risso. This species never equals the length of the first, but always exceeds that of the second; it is of a blackish-brown colour on the back, and striped obliquely on the sides with the same colour; the belly dirty grey; ventral fins midway between the dorsal, which are edged with black; upper lobe of the caudal fin very long and edged with white. Is found in the Mediterranean, keeps constantly in deep water, and fiercely attacks any fish it meets whatever may be its size. The female drops ten or twelve young ones at different times of the year.

S. Centrina; *Squalus Centrinus*, Lin.; *le Squale Humantin*, Lacep. More than four feet in length, and the body of a triangular prismatic form, of which the belly is the base, and covered with a rough skin, having on it hard projecting tubercles; second dorsal opposite the ventral fins; upper parts brownish; under parts grey; caudal fin small. It is found both in the Atlantic and Mediterranean. Its flesh is coarse and little esteemed, but its skin is employed for polishing hard wood.

See Cuvier, *Règne Animal*; Risso, *Histoire Naturelle de l'Europe Méridionale*.

SPINDLE. See SPIN.

SPINE, *n.*

SPI'NAL,

SPI'NET,

SPI'NOUS,

SPI'NO'SITY,

SPI'NY,

SPI'NINESS.

Fr. *espine*; It. *spina*; Sp. *espina*; Lat. *spina*, which Vossius thinks may be from the Gr. *σπινδ-ειν*, *extendere*, to stretch or draw out, *quia in acumen extenditur*, because it is drawn out to a point. The A. S. *spin-an* is probably the origin. Applied to

A thorn; to the bone extending the whole length of the back.

Spinale medulle, the spinal marrow, the marrow of the back-bone; derived from the brain, and, like a main stock, from which all the sinews under the head do grow. Cotgrave. See the Quotations from Paley.

Spinous, *spiny*, long, thin, as a *spine* or thorn; prickly, piercing, tearing, vexing, or vexatious, troublesome.

Spinet, Lat. *spinetum*, where *spiny* or thorny bushes grow.

SPINAX.

SPINE.

SPINE.

SPINI-FEX.

Roses their sharp *spines* being gone,
Not royal in their smells alone,
But in their hew.

Beaumont and Fletcher. The Two Noble Kinsmen, act i. sc. 1.

The amplitude of that place where the nerves meet in the *spinal* marrow is not large enough to receive the distinct impresses of all the objects the mind retains in memory.

More. Immortality of the Soul, book ii. ch. vii.

A satyr, lodged in a little *spinet*, by which her majesty and the prince were to come, at the report of certain cornets that were divided in several places of the park to signify her approach, advanced his head above the top of the wood.

Ben Jonson. The Satyr.

This I take to be in the true and genuine meaning of this passage upon which no charge of Pelagianisme can be fastened; nor, needeth it any *spinous* criticisms for its explication.

Mede. Works, fol. 28. Discourse 4.

And, as in well growne woods, on trees, cold *spinie* grasshoppers sit chirping, and send voyces out, that scarce can pierce our eares, For softnesse, and their weake faint sounds; (so talking on the toure;)

These seniors of the people sate.

Chapman. Homer. Iliad, book iii.

Wi. No, no, farewell Toby,

Farewell *spiny* Nicholas, no such thing.

Beaumont and Fletcher. The Nightwalker, act iii.

The simile Spondanus highly commends, as most apt and expressive; but his application in one part doth abuse it, in the other right it; and that is, to make the old men resemble grasshoppers for their cold and bloudlesse *spininess*. Tython being for age turned to a grasshopper.

Chapman. Homer. Iliad, book iii. Comment.

Some years since a young gentleman was wounded in a duel; the rapier entred into his right side, slanting by his short ribs under the muscles, reaching within a finger's breadth of the *spine*, with a redoubled thrust.

Wiseman. Treatises, vol. ii. book v. ch. ii. p. 59.

Full on his neck the falling falchion sped,
From his broad shoulders hew'd his crested head;
Forth from the bone the *spinal* marrow flies,
And sunk in dust the corpse extended lies.

Pope. Homer. Iliad, book xx.

He [Jeremy Taylor] could bear with the harshness and roughness of the schools, and was not unseen in their subtilties and *spinisities*.

Wood. Athenæ Oxonienses, vol. ii. fol. 401.

Durion. A fruit that in shape resembles a small melon, but the skin is covered with sharp conical *spines*, whence its name; for *dure*, in the Malay language, signifies prickle.

Cook. Voyages, vol. ii. book iii. ch. xi. p. 299.

The *spine* or backbone is a chain of joints of very wonderful construction. Various, difficult, and almost inconsistent offices were to be executed by the same instrument. It was to be firm, yet flexible; firm, to support the erect position of body; flexible, to allow of the bending of the trunk in all degrees of curvature.

Paley. Natural Theology, ch. viii.

It was further also (which is another, and quite a distinct purpose from the rest) to become a pipe or conduit for the same conveyance from the brain, of the most important fluid of the animal frame, that, namely, upon which all voluntary motion depends, the *spinal* marrow.

Id. Ib.

Astr. With five rays of almost equal thickness, beset with numerous *spines*.

Pennant. British Zoology, vol. iv. p. 129.

Astr. Stellated, with four or six, but generally with five lanceolate convex *spiny* rays; varies infinitely in color.

Id. Ib.

SPINIFEX, in *Botany*, a genus so called by Linnæus from *spina*, a spine, and *facio*, to make. It belongs to the class *Polygamia*, order *Dioecia*, and the natural family of *Gramineæ*. Generic character: flowers polygamodioecious; glumes two-flowered, two-valved, equal; male flowers in spikes, triandrous, the rachis naked on both sides; androgynous flowers solitary, awn-formed, and elongated at the base of the rachis; outer florets male or neuter, one or two-valved, inner ones hermaphrodite.

This genus consists of five known species, mostly natives within the tropics; they are coarse grasses, growing along the sea-shore, among the sand which

they fix by their widely spreading, creeping roots; the male plants usually forming distinct patches from the females. The spikes are numerous and approximate. The female flowers crowded into echinated heads.

SPINET, the Fr. *espinette*, Cotgrave says, is a pair of virginals.

When miss delights in her *spinet*,
A fiddler may a fortune get.

Swift. Cadmus and Vanessa.

SPIO, in *Zoology*, a genus of *Antenniferous Annulida*.

Generic character. Body long, jointed, slender, having on each side a row of bundles of very short bristles; *branchiæ* lateral, simple, filiform; two very long filiform tentacles resembling arms; mouth terminal; eyes two or four.

This genus belongs to the family *Nereida*. They are little animals which live in tubular holes perforated in the sandy bottom of the sea, and are continually moving the tentacles attached to their head, of which sometimes there are two, and sometimes four, with which they catch small marine animals for the purpose of sucking them. There are four species, two of which are European. The type of the genus is *S. Seticornis*.

See Lamarck, *Histoire Naturelle des Animaux sans Vertèbres*.

SPIRACANTHA, in *Botany*, a genus so called by Kunth, from the Greek *σπειρα*, a *spire*, and *κανθα*, a *spine*. on account of the spiral spines. It belongs to the class *Syngenesia*, order *Æqualis*, and the natural family of *Compositæ-Vernoniaceæ-Rolandreæ*. Generic character: pappus in many series, setaceous paleaceous, unequal.

This genus consists of a single known species, a small shrub, native of New Granada, with petiolate, spinosely mucronate leaves, which are tomentose beneath. The heads are disposed in two-rowed spikes, the involucre of four or five leaves in one series, and the spines in clusters.

SPIRADICLES, in *Botany*, a genus so called by Blume, from the Greek *σπειρα*, a *spire*, and *δικλιν*, *folding-doors*, on account of the valves of the capsule being divided into two parts, as also twisted at top. It belongs to the class *Pentandria*, order *Monogynia*, and natural order *Rubiaceæ*. Generic character: calyx turbinate, five-toothed; corolla with a five-parted, spreading limb, tube short; stamens five, inclosed; style girded by four glands; stigma two-lobed; capsule crowned by the calyx, two-celled, two-valved; valves bipartite, at length twisted; seeds numerous, angular.

A genus nearly allied to *Tula*, consisting of a single known species, a native of Java; it is a small tufted plant with the habit of *Nertera*; the leaves are glabrous, and the flowers are secund in terminal and lateral spikes.

SPIRÆA, in *Botany*, a genus so called by Linnæus. from the Greek *σπειραιω*, to become *spiral*, in allusion to the fitness of the plants to be twisted into garlands. It belongs to the class *Icosandria*, order *Pentagynia*, and the natural family of *Spiræaceæ*. Generic character: calyx five-cleft, persistent; stamens ten to fifteen, inserted in the torus lining the calyx along with the petals; carpels solitary or several together, seldom connected at the base, sessile, rarely stipitate; seeds two or three in each carpel, fixed to the inner suture.

This genus consists of above fifty species, natives of all the temperate parts of the globe; they are either shrubs or herbs, with usually simple, rarely compound

SPINI
FEX.
—
SPIRÆA.

SPIRÆA. leaves. Among the shrubs, *S. salicifolia*, *S. hypericifolia*, and *S. alnifolia*, are common in the gardens; and among the herbaceous plants *S. filipendula*, the Dropwort, *S. ulmaria*, the Meadow-Sweet, both natives of Britain, and *S. aruncus*, are also common in the gardens.

SPIRE.

SPIRALEPIS, in *Botany*, a genus so called by D. Don, from the Greek *σπειρα*, a *spire*, and *λεπιδ*, a *scale*, on account of the twisted scales. It belongs to the class *Syngenesia*, order *Superflua*, and natural order *Compositæ-Senecionideæ-Gnaphaliæ*. Generic character: heads many-flowered, homogamous or heterogamous; female flowers disposed in one series around the ray, the rest hermaphrodite; rachis bractless; pappus in two series; ovary sessile, beakless, the areola terminal.

This genus, which is separated from *Gnaphalium*, consists of several species, all natives of the Cape of Good Hope; they are humble herbs or shrubs, white from tomentum, with membranous sessile leaves; involucre cylindrical, imbricated; corollas equal, reddish.

SPIRANTHERA, in *Botany*, a genus so named by Saint Hilaire, from the Greek *σπειρα*, a *spire*, and *ανθηρα*, an *anther*, on account of the anthers being twisted in a spiral manner. It belongs to the class *Pentandria*, order *Monogynia*, and the natural family of *Rutaceæ*. Generic character: calyx five-cleft; petals five, free; stamens five; anthers at length spirally revolute; ovaries five, villous, connected; styles five, joined; fruit of five or fewer carpels, connected at the base.

A genus nearly allied to *Galipea*, consisting of only one known species, a native of Brazil; it is a small shrub with alternate, stalked, ternate leaves; axillary, trifid, three-flowered peduncles, and very sweet-scented, nearly white flowers.

SPIRANTHES, in *Botany*, a genus so named by Richard, from the Greek *σπειρα*, a *screw*, and *ανθος*, a *flower*, on account of the spiral flower spikes. It belongs to the class *Gynandria*, order *Monandria*, and the natural family of *Orchideæ*. Generic character: perianth sub-bilabiate; of five conniving sepals; labellum inclosed, spurless, unguiculate, parallel with the column, entire, having two callosities at the base, usually curled on the edges; column very short, stipitate, drawn out into an erect lamina at the base; anther terminal, cordate, stalked with discrete cells, adnate longitudinally; stigma flat, cuspidate, membranous, finally split; pollen masses oblong, powdery; ovary oblique at top.

This genus, which is separated from *Neottia*, consists of delicate, terrestrial, orchideous plants, with fibrous roots and white flowers, which are always disposed in spiral spikes. There are about fourteen species known, all natives of America, with the exception of one, the *S. æstivalis*, or Lady's Tresses, which is a native of Britain.

SPIRE, *n.*

SPIRE, *v.*

SPIRAL, *adj.*

SPIRAL, *n.*

SPIRALLY,

SPIRY.

Fr. *spire*, *spiral*; It. *spira*, *spirale*; Sp. *espira*, *espiral*; Lat. *spira*; Gr. *σπειρα*, *linea flexuosa faciens orbes non redeuntes in se: circulus non ad eundem punctum reductus*.

A circular line circumvolving a circular line; then applied to a continuance or repetition of folds, twists, or wreaths, rising, and gradually decreasing as they rise to a point, at the summit or top; and thus forming a column or pillar diminishing towards the top. Hence to *spire*, is

To rise, spring up, shoot up or forth conically, pyramidically: in a tapering form, or form diminishing or lessening towards the top.

Bote yf þat sed þat sowen is. in þe sloh sterve
Shal nevere *spir* springen up. ne spik on strawe curne.
Piers Plouhman. *Vision*, fol. 211.

Out of this ground muste come the *spire*, that by processe of tyme shall in greatnesse sprede, to haue branches and blosomes.
Chaucer. *The Testament of Love*, book iii.

In gentle ladies breste and bounteous race
Of woman-kind it [the rose] fayrest flowre doth *spyre*,
And beareth fruit of honour and all chaste desyre.
Spenser. *Faerie Queene*, book iii. can. 5.

Thou saw'st great burden'd ships through these thy valleys pass,
Where now the sharp-edg'd scythe shears up the *spiring* grass.
Drayton. *Poly-olbion*, song 16.

When Thames, his either banks adorn'd with buildings fair,
The city to salute doth bid the Muse prepare;
Whose turrets, fanes, and *spires*, when wistly she beholds,
Her wonder at the site thus strangely she unfolds.
Id. *Ib.*

The Egyptians (among many other memorable and wonderfull workes wrought by their princes) speake much of these two pyramids, the mightie *spires* and steeples whereof (by their saying) doe arise out of the verie water.

Holland. *Plinie*, book xxxvi. ch. xii.

If you say it consists of points, from this position I can necessarily demonstrate that every *spear*, or *spire-steeple*, or what long body you will, is as thick as it is long.
More. *An Antidote against Atheism*, part i. book i. ch. iv. fol. 15.

But when the blue claie aboundeth, (which hardlie drinketh vp the winter's waters in long season,) there the grasse is *spearie*, rough, and verie apt for brushes.

Holinshed. *The Description of Britaine*, book ii.

As for the leaves, their density appeareth, in that either they are smooth and shining, as in bayes, holly, ivy, box, &c. Or in that they are hard and *spirie*, as in the rest.

Bacon. *Natural History*. Cent. vi. sec. 592.

Then cast a languishing regard around,
And saw with hateful eyes the temples crown'd
With golden *spires*, and all the hostile ground.
Dryden. *Palamon and Arcite*, book i.

Around our pole the *spiry* dragon glides,
And like a winding stream the bears divides.
Id. *Virgil*. *Georgics*, book i.

Some [watches] have strings and physies, [fusees,] and others none; some have the balance loose, and others regulated by a *spiral* spring, and others by hog's bristles.
Locke. *Of Human Understanding*, vol. i. book iii. ch. vi. p. 501.

The sides are composed of two orders of fibres running circularly or *spirally* from base to tip.
Ray. *On the Creation*.

Or the patch'd disjointed choir
Of some old fane, whose steeple's gothic pride
Or pinnacled, or *spir'd*, would boldly rise
"In tufted trees high bosom'd."

Mason. *The English Garden*, book iii.

Something, perhaps, like the organization of reptiles, might have been hit upon by the ingenuity of the artist; or might have been exhibited in an automaton, by the combination of spring, *spiral* wires, and ringlets.

Paley. *Natural Theology*, ch. xvi.

From this a tube, or round body, was formed, by which the water, or air, or both, was carried in a *spiral* stream up to the clouds.
Cook. *Voyages*, vol. iii. book i. ch. vi. p. 94.

The marks upon the face in general are *spirals*, which are drawn with great nicety, and even elegance, those on one side exactly corresponding with those on the other.

Id. *Ib.* vol. ii. book ii. ch. ix. p. 39.

Close to the beach it was covered with high *spiry* trees, which he [Dampier] mentions as having the appearance of pines.

Id. *Ib.* vol. ii. book iii. ch. viii. p. 234.

SPIRE.

SPIRE.

SPIRE, (SPEYER,) a town of Bavaria, and capital of the Circle of the Rhine, was founded long before the Christian era. It was at first named *Noviomagus*, and afterwards *Augusta Nemetum*, from its being the principal seat of the *Nemetes*: A. D. 348, we find it already erected into a bishopric. Spire subsequently became an appanage of the Kings of France; and, about the VIIIth Century, it took its present name from the small river on whose banks it is seated.

Passing from the power of France, Spire rose to be one of the most noted towns of the empire. It was erected into a free and imperial city by the Emperor Henry IV.; the nominal authority of its suffragan at the same time remaining intact, although he was denied the liberty of fixing his residence there. Great privileges were conferred upon it by succeeding Emperors. In 1529 that celebrated Diet was held here, from an appeal against which on the part of the reformers the name of Protestant took its rise; and the year afterwards, Charles V. fixed the seat of the Imperial Chamber here.

At the close of the XVIIth Century Spire had reached to a high pitch of prosperity, when, in September 1688, the troops of Louis XIV., commanded by Montclas, presented themselves before the devoted city. Awed by the remembrance of the excesses committed by the French in the Palatinate, the inhabitants, under certain guarantees, opened their gates to the enemy. The fortifications were immediately razed; for the space of eight months the citizens were subjected to the most despotic usage, and fined in heavy contributions towards the expenses of the war, and at the end of this oppressive term, they were warned by a proclamation issued by beat of drum to quit the town in seven days' time, as it would then be committed to the flames. The excuse for this nefarious act was, that the French monarch, needing the services of the garrison elsewhere, he was constrained to this severe measure in order that the town might not serve as a *point d'appui* to the enemy. All the grace allowed was a permission to the inhabitants to secure and carry off what property they could within the allotted time; and this fine city was then delivered to the flames, not even the famous cathedral, the mausoleum of so many Emperors, being spared, although the most solemn promises had been given that that majestic and sacred edifice should be respected.

It required ten years to raise the hapless town from its ashes. These horrors were renewed by the revolutionary government of France, determined to place a desert between France and its enemies; but under the imperial *régime* it rose to a degree of prosperity exceeding its most flourishing state in previous times.

Spire at present extends over a vast extent of ground, sufficient, if entirely built upon, to contain double the population. The vacant spaces are mostly occupied by gardens. The city is seated on the *Speyer*, and is surrounded by walls, which are entered by five gates. The chief buildings are the town-hall and the cathedral; and it contains a gymnasium or college, as well as several other public establishments, which render it of more importance than its limited population would bespeak. It enjoys some trade, chiefly in corn, wine, cattle, tobacco, and madder: there are some manufactories of tobacco, and several madder-mills established in the town.

Spire is the chief seat of the authorities of the Department or Circle of the Rhine, and is a bishop's see.

The population, in 1830, was composed of 4980 Protestants, 2950 Catholics, 255 Jews, and about 15 Menonites. The chemists Becher and Stahl were born here. North latitude $49^{\circ} 18' 51''$; East longitude $8^{\circ} 29'$.

Malte-Brun; Balbi; *Dictionnaire Géographique Universel*.

SPIRIDENS, in *Botany*, a genus so called by Nees von Esenbeck, from *spira*, a spire, and *dens*, a tooth; on account of the twisted teeth of the outer peristome. It belongs to the class *Cryptogamia*, and order *Musci*. Generic character: seta lateral; peristome double, outer one composed of sixteen spirally involute teeth; inner one of sixteen, rather remote, subulate cilia, marked each by a line in the middle, and perforated to the apex; calyptra dimideate.

This genus consists of a single known species, *S. Reinwardtii*, a native of the Moluccas; it has the habit of a gigantic species of *Hypnum*, but the capsules are lateral and almost sessile.

Fr. *esprit*, *spiritueux*; It. *spirito*, *spiritoso*; Sp. *espírito*, *espiritoso*; Lat. *spiritus*, from *spirare*, to breathe. Martinus derives from *σπω αερα*, *traho aera*, to draw in the air. Vossius suspects it to be formed from the sound; Tooke, that it is one of those Lat. verbs which are evidently from our own Northern language. Lat. *spirare*; A. S. *spir-ian*, to search, seek, look after, to investigate, to examine. See to **ASPIRE**. But the A. S. verb never was applied to the act of breathing, nor the Lat. to that of searching. In the passages quoted below from the Gospels, *spirit* is in the A. S. version *gast*, (ghost.)

The Lat. *spiritus*, from which our word immediately comes, is (as *animus*, and the Gr. *πνευμα*, also are) the breath; that which breathes, has or gives breath or animation, life or vitality, to material bodies; the soul, the mind; also ghost, spectre; it is also applied to the more active qualities of animated, intelligent beings: emphatically, life, animation, vivacity; and hence courage, energy, ardour, eagerness, vigour:—to the mind, the general or characteristic feelings or qualities of the mind, the temper, the disposition. Further, it is opposed to matter or body; or any gross qualities of body: and thence applied to any thing pure or purified, refined, ethereal,—a pure, refined, immaterial being. See **SPRITE**.

Spirituos, as now usually, was also formerly, written *spiritous*. *Spiritedly* is not uncommon.

And whanne it was evyn thei broughten to him many that hadden develis, and he castide out *spiritis* bi word.

Wiclif. Matthew, ch. viii.

When the euen was come, they brought vnto him many that were possessed with deuyls. And he cast oute the *spirites* with a word.

Bible, Anno 1551.

He gaf to hem power of vnclene *spirites* to cast hem out of men, and to heele every languor and sykenesse.

Wiclif. Matthew, ch. x.

[He] gaue theym power ouer vnclene *sprites*, to cast them out, & to heale al maner of sicknesses

Bible, Anno 1551.

SPIRE.

SPIRIT.

SPIRIT.

And Marye seyde, My soul magnifieth the Lord, and my *spyr*t hath gladid in God myn helthe. *Wiclif. Luke, ch. i.*

And Mary sayde, My soule magnifieth y^e Lord, and my *spirite* reioyseth in God my Sauour. *Bible, Anno 1551.*

But whanne the coumforteur schal come which I schal sende to ghou fro the fadir, a *spyr*t of treuthe which cometh of the fadir, he schal bere witnessyng of me. *Wiclif. John, ch. xv.*

But when the comforter is come whome I wyll sende vnto you from y^e father, whiche is the *spirite* of truthe, which proceadeth of the father, he shall testifye of me. *Bible, Anno 1551.*

For a beestli man parseyueth not tho thingis that ben of the *spyr*t of God, for it is foli to him, and he mai not undirstonde, for it is examyed goostli but a *spyr*ituall man demeth alle thingis. *Wiclif. 1 Corynth. ch. ii.*

For the naturall man perceaueth not the thinges of the *spirite* of God. For they are but folyshnes vnto hym. Neither can he perceaueth them, because he is *spyr*ituallly examined. But he that is *spyr*ituall, discusseth all thynges. *Bible, Anno 1551.*

It is sowun a beestli bodi, it shal rise a *spyr*ituall bodi; if ther is a beestli bodi, ther is also a *spyr*ituall bodi. *Wiclif. 1 Corynth. ch. xv.*

It is sownen a naturall body, and ryseth a *spyr*ituall bodye. There is a naturall bodye and there is a *spyr*ituall bodye. *Bible, Anno 1551.*

So feble were his *spirites*, and so low,
And changed so, that no man coude know
His speche ne his vois, though men it herd.
Chaucer. The Knightes Tale, v. 1372.

And trust wel, that in the name of thy neighbour thou shalt vnderstande the name of thy brother; for certes all we have on fader fleshly, and on moder: that is to say, Adam and Eve; and also our fader *spyr*ituall, that is to say, God of heven.
Id. The Persones Tale, p. 156.

Of euery wisdom the parfite
The highe God of his *spirite*,
Yafe to men in erth here,
Upon the forme and the matere,
Of that he wolde make hem wise.
Gower. Conf. Am. book iv.

And said, this daie venim is shadde
In holy churche of temporall,
Whiche medleth with the *spyr*ituall.
Id. Ib. book iii.

Whither the party be poore *spyr*ited or proud, wyl somewhat appeare by hys delyte in hys owne prayse.
Sir Thomas More. Workes, fol. 1190. Of Comfort against Tribulation.

[Foure or fyue fonde freres] take vpon themselfe to preache and saye to the people of themselfe, we bee the *spyr*ituall, we seache the bottome of Goddes commaundement, we vnderstande the scrypture in hys right sense.
Id. Ib. fol. 399. Against Tyndall's Preface.

Then if any ther be
Of high or low degree,
Of the *spyr*ituallty,
Or of the temporaltie.
Skelton. Colin Clout.

So that vyce was accompted for small or none offence, the whiche reigned nat only in the temporaltie, but also in the *spyr*ituallty and hedes of the same.
Fabyan. Cronycle, ch. lxxxii.

To the which [baby] she was moder bothe naturally and *spyr*ituallly, and welcomed y^e kinge hir lorde in right humble maner.
Id. Ib. ch. 113.

When therefore the gracious *spyr*ations of the Holy Ghost are within thee, be thankful to the infinite munificence of that blessed *spyr*it.

Hall. Works, vol. viii. p. 124. The Balm of Gilead.
Their fiery *spirits*, making th' ayre so fine,
That they in flood were there, as well as wine.
Chapman. Homer. Bacchus, fol. 111.

On thee
Impresst the effulgence of his glorie abides,
Transfus'd on thee his ample *spyr*it rests.
Milton. Paradise Lost, book iii. l. 387.

He ceas'd, and next him Moloc, scepter'd king,
Stood up, the strongest and the fiercest *spyr*it
That fought in heav'n; now fiercer by despair.
Milton. Paradise Lost, book ii. l. 43.

Thou *spyr*it, who ledst this glorious Eremite
Into the desert, his victorious field
Against the *spyr*ituall foe, and broughtst him thence
By proof of the undoubted Son of God, inspire,
As thou art wont, my prompted song—else mute.
Id. Paradise Regained, book i. l. 8.

And as I wake, sweet music breathe
Above, about, or underneath,
Sent by some *spyr*it to mortals' good,
Or th' unseen genius of the wood.
Id. Il Penseroso, l. 151.

Fame is the spur that the clear *spyr*it doth raise,
(The last infirmity of noble mind,)
To scorn delights, and live laborious days.
Id. Lycidas, l. 70.

Or unsphere
The *spyr*it of Plato, to unfold
What worlds, or what vast regions hold
The immortal mind that hath forsook
Her mansion in this fleshy nook.
Id. Il Penseroso, l. 88.

The sum of all is this,
You have been unthankfull to him; and I crave
The rigour of the law against you all.
CAS. My royal *spyr*ited daughter!
Beaumont and Fletcher. The Lawes of Candy, act v. sc. 1.

For then did Polepat passe
A lance at Damasus, whose helme was made with cheeks of
brasse,
Yet had not proof enough; the pyle drave through it, and his
skulle;
His braine in blood drown'd; and the man, so late so *spyr*ituall,
Fell now quite *spyr*itlesse to earth.
Chapman. Homer. Iliad, book xii.

The same [external profession] will this church of Laodicea
hold on *spyr*itlessly and lazily, with little life or zeal.
More. On the Seven Churches, ch. ix.

This is not a loving agreement, arising from oneness of *spyr*it,
but a dead stupidity, arguing a total *spyr*itlessness.
Leighton. Comment. on First Epistle of Peter, ch. iii.

They grow
Deep under ground, materials dark and crude,
Of *spyr*ituos and fierie spume, till toucht
With heav'n's ray, and temper'd they shoot forth
So beauteous, op'ning to the ambient light.
Milton. Paradise Lost, book vi. l. 477.

Each bone might through his body well be read,
And every sinew seene, through his long fast:
For nought he car'd his carcas long unfed;
His mind was full of *spyr*ituall repast.
And pyn'd his flesh to keep his body low and chaste.
Spenser. Faerie Queene, book i. can. 10.

We are commanded to fast, that we may pray with more *spyr*ituallty, and with repentance.
Bishop Taylor. Sermon 4. vol. i. p. 78.

For in the same degree that virgins live more *spyr*ituallly than
other persons, in the same degree is their virginity a more excellent
state.
Id. Holy Living, p. 71.

That it may appear aiery and *spyr*ituos, and fit for the welcome
of chearful guests: the principal difficulty will be in contriving the
lights and staircases.
Reliquiae Wottonianae, p. 42.

And to God, indeed, this name is attributed to signifie his most
simple nature, and his most powerfull energy; but to other sub-
stances of this kind it seemeth also assigned to imply the manner
of their origine; because God did by a kind of *spyr*itation produce
them.
Barrow. Works, vol. ii. fol. 490. Sermon 34.

*Spir*it, in its primary signification, is breath: angel, a mes-
senger: and I doubt not, but if we could trace them to their
sources, we should find in all languages the names which stand
for things that fall not under our senses, to have had their first rise
from sensible ideas.
Locke. Of Humon Understanding, vol. i. book iii. ch. i. p. 423.

SPIRIT.

SPIRIT. Conceive one of each pronounced *spiritally*, the other vocally.
Holder. *Elements of Speech*.

SPIROBRANCHUS. And yet our high-flown enthusiasts generally (however, calling themselves Christians) are such great *spiritualists*, and so much for the inward resurrection, as that they quite allegorize away, together with other parts of Christianity, the outward resurrection of the body; and indeed will scarcely acknowledge any future immortality, or life to come after death; their *spirituality* thus ending in Sadducism and infidelity, if not at length in downright atheism and sensuality.

Cudworth. *Intellectual System*, book i. ch. v. fol. 795.

By thus *spiritualizing* (if I may so speak) the corporeal works of God, there may accrue to the pious soul uses far more valuable than they can afford the body.

Boyle. *Works*, vol. v. fol. 416. *Essay on Natural Causes*.

In the intervals of my fits I both began and made some progress in the promised discourse of public *spiritedness*.

Id. *Ib.* vol. vi. fol. 48. *Letter of Mr. Boyle to several Persons*.

These ancients say, that impure souls after their departure out of this body, wander here up and down for a certain space, in their *spirituous*, vaporous, and airy body, appearing about sepulchres, and haunting their former habitations.

Cudworth. *Intellectual System*, book i. ch. v. fol. 786.

The operation was not always, especially at first, so early manifest, as the *spirituousness* of the liquor made some expect.

Boyle. *Works*, vol. iii. fol. 379. *Pneumat. Experim. about Respir.*

For it is not plain, that we derive the moisture and fluidity of our bodies from the water that is in the universe, their consistency and solidity from the earth, their heat and activity from the fire, and their *spirituosity* from the air.

Cudworth. *Intellectual System*, book i. ch. iv. fol. 421.

With all the warmth of a zealot in the cause of virtue, he pours his majestic verse, and, amid the most *spirited* invective and the finest morality, emits many a luminous irradiation of poetry beautifully descriptive.

Knox. *Works*, vol. ii. p. 94. *Essay*, No. 137.

Whether they are not growing vain and thoughtless, languid in their sentiments of true honour and virtue, infrequent or *spiritless* in their devotions, unmindful of past sins and future improvements, forgetful of their latter end.

Secker. *Works*, vol. ii. p. 348. *Sermon* 23.

Nothing contributes more to prove the *spirituality* of man, than the exalted delight which he is able to derive from the operations of his intellect or his fancy.

Knox. *Works*, vol. iii. p. 267. *Winter Evenings*. *Evening* 61.

It seems, however, to be the decisive doctrine of Scripture, that whatever may be the immediate state of our souls, our bodies, in some *spiritualized* form which we understand not, shall be again united to them.

Gilpin. *Sermon* 22. vol. i. p. 269.

The Socinians, who boast to have interpreted scripture on the severest and justest laws of logic and criticism, have in this instance, as well as in many others, deviated more from these laws than the most licentious of the allegorists, or the wildest of the *spiritualizers*.

Warburton. *Works*, vol. vi. p. 274. *The Divine Legation*.

Fermented liquors brewed, and *spirituous* liquors distilled, not for sale, but for private use, are not in Great Britain liable to any duties of excise.

Smith. *Wealth of Nations*, vol. iii. book v. ch. ii. p. 355.

SPIRITUOUS LIQUORS. See WINES.

SPIROBRANCHUS, from *σπειρα*, a spiral, and *βραγχος*, a gill, Cuv. In Zoology, a genus of animals belonging to the family *Pharyngi-labyrinthiformes*, order *Acanthopterygii*, class *Pisces*.

Generic character. Head large and rounded; body oblong; mouth extending back beneath the eyes; jaws armed with very fine teeth, of which the lateral in the lower jaw are rather long; in front of the vomer are also teeth, and a long row on each palatine bone; opercle terminating in two points, but not denticulated; accessory branchial leaves two on each side, and very slightly curved; branchial rays four; ventral fins below, and dorsal above the middle of the pectoral; anal com-

mencing further back, and terminating opposite the extremity of the dorsal; caudal fin square.

But a single species of this genus is known, which is connected on the one side by the small number of its anal rays, and by its form to the genus *Anabas*, and on the other by its palatine teeth with *Ophicephalus*.

S. Capensis, Cuv. About three inches long; of a deep brown colour, slightly tinged with golden upon the sides and belly; three black streaks pass from each eye to the edge of each preopercle. This fish is very abundant in all the little rivers of the Hottentot country.

See Cuvier and Valenciennes, *Histoire Naturelle des Poissons*.

SPIROLINA, in Zoology, a genus of *Polythalamous Cephalopodous Mollusca*.

Generic character. Shell multilocular, partially twisted spirally; convolutions close, the last one terminating in a straight line; transverse septa perforated with a tube.

This genus belongs to Lamarck's *Lituoline* tribe; it very nearly resembles *Spirula*, but distinguished from it by the convolutions being close instead of apart, as in that genus. They are very small fossil shells. The type is *S. Depressa*.

See Lamarck, *Histoire Naturelle des Animaux sans Vertèbres*.

SPIRORBIS, in Zoology, a genus of *Serpuloid Annelida*.

Generic character. Body tubicolar, subcylindrical, slender posteriorly; gills six, pinnated, retractile, and radiated at the anterior extremity; opercle pedicellate, flat at the top and placed between the gills; tube testaceous and twisted in an orbicular discoid spiral, flattened and fixed below.

This genus very nearly approaches *Serpula*, but differs in the disposition and number of its tentacular appendages, and in the orbicular discoid spiral shape of its tube, in which it resembles *Planorbis*. Nearly all of them are very small, and found attached to sea-weed, shells, and other marine substances, often in great quantities, but always distinct. The animal itself is of a blood-red colour. There are enumerated sixteen species, of which eleven are fossil; of the five existing species two are found in the Atlantic and three in the South Seas. The type of the genus is *S. Nautiloides*, Lam.; *Serpula Spirorbis*, Lin.

See Lamarck, *Histoire Naturelle des Animaux sans Vertèbres*.

SPIROSPERMUM, in Botany, a genus so called by Du Petit Thouars, from the Greek *σπειρα*, a screw, and *σπέρμα*, a seed, on account of the long spirally twisted embryo. It belongs to the class *Dioecia*, order *Monadelphia*, and the natural family of *Menispermaceæ*. *Generic character*: sepals and petals disposed in a ternary order, in two series; male flowers having six stamens, the three inner ones joined at the base; female flower with eight or nine carpels, the whole forming a round head.

This genus consists of a single species, *S. penduliflorum*, a native of Madagascar. It is a weak sarmentose shrub, with alternate, many-nerved leaves, and pendulous racemes of small flowers.

SPIROSTYLIS, in Botany, a genus so named by Presl, from the Greek *σπειρα*, a spire, and *στυλος*, a column, in allusion to the twisted style. It belongs to the class *Hexandria*, order *Monogynia*, and the natural order of *Loranthaceæ*. *Generic character*: petals six,

SPIROBRANCHUS.
SPIROSTYLIS.

SPIRO-
STYLIS.
—
SPISS.

linear, almost free to the base; stamens six; anthers fixed by the back to the filaments; style twisted.

This genus, which is separated from *Loranthus*, consists of one known species, *S. Hænkeana*; it is a parasitical shrub, a native of Mexico about Acapulco. The leaves are coriaceous, and the flowers are in axillary racemes.

SPIRT, or
SPURT,
SPURT, v.
SPURTING,
SPUR'RTLE, v. } With a slight variation of meaning from the D. *spruyten*, *surgere in altum*. Skinner. *Spurt*, by a customary metathesis, is the same word as *sprout*, the past participle of the A. S. *sprytan*, *germinare*, to shoot out, to cast forth. Tooke. To *spurt*,

To shoot out, to eject, or cast or throw forth.

If a man have a desire that both garlicke and onions may be kept long for his provision, their heads must be dipped and well plunged in salt water, warme; by this meanes indeed last they will longer without *spurting*.

Holland. *Plinie*, book xix. ch. vi.

These nuts also are parched for to be eaten; and within their belly they have in the mids a little chit or *spurt*, as if it were a navill.

Id. *Ib.* book xv. ch. xx.

Toads are sometimes observed to exclude or *spirt* out a dark and liquid matter behinde; which we have observed to be true, and a venomous condition there may be perhaps therein.

Sir Thomas Brown. *Vulgar Errours*, book iii. ch. xiii. p. 171.

The brains and mingled blood were *spirtled* on the wall.

Drayton.

When we come abreast of the headlands we find it calm; yet see the breeze curling on the water on both sides of us, and sometimes get a *spurt* of it to help us forward.

Dampier. *Voyages*, vol. ii. part iii. ch. iv. p. 37.

At last I perceived two white specks in the middle of the boil, and squeezing it, two small white worms *spurted* out.

Id. *Ib.* Anno 1676.

The terraqueous globe particularly, which circumsolves at the rate of about 1000 miles an hour, would by the centrifugal force of that motion, be soon dissipated, and *spirted* into the circumambient space, was it not kept together by this noble contrivance of the Creator, this natural inherent power; namely, the power of attraction or gravity.

Derham. *Physico-Theology*, book i. ch. v. p. 34.

SPIRULA, in *Zoology*, a genus of *Polythalamous Cephalopodous Mollusca*.

Generic character. Shell cylindrical, delicate, almost transparent, multilocular, partially twisted in a discoid spiral, with the turns far apart, and the last straight at its extremity; septa transverse, equidistant, concave without; siphon interrupted laterally; aperture orbicular.

This little shell was long since well known to naturalists, but of its inhabitant they were ignorant till Peron brought it from the South Seas. Lamarck states it to be a true *cephalopode*, having a bag enclosing only the hinder part of the body, at the extreme part of which is a small shell so inserted that merely a part of its last turn is visible, whilst its head sustains ten arms, ranged in a circle about the mouth, and of which two are longer than the others. The only known species is *S. Peronii*.

See Lamarck, *Histoire Naturelle des Animaux sans Vertèbres*.

SPISS,
SPISSATED,
SPISSITUDE. } Fr. *epais*; It. *spesso*; Lat. *spissus*, which Vossius derives from Gr. *σπιδ-ρος*, *densus*, *obscurus*.
Dense, thick, muddy, gross.

From his modest and humble charities, virtues which rarely cohabit with the swelling windiness of much knowledge, issued this

spiss and dense, yet polish'd; this copious, yet concise treatise of the variety of languages. *Brerewood*.

Neither sunne nor shade, ne yet [the light of candle, causeth them [emerauds] to change and loose their lustre; but contrariwise, as they ever send out their owne raies by little and little, as they entertaine reciprocally the visuall beames of our eyes; and for all the *spissitude* and thicknesse that they seeme to have, they admit gently our sight to pierce into their bottome.

Holland. *Plinie*, book xxxvii. ch. v.

The heaven here has always some cloud in his countenance, and from this grossness and *spissitude* of air proceeds the slow nature of the inhabitants.

Howell. *Letter* 8. book i. sec. 1.

Spissitude, attended with heat, grows inflammatory.

Arbuthnot. *Of Aliments*, ch. vi. p. 159.

Without doubt, the images, which the *spissated* juice of poppy presents to the fancy, was one reason why this drug had a place in the ceremonial of the shows.

Warburton. *Works*, vol. ii. p. 124. *The Divine Legation*.

SPIT, v. } Also written *spet*; A. S. *spittan*, *spæt-*
SPIT, n. } *an*, *spiwan*; D. *speeunien*; Ger. *speyen*;
SPI'TTLE. } Sw. *spy*. (See SPEW.)
SPA'TTLE. } To throw out, or cast out, to eject, to emit.

Whanne he hadde seid these thingis, he *spette* into the eerthe, and made clay of the *spotil*, and anointide the cley on his yghen.

Wiclif. *John*, ch. ix.

As sone as he had thus spoken, he *spat* on the grounde and made claye of the *spette*, and rubbed the claye on the eies of the blynde.

Bible, Anno 1551.

But it [flees] was kept alway with a dragoun,
And many other marvailles vp and down,
And with two buls maked all of bras,
That *spitten* fire.

Chaucer. *The Legend of Hipsiphile and Medea*, p. 309.

Their whole knowledge, by learning without the booke, was tied only to their tonge and lips, and never ascended up to the brain and head; and therefore was sone *spitte* out of the mouth againe.

Ascham. *Workes*, fol. 264. *The Scholemaster*, book ii.

The *spattle* of their tongues, their idle praiynges, &c.

Bale. *Image of both Churches*, p. iii.

And (I wyl as I say leaue) all hys deuelyshe lies which he *spetteth* and *speweth* oute vpon honest men.

Sir Thomas More, fol. 736. *Confutation against Barnes*.

Great Hector put downe quite,
Laid flat in field, and with a crowne, of princes compassed;
So stopt up, that he scarce could breathe; his mind's sound habit fled,
And he still *spitting* blood.

Chapman. *Homer. Iliad*, book xv.

Some grandame, or religious aunt, whose joy
Is from the cradle to take out the boy,
In lustrall *spittle* her long finger dips,
And expiates his forehead and his lips.

Beaumont. *Persius. Satire* 2.

Cherrie trees yeeld a glutinous and gummie humor, but elmes a thin liquor in manner of *spittle*.

Holland. *Plinie*, book xvi. ch. xxxviii.

Let there bee then either a small furrow rased along just through the midst of the shaddow with a *spittle spade*, or the point of some hooke.

Id. *Ib.* book xviii. ch. xxxiii.

And whether the head of a deer, that by age is more *spitted*, may be brought again to be more branched.

Bacon. *Natural History. Cent.* viii. sec. 757.

No man could *spit* from him without it, [the tongue,] but would be forced to drivle, like some paraliticks or a fool; the tongue being as a stopcock to the air, till, upon its suddain removal, the *spittle* is thereby driven away before it.

Grew. *Cosmologia Sacra*, book i. ch. v. fol. 26.

Mænas and Atys in the mouth were bred,
And never hatch'd within the lab'ring head.
No blood, from bitten nails, those poems drew,
But churn'd, like *spittle*, from the lips they flew.

Dryden. *Persius. Satire* 1.

SPISS.
—
SPIT.

SPIT. After making a few boards to weather a *spit* that run out from an island on our lee, Captain Clerke made the signal for having discovered an harbour.
 SPITAL. *Cook. Voyages*, vol. v. book i. ch. v. p. 136.

On the west side of the Cape there appeared to be a lagoon, and on the two *spits* which formed the entrance we saw an incredible number of the large birds that resemble the pelican.
Id. Ib. vol. ii. book iii. ch. ii. p. 103.

SPIT, *n.* } A. S. *spitu*; D. *spet*, *spit*; Ger. *spiss*,
 SPIT, *v.* } which Wachter derives from *spaden*, *fodere*, *fodicare*, *transfigere*, (see SPADE,) to dig, to transpierce. It. *spiedo*.

To pierce, to transpierce, to penetrate, (with any thing sharp-edged or pointed.)

And *yspylde* hym þoru out myð an ýrene *spyte*.
R. Gloucester, p. 207.

CHAT. Yes, by the masse; and if he came, bad me not sticke to *speet* hym.
Anonymous. Gammer Gurdon's Needle, act v. sc. 2.

Many a gossip's cup in my tyme have I tasted,
 And many a broche and *spyt* have I both turned and basted.
Id. Ib. act i. sc. 1.

Such are not to bee liked that giue a man a shoulder of mutton, and breake his head with the *spitte* when they haue done.
Wilson. Arte of Rhetorique, p. 133.

Automedon held, while he pieces cut
 To roast and boyle, right cunningly; then of a well-fed swine,
 A huge fat shoulder he cuts out, and *spits* it wondrous fine;
 His good friend made a goodly fire; of which the force once past,
 He laid the *spit* low, neare the coales, to make it browne at last.
Chapman. Homer. Iliad, book ix.

Who home strait led
 A five-yeares-old male ox, feld, slew, and flead;
 Gather'd about him; cut him vp with art;
Spitted, and roasted; and his euery part
 Diuided orderly.
Id. Ib. Odyssey, book xix.

A *spit* he seiz'd,
 Just reeking from the fat surloin.
Somerville. Hobbinol, can. 2.

SPI'TAL, or } Fr. *hospital*, a hospital, a spittle.
 SPI'TTLE. } It. *spedale*, manifestly corrupted, say Junius and Skinner, from *hospitale*. See HOSPITAL.

A place for the reception and entertainment of strangers; (*hospites*;) for the care of the poor and needy, aged or infirm; for the care or cure of the sick or diseased. Hospital and *spittle* are sometimes discriminated in their application.

He opened a secrete gate and out thereat
 Conveied her, that no man should espie,
 There to a village halfe a mile thereby,
 Delivered her in at the *spittell* hous,
 And daily sent her part of his almous.
Chaucer. The Testament of Creseide, p. 297.

At Paules crosse or els where
 Openly at Westminster
 And Saynt Mary *spittel*
 They set not by us a whistel.
Skelton. Colin Clout.

The most part of those left-hand rascals,
 The very vomit, sir, of hospitals,
 Bridewels, and *spittle-houses*.
Beaumont and Fletcher. The Nice Valour, act iv. sc. 1.

She felt, or fancy'd in her fluttering mood,
 All the diseases which the *spittles* know,
 And sought all physic which the shops bestow.
Thomson. Castle of Indolence, can. 1.

VOL. XXVII.

SPITE, } Fr. *despit*; It. *despetto*; Sp. SPITE.
 SPITE, } *despecho*, manifestly, says Junius,
 SPI'TEFUL, } from *despectus*; yet is inclined to
 SPI'TEFULLY, } derive our Eng. *spite* from the Ger.
 SPI'TEFULNESS, } *spitten*. See ante, DESPITE. G.
 SPI'TOUS, } Douglas says, "I *spitte* for *disspite*
 SPI'TOUSLY. } to se thame *spyllt*," (i. e. the verses
 of Virgil *spoilt*.) *Spite*, met., is
 Contempt, malignity, malign or malicious will or inclination; malicious mischief.

The first of hem is called Pride,
 That other arrow next hem beside,
 It was cleped Villanie.
 That arrow was with feilonie
 Envenimed, and with *spitous* blame.
Chaucer. The Romant of the Rose, p. 178.

This carpenter wend he were in despeire,
 And hent him by the shulders mighily,
 And shoke him hard, and cried *spitously*;
 "What Nicholas? what how man? loke adoun."
Id. The Milleres Tale, v. 3469.

Dame Nature hir had framde so perfite in hir kinde
 As not the *spiteful* man himself one fault in hir coulede finde.
Turbervile. The Complaint.

But thus with ireful eyes, and face that shook with *spite*,
 Diana did begin. *Sidney. Arcadia*, book iii. p. 451.

Consider eke, that *spite* availeth naught.
Wyat. To his Ladie.

Tyll at the length when Cupid spiede
 My scornfull wyll and *spitefull* vse,
 And how I past not who was tyed
 So that my self myght still liue lose.
The Lover that once disdained Loue, &c.

If the deuill shoulde himself sit and deuise to speke *spightfully*, what could he say more like hymself against this part of the holy sacramēt of penaūce, thē he now speketh by y^e mouth of this his holy spiritual mā.
Sir Thomas More. Workes, fol. 380. *Aunsweere to Tyndall's Pref.*

When Perpenna Vento, being of the same faction, arrived in Spain full of money, and with a good number of souldiers, intending to make war in his behalf against Metellus, his souldiers fell out with him, and had none other talk in his camp but of Sertorius; the which *spighted* Perpenna to the heart, being proud and stately by means of his wealth and estate, coming of a noble house.
North. Plutarch. Sertorius, fol. 492.

CLEO. I have found out a way shall bring me to him,
Spight of Photinus watches.
Beaumont and Fletcher. The False One, act ii. sc. 2.

And eke the verse of famous poets' witt
 He does backebite, and *spightfull* poison spues
 From leprous mouth on all that ever writt;
 Such one vile Envy was.
Spenser. Faerie Queene, book i. can. 4.

A rude disorder'd rout he did espy
 Of men and women, that most *spitefully*
 Did one another throng. *Davies. On Dancing*.

We did not question but we should either get a good commerce with the Indians, by such toys as we had purposely brought with us, or else force our way through their country in *spight* of all their opposition.
Dampier. Voyages, vol. i. ch. i. p. 6. Anno 1681.

What concord can there be between a *spiteful* and devilish spirit, and the foundation of all love and goodness?
Scott. Christian Life, part i. ch. ii. fol. 15.

Now all the doctor's money's spent,
 His tenants wrong him in his rent;
 The farmers, *spitefully* combin'd,
 Force him to take his tithes in kind.
Swift. Horace, book i. Ep. 7.

It looks more like *spitefulness* and ill-nature than a diligent search after truth.
Keil. Against Burnet.

SPITE.
—
SPITZ-
BERGEN.

You will say, bad thoughts enter your mind in *spite* of your best endeavour; they may; but if they are not entertained with other guests, they are received coldly, they will never stay long.

Gulpin. Sermon 42. vol. ii. p. 205.

But they plead, that avoiding censure is impossible; people will say ill-natured things, and make *spiteful* constructions; some will always be raising stories, and others believing them; and why should one give one's self trouble to prevent what after all cannot be prevented?

Secker. Works, vol. iii. p. 219. Sermon 15.

SPITZBERGEN, a group of islands in the Arctic Ocean; of which, strictly speaking, the largest only receives the name of Spitzbergen. Once the resort of the hardy adventurers engaged in the whale-fishery, Spitzbergen has for many years been all but deserted in consequence of the recession of the fish from the adjoining seas. The whalers gradually left its shores for the more abundant fisheries of Davis's Straits and Baffin's Bay; and these in their turn having been exhausted, the fish have been followed to other haunts; and, more particularly, the success attendant on the South Sea fishery will render these icy regions less frequented and less known than at an earlier date.

The claim of the discovery of Spitzbergen rests between Barentz, a Dutchman, who visited the group in 1595, and Hugh Willoughby, who explored these seas nearly half a century earlier; but it seems probable that the discoveries of the latter were confined to the shores of Greenland. In the middle of the XVIIth Century, when the Northern whale-fishery was calling into active rivalry the English, Dutch, Hamburgers, the French, and Danes, Spitzbergen became a station of paramount importance, and its coasts and seas were parcelled out among these several nations. The Dutch, however, formed the largest settlement here, on Amsterdam Island, a small isle lying off the North-West extremity of Spitzbergen; but so long has this been deserted through the retirement of the fish to the open seas, and to the large ice-banks off Greenland, that the very situation of *Smeerenberg* (so the settlement was appropriately called, from the words *smeeren* "to melt," and *berg*, "a mountain") is now a matter of dispute. The only colony at present on the island consists of some 20 Norwegians and Laplanders, employed by an English merchant, established in Norway, to collect furs.

The general appearance of Spitzbergen is thus described by Mr. Scoresby. "The principal objects which strike the eye are innumerable mountainous peaks, ridges, precipices, or needles, rising immediately out of the sea, to an elevation of 3,000 or 4,000 feet, the colour of which, at a moderate distance, appears to be blackish, shades of brown, green, grey, and purple snow or ice, in striæ or patches, occupying the various clefts and hollows in the sides of the hills, capping some of the mountain summits, and filling with extended beds the most considerable valleys; and ice of the glacier form, occurring at intervals, all along the coast in particular situations, as already described, in prodigious accumulations. The glistening or vitreous appearance of the iceberg precipices; the purity, whiteness, and beauty of the sloping expanse formed by their snowy surfaces; the gloomy shade presented by the adjoining or intermixed mountains and rocks, perpetually covered with a mourning veil of black lichens, with the sudden transition into a robe of purest white, where patches or beds of snow occur, presents a variety and extent of contrast altogether peculiar, which, when enlightened by the occasional ethereal brilliancy of the polar sky, and

harmonized in its serenity with the calmness of the ocean, constitute a picture both novel and magnificent. There is indeed a kind of majesty, not to be conveyed in words, in these extraordinary accumulations of snow and ice in the valleys, and in the rocks above rocks, and peaks above peaks, in the mountain groups, seen rising above the ordinary elevation of the clouds, and terminating occasionally in crests of everlasting snow, especially when you approach the shore under the impenetrable density of a summer fog; in which the fog sometimes disperses like the drawing of a curtain, when the strong contrast of light and shade, heightened by a cloudless atmosphere and powerful sun, burst on the senses in a brilliant exhibition, resembling the productions of magic." A singular circumstance connected with this region is the deception which it presents in clear weather, the land at twenty miles distance seeming to lie no more than a league off. The writer just quoted conceives that this phenomenon will account for the conduct of the Danish Captain, Hogens Heinson, who, being sent to discover the lost colony of Greenland, imagined when he descried the land that it was much nearer than it really was, and finding after some hours' sail that he apparently made no way towards it, tacked about in dismay, and reported on his return that his vessel had been stopped by "some loadstone rocks hidden at the bottom of the sea."

The vegetable productions of the group consist of mosses, lichens, and other of the incumbent classes. Its animals are the bear, rein-deer, and the Arctic fox; and the seal and walrus frequent its shores. The atmosphere, as is observable in the Arctic regions generally, has an antiseptic effect; the bodies of individuals who have perished here, and the timber of the huts erected, remaining undecomposed and undecayed for years. The group approaching within ten degrees of the pole, the sun remains below the horizon for about four months in the year; but the brightness of the moon and stars at one interval, and the brilliancy of the aurora borealis at others, are usually sufficient to prevent any long continuance of darkness. During the height of summer, when the sun is never absent for four months, the mean temperature is only about 34° 30' of Fahrenheit.

The islands which constitute the group of Spitzbergen, lie between 76° 30' and 80° 30' North latitude, and between 10° and 24° East longitude. The main land is about 300 miles in length, nearly in the direction of the meridian.

Marten, *Voyage to Spitzbergen and Greenland*, Hamburg, 1675; Phipps and Scoresby, *Voyages*.

SPLACHNIDIUM, in *Botany*, a genus so called by Greville, from the Greek *σπλαγχνον*, an *entrail*, and *ειδος*, *form*, on account of the shape of the plant. It belongs to the class *Cryptogamia*, and order *Algæ*. Generic character: frond cylindrical, tubular, sub-inflated; tubercles pertuse, scattered over the whole frond.

A genus of Sea-weed; one species is a native of the coast of New Zealand.

SPLACHNUM, in *Botany*, a genus so called by Linnæus, from *σπλαγχνον*, a name used by Dioscorides for a lichen or other cryptogamic plant. It belongs to the class *Cryptogamia*, and order *Musci*. Generic character: seta terminal; peristome single, of eight double and sometimes sixteen twin teeth, which generally become reflexed when dry. Capsule with an apophysis; calyptra mitre-formed, at length sub-dimidiolate, glabrous, without furrows.

SPLAY.

This is a very pretty genus of Mosses, containing seven known British species. They are always found on the dung of animals, or other animal substances, as bones, decayed woollen stockings, flannels, and hats.

SPLASH, *v.* } The English *splash* (says Ihre) is
SPLASH, *n.* } to sprinkle or spatter with water or mud; the Sw. *plaska*, to move the water noisily while washing. See to PLASH.

Then answered 'squire Morley, Pray get a calash,
That in summer may burn, and in winter may *splash*,
I love dirt and dust; and 'tis always my pleasure,
To take with me much of the soil that I measure.
Prior. Down-Hall.

They dance in a round, cutting capers and ramping;
A mercy the ground did not burst with their stamping.
The floor is all wet with leaps and with jumps,
While the water and sweat *splish-splash* in their pumps.
Swift. Description of an Irish Feast.

Where the mock female shrew and hen-peck'd male
Scoop'd rich contents from either copious pail,
Call'd bursts of laughter from the roaring rout,
And dash'd and *splash'd* the filthy grains about.
Lloyd. Epistle to C. Churchill.

SPLAY, *v.* } *i.e.* to display; to unfold, to ex-
SPLAY, } pand, to extend, to spread or stretch
SPLA'YING, *n.* } out, to open widely.

As in the examples from Plinie and Chapman; to open the parts which inclose.

————— The floures of many divers hew,
Upon hir stalkes gon for to sprede,
And for to *splay* out hir leves in brede
Again the sunne.
Chaucer. The Complaint of the Black Knight, p. 333.

————— The queen the peeping day
Espied, and navy with 'splay'd sails depart
The shore, and eke the port of vessels void.
Surrey. Virgil. Aeneis, book iv.

And the casting abroad of his hands, the *splaying* of Christ
upon the crosse.
Tyndall. Workes, fol. 277. Of Sacraments and Ceremonies.

And untill the grayne of mustard seed beyng digged into the
yearthe, did ferre and wyde *spleygh* his boughes abrode ouer Asia,
ouer Afrike, and Europe.
Udall. Preface to Luke.

Mise his wife [was] so handsom a beldam that only her face and
her *splay-foot* have made her accused for a witch.
Sidney. Arcadia, book i. p. 19.

Unlesse you will take it for a *splayed* or gelded sow; as if
Agamemnon would innuate, that as this sow (being *splayed*) is
free from Venus, so had he never attempted the dishonour of
Briseis.
Chapman. Homer. Iliad, book xix. Comment.

Sowes also are *splayed* as well as camels, but two daies before
they be kept from meat; then hang they them by the forelegs for
to make incision into their matrice, and to take forth their stones;
and by this means they will sooner grow to be fat.
Holland. Plinie, book viii. ch. li.

The doublers of a hare, or in a morning
Salutes from a *splay-footed* witch, to drop
Three drops of blood at th' nose just, and no more,
Croaking of ravens, or the screech of owls,
Are not so boding mischief as thy crossing
My private meditations.

Ford. The Broken Heart, act v. sc. 1.

He was the most perfect saturnine person that ever was beheld
—he was of a middle stature, broad forehead, beetle-brow'd, thick-
shouldered, flat-nos'd, full lips, down-look'd, of black curling stiff
hair, and *splay-footed*.

Wood. Athenæ Oxonienses, vol. i. fol. 579.

Hadst thou but, Janus like, a face behind,
To see the people, what *splay-mouths* they make;
To mark their fingers, pointed at thy back.
Dryden. Persius. Satire 1.

SPLEEN,
SPLE'ENED,
SPLE'ENFUL,
SPLE'ENLESS,
SPLE'ENY,
SPLE'ENISH,
SPLENE'TIC,
SPLENE'TICAL,
SPLE'NICK,
SPLE'NITIVE.

Fr. *splenique, splenitique*; It. **SPLEEN.**
splenetico; Lat. *splen*; Gr. *σπλην*.

The *spleen* is the supposed seat
of whims, humours, or uncertain
tempers; of melancholy, fretful-
ness, peevishness, angriness.

See the Quotation from Paley.

Spleenless is used by Chapman,
met., free from uncertainty or
change; even, equal, steady.

Spleened, Arbuthnot, deprived of the *spleen*.

Nowe ouer this for to wite,
As it is in phisike write,
Of liuer, of longe, of galle, of *splene*,
Thei all vnto the herte bene
Seruantes.

Gower. Conf. Am. book vii.

Vnto this cawle, is fastned the *splene* on the left side of the
belly just over-against the liver.

Holland. Plinie, book xi. ch. xxv.

DUKE. Prythee, no more, Ferentes; by the faith
I owe to honour, thou hast made me laugh
Beside my *spleen*.

Ford. Love's Sacrifice, act i. sc. 2.

Now will I hence to seeke my lonely Moore,
And let my *spleenful* sonnes this trull defloure.
Shakspeare. Titus Andronicus, act ii. sc. 3. fol. 38.

In meane time flew our ships; and straight we fetcht
The Sirens' ile; a *spleenelesse* wind, so stretcht
Her wings to waft vs, and so vrg'd our keele.
Chapman. Homer. Odyssey, book xii.

————— I know her for
A *spleeny* Lutheran, and not wholesome to
Our cause, that she should lye i' th' bosome of
Our hard-ru'd king.
Shakspeare. Henry VIII. act iii. sc. 2. fol. 220.

But here yourselves you must engage,
Somewhat to cool your *spleenish* rage,
Your grievous thirst and to asswage,
That first you drink this liquor.
Drayton. Nymphidia.

A lawlesse paunch! the cause of much despight,
Through raunging of a currish appetite,
When *spleenish* morsels cram the gaping maw,
Withouten diets care or trencher law.
Hall. Satire 4. book iv.

I have received much benefit by yours, [advice,] touching my
splenetical infirmity.
Reliquiæ Woltonianæ, p. 368.

EGRE. Some *splenitive* youths now, that had never seen more
than the country smook, will grow in choler; it would shew fine
in us.

Beaumont and Fletcher. The Elder Brother, act iv. sc. 1.

Spleen to mankind his envious heart possest,
And much he hated all, but most the best.
Pope. Homer. Iliad, book ii.

The famous Burleigh used to say, that "he never cared to see
the treasury swell like a disordered *spleen*, when the other parts of
the commonwealth were in a consumption."
*Lord Bolingbroke. Works, vol. ii. p. 268. On the History of Eng-
land. Letter 14.*

Animals *spleened* grow salacious. *Arbuthnot*

The *spleenful* pigeons never could create
A prince more proper to revenge their hate.
Dryden. The Hind and the Panther.

And Horace seems to have purged himself from those *splenetic*
reflections in those odes and epodes, before he undertook the noble
work of satires, which were properly so called.

Id. Dedication to Juvenal.

If highly born, intolerably vain,
Vapours and pride by turns possess her brain,
Now gayly mad, now sourly *splenetic*;
Freakish when well, and fretful when she's sick.
Pope. The Wife of Bath, p. 193.

SPLEEN. This daughter silently lours; the other steals a kind look at you; a third is exactly well behaved; and a fourth a *splenetic*.
SPLENDENT. *Tatler.*

The *splenick* vein has divers cells opening into it near its extremities in humane bodies, but in quadrupeds the cells open into the trunks of the *splenick* veins.

Ray. On the Creation, part ii. p. 319.

It is possible in my opinion, that the *spleen* may be merely a stuffing, a soft cushion to fill up a vacancy or hollow, which, unless occupied, would leave the package loose and unsteady; for, supposing that it answers no other purpose than this, it must be vascular, and admit of a circulation through it, in order to be kept alive, or be part of a living body.

Paley. Natural Theology, p. 171.

But wayward Fortune takes a *spleenful* joy
 The wisest schemes of mortals to destroy.

Cambridge. The Scribleriad, book vi.

I think I can confidently declare that I was not influenced by *splenetic* or envious motives, when I attacked the pride, folly, and wickedness of some among the nominal great, who justify every enormity under the name of fashionable indulgence.

Knor. Works, vol. ii. p. 271. Essay No. 175.

SPLENDENT, Fr. *splendeur*; It. *splendere*,
SPLENDID, *splendido*; Sp. *esplendente*; Lat.
SPLENDIDLY, *splendens*, past participle of *splendere*, to shine. See **RESPLENDENT**.
SPLENDIDNESS,
SPLENDOUR, Shining, bright, brilliant, glittering; illustrious; conspicuous;
SPLENDOROUS, magnificent.
SPLINDIDIOUS.

Splendorous and *splendidious* rest upon the authority of Drayton.

A full moone having about her a round circle, showeth that there will bee wind from that part where the said circle is most *splendant*.
Holland. Plinie, book xviii. ch. xxxv.

Fame is a winged warriour they beheild,
 With semblant fierce and furious looke that stood,
 And in his left hand had a *splendant* sheild,
 Wherewith he couered safe their chieftaine good.
Fairefax. Godfrey of Bulloigne, book viii. st. 84.

So as those chanteresses, unless they be such as perhaps delight as much in their wing as in their voice, may live long among so good provisions, and room, before they know that they are prisoners; reducing often to my memory that conceit of the Roman stoick, who, in comparison of his own free contemplations, did think divers great and *splendent* fortunes of his time little more than commodious captivities.
Reliquiae Wottonianæ, p. 66.

Let us not then pursue
 By force impossible, by leave obtain'd
 Unacceptable, though in heav'n, our state
 Of *splendid* vassalage, but rather seek
 Our own good from ourselves.
Milton. Paradise Lost, book ii. l. 249.

Celestial brightness seized on his face,
 That did the wond'ring Israelites amaze,
 When he returned from that sovereign place,
 His brows encircled with *splendidious* rays.
Drayton. Moses his Birth and Miracles, book iii.

We may admire
 The blaze and *splendour*, but not handle fire!
Ben Jonson. Elegy on Lady Anne Pawlet.

Millions of spirits for his fault amerc't
 Of heav'n, and from eternal *splendors* flung
 For his revolt.
Milton. Paradise Lost, book i. l. 614.

Before him as in *splend'rous* arms he rode,
 Whilst his courveting courser seem'd to scorn
 To touch the earth whereon he proudly trod.
Drayton. The Battle of Agincourt, p. 16.

Thunder and lightning let him down the air,
 Trumpets celestial sounding as he came,
 Which struck the people with astounding fear,
 Himself invested in a *splendorous* flame.
Id. Moses his Birth and Miracles, book iii.

The question is not put, how far extends
 His piety, but what he yearly spends;
 Quick to the business; how he lives, and eats;
 How largely gives; how *splendidly* he treats.
Dryden. Juvenal. Satire 3.

Their liveries, whose gaudiness evinces not the footman's deserts, but his lord's *splendidness*, and in men's esteem entitles the lacquey to nothing but a good master.

Boyle. Works, vol. vi. fol. 18. Discourse against Customary Swearing.

The Pelian javelin in his better hand
 Shot trembling rays, that glitter'd o'er the land;
 And on his breast the beamy *splendours* shone
 Like Jove's own lightning, or the rising sun.

Pope. Homer. Iliad, book xxii.

Th' Iberian realm
 Could boast no purer breast, no sprightlier mind,
 No race more *splendent*, and no form so fair.

Shenstone. Love and Honour.

We see through all this *splendid* obscurity, that something grand is approaching. The several shades of darkness by degrees gives way. Day comes on more and more, till at length the sun rises in all its glory; and, opening into its fullest *splendor*, surrounds the earth from one end of it to the other.

Gilpin. Sermon 1. vol. i. p. 10.

All the women appeared very *splendidly* dressed after the Kamtschadale fashion.

Cook. Voyages, vol. vii. book vi. ch. ii. p. 197.

SPLINT, or **D.** *splenter*, *splinter*, *spletter*; **Ger.**
SPLINT, n. *splitter*, **Sw.** *splitter*; **Dutch** *splyten*,
SPLINT, v. *splinteren*; **Ger.** *spleissen*, to split.
SPLINTER, n. A *splint*, a part severed or broken
SPLINTER, v. off, a fragment; a piece or part; a segment or section, a cutting.

To *splint* or *splinter*, to sever into broken pieces or fragments; also to support or secure by pieces affixed; to prop or support.

Splint, (in a horse,) a swelling hard as a *splint* of wood.

Splinter'd, in Shakspeare, is by most editors altered to *splinted*.

When the wood is cut into many clefts and *splents*, fresh and green, they are heaped up on high, and hollow, in manner of a furnace or chimney.
Holland. Plinie, book xvi. ch. vi.

Touching Epaminondas, he was brought yet alive into his tent; howbeit the physitians and surgeons being called together to dress him, they all agreed that so soon as ever they pulled out the head and *splint* of the dart out of his body he must needs die.

North. Plutarch. Epaminondas, fol. 931.

So many intire tenements, like *splinters*, have flown out of the materials thereof. [Theobalds.]

Fuller. Worthies, vol. i. Hartfordshire.

The broken rancour of your high-swolue hates,
 But lately *splinter'd*, knit, and ioy'd together,
 Must gently be preseru'd, cherisht, and kept.
Shakspeare. Richard III. act ii. sc. 2. fol. 184.

No vow, dear sir, tie not my fair belief
 To such strict terms; those men have broken credits,
 Loose and dismember'd faiths, (my dear Antonio,) that *splinter* 'em with vows; am I not too bold?
Beaumont and Fletcher. The Maid in the Mill, act i. sc. 3.

And with the fearful shock,
 Their spears in *splinters* flew, their beavers both unlock.
Drayton. Poly-olbion, song 82.

A man may be in the regions of death before he perceives his head to ache; and instead of a staff in his hand, may have a *splinter* in his elbow.

Taylor. Sermon 1. vol. iii. p. 21.

It, even when crush'd, a number did confound;
 To venge the whole, each *splinter* gave a wound.
Stirling. Jonathan.

But all the ancients, after the seventh day, did use *splints*; and

**SPLEN-
DENT.**
SPLINT

SPLIT. so have I where they might safely be used; for they not only keep the member steady, but streight.
SPOIL. *Wiseman. Treatises, vol. ii. book vii. ch. i. p. 246.*

Therefore be not disturbed in your thoughts, but, having taken out the bullet, or pieces of *splinters*, dress it up as a contused wound.
Id. Ib. vol. ii. book vi. ch. iii. p. 159.

From worldly hopes and false dependance freed,
 I'll seek no safety from a *splinter'd* reed.
Harte. The Courtier and Prince.

Loud shrieks of horror through the fleet resound,
 Bursts the torn cordage, rattle far around
 The *splinter'd* yard-arms.

Mickle. Lusiad, book vi. v. 563.

SPLIT, v. See *ante*, **SPLINT**. D. *splyten*; D. *splitten*, *spalten*, to sever or separate into parts; to part, to divide, to break, to burst, to cleave, to rive asunder.

Splutter, not an uncommon word in vulgar speech, may be, to split or splitter, otherwise to *sputter*.

& if a clerke men-founde in his londe þat reft,
 þorgh slaughter or wounde, or þorgh oþer theft,
 Men suld schewe his guilte in þe courte of lay,
 & þer be saued or *splue*, bot Thomas said him nay.
R. Brunne, p. 129.

He strait inform'd a lute,
 Put neck, and frets to it; of which, a sute
 He made of *splitted* quills; in equall space
 Impos'd vpon the neck; and did embrace
 Both backe and bosome.
Chapman. Homer. Hymne to Hermes.

This once resolv'd, the peasants were enjoin'd
 Sere-wood, and firs, and dodder'd oaks to find.
 With sounding axes to the grove they go,
 Fell, *split*, and lay the fuel on a row.

Dryden. Palamon and Arcite, book iii.

And when cold winter *split* the rocks in twain,
 And ice the running rivers did restrain,
 He stripp'd the bears-foot of its leafy growth,
 And, calling western winds, accus'd the spring of sloth.
Id. Virgil. Georgics, book iv.

How should we rejoice, if, like Judas the first,
 Those *splitters* of parsons in sunder should burst!

Swift.

Shem being yet alive, and his family not *split* into its branches, it was natural, and agreeable to the usage of the prophetic style, that the future blessings of the offspring should be referred to the ancestor.

Horsley. Sermon 17. vol. ii. p. 60.

SPLUTTER. See **SPLIT**.

SPOIL, n. See **DESPOIL**.

SPOIL, v. Fr. *spolier*; It. *spogliare*; Lat. *spoliare*, from the A. S. verb *spillan*, *privare*, (Tooke.) See *ante*, to **SPILL**.
SPO'ILER,
SPO'ILFUL,
SPOILATION. Vossius derives the Lat. *spolium*,

either from *σπολή*, Æolic, for *στολή*, *amictus*, since *spoliare* is *vestem detrahere*, to draw off the clothing, or from *σπυλαειν*, to plunder.

Spoil, n., that which is taken away; plundered or pillaged; the prize, pillage, plunder, booty. To *spoil*, to seize or take, to deprive or bereave, to destroy, to waste, to perish; to deprive or bereave, *sc.* of its use or usefulness; to harm, to injure, to mar, to corrupt.

No man may go into a strong mannes hous and take away hise vessels, but he bynde first the stronge man and thanne he schal *spoil* his hous.
Wiclif. Mark, ch. iii.

No man can enter into a stronge mannes house, and take away his goodes, excepte he first bynde that stronge man, and then *spoyl* his house.
Bible, Anno 1551.

If netheles we ben foundun clothid and not nakid, for whi we that ben in this tabernacle sorowen withynne, and ben heuyed for that that we wolen not be *spoilid*, but be clothid aboue, that thilk thing that is deedli be sopun up of lyf.

Wiclif. 2 Corynth. ch. v.

Ay me, what one? that Hector how unlike,
 Which erst return'd clad with Achilles *spoiles*?

Surrey. Virgil. Æneis, book ii.

He entred the terytory of Seynt Edmund, and wasted and *spoyled* the countree.
Fabyan. Chronycle, ch. 200.

He that lost all shall find a treasure, and he that *spoiled* him shall be found naked and *spoiled* by the destroyer.

Taylor. Sermon 2. vol. i. p. 33.

There are many good things which are wholly *spoiled* if they do but touch the tongue; they are *spoiled* with speaking; such as is the sweetest of all Christian graces, humility, and the noblest actions of humanity, the doing favours, and acts of kindness.

Id. Sermon 24. vol. i. p. 446.

He, like an adder lurking in the weeds,

His wandring thought in deepe desire does sleepe,
 And his frayle eye with *spoyl* of beauty feedes.

Spenser. Faerie Queene, book ii. can. 5.

There the sad mother with her tender childe
 Doth teare her tresses loose, complaine, and flie,
 And there the *spoiler* (by her amber haire)
 Drawes to his lust the virgin chaste and faire.

Fairefax. Godfrey of Bulloigne, book xix. st. 30.

But thou (my sonne) too long, by no means erre,
 Thy goods left free for many a *spoilfull* guest;
 Lest they consume some, and diuide the rest.

Chapman. Homer. Odyssey, book iii.

He combated this strong one, (this mighty and dreadful foe of ours,) and baffled him, and bound him, and disarmed him, (taking away the whole armour in which he trusted,) and *spoiled* him, (rifled all his baggage, bare away all his instruments of mischief.)

Barrow. Sermon 6. vol. i. p. 103.

The *spoils* were distinguished by two names, being either taken from the dead, and termed *σπύλαι*; or, from the living, which they called *λάφυρα*; they consisted of whatever moveables belonged to the conquered, whose whole right and title, by the law of arms, passed to the conquerors.

Potter. Antiquities of Greece, vol. ii. book iii. ch. xii. p. 107.

From a principle of gratitude I adhered to the coalition; my vote was counted in the day of battle, but I was overlooked in the division of the *spoil*.

Gibbon. Memoirs of his Own Life, p. 164.

By the slow-dripping urn of Styx she swore,
 The prophet's peaceful mansions evermore
 From those rapacious *spoilers* should be free.

West. The Story of Phineus.

Spoliation is an injury done by one clerk or incumbent to another, in taking the fruits of his benefice without any right thereunto, but under a pretended title.

Blackstone. Commentaries, vol. iii. book iii. ch. vii. p. 90.

SPOKE. See **SPEAK**.

SPOKE, Ger. *speichen*, *radii rotæ*. Wachter.

The radii of a wheel; the steps of a ladder; formed, fixed, like *spikes*.

The beam and axletree of massie gold;
 On silver *spokes* the golden fellies rold.

Sandys. Ovid, book ii.

Thus do your airs echo o'er

The notes and anthems of the spheres,
 And their whole concert back restore,

As if earth too would bless heav'n's ears;
 But yet the *spokes* by which they scal'd so high,
 Gamble hath wisely laid of *ut re mi*.

Lovelace. On Lyric Poems, set by Gamble.

SPO'NDEE, Lat. *spondeus*; Gr. *σπονδαίος*; in **SPONDA'ICK**, metre, a foot of two syllables, from **SPONDA'ICAL**. *σπονδή, libatio*, because used in making libations.

Nor is 't long since, they [iambicks] did with patience take
 Into their birth-right, and for fitness sake,
 The steadie *spondees*; so themselves doe beare
 More slow, and come more weightie to the eare.

Ben Jonson. Horace. Art of Poetrie.

SPOIL.

SPON-
DEE.

SPON-
DEE.SPON-
DYLUS.

The nimble dactyl striving to out-go
The drawling *spondee* pacing it below.
The ling'ring *spondees* labouring to delay
The breathless dactyls with a sudden stay.
Hall. Satire 6. book i.

Yet all the feet whereon these measures go,
Are only *spondees*, solemn, grave, and slow.
Davies. On Dancing.

Pythagoras caused the musician to change the tones; and so by
a heavy, grave, *spondaical* musick he presently appeased their fury.
Ferrand. On Love Melancholy, p. 315.

The learned languages have certainly a great advantage of us,
in not being tied to the slavery of any rhyme; and were less con-
strained in the quantity of every syllable, which they might vary
with *spondees* or dactyls.
Dryden. Letter to Sir R. Howard.

This at least was the power of the *spondaick* and dactyllick har-
mony, but our language can reach no eminent diversity of sound.
Rambler, No. 94.

SPONDIAS, in *Botany*, a genus so called by Lin-
næus, from *σπονδιας*, one of the Greek names for the
plum, on account of the resemblance in the fruit. It
belongs to the class *Decandria*, order *Pentagynia*, and
the natural family of *Spondiaceæ*. Generic character:
flowers sometimes of separate sexes; calyx five-cleft;
petals five, spreading; stamens ten, exserted, rising from
the crenate disk; styles five; drupe ovate or roundish,
containing a fibry, five-celled nut, each cell containing
two ovula, but solitary at maturity.

This genus consists of four known species, tall trees,
with impari-pinnate leaves, and axillary and terminal
simple or paniced racemes of reddish or yellowish small
flowers. The fruit is purple or yellow, and is eaten
under the names of hog-plums and Spanish plums, in
places of their natural growth.

SPONDYLE, *n.* Lat. *spondylus*; Gr. *σπονδυλος*;
Fr. *spondilles*, the knuckles or turning joints of the
chine, back, or neck bone. *Cotgrave.*

The first *spondyle* or turning joint in the chine of a dragon doth
promise an easie and favourable accesse unto the presence of
princes and great states.

Holland. Plinie, book xxix. ch. iv.

— All his joints
Do crack, as if his limbs were tied with points;
His whole frame slackens; and a kind of rack
Runs down along the *spondils* of his back.

Ben Jonson. The Sad Shepherd, act ii. sc. 2.

SPONDYLUS, in *Zoology*, a genus of *Pectinoid*
Monomyary Conchifera.

Generic character. Shell composed of unequal
valves, adherent, auriculated, spiny or rough; hooks
unequal; under valve exhibiting its hinge surface ex-
ternally, flat, trigonal, and divided by a groove which
increases with age; hinge consisting of two teeth in
each valve with an intermediate cavity for the liga-
ment, and continued to the external groove; ligament
internal, its former relics appearing externally.

This genus is commonly known by the name of
Spiny Oysters, but is much distinguished from the
True Oysters, *Ostrea*, by its double-toothed hinge, and
by its valves being covered with numerous and often
very large spines, some of which are very pointed and
others tongue-shaped, sometimes simple, at other times
foliaceous at their surface, and always arranged in rows
upon radiating longitudinal ribs; the lower valve is the
larger and more convex. Their colours are very bright
and varied. Twenty-one recent species are described
by Lamarck, of which the type, *S. Gæderopus*, is

found in the Mediterranean. There are also four fossil
species.

See Lamarck, *Histoire Naturelle des Animaux sans*
Vertèbres.

SPONGE, or	{	Fr. <i>esponge</i> , <i>espongieux</i> or <i>spon-</i>
SPUNGE, <i>n.</i>		<i>gieux</i> ; It. <i>spugna</i> ; Sp. <i>esponja</i> ;

SPO'NGIOUS,		To <i>spunge</i> , met., to draw or
SPO'NGINESS,		drain; to absorb or sup up; to ex-
SPO'NGER.		tract, to exhaust.

And oon ran and fullide a *spounge* with vynegre and puttide
about to a reed and gaf to him to drinke.

Wiclif. Mark, ch. xv

And one ran and fylled a *sponge* ful of vineger, and put it on a
rede, and gaue him to dryncke.

Bible, Anno 1551.

Of *sponges* we find three sorts: the first thicke, exceeding hard,
and rough, and this is called *tragos*; a second not all so thick,
and somewhat softer, and that is named *manon*; the third is fine
and yet compact, wherewith they make *sponges* to cleanse and
scoure withall, and this is tearmed *cachilleum*.

Holland. Plinie, book ix. ch. xlv.

— Then with a *sponge* he drest
His face all over, necke and hands, and all his hairie breast.
Chapman. Homer. Iliad, book xviii.

So that, except between the words of translation and the minde
of Scripture it selfe, there bee contradiction, euery little difference
should not seeme an intolerable blemish necessarily to be *spunged*
out.

Hooker. Ecclesiasticall Politie, book v. fol. 213.

Old Proteus hath been known to leave his finny herd,
And in their sight to *spunge* his foam-bespawled beard.
Drayton. Poly-olbion, song 2.

I saw Jove's bird, the Roman eagle wing'd
From the *spungy* south, to this part of the west,
There vanish'd in the sun-beames.
Shakspeare. Cymbeline, act iv. sc. 2. fol. 390.

For which purpose *spongy* it [the lights] is and full of hollow
pipes within.

Holland. Plinie, book xi. ch. xxv.

Paper participates in some sort of the characters of the country-
men which make it; the Venetian being neat, subtile, and court-
like; the French light, slight, and slender; the Dutch thick, cor-
pulent, and gross; not to say sometimes also *charta bibula*, sucking
up the ink with the *sponginess* thereof.

Fuller. Worthies, vol. i. p. 154. The Worthies of Cambridgeshire.

Consider the *sponginess* and laxness of the brain, and thinness
of the tunicles in the little arteries that are there.

More. Immortality of the Soul, part iii. book ii. ch. ix. fol. 101.

How came such multitudes of our own nation at the beginning
of that monstrous (but still surviving and successful) rebellion in
the year 1641 to be *spunged* of their plate and money, their rings
and jewels, for the carrying on of the schismatical, dissenting,
king-killing cause?

South. Sermon 12. vol. i. Oxon. 1685.

Now what man in his wits would keep such a company of de-
vouring lusts about him, that are perpetually *spungeing* upon his
estate, and eating the bread out of his children's mouths?

Scott. Christian Life, part iii. ch. ii. fol. 663.

So saying, with a sudden blow
He laid the noxious vagrant low.
Crash'd in his luxury and pride,
The *spunger* on the public dy'd.

Gay. The Man, the Cat, &c.

The cod itself or shell is almost half an inch thick; neither
spongy nor woody, but of a substance between both, brittle, yet
harder than the rind of a lemon.

Dampier. Voyages, vol. i. ch. iii. p. 61. Anno 1682.

Colbert made the most of all these advantageous circumstances,
and while he filled the national *spunge*, he taught his successors
how to squeeze it.

Lord Bolingbroke. On History. Let. 7.

Some of the smaller boats are made of the bread-fruit tree,
which is a light *spongy* wood, and easily wrought.

Cook. Voyages, vol. i. book i. ch. xviii. p. 205.

SPON-
DYLUS.

SPONGE.

SPON-
GIA.SPONGIA, in Zoology, a genus of *Amorphous Zoophytes*.

Generic character. Body multiform, more or less irregular, supported by a simple horny skeleton without spicula, enclosing or forming canals for the passage of water, which enters by small apertures called *pores*, and is ejected by larger ones called *fecal orifices*.

The structure of the individuals forming this genus, and those so nearly allied as formerly to be included in it, has been but till recently so little examined, as to give opportunity for dispute among naturalists whether its proper place be in the animal or vegetable kingdom. And even now, though the able and diligent observations of Dr. Grant have in some respects if not entirely explained the structure of the group to which it belongs, yet it is much to be doubted whether his researches have been sufficiently extended to prove it more than a polypary, the animal inhabiting which has yet to be discovered. For although the phenomena it exhibits are such as to be scarcely comprehensible without reference to animal agency, yet the two kinds of tubes he describes as existing in it, by one set of which water is drawn into the substance of the mass, whilst by the other it is ejected after having performed a kind of circulation, exhibit no sensibility or contraction upon the application of those stimulants which in other cases excite animal structures to action. His observations, therefore, upon the irritability or rather the non-irritability of the mass of the Sponges and of the tubes into which it is disposed are extremely interesting, as showing the existence of two very contrary functions, viz. imbibition and ejection, whilst they are equally valuable as entirely disproving the assertions of Marsigli, Ellis, Pallas, and Lamarck, in reference to the alternate dilatation and contraction of the fecal orifices, and the passage of the water to and fro by these orifices alone.

Lamarck, in his genus *Spongia*, has described one hundred and thirty-eight species, to which the editors of the last edition of his great work, *Histoire Naturelle des Animaux sans Vertèbres*, have added nine; these he divides into seven sections:—1st. sessile masses simple or lobed, forming either coverings or enclosures; 2d. subpediculate masses, or those contracted at their base, simple or lobed; 3d. pediculate masses, flattened or fan-shaped, simple or lobed; 4th. concave expanded, cup-shaped or funnel-shaped masses; 5th. tubular or pipe-shaped masses, not expanded; 6th. foliaceous masses or divided into flattened lobes, leaf-shaped; and 7th. branching, shrub or tree-like masses. Of these, however, some certainly are plants, and from the observations of Dr. Grant it is perfectly clear that among the others the types of three distinct genera are to be found, although it has not been hitherto possible to distribute the whole into their proper places on account of the difficulty, and, in many instances, the impossibility, of obtaining the species in a recent state, in which only can its true structure be properly examined.

Whilst alive, the fibres of which the skeleton (as it may be called) of the Sponge consists, are every where covered with a transparent, soft, and even glutinous matter, which also spreads over the external surface and lines the cavities, penetrating from the pores and fecal orifices into the interior, and it is in this soft matter that Lamarck considers the polyps of the Sponge reside, the existence of which, however, has not hitherto been ascertained.

It is to Dr. Grant we are indebted for a knowledge of

the fact, that the fibres of which the skeleton consists are composed of three different kinds of materials, or rather, that of the three groups which he has at present discovered in Lamarck's genus *Spongia*, each group exhibits a difference of structure and material in the composition of its skeleton, and hence he has divided them into the genera Sponges, Calcareous Sponges, and Silicious Sponges, or, as they are called by Blainville, who retains the old generic name for the first, *Spongia*, *Calcispongia*, and *Halispongia*. To the Calcareous Sponges Dr. Flemming had attached the generic name *Grantia*, in honour of the discoverer, but Dr. Grant himself preferred that of *Luchelia*. And the Silicious Sponges Dr. Flemming named *Alichondria*, whilst Dr. Grant changed it to *Halina*. The nomenclature of Blainville, however, is preferable, as at once showing the peculiar material, either lime or silica, upon which the generic character depends.

The species already determined to belong to this genus, as defined by Dr. Grant, are distinguished by a skeleton or axis consisting of cylindrical, tubular, *horny* fibres, dissolving without effervescence in acids, leaving no trace when rubbed on glass, and, like burnt hair, emitting a horny odour; when examined beneath a microscope, they are shown as nearly of the same size, smooth externally, translucent, and of a brownish-yellow colour; tough, flexible, very elastic, generally quite straight, and anastomosing freely with each other. Their diameter is about a third of that of a human hair, one half of which is occupied by their internal cavity, and they unite at a distance varying from one-tenth to a whole line, at all angles, dilating into small angular cavities, where they meet, and communicating freely with each other, so as to form one shut cavity throughout the whole Sponge, which, as they wind around the canals and pores, cannot therefore be the cells of any polyps or other animals causing the currents already mentioned. This part, the axis or skeleton, is that which is employed in commerce or preserved in collections. But between all the fibres, when the Sponge is alive, there is another substance soft and transparent, which readily putrefies and washes away after death, and it is probable that in it, if any where, is placed the residence of the animals by which the Sponge is formed.

Of this genus but ten species are determined, one of them only, *S. Pulchella*, is indigenous to Great Britain, and three, *S. Communis*, *Lacinulosa*, and *Usitatissima* are found in the Mediterranean, Red Sea, and Indian Ocean; others are found in the seas washing America, and some upon the coast of New Holland. Their use is too well known to require notice.

The type of the genus is *S. Communis*.

See Ellis in *Phil. Transact.* vol. lv.; Lamarck, *Histoire Naturelle des Animaux sans Vertèbres*; Grant, in *Edinburgh Philosophical Journal*, vols. xiii. xiv. and xv.

SPONGILLA, in Zoology, a genus of *Amorphous Zoophytes*.

Generic character. Body more or less tough and friable, of irregular form, consisting of a small quantity of fibro-cartilaginous matter, largely solidified by numerous simple and silicious spicula, full of pores, but not provided with true papillary mouths.

This genus is found spreading upon stones, rocks, or other solid matter at the bottom of lakes, stagnant pools, and ditches. Like the other sponge-like beings, it is doubtful whether they are vegetable or animal

SPON-
GIA.SPON-
GILLA.

SPON-
GILLA.

productions; Dutrochet and Link consider them as the former; Oken, who first established the genus by the name of *Tupha*, Lamarck, who subsequently applied to it the title of *Spongilla*, and Blainville, have placed it among the latter. Whilst Dr. Grant has shown its affinity to *Calcispongia* in the existence of silica in its spicula, and has not yet found the unknown polyps inhabiting it spoken of by Lamarck.

The species described by Grant is *S. Friabilis*, which may be taken as the type of the genus; neither of the other species, *S. Pulvinata* nor *S. Ramosa*, having been so fully examined, and from which it is distinguished by its erect, longitudinal fibres rising, branching, and radiating towards the surface, and beyond it in dried specimens. It is of a green or grey colour, soft, fibrous, reticulate, and brittle, of an irregularly flat, spreading form, acquiring a thickness of more than two inches, spreading to the extent of several feet, with irregular, short, compressed lobes, sharp ridges, thin plates or cylindrical branches rounded at their tips, and having numerous very distinct apertures on its surface leading to its interior; it contains a turbid, green-coloured, gelatinous matter in its interstices, and erect, branching fibres springing up from its base, and emits a strong fetid smell. When young, it is seen adhering to stones under water as small, round, convex spots, soft, downy, of a light grey colour, or spreading like a flat woolly mass about a line in thickness and one or two inches in extent. From the porosity of its texture various kinds of extraneous substances, as sand, mud, gravel, shells, larvæ, and different sorts of ova are found embedded in it. When alive is soft, brittle, and tears readily, has rather a greasy feel, and when taken into the mouth easily dissolves, leaving only a little earthy matter. When putrid in water emits a very offensive animal odour; and if put on a hot iron, either fresh or putrid, gives out a smell of burnt skin, and leaves a fibrous residue, which becomes red-hot without consumption or change of form, and though containing, according to Lamouroux, half its weight of lime is not acted on when plunged into acetic, nitric, sulphuric, or muriatic acid; but if rubbed on glass leaves numerous little scratches. These fibres then form the axis of the *Spongilla*, and consist of minute silicious spicula of as regular form as crystals, and are so ranged around all the apertures as completely to prevent any alteration of their form. They are about the eightieth of an inch long and the fourth of a hair thick, are transparent, colourless, cylindrical, very slightly and regularly curved, pointed at both ends, tubular, hard, and brittle; when moist they have a transparent, glassy appearance, and seem solid, perhaps from being filled with soft matter, but when dried become partially opaque, and are seen to contain a cavity extending from one end to the other, and occupying about half their diameter, which is probably closed, as it bursts when heated. They adhere to each other in bundles of ten throughout their whole length, are not separated by agitation or immersion in hot water, but quickly in strong acids. Their wavy direction is caused by the curves of one set being opposed to those of the next and so on, whilst the single, transverse spicula generally pierce through them to strengthen their connection. The whole arrangement of the spicula disproves the passages in *Spongilla* being accidental, and formed by worms or aquatic insects in a vegetable substance.

The external surface of this fresh-water Sponget is, like the Marine Sponges, covered with numerous pores

leading to its interior, which are quite distinct from the apertures between the lobes and branches. They are distributed irregularly, and surrounded by projecting naked fibres, appear open and smooth on their margins, and when under the microscope, beside being defended by the projecting bundles, each margin is supported by loose spicula lying parallel to the surface. The bounding fascicules of the pores have few spicula, and are loosely connected, so that they are not so compact as the Marine Sponges. These apertures do not exhibit any ciliæ at their margin when put under the microscope, but their internal walls are covered with the same minute granular bodies lining the canals and pores of the Sponges, and project more towards the centre of the openings. These pores are the entrance of canals which are distributed through the body, increasing in diameter till they again reach the surface, and form the *fecal orifices*, which are of great size, and open on the depressed parts between the lobes. The internal canals are bounded and supported by the longitudinal fibres and single transverse spicula passing from one bundle to the other, and the projecting longitudinal fibres converge slightly around the pores and fecal orifices, and the latter are never raised to the extremity of projecting papillæ, nor have the regular form, size, or distribution. The granular bodies lining the whole of the canals are connected with each other and with the walls by a very soft, transparent, green, glistening matter, which is quite homogeneous; it also connects both longitudinal and transverse fibres. The currents pass by the pores into the interior, and out by the fecal orifices, carrying with them the same feculent matter as the Sponges. But neither have Blumenbach nor Grant succeeded in exciting any spontaneous motion in the *Spongilla*.

From September to February inclusive there are observed distributed very irregularly, but mostly in the deeper parts, and frequently in groups of twenty or thirty without any organic connection either to each other or to the neighbouring parts, small, yellow, globular bodies, as big as grains of sand, which seem to have no proper cell but fall out if the broken substance be agitated in water, and when burst snap suddenly and emit a white semi-opaque viscid matter. The capsules appear under the microscope of a coarse granular structure, studded with transparent spots as if porous, but nothing escapes from them when pressed. The soft matter contained within them consists of two or three hundred soft, transparent, gelatinous bodies, slightly adherent, and, when magnified, resembling frog's spawn, together with a small quantity of thin, colourless fluid and some lively monads. When put in water for a few minutes the transparent globules dissolve, and each seems to contain about a hundred very small, white opaque particles, which lie on one side, occupying a third of the globule's bulk. Dr. Grant found them always alike in whatever month he took them, nor did he observe any change in such as had been kept for six weeks in rain water. He says they differ from the ova of every Marine Sponge he has seen in the strength of their cartilaginous capsule and in the solubility of their gelatinous globules; whilst their lively straw colour readily distinguishes them from the deep sea-green or grass colour of *Spongilla*, in which they are found; and they do not develop themselves into young *Spongillæ* in the same circumstances which evolve the true ova of that animal. Lichtenstein thinks they are the ova of *Tubularia Sultana* of Blumenbach.

SPON-
GILLA.

SON-GILLA. See Lamarck, *Histoire Naturelle des Animaux sans Vertèbres*; Grant, *On the Structure and Nature of the Spongilla Friabilis*, in *Edinburgh Philosophical Journal*, vol. xiv.; De Blainville, *Manuel d'Acténologie ou de Zoophytologie*.

SPONGOSTEMMA, in *Botany*, a genus so called by Reichenbach, from the Greek *σπογγος*, a sponge, and *στεμμα*, a crown, on account of the spongy limb of the calyx. It belongs to the class *Tetrandria*, order *Monogynia*, and the natural family of *Dipsacæ*. Generic character: involucre green, sub-biseriale; receptacle paleaceous; limb of calyx spongy, inflexed, and tumid; limb of corolla five-cleft, outer ones the largest; pappus bristly.

A genus separated from *Scabiosa* or *Asterocephalus*, consisting of four known species; the principal is *S. atropurpurea*, a well-known garden annual. They are all annual plants, natives of Europe, with dark purple or lilac flowers.

SPONIA, in *Botany*, a genus so called by Commer-son, but its derivation has not been explained. It belongs to the class *Polygamia*, order *Monoecia*, and the natural order *Urticæ*. Generic character: flowers polygamous, disposed in dichotomous cymes; calyx of five equal, persistent sepals; stamens five; ovary horned by two lateral stigmas, which are incurved before the expansion of the flower; ovula solitary, pendulous; fruit succulent, with a compressed, spherical seed; the testa nucamentaceous and rugulose.

A genus separated from *Celtis* in consequence of the cymose inflorescence, persistent calyx, and short, sessile, free stigmas, and foliaceous cotyledons. Fourteen species are known; they are all the former species of *Celtis*, natives of Asia and America. *S. andaresa* is the *Celtis orientalis*.

SPONSOR, } Fr. *sponseur*; Lat. *sponsor*. See SPONSIONAL. } SPONTANEOUS, *infra*.

One who gages or pledges himself, promises or gives surety for another. See the Quotations.

And hence, Heb. vii. 22, our Mediator is called the *sponsor*, or surety of a better covenant.

Scott. *Christian Life*, part i. ch. iv. fol. 81.

It is evident that he is righteous, even in that representative and sponsional person he put on. Leighton. *Sermon 5*.

The church demands the security of *sponsors*, who are intended, if the infant should be left an orphan, or neglected by its parents, to see it properly instructed in the advantages promised, and the conditions required.

Gilpin. *Sermon 23*. vol. iii. p. 259.

SPONTA'NEOUS, } Fr. *spontane*; It. *spontanea*; Lat. *spontaneus*; from SPONTA'NEOUSLY, } SPONTA'NEOUSNESS, } *sponte*, voluntarily, willingly, SPONTANE'ITY. } of free will: from the Gr. *σπονδή*, *libatio*; a voluntary offering, sanctioned by a libation.

Voluntary, willing, of free will or accord; self-willing, self-moving, self-acting.

Hence this divine matter will appear to our mind as incapable of spontaneous motion, and of free cogitations and perceptions unimpressed from corporeal motion as the pig of lead and wedge of gold there mentioned.

More. *The Immortality of the Soul*, book ii. ch. i. fol. 60.

It is certain, likewise, that matter or body as such, hath no power of moving itself freely or spontaneously, neither by will nor appetite.

Cudworth. *Intellectual System*, book i. ch. v. fol. 667.

It is impossible to resolve perception, phantasie, memory, the sagacities and instincts of brutes, the spontaneousness of many

of their animal motions into those principles, (the modification of matter, or the natural motion thereof.)

Hale. *Origination of Mankind*, fol. 49.

By spontaneity is meant inconsiderate action (or else nothing is meant by it.) Hobbes. *Of Liberty and Necessity*.

Where ever-during snows, perpetual shades
Of darkness, would congeal their livid blood,
Did not the Arctic tract spontaneous yield
A cheering purple berry, big with wine,
Intensely fervent.

SPO-
RADES.

SPORADES, (Αἱ Σποράδες νῆσοι,) "the Scattered Isles," is a name given to those islands in the Ægean Sea which do not lie in a continuous group like the Cyclades, but are separated from them and each other by a wider interval. A term of such indefinite import admits of considerable laxity in its application; ancient writers therefore differ as to the number of the islands belonging to this division of the Archipelago. It was, however, generally referred to the Cyclades, to the East and South-East of which most of these islands lie, as its centre; and the principal islands included in it were Icaria, Patmos, Leros, Calymna, Cos, Nisyros, Telos, Carpathus, Casus, Astypalæa, Thera, Pholegandros, Sicinus, Ios, and Lebinthus, the former near the coast of Asia Minor, the latter almost intermixed with the Cyclades.

Icarus
Nicaria.

1. Icaria, named from Icarus, son of Dædalus, whose daring attempt to fly gave, according to the Greek mythologists, a name to the Icarian Sea, is of an oblong form stretching from North-East to South-West, and in that direction measuring 300 stadia, (nearly 40 miles,) according to Strabo, (xiv. p. 639,) who is greatly in excess, but not more than four or five miles across in its broadest part. The highest summit near its South-Western extremity, is in $37^{\circ} 31' 9''$ N. and $26^{\circ} 3'$ E., its North-Eastern extremity being in $37^{\circ} 36' 26''$ N. and $26^{\circ} 17' 11''$ E. (Gauttier in *Conn. des Tems*, 1822-3.)

Dracenum. Its Northern promontory, called Dracenum, is part of a lofty mountain bearing the same name, celebrated by Theocritus (xxvi. 33.) as the birth place of Bacchus. It is now called Phanári, (the Lantern.) Red and very strong but rough and harsh wine, made on Mount Pramna, was one of the productions for which Icaria was noted. (Athen. i. 30.) This island had no harbours and only two towns, Dracenum near the cape so named, and Cœnoe, (Οἰνόνη,) on the shore of a tolerable roadstead. It was almost a desert in the time of Strabo. *Macris*, *Doliche*, and *Ichthyussa*, (long, and abounding in fish,) are rather epithets applied to this island by poets, than proper names.

Corassia.
Fourni.
Formiche.

The three islets called Corseæ, or Corassia, (Phurni, "the Ovens;" by the Genoese Formiche, "Ants,") lie to the South-East of Icaria, between it and Samos. Icaria, as the Greeks still called the Island; the Nicaria of the Genoese, formed by retaining the final *n* of the article in the accusative case, though an episcopal See subject to the Metropolitan of Rhodes, (Meletius, iii. 215.) or Samos, (Tournefort, i. 400.) has long been little cultivated and very thinly peopled. In the middle ages it belonged to the Venetian family of Giustiniani. Its mountains are for the most part covered with wood, and its valleys susceptible of cultivation; but when visited by Tournefort (i. 399.) in the beginning of the XVIIIth Century, its inhabitants were supposed not to exceed 1000 in number; and when Dr. E. D. Clarke, (*Trav.* v. 70.) exactly a century later, was becalmed near it in the night, his boatmen assured him that it is merely a resort of pirates. It is called by the Turks Akhî Kariyeh.

Patmos.
Patino.
Patinoz.

2. Patmos, in $37^{\circ} 17' 2''$ N. and $26^{\circ} 35' 23''$ E. (Gauttier, in *Conn. des Tems*, 1823,) so well known among Christians as the place where the Revelations were delivered to St. John during his banishment under Domitian, was scarcely noticed by the ancients: Strabo

(x. 488.) names it as one of the Sporades in the Icarian Sea, and Pliny (iv. 12.) gives it a circuit of 30 miles. It consists of two rocky islets of coarse porphyry, united by a small but precipitous isthmus, on the summit of which are the remains of a very ancient fortress: on each side of this isthmus are two spacious harbours. (Walpole, *Mem.* ii. 43.) Patmos has been changed into Pátino (Πάτινο, Melet. iii. 219.) by the Greeks, and Pátinoz by the Turks; and the island is now an episcopal See under the Metropolitan of Rhodes. Its stately monastery, more like a castle than a convent, and its cathedral are believed by the Greeks to have been built by the disciples of St. John. It has only one town, the population of which is about 3000 persons. In 1817 the whole revenue of the monastery was estimated at 200 purses (100,000 piastres) = £5000, and the annual payment to the Sultán at 3000 or 4000 piastres (£150 or £200.) The churches in the island are upwards of 240. "Perhaps," says Dr. E. D. Clarke, (*Trav.* vi. 73.) "there is not a spot in the Archipelago with more of the semblance of a volcanic origin than Patmos. The cliffs exhibit no form of regular strata, but one immense bed of porous black rock, in which are numerous nuclei of a white colour as large as a pullet's egg, in the form of crosses. The rock itself, upon a nearer examination, proves to be a very curious porphyry: the nuclei are all of them intersecting crystals of feldspar imbedded in decomposing trap." "Nothing," he adds, (vi. 56.) "can be more remarkable than the situation of the town built upon the edge of a vast crater sloping off on either side like the roof of a tiled house. Perry has compared it to 'an ass's back,' upon the highest ridge of which stands the monastery," a very powerful fortress, built upon a steep rock with several towers and lofty thick walls. It was patronized, if not founded, at the end of the XIth Century by Alexius Comnenus, whose original diploma the monks still possess. (*Ib.* vi. 50.) From its library, that intelligent traveller procured some valuable MSS., particularly a collection of Plato's *Dialogues** with ancient scholia previously unknown. The grotto in which, according to tradition, St. John saw the visions which he has recorded, is a small cave midway down the side of a hill between the monastery and the port of La Scala. It is now enclosed in a convent, or hermitage, called The Apocalypse, (ἡ Αποκάλυψις,) but too small to have been ever inhabited. Tournefort (i. 440.) has given a good delineation of it. A school held there was for a long time the best in this part of the Archipelago, and was much frequented till it was superseded by that at Aivah-lí, or Kydoniæ. (Clarke, *Trav.* vi. 43. 52.) The revenue paid by Patmos to the Turks in Tournefort's time amounted to 1000 crowns, (£250,) exclusive of *avanías*

SPO-

levied by the Kapudán Páshá and his officers, which might be estimated at least at half that sum. Its women are remarkable for their beauty. (Tournefort, i. 438. Clarke, vi. 62.) To the East of Patmos are the almost contiguous islets of Arcitis* (Nakri) and Lepsia, (Lipsa.) These islets seem to be the termination of the submarine chain, which forms a continuation of the peninsula of Halicarnassus in Doris, and are separated by a narrow strait from

3. Leros, (ὁ Λέρος,) still bearing the same name, and called Leiriyóz by the Turks. It was colonized by Milesians, (Herod. v. 125. Strabo, xiv. 635.) and famous for a temple of Diana and the sacred meleagrides (francolins) kept there by her priests, as well as by the bad character of its inhabitants, immortalized in the epigram of Phocylides. (Clarke, vi. 35.) The summit of Mount Klídi, (Key,) one of its highest points, is in 37° 10' 44" N. and 26° 51' 26" E. (Gauttier.) The aloes-wood, said to be indigenous there by Dapper, who must never be trusted unless he gives his authority, is part of the resiniferous trunk of the *Aquillaria agallochum*, a native of Cochin China and the adjoining countries.

4. Calymna, (Κάλυμνα, Scylax, p. 38.) called Kálimiyóz by the Turks, celebrated for its honey by Ovid, (*Met.* viii. 222.) and a much larger island than Leros, is due South-East of it, and separated from it by a very narrow channel. It is called Clarus (ἡ Κλάρος) by Meletius, (iii. 220.) who says its present name is Calamus, (Κάλαμος,) Cálydna, or Calólymno, (Melet. iii. 222.) It must be the Calydna of Pliny, (v. 36.) as he mentions its three towns, Nolium, Nisyros, and Mendeterus, and it is the only one of these islands called Calydnæ by Homer (*Il.* ii. 676.) which is large enough to have had so many towns or villages. According to Dapper it is 40 nautical miles in circuit, and very mountainous. (*Archipel.* 44.) Few of these islands have been less visited. A small island surrounded by islets lies between it and Cos. This group is called by the Turks Kará tághlar, (the Black Mountains.)

5. Cos, (ἡ Κῶς,) in the Myrtoan Sea, anciently called by the poets Gea, Nymphæa, Merope, or Meropéis, and Hydrusa, (well-watered,) was named Lango, or Stancoi, by the Italians in the middle ages, and Istankóï, (Εἰς τὴν κῶ,) by the Turks. The summit of Mount Christós, one of its highest peaks, as determined by Captain Gauttier, is in 36° 49' 59" N. and 27° 14' 13" E. Cos was the kingdom of Eurypylus, son of Hercules, in the time of the Trojan war, (Hom. *Il.* ii. 677.) but was afterwards colonized by Dorians from Megara, (Strabo, xiv. 653.) who also occupied the neighbouring part of the continent. It seems to have been governed by hereditary monarchs till the Persian war, after which it was tributary to Athens, till the subversion of that state by the Peloponnesians. At a later period, Cos maintained its independence by a strict alliance with Rhodes. Its first capital, Astypalæa, was on its North-Western side facing the Icarian Sea; another site near the promontory Scandarium, its North-Eastern extremity, was afterwards chosen, probably on or near the place of the present town of Kōs, which is on a harbour opposite to the coast of Asia. Its temple of Æsculapius, pictures by Apelles, citizen Hippocrates, wealth, and population, made it a place of great resort, notwithstanding the earthquakes by which it was fre-

quently visited. (Strabo, xiv. 657.) Its Western extremity was Drecanum, and its Southern point Lacêtér, between which was Halisama, a strong hold. Lacêtér, according to Strabo, (xiv. 657.) is by sea 235 stadia (about 30 miles) South-West of the capital. Stomolimne, (Portsmouth,) is a harbour on its North-Western side. It is in many places productive, but on the South side mountainous; was long subject to the Knights of St. John of Jerusalem, from whom it was taken by the Turks, and is an archiepiscopal See in the Greek Church. Its population of 20,000 in the beginning of this century has been reduced in a few years to less than half that number. (Clarke, *Trav.* v. 450.) The variety of its plants, its fragments of ancient sculpture, and its warm chalybeate spring, which bears the name of Hippocrates, a native of Cos, are well described by Dr. Clarke, (*Trav.* iii. 255.) A fine bas-relief seen by him in the walls of the castle (*Ib.* 264.) is well deserving of notice. The island consists almost entirely of one barren mountain of limestone, a species of marble, forming the principal constituent of almost all the Greek islands. (*Ib.* 263.) Within the castle, which none but Turks were then allowed to enter, it is probable many valuable fragments of ancient sculpture might be found. Between Cos and Nisyros is the islet Istros, the Begialis (ἡ Βεγιαλῖς) of Ptolemy, (v. p. 121.) whence by apocope its modern name (Γιαλί) Giali, pronounced Yali, in 36° 22' 15" N. and 27° 29' E. (Gauttier.)*

To the South-East of Cos is (6.) Nisyros, (ἡ Νίσυρος,) vulgarly Nisuro, or Nísari, in very ancient times Porphyris, and by the Turks Injir-lí, (Fig-land,) in 36° 35' 16" N. and 27° 11' 6" E. (Gautt.) It is a lofty rock, said by the Greek mythologists to have been rent by Neptune from Cos. (Strabo, x. 488. Apollodor. i. 6. 2.) The town near the port, remarkable on account of a temple to Neptune, and some warm baths, bore the same name; its other town was called Argos. (Steph. Byzant. v. Νίσυρος.)

Nearly due South of Cnidus, and South-East of Nisyros, is (7.) Telos, (ἡ Τήλος, Strabo, x. 488.) called Episkopía and Episkopí by the modern Greeks, Ilikí by the Turks, in 36° 26' 22" N. and 27° 20' 57" E. (Gauttier;) a small rocky island, celebrated among the ancients for a peculiar unguent. (Pliny, *Nat. Hist.* xiii. 2.) It has three ports; of which the Easternmost, on the North side of the island, is the best. (Dapper, *Archip.* p. 73.)†

A much larger island than those last mentioned, is (8.) Carpathus, (ἡ Κάρπαθος, called Crapathus by Homer (*Il.* ii. 676.) whence the surrounding sea was called Carpathian. Its circumference measures 400 stadia,‡ (50 miles,) according to Strabo, (x. 489.) One of its four towns bore the same name as the island called Nisyros. (*Ib.*) Ptolemy (*Geogr.* v. p. 121.) places the Northern promontory, Ephialtium,§ in 35° 20'

* Begialis, or Belgialis, is placed in 36° 50' N. and 56' 10" E. (= 27° 2' E. of Greenwich) by Ptolemy, *Geograph.* v. p. 121.

† Sonnini (*Travels in Greece*, i. 208.) mentions this island, but it is evident he never visited it. His work on Greece is little better than a compilation made many years after his return to France, and, except for the remarks relative to natural history, scarcely deserving notice.

‡ According to the reading of the third Medicean MS. The common reading is 200, which, an inspection of the best Maps shows to be erroneous.

§ The figures in hooks are from Bertius's Latin Version, the others are from the Greek text; that the former are the most correct is evident.

* In Dr. Cramer's Map, not in his text, nor in Scylax, Strabo, Pliny, or Ptolemy. Akri, (*Ακρη,) the modern name, seems to point to *Acritas* as the ancient word. Where is Arcitis found?

C. Pernisa.

(10') N. and 57° 20' (40') E.; the Southern promontory, Thoantium, in 35° (34°) 6' (24') N. and 57° 20' (40') E., (called Pernice by the Genoese and Pernica by the modern Greeks,) but the Northern extremity, by Captain Gauttier's observations, (*Conn. des Tems*, 1821, 1822,) is in 35° 54' 20" N. and 27° 12' 34" E.; the Southern being in 35° 23' 30" N. and 27° 13' 4" E., giving rather more than 30 nautical miles for the length of the island. Its capital, Posidium, placed by Ptolemy in 35° 6' N. and 57° 20' E., appears to have been near its Northern extremity. It had four towns, and was thence called a Tetrapolis, (Strabo, *loc. cit.*) and the ruins of one of them were visible near the sea on the South side of the island in the time of Porcacchi, (cited by Dapper, *Archip.* p. 34.) at a place called Phianti. The principal town, called Scárpanto by the Venetians and Genoese, was near the harbour of Tristómato, at the North-East end of the island. There the kadí, or judge, appointed by the Sultán, resides when on the island, which is only for a few months; his ordinary residence being at Rhodes. The governor, the only Muselmán inhabitant, used to be a Turkish officer of inferior rank. Carpathos has extensive pastures, a great deal of game, and had formerly a considerable coral fishery. Few of the Greek islands have been less visited by travellers. It is called Scárpanto by the Italian seamen, and Kúyeh by the Turks.

Casus.
Caso.
Schobanli.

The small island of (9.) Casus, still called Kasos by the Greeks, and Chóbán-lí (Shepherd Island,) by the Turks, lies to the South-West of Karpáthos, separated from it by a very narrow strait. Its position is in 35° 18' 20" N. and 26° 52' 44" E. (Gautt.) In the XVIIth Century it was considered as a nest of pirates, (Dapper, *Arch.* p. 36.) and its inhabitants are very expert pilots, much employed in the navigation of the Archipelago. Dr. E. D. Clarke (vi. 78.) speaks in the highest terms of the skill, and what is more extraordinary, of the integrity, of the Casiote in whose vessel he sailed from Cos to Athens.

Astypalæa.
Astypalia.
Stampalia.
Istampolia.

Nearly due West of Nisyrus, about 52 miles distant, (10.) Astypalæa, (ἡ Ἀστυπαλαία,) one of the many double islands in the Archipelago, consisting of two mountainous islets united by a narrow peninsula. Pyrrha, (Red,) Pylæa, (Portal,) Theón Trapeza, (the Table of the Gods,) and Astea, (Ἀστεία,) were among its ancient names. It is now called Astypaliá by the Greeks, Stampalia by the Italians, and Istánpóliyah by the Turks. Mount Veglia, in its Northern division, lies in 36° 32' 15" N. and 26° 19' 44" E. It was formerly an episcopal See under the Metropolitan of Rhodes. (Melet. iii. 36.) Though hilly, it can hardly be called mountainous; and from the abundance of flowers which covers its rich soil, it derived its poetical name of Deorum Tabula. Among other advantages which it enjoys, is an abundance of excellent fish, (Ovid. *Art. Amat.* ii. 8.) particularly the drákæna, (*Trachinus draco*), the red mullet, (*Mugil cephalus*), képhalos of the present Greeks; the mormy'ros, (*Sparus mormyrus*), not so grateful to the taste as to the eye; the melanúrí, (*Sparus melanurus*), called siyáh-gúsh or black-ear by the Persians, from the black spots on its tail, excellent for the tablê; the skatári, (σκαράριον, *Sparus cantharus*;) and the khánnos, (χάννος, Gaper, *Perca cabrilla*), a delicate kind of perch, said by Aristotle to have no males, and believed by Sonnini to be hermaphrodite. (Sonnini, *Greece*, i. 264.) The best snails, says Pliny, (*Nat. Hist.* viii. 59.) are found in Astypalæa. Tragia, (Thucyd. i. 116.) now Trago-

Tragia.

nisi, (Goat Island,) and Hippuris, Erimonisi, (Ἐριμονισί, Desert Island,) are islets due West of the Southern portion of Astypalæa.

(11.) Anaphe, (ἡ Ἀνάφη,) still bearing the same name, corrupted in the middle ages into Namfi or Namfio, is in 36° 22' 21" N. and 25° 47' 18" E. (*Conn. des Tems*, 1823.) It has been already noticed in this work. (xvii. p. 541.)

(12.) Thera, (ἡ Θήρα,) the highest peak of which is Thera. in 36° 20' 45" N. and 25° 28' 17" E., lies due West of Santorini, Anaphi, and now bears the name of Santorini, (Σαντορήνη,) from the Italian Sant'Irini, the island having been dedicated to St. Irene; in Greek Agía Irini, (ἡ Ἁγία Εἰρήνη,) had a most luxuriant vegetation, as may be inferred from the name first given to it, Calliste, (The most Beautiful,) but frequent and tremendous volcanic eruptions have reduced it almost to a desert. Its semilunar form, with a smaller island between the horns of the crescent, and three islets in the intermediate space, and its black burnt cliffs rising perpendicularly for 300 feet from the sides of a fathomless basin, are of themselves sufficient to mark this as the crater of a submarine volcano; but independently of tradition, which says that Thera and the outer island Therasia (ἡ Θηρασία, Strabo, x. 484.) (Apollon. Rhod. iv. 1757.) were thrown up by the sea, and at first united, history has marked the period at which several of these violent convulsions took place. Therasia, as the Greeks still call it, is separated by a very narrow passage from the North-West extremity of Santorini; and South-East of it are the three islets, 1. Mikronisi, (τὸ Μικρονισί, Little Island,) the Easternmost, and therefore nearest to Thera; 2. Kammeni, (ἡ Καμμένη or Καμμένη νῆσος, Burnt Island,) also called Hiera, (Sacred,) or Automate, (Spontaneous,) between it and Aspronisi, (τὸ Ἀσπρονῆσι, White Island,) on the South-West side of Kammeni. If the numbers given by Pliny, (*Nat. Hist.* ii. 87.) are correct, Therasia was rent from Thera so lately as B. C. 237; and Herodotus, (iv. 147.) who speaks of Calliste, afterwards called Thera, as colonized by Cadmus nearly 1500 years before the Christian era; and again by the Lacedæmonian Theras, 120 years later, (B. C. 1063,) makes no mention of Therasia, which, if Pliny be right, did not exist till nearly 200 years after the time of that historian. The appearance, however, of one of the islets between Thera and Therasia in A. D. 46 is mentioned by Seneca, (ii. c. 26. vi. c. 21.) who calls it by mistake Therasia; by Aurelius Victor, (*Vitâ Cladii*), and by the Syncellus, (*Chronograph.*) In A. D. 712 or 726 the little isle of Hiera was united to Thera after a tremendous eruption which lasted for some days. (Theophan. *Chron.* and Nicephorus, *Hist. Eccles.*) The Great Kammeni was considerably increased by a volcanic eruption in 1427. The Mikrakammeni or Mikronési was thrown up in a similar manner in 1573. (Tournefort, i. 268.) Another eruption is recorded by Thévenot (*Relation*, ch. 68.) as having occurred in 1650; and a fourth islet appeared between the Great and Little Kammeni, on the 23d of May, 1707, two slight shocks of an earthquake having been felt five days before. These commotions, attended by violent explosions with only short intervals, continued till the 15th of August, 1708, nor did they entirely cease for three or four years.

The new island, after frequently changing its form New and dimensions, continually discharged from six craters Island. (Sonnini, i. 309.) streams of lava and astonishing clouds

of ashes and volcanic matter. (*Mém. des Miss.* i. 126.) The fire beneath these craters has now, however, been apparently extinct for upwards of a century. This new island, called Nea Kammeni, (or Kaïmeni, ἡ Νέα Καϊμένη.) is upwards of a mile in length, (Olivier, *Trav.* ii. 162.) studded with irregular masses of broken basaltic columns, intersected by pools exhaling insufferably mephitic vapours. The craters on the East side, whence the burning streams issued, are somewhat higher than the rest of the isle. There, and there only, vegetation was beginning to appear, (in 1794,) nearly a century after the island was first thrown up. The highest peaks, St. Stephen and St. Elias, above the site of the town of Thera, and near the Southern extremity of the island, though in some places lightly covered with the pumice-stone everywhere scattered over the soil, have never suffered from the action of fire, and are entirely calcareous, consisting of an inferior kind of grey marble. (Olivier, ii. 160.) Considering its size, Santorini is the wealthiest of the Greek islands; its inhabitants are temperate and laborious. The want of native produce is compensated by industry; cloths are manufactured, and caps and stockings knit principally by the women. The soil is favourable to the vine, which requires little water, this island having none but rain-water collected in cisterns; and "the sacred wine" of Santorini is now more esteemed than the best Cyprus. (Olivier, ii. 174.) Cotton is also produced in some quantity. Grain and vegetables are very scarce; fruit trees uncommon, and fuel very dear. The taxes of various kinds levied in 1794 amounted to 55,000 piastres, (then about £5500.) In the villages the houses are little better than caves cut out of the pumice-stone rock. The French travellers, Olivier and Bruguière, made a report to the Turkish government, recommending the working of puzzolana quarries in Santorini, for the use of the public works at Constantinople, notwithstanding the islanders, whose poverty had previously shielded them against the rapacity of the Turks, made every effort to prevail on them to withhold their report. This zeal to aid the Turks at the expense of common humanity is justly condemned by Sonnini. (i. 317.) Thera was not only colonized by Phœnicians, and afterwards by Lacedæmonians under Theras, (Herod. iv. 147.) but its inhabitants themselves founded the Greek colony in Cyrene under Battus, (Herod. iv. 151.) about B. C. 650. In the Peloponnesian war, Thera remained faithful to the mother-country, and joined Sparta. After the taking of Constantinople by the Franks, A. D. 1204, Santorini was annexed to the Duchy of Naxia, and was finally captured by Barbarossa in 1538. Being one of the Eastern islands, it does not form a part of the present kingdom of Greece. A little to the South-West of Thera or Santorini are the islets Ascania, called Le Christiane by the moderns, lying in 36° 14' 40" N. and 23° 12' 54" E., and between 60 and 70 miles to the North-West is (13.) Pholegandros, celebrated by the ancient poets for its rocks and barrenness. (Strabo, x. 485. Antipater in *Analecta*, ii. p. 119.) It was sometimes called Phlegandros, and is named by the modern Greeks Polykandros, and is in 36° 37' 3" N. and 24° 55' 14" E. (14.) Sicinos, (ἡ Σίκινος,) still retaining its ancient name, and lying in 36° 39' 51" N. and 25° 6' 57" E., is larger than Pholegandros, and separated from it by a narrow passage, in the middle of which is Lagusa, (Λάγυσα,) an islet now called Kardiótissa, (ἡ Καδιώτισσα.) Sicinus was first called Cenoë, (Οἰνόνη,) from its

abundant produce of wine. To the East of it lies (15.) Iös, (Ἰος,) by the Italians Nio, in 36° 42' 44" N. and 25° 20' 58" E., which received its name from the Ionians, by whom it was anciently colonized. It has little wood, is less rocky, and more productive of grain than most of the islands in the Archipelago. (Sonnini, i. 283.) To the North-East of Ios are three small islands, lying to the South and South-East of Naxos: 1. Donysa or Donysia, celebrated by Virgil (*Æn.* iii. 125.) for its verdure, now called Heraclēa, or by apocope, Rákliā; (Ἡράκλεια;) 2. Schínussa, (Σχίνουσσα, 'lentisc-clad,' Steph. Byzant.) which retains its ancient name; and 3. Nicasia, (ἡ Νικασία, Steph. Byz.) sometimes called Karo, in 36° 53' 29" N. and 25° 40' E. Of these, the last only is inhabited. To the North-West of it are the small islets Phacusa, (Φάκουσσα,) Pyrrha, and Kiero, (Κιέρω,) also called Kophínissa; Letandros, Pyrrha, called by Tournefort (i. 226.) Stenosa, (Στενοῦσα,) is an uninhabited rock, East of Naxos and North-East of Nicasia.

South of it is (16.) Amorgos, (ἡ Ἀμοργός, Melet. iii. 221.) in 36° 50' 40" N. and 25° 55' 54" E., which has been previously noticed. (*Ency. Met.* xvii. 508.) Cinnara (Κινάρα) and Lebinthus, (Λέβινθος,) easily corrupted into Lévitro, (Λέβιτρος,) whence the *Levita** of the Italian seamen, are two small uninhabited isles North-East of Amorgos, the latter being due West of Calymna.

Syme, (ἡ Σύμη, Il. ii. 671.) in the gulf of Doris, still bearing its ancient name, lies in 36° 34' 40" N. and 27° 47' 19" E., and is a small, rocky, barren islet, well cultivated by its numerous inhabitants, 7000 in number, who gain a livelihood principally by cutting down timber on the neighbouring continent and gathering sponge on its shores, which produce they export as far as Alexandria. Their payments to the Turkish government are estimated at 27,000 piastres, now worth about £250. This island was anciently called Metapontis, from its place near the open sea; Ægle, from its shining rocks; and Carice, i. e. Carian, from the adjoining state. It was visited in 1837 by Mr. Brook, whose observations were published in the *Journal of the Geographical Society*, (viii. 129.) To the South of it are the rocks and picturesque islet called Kiskilies,† the hydrography of which is fully detailed by that enterprising traveller.

As Syme was considered as belonging to the Dorian colony in Asia, and that part of Caria demands a fuller notice than has hitherto been given in this work, (*Ency. Met.* xix. 301.) it may properly be added in this place.

Doris, or the Dorian colony in Asia, was founded by Phorbás, son of Lapithes, 396 years before the taking of Troy, or B. C. 1580, and his son Triopas subsequently made himself master of the Triopian promontory, (Τριόπιον, Calokrió,) near which he founded Cnidus, (Κνίδος,) the capital of Doris, which, strictly considered, comprehended only the peninsula Triopium, Syme, and the island of Rhodes; though the rest of the Carian coast as far as Cannus, (Κόϊγῆζ,) consequently the whole of Peræa, is included in Doris by Ptolemy, as having been subject to Rhodes, which was a Dorian state. The Dorian Hexapolis or six confederated cities, a confeder-

* Meletius (iii. 221.) has Λιβίτρα, (Levitra,) but with regard to Asia and the Asiatic islands, he was too often obliged to rely on Molet, Niger, and similar uncertain guides.

† Perhaps this is the Latin word *quisquillæ*, "chips," "shaving;" Grecised; it does not, however, appear in the modern Greek authorities.

ration formed for a religious rather than a political object, were Halicarnassus and Cnidus on the continent; Cos, in the island so named; and Lindus, Jalyssus, and Camirus in Rhodes. That confederacy became a Pentapolis on the exclusion of Halicarnassus from the league in consequence of an act of sacrilege committed by one of its citizens, probably in the VIth Century before the birth of Christ. (Herod. i. 144.)

Halicarnassus, the residence of Artemisia, daughter of Lygdamis, and the native place of Herodotus, was placed on the shore of a deep bay opposite to the small island called Arconnesus, (Arrák átá-sí.) in $37^{\circ} 1' 45''$ N. and $27^{\circ} 25' E.$, (Beaufort,) and on the site of a town now called Búdrúm, (Cellar,) erroneously spelt Boudroun by most travellers, though written Μποδρούμ (Bodrúm) by Meletius (iii. 170.) in his *Geography* published so long ago as 1728. (*Ency. Met.* xxv. 436.) It was adorned by the celebrated mausoleum erected by Artemisia in honour of her husband and brother, the grief for whose loss broke her heart before that stupendous monument was completed. The eminent sculptors and architects engaged in the construction of it, completed their work, however, notwithstanding the death of the Queen, by which the hope of any reward beyond an undying fame was cut off. (Plin. *Nat. Hist.* xxxvi. 5. Strabo, xiv. 656.) That boon indeed they fully obtained, as similar monuments have received from their work a name now adopted in the language of every civilized nation, and the tomb of Mausolus was, even in the dark ages, remembered as one of the seven wonders of the world. This admirable monument was in the Acropolis called Salmacis, from a very clear and well-tasted spring, (Vitruv. ii. 8.) fabulously said to be gifted with wonder-working efficacy. (Ovid. *Met.* iv. 11.) Halicarnassus, once possessed of vast power and opulence in consequence of its double harbour, (Scylax, *Periplus*, p. 38.) was nearly deserted at the close of the Mithridatic war, but was restored by Cicero's brother Quintus, in his proconsulate. (*Ep. ad Frat.* i. 8.) It existed as an episcopal

See under the Metropolitan of Stauropolis till the VIIIth or IXth Century.

Cnidus,* (ἡ Κνίδος,) on a neck of land at the extremity of the Triopian peninsula, in $36^{\circ} 40' 30''$ N. and $27^{\circ} 21' 15''$ E. (Capt. Beaufort,) was the capital of the cities associated for the celebration of solemn games in honour of the Triopian Apollo, called "the Dorian Contest," (ὁ Ἀγὼν Δωριεὺς,) the assemblies for that purpose being held in a temple erected on the Triopian promontory. (*Schol. in Theocrit.* xvii. 69.) The Cnidians having assisted the Romans, as the allies of Rhodes, long enjoyed their freedom. (Plin. *Nat. Hist.* v. 8.) They were great lovers of the arts; and, among other master-pieces, possessed the Venus of Praxiteles, a desire of seeing which was alone sufficient, says Pliny, (iv. 12.) to lead many to take the trouble of making a voyage to Cnidus. Venus, as the patroness of seamen, was a peculiar object of adoration in that city, and supposed to delight in her abode there. (Catull. xxxvi. 11.) The Cnidians also possessed an inestimable picture by Polygnotus. (Pausan. *Phoc.* c. 25.) The territory of Cnidus, which comprehended the whole of Triopium, was very productive, and celebrated for its reeds, which were highly prized by scribes. (Plin. xvi. 64.) The narrow isthmus between Triopium and the continent of Asia, little more than five miles in breadth, through which the Cnidians attempted to cut a canal, (Herod. i. 174.) is probably opposite to Syme, in $27^{\circ} 45' W.$, but for a solution of this and other interesting problems respecting the ancient geography of the gulf of Cos, reference must be made to the survey now carried on by the naval officers under the direction of Captain Graves, whose zeal and ability have already cleared up so many difficulties previously inexplicable.

Cnidus.

SPORADICAL, Gr. σποραδικός, from σπειρ-ειν, *spargere, dispergere*, to spread, to disperse.

For the application to disease. See the Quotations.

These I call intercurrent or *sporadick*, because they happen at any time when epidemics rage.

Sydenham. *Works*, ch. i. p. 3.

A *sporadical* disease is, what in a particular season affects but few people.

Arbuthnot.

SPORENDONEMA, in *Botany*, a genus so named by Desmazières from the Greek σπορος, *a seed*, ενδον, *within*, and νημα, *a thread*. It belongs to the class *Cryptogamia*, and order *Fungi*. Generic character: sporidia rather large, disposed in rows within the tubular pellucid flocci.

Of this genus there are two known British species, *S. casei*, growing on old cheese, and *S. muscæ*, growing on dead flies, adhering to leaves, ceilings, &c.; the first is in pulvinate red tufts, and the second in white tufts.

SPORLERDERA, in *Botany*, a name given by Hampe. It belongs to the class *Cryptogamia*, and order *Musci*. Generic character: theca closed; calyptra large, mitre-formed or campanulate entire.

A genus nearly allied to *Phascum*, consisting of a single known species, *S. Beyrichiana*, a native of North America, near Baltimore.

SPOROBOLUS, in *Botany*, a genus so called by R. Brown from the Greek σπορος, *a seed*, and βαλλω, *to cast forth*, in reference to the seeds being free from the chaff. It belongs to the class *Triandria*, order *Digynia*, and the natural family of *Gramineæ*. Generic character: glumes one-flowered, two-valved, awnless, unequal, the outer valve the smallest; perianth two-valved, awnless, acutish, sessile, beardless, longer than the glume; hypogynous scales two; stamens two or three; styles two; stigmas villous; seed obovate, ventricose, free, deciduous.

A genus separated from *Agrostis*, consisting of above ten species; they are tropical grasses, scarcely ever found beyond 35° latitude. The flowers are paniced, the neck of the sheaths bearded, and the ligula obsolete.

SPOROCHNOS, in *Botany*, a genus of sea-weeds, so called by Agardh from the Greek σπορα, *a seed*, and χνός, *wool*, on account of the receptacles being crowned by fascicles of pencilled hairs. It belongs to the class *Cryptogamia*, and order *Algæ*. Generic character:

* "Now called Stadiá (Σταδία) according to some," says Meletius, (iii. 172.) which shows that he had no good authority for the modern name.

SPO-
ROCH-
NOS.
—
SPORT.

Fronds filiform, cylindrical, or compressed, cartilaginously membranous; fruit a claviform, articulated thread, aggregated and radiating into scattered warts, or concentrated in clavate receptacles which are crowned by fascicles of pencilled hairs.

A genus separated from *Fucus*, consisting of seven British species; they are olive-green or yellowish-brown plants, inhabitants of the ocean and sea-shore.

SPOROCYBE, in *Botany*, a genus so called by Fries from the Greek *σπορος*, a seed, and *κεφαλη*, a head, on account of the sporidia being in a terminal head. It belongs to the class *Cryptogamia*, and order *Fungi*. Generic character; sporidia simple, conglobated into a terminal head; flocci rather fibrous.

Of this genus there are two known species; they are small black plants growing on decayed stems of vegetables.

SPOROTRICHUM, in *Botany*, a genus so called by Link from the Greek *σπορος*, a seed, and *τριχ*, a hair, on account of the sporidia growing on hair-like flocci. It belongs to the class *Cryptogamia*, and order *Fungi*. Generic character: flocci erect or tufted, at length flaccid and decumbent, branched, septate, uniform; sporidia free, simple, at first interwoven with or covered by the flocci, at length scattered over them.

There are seven known British species of this genus; they grow generally on decayed vegetable substances, and they are either white, blackish, or sulphur coloured.

Bids thee leaue these, and with her soueraigne grace,
Here on this grasse-plot, in this very place
To come and *sport*.

Shakspeare. The Tempest, fol. 14.

Sporting the lion ramp'd, and in his paw
Dandl'd the kid.

Milton. Paradise Lost, book iv. l. 343.

And, them before, the fry of children yong
Their wanton *sportes* and childish mirth did play,
And to the maydens sounding tymbrels song
In well attuned notes a ioyous lay.

Spenser. Faerie Queene, book i. can. 12.

Who says these Romish pageants been to high
To be the scorne of *sportful* poesy?

Hall. Satire 7. book iv.

When sadness dejects me, either I countermine it with another sadnesse, or I kindle squibbs about me again, and flie into *sportfulness* and company.

Donne. Letter to Sir H. G., p. 288.

For the question you there put, you do it I suppose but *sportingly*.

Hammond. Works, vol. i. fol. 193. *Copy of Papers passed at Oxford*.

Sad language fits sad lookes; stuff'd menacings,
The angry brow; the *sportive*, wanton things;
And the severe, speech ever serious.

Ben Jonson. Horace. Art of Poetrie.

One of thy tressed curls there falling down,
As loth to be imprison'd in thy crown,
I saw the soft air *sportively* to take it,
And into strange and sundry forms to make it.

Drayton. The Duke of Suffolk to the French Queen.

Shall I conclude her to be simple, that has her time to begin,
or refuse *sportiveness* as freely as I have?

Walton. Angler.

Out of her window close she blushing peeps;
Her weeping eyes in pearled dew she steeps;
Casting what *sportless* nights she ever led.

Fletcher. Piscatory Eglogue 7.

And, while the robes imbibe the solar ray,
O'er the green mead the *sporting* virgins play,
Their shining veils unbound. Along the skies
Tost, and retost, the ball incessant flies.
They *sport*, they feast; Nausicaa lifts her voice,
And, warbling sweet, makes earth and heaven rejoice.

Pope. Homer. Odyssey, book vi.

In areas vary'd with mosaic art,
Some whirl the disk, and some the javelin dart,
Aside, sequester'd from the vast resort,
Antinous sate spectator of the *sport*.

Id. Ib. book iv.

When *sportful* coots run skipping o'er the strand.

Dryden. Virgil. Georgics, book i.

Now there is nothing more surprising in its own nature than to see or hear a serious thing *sportfully* represented, and dress'd up in an antick and ridiculous disguise.

Scott. Christian Life, part ii. ch. iii. fol. 215.

If a history so circumstantiated as that is, shall be resolved into fable or parable, no history whatever can stand secure, but a wide door will be opened to the roivings of *sportive* wit or wanton fancy.

Waterland. Works, vol. vi. p. 16. *Preface to Scripture Vindicated*.

Where the linnets sit and sing,
Little *sportlings* of the spring.

Swift. On a Lady's Spaniel.

Ye days, that balmy influence shed,
When sweet childhood, ever sprightly,
In paths of pleasure *sported* lightly,
Whither, ah whither are ye fled!

Beattie. Ode to Hope.

SPORT-
ING.

We had a pleasant day, and the evening brought us all on board; myself and party met with good sport.

Cook Voyages, vol. iii. book i. ch. iv. p. 82.

So sportive is the light
Shot through the boughs, it dances as they dance,
Shadow and sunshine intermingling quick,
And dark'ning, and enlight'ning as the leaves
Play wanton, ev'ry moment, ev'ry spot.

Cowper. The Task, book i.

When again the lambkins play,
Pretty sportlings full of May.

Philip. To Miss Carteret.

Gray dawn appears; the sportsman and his train
Speckle the bosom of the distant plain.

Cowper. Progress of Error.

Divisions
of subject.

SPORTING. This subject may be conveniently divided into the several heads of hunting, coursing, shooting, horse-racing, and angling, all but the latter being usually designated by the term field-sports. HUNTING, COURSING, and ANGLING (see those Articles) have each been separately treated of in this work, and will not therefore form any part of the present notice. The sport derived from hawking has also been described under the head FALCONRY. We shall confine our attention now to the terms shooting and horse-racing, adding, however, to our observations on the former some account of the alterations which have taken place in the Game Laws since the publication of our Article under that title in the year 1828. A few words will also be subjoined in reference to Skating, which, though not properly a field-sport, may be conveniently introduced as one of the favourite pastimes of the English.

Origin of.

It is unnecessary in this place to enter into the discussion whether or not the custom of shooting or projecting missiles at animals and birds was originally resorted to for the purposes of utility or recreation, as it seems very generally admitted that the procurement of food was the primary motive of this, as it undoubtedly was of the practice of hunting; and indeed in the progress of our inquiries we shall not fail to observe that the art of fowling seems to have been formerly looked upon as a mean of subsistence rather than as an amusement, although in our own time its original object has entirely given place to its charms as a sport, combining the two-fold advantages of wholesome exercise and the display of skill.

The bow.

The use of the bow for the purposes of Sporting, whether in shooting at birds or deer, prevailed in this country as early as the VIIIth Century, as appears by illuminations in manuscripts of that date, in some of which the sportsman is represented as accompanied by his dog, in others not; and, notwithstanding the introduction of gunpowder into Europe, which is said by some to have taken place in the XIIIth and by others in the XIVth Century, the bow, as a Sporting instrument, was certainly not entirely disused in the XVIth and XVIIth.

Roger As-
cham 1544.

Roger Ascham, in his work entitled *Toxophilus*, which was written in 1544, but not published until 1571, in a humorous description of the various absurdities of position into which some archers throw themselves when practising the art, observes, "Another draweth his shaft lowe at the breast, as though he would shoote at a roving marke . . . ; another coureth down . . . as though he would shoote at crows;" and Nichols, in the second volume of his *Progresses*, states that when Queen Elizabeth visited Lord Montacute at Cowdrey in Sussex,

"her highness tooke horse and rode into the park, at eight o'clock in the morning, where was a delicate bowre prepared, under the which were her highness musicians placed; and a cross-bow, by a nymph, with a sweet song was delivered into her hands, to shoote at the deere; about some thirty in number were put into a paddock, of which number she killed three or four, the Countess of Kildare one;" and Strutt, in his *Sports and Pastimes*, p. 29, in observing upon the various modes of fowling, says, "there may also be added bows and arrows, which answered the purpose of guns before they were invented and brought to perfection."

The earliest mention of the gun and its description as a fowling-piece is to be found in Gervase Markham's book, entitled *Hunger's Prevention, or the whole Arte of Fowling by Water and Land*, after speaking of several modes of conducting the sport by "nettes, gunnes," &c., it proceeds:—"The next engine to these is the gun or fowling-piece, which is a generall engine, and may serve for any fowle, great or little whatsoever, for it hath no respect at what it striketh, being within the levell: and of the fowling-piece you shall understand that to be the best which is of the longest barrell, as five foote and a halfe, or six foote, and the boare indifferent, some what under Harquebush, for these hould the best charges, and carry the farthest levell, which is a principall thing to be regarded; for fowle are of such a tickell and cunning nature, that a man shall hardly get within any indifferent or neare station, and to shoote out of levell or distance were to shoote against the winde, and scarr-crow like, onely to affright fowle with the losse of labour; as for the shape or manner of it, 'tis better it be a fier Locke or snaphaunce than a cocke and tricker, for it is safer and better for carriage, readier for use and keepes the powder dryer in all weathers, whereas the very blowing of a coale is many times the losse of the thing aymed at; as for the charge, your round haile-shot or drop-shot is better than the single or doble bullet, and this haile-shot would be of bignesse according to the game you shoot at, which, if it be great and large, then it would be of twenty or thirty to a charge, or lesse as the piece will carry; but if the game be small then it would be of fortie or three-score, as shall seeme best in the discretion of the fowler; Now for the use of this Fowling-Piece, it is either for land or water what is passable, or may bee waded, as whether it bee in Fenne, upon Plash or Pits, or any other blank-water; and herein first the fowler is to observe the finding out of his game, and which fowle lyeth fittest for his purpose, at no time striving to shoote at a single fowle, if he can by any means compasse more within his levell; then he shall seeke as neare as he can to shoote with the winde, not against the winde, and rather side waies or behinde the fowle than full in their faces, then hee shall seeke the convenientest shelter hee can finde, as either hedge, banke, tree, or any other shaddow which may hide him from the gaze of the fowle, for they are so fearefull of the proportion, visage, or motion of a man, that upon the least suspition they are gone in a moment, and therefore when under his covert or pertision he is gotten within his levell and hath the winde fit and certaine, then hee shall make choyce of his marke, which (as before I said) would in no wise be a single fowle, having more within your levell, but rather the longest and largest ranke or file of fowle you can find, for since one shoot is as much as you can get at one time and in one place, it is meete you put it to as great use and

profit as you can possibly, which done you may instantly and speedily discharg, and then send forth your dogge to fetch what you have stricken, both as well those which are slaine out right as those which are hurt and maymed; and being so as you cannot your selfe conveniently come by them; but by all meanes you must have your dogge in such true obedience that hee may not stirre from your heeles, or let so much as his shadow be perceived, till you have shot and yourselfe bid him goe, for to rush forth too suddenly or upon the first fire or clap of the snaphaunce, though the piece goe not off, (as many mad headed currs wil doe,) is many times the losse of very much good sport; which to avoyd suffer not your dogge to stirre till you bid him; Thus as you doe upon these blanke waters, so you shal also doe upon the brooks and greater rivers, where if you have not shelter sufficient by reason of the nakednesse of the bankes and want of trees, then you shall creepe upon your hands and knees under the bankes, and lying even flat upon your belly, put the nose of your piece over the banke and so take your levell; for a fowle is so wonderfully feareful of a man, that albeit a hawke were turning over her to keepe her in awe yet upon the least shew of a man shee will rise and trust to her winges and fortune." In many parts of this description the reader will not fail to observe that the present practice has little varied, as he will see when he comes to the observations on wild fowl shooting.

Anatomy
of Melan-
choly,
1624.

The next mention of the gun, as referring to sporting, is in the following passage in Burton's *Anatomy of Melancholy*, published in 1624. After descanting upon the pleasures of hawking and hunting, he proceeds, "Fowling is more troublesome, but all out as delight-some to some sorts of men, be it with guns, lime, nets, glades, ginnes, strings, baits, pitfalls, pipes, calls, stawking-horses, setting-dogges, coy-ducks, &c. or otherwise."

Jewell for
Gentrie,
1614.

It is somewhat singular that the only direct mention of the gun as an instrument of sporting is in the elaborate description given above, and indeed in most of the treatises upon the art of fowling we find that the mode of proceeding was by any of the modes mentioned by Burton rather than by the gun. Thus, in the *Jewell for Gentrie*, said to be a reprint in 1614 of a former work, but very materially altered from it, and both evidently compiled from the *Book of St. Albans*, is a full account of how to trap, lime, and otherwise ensnare birds, but not a word either of the bow or of the gun; and the earlier work, the *Book of St. Albans*, written about 1481, and printed soon afterwards, is not only silent with respect to the gun, but no expression occurs referring to the bow, even as an auxiliary in the practice of hunting; a circumstance the more observable, as in the book mentioned by Strutt, as having been composed nearly a century before by the master of the game to King Henry IV., and drawn up for the use of the Prince of Wales his son, very full directions are contained, as well as to the shooting at the game with bows as following them with dogs. Mr. Strutt, *Sports and Pastimes*, p. 15, gives the substance of them as follows:—

Book of
St. Albans,
1481.Book by
the master
of the game,
XVth Cen-
tury.

"When the King shall think proper to hunt the hart in the parks or forests, either with bows or greyhounds, the master of the game and the park-keeper or the forester, being made acquainted with his pleasure, shall see that every thing be provided necessary for the purpose. It is the duty of the sheriff of the county wherein the hunting was to be performed, to furnish fit stabling

VOL. XXVII.

for the King's horses, and carts to take away the dead game. The hunters, and officers under the forester, with their assistants, were commanded to erect a sufficient number of temporary buildings for the reception of the royal family and their train; and, if I understand my author clearly, these buildings are directed to be covered with green boughs, to answer the double purpose of shading the company and the hounds from the heat of the sun, and to protect them from any inconvenience in case of foul weather. Early in the morning, upon the day appointed for the sport, the master of the game, with the officers deputed by him, ought to see that the greyhounds were properly placed, and the person nominated to blow the horn, whose office was to watch what kind of game was turned out, and, by the manner of winding his horn signify the same to the company, that they might be prepared for its reception upon its quitting the cover. Proper persons were then to be appointed at different parts of the enclosure, to keep the populace at due distance. The yeoman of the King's bow, and the grooms of his tutored greyhounds, had in charge to secure the King's standing, and prevent any noise being made to disturb the game before the arrival of his Majesty. When the royal family and the nobility were conducted to the places appointed for their reception, the master of the game, or his lieutenant, sounded three long mootes for the uncoupling of the hart hounds. The game was then driven from the cover, and turned by the huntsman and the hounds so as to pass by the stands belonging to the King and the Queen, and such of the nobility as were permitted to have a share in the pastime; who might either shoot at them with their bows, or pursue them with the greyhounds at their pleasure."

The bow certainly appears, in the opinion of Mr. Strutt, (p. 29,) to have been used for the purpose of fowling, independent of its application as an assistance in hunting; for he says, "The *stalking-horse* originally was a horse trained for the purpose, and covered with trap-pings, so as to conceal the sportsman from the game he intended to shoot at. It was particularly useful to the archer by affording him an opportunity of approaching the birds unseen by them, so near that his arrows might easily reach them; but as this method was frequently inconvenient, and often impracticable, the fowler had recourse to art, and caused a canvass figure to be stuffed, and painted like an horse grazing, but sufficiently light that it might be moved at pleasure with one hand. These deceptions were also made in the form of oxen, cows, and stags, either for variety, or for conveniency sake. In the inventory of the wardrobes belonging to King Henry VIII., we frequently find the allowance of certain quantities of stuff for the purpose of making *stalking-coats* and *stalking-hose* for the use of his Majesty." For the general description of the stalking-horse Mr. Strutt does not cite any authority, and there is no mention of the horse so trained in the *Jewell for Gentrie*, nor in Gervase Markham's *Gentleman's Aca-*

SPORT-
ING.

shooting at "fowle," the use of the stalking-horse, and the value of a well-trained dog. Alluding to the natural shelters for the fowler mentioned in the former extract, he observes: "Now for as much as these shelters or coverts are after a way then found, that Fowle doe many times lye so farre removed within the water that unlesse a man doe goe into it where no shelter at all is, more than a man bringeth with him, he cannot possibly compasse a shoote; so that of necessity a man must have some moving shaddow, or shelter to walke by him; in this case there is nothing better than the Stalking Horse, which is any old jade trayned up for that use, which, being stript naked, and having nothing but a string about the neather chappe, of two or three yards longe, will gently, and as you have occasion to urge him, walke up and downe in the water which way you will have him; flodding and eating upon the grasse or other stuffe that growes therein; and then being hardy and stout without taking any affright at the report of the piece, you shall shelter yourselfe and your piece behind his fore shoulder, bending your body downe low by his side, and keeping his body still full betweene you and the Fowle; Then haveing (as was before shewed) chosen your marke, you shall take your levell from before the fore part of the Horse, shooting, as it were, between the horses neck and the water, which is more safe and surer than taking the levell under the horses belly, and much lesser to be perceaved; the shoulder of the horse covering the body of the man, and the horses legges shaddowing the legges of the man also: and as thus you stalke upon the great blanke waters, so you may stalke also along the bankes of brookes or great rivers, by little and little winning the fowle to as neare a station as can be desired, and thus you may doe also upon the firme ground, whether it be on moor, heath, or other rotten earth, or else upon the tylthe where greene corne groweth; or generally, in any other haunt where fowle are accustomedly usde to feede or abide. And as you make use of this stalking-horse, so must you not in any wise want your water-dogge, for he is as usefull at this time as at any other, nor can you well doe any thing without him; especially if it be upon rivers or broad deepe waters; yet you should have him at such obedience that whilst you are stalking you may leave him with your bagges, saddle, and bridle, and other needments, where he may lye close, and never stirre till you have shot, and then upon the least gybbet or call to come running unto you, and to fetch forth what you shall kill, which, with a small practice, he will doe readily and willingly after you have made him understand your minde, for they are creatures of wonderfull great capacity, and naturally inclyned to the sport, so that being in true awe there is nothing which they will not with great readinesse performe. Now forasmuch as these stalking-horses, or horses to stalke withall, are not ever in readinesse, and at the best aske a good expence of time to be brought to their best perfection: as also, in that every poore man or other which taketh delight in this exercise, is either not master of any horse, or if he had one, yet wanteth fit meanes to keepe him: and yet neverthesse this practice of fowling must or should be the greatest part of his maintenance," the author proceeds to describe that artificial ones may be constructed of canvass, either stuffed or unstuffed, in the shape of, and painted to imitate the colour of a horse, ox, stag, or even a hedge or bush, though it must be confessed that the specimens or patterns afforded by the

wood-cuts accompanying the work would draw largely on the credulity of the animal kingdom if the fowler were fortunate enough to stalk successfully by their means. He also mentions that some sportsmen only use the imitation of the head of some animal placed over their own, on the supposition that it is only the human face that is so alarming to the fowl; but he does not recommend such a practice.

At what precise time the gun came into general use for the purpose of killing game it is now unimportant further to inquire; certain it is that in no great lapse of time after its introduction on a small scale it wholly superseded, and has continued to exclude, the bow as an implement of sport. Under the name of hand-gun it is generally said to have been introduced into this country in the early part of the XVIth Century, though Grose, in his *Military Antiquities*, vol. i. p. 153, on the authority of Leland, dates that event as occurring in 1471. However this may be, it seems clear from the testimony of Gervase Markham and Burton, that in the early part of the XVIIth Century guns were used for the purpose of sporting; and Strutt, p. 45, referring to *Gesta Grayorum*, which was printed 1594, makes mention that at a still antecedent period the demy-hag or hag-butt was used to shoot at birds and beasts.

The first name given to small arms was harquebuss, a word said to have been derived from the Italian *arcobousa*, or bow with a hole, and they have been successively designated harquebuss, hackbut, hand-gun, match-lock, musket, snaplace, petrinall, firelock, carabine or carbine, and fowling-piece, the latter a name which, we have seen from Markham, they have retained from 1621 to the present day.

Shooting, in sportsmanship, is understood to be the killing of game by the gun with or without the help of dogs. Upon this head we shall give such directions as appear most important to be observed by the sportsman, and add a general notice of the several kinds of shooting, coupled with remarks upon the use of the detonating and the flint gun-lock, for most of which we shall be indebted to the able work of that veteran and experienced sportsman, Lieutenant-Colonel Hawker, in whose *Instructions to Young Sportsmen* the tyro may find all that can be learned from books, whilst the older shooter may have his opinions confirmed or his doubts removed.

If the shooter be a complete novice, first, let him take a gun that he can manage, and be shown how to put it to his shoulder, with the breach and sight on a level, and make himself master of bringing them up to a wafer. Then, with a wooden or bone driver, instead of a flint, or any thing to protect the lock from the concussion, if a detonater, let him practise at this mark; and when he thinks he can draw his trigger without flinching he may present the gun to the right eye of any person standing opposite to him, who will be able then to see at once if he is master of his first lesson. In doing this he must remember that the moment the gun is brought up to the centre of the object, the trigger should be pulled, as the first sight is always unquestionably the best. Then let him go out to practise at a card with powder till he has got steady, and afterwards let his gun be loaded occasionally with shot, but never let the time of this addition be known to him, and the idea of it being, perhaps, impossible to strike his object, will remove all anxiety, and he will soon become perfectly collected. The intermediate lesson of a few shots at small birds, may be given; but this plan throughout

Shooting.

Rules for
beginners.

SPORT-
ING.

must be adopted at game, and continued, in the first instance, till the pupil has quite divested himself of all tremor at the springing of a covey, and observed in the last, till most of his charges of shot have proved fatal to the birds.

The beginner should keep his gun moving as follows:—before an object crossing; full high for a bird rising up, or flying away very low; and between the ears of hares and rabbits running straight away; all this, of course, in proportion to the distance; and if we consider the velocity with which a bird flies, we shall rarely err by firing when at fifty yards at least five or six inches before it. As the barrels of double guns usually shoot a little inwards at long distances, there is so far a preference in favour of the right barrel for an object crossing to the left, and *vice versa*, that if we were beating along the side of a hedge it would be best to keep the barrel next to it in a state of preparation. Till the pupil is perfect in all this he will find great assistance from the sight, which he should have precisely on the intended point when he fires. He will thus, by degrees, attain the art of killing his game in good style, which is to fix his eyes on the object, and fire the moment he has brought up the gun.

Distance.
Detonater
and flint.

As to distance, it should be observed that there is a material difference between shooting with a detonater and a flint gun. As a detonater goes so very much quicker than a flint, it becomes necessary, in firing one, to avoid shooting too forward; if therefore a detonater is used only half the allowance should be made, that is, where the sportsman would fire six inches before a bird with a flint, he should fire only three with a detonater, and so on. This rule should be always borne in mind when distance is spoken of in this Article, as it will always be the flint gun which is named. With regard to the distance which constitutes a fair shot, there is no speaking precisely, but as far as it can be averaged, if a gun be held straight, a bird should scarcely ever escape at forty yards, which is the outside of point-blank range, although, at fifty yards, the chances are three to one in favour of killing, with a good aim; but as a gun never shoots twice alike, a bird at this distance may sometimes be struck with three or four shots, and at others may escape through an interval, though the piece be never so well directed. But, if a pellet should take a bird in a vital part, or the wing, at seventy or even eighty yards, it would, perhaps, come down, though the probabilities are against the bird being hit at all at that distance. Birds flying straight away or coming to you, require a much harder blow than those crossing or flying directly over your head, by reason that, in the first instance, they are partly shielded by the rump, and, in the second, the feathers are apt, at long distances, to glance the shot.

Finishing
directions.

For completing the study of shooting, the able writer before named gives the following directions. In killing snap-shots, fix your eyes, and immediately pitch your gun and fire, as it were, along, or rather over the backs of the birds. Recollect they are generally rising, and not flying forwards, when you take them very quick; and that as the birds required to be so taken are usually at a distance, an elevation, at all events, can do no harm. If you have a double gun, always contrive as much as possible to get cross shots, (which you will most likely do by walking across, or heading your dog, instead of going, like a bungler, directly from him to the game,) or otherwise your second barrel birds, by flying straight

away up wind, down wind, or, in short, in the smoke, may sometimes defy the best shot in Europe. Recollect further, that, as birds fly across you, they not only become clear of the smoke, but give you more time, and present to your charge a more vital part.

In firing at random distances, where birds are crossing you at the distance of sixty or seventy yards, the average of good shots generally present not more than half a foot before them. But it should be recollected, that after the shot has been driven through the air to the point-blank distance, it travels so much slower, that the allowance must be greatly increased; and that, although a few inches may be sufficient to fire before a fair cross shot, yet at sixty or seventy yards I should fire at least two or three feet before the bird, if it went with any velocity; yes, even with a detonater I should do so at this distance. In shooting by guess at rabbits, or any thing in covert, fire at least a foot or two before the object, because, on losing sight of it, your hand will imperceptibly obey the eye in coming to a short of check, by which you will invariably shoot a long way behind it.

In walking up to your dogs, in turnips or high stubble, when birds are wild, lift your legs high; and by thus making less noise, you will get twice as near to your game. In an open country, where the stubble is thin, advance as quiet as possible, tread light, and crouch your body as low as you can. Why does a pointer sometimes get within ten yards, when the birds fly up from the shooter at above a hundred? Because a dog is so low the birds cannot see him, and rapidly advances on them without making a noise.

If a dog stands at a high hedge, go yourself on the opposite side, and let your servant be sent where the dog stands. When he hears you arrive opposite, let him call to you, and when you are ready for him to beat the hedge, give a whistle, because a bird, being less alarmed at a whistle than a man's voice, will most likely come out on your side. Some people heigh the dogs in. This, I need not tell a sportsman, is the way to spoil them, and to prevent them from being staunch on such occasions.

In boisterous weather, contrive, as much as you can, to sport on the windward part of your beat, or you will drive the birds away from your own property to where they may fall a prey to other shooters, or be driven into the heart of another manor by some knowing game-keeper. Many old sportsmen will not beat their ground at all in windy weather. This I hold to be bad, for birds run a great deal when it blows hard, and by such means often run out of bounds. When birds are young and tame, a windy day is generally the ruin of good sport; but when they are strong and wild, the most boisterous weather is frequently the best for one who shoots quick and well, as the birds cannot hear so far, and will often lie the closer for the sake of shelter.

Before proceeding with a sketch of the various sorts of game usually shot at, we will add a few remarks upon the relative merits of the flint and the detonating gun, and an ingenious direction for trying the goodness of gun barrels. That a detonater shoots more quickly than a flint gun is admitted on all hands, but that it does not shoot so strongly is obvious from the following experiments made by Colonel Hawker:—1st. Trial of a 17 pounds duck gun at fifty yards, loaded with four ounces of B. B. shot, (containing 58 pellets to the ounce,) and rather more than an equal measure of fine cylinder-powder, at a sheet of paste-board, and twelve sheets of thick brown

Trial of
barrels.

Take out the breeching, and having ascertained that the barrel is free from flaws or unsound places, fire

about a dozen or twenty shots at a quire of the thickest brown paper, by which will be known to a certainty both the strength and closeness with which the shot is driven. The strongest and most regular shooting gun is the best, provided it does not throw the shot so thin as for a bird to escape between them. Shot fired against a plate of iron, white-washed before each shot, will also show this, as the stronger the gun shoots the flatter the pellets are beat, and the larger therefore the dark spots will appear on the white surface.

A barrel may be pretty good, and perfectly safe, and yet not able to bear the scientific inspection of a first-rate maker or judge, that is, to hold the barrel up to the window, and gradually raise it till the shade from above the window runs along its surface, by which inspection the most trifling want of finish will be easily discovered. For instance, if a barrel really good be examined in this manner, the shade will run along it like the even surface on a flow of smooth water, but if it be finished by an inferior hand, the iron will appear all in bumps, as if that flow of water was agitated by wind. To inspect the inside of a barrel, raise it in like manner, and if the stream of shade, as it were, flows true and steady, the boring may be considered straight, and free from any palpable defect.

It is a common practice with young, and sometimes Partridge even with old sportsmen, to go out at break of day, but shooting. as the birds at this time are on their feed they seldom lie well. When sprung from the run they are pretty sure to take wing together, and being once disturbed in this state, it becomes afterwards much more difficult to disperse them than if they had been left quiet till the dew had dried on the stubble. Secondly, the sportsman throws off with long shots instead of fair ones. From about three till six o'clock in the *afternoon*, in the early part of the season, is the time at which all the best shots are to be got. The birds are then scattered and driven to the low grounds and meadows, where, with steady dogs, they may be found, one or two at a time, and kicked up as fast as the gun can be loaded and fired. The first object to be attended to is, to have good markers, judiciously placed, and then to disperse the birds; the best way to do which, is to head the dogs, by taking an extensive circle. The second is, to make no more noise than what cannot absolutely be avoided, by doing as much by signal and whistling, and as little by hallooing as possible. Thirdly, to go first on hills to find, and drive down from them, the birds, and then in vales to kill them. Fourthly, when distressed for partridges in a scarce country, at the end of a season, to take a horse and gallop from one turnip field to another, instead of regularly slaving after inaccessible coveys. After a storm, as soon as the ground is dry, or the next day, birds will lie in a calm; and after a calm they will lie in windy weather. They are frequently as much on the listen as on the watch, and this is why, towards the end of the season, the sportsman sometimes does best in boisterous weather. A young marker should always be Marker. told that he must carry his eyes well forward when a covey of birds begin to skim in their flight, and consider, that as they may continue doing so for a field or two, he cannot safely say that he has marked them down till he has seen them stop and flap their wings, which all game must do, before they can alight on the ground.

As to the proper period of the day for shooting grouse, Grouse similar observations apply as those relating to the par- shooting. tridge. The chief difficulty to be guarded against, is the

SPORT-
ING.

SPORT-
ING.

manœuvre of the old cock, who runs cackling forward, in order to lead the shooter away from the brood. A dog who has been used to the sport will sometimes head him, and be too cunning for him, or at all events will not suffer him to prevent the sportsman from getting a good shot at the rest of the pack. To find muir-game at the beginning of the season, as many pointers or setters as can be got to hunt steadily together should be taken. To kill them, when found and marked down, all but one staunch dog should be taken up. For shooting grouse, a fine sunshiny day should be selected, from about eight till five o'clock in August or September, and from about eleven until three o'clock at the latter period of the season, as they are then extremely wild, and will only lie tolerably during the few hours which are favoured by a warm sun. Unless the weather is very fine, they will run and get up four hundred yards before the shooter, in which case one person should take an immense circle, so as to head them, while the other remains behind, to press them forward when he is ready. Grouse take a harder blow than partridges, and do not fly quite so regular and steady. Scotland is the best place for this sport, as the heather there being much higher, they will lie closer than in Yorkshire and the other moors of England; add to which, the sport there has, in many parts, the pleasing addition of black-cock and ptarmigan shooting.

Black
game
shooting.

Black game, or black grouse, rise somewhat like young pheasants. At the commencement of the season they lie in the borders of Hants and Dorset tolerably well, and particularly if the weather is so hot as to drive them down to the bogs. The grey hen generally remains with the pack, which seldom consists of more than five or six birds. Nine or ten is considered a very large pack, except in winter, when the cock birds all congregate together in one flock, and in general defy every kind of fair shooting. The keeper's only chance is to keep concealed for their flight, as a black cock, although one of the wildest birds in existence, will, when once on the wing, seldom break his course or raise his flight, let what will intercept him. The old cock birds, even at the beginning of the season, are very difficult of access, as, on being approached, they keep running forward instead of remaining with the pack.

Pheasant
shooting.

For shooting pheasants, it often becomes necessary to start very early in the morning, as they are apt to lie during the day in high covert, where it is almost impossible to shoot them till the leaf has fallen from the trees. We can never be at a loss in knowing where to go for pheasants, as we have only to send some one on the previous evening, from the last hour before sunset, to watch the different barley or oat stubbles of a woodland country, and in these will be regularly displayed the whole contents of the neighbouring coverts. It then remains to be chosen which woods are the best calculated to shoot in; and when we begin beating them, it must be remembered to draw the springs, so as to intercept the birds from the old wood. If the coverts are wet, the hedge-rows will be an excellent beginning, provided care is taken to get between the birds and their places of security. If pheasants, when feeding, are approached by a man, they generally run into covert, but if they see a dog, they are apt to fly up. For one alone to get shots in a thick underwood, a brace or two of very well broke spaniels would be the best. But a sportsman with a very high-couraged old pointer, who would keep near him, and on being told would break his point, and

dash in and put the pheasants to flight before they could run out of shot, would probably be still more successful. This office may also be performed by a Newfoundland dog; but as first getting a point would direct the shooter where to place himself for a fair shot, the Newfoundland dog would always do best kept close to his heels, and only made use of to assist in this, and particularly for bringing the game; as we rarely see a pointer, however expert in fetching his birds, that can follow and find the wounded ones half so well as the real St. John's Newfoundland dog. It should of course be recollected, that the pointer kept for this purpose should never be taken with regular broke dogs.

SPORT-
ING.

The pursuit of woodcocks with good spaniels may be termed the fox-hunting of shooting. In a country where cocks are scarce, the shooter should be sure to put a marker in a tree before he attempts to flush one a second time; and when he has marked down a cock, he should remember how very apt he is to run, instead of rising from the spot in which he may have seen him drop. If a cock flies away, and continues to rise wild, the shooter should go safely beyond where the bird may have last dropped, and then back again to beat for him, (leaving some one to make a noise on the side where he has before advanced on him,) and he will then most likely lie close, or fly towards the gun. If this will not do, the sportsman should take his station quietly to windward, as cocks generally fly against the wind, and give a whistle when he is ready, and let the other person then draw on and flush him. His cry of "Mark!" will assist in frightening and driving the cock forward, and be a signal for preparation.

Cock
shooting.

For this sport a warm windy day is best, as snipes then usually lie better, and on being sprung, hang against the wind, and become a good mark. Should there have been much rain, time should be allowed for the wind to dry the rushes a little before the shooter begins to beat the best ground, as the snipes may not lie well. Although these birds frequent wet places, yet the very spot on which they sit requires to be dry to their breasts in order to make them sit close, or, in other words, lie well. If they spring from nearly under the feet, he should remain perfectly unconcerned until they have done twisting, and then bring up his gun and fire; but if he presents it in haste, they so tease and flurry, that he is apt to become nervous, and cannot bring the gun up to a proper aim. If, on the other hand, they rise at a moderate distance, he should fire instantly and bring them down before they begin their evolutions. When they cross, he should be sure to fire well forward, and in springing them should always contrive to get to windward of them, by which he will be more likely to prevent their moving, and seldom fail to get a cross shot, in taking which a young sportsman is not so liable to be confused by their twisting. To kill snipes, the shooter should first go silently down wind to walk up the wilder ones, afterwards let go an old pointer up wind to find those which may have lain so close as to allow him to pass, and before he springs them take care to make a circle and head his dog. He should look always for snipes in places which are not frozen. The worst time for shooting them is in a white frost, as they generally take to the uplands, or get into some rivulet, in small whisks or flocks, and spring up all together, instead of being well dispersed, and thereby affording a number of shots, as they do in boisterous weather. But after a frost has brought the snipes into the country,

Snipe
shooting.

SPORT-
ING.

they yield good sport on the first open windy day that follows. When once found, snipes should never be left, as they may disappear in a single night.

Sometimes a peculiar difficulty presents itself in the inconvenience of the place from which the sportsman is obliged to fire, sometimes being up to his knees in a rapid stream, at others tottering on a quagmire, or having to pull his leg out of stiff bog at every step, whilst the snipes are getting up so fast as to require the quickest shooting. In this case he should go as quiet as possible till he is firm on his legs; and he should at all times walk slow in treading on a bog, because if he step too fast, he is neither so steady nor so ready to stop and fire, and of course more liable to stumble on the springing of a snipe.

Wild fowl
shooting on
the coast.

Wigeon.

In following wild fowl, it is easier to get within twenty yards of them by going to leeward, than a hundred and fifty if directly to windward, so very acute is their sense of smelling. The best time, therefore, to have sport with a canoe and a shoulder gun, (provided it be low water, or half ebb, while the shooter is hid in the creeks,) is in clear, frosty, moonlight nights, when the wind happens to blow towards him as he faces the moon. It is then impossible for the wild fowl to smell him, and he may, by getting them directly under the light, have the most accurate outline of every bird, and even distinctly see them walking about at a much greater distance than a gun could do execution. From thus being on the shining mud banks they appear quite black, except some of the old cock wigeon, on the wings of which the white is often plainly to be seen. It does not follow, however, that nothing can be done without a bright moon. So far from it, that some old hands prefer but little moon, even for the mud, where, by constant habit, they can easily distinguish the black phalanxes of wigeon from the shades on the places they frequent, and particularly if they are feeding among the puddles which have been left by the tide. In this pursuit, and when not favoured by the best of light, the inexperienced shooter should take care to ascertain that the black patch to be seen is a flock of birds, which he will do by observing the occasional change of feature in the outside of it. Also, on approaching them, he should be careful that their enormous masses and tremendous noise do not deceive him in the distance, and tempt him to fire out of shot; and thirdly, not to be too eager in getting his dead birds, as it sometimes happens, in hard weather, that the remainder of the flock will again pitch down among them, particularly if some of the younger birds have been winged, which have not the cunning to make off for a creek like the old ones. In this case a reserved gun would probably more than double the produce of the first shot. It should be understood that this night shooting is chiefly at the wigeon, as the geese, of late years, since there have been so many shooters, have seldom ventured much in harbour by night, except sometimes at high spring tides, with a full moon; and the greater part of the ducks, teal, dunbirds, and such like, repair inland to the ponds and fresh springs, unless driven to the salt "feeding ground" by severe frost. A company of wigeon, when first collecting, may be heard at an immense distance, by the whistling of the cocks and purring noise of the hens; but when they are quietly settled, and busy at feed, the motion of their bills, which is similar to that of tame ducks, may be heard. They are never so readily disturbed by hearing as by smelling or seeing, in both of which they are very

quick, though in the latter less so than many other birds. Sea pheasants and teal are sometimes with them. SPORT-
ING.

If there should not be sufficient water for the shooter to approach the birds, he may either put his canoe into a creek or drain and wait until the return of the tide, with which he may gradually approach them as the water flows, or if that be too long a time to wait, he may go and return when the tide has risen to within one or two hundred yards of the birds. Here, unless disturbed, they will remain as long as the tide allows them space to stand on, and as the mud begins to disappear, will concentrate themselves on the last uncovered spot, where, as soon as the water begins to *whiten the mud*, thousands may be seen literally wedged among one another, and from whence they are so unwilling to fly, that they will seldom stir till the water actually sets them afloat. With proper management, therefore, the shooter has at this time every chance of approaching them. To do this the punt must be kept well fore and aft, he must lie down in her as close as having to push or paddle her will admit of; but he must not advance on the birds until he has just sufficient water to carry up the punt. He must then work up to them, and be careful all the time to guard against any sudden motion. By attending to this, and having every thing white, (except in moonlight, when a drab or canvass colour will be less glaring,) he may safely approach the unsuspecting mass of fowl, which will at first appear like the indistinct view of an island, and on getting near, it will look more and more black, till at last the shape of the outside birds may be plainly distinguished. Now, unless some straggling bird should give the alarm, or the moon should suddenly shine forth and discover him to the flock, the shooter may open his fire upon them, and with a pound of the smallest duck shot may perhaps secure as many as 50 or 60 wild fowl, as fast as he, his boatman and dog, can collect them. Having thus succeeded, he must beware not to let his eagerness be the means of endangering his personal safety. Many have lost their lives by *both* having quitted the boat, which may soon drift away. One should go out for the birds, taking with him the setting pole with which he may pin down the wounded birds, whilst the other keeps as close to him as possible in the boat, rowing or pushing with an oar, with which he may occasionally assist in killing the crippled birds that are afloat. This opportunity of shooting wigeon may be also taken by going out when the evening is not too light, at high water, and keeping at a distance till the tide begins to leave the mud, in and round the first appearing part of which the birds will probably collect. There is no time of tide at which birds are so easily approached as at what is called "the ground ebb," because the receding tide makes the shallows, on which they stand or swim, appear so white, that the birds are easily distinguished, and causes a sufficient ripple on the deep water to give it at all times rather a darker colour. Thus the gunner has the advantage of catching his birds in the white water, while the birds have the disadvantage of his advance from the dark water, by which means we calculate that it is easier to get within fifty yards at the ebb than within seventy yards upon the flood. Night shooting is now alluded to, for by day it is very rare to get so near, particularly with a large company of birds. It should always be remembered that, excepting in a glaring moon and sun, it is impossible for the gunner to have his punt and his dress too white for calm water.

SPORT-
ING.Weather,
time, and
sound.

Rules as to Weather, Time, and Sound.—**WEATHER.** For shooting in the sea, fog, or snow, or other hazy weather is bad, though in the fens and marshes it is sometimes the best weather. Bright starlight, if it be so about the horizon, as well as over head, is the very best of all times for getting at birds, as the tide flows over the mud, particularly if there is a little breeze, without wind enough to blacken the shallow water. If a cold black frost, so much the better. Even in moonlight, wigeon are easier approached than in hazy weather. In white frosts they are often restless, and in rain they are constantly flying and pitching. In very dark weather they are suspicious and more on the watch than in starlight; but if the wind blows fresh enough to drown the noise of a launching-punt, some heavy shots may now and then be made by sweeping the surface of the mud to the sound of where the flock is walking and feeding. In mild weather wigeon are generally scattered about till after midnight, unless they become concentrated by the flow of the surrounding tide. But in cold weather they sit thick together. The first night or two of thaw, after a sharp frost, is the best opportunity for this sport.—**TIME.** If wigeon are left till just before daybreak, so much the better, though the best of all shots is when the birds are together, before the tide flows high. But shooting at them when actually afloat is not so well; they are then more scattered, their feathers are not so open, and shooting then is apt to make them forsake their feeding ground.—**SOUND.** The thicker the weather, the more silent the wigeon when pitched. A shrill clear pipe denotes a single cock wigeon, as does a long loud "purre" a hen; but when the call of the cock is one short soft note, and not so often repeated, the gunner may expect to find a company. If so, the birds will probably soon be heard "in a charm," that is, in full concert, at which time they are unobservant, so that he should then approach, and stop from time to time as the birds cease, when, by advancing in this manner, he may, if it be starlight, generally get near enough for a good shot. When birds are about one hundred yards off, or much further, in very calm weather, they may be heard feeding; the noise of which, at this distance, is like the falling of a little water, and is often mistaken for it at ebb tide.

Sporting
birds and
animals.

We have now very copiously gone through the several most varying modes of shooting, and it will be sufficient to remark, that all game destroyed by the gun are bagged by one or other of them. We shall now, upon this branch of the subject, merely add an alphabetical list of those animals and birds which in this country are generally considered as sporting birds and animals, or those which are shot at for diversion or practice. They are as follows:—Bitterns, Bustards, Coots, Cormorants, Curlews, Deer, viz. fallow-deer, red-deer or stag, and roe-buck, Divers, viz. clucking-duck, black-duck, burrough duck or sheldrake, common wild duck, eider duck, ferruginous, golden eye, grey, long tailed, morillon, pin-tailed sea pheasant or cracker, scaup, shoveller or broad billed, tufted, and velvet or double scoter ducks, Dunbird or great headed wigeon, Fieldfare, Gannet or solan goose, Garganey, Geese, viz. bean, bernacle, brent, common wild goose, Egyptian, red-breasted Siberian, and white fronted or laughing, Godwits, Grebes, Grouse, black grouse or black cock, red and white grouse, Guinea fowl or pearly hen, Gulls, Hares, Herons or heronshaws, Knots, knutes, or knouts, Landrails, Common water rails, and spotted water rails, Larks, Oxbirds, Purres or stints,

Partridges, and red-legged partridges, Pheasants, viz. common, golden, silver or pied, &c., Pigeons, and wild pigeons, or doves, viz. stock, ring cushat, or queest, turtle, Plovers, viz. great, bastard or lapwing, or peewit, golden, grey, dotterel, ring dotterel, ring plover or sea lark, and long-legged plover or long shanks; Quails, Rabbits, Redwings or wind thrush, Rooks, Ruffs, Snipes, viz. great or solitary, common or heather bleaters, and jack starlings or stares, Swans, viz. wild or hooper, and Polish, Teal, Wigeon, Whewer, Whim or panded whew, and Woodcocks.

SPORT-
ING.

The subject of the Game laws has been so fully discussed in our previous Article under that title, that it will be needless here to enter further into it than to point out to what extent these laws have been altered by the stat. 1 and 2 Will. IV., c. 32, which passed on the 5th of October, 1831, and came into operation on the 1st of November following. As the principal statutes relating to the old law are stated in the former Article, it will be proper, in the first place, to point out those which have been repealed by the new statute; they are as follows:—so much of 13 Ric. II. st. 1. c. 13, as relates to such persons as shall not have or keep any greyhound, hound, or other dog to hunt, and shall not use any fyrets, heys, nets, harepipes, cords, or other engines, to take or destroy hares, conies, or other gentlemen's game; so much of 22 Edw. IV. c. 6, as relates to the having any mark or game of swans; and the several Acts 11 Hen. VII. c. 17; 19 Hen. VII. c. 11; 14 and 15 Hen. VIII. c. 10; 25 Hen. VIII. c. 11; 33 Hen. VIII. c. 6; 23 Eliz. c. 10; 2 Jac. I. c. 27; 7 Jac. I. c. 11; 22 and 23 Car. II. c. 25; 4 Will. and Mary, c. 23; 5 Anne, c. 14; 9 Anne, c. 25; 8 Geo. I. c. 19; 10 Geo. II. c. 32; 26 Geo. II. c. 2; 28 Geo. II. c. 12; 2 Geo. III. c. 19; 13 Geo. III. c. 55; 13 Geo. III. c. 80; 39 Geo. III. c. 34; 43 Geo. III. c. 112; 48 Geo. III. c. 93; 50 Geo. III. c. 67; 58 Geo. III. c. 75; and 59 Geo. III. c. 102. (Sec. 1.)

Hares, pheasants, partridges, grouse, heath or moor game, black game, and bustards. (Sec. 2.)

What are
game.

Any person who shall kill or take any game, or use a dog, gun, net, or other engine, for that purpose, on a Sunday or Christmas-day, subject, on conviction by two justices, to a penalty not exceeding £5 for every offence, with costs; any person who shall kill or take any *partridge* between the 1st of February and 1st of September, or any *pheasant* between the 1st of February and the 1st of October, or any *black game* between the 10th of December and the 20th of August, or in Somersetshire, Devonshire, or the New Forest, between the 10th of December and the 1st of September, or any *grouse*, called *red game*, between the 10th of December and the 12th of August, or any *bustard* between the 1st of March and the 1st of September, subject, on conviction by two justices, to a penalty not exceeding one pound for every head of game so killed or taken, with costs. Any person laying poison with intent to kill or injure game, subject to a penalty, upon conviction by two justices, not exceeding ten pounds, and costs. (Sec. 3.) Persons who, not having the right of killing the game upon any land, nor having permission of the person who has such right, shall wilfully take out of, or destroy in, the nest, upon such land, the eggs of any bird of game, or of any swan, wild-duck, teal, or wigeon, or shall knowingly have in his possession any such eggs so taken, subject, on conviction by two justices, to a penalty not exceeding five shillings for every egg, with costs. (Sec. 24.)

or possess-
ing eggs.

SPORT- ING.	search of game, or woodcocks, snipes, quails, landrils, or conies, are made subject, on conviction before one justice, to a penalty not exceeding two pounds, and costs; and persons, to the number of five or more, so trespassing, made subject, on similar conviction, to a penalty of not exceeding five shillings for each person, and costs; and the leave or licence of the occupier of the land, if not entitled to the game, shall not be sufficient defence against the landlord. (Sec. 30.) Trespassers in search of game, &c., may be required by landlord, occupier, gamekeeper, &c., to quit the land, and to tell their names and places of abode, and in cases of refusal or wilfully remaining on or returning to the land, they may be arrested by such landlord, &c., and conveyed before a justice, and on conviction, whether apprehended or not, by one justice, shall pay a penalty not exceeding five pounds, and costs; but such trespassers must be discharged, unless brought before a justice within twelve hours, and in case of such discharge, he or they may be proceeded against by summons or warrant, as after mentioned. (Sec. 31.) Where five or more persons shall be found armed with gun or guns on any land, forest, &c., in the day-time, in pursuit of game, woodcocks, &c., and shall by violence or menace endeavour to prevent any authorized person from approaching for the purpose of requiring them to quit the land, or to tell their names and places of abode, each person shall be subject to a penalty, on conviction before two justices, not exceeding five pounds, and costs. (Sec. 32.) Day-time to commence at the beginning of the last hour before sunrise, and to conclude at the expiration of the first hour after sunset. (Sec. 34.) For trespassing on the King's forests, parks, chases, or warrens, in the day-time, penalty, on conviction before one justice, not exceeding two pounds, and costs. (Sec. 33.) Game may be taken from trespassers not delivering up the same when demanded by the person having the right to kill the game, or his gamekeeper, &c., &c. (Sec. 36.)	three calendar months after the commission of the offence: that the prosecutor be not compelled to negative, by evidence, any certificate, licence, &c., but that the party seeking to avail himself of such defence must prove it; and that convictions be returned to the sessions, to which persons convicted are entitled by this Act to appeal.	SPORT- ING.
Notice to quit.		No summary conviction, or adjudication, or appeal, shall be quashed for want of form, or removed by <i>certiorari</i> , or otherwise; and no warrant of commitment shall be held void for any defect, provided it be alleged that it is founded on a conviction, and there shall be a good and valid conviction to sustain it. (Sec. 45.)	Want of form.
Names, &c.		This Act shall not preclude the action of trespass; but no action at law shall be maintained for the same trespass by any person at whose instance, or with whose concurrence or assent, proceedings shall have been instituted under this Act. (Sec. 46.)	Option as to proceed- ings.
Apprehen- sion. Penalty.		All actions and prosecutions to be commenced against any person for any thing done in pursuance of this Act, shall be laid and tried in the county where the fact was committed, and shall be commenced within six calendar months after the fact committed, and one calendar month's notice in writing given to the defendant of such action, and the cause thereof; and the defendant may plead the general issue, and give this Act and the special matter in evidence; and no plaintiff shall recover in such action, if tender of sufficient amends shall be made before the action be brought, or a sufficient sum be paid into court by the defendant after such action is brought. (Sec. 47.)	Actions against magis- trates, venue, &c.
Violence.		Act does not extend to Scotland or Ireland. (Sec. 48.)	
Penalty. Day-time.		The foregoing Act has been since altered in one respect, namely, by statute 5 and 6 Will. IV. c. 20, the 21st section of which enacts, that one moiety of such penalties, as by 1 and 2 Will. IV. c. 32, were directed to be paid wholly for the county rate, shall now be paid, one moiety to the informer, and the other moiety to the overseer, to be by him applied as in the former Act directed; and that the form of conviction, so far as relates to the distribution of the penalty, shall be made conformable to the directions in the subsequent Act.	Stat. 5 and 6 Will. IV.
Royal forests, &c.		The principal alterations effected by the above Act of 1 and 2 Will. IV. are the conferring a general qualification upon every one who takes out a game certificate; the vesting of the right to game in the landlord exclusively, unless by special agreement between him and his tenant; the imposition of a penalty in case of trespass in pursuit of game, and the legalization of the sale of game.	
Exemption from tres- pass.	The provisions against trespassers and persons found on land shall not extend to any person hunting or coursing upon any lands with hounds, or greyhounds, and being in fresh pursuit of any deer, hare, or fox already started upon any other land, nor to any person <i>bonâ fide</i> claiming and exercising any right, or reputed right, of free warren or free chase, nor to any gamekeeper lawfully appointed within the limits of any free warren or free chase, nor to any lord or any steward of the Crown, of any manor, lordship or royalty, or reputed manor, lordship, or royalty, nor to any gamekeeper by such lord or steward appointed. (Sec. 35.)	In accordance with the principle of the above Act, which gives the property in game to the landlord, the Mutiny Acts, which pass annually, have been framed in such manner, that in lieu of the lord of the manor's permission being obtained by officers before they sport in places near their quarters, the consent of the person entitled to grant such leave is required.	Mutiny Act.
Application of penalties.	Penalties to be paid to overseers of township, &c., and by them applied to the general rate; (sec. 36;) but by a subsequent Act 5 and 6 Will. IV. c. 32, this is altered. See <i>post</i> .	And lastly, we may mention that the statute 57 Geo. III. c. 90, mentioned in the Article GAME LAWS, and by which the crime of night poaching was made punishable with transportation for seven years, has been repealed by the Act 9 Geo. IV. c. 69, which enacts, that any person taking or destroying game by night, or entering any land, whether open or inclosed, with gun, net, engine, or other instrument, for the purpose of taking or destroying game, shall, for the first offence, be committed for three months, and kept to hard labour, and find sureties, himself in ten pounds, and two others in	Act 9 Geo. IV. c. 69. Night poaching.
Imprison- ment.	Penalties must be paid immediately on conviction, or within such time as justice or justices think fit; in default, party convicted to be imprisoned (with or without hard labour) as to justice or justices shall seem meet, for term not exceeding two calendar months, where the penalty, exclusive of costs, shall not amount to five pounds, and not exceeding three calendar months in any other case, the imprisonment to cease in each case upon payment of the amount and costs.		
Time for prosecu- tion, &c. &c.	The 39th and five following sections give the form of conviction, and direct that justices shall have power to summon witnesses, who must attend under a penalty of five pounds; that prosecutions be commenced within		

SPORT-
ING.

five pounds each, or one in ten pounds, for his not so offending within one year, and for the second offence to be kept to hard labour for six months, and find sureties, himself in twenty pounds, and two others in ten pounds each, or one in twenty, for his not so offending within two years; and for the third offence, shall be transported for seven years, or sentenced to two years' imprisonment and hard labour. By this Act night-time is to be counted as commencing at the expiration of the first hour after sunset, and as concluding at the beginning of the last hour before sunrise.

Racing.

RACING, in sportsmanship, is the riding on horseback in competition with others in order to obtain a prize.

The
ancients.

This sport is of great antiquity, and though it does not seem to have been held amongst the Olympic games in such high estimation as the chariot race, still it must have been much favoured, since the names of Philip King of Macedon and Hiero King of Syracuse are amongst those of the competitors for its honours. Mr. West, in his dissertation upon those games, relates, from the writings of Pausanias, an anecdote of a celebrated mare called Aura, who having by accident thrown her rider very soon after she had started, continued the race of her own accord, and turned round the pillar as if the rider had been still upon her back; and upon hearing the trumpet, mended her pace, till coming in before her antagonists, she stopped short opposite the judges of the games, and her master, Phidolas, was adjudged to be the victor. Respecting the ancient race-course and races, see the Articles HIPPODROME and CIRCUS.

Saxons.

"It was requisite," says Mr. Strutt, *Sports and Pastimes*, p. 31, "in former times for a man of fashion to understand the nature and properties of horses, and to ride well; or, using the words of an old romance writer, 'to runne horses and to approve them.' In proportion to the establishment of this maxim, swift running horses of course rose into estimation; and we know that in the IXth Century they were considered as presents well worthy the acceptance of kings and princes. When Hugh Capet, the head of the house of the Capets, afterwards monarchs of France, solicited the hand of Edels-witha, the sister of Æthelstan, he sent to that prince, among other valuable presents, several running horses, with their saddles and their bridles, the latter being embellished with bits of yellow gold. It is hence concluded, and indeed with much appearance of truth, that horse-racing was known and practised by the Anglo-Saxons, but most probably confined to persons of rank and opulence, and practised only for amusement sake." It must however be borne in mind, that the term *running-horses*, *equos cursores*, is used by the author who is here quoted, William of Malmsbury, *de Gestis Regum Anglorum*, and that the same term is used much later even by writers in the reign of Edward III., but there is no distinct evidence to show that these running horses were wholly used for the purposes of racing, indeed it may more fairly be supposed, in these remote times, that they were also valuable for their fleetness in following the hounds, and the various sports of the field.

Smithfield
racing.
XIIth Cen-
tury.

Fitzstephen, a writer of the reign of Henry II., speaks of horses being sold in West Smithfield, and that it was a practice to prove the value of hackneys and charging steeds to match them against each other. He says in effect, "When a race is to be run by this sort of horses, and perhaps by others, which also in their kind are strong and fleet, a shout is immediately raised, and the common horses are ordered to withdraw out of the way. Three

jockeys, or perhaps only two, as the match is made, prepare themselves for the contest; such as being used to ride know how to manage their horses with judgment: the grand point is to prevent a competitor from getting before them. The horses, on their part, are not without emulation, they tremble and are impatient, and are continually in motion; at last, the signal once given, they strike, devour the course, hurrying along with unremitting velocity. The jockeys, inspired with the thoughts of applause, and the hopes of victory, clap spurs to their willing horses, brandish their whips, and cheer them with their cries!" In this passage is a plain indication of a regular race, although the purpose seems rather to have been to show the mettle and fleetness of the horse with a view to profit, than the glory which the author somewhat poetically supposes had an influence on the riders.

At what precise period regular races were first run in this country it is difficult to determine, but it is clear it must have been some time before the end of the XVIth Century, for we find Bishop Hall in one of his satires evidently alluding to the breed, and also to the pedigree of horses, a circumstance not likely to have occurred had it not, in the reign of Queen Elizabeth, when that author wrote, become a sport reduced in some degree to a system. In the third satire of the fourth book of *Virgidemiarum*, alluding to the folly of depending upon the lustre of ancestry rather than upon our own personal merit, he breaks out thus:

Tell me, thou gentle *Troian*; dost thou prise
Thy brute beasts' worth by their dams qualities;
Say'st thou this *Colt* shall proove a swift-pac'd steed,
Only because a *Jennet* did him breed?
Or say'st thou this same Horse shall win the prize,
Because his dame was swiftest *Trunchevice*,
Or *Runcuall* his Syre; himself a *Gallaway*?
Whiles like a tireling Iade he lags half-waye.

It was not long after horse-racing became an accustomed sport that it degenerated, by its abuse, into the means both of extravagance and of dishonesty. Lord Herbert of Cherbury, in his life written by himself, and published by Lord Orford in 1764, says, "The exercise I do not approve of is running of horses, there being much cheating in that kind;" and Burton in his *Anatomy of Melancholy*, part ii. sect. 2. memb. 3, though he approves of the sport as an exercise, deprecates the losses sustained by it. "Riding of great horses, running at ring, tilts and tournaments, horse races, wild-goose chases, which are the disports of greater men, and good in themselves, though many gentlemen by that means gallop quite out of their fortunes." It was, however, in the reign of James I. that racing was reduced to a complete system, and that public races were established. But before we proceed with the history of this sport, we will make some interesting extracts from the two works of Gervase Markham before referred to, namely, *How to chuse, ride, traine, and diet, both Hunting Horses and Running Horses*, and *Countray Contentments*. In the former he thus distinguishes between the requisites for a hunting and a running horse; and the passage occurs in the chapter headed "The secrets and art of trayning and dietting the horse for a course, which we commonly call running horses!" "The difference betweene the hunting horse before mentioned, and the horse for a course, is great, therefore the art of more esteeme, and the secrets more worthie disclosing. The first (which is the hunting horse) hath his vertue, consisting in long and weary toyle, this other

in quicknes of speede and suddayne fury. And as the one requireth a whole day for his triall, so this other in comparison must dispatch in a moment. For the choice of your running horse, it nothing differeth from your hunting, save that you may dispence with sundry faults in this horse for a course, which may not be tollerable in a hunting horse, as for example. If your horse be long and loosely made, that is, not so short and closely knit together as a hunting horse should be, yet for a course he may be excellent, and in short races show great swiftnes. Also, if hee be small limbd, and weakly joyned, although these faults I utterly disalow, and mislike, yet shall you finde many horses of a wonderfull speede to entertaine these infirmities." The writer then proceeds to give a long description of the mode of training the horse, many of the directions in which would somewhat startle a modern practitioner. "Also the last course you give him, let it be in his cloathes, and let him not exceede a false galloppe: nay if he halfe gallope, halfe trot, it shall not be amisse, but profitable, for the more gently you use him that day, the more willing he will be the next time to accomplish your desire. The first thing you give him to eate after every course, let it be a handfull or two of wheat-eares, and a little mustard-seede sprinkled upon them, to purge his head, and occasion him to neese, which is very souveraine." * * *

The day of
the race.

"Nowe lastly, as touching the day in which your horse must runne for your wager, thus shall you use him. First, the night before, you shall give him but a verie little supper, so that hee may be passing empty in the morning, on which morrowe have him out, and ayre him an howre or two before day, taking great care that hee empty himselfe thorowly whilst he is abroad, then bring him in, and after you have well rubd all his foure legges, and annoynted them thorowly, either with neates-foote oyle, treane oyle, sheepes-foote oyle, or linseede-oyle, all which be the most excellent oyles that may bee for a horse, especiallie the two last. Then give him this foode, take a good bigge penny white loafe, and cut the same all out into toasts, and toast them against the fire, then steepe them in muscadine, and lay them betweene hote cloathes, and being layde before the fire, dry them againe, and so give them to your horse. These be so pleasant and comfortable, that your horse's emptines (as he must be wonderfull empty when he goeth to his course) shall little agreeve him. If you have not this ready to give him, if then you give him halfe a pecke of fine oatmeale well dried, it shall be as good, for though it be not so pleasant, yet being so light a foode as it is, it wil both comfort his stomack, and be soone digested. When he hath eaten this put on his mussell, give him great store of lytter, and unloose his sursingle, that his cloathes may hang loose about him, and so let him stande to take his rest till the howre in which he must be led forth to runne his wager, not suffering any man to come within your stable for feare of disquietting your horse." This last passage contains a precaution very necessary in the present state of the turf for other reasons than the quiet of the racer. The directions thus conclude:—"When the howre is come in which you must leade him out, gyrd on his cloathes, handsomely, bridle him up, and then take your mouth ful of strong vinegar, and spirt it into your horses nose thrils, the strength whereof will search and open his pypes, making them apt for the receite of wind. This done, leade him to the race, and when you come at the ende therefore where you must uncloth him, having the vinegar carried after you, doo

the lyke there, and so bequeath him and your selfe to God, and good fortune. Che sera sera."

From the *Countrey Contentments*, the division on "Horse-manshippe," we shall only extract the following whimsical passage, containing a preventive against danger, which would force a smile from a Newmarket jockey of the present day. "Saddle your horse on the race day in the stable before you leade him forth, and fixe both the pannell and the girthes to his backe and sides with shooe-maker's waxe, to prevent all daungers." Nor do the combined absurdities of diet and saddling for the race appear to have quickly subsided, for in the fourteenth impression of the same writer's *Masterpiece*, to which now is added, *The Compleat Jockey*, * * never before made publick, and dated 1688, we find the following passages:—"Just as you are going to lead him, dip the bit of his bridle in muscadine or alicant, and then drawing off his muzzle, draw on his bridle; * * * then spread soft wax, such as shoo-makers use, under your girts and saddle, which done, girt it gently on his back, so that he scarcely feel it is on; then spread a large white linen cloth, over his saddle, and over it all his other cloths, which likewise being slightly girt, stick whips under his girts or sursingles, but let them be very soft; then cover him with some piece of rich tapestry or cloth of state to make him show gallant, after which pour down his throat with a drenching horn, one pint of muscadine, alicant, or for want of either canary." Lastly, from the following observation in the same book, it seems to have been the practice thus early to employ jockeys to ride, and not, as is sometimes asserted, that the owners always rode their horses. "After which your self, or whom you assign to ride him, may take his back, and observing the fair start, put him swiftly on, and run the match."

James I. was the earliest monarch who established public races in England; they took place sometimes at Croydon in Surrey, and at others at Garterley in Yorkshire, and Theobalds Park, near Enfield Chase, then the favourite residence of the King, and which he had greatly enlarged by the addition of a portion of the chase and the adjoining commons of Northaw and Chess-hunt, and contained an area of ten miles round, surrounded by a brick wall. Camden mentions, that in 1607 there were races near York, and that the prize was a little golden bell. Upon this subject Mr. Gough, in his edition of that writer's great work, *The Britannia*, vol. iii. p. 65, has the following passage:—"York and its neighbourhood have long been famous for this diversion. Mr. Camden mentions the prize for the winning horse in Galtres forest, a little golden bell, which was tied on his forehead, and he was led about in triumph, whence the saying, when a person is winner or most expert at any sport, *He bears the bell*. York races were first set up in 1709, and a king's plate in 1713. The first course was on Clifton ings; but it was soon fixed at Knavesmaire." At the period of the regular establishment of races, the horses were prepared for their duty by the discipline of food, physic, airing, sweats, and clothing, although, from the extracts from the writings of Markham, that preparation was very different in some respects from that adopted at the present day, as we shall hereafter see. The weight also was at this time settled, being about ten stone for the rider, who was weighed in scales before he started. From the circumstance of the prize usually being a bell, most of the celebrated courses in England ob-

SPORT-
ING.

Charles I.

tained the name of bell-courses, a term not unfrequently used in the present day.

From a passage in the comedy of the *Merry Beggars, or the Jovial Crew*, written in 1641, and published in Dodsley's collection of old plays, it seems that races were held during the reign of Charles I. in Hyde Park: the passage is, "Shall we take a fling to London, and see how the spring appears in Spring Garden, and in Hyde Park to see the races both horse and foot?" In the same reign races were also held at Stamford, as Boucher, in his Survey of that town, written in 1625, says that gentlemen used to meet there for the exercise of their swift running horses every Thursday in March, the prize being a silver gilt cup and cover. At the latter part of the same reign, 1640, races were also held at Newmarket, although the round course was not made until 1666; and indeed Cambridgeshire was even at an anterior period resorted to for this sport, for Sir Simon D'Ewes in his journal makes mention of a horse-race near Linton, in that county, in the reign of James I., and says that the company slept in the town on the night of the race. It is certain, too, that that King built a house at Newmarket.

Cromwell.

Although the Protector did not, during the troubled period which succeeded the murder of Charles I., enter much into the sport of the turf, yet he had his stud-groom, Mr. Place, and was the possessor of the celebrated stallion, the White Turk, with whom the oldest of our present horse pedigrees end. He had also a famous brood mare, called the Coffin Mare, from the circumstance of her being concealed in a vault during the search for his effects at the time of the Restoration. "It has been asserted," says the writer of a preface to the *Racing Callendar Abridged*, "apparently without sufficient authority, that horse-racing, which is supposed to have been suspended during the civil wars, was not revived till after the Restoration of the monarchy." The puritans of those days did not object to the diversion, which they regarded as a manly exercise, and two proclamations were issued by Cromwell, which prove that races were frequent and much relished by the people in the time of the Commonwealth. Copies of these proclamations are preserved in the British Museum. The first of these is dated Whitehall, February 24, 1654, and sets forth "that his Highness the Lord Protector being informed that several horse-races are appointed in divers parts of the commonwealth, and considering how great a concourse of people do usually frequent such meetings, and the evil use made thereof by such ill-disposed persons as watch for opportunities to raise new troubles; for the better preventing of the evils which may arise thereby to the people of this commonwealth, his Highness, by the advice of his council, doth hereby prohibit and forbid all horse-races, and all meetings of any persons whatsoever, upon pretence or color of any horse-races, in any place within England or Wales for the space of six months from the 26th of February, 1654; and doth hereby straightly charge and command that no person or persons whatsoever, during the space of the said six months, do appoint any horse-race, or do assemble or meet together upon or by color of any appointment of any horse-race, or do be present at such horse-race, as they would avoid being guilty of the danger that may ensue thereon, and as they tender the peace and security of the nation." Justices and soldiers quartered near are then ordered to prevent such meetings. The other

is a somewhat similar document, prohibiting races for eight months from the 8th of April, 1658.

On the restoration of Charles II. he became a great patron of the turf. He gave public rewards and prizes, and appointed races to be held on Datchet Mead during his residence at Windsor. Newmarket, however, was the principal place of resort for this sport. The palace erected by his grandfather, but which during the civil wars had gone to decay, was rebuilt, and the King attended in person, and kept and entered horses in his own name. Burford Downs, since known as Bibury Race-course, were also famous for their races in this reign. The breed of the race-horse was also greatly improved by the patronage of this monarch. With a view to the improvement of the native stock, the master of the horse, either Sir Christopher Wyvil or Sir John Fenwick, it is not clear which, was sent to the Levant to procure horses and mares for breeding; many of the latter of which, as well as their produce, have been often called "Royal Mares," and appear as such in the stud book to this day. The well remembered Dodsworth, though foaled in England, was a natural barb; his dam, a barb mare, was imported at this period. This mare is said to be the earliest racer on record whose pedigree can be fully authenticated. She was sold by the stud master after the King's death for forty guineas. In the Duke of Tuscany's journal of his travels in England, in this reign, there is a full account of the mode then adopted for conducting the sport when the King attended. "At three o'clock, (May 9, 1669,) according to the English mode of reckoning, the King and the Duke of York went from Newmarket to see the race-horses, and repaired to the place appropriated to this sport, going to a certain spot, which is nearly in the middle of the course, and there his Majesty stopped and amused himself with seeing my Lord Blandford and my Lord Germain play at bowls. The race-course is a tract of ground in the neighbourhood of Newmarket, which, extending to the distance of four miles over a spacious and level meadow, covered with very short grass, is marked out by tall wooden posts, painted white. These pointed out the road that leads directly to the goal, to which they are continued the whole way, placed at regular distances from one another; the last is distinguished by a flag mounted upon it to designate the termination of the course. The horses intended for this exercise, in order to render them more swift, are kept always girt, that their bellies may not drop, and thereby interfere with the agility of their movements; when the time of the races draws near, they feed them with the greatest care, and very sparingly, giving them for the most part, in order to keep them in full vigour, beverages composed of soaked bread and fresh eggs. Two horses only started on this occasion, one belonging to Bernard Howard, of Norfolk, and the other to Sir Elliot. They left Newmarket saddled in a very simple and light manner, after the English fashion, led by the hand, and at a slow pace, by the men who were to ride them, dressed in taffeta of different colours, that of Howard being white, and that of Elliot green. When they reached the place where they were to start, they mounted, and loosening the reins, let the horses go, keeping them in at the beginning, that they might not be too eager at first setting off, and their strength fail them in consequence, at the more important part of the race; and the farther they advanced in the course, the

SPORT-
ING.

Charles II.

SPORT-
ING.

more they urged them, forcing them to continue it at full speed. When they came to the station where the King and the Duke of York, with some lords and gentlemen of his Majesty's court, were waiting on horseback till they should pass, the latter set off after them at the utmost speed, which was scarcely inferior to that of the race-horses; for the English horses being accustomed to run, can keep up with the racers without difficulty; and they are frequently trained for this purpose in another race-ground, out of London, situated on a hill which swells from the plain with so gradual and gentle a rise, that it cannot be distinguished from a plain; and there is always a numerous concourse of carriages there to see the races, upon which considerable bets are made. Meanwhile his Highness, with his attendants and others of his court, stopping on horseback at a little distance from the goal, rode along the meadows, waiting the arrival of the horses, and of his Majesty, who came up close after them with a numerous train of gentlemen and ladies, who stood so thick on horseback, and galloped so freely, that they were in no way inferior to those who had been for years accustomed to the *manège*. As the King passed, his Highness bowed, and immediately turned and followed his Majesty to the goal, where trumpets and drums, which were in readiness for that purpose, sounded in applause of the conqueror, which was the horse of Sir — Elliot. From the race-ground his Majesty, being very much heated, adjourned to his house, accompanied by his Highness, and by the greater part of the gentlemen who had come to see the race."

William
III.

When William III. ascended the throne, he became a patron of racing, adding plate to those given at different places in the kingdom, and founding an academy for the art of riding. When he was present at the races, he was attended by his guards, who encamped on the heath. Subsequent monarchs have been in a greater or less degree admirers of the sport, as Queen Anne, (who kept race-horses, and entered them in her own name,) and whose consort, Prince George of Denmark, kept a fine stud. In her reign the Curwen bay barb and celebrated Darley Arabian appeared. George I. and George II. also patronized racing for the purpose of improving the breed of horses, though they did not enter into the sport, and in the reign of the latter an Act was passed, which will be hereafter referred to, for suppressing gambling, and for the purpose before alluded to. The Godolphin Arabian, so called from being the property of Lord Godolphin, appeared in George II.'s time, and in the following reign the celebrated Eclipse appeared, "and from that period," says Nimrod, in his book *The Chase, the Road, and the Turf*, "may English racing be dated."

Geo. IV.

George IV. was a very munificent patron of the turf, and was considered to have a sound judgment in such matters. He always kept a magnificent racing establishment, and was the breeder of many first-rate horses.

William
IV.

His late Majesty added several plates to those already run for, though he was no partaker in the sport; since that time the stud at Hampton Court has been sold.

Prizes.

We have already seen that the prizes were originally bells, and afterwards cups and covers, but in the reign of George I. the custom of giving one hundred guineas in lieu of any other prize, then denominated plate, was established, and that sum still continues, if given by the Crown, to be called the King's or Queen's plate.

James I. purchased of Mr. Markham an Arabian

horse for the sum of £500; he was the first of that country which had ever been seen in England. The Duke of Newcastle, in his celebrated treatise on horsemanship, mentions him to have been of a bay colour, a little horse, and no rarity of shape. We have seen that Charles II. imported several horses from the Levant; and, indeed, in that King's reign our breed must have been in high repute, for we find that, in 1682, 1683, some were taken to France for the purpose of contending for a prize. Echard, in his *History of England*, vol. iii. p. 668, says, "About the beginning of this year there happen'd a small transaction beyond sea, which made his (the Duke of Monmouth's) name more discours'd of than at other times. The horses of England are valuable and famous on many accounts, and among others for racing; and it was upon this consideration that the French King invited into France the most noted racers from several countries, by exposing a plate, or prize, of a thousand pistoles, to be run for before him, in the Plain d'Echere, near St. Germain en lay. And accordingly on the 25th of February, N.S. the said race was run before the King, Queen, and Dauphine, by several famous horses, where the Duke of Monmouth's horse won the prize; and was afterwards purchased by the French King."

SPORT-
ING.Breed of
horses.Duke of
Monmouth.

A writer in the *Dictionary of Sports* says, "Fine and delicate horses, the natives of warm climates, excel in swiftness. The most perfect of these were originally found in Arabia; but their qualities may be improved in their descendants in a more fruitful country. The Arabians tried in England have never proved themselves equal in any respect, upon the course, to the English racers, descended from Arabian stock." The true test of thorough blood is not speed, but continuance. The speed and continuance of race-horses is necessarily affected by the weight which they carry. It is said that, in running four miles, seven pounds make the difference of a distance, or two hundred and forty yards between horses of equal goodness. Weight is therefore regulated with scientific precision on the turf, and if the jockeys, or either of them, fall below the amount agreed upon, they are made to carry weights to make up the difference. The usual trial of speed in English racing, is a single mile; of continuance or bottom, four miles. It has been asserted that Flying Childers ran a mile over Newmarket in the space of a minute. The time was really a few seconds over a minute. Flying Childers, in 1721, ran four miles, carrying nine stone two pounds, in the space of six minutes forty-eight seconds. This wonderful animal leaped ten yards with his rider upon level ground, and is supposed to have covered, at every spring in running, a space of twenty-five feet, which is more than forty-nine feet in a second. Speaking of the same animal, Pennant, in his *British Zoology*, p. 2, says, "In the annals of Newmarket may be found instances of horses that have literally outstripped the wind, as the celebrated M. Condamine has lately shown in his remarks on those of Great Britain. Childers is an amazing instance of rapidity, his speed having been more than once exerted equal to eighty-two and a half feet in a second, or near a mile in a minute; the same horse has also run the round course at Newmarket, which is about four hundred yards less than four miles in six minutes and forty seconds, in which case his fleetness is to that of the swiftest Barb as four to three."

Swiftness
of the
horse.Flying
Childers.

The most signal instances of speed and bottom on Eclipse.

SPORT-
ING.

record respecting other horses may be mentioned as follows:—Eclipse, a chestnut horse, bred by William Duke of Cumberland, uncle of George III., and named Eclipse from having been foaled on the 1st of April, 1764, the day on which the remarkable eclipse of the sun occurred, ran four miles at York in eight minutes, carrying a weight of twelve stone, or one hundred and sixty-eight pounds; and Bay Malton ran over the same course in seven minutes and forty-three and a half seconds; and at a later period Tranby performed the hitherto unrivalled feat of carrying Mr. Osbaldiston sixteen miles in thirty-three minutes and fifteen seconds over Newmarket course. The time of each four mile heat was as follows:—1st, eight minutes ten seconds; 2d, eight minutes; 3d, eight minutes fifteen seconds; and 4th, eight minutes fifty seconds. It was a match against time.

Bay
Malton.
Tranby.

Training.

It will be sufficient on this head to afford so much information as will show the contrast between the present mode and that adopted at a former period, as stated by Gervase Markham. At about four o'clock the horse is brushed over, and after he has finished eating his corn, he is taken out to exercise, and, according to his age, state of his flesh, he is walked and galloped before and after water. On his return to the stable he is carefully rubbed down, and his legs brushed, and afterwards fed, and then the door is closed, and he is left perfectly quiet, all which is completed as early in the day as possible. A similar process, only shorter, takes place every three hours after; at noon brushing, feeding, &c., again, and the stable door is again closed for several hours, when similar operations to those of the morning are repeated; similar stable discipline follows, and the door is once more closed at six o'clock. At eight the horse is fed and raked up. Immediately before a race begins, the jockeys are weighed, to see whether they are of the prescribed weight; and immediately after the race is over, the weighing is repeated, to ascertain that none of the weights have dropped on the course. We find nothing, however, in the present day concerning cobbler's wax under the saddle, or whisks of straw between the body of the horse and the girths.

Weighing.

Racing
laws.
Age.

We will now add a few of the leading rules observed on the turf. Horses take their ages from May-day, that is, a horse foaled any time in the year 1840 will be deemed to be a year old on the 1st of May in the following year, but since a resolution of the Jockey Club in 1833, after the end of that year, all horses are considered at Newmarket as taking their ages from the 1st of January, instead of the 1st of May. Four inches are a *hand*. Fourteen pounds are a *stone*. *Catch weights* are each party to appoint a person to ride without weighing. *Feather weights* signify the same. *Give and take* plates are weights for inches; fourteen hands to carry a stated weight; all above or under to carry extra, or be allowed the proportion of seven pounds to an inch.

Hand.
Stone.
Catch
weights.
Feather
weights.

Post match.

A *post match*, is to insert the age of the horses in the articles, and to run any horse at that age, without declaring what horse till he come to the post to start.

Handicap.

A *handicap* match is, A, B, and C, to put an equal sum each into a hat, C, who is the handicapper, makes a match for A and B, who when they have perused it, put their hands into their pockets, and draw them out closed, then they open them together, and if both have money in their hands, the match is confirmed; if neither have money it is no match. In both cases the handicapper draws all the money out of the hat. But if one

has money in his hand, and the other none, then it is no match, and he that has the money in his hand is entitled to the deposit in the hat. One thousand seven hundred and sixty yards are a mile; two hundred and twenty yards are a furlong, and two hundred and forty yards are a distance.

SPORT-
ING.

Distance.

The interference of the Legislature with the spirit of horse-racing has not been very great, indeed it has principally been exercised for the purpose of restraining excessive gambling and encouraging the breed of horses. By the Act 13 Geo. II. c. 19, passed to suppress races by ponies and weak horses, it was enacted, that all matches for any prize under the value of £50 were illegal, and subjected the party to a penalty of £200 for the owner of the horse, and £100 for the advertiser of the plate: that every horse entered to run, if five years old, should carry ten stone; if six, eleven; and if seven, twelve. That no person should run any horse at a course, unless it were his own, nor enter more than one horse for the same plate, upon pain of forfeiting the horses, and that every horse-race should be begun and ended in the same day." This Act was, however, repealed in five years; for we find by the 11th section of the 18th Geo. II. c. 34, after reciting the above regulations, and that "the thirteen royal plates of one hundred guineas each, annually run for, as also the high prices that are constantly given for horses of strength and size are sufficient to encourage breeders to raise their cattle to the utmost size and strength possible," and enacts, that after 1745 horses may run for any sum or plate of £50 and upwards, and at any place, without being subject to the above-mentioned penalties.

New-
market.

"Previously to 1753," says Nimrod in his book, *The Chase, the Road, the Turf*, "there were only two meetings in the year at Newmarket for the purpose of running horses, one in the spring, and another in October. At present there are seven, distinguished by the follow-

SPORT-ING. ing terms:—The *Craven*, in compliment to the late Earl Craven, commencing on Easter Monday, and instituted in 1771. The *First Spring*, on the Monday fortnight following; the *Second Spring*, a fortnight after that, and instituted in 1753. The *July*, commonly early in that month, instituted 1753. The *First October*, on the first Monday in that month; the *Second October*, on the Monday fortnight following, instituted 1762; and the *Third October*, or Houghton, a fortnight afterwards, instituted 1770."

Childers.

With regard to Newmarket and the Beacon and Round course, we may again refer to the horse Childers. He has run the first in seven minutes and a half, and the second in six minutes forty seconds; which is at the rate of forty-nine feet in a second, but all other horses take up at least seven minutes and fifty seconds in completing the first and longest course, and seven minutes in the shortest, which is at the rate of more than forty-seven feet in a second, and it is commonly supposed that these coursers cover, at every bound, a space of ground equal in length to about twenty-four English feet.

Ascot.

Ascot Heath. The two-mile course is a circular one, of which the last half is called the old mile. The new mile is straight, and up hill all the way. The T. Y. C. is five furlongs and one hundred and thirty-six yards.

Buxton.

The course at Buxton is one mile only.

Chelmsford.

Chelmsford course is round or oval, short of two miles by about thirty yards, but made up two miles by starting between the distance post and the winning-chain; about half of the straight mile is in the round course, finishing with rather a severe hill.

Chester.

Chester course is flat and one mile and one hundred yards round.

Doncaster.

The course at Doncaster is circular and nearly flat, of about one mile, seven furlongs, and seventy yards. The shorter courses are portions of this circle.

Egham.

The round or rather oval course is short of two miles by sixty-six yards, and is nearly flat.

Exeter.

The old course is round or rather oval, of two miles, two-thirds of which are nearly flat, and the remainder rather hilly; the last half mile is in a straight line with a little ascent, and beautiful coming in. There is a round and level course of one mile, recently made, called the New Course, and a three-miles course, also nearly level, formed out of the new and old courses.

Gloucester.

An oblong of about a mile and a half, with a straight run in of four hundred yards.

Knutsford.

A round course of one mile, and nearly flat.

Liverpool.

The old course is oval and flat, one mile; the new course is flat, one mile and a half round, with a straight run in of nearly three-quarters of a mile, and a very gradual rise.

Manchester.

One mile, rather oval, with a hill, and a fine run in.

Newton.

A triangular course of one mile, with a strong hill.

Nottingham.

Is a round course of one mile, two furlongs, and eleven yards.

Oxford.

Round or rather oval course of two miles all but a distance, and quite flat: the last half mile straight.

Plymouth.

Nearly an oval course of one mile and a half, quite flat, with a straight run in of one-third of a mile.

Preston.

Oval and flat, and one mile round.

Stafford.

A one-mile course, which would be complete oval, but for a straight run in of about a quarter of mile.

Stockbridge.

Nearly round, somewhat hilly, the last three-quarters of a mile straight for a run in; also a straight mile.

Tavistock.

A round or rather oval course, two miles, a little

hilly, the last three-quarters of a mile straight, and very nearly level; the one mile is a portion of the above.

SPORT-ING.

An oval-shaped course, one mile and a quarter, the Wolver-run in is straight, and the T. Y. C. is a straight half hampton-mile.

SKATING is the art of moving upon ice with the aid of Skating. a sort of wooden plate attached to the foot shod with iron or steel. The word *skate*, sometimes spelt *scate*, is *skidor*, in Swedish; *skid*, in Icelandic, and *schaetze*, in the Teutonic dialect, and the old English word for *skates* was *scates*. Respecting the practice of skating, Mr. Strutt (*Sports and Pastimes*, p. 68.) seems to have fallen into an error in likening, "the wooden skates shod with iron or steel, which are bound about the feet and ancles," to the *talares* of the Greeks and Romans, for we meet with no implement by that name, nor indeed by any other, by which the Greeks or Romans were accustomed to divert themselves by moving over surfaces, whether of ice or otherwise. The only *talares* of the ancients were the four-sided dice; but the huckle bones, or as they are at the present day called dibs, are referred to by writers under the same word.

Although this exercise is resorted to in this country as a graceful and healthy amusement, it seems highly probable that it was originally resorted to rather as a matter of necessity or convenience. Amongst the northern nations very early mention is made of the practice; thus in the *Edda*, written in the IXth or Xth Century, the god Uller is represented as distinguished by his beauty, his arrows, and his skates; and Mr. Strutt (referring to Olaf Worm. *Lit. Run.* p. 129; Bartholin. p. 420) in his Introduction mentions a northern hero, whose name was Kolsen, who boasted that he had seven accomplishments, one of which was, "I can traverse the snow on scates of wood."

It seems to be very generally admitted that the practice was introduced into this country either by our northern ancestors, or at a later period from the Low Countries. In Holland, particularly, we know that skating is used not only as a graceful and elegant amusement, but as an expeditious mode of travelling when the lakes and canals are frozen up. In that country long journeys are made upon skates with ease and expedition; but, in general, less attention is there paid to grace of attitude, and elegance of movement, than to the expedition and celerity of what is called journey skating. The Hollanders have also made the art subservient to the necessities of war; for we hear from William Carr, in his *Remarks of the Government of severall Parts of Germanie*, &c., published in 1688, of the dexterity of the Dutch skaters in the following passage, 1688. pages 112, 113, alluding to a sudden thaw by which the French army were mainly put to rout: "In less than ten howers the Ice so sunk and such floods of snow came downe from the high lands that the French were fain to make a very disorderly retreat, Marching up to the middel for hast, because on the Banks there could not march above four men a brest, so they were constrained to leave behind them the greatest part of the Plunder they had robbed from the Innocent Country people, and the nimble Dutch men on their Scates so long as the Ice would beare them, did shoot downe the French like Ducks diving under water, so that it cost Luxemburgs Armie deare, tho' they had the pleasure to burne the poore people, of which the French afterward wickedly made their boast."

SPORT-
ING.Skating in
England.

The use of the skate is also much resorted to in Germany and Russia, and in many places the ladies practise the art of skating as an amusement and healthy exercise.

"I cannot by any means ascertain," says Mr. Strutt, *Sports and Pastimes*, p. 68, "at what time skating first made its appearance in England, but we find some traces of such an exercise in the XIIIth Century, at which period, according to Fitzstephen, it was customary in the winter, when the ice would bear them, for the young citizens of London to fasten the leg bones of animals under the soles of their feet by tying them round their ankles, and then taking a pole shod with iron into their hands, they pushed themselves forward by striking it against the ice, and moved with celerity equal (says the author) to a bird flying through the air, or an arrow from a cross bow; but some allowance, I presume, must be made for the poetical figure:" he then adds, "at times, two of them thus furnished agree to start opposite one to another, at a great distance; they meet, elevate their poles, attack, and strike each other, when one or both of them fall, and not without some bodily hurt; and, even after their fall, are carried a great distance from each other by the rapidity of the motion, and whatever part of the head comes upon the ice, it is sure to be laid bare."

Scotland.

Scotland has long been famous for the adroitness as well as for the gracefulness of its skaters. In or about the year 1760, a club was established in Edinburgh for the encouragement of the art. Mr. Strutt does not seem willing that the fame of the metropolis of Scotland should outvie that of London, for he declares, page 69, that he has seen "when the Serpentine river in Hyde Park was frozen over, four gentlemen there dance, if I may be allowed the expression, a double minuet in skates, with as much ease, and I think more elegance, than in a ball-room; others again, by turning and winding with much adroitness, have readily in succession described upon the ice the form of all the letters in the alphabet."

The comparative degree of grace exhibited on the ice or in the ball-room, is, of course, entirely a matter of taste, but certainly London has exhibited many celebrated skaters, one of the most expert of whom was the late Benjamin West, the President of the Royal Academy, who could with much dexterity represent on the surface of the ice a copy of any of the ancient statues.

It is said that the English are deficient in grace from the circumstance of the mal-construction of their skates. They are considered by writers as too much curved in the surface which embraces the ice, which involuntarily brings the users of them round on the outside upon a quick and small circle; whereas the skater by using skates of a different construction, less curved, has the command of his stroke, and can enlarge or diminish the circle according to his wish. From the following passage from Mr. Strutt's book, before quoted, the skates in former times seem to have been longer than those now in use. "In Hoole's translation of the *Vocabulary of Comenius*, the skates are called *scrick shoes* from the German, and in the print at the head of the section, they are represented longer than those of the present day, and the irons are turned up much higher in the front."

This exercise has been praised by poets both native and foreign. Thomson, in his *Winter*, says of skaters,

"They sweep
On sounding skates a thousand different ways,
In circling poise swift as the winds."

SPORT-
ING.

But Klopstock appears to be far more enthusiastic, for he says in one of his Odes, "Man, like the Homeric gods, strides with winged feet, over the sea, transmuted into solid ground." In this passage the Talare seems indeed indicated, of which John Florio in his *World of Wordes*, published 1598, gives the following description, "a shoe with wings as Mercury is fained to weare." Goëthe, Herder, and other German poets have also sung the praises of this invigorating exercise. Further information upon the subject may be found in Salzmann's *Gymnastics*, and in Garcia's *Le vrai Patineur*, &c."

The following observations seem to contain all the Directions. instructions necessary to an acquirement of the art of skating. Those who wish to be proficient should begin at an early period of life, and endeavour to throw off the fear which always attends the commencement of an apparently hazardous amusement. They will soon acquire a facility of moving on the inside; when they have done this, they must endeavour to acquire the movement on the outside of the skates; which is no more than throwing themselves upon the outer edge of the skate, and making the balance of the body tend towards that side which will necessarily enable them to form a semicircle; in this much assistance may be derived from placing a bag of lead shot in the pocket next to the foot employed in making the outside stroke, which will produce an artificial poise of the body, which afterwards will become natural by practice. At the commencement of the outside stroke, the knee of the employed limb should be a little bent, and gradually brought to a rectilinear position when the stroke is completed. When the practitioner becomes expert in forming the semicircle with both feet, he is then to join them together, and proceed progressively and alternately with both feet, which will carry him forward with a graceful movement. Care should be taken to use very little muscular exertion, for the impelling motion should proceed from the mechanical impulse of the body thrown into such a position as to regulate the stroke. At taking the outside stroke, the body ought to be thrown forward easily, the unemployed limb kept in a direct line with the body, and the face and the eyes directly looking forward; the unemployed foot ought to be stretched towards the ice, with the toes in a direct line with the leg. In the time of making the curve, the body must be gradually and almost imperceptibly raised, and the unemployed limb brought in the same manner forward; so that, at finishing the curve, the body will bend a small degree backward, and the unemployed foot will be about two inches before the other, ready to embrace the ice, and form a correspondent curve. The muscular movement of the whole body must correspond with the movement of the skate, and should be regulated so as to be almost imperceptible to the spectators. Particular attention should be paid in carrying round the head and eyes with a regular and imperceptible motion; for nothing so much diminishes the grace and elegance of skating as sudden jerks and exertions, which are too frequently used by the generality of skaters. The management of the arms likewise deserves attention. There is no mode of disposing of them more gracefully in skating outside, than folding the hands into each other, or using a muff. There are

SPORT-
ING.
SPOT.

various feats of activity used by skaters, but we have not space here to enumerate them. Moving on the outside is the primary object for a skater to attain; and when he becomes an adept in that, he will easily acquire a facility in executing other branches of the art. There are few exercises but will afford him hints of elegant and graceful attitude; for instance, nothing on the ice can be more beautiful than the attitude of drawing the bow as if discharging an arrow whilst the skater is making a large circle on the outside. The manual exercise, and

military salutes, have also a pretty effect when used by an expert skater. Many more particulars may be obtained from a perusal of a treatise by R. Jones, a Lieutenant of Artillery, published in 1772, and illustrated with plates respecting the attitudes and graces. The work is entitled, *A Treatise on Skating, founded on certain principles deduced from many years' experience; by which that noble science is now reduced to an art, and may be taught and learned by a regular method, with ease and safety.*

SPORT-
ING.
SPOUSE.

SPO'RTULE, } Fr. *sportule*; It. *sportula*; Sp.
SPO'RTULARY. } *esportula*; Lat. *sportula*, *sporta*;
Gr. *σπυρίς*, a basket; applied to the dole or arms carried away in the basket. Generally,

Sportule, alms; *sportulary*, eleemosynary.

The bishops, who consecrated the ground, had a spill or *sportule* from the credulous laity. *Ayliffe. Parergon.*

Hereupon it is, that these *sportulary* preachers are fain to sooth up their many masters, and are so gaged with the fear of a starving displeasure, that they dare not be free in the reprehension of the daring sins of their uncertain benefactors; as being charmed to speak either placentia or nothing.

Hall. Cases of Conscience, disc. iii. ch. vii.

SPOT, *v.*

SPO'TLESS,

SPO'TLESSNESS,

SPO'TLY.

spot, the matter *spitten*, *spate*, or *spitted*. And see *SPOUT*, and *SPECK*.

A speck; a blot, a stain; met. a mark of impurity; surface marked or denoted; a specific place.

Her gite was gray and ful of *spotles* blake.

Chaucer. The Testament of Creseide, p. 296.

Syth that al the iustice of man is as the scripture sayeth like a fowle *spotted* clowte, and that y^e sterres are not clene in the syght of God.

Sir Thomas More. Workes, fol. 740. *Confutation against Barnes.*

This your sedition is not onely most odious, but also most horrible, that hath *spotted* the whole cuntrye with such a staine of ydlenesse.

Sir John Cheke. Hurt of Sedition.

A hill most fit for such a master,

A *spotless* mind of alabaster.

Sidney. Arcadia, book ii.

Wyld beastes in yron yokes he would compell;

The *spotted* panther, and the tusked bore,

The pardale swift.

Spenser. Faerie Queene, book i. can. 6.

Through cruell knife that her deare heart did kerve

And now she is with her upon the way

Marching in lovely wise, that could deserve

No *spot* of blame, though spite did oft assay

To blot her with dishonour of so faire a prey.

Id. Ib. book iv. can. 1.

Sweete love devoyd of villanie or ill,

But pure and *spotles*, as at first he sprong

Out of th' Almighties bosome, where he nests.

Id. The Teares of the Muses.

Lord, if thou look for a *spotlessness*, whom wilt thou look upon!

Donne. Devotions.

— The broad circumference

Hung on his shoulders like the moon, whose orb

Through optic glass the Tuscan artist views

At ev'ning from the top of Fesole,

Or in Valdarno, to descry new lands,

Rivers or mountains in her *spotty* globe.

Milton. Paradise Lost, book i. l. 291.

VOL. XXVII.

Thus he that has an idea made up of barely the simple ones of a beast with *spots*, has but a confused idea of a leopard; it not being thereby sufficiently distinguished from a lynx, and several other sorts of beasts that are *spotted*.

Locke. On Human Understanding, vol. i. book ii. ch. xxix.

This brilliant is so *spotless*, and so bright,

He needs no foil, but shines by his own proper light.

Dryden. The Character of a good Parson.

Two water snakes swam by the ship; they were beautifully *spotted*, and in every respect like land snakes, except that their tails were broad and flat.

Cook. Voyages, vol. ii. book iii. ch. ii. p. 97.

Few men are so *spotless* in their characters as not to afford some scope for evil report among those who examine their actions and characters with the searching and unwinking eye of envy.

Piers Ploukman. Vision, fol. 215.

The architriclyn clepith the *spouse*, and seith to him, ech man settith first good wyn; and whanne men be fillid, than that that is worse: but thou hast kept the good wyn into this tyme.

Wiclif. John ch. ii.

5 Q

SPOUSE.

And Jhesus seide to hem whether the sones of *spousaylis* moun faste as long as the *spouse* is with hem? as longe tyme as thei han the *spouse* with hem thei moun not faste.
Wiclif. Mark, ch. ii.

Come thou and I schal schewe to thee the *spouses* the wyf of the lombe.
Id. Apocalips, ch. xxi.

Sire clerk of Oxenforde, our hoste said,
Ye ride as stille and coy, as doth a maid,
Were newe *spoused*, sitting at the bord.
Chaucer. The Clerkes Prologue, v. 7877.

This markis hath hire *spoused* with a ring
Brought for the same cause, and than hire sette
Upon an hors snow-white, and wel ambling.
Id. The Clerkes Tale, v. 8262.

O swete and wel beloved *spouse* dere
Ther is a conseil, and ye wol it here,
Which that right fayn I wold unto you saie,
So that ye swere, ye wol it not bewraie.
Chaucer. The Second Nonnes Tale, v. 15612.

Boweth your nekke under the blisful yok
Of soveraintee, and not of servise,
Which that men clepen *spousaile* or wedlok.
Id. Ib. v. 17989.

This wife was fro the well come,
Where that a pot with water nome
She hath, and brought it in to house,
And sawe howe that hir sole *spouse*
Was set, and loked on a boke
Nigh to the fyre.
Gower. Conf. Am. book iii.

But whanne the wodde is woxen grene,
And comen is the sommer tide,
Than fleeth she ferth, and ginneth to chide,
And chetereth out in hir langage,
What falsehede is in mariage,
And telleth in a maner speche
Of Thereus the *spouse-breche*.
Id. Ib. book v.

At whiche mariage was no persones present but the *spouse*, the *spousesse*, the duches of Bedforde her moder, y^e preest, two gentylwomen, and a yong man to helpe the preest synge.
Fabyan. Chronycle. Edward III. p. 654.

Not the *spousage* of their soules haue they broken by no filthy traditions of men.
Bale. Image of both Churches, ch. xiv. v. 6.

What joy or honours can compare
With holy nuptials?
When in the happie choyce,
The *spouse* and *spoused* have the formost voyce!
Ben Jonson. Epithalamion.

At last such grace I found, and meanes I wrought,
That I that lady to my *spouse* had wonne;
Accord of friendes, consent of parents sought.
Spenser. Faerie Queene, book ii. can. 4.

He left two sonnes, of which faire Elferon,
The eldest brother, did untimely dy;
Whose emptie place the mightie Oberon
Doubly supplide, in *spousall* and dominion.
Id. Ib. book ii. can. 10.

Where Phœbus self, that god of poets hight,
They say, did sing the *spousall* hymne full cleere,
That all the gods were ravisht with delight
Of his celestiall song and musick's wondrous might.
Id. Ib. can. 7.

Oh indolent! to waste thy hours away!
And sleep'st thou careless of the bridal day?
Thy *spousal* ornament neglected lies;
Arise, prepare the bridal train, arise!
Pope. Homer. Odyssey, book vi.

Nor for a dear, lost father only flow
The filial tears, but woe succeeds to woe:
To tempt the *spouseless* queen with amorous wiles,
Resort the nobles from the neighbouring isles.
Id. Ib. book i.

No; never shall my conscious lips betray
Such innocence, such sacred *spousal* love.
Mickle. The Siege of Marseilles, act i. sc. 2

SPOUT, n. } *Spout, to spout out water.* D. **SPOUT.**
SPOUT, v. } *spuyten, to spit.* Junius and Tooke
SPO'UTER, } affirm it to be the past participle of **SPRAIN.**
SPO'UTLESS. } *spitt-an, to spit, to throw out.*

The place whence, that from which any thing is *spitten* or thrown out, ejected or omitted, from which any liquid is poured: also a mass of water falling, not in drops, but in a continuous stream like liquor from the spout of a vessel.

To *spout*, met., to throw out, utter or pour forth, *sc.* words. *Spouter*, an utterer of words, an abundant or copious talker.

Who kepte Jonas in the fishes mawe,
Til he was *spouted* up at Ninivee?
Chaucer. The Man of Lawes Tale, v. 5007.

This signe is veraily resembled
Liche to a man, whiche halte assembled
In either honde a water *spout*,
Wherof the stremes rennen out.

Gower. Conf. Am. book vii.

They themselves laid them down hard by the murmuring musick of certain waters, which *spouted* out of the side of the hills, and in the bottom of the valley made of many springs a pretty brook, like a commonwealth of many families.

Sidney. Arcadia, book i. p. 65.

And one of them I saw myselfe sunke downe right with the abundance of water that this monstrous fish *spouted* and filled it withall.

Holland. Plinie, book ix. ch. vi.

From his throte brake out
My wine, with man's flesh gobbets, like a *spout*.

Chapman. Homer. Odyssey, book ix.

No hands could force it thence, so fixt it stood,
Till out it rush'd, expell'd by streams of *spouting* blood.
Dryden. Ovid. Metamorphoses, book xii.

They are likewise very full of blood, for if they are deeply wounded in a dozen places there will instantly gush out as many fountains of blood, *spouting* to a considerable distance.

Anson. Voyages, book ii. ch. i. p. 168.

So the good man doth not plant his bounty in one small hole, or *spout* it on one narrow *spot*, but with an open hand disseminates it, with an impartial regard distils it all about.

Barrow. Sermon 22. vol. ii. p. 522.

Neither is it desirable, that a boy should acquire that love and habit of declaiming, which may introduce him to *spouting* clubs or disputing societies.

Knox. Liberal Education, sec. 20.

The quoters imitate parrots or professed *spouters*, in committing words only to memory, purposely for the sake of ostentation.

Id. Winter Evenings. Evening 32.

The diameter of the base of this *spout* I judged to be about fifty or sixty feet; that is, the sea within this space was much agitated, and foamed up to a great height.

Cook. Voyages, vol. iii. book i. ch. vi.

There the pitcher stands
A fragment, and the *spoutless* tea-pot there;
Sad witnesses how close-pent man regrets
The country, with what ardour he contrives
A peep at nature, when he can no more.

Cowper. The Task, book iv.

SPRACK. *Sprag*, Grose says, is lively, active,—but he does not subjoin where it is used. Stevens mentions the neighbourhood of Bath. Malone supplies an example from the Supplement to Cibber's Life. "Mr. Dogget was a little lively *sprack* man." It may be *spræc*, from A. S. *spræc-an*, to talk; *spræc-ol* is a chatterer, or great talker.

Eu. He is a good *sprag-memory*.
Shakspeare. The Merry Wives of Windsor, act iv. sc. 1. fol. 54.

SPRAIN, n. } Lye and Skinner agree that *sprain*
SPRAIN, v. } is corrupted from *strain*.

I confessed I was in pain, and thought it was with some *sprain* at Tennis.
Temple. Of the Cure of the Gout.

SPRAIN.

SPRAY.

The sudden turn may stretch the swelling vein,
The cracking joint unhinge, or ankle sprain.

Gay. *Trivia*, book i. v. 37.

SPRAT, D. *sprot*; *halecis pullus*, the young or sprout of the herring, (as some think, Kilian,) from *sproten*, to sprout.

Before that, a plump vintner
Kneeling, and offering incense to his deitie.
Which shall be only this, red *sprats* and pilchers.
Beaumont and Fletcher. *The Bloody Brother*, act ii. sc. 2.

SPRAWL, v. } *Sprawl* is the diminutive of *spread*,
SPRA'WLING, n. } —*spreadle*, *spraddle*, *sprawl*.

To spread about; to move with the limbs spreading, or thrown out, to throw or toss about widely.

As kynge Menander in a laye
The sooth hath fonde, where she laye
Spraulend with hir wynges twey,
As she whiche shulde than deye
For loue of hym, whiche was hir make.

Gower. *Conf. Am.* book iv.

I haue seene it, saith Cambrensis, experimented, that a toad being compassed with a thong of Irish leather, and creeping thitherward, indeuoring to haue skipt ouer it, suddenlie reculed backe, as though it had been rapt in the head; wherevpon he began to *sprall* to the other side.

Holinshed. *Description of Ireland*, vol. vi. p. 9.

As if you put the haire of an horsse taile in mire, puddle, or in a doonghill for a certeine space, it will turne to a little thin *spralling* worme, which I haue often seene and experimented.

Id. *Ib.* vol. vi. p. 20.

And often with his *sprawl*ings came aloft;
Yet no way kept down death's relentless force:
But (full of water) made an heauie corse.

Chapman. *Homer. Batrachomyomachia*.

Oft I've seen,
Ev'n at her frown, the boist'rous uproar cease,
And the mad pickers, tam'd to diligence,
Cull from the bin the *sprawling* sprigs, and leaves
That stain the sample, and its worth debase.

Smart. *The Hop-Garden*.

I mean all such as can, for some
This hand hath sent to their long home;
And some lie *sprawling* on the ground,
With many a gash and bloody wound.

Butler. *Hudibras*.

The tumbling goblet the wide floor o'erflows,
A stream of gore burst spouting from his nose;
Grim in convulsive agonies he *spraws*;
Before him spurn'd the loaded table falls.

Pope. *Homer. Odyssey*, book xxii.

SPRAY. As *stray* and *straggle* (corrupted into *stroll*) are of the same origin with *straw* or *strew*, so *spray* and *sprall* (corrupted from *spraddle*) may have one origin, viz., the verb *sprædan*, to spread. *Spray* is applied to—

The little twigs or shoots at the extent of a branch or bow; also to small drops of water scattered or dispersed by the wind, or the dashing of the waves.

The wode dove upon the *spray*
He sang ful loude and clere.

Chaucer. *The Rime of Sire Thopas*, v. 13700.

That *spray* to fame so fertile,
The lover-crowning myrtle,
In wreaths of mixed bows,
Within whose shades are dwelling
Those beauties most excelling,
Enthron'd upon her brows.

Drayton. *Ode to the New Year*.

CLORIS. Nay that those sweet harmonious strains we hear,
Amongst the lively birds' melodious lays,
As they recording sit upon the *sprays*,
Were hovering still for music at thine ears.

Id. *The Muses' Elysium. Nymphal 4*.

The painted birds, companions of the spring,
Hopping from *spray* to *spray*, were heard to sing.

Dryden. *The Flower and the Leaf*.

It being so very hazy and thick in the horizon, that we could not see a mile round us, occasioned by the *spray* of the sea being lifted up to a greater height by the force of the wind.

Cook. *Voyages*, vol. iii. book ii. ch. iv. p. 211.

SPREAD, v.

SPREAD, n.

SPRE'ADER,

SPRE'ADING, n.

SPRE'ADINGLY.

D. *speaden*, *spreyden*; Ger. *spreiten*; Sw. *sprida*; A. S. *spre-dan*; *extendere*, *expandere*—

To extend or stretch out, to expand or lay open; to broaden or widen; to lay over, stretch over, a wider or broader space; to pass or move over a wide or extended surface; to dilate, to diffuse; to divulge, to publish.

þo þe Romeyns were wyþ out chef, dyscomfordd hii were
& to *spradde* hem her & þer, & þe oþere after vaste,
& slowe & despoylede, & to grounde hem caste.

R. Gloucester, p. 212.

Was neuer in alle his lyue þer fadere ore so glad,
Als whan he sauh his sons tuo, þe paiens force to *sprad*.

R. Brunne, p. 18.

Almerle his banere *sprad*, and oþer barons mo,
Mikelle blod þei schad of folk þat þei gon slo.

Id. p. 117.

— Holyness and honestete. out of holy churche
Spryngeþ and spredeþ. and enspireþ þe peuple.

Piers Plouhman. *Vision*, fol. 276.

Lord, Y woot that thou art an harde man, thou repist where thou hast not sowe, and thou gederist togider where thou hast not *sprede* abroad.

Wiclif. *Matthew*, ch. xxv.

For the charite of God is *sprede* abroad in oure hertis bi the hooli goost that is ghounn to us.

Id. *Romayns*, ch. v.

And Zephirus, and Flora gentelly,
Yave to the floures soft and tenderly,
Hir swote breth, and made hem for to *sprede*.

Chaucer. *Prologue to Legend of Good Women*, p. 300.

Of plate of golde a berde he had,
The whiche his brest all ower *spradde*.

Gower. *Conf. Am.* book v.

All in a woodman's iacket he was clad

Of Lincolne greene, belayd with silver lace;

And on his head an hood with aglets *sprad*,

And by his side his hunter's horne he hanging had.

Spenser. *Faerie Queene*, book vi. can. 2.

A multitude, like which the populous north
Pour'd never from her frozen loyns, to pass
Rhene or the Danaw, when her barbarous sons
Came like a deluge on the south, and *spread*
Beneath Gibraltar to the Lybian sands.

Milton. *Paradise Lost*, book i. l. 356.

Betwixt them lawns, or level downs, and flocks
Grasing the tender herb, were interpos'd;
Or palmie hilloc, or the flourie lap
Of some irriguous valley *sprede* her store,
Flours of all hue, and without thorn the rose.

Id. *Ib.* book iv. l. 252.

— The gates wide op'n stood
That with extended wings a banner'd host
Under *spread* ensigns marching might pass through
With horse and chariots rankt in loose array.

Id. *Ib.* book ii. l. 834.

Satan with less toil, and now with ease
Wafts on the calmer wave by dubious light,
And like a weather-beaten vessel holds
Gladly the port, through shrouds and tackle torn;
Or in the emptier waste, resembling air,
Weighs his *spread* wings, at leisure to behold
Farr off th' empyreal heav'n.

Id. *Ib.* book ii. l. 1041.

No flower hath that kind of *spread* that the woodbine hath.

Bacon. *Natural History*, Cent. vii. sec. 676.

If their child be not such a speedy *spreader* and brancher, like the vine, yet perchance he may prove *proles tardè crescentis olivæ*; and yield, though with a little longer expectation, as useful, and more sober fruit than the other.

Reliquiæ Wottonianæ, p. 77.

SPREAD. Also can any understand the *spreadings* of the clouds, or the noise of his tabernacle? *Job*, ch. xxxvi. v. 29.

SPRIG. As touching the *spreading* of mucke, and mingling it with the mould of a land, it is exceeding good to do it when the wind setteth full west.

Holland. Plinie, book xvii. ch. ix.

Why we ought not to stand to their arbitrement, shall now appear by a threefold corruption which will be found upon them.
1. The best times were *spreadingly* infected, &c.

Milton. Of Reformation in England, book i.

For when the favouring shades of night arise,
And peaceful slumbers close my mother's eyes,
Me from our coast shall *spreading* sails convey,
To seek Ulysses through the watery way.

Pope. Homer. Odyssey, book ii.

He chuses a company of very ordinary unlettered men, but very honest men, to be the witnesses of his conversation and doctrine; and these he designs for the *spreaders* of his religion throughout the world.

Sharp. Sermon 3. vol. ii. p. 67.

The *spreading* of the coral bank, or reef, into the sea, in my opinion is continually, though imperceptibly, effected.

Cook. Voyages, vol. iv. book ii. ch. iii. p. 263.

SPREKELIA, in *Botany*, a genus so called by Heister. It belongs to the class *Hexandria*, order *Monogynia*, and the natural family of *Amaryllideæ*. Generic character: perianth declinate; tube hardly any; upper segments reflexed, lower one sloped downwards, and convolute at the base; stamens six; filaments inserted equally, with a connecting membrane at the base of the perianth, fasciculate, declinate, and recurved, as well as the style; the upper sepaline and lower petaline segments shorter than the others; anthers pendulous, fixed one-third from the top.

This genus consists of a single known species, *S. formosissima*, the *Amaryllis formosissima*, a native either of Cuba or St. Domingo: it is a bulbous-rooted plant with ensiform leaves, and single flowered scapes. The flower is very large, declinate, of a deep scarlet colour.

SPRENGELIA, in *Botany*, a genus so called by Smith, in honour of C. C. Sprengel of Spandau, in Brandenburg. It belongs to the class *Pentandria*, order *Monogynia*, and the natural family of *Epacrideæ*. Generic character: calyx coloured; corolla five-parted, rotate, beardless; stamens five, hypogynous; anthers connate or free; hypogynous scales none; capsule with the placentas adnate to the central column.

This genus consists of two known species, *S. incarnata* and *S. montana*, the first a native of New South Wales, and the other of Van Diemen's Land; they are small elegant shrubs of a dry prickly habit, with reddish flowers, which terminate the lateral branches.

SPRENT, *sprenged*, *sprengd*, *spreynd*, *sprent*. See **SPRING**, **SPRINKLE**, and **BESPRENT**.

Sprinkled, scattered.

For if the blood of goot, buckis, and of bolis, and the ausche of a cow calff *spreynd*, halewith uncleene men to the clensyng of fleische, hou mych more the blood of Crist, which bi the Hooli Goost offride himsilff unwemmed to God, schal clense oure conscience fro deede werkis to serue God that lyueth?

Wiclif. Ebrewis, ch. ix.

O soden wo, that ever art successour
To worldly blis, *spreint* is with bitternesse
Th' ende of the joye of our worldly labour.

Chaucer. The Man of Lawes Tale, v. 4842.

So furiously each other did assayle,
As if their soules they would attonce have rent
Out of their brests, that streames of bloud did rayle
Adowne, as if their springs of life were spent;
That all the ground with purple bloud was *sprent*.

Spenser. Faerie Queene, book iv. can. 2.

SPRIG, A. S. *sprec*, a twig, a branch, a sprig; Somner. *Sprec* seems clearly from the A. S. *sprec-an*, to utter or put out. See the Quotation from *Plinie* in *v. Sprout*.

A small shoot; sc. of a tree; it is also used as the **SPRIG**.
Lat. *stolo*, (see **STOLIDITY**.) and as the English *imp*. **SPRING**.

With this he hung them up aloft, upon a tamricke bow,
As eyeful trophies; and the *sprigs* that did about it grow,
He proined from the leavie armes, to make it easier view'd.
Chapman. Homer. Iliad, book ix.

So Philomel, perch'd on an aspin *sprig*,
Weeps all the night her lost virginity,
And sings her sad tale to the merry twig,
That dances at such joyful misery.
Fletcher. Christ's Triumph over Death.

Thus fades the oak i' th' *sprig*, i' th' blade the corn;
Thus without young, this phenix dies, new-born.

Dryden. Upon the Death of Lord Hastings.

Let it be deemed by Christians a greater honour to pluck one *sprig* of olive, than to bring home whole loads of laurel.

Knox. The Prospect of Perpetual and Universal Peace.

SPRIGT. See **SPRITE**.

SPRING,

D. *springhen*; Ger. *springen*;

Sw. *springa*; A. S. *spryngan*;

To rise, or arise, or raise; to

come forth, as water or seed from

the ground; to proceed or cause

to proceed, to produce; to have

or give their source, origin, or

beginning; to issue or shoot forth,

as water from a fountain or jet;

to start, to leap.

Spring, n. (as the verb,) the time or season when general vegetation begins, the vernal season; each shoot of vegetation, plants shooting or germinating.

Springe, a springing snare or gin; a snare.

Sprenging, *Wiclif*, is in the Vulgate *aspersio*. See **SPRINKLE**.

A *spring* is also applied to any thing elastic, i. e. to any thing which, when stretched or pressed, rises or returns again; to an elastic body, an elastic force or power.

Springal, met., a shoot, a youth; also an engine of war for shooting by force of a *spring*; Fr. *espringalle*.

— per schul kynges come & *springe* of pi blod.

R. Gloucester, p. 15.

— Holynes and honestete. out of holy church

Spryngeþ and *spredeþ*. and enspireþ þe people.

Piers Plouhman. Vision, fol. 276.

— And flod have wasshe

Clene away þe cursede blod. that of Cayne ys *spronge*.

Id. Ib. fol. 177.

But the water that I chal gyue him, schal be maad in him a welle of water *sprynge* up into everlasting lyf.

Wiclif. John, ch. iv.

But the water that I shal geue hym, shall be in hym a well of water, *sprynge* vp into euerlastyng lyfe.

Bible, Anno 1551.

But othire seedis felden in to stony placis, where thei hadden not myche erthe, and anon thei *sprungen* up, for thei hadden not depnesse of erthe.

Wiclif. Matthew, ch. xiii.

Some fell vpon stonye grounde where it had not much earth, and anon it *spronge* vp, because it had not depth of earth.

Bible, Anno 1551.

Bi obedience and *sprenging* [*aspersio*] of the blood of Iesus Crist, grace and pees be multiplied to you.

Wiclif. 1 Peter, ch. i.

Also it is necessarie to understande whennes that sinnes *springen*, and how they encresen, and which they ben.

Chaucer. The Persones Tale, p. 151.

Certaine I am full like indeed
To him that cast in earth his seed,
And hath ioy of the new *springing*
Whan it greeneth in the ginning,

SPRING.

And is also faire and fresh of flour,
Lustie to seene, swote of odour,
But ere he it in his sheues shere,
May fall a weather that shall it dere,
And make it to fade and fall,
The stalke, the greine, and floures all.

Chaucer. *The Romant of the Rose*, p. 203.

Than shal she ben even at ful alway,
And spring-flood lasten bothe night and day.

Id. *The Frankelcines Tale*, v. 11378.

And eke within the castle were
Springolds, gones, bowes and archers.

Id. *Romant of the Rose*, v. 4191.

In a foreste alone he was
He sawe vpon the grene gras
The faire floures fresshe springe.

Gower. *Conf. Am.* book i.

Upon the sprynge of fresshe welles,
She shope to dwelle, and no where elles.

Id. *Ib.* book v.

And whan the spryngyng tyme began, than Syr William Duglas
purueied hym of that whiche aparteynd for his entreprise.

Lord Berners. *Froissart. Cronycle*, vol. i. ch. xx. p. 29.

And this castell was set bytwene the towne and the se, and was
well fortyfied with springalles, bombardes, bones, and other artil-
lary.

Id. *Ib.* ch. 144. p. 173.

The lorde of Bauceen pycarde went vpon the se, aprochyng
the castell, the better to aduyce it, and ther he was stryken with a
springall and slayne.

Id. *Ib.* ch. 193. p. 229.

Thus posies of the spring-flowers were wrapt up in a little green
silk, and dedicated to Kala.

Sidney. *Arcadia*, book iii.

Faire virgin, said the prince, yee me require
A thing without the compass of my witt:
For both the lignage, and the certein sire,
From which I sprong, from me are hidden yitt.

Spenser. *Faerie Queene*, book i. can. 9.

The one his bowe and shafts, the other spring
A burning teade about his head did move,
As in their syre's new love both triumphing.

Id. *Muipopotmos*.

Nor shall the rain of your good counsel fall
Upon the barren sands, but spring up fruit,
Such as you long have wished for.

Massinger. *The Unnatural Combat*, act iii. sc. 2.

Now these oilets are properly (in twigs or sets of trees) those
buds called, where the new spring first shooteth forth.

Holland. *Plinie*, book xvii. ch. xxi.

Amongst the rest, which in that space befell,
There came two springalls of full tender yeares,
Farr thence from forrein land where they did dwell,
To seeke for succour of her and her peares,
With humble prayers and intreatful tears.

Spenser. *Faerie Queene*, book v. can. 10.

GAS. Why, my Lord,—

CAS. Nay, nay, you are too wise now; good, observe me.
I do not rail against the hopeful springall,
That builds up monuments in brass; rears trophies
With mottoes and inscriptions, quaint devices
Of poetry and fiction.

Beaumont and Fletcher. *The Laws of Candy*, act iii. sc. 1.

EUPH. Come hither springall.

ON. That in the Almain tongue signifies a gentleman.

Id. *The Queen of Corinth*, act ii. sc. 4.

Mischief 'gainst goodness aim'd, is like a stone
Unnaturally forc'd up an eminent hill,
Whose weight falls on our heads and buries us,
We springe our selves, we sink in our own bogs.

Id. *Ib.* act iv. sc. 3.

Looke how a mauis, or a pygeon
In any groue, caught with a sprindge, or net;
With struggling pinions 'gainst the ground doth beat
Her tender body; and that then-streight bed
Is soure to that swindge, in which she was bred.

Chapman. *Homer. Odyssey*, book xxii.

Woodcocks arrive first on the north coast, wher almost euerie
hedge serueth for a roade, and euerie plashoote for springles to
take them.

Carew. *Survey of Cornwall*, fol. 25.

The young men and maidens go out into the woods and cop-
pices, cut down and spoil young springers to dress up their May-
booths.

Evelyn, book iv. sec. 4.

The sundry germinations and springing up of the works of
righteousness in him are a delectable paradise in him.

More. *The Moral Cabbala*, part iv. ch. ii. fol. 34.

All dreadfull pourtraicts of deformitee:

Spring-headed hydres; and sea-shouldring whales;
Great whirlpooles, which all fishes make to flee.

Spenser. *Faerie Queene*, book ii. can. 12.

As through his chanell crookt Meander glides
With turnes and twines, and roubles now to now fro,
Whose streams run forth there to the salt sea sides,
Here backe returne, and to their springward goe.

Fairefax. *Godfrey of Bulloigne*, book xvi.

'Twas ebbing darkness, past the noon of night,
And Phosphor, on the confines of the light,
Promis'd the Sun, ere day began to spring.

Dryden. *Palamon and Arcite*, book iii.

Along these blushing borders, bright with dew,
And in yon mingled wilderness of flowers,
Fair-handed spring unbosoms every grace;
Throws out the snow-drop, and the crocus first;
The daisy, primrose, violet darkly blue,
And polyanthus of unnumber'd dyes.

Thomson. *Spring*.

L. SAN. They haue all new legs,
And lame ones; one would take it,
That neuer see 'em pace before, the spauen
And spring-halt rein'd among 'em.

Shakspeare. *Henry VIII.* act i. sc. 3.

The sea arose with such high spring tides, that overflowing the
countries next adioining, diuers villages with the inhabitants were
drowned and destroyed.

Holinshed. *Historie of England*, book vii. ch. viii.

ISA. Alas, poor woodcock, dost thou go a birding: thou hast
e'en set a sprindge to catch thy own neck.

Dryden. *The Wild Gallant*, act iii.

The exterior part of this our habitable world is the air or atmos-
phere; a light, thin fluid, or springy body, that encompasses the
solid earth on all sides.

Locke. *Elements of Natural Philosophy*, ch. v.

This undestroyed springiness of the air seems to make the neces-
sity of fresh air to the life of hot animals, (few of which, as far as
I can guess, after many trials,) would be able to live two minutes
of an hour if they were totally, and all at once, deprived of air.

Boyle. *Works*, vol. iv. fol. 91. *Qualities of the Air*.

Yet the ends and uses of respiration are not served by that
springiness, but by some other unknown and singular quality.

Bentley. *Sermon* 8. p. 324.

Indeed love (the spring-head of charity) as it is the sweetest of
all passions, so it is one of the strongest too.

Atterbury. *Sermon* 2. vol. i. p. 63.

These assiduously,
But gently, in their proper arts employ'd,
Acquire a vigour and springy activity,
To which they were not born.

Armstrong. *Art of Preserving Health*, book iii.

This was very conspicuous during the spring-tide of the full
moon, which happened soon after our arrival.

Cook. *Voyages*, vol. vi. book iv. ch. iii. p. 313.

SPRING. See WATERS.

SPRINKLE, v. } D. sprenghen, sprenghele,
SPRI'NKLE, n. } sprengkalen; German sprengen,
SPRI'NKLING, n. } sprengken; Sw. sprenga; A. S.

spræng-an. Besprængan, spargere;—sprænc-an, minu-
tatum spargere: merely a consequential usage of spræng-
an, to spring, to throw or shoot forth:—to throw or cast
upon, to spurt forth upon.

To throw forth in small particles, in drops, to cover
with small particles or drops, to scatter, to asperse.

SPRING,

—
SPRIN-
KLE.

SPRINKLE.

SPRITE.

Wad segge ge, quoth Merlyn, of his newe pinge?
Radde ge, þat me by *sprengede* þat mortar mid my blod.
R. Gloucester, p. 130.

They burn sweet gums, and spices or perfumes, and pleasant
smells, and *sprinkle* about sweet ointments and waters.
Sir Thomas More. *Utopia*, vol. ii. book ii. ch. v. p. 62.

There Hecuba I saw with a hundred moe
Of her sons wyues, and Priam at the altar,
Sprinkling with blood his flame of sacrifice.
Surrey. *Virgil. Æneis*, book ii.

The seate of Muses nine
where fiftene welles doe flowe,
Whose *sprinckling* springs and golden streames
ere this thou well didst knowe.
Turberville. *Upon the Death of Mayster Richard Edwards*.

She [Hope] alway smyld, and in her hand did hold
An holy water *sprinkle*, dipt in dew,
With which she *sprinkled* favours manifold
On whom she list, and did great liking sheowe,
Great liking unto many, but true love to fewe.
Spenser. *Faerie Queene*, book iii. can. 12.

How long might an indifferent eye looke upon the comicall and
mimick actions in those your misteries that should be sacred,
(your magick exorcismes, your clerical shavings; your uncleanly
unctions, your crossings, creepings, censings, *sprinklings*, &c.)
Hall. *Works*, vol. i. fol. 251. *Decade 1. Epistle 1.*

Him his swift coursers on his splendid car,
Rapt from the lessening thunder of the war;
To Troy they drove him, groaning from the shore,
And *sprinkling*, as he pass'd, the sands with gore.
Pope. *Homer. Iliad*, book xiii.

As signs of friendship they present a green branch, and *sprinkle*
water with the hand over the head.
Cook. *Voyages*, vol. iv. book iii. ch. iii. p. 33.

[A stranger] had come upon the recommendation of Socrates
the son of Sophroniscus, with an earnest and humble desire to
receive some *sprinklings* of his wisdom.

Search. *Light of Nature*, vol. ii. part ii. ch. xxiii. p. 241

SPRIT, *i. e.* SPIRT; to sprout, to throw out.

Toads are sometimes observed to exclude and *spirt* out a dark
and liquid matter behind; which we have observed to be true,
and a venomous condition there may be perhaps therein.

Sir Thomas Brown. *Vulgar Errors*, book iii. ch. xiii. p. 171.

The barley, after it has been couched four days, will sweat a
little, and show the chit or *sprit* at the root-end of the corn.
Mortimer. *Husbandry*.

Soon after the wind moderated, and we let all the reefs out of the
topsails, got the *spritsail-yard* out, and topgallant-mast up.
Cook. *Voyages*, vol. iii. book i. ch. ii. p. 20.

SPRITE,

SPRI'TEFUL,

SPRI'TEFULLY,

SPRI'TEFULNESS,

SPRI'TING, *n.*

SPRI'TELESS,

SPRI'TELY,

SPRI'TELINESS.

Also written *spright*, *sprightful*,
&c.

A contraction of *spirit*.

It has been common to write
spriteful, and not *spiritful*—

Full of spirit, life, animation,
vivacity, ardour, vigour: *spritely*
also belongs to this contracted

form.

Lively, animated, brisk, active, ardent, vigorous.

Sprited—haunted as by a *sprite*. (Steevens.)

—Wherewith came to my mind

The image eke of my dere father, when

I thus beheld the king of equal age

Yeld up the *sprite* with wounds so cruelly.

Surrey. *Virgil. Æneis*, book ii.

Her sister Anne, *spritelesse* for dread to heare

This fearefull sturre, with nailes gan teare her face,

She smote her brest, and rushed through the rout.

Id. *Ib.* book iv.

Yet died not his [Arundell's], prodigious tyrannye with him,
but succeeded with his office in Henry Chichely, and in a great
sort more of the *spryghtful* spirituality.

State Trials, 1 Henry V. Sir J. Oldcastle.

SPRITE.

SPROUT.

And forth he cald out of deepe darknes dredd
Legions of *sprights*, the which, like litle flyes,
Flutt'ring about his ever-damned hedde,
Awaite whereto their service he applyes,
To aide his friendes, or fray his enemies.

Spenser. *Faerie Queene*, book i. can. 1.

SATYR. See, he gathers up his *spright*,
And begins to hunt for life.

Beaumont and Fletcher. *The Faithful Shepherdess*, act iv. sc. 1.

IMO. I am *sprighted* with a foole,
Frighted, and angered worse.

Shakspeare. *Cymbeline*, act ii. sc. 3. fol. 378.

AR. Pardon, master,
I will be correspondent to command
And doe my *spryting* gently.

Id. *The Tempest*, act i. sc. 2. fol. 4.

Fair Colona, young and *sprightful* lady, do not let me, in the
best of my youth, languish in my most earnest affections.

Ford. *Love's Sacrifice*, act i. sc. 2.

This said, his readie charioteere did scourge his *spritefull* horse,
That freely to the sable fleet perform'd their fierie course.

Chapman. *Homer. Iliad*, book xi.

Then on the shore the worthy hid, and left his horrid lance
Amids the tamariskes; the *spritelike* did with his sword advance
Up to the river.

Id. *Ib.* book xxi.

If his [Jonson] later be not so *spriteful* and vigorous as his first
pieces, all that are old will, and all that desire to be old should,
excuse him therein.

Fuller. *Worthies*, vol. ii. *Westminster*.

No organs, no harp, no lute can sound out the praises of the
Almighty Father so *spritefully*, as the man that rises from his bed
of sorrows, and considers what an excellent difference he feels
from the groans and intolerable accents of yesterday.

Taylor. *Sermon 15.* vol. i. p. 284.

Levity and rashness have in it some *spritefulness* and greatness
of action.

Id. *Sermon 9.* vol. i. p. 166.

For after death, we *sprights* have just such natures,
We had for all the world, when human creatures.

Dryden. *Epilogue to Tyrannick Love*.

In short, therefore, the proper heaven and happiness of a man,
considered as a rational being, consists in the constant, free, and
sprightful exercise of his faculties, about such objects as are most
convenient to his rational nature.

Scott. *Christian Life*, part i. ch. i. fol. 4.

Wak'd as her custom was, before the day,
To do th' observance due to *sprightly* May:
For *sprightly* May commands our youth to keep
The vigils of her night, and breaks their sluggard sleep.

Dryden. *Palamon and Arcite*, book i.

Meantime the lyre rejoins the *sprightly* lay;
Love-dittied airs, and dance, conclude the day.

Pope. *Homer. Odyssey*, book i.

Then the faculties are most pleas'd and delighted too, when
they are most vigorously exercised about that which is most suit-
able to them; when they are not only determined to such objects
as are most agreeable to their natures, but do also act upon and
exert themselves towards them with the greatest *sprightliness* and
vigour.

Scott. *Christian Life*, part i. ch. i. fol. 3.

A leaf he'd scarce perus'd, when to their sight,
In likeness of a page, appear'd a *spright*.

Hoole. *Orlando Furioso*, book ii. v. 109.

So when Saul's weary'd son his fasting broke
With honey dropping from Philistian oak,
Returning strength and *sprightliness* arise,
Glow on his cheeks, and sparkle in his eyes.

Harte. *Thomas à Kempis. A Vision*.

Parents and schoolmasters may not be displeased at unlucky
tricks played by their lads, as showing a sagacity and *sprightliness*
they delight to behold; yet they will not suffer them to pass with
impunity, least it should generate idleness and other mischiefs.

Search. *Light of Nature*, vol. ii. part iii. ch. xxvi. p. 229.

SPROUT, *n.*SPROUT, *v.*

D. *spruyte*, *spruyten*; Ger. *spross*,
spruiessen; A. S. *sprout*, *spraut*; past
participle of *spryt-an*.

To shoot out, to cast forth.

Sprouts, in gardening, are the shoots from the stem of
the vegetable after the head is cut off; then applied to
young plants before they have headed.

SPROUT.

SPRUCE.

The bough, the braunch, the tree,
From which do spring and *sproute* such fleshie seedes,
As nothing else but moane and myschiefe breedes.

Gaseoigne. The Fruits of Warre.

These *sprouts*, when they are come once to some bignesse, and do braunch there, bee called of the Latines by a prettie name, *gemmae*, as it were precious stones: but so long as they are no other than buds *sprouting* forth under the concavities or pit-hole of the foresaide joints, they tearme them *oculos*, (i. oilets or eies,) marie in the very top they be named by them *germina*, (i. *sprigs* or *burgeons*.)

Holland. Plinie, book xvii. ch. xxi.

But a whole Hydra more
Remains of *sprouting* heads too long to score.

Dryden. Absalom and Achitophel.

Upon our complaining of the want of bread-fruit, we were told that the produce of the last season was nearly exhausted; and that what was seen *sprouting* upon the trees would not be fit to use in less than three months.

Cook. Voyages, vol. i. book i. ch. xv. p. 160.

Thus the heartiest gratitude, as I have shown in the proper place concerning the purest love, though bearing the fragrantest flowers, *sprouts* originally from the earthy principle of self-interest.

Search. Light of Nature, vol. i. part ii. ch. xxiii. p. 129.

SPRUCE, adj. Skinner derives from the Fr.

SPRUCE, v. *preux*, and *preux* from the Lat.

SPRU'CELY, *probus* or *probatus*. Junius says,

SPRU'CENESS. the well fed and strong are called

spruze and lustie young fellows, from the A. S. verb *spryttan*, to grow, to spread. Minshew from the Lat. *purus*.

Perhaps the Quotation from Hall will show the true origin of the word. It was the custom of our ancestors on especial occasions to dress after the manner of particular countries. The gentlemen who adopted that of Prussia or *Spruce* seem, from the description of it, to have been arrayed in a style to which the epithet *spruce*, according to our modern usage, might have been applied with perfect propriety. Prussian leather, *Coreum Prusceanum*, is called in Barett by the familiar name of *spruce*.

Smart, trim; smartly or trimly decked or dressed.

And after them came syr Edward Hayward, than admyral, and wyth hym syr Thomas Parre, iu dobles of crimosin veluet, voyded lowe on the backe, and before to the cannell bone, lased on the breastes with chaynes of siluer, and ouer that shorte clokes of crimosyn satyne, and on their heades hattes after dauncers fashion, with feasauntes fethers in them. They were appareyled after the fashion of Prusia or *Spruce*.

Hall. Henry VIII. The Firste Yere, fol. 6.

Earth too, will be a Lemnia; and the tree,
That wraps that crystal in a wooden tomb,
Shall be took up *spruce*, fill'd with diamond.

Donne. Elegy on Death.

Alas! the niceties of a *spruce* understanding, and the curious nothings of useless speculation, and all the opinions of men that make the divisions of heart, and do nothing else, cannot bring us one drop of comfort in the day of tribulation, and therefore are no parts of the strength of faith.

Taylor. Sermon 3. vol. iii. p. 78.

Against thou goest, curle not thy head and haire,
Nor care whether thy band be foule or faire;
Nor be not in so neat and *spruce* array
As if thou mean'st to make it holiday.

Beaumont. The Remedy of Love.

Salmacis would not be seen of Hermaphroditus till she had *spruced* up her self first.

Burton. Anatomy of Melancholy, vol. ii. p. 335.

As the doublet fell, neater inventions began to set up. Now in the time of *spruceness*, our plays follow the niceness of our garments, single plots,

Middleton. The Roaring Girl. To the Reader.

The common or *spruce* firr requires a strong soil, and is commonly a native of the low grounds and plains in Norway and Sweden, where the soil is deep, and of a strong loamy nature.

Miller. Dictionary.

Small need of art
To form *spruce* architrave, or cornice quaint,
On Parian marble, with Corinthian grace
Prepar'd.

J. Philips. Cerealia.

Beware of men who are too *sprucely* dress'd;
And look you fly with speed a fop profess'd.

Congreve. Ovid Imitated.

SPRUNT, v. *Sprunt* is probably, by mere trans-
SPRUNT, adj. position of the *r*, *spurn'tt*, *spurnt*.
SPRU'NTLY. A *spurn* in Holland (or as it is now

more usually written a *spur*) is any sharp, hard projection. To *spur*, to goad, to stimulate, (sc. with the heel or any thing affixed to it,) and, consequently, to *kick*.

Sprunt, the adjective, sharp, keen; hard and short, as a *spur*.

To *sprunt*; to throw out spurns or spurs, to spring forwards or outwards.

Spruntly, sharply, like any thing sharp, brisk, trim, smart.

As for that little *sprunt* piece of the brain which they call the conarion, that this should be the very substance whose natural faculty it is to move itself, and by its motions and nods to determine the course of the spirits into this or that part of the body, seems to me no less foolish and fabulous then the story of him that could change the wind as he pleased, by setting his cap on this or that side of his head.

More. An Antidote against Atheism, book i. ch. xi. fol. 35.

Either side

How do I look to-day, am I not drest

Spruntly?

Ben Jonson. The Devil is an Asse, act iv. sc. 1.

See this sweet simpering babe,
Dear image of thyself; see how it *sprunts*
With joy at thy approach!

Somerville. Hobbinol.

SPUD is (probably) a small *spade*. See SPIT.

DERMOT. My love to Sheelah is more firmly fixt
Than strongest weeds that grow these weeds betwixt:
My *spud* these nettles from the stones can part;
No knife so keen to wed thee from my heart.

Swift. A Pastoral. Dialogue, Anno 1728.

SPUMARIA, in *Botany*, a genus so called by Persoon, from the Latin *spuma*, foam, on account of the appearance of the plant. It belongs to the class *Cryptogamia*, and order *Fungi*. Generic character: peridium indeterminate, falling away, simple, divided within into cells by distinct, regular, ascending folds.

There is only a single British species known of this genus, *S. alba*: it is a plant of a white colour, growing on the stems of grass a few inches above the soil.

SPUME, n. It. *spuma*, *spumare*; Sp. *espuma*,
SPUME, v. *espumar*; Fr. *escume*, *escumer*. *Es-*
SPU'MOUS, *cumer la mer*, to scour, as a fleet
SPU'MY. of warlike ships, the sea. Our verb,
in all the examples found, is written *spoom*, Lat. *spuma*,
from *spuere*, to spit or spew, (A. S. *speow-ian*.)

The foam or froth, spit or thrown up (to the surface) by liquids, fluids, &c.

And let it boyle in such a plite

Til that she [Medea] sigh the *spume* white.

Gower. Conf. Am. book v.

MAST. Well, spare her our main topsail,

He shall not look us long, we are no starters.

Down with the foresail too, we'll *spoom* before her.

Beaumont and Fletcher. The Double Marriage, act ii. sc. 1.

His steeds their flaming nostrils cool

In *spume* of the Cerulean pool;

Whilst the wheels dip their hissing naves

Deep in Columbus' western waves.

Cotton. Night Quatrains.

SPRUCE.

SPUME.

SPUME. Such as are the Fescennines of Ausonius, the excrement and *spume* of Martial's verse, and the Ephesiaca of Xenophon.
SPUR. Taylor. *Sermon* 22. vol. i. p. 414.

But quaint pride
 Hath taught her sons to wound their mother's side,
 And gage the depth, to search for flaring shells,
 In whose bright bosom *spumy* Bacchus swells.
 Fleleher. *Christ's Triumph on Earth*.

The full and express meaning therefore of Aristotle's text must be this, that in the *spumeous* and watry or terrene moisture of the seed, is contained a body of a more spirituous or aëreal consistency.
 More. *The Immortality of the Soul*, book ii. ch. xiv. fol. 119.

When virtue *spooms* before a prosperous gale,
 My heaving wishes help to fill the sail.
 Dryden. *The Hind and the Panther*, part iii.

Which when, in anguish, through the flesh he tore,
 From both the wounds gush'd forth the *spumy* gore.
 Gay. *The Death of Nessus*.

The Tiber now their *spumy* keels divide,
 And stem the flow of his descending tide.
 Brooke. *Constantia*.

The wind fresh blowing from the Syrian shore,
 Swift through the floods her *spooming* vessel bore.
 Id. *Ib.*

SPUNGE. See SPONGE.

SPUNK. *Spunk* or *spunk* is a common Scotch word, also used in the northern parts of England. The expression, "He has some *spunk* in him," is equivalent to "he has some mettle or spirit in him." The opinion of Dr. Jamieson is far from satisfactory. He supposes the first letter of the D. *voncke*, a spark, to be changed into *p*, and then the letter *s* to be prefixed. The D. *spanghe*, Ger. *spange*, A. S. *spange*, *spong*, &c., English *spang*, are nearer in their form, and as near in their signification.

Any thing shining, fiery, easily kindled or inflamed; fierceness, spirit, mettle.

To make white powder; it is surely many wayes feasible: the best I know is by the powder of rotten willows, *spunk*, or touch-wood prepared, might perhaps make it russet.

Sir Thomas Brown. *Vulgar Errours*, book ii. ch. v. p. 98.

SPUR, n. D. *spore*, *sporen*; Ger. *sporn*,
SPUR, v. *spornen*; A. S. *spora*, from A. S.
SPURRIER, *spir-ian*, to search after, to follow,
SPURRING, n. to pursue; and, consequentially, to
SPURLESS, urge on, goad on, the pursuit.
SPUR-GALLED. A goad, a prick; met. that which
 goads, incites, stimulates; an incitement, a stimulant:
 also applied to any sharp, hard, stiff, or sturdy pro-
 jection.

He smot stede with the *spore*.
 R. Gloucester, p. 544.

And on hire fete a pair of *spores* sharpe.
 Chaucer. *Prologue to the Canterbury Tales*, v. 475.
 And he with *spore* in horse side,
 Him hasteth faste for to ride,
 Till all men be lefte behynde.
 Gower. *Conf. Am.* book i.

Be þe luef be þe loht sire Edward,
 þou shalt ride *sporeles* o þy lyard
 Al þe ryhte way to douere ward.
 Satyrical Ballads by Ritson. On Warton, p. 5.

They made all their people to alyght a foote, and to put of
 theyr *spurris*, and araynged iii great batelles, as they hadde done
 before, and there were made many newe knyghtis.

Lord Berners. *Froissart*. *Cronycle*, ch. xviii.

Which outrage when those gentle knights did see
 Full of great envy and fell gealosy
 They stayd not to avise who first should bee,
 But all *spurd* after, fast as they mote fly,
 To reskew her from shamefull villany.
 Spenser. *Faerie Queene*, book iii. can. 1.

TIM. Consumptions sowe
 In hollow bones of man, strike their sharpe shinnes,
 And marre men's *spurring*.
 Shakspeare. *Timon of Athens*, act iv. sc. 3.

Or who would ever care to doo brave deed,
 Or strive in vertue others to excell;
 If none should yeeld him his deserved meed,
 Due praise, that is the *spur* of dooing well?
 Spenser. *The Teares of the Muses*.

Some of these lunatics, these frantic asses,
 Gave him *spur-rials* for his farthing glasses.
 Drayton. *The Moon-Calf*.

The cock, for instance, hath his *spurs*, and he strikes his feet
 inward with singular strength and order, and it is not possible he
 should use his *spurs* with greater reason for his advantage; yet he
 doth not this by any syllogistical method, or by ratiocination, but
 is meerly tutored to it by instinct.

Hale. *Origination of Mankind*, p. 56.

Gramercie Letherleg: get me the *spurrier*,
 And thou hast fitted me.

LET. I'll do it presently.
 Ben Jonson. *The Staple of Newes*, act i. sc. 1.

CHL. Plague o' your *spurgall'd* conscience, does it tire now?
 Now when it should be tuffest?
 Beaumont and Fletcher. *The Mad Lover*, act v. sc. 1.

ROW. I am ridden Tranco,
 And *spur-gall'd* to the life of patience.
 Id. *The Woman's Prize*, act ii. sc. 4.

ROW. Why do you look so strange?

LIV. I use to look, sir,
 Without examination.

MUR. Twenty *spur-royals* for that word.
 Id. *Ib.* act i. sc. 4.

Suppose we should put feathers, bullets, and *spur-rowels* in a
 box, where they shall lye intermixedly, but close, one with another.
 More. *The Immortality of the Soul*, book ii. ch. ii. fol. 67.

He gaz'd with wonder on their equal might,
 Look'd eager on, but knew not either knight:
 Resolv'd to learn, he *spurr'd* his fiery steed
 With goring rowels to provoke his speed.

Dryden. *Palamon and Arcite*, book ii.

By the by, it may perhaps be of some use to remark, that the
 chief, if not the only *spur* to human industry and action, is un-
 easiness.

Locke. *Of Human Understanding*, vol. i. book ii. ch. xx. p. 227.

A little before this discovery, was another made by the new
 president and fellows of Magdalen College, of 1400*l.* in old gold or
spurroyals.

Wood. *Fasti Oxonienses*, vol. ii. fol. 67.

Afterwards siding with the faction, he became a Presbyterian, a
 Covenanter, an Independent, was made Fellow of Magdalen Col-
 lege by the com. and visitors, (where he had his share of the
 old gold or *spurroyals* belonging to that house,) went away with,
 and never restored, them again as others did.

Id. *Ib.* vol. ii. fol. 85.

Self-interest, as we there show, *spurring* to action by hopes and
 fears, caused all those disorders amongst men, which required the
 remedy of civil society.

Wurburton. *The Divine Legation*, book i. sec. 4.

SPURGE, } Fr. *espurge*; a plant of *purgative*
SPURGING, v. } qualities. *Espurger*, Lat. *purgare*,
 to purge or cleanse out. D. *spurgie*.
Spurging,—clearing out; cleansing.

I have beene gathering wolve's haire,
 The mad dog's foam, and the adder's eares;
 The *spurging* of a dead man's eyes,
 And all since the evening starre did rise.

Ben Jonson. *Witches' Charms*.

That the leaves of the cataputea or *spurge* being plucked upward
 or downward, respectively perform their operations by *purge* or
 vomit, as some have written, and old wives still do preach, is a
 strange conceit.

Sir Thomas Brown. *Vulgar Errours*, book ii. ch. vii.

SPUR.
SPURGE.

SPURIOUS.
—
SPURN.

SPURIOUS, } It. *spurio*; Sp. *spurio*; Lat. *spurius*; perhaps from Gr. *σπορα*,
SPURIOUSLY, } *sparsio seminis*.
SPURIOUSNESS. }
Of unknown, unsettled parentage or origin; illegitimate, counterfeit.

But can it be aught but a *spurious* seed
That growes so rife in such unlikely speed?

Hall. *Satire* 1. book vi.

The deposition, confessing that the child had been *spuriously* passed upon Virginius for his own.

Webster. *Tragedy of Appius and Virginia*.

I never could be imposed on to receive for yours what is written by any others; or to mistake your genuine poetry for their *spurious* productions.

Dryden. *Dedication to Juvenal*.

There was no shadow of reason why the Asclepius should have fallen under the same condemnation, nor several other books superadded by Patricius, they being unquestionably distinct from the Pæmander, and no signs of *spuriousness* or bastardy discovered in them.

Cudworth. *Intellectual System*, book i. ch. iv. fol. 321.

You proceed to Hippolytus, and speak of his *spuriousness* with as much confidence as if you were able to prove it.

Waterland. *Works*, vol. iii. p. 62. *A Second Defence of some Queries*.

St. Luke's Gospel, written for the peculiar use of the converted Gentiles, and for the express purpose of furnishing a summary of authentic facts, and of suppressing *spurious* narrations.

Horsley. *Sermon* 34. vol. iii. p. 84.

SPURN, *n.* } A. S. *sporn-an*, *spurnan*; seems
SPURN. } formed from *spor*, past participle of
spir-ian; *spor-en*, *sporn*, or *spurn*, and to be applied, consequentially,

To kick; to strike at, knock or dash; to push against, push away; to reject, cast, or throw off or away, (indignantly, contemptuously, scornfully.)

Yet right anon as that his dore is up,
He with his feet wol *spurnen* down his cup,
And to the wood he wol, and wormes ete.

Chaucer. *The Squires Tale*, v. 10929.

A leper lady rose, and to her wend,
And sayd, Why *spurnes* thou again the wall,
To slea thy selfe, and mende nothing at all?

Id. *The Complaint of Crescide*, p. 297.

So that within a while I gesse
She had on suche a chance *spurned*,
That all hir mode was ouertorned,
Whiche firste she had of slowe manere.

Gower. *Conf. Am.* book iv.

The old kindenesse of the father cannot lette the good chyld vitrely dyspayre, for all that he hath played at *spurne* poynte by the waye in goynge at scholwarde.

Sir Thomas More. *Workes*, fol. 576.

But all in vain against her will they *spurn*,
Persuasion, threat, nor curse with her prevails.

Drayton. *The Barons' Wars*, book iii.

The fir and larch have one tap root and no more: for upon that one maine maister-root they rest and are founded; howbeit, many small strings and petie *spurns* shoot out of the sides.

Holland. *Plinie*, book xvi. ch. xxxi.

The insolence of office, and the *spurnes*
That patient merit of the vnworthy takes.

Shakspeare. *Hamlet*, act iii. sc. 1. fol. 265.

And what defence can properly be used in such a despicable encounter as this, but either the slap or the *spurn*?

Milton. *Works*, vol. i. fol. 308. *A Reply to an Answer against the Doctrine and Discipline of Divorce*.

Now they who reach Parnassus' lofty crown,
Employ their pains to *spurn* some others down.

Pope. *Essay on Criticism*.

Then why this *fastus academicus*, this local insolence, this pomp of pretension, which *spurns* at the idea of reform; as if Oxford and Cambridge alone possessed all learning, all science, all philosophy, all divinity, all excellence.

Knox. *Works*, vol. iv. p. 265. *Liberal Education*.

VOL. XXVII.

SPUTATION, } Lat. *sputum*, spit or spittle. See
SPUTATIVE. } SPIT.
Sputative, that can or may spit; disposed or inclined to spit.

It was my intention to see whether I could pick out any counsel to allay that *sputative* symptom which yet remaineth upon me from my obstructions of the spleen.

Reliquiæ Wottonianæ, p. 370.

A moist consumption receives its nomenclature from a moist *sputation*, or expectoration; a dry one is known by its dry cough.

Harvey. *On Consumptions*.

SPUTTER, or } Are the same word; to *sputter* is
SPA'TTER. } to throw as if spitting.

And now thou dost with lies the throne invade,
By practice harden'd in thy slandering trade.
Obtending Heaven, for whate'er ills befall,
And *sputtering* under specious names thy gall.

Dryden. *Homer. Iliad*, book i.

And now the strand, and now the plain they held,
Their ardent eyes with bloody streaks were fill'd:
Their nimble tongues they brandish'd as they came,
And lick'd their hissing jaws that *sputter'd* flame.

Id. *Virgil. Æneid*, book ii.

While N—— and M—— *sputter* there,
Thou'lt ne'er prevent, with all thy care,
The melting of the suet.

Mason. *Ode*.

SPY, *v.* } See ESPY. D. *spien*, *speuren*; Ger. *spa-*
SPY, *n.* } *cher*, *spueren*; A. S. *spyr-ian*; to search or
SPI'AL. } seek.

To search; to look, to keep a look out, to observe; to see, to discover, to detect.

Eilred gede þorgh his lond, priuely to *spie*
Euerilkon þe Danes, & smertly bounde
Or smýte of þer hedes, aý as men þam founde.

R. Brunne, p. 40.

Had þei had a *spie* among þe Walssh oste,
& warned þam priuelie, þat þei were bi þat coste,
þei had bien men lyuand, þat þer to dede went,
þat folie tok on hand withouten avisement.

Id. p. 241.

And for to do him more greuance
Which hath ordained jelousie,
An olde vecke for to *spie*
The manner of his gouernaunce.

Chaucer. *The Romant of the Rose*, p. 202.

So that Rastell speaketh and seyeth all in diminutives, for where he should of truth *spye* hell, there *espyeth* he but purgatory.

Frith. *Workes*, fol. 16. *Answers against Rastell's Dialogues*.

As if a souldier of our aduersaries part shoulde come in among vs with our Lorde's badge, hauyng not that hart, fayth, and love, to our captaine that we haue, we would (if we espyed it by any token) take him for a *spye* and betrayer rather then one of vs.

Tyndall. *Workes*, fol. 472. *Declaration of the Lorde's Supper*.

The Jewes marked hym and laid *spial* for him, whether he went to y^e keeping of the holy day or no, and forasmuch as thei desired to se him, thei equired one of another where he was.

Udall. *John*, ch. vii.

And all the hinder partes, that few could *spie*,
Were ruinous and old, but painted cunningly.

Spenser. *Faerie Queene*, book i. can. 4.

The Sarazin, sore daunted with the buffe,
Snatcheth his sword, and fiercely to him flies;
Who well it wards, and quyteth cuff with cuff:
Each other's equall puissance envies,
And through their iron sides with cruell *spies*
Does seeke to perce.

Id. *Ib.* book i. can. 2

When he came unto the city of Cuma, he perceived that all the coasts by the sea were layed for him to apprehend him, and that he had many *spials* upon him.

North. *Plutarch. Themistocies*, fol. 110.

5 R

SPY.
—
SQUAB.

Achilles, starting, as the chiefs he *spy'd*,
Leap'd from his seat, and laid the harp aside.
Pope. Homer. Iliad, book ix.

Joyful they met; the Spartan thus begun:
Why puts my brother his bright armour on?
Sends he some *spy*, amidst these silent hours,
To try your camp, and watch the Trojan powers?
Id. Ib. book x.

As each is known to be a *spy* upon the rest, they all live in continual restraint; and having but a narrow range for censure, they gratify its cravings by preying on one another.

Idler, No. 78.

Amongst other things which, at different times, I had given to this chief, (Otoo,) was a *spying-glass*.

Cook. Voyages, vol. vi. book iii. ch. iv. p. 64.

SPYRIDEA, in *Botany*, a genus so called by Harvey from the Greek *σπυρίς*, a *basket*, in allusion to the appearance of the receptacles. It belongs to the class *Cryptogamia*, order *Algæ*, and the natural family of *Algæ-Confervoidæ*. Generic character: main filaments inarticulated, cartilaginous, beset with articulated ramuli; dissepiments opaque. Fructification, first trisporous capsules with hyaline pericarps, clustered round the bases of the ramuli; secondly, pedunculate gelatinous receptacles, with membranaceous pericarps, often surrounded by an involucre of short ramuli containing two or three roundish granules.

There is only a single known British species of this singular genus, *S. filamentosa*, a sea-weed, native of the southern shores of England, as also of the Indian and Pacific Oceans: it is of a light red colour fading to dull brown.

SPYRIDIDIUM, in *Botany*, a genus so called by Hugel from the Greek *σπυρίς*, a *basket*. It belongs to the class *Pentandria*, order *Monogynia*, and the natural order *Rhamneæ*. Generic character: calyx turbinate, five-cleft; tube semiadnate to the ovary, with erect segments; petals cucullate, connivent; disk thin, fleshy, wholly adnate, five-lobed, the lobes and sinuses roundish; anthers globose reniform, dehiscent; ovary villous at top; style elongated, slender; stigmas trisulcate; fruit unknown.

This genus is nearly allied to *Phyllica*, and is intermediate between that and *Soulangia*, and differs from the first in the presence of a disk and elongated style, and from the second in the disk being adnate to the calyx, and in the ovary being villous at top and not covered by a fleshy stratum. There is only a single known species, *S. eriocephalum*, a native of New Holland; it is a small heath-like shrub, with the habit and inflorescence of *Phyllica*.

SQUAB. *Squab* or *quab* (q. v.) is an unfledged bird, a nestling; and may be so called from the *quavering* action, when fed by the parent. The application then appears to be to any thing full fed, unwieldy, inert as a quab, or *squab*.

Squab-pie is the name given in Cornwall and Devonshire to a favourite pie, formed of alternate layers of meat, apples, and onions.

SOLO. No, truly, sir, I should be loath to see ye
Come fluttering down like a young rook, cry *squab*,
And take ye up with your brains beaten into your buttocks.
Beaumont and Fletcher. Woman Pleas'd, act i. sc. 1.

Diet makes them of a *squabbish* or lardy habit of body.
Harvey.

On her large *squab* you find her spread,
Like a fat corpse upon a bed.
Pope. Imitations. Earl of Dorset.

Cornwal *squab* pie, and Devon whitepot brings,
And Leister beans and bacon, food for kings.
King. Art of Cookery.

Gorgonius sits abdominous, and wan,
Like a fat *squab* upon a Chinese fan:
He snuffs far off th' anticipated joy;
Turtle and ven'son all his thoughts employ.

Cowper. Progress of Error.

SQUA'BBLE, n. } See SQUALL. A *squabble* seems
SQUA'BBLE, v. } to be a noisy, clamorous *squall-*
ing, strife or contention; a contentious, quarrelsome
wrangle, brawl, or brabble.

So indiscreet an officer. Drunke! and speake parrot! and
squabble! swagger! sweare! and discourse fustian with one's
own shadow!
Shakspeare. Othello, act ii. sc. 3. fol 321.

She blunts the point of care, alleviates woes,
And pours the balm of comfort and repose;
Bids the heart yield to virtue's silent call,
And shows ambition's sons mere children all;
Who hunt for toys which please with tinsel shine;
For which they *squabble*, and for which they pine.

Savage. The Volunteer Laureat, No. 3.

These follies had such influence on the rabble,
As to engage them in perpetual *squabble*.

Butler. Upon Human Learning.

The officer, perceiving what he was about, immediately ordered him to desist, thinking it more prudent to submit to the present violence, than to embroil his commander in an inextricable *squabble* with the Chinese government, by the death of their subjects.

Anson. Voyages, book iii. ch. ix. p. 520.

They had no conception that the reign of the Messiah could be any other than a temporal dominion; as appears by their addresses to their master for preferment, and by their *squabbles* amongst themselves for superiority.

Warburton. Works, vol. x. p. 217. Discourse 29.

SQUA'DRON, n. } Fr. *esquadre*, *esquadron*; It.
SQUA'DRON, v. } *squadrone*; Sp. *esquadra*; all
(Skinner) from the Lat. *acies quadrata*, a *square* troop.

A number of men, ships, &c. arranged in a *square*; now applied to a number, a division of men or ships without reference to the form. Hence *squad*, n.

Palladius made such an impression into the *squadron* of the Helots, that at first the great body of them began to shake and stagger.

Sidney. Arcadia, book i.

They for us fight, they watch and dewly ward,
And their bright *squadrons* round about us plant;
And all for love and nothing for reward:
O, why should heavenly God to men have such regard!
Spenser. Faerie Queene, book ii. can. 8.

His place of birth a solemn angel tells
To simple shepherds, keeping watch by night;
They gladly hither haste, and by a quire
Of *squadron'd* angels hear his carol sung.

Milton. Paradise Lost, book xii. l. 364.

Whate'er this heart can prompt, or hand obey;
All, all, Achilles, Greeks! is yours to-day.
Through your wide host this arm shall scatter fear,
And thin the *squadrons* with my single spear.

Pope. Homer. Iliad, book xx.

Great is thy skill, O father! great thy toil,
Thy careful hand is stamp'd on all the soil,
The *squadron'd* vineyards well thy art declare,
The olive green, blue fig, and pendent pear.

Id. Ib. Odyssey, book xxiv.

The mountain echoes with the wild affright
Of flying *squadrons*; down their arms they throw,
And dash from rock to rock to shun the foe.

Mickle. Lusiad, book iii. v. 532.

SQUA'LID, } It. *squallido*, *squallore*; Lat. *squa-*
SQUA'LOR. } *lidus*, *squalor*: *squalus* either from the
Gr. *κηλς*, *macula*, or from *σκελλος*, *dry*, because (Vossius) *dryness* causes *roughness*.

Covered, overspread, overgrown, with filth or dirt;
with foulness; filthy, dirty; foul.

And now together on their way they bin,
Whenas they saw a squire in *squalid* weed
Lamenting sore his sorrowful sad tyne
With many bitter teares shed from his blubbred eyne,
Spenser. Faerie Queene, book v. can. 1.

In level race [Diana] outstrips the jumping deer,
With nimble feet; or with a mighty spear
Flings down a bristled boare, or else a *squalid* beare.
Fletcher. Piscat. Egl. 5.

Yet euen himselfe (although a god he were,
Clad in a *squalid* sheepskin) gouerned there
A mortall's sheepe.

Chapman. Homer. Hymn to Pan.

When their judgments are firme, and out of danger, let them
reade both, the old and the new: but no lesse take heed, that
their new flowers and sweetnesse doe not as much corrupt, as the
others drinesse and *squalor*, if they choose not caefully.

Ben Jonson. Discoveries, fol. 116.

Next came Ulysses lowly at the door,
A figure despicable, old, and poor,
In *squalid* vests, with many a gaping rent,
Propp'd on a staff, and trembling as he went.

Pope. Homer. Odyssey, book xvii.

Nor everlasting rain deforms
The *squalid* fields; nor endless storms,
Inconstant, vex the Caspian main.

Francis. Ode to Valcius.

SQUALL, v. } D. *schelle*; Ger. *schall, schallen*;
SQUALL, n. } Sw. *squæla*; from the A. S. *giellan*,
SQUALLY. } to yell, *ululare, stridere, fremere*.
(See SQUEAL, and SQUABBLE.) To utter a harsh, shrill
noise, clamour, or cry.

A *squall* of wind; a howling, roaring (rush or gust
of) wind. See GALE; from which a *squall* differs—in
the suddenness of its beginning and shortness of its
continuance.

A *squall* seems to be a cry at full stretch; and *squall-*
ing out, in Fuller, to *stretching* or sprawling out.

Such walk with a black, or a red little cur,
That open will, quickly, if any thing stir:
Then *squall*eth the master, or trudgeth away,
And after dog runneth, as fast as he may,
Tusser. September's Husbandry, p. 24.

The raven croaks, the carrion crow doth *squall*,
The pye doth chatter, and the partridge call.

Drayton. Noah's Flood.

He [William Evans] was not onely what the Latines call *com-*
pernis, knocking his knees together, and going out *squalling* with
his feet, but also haulted a little.

Fuller. Worthies, vol. ii. p. 120. Monmouthshire.

Betty distorts her face with hideous *squall*,
And mouth of a foot wide begins to bawl.

King. Little Mouths.

Presently the wind shifted to the southward, and blew in such
violent *squalls*, that we were obliged to hand our top-sail, and
reef our main-sail.

Anson. Voyages, book i. ch. viii. p. 105.

The wind proved *squally*, and blew so strong off shore, that we
were driven too far to the southward to venture to send off our
boat.

Id. Ib. book iii. ch. i. p. 408.

A lowering *squall* obscures the southern sky,
Before whose sweeping breath the waters fly;
Its weight the top-sails can no more sustain—
Reef top-sails, reef! the master calls again.

Falconer. Shipwreck, can. 2.

At noon the gale was somewhat abated, but we had still heavy
squalls.

Cook. Voyages, vol. i. book ii. ch. v. p. 347.

SQUALUS, Cuv.; Shark, Pen. In Zoology, a
genus of animals belonging to the family *Plagiostomati*,
order *Chondropterygii branchiis fixis*, class *Pisces*.

Generic character. Muzzle prominent; beneath it in
front the nostrils, not elongated into a groove nor fur-
nished with lobes; teeth cutting, pointed, and often ser-
rated on their edges; inspiracles sometimes extremely

small; branchial apertures either partially above the
pectoral fins or entirely before them; first dorsal fin
much in front of the pectorals, second opposite the
anal; caudal fin with a second lobe beneath, giving it a
more or less forked form.

The Sharks of Cuvier form only part of the Linnæan
genus *Squalus*, including all those which have a project-
ing muzzle, and the nostrils not extended in grooves to
its tip, partially enclosed by fleshy lobes, as in the Dog-
fish, *Scyllion*. Cuvier has divided them into several
subgenera, dependent upon the presence or absence of
the inspiracles and anal fin. Risso, however, says, that
the inspiracles exist, although extremely small, in
Cuvier's first subgenus *Carcharias*; they may therefore
be set aside as forming a distinction from the second
Lamia, the principal difference between the two being
the flattened form of the muzzle in the former, and py-
ramidal shape in the latter. If then the existence of
very small inspiracles be admitted in *Carcharias*, there
will be no need of the third subgenus *Galeus*, which
Cuvier says is only distinguished from it by their pre-
sence. They are oviviparous, the eggs being hatched
in the oviducts, and the young ejected alive.

The Sharks are extremely ferocious and of pro-
verbially gluttonous habits. Some of them were known
to the Greeks by the name of *Xapxapias*, but they confused
their habits with the accounts they gave of the Dol-
phin. Besides preying upon other fish or seals, nothing
seems to come amiss to them either living or dead, and
they are constantly noticed following ships on the
watch for any offal which may be cast overboard. They
do not generally swim with great speed, and their pro-
gress is retarded in some degree by the position of their
mouth requiring them to turn on one side when about
to seize their prey. They were formerly said to be pos-
sessed of a fine scent, but Quoy and Gaimard have
proved that this is not the case, and that rather their
vision is acute. They appear to be found in all seas,
mostly upon the coast, but between the tropics are
often met with on the high sea. Their habits are gene-
rally solitary, except when hunger draws them into bays
or other inlets, when they are seen in swarms. Their
flesh is coarse and tasteless, but rarely eaten excepting
from the tail. The liver is very greasy, and large quan-
tities of oil are obtained from it. The skin rough, and
from some species it is used in the manufacture of a sort
of shagreen.

a. With the muzzle flattened and the branchial aper-
tures extending above the pectoral fins.—*Carcharias*,
Cuv.

S. Carcharias, Lin.; *le Requin*, Cuv.; *White Shark*,
Pen. From twenty-five to thirty feet in length; the
body spindle-shaped, and covered with hard granular
skin; head large, muzzle flattened from above to below,
short, and rounded, largely furnished with pores which
exude a glairy secretion; mouth large, wide, and semi-
circular; upper jaw armed with six, and the lower with
four rows of teeth, white, triangular, and finely denti-
culated on their straight edges, and amounting to four
or six hundred, those of the lower jaw narrower and less
dentated; Fabricius says, that this difference in the
number of the teeth in the two jaws exists only in the
young, and that in the old animal both jaws have six
rows; tongue short, thick, and rough, as is also the
palate; eyes round, the irides pearly-white, and the
pupils blackish; upper parts of the body brown, under

SQUA-
LUS.

parts white, and two rows of black pores upon the sides; pectoral fins very large, extending beyond the base of the first dorsal and of an isosceles triangular shape; first dorsal fin elevated and rounded, second received into a groove at its base, and directly above the anal; ventral fins small, whitish at their tips, and rather nearer the second than the first dorsal; caudal fin consisting of two lobes, of which the upper is twice as long as the lower. They appear to be found in the seas of all warm climates, also in the Mediterranean during spring and autumn, and have occasionally been taken on the British coasts. They usually reside in deep water, and rise only to the surface when induced so to do by hunger, or near to the shore when in pursuit of their prey. They are generally said to swim with great ease and swiftness on account of the size of their pectoral fins, but this is denied by Quoy and Gaimard, who declare that their motions are naturally slow, and that they have not the vivacity of some other fishes. They also contradict the assertion of these animals springing out of the water after their prey, and state that they had frequently offered to the most hungry Shark a bait at a distance only of six inches from the surface of the water, which it left without the slightest endeavour to take. Indeed, these fishes never have the head and body above the surface of the sea; they show only the tip of the dorsal fin, a sign by which in calm weather their approach is noticed, and very rarely the upper lobe of the tail is seen. Their voracity is extreme, and they seize all kinds of aquatic animals living or dead, but are specially fond of Halibut, Cod, Seals, and Thunnies, and in pursuit of the latter are often caught with them in the net; and Cetti speaks of one thus taken weighing three or four hundred pounds, in which were found eight or ten Thunnies. It seizes on men when it has the opportunity, and hence its German name *Menschenfresser*, or man-eater. Numerous instances of this fact are given by various navigators; and Capt. Basil Hall mentions a Shark well known in one of the harbours of Jamaica, the fear of which was more efficient in preventing the sailors swimming ashore than the most vigilant watch. Quoy and Gaimard deny the commonly received opinion that these Sharks can snap off a limb, in consequence of the backward direction of their teeth, some of which lie parallel to the jaws; there can be no doubt that the direction of the teeth in these animals, as in the non-venomous Snakes, is rather for the purpose of preventing the escape of their prey by slipping from their mouths, and which is further assisted by the fact that many of the teeth are movable upon the gums, and decline as any thing passes from the mouth to the throat, whilst on the contrary any struggle to get away in an opposite direction tends only to raise and plunge them more deeply into the engorged morsel. Yet as the jaws are so strong, and the teeth so sharp as they are, there can be no difficulty in a limb being broken and its soft parts cut through, so as to be what is commonly called snapped off. They have great strength in their tail, so that as soon as a Shark is hoisted on board a ship, the sailors immediately endeavour to strike it off. Their size, as already mentioned, is very great; Müller mentions one taken at the Isle of St. Margaret weighing fifteen hundred weight, and Pennant quotes Gillius, who says they sometimes weigh four thousand pounds. Their eggs are about eight inches long and in masses of forty; they are hatched internally, and about that number have been found within the mother. Their flesh is very coarse and un-

savoury; but the skin is used for shagreen, and train oil is obtained from the liver.

Cuvier observes that the *S. Carcharias*, Bl., more nearly resembles the genus *Scymnus* than the *Squali*.

S. Vulpes, Gmel.; *la Faux ou Renard*, Cuv.; *Long-tailed Shark*, Pen. About thirteen feet long, of which the upper lobe of the tail is nearly as long as the body; head small and rounded; snout short and conical; teeth alike in both jaws, triangular, and not denticulated at their edges; eyes lateral and large, occupying three-fifths of the length of the upper jaw; body spindle-shaped; skin smooth; the back cinereous, and the belly white; first dorsal fin triangular and elevated in the middle of the back; second very small, triangular, inclining, and terminating in a very sharp point; pectoral fins narrow, triangular, and very long; ventrals small, triangular, and horizontal; anal similar to the second dorsal. This species is found occasionally on the British coast, also in the Mediterranean. It not unfrequently dashes among a herd of Dolphins which are sporting about in fancied security, and puts them to flight by a smart blow of its tail; hence, perhaps, its vulgar name of *Thresher* on the Devonshire coast. It was known to the ancients by the titles *Αλωπηξ*, or *Vulpes*, either from the length of its tail resembling that of a Fox, or from its swallowing (as they supposed) the hook with which it had been hooked till it could reach the line attached to it, and then biting it asunder. Its flesh is tolerably good, and not very unlike veal.

S. Glaucus, Lin.; *le Bleu*, Cuv.; *Blue Shark*, Pen. From six to seven feet in length; muzzle long, pointed, and flattened; mouth wide; teeth in four or five rows, and finely denticulated; eyes small, irides white, pupils green; pectoral fins large, and sickle-shaped, the body deepest opposite their origin; first dorsal fin on the middle of the body, low, rounded above, triangular, with its basal edge longer than the others; the second opposite the anal fin, which is midway between the ventral fins and the lower lobe of the caudal, which has only one-third the length of the upper lobe. The skin of this species is granular, but less rough than the others; upper surface of the dorsal fins and upper surface of the pectoral fins slate-blue; the belly white. The Blue Shark is a native of the Mediterranean, but occasionally visits the British coast, and has been found on the Irish shore, and as far north as Zetland. According to Mr. Crouch, it is migratory, and never taken on the Cornish coast before the middle of June, but afterwards becomes more abundant. They are great plagues to the fishermen, cutting their lines without apparent reason, or running along the whole length of a pilchard drift net, cutting out as with shears the net and the fish it contains, and swallowing both together. When it cannot escape from the hook upon which it is caught, it has a curious method of rolling up the whole line upon its body, so as almost to preclude the possibility of getting it off. The old writers on natural history, and Ælian especially, have pleased themselves with describing the great affection of the Blue Shark for its young, and state when they are in danger it permits them to swim down its throat and shelter themselves in its stomach, from which doubtless living young ones have occasionally been taken; but whether the well-known tenacity of life in this species is sufficient to preserve them there unharmed for any length of time, and afterwards to be ejected, may be matter of doubt. Like other Sharks, they are occasionally accompanied by the Pilotfish, (*Nau-cratis Ductor*, Cuv.), and a curious anecdote of them is

SQUA-
LUS.

SQUA-
LUS.

mentioned in Griffith's translation of Cuvier's *Règne Animal*. "Captain Richards, R. N., during his last station in the Mediterranean, saw on a fine day a Blue Shark which followed the ship, attracted, perhaps, by a corpse which had been committed to the waves. After some time a sharp-hook baited with pork was thrown out. The Shark, attended by four Pilotfish, repeatedly approached the boat, and every time that he did so one of the Pilotfish preceding him was distinctly seen from the taffarel of the ship to run his snout against the side of the Shark's head to turn it away. After some further play the fish swam off to the wake of the ship, his dorsal fin being long distinctly visible above water; when he had gone, however, a considerable distance, he suddenly turned round, darted after the vessel, and, before the Pilotfish could overtake him and interpose, snapped at the bait and was taken. In hoisting him up, one of the Pilots was observed to cling to his side until he was half above water, when it fell off. All the Pilotfishes then swam about awhile, as if in search of their friend, with every apparent mark of anxiety and distress, and afterwards darted suddenly down into the depths of the sea. Colonel Hamilton Smith himself witnessed with intense curiosity an event in all respects precisely similar."

S. Ascensionis, Osb.; *le Squalé Glauque*, Lacep.; *Ascension Shark*. This is considered by Cuvier a distinct species from the preceding, though held by Lacepede to be the same; its teeth are triangular, lengthy, and not denticulated; upon the upper part of the extremity of the tail is a small pit; the whole of the upper parts are greenish-blue, and the under parts of brilliant white. It is found in the neighbourhood of the Isle of Ascension.

S. Obscurus, Lesuer; *Dusky Shark*. Head flat and broad, with a sharp-edged snout, rounded and wide at the end; teeth triangular and serrated; dorsal and anal fins stretching backwards, each in a point, the latter having two lobes; pectorals long, narrow, and sickle-shaped; ventral fins small, squarish; upper edge of the tail undulating, lower emarginate; the upper lobe of the caudal fin lanceolate, the lower short and rounded. Upon each side of the neck is a white spot. Found on the coast of North America.

S. Littoralis, Les.; *Ash-coloured Shark*. About three feet in length; head flat, dilated between the eyes, and terminating in a rounded point; irides silvery; aperture of mouth resembling the letter U; teeth narrow, pointed, undulated, and not denticulated, in three or four rows; body short, thick, and wide towards the belly; dorsal fins large, and rather of a square form, the second anterior to the anal, which is also squared; pectoral fins large and soft; tail rounded, with an undulating edge, and slightly notched at the base upwards, its falciform fin terminating in a distinctly triangular lobe; upper parts reddish-grey; belly white. Found on the coast of North America.

S. Ustus, Dumer.; *le Requin à nageoires noires*, Quoi and Gaim.; *Black-finned Shark*. More than four feet long; muzzle flattened, and very round at the tip; teeth in the lower jaw pointed, and the upper more flattened, triangular, and hollowed on their edge; its colour is yellowish-ash; the sclerotic greenish, and iris yellow; at the extremity of each fin is a black spot, deeper on the first dorsal, the pectorals, and the lower lobe of the caudal fin. Is found near the Isle of Waigiou. Cuvier places here the two Sharks described by Dr. Russell in

his *Fishes of the Coromandel Coast* by the native names *Pala Sona* and *Sona Kowah*.

The next species Cuvier has placed in a distinct sub-genus from the preceding by the name *Galeus*, in consequence of its possessing inspiracles, which he denies to the former; if, however, Risso's observation on the inspiracles, in which he is supported by Jenyns, be correct, such division cannot be admitted, as Cuvier allows that in all other respects it resembles his sub-genus *Carcharias*.

S. Galeus, Lin.; *le Milandre*, Cuv.; *Tope*, Pen. From three to six feet in length; muzzle prominent, rather triangular, very much flattened, and rather transparent in front of the nostrils, which are midway between its point and the mouth; teeth small, triangular, and sharp pointed, in several rows, and nearly alike in both jaws; body spindle-shaped and lengthy; first dorsal fin of nearly equal height and length, and not large, placed at one-third of the total length from the muzzle, and the second midway between the first and the end of the tail; anal similar to the second dorsal, and a little behind it; pectoral of moderate size; ventral in the middle of the whole length, and obliquely truncated at their tips; caudal bilobed, the upper terminal, oblique, and truncated, the lower with one deep, triangular elongation, and a smaller one near the tip; upper parts and sides deep slate-grey; under parts yellowish-white. It is common in the Mediterranean and upon the southern British coasts, where it is known as the *Penny Dog* and *Miller's Dog*. It is also met with on the Welch coast and the southern coast of Ireland. It is rapacious, but not so much so as the Blue Shark. The young are excluded to the number of thirty or more at once, in May or June; they remain on our coast during the first winter, whilst those of larger size go into deep water, and do not attain their full size till the second year. Bloch says that it sometimes acquires a hundred pounds weight, and usually lives in society and in deep water.

b. *With the muzzle pyramidal, and all the branchial apertures in front of the pectoral fins.*—*Lamna*, Cuv.

S. Cornubicus, Gmel.; *le Squalé Nez*, Cuv.; *Porbeagle Shark*, Pen. From five to nine feet in length; muzzle very long, slender, and sharp pointed, with a band of punctures on each side of the forehead, a few behind the eyes, and a triangular patch before the nostrils, which are placed between the muzzle and the mouth; the latter of a semilunar form, its convexity forwards; teeth sharp, with a little process on each side of their base, arranged in the upper jaw in a double row, except the middle two, which stand single, whilst in the lower they are ranged in a triple row, the remaining teeth being placed in two ranks; the hinder row are directed inwards and the front outwards; body spindle-shaped, thick and deep, but very slender and flattened from above to below near the tail so that its sides here are keel-shaped, in which ridges are lost a row of indistinct minute tubercles running backwards from the head along each side of the body; on the upper and under surface, close to the root of the tail fin, a semicircular depression with the points directed backwards; skin roughish; first dorsal fin nearly in the middle of the body, not quite so high as long; second dorsal nearer the tail, opposite the anal fin, and both of nearly equal size; pectoral fins directly behind the last branchial openings, and rather more than one-sixth of the whole

SQUA-
LUS.

SQUA-
LUS.
—
SQUAN-
DER.

length of the fish, and of a semilunar form, as are also the ventrals, which are small; caudal fin semilunar, its upper lobe a third longer than the lower; upper parts, fins, and tail, and part of the sides dusky with a tinge of green or blue, all the other parts entirely white. This species is occasionally met with in the Frith of Forth, is found along the southern coast of England, not uncommonly on the Cornish coast, and said also to have been caught at Belfast. It pursues its prey in small packs, and from this habit, as well as a slight resemblance to the Porpoise, it has acquired the name of *Porbeagle*.

S. Monensis, Shaw; *le Beaumaris*, Cuv.; *Beaumaris Shark*, Pen. From seven to nine and a half feet in length; it has the muzzle shorter and the teeth sharper, the eye much larger, the dorsal and pectoral fins further back, and the bulk of the fish greater in proportion to its length; the whole fish is lead colour; and the skin smoother than in the smaller species. But two individuals of this species have been met with; one mentioned by Pennant at Beaumaris, and the other stranded near Bangor Ferry. Donovan and Flemming consider it as belonging to the last species; Turton and Gmelin as a variety; but Shaw and Cuvier agree with Pennant in making it a distinct species.

See Linnæi *Systema Naturæ* a Gmelin; Cuvier, *Règne Animal*; Risso, *Histoire Naturelle de l'Europe Méridionale*; Pennant, *British Zoology*; Jenyns, *Manual of British Vertebrate Animals*; Lesuer in *Journal of the Academy of Natural Science of Philadelphia*; Quoi and Gaimard, *Zoologie du Voyage de l'Uranie*.

SQUAME, } It. *squama*, *squamoso*; Lat. *squama*.

A man groweth in height and length untill he be one and twentie years of age; then beginneth he to spread and burnish in *squareness*.

Holland. *Plinie*, book xi. ch. xxxvii.

Politicians inculcate much, that to the well governing of a people, *squaring* fit laws for it, and keeping it in good order, the nature and humour of that people should be chiefly heeded and well understood.

Barrow. *Works*, vol. i. p. 375. Sermon 18.

If I mistake not it follows, from what I have said, that the question itself is altogether improper; and it is as insignificant to ask, whether man's will be free, as to ask whether his sleep be swift, or his vertue *square*; liberty being as little applicable to the will, as swiftness of motion is to sleep, or *squareness* to vertue.

Locke. *Of Human Understanding*, vol. i. book ii. ch. xxi. fol. 100.

Lo; an astrologer, with filth besmear'd,
Rough and neglected, with a length of beard,
Pores round his cell for undiscover'd stars,
And decks the wall with triangles and *squares*.

Fawkes. *A Voyage to the Planets*.

It [common-place wit] is as obsolete as fardingales, ruffs, and *square-toed shoes*.

Knox. *Winter Evenings*. Evening 9.

SQUASH, } *i. e. quash, q. v. Fr. quasseur, a*
SQUASH. } *squasher.*

Squash, in Shakspeare, is applied met. to a soft, infirm being, easily *crushed*; in Boyle, to a pumpkin of the same nature; in Swift, to the noise made by falling into water; the dash or splash.

"*Escraseur*, a crusher. *Squasher*, or beater of things flat by hard pressing them." Cotgrave.

There is an unhappie bird called *Æsalon*, and but little withall: yet will she *squash* and breake the raven's eggs.

Holland. *Plinie*, book x. ch. xxiv.

How like (methought) I then was to this kernell,

This *squash*, this gentleman.

Shakspeare. *The Winter's Tale*, act i. sc. 2. fol. 279.

I caused my gardener to dig out a convenient quantity of good earth, and dry it well in an oven, to weigh it, to put it in an earthen pot almost level with the surface of the ground, and to set in it a selected seed, he had before received from me for that purpose, of *squash*, which is an Indian kind of pompion that grows apace; this seed I ordered him to water only with rain or spring water.

Boyle. *Works*, vol. i. fol. 494. *The Sceptical Chymist*.

My fall was stopped by a terrible *squash* that sounded louder to my ears than the cataract of Niagara.

Swift. *Gulliver*. *Brobdingnag*, ch. viii.

SQUAT, v. } It. *quatto, squatte*, husht, close,

SQUAT, n. } still, lurking: *acquattare*, to hide or *squat* as a hare doth, Florio: perhaps, says Skinner, from the Lat. *quietus*. Menage from the Lat. *captare*, borrowed from the covering posture of bird-catchers.

Skinner thinks *squat*, applied to any thing short, broad, sturdy, is *squared*, from *quadratus*. There seems little occasion for two words.

To cower, to stoop; generally applied to the posture described by Dampier and Cooke; to depress.

Squat, adj., consequentially, short, broad.

King Edward the Second gave strict commandment to the citizens to build the abbey they razed; saieing, that although lawes were *squatted* in warre, yet notwithstanding they ought to be reuiued in peace.

Holinshed. *The Description of Ireland*, vol. vi. p. 26.

Therefore I do not like those *squatting* unseemly bold postures upon one's tail, or muffling the face in the hat, or thrusting it in some hole, or covering it with one's hand; but with bended knee, and in open confident face, I fix my eyes on the east part of the church, and heaven.

Howell. *Letter* 32. book i. sec. 6.

He [the ram-fish] *squatteth* close under the shade of bigge ships that ride at anker in the bay, where he lieth in ambush to wait when any man for his pleasure would swim and bath himselfe, that so he might surprise them.

Holland. *Plinie*, book ix. ch. xlv.

Him there they found

Squat like a toad, close at the eare of Eve;

Assaying by his devilish art to reach

The organs of her fancie, and with them forge

Illusions as he list, phantasms and dreams.

Milton. *Paradise Lost*, book iv. l. 799.

By this unreasonable custom they do in a manner lose the use of their feet, and instead of going they only stumble about their houses, and presently *squat* down on their breeches again, being, as it were, confined to sitting all days of their lives.

Dampier. *Voyages*, vol. i. ch. xv. p. 408.

Such wrinkles, as a skilful hand would draw
For an old grandam ape, when, with a grace,
She sits at *squat*, and scrubs her leathern face.

Dryden. *Juvenal*. *Satire* 10.

She placed them in a heap, laid over them a handful of green celery, and over that a coarse mat, and then *squatted* herself down, on her heels, on the top of all.

Cook. *Voyages*, vol. iv. book iii. ch. xi. p. 147.

SQUATINA, Dumer.; *Angel Fish*, Pen. In Zoology, a genus of animals belonging to the family *Plagiostomati*, order *Chondropterygii branchiis fixis*, class *Pisces*.

Generic character. Mouth at the extremity of the muzzle; head flat and rounded in front; eyes on the dorsal surface; inspiacles; body broad and flattened horizontally; pectoral fins large, extending forwards, but separated from the back by a deep cleft, in which are the openings of the gills; dorsal fins behind the ventral; no anal fin; caudal fin having one lobe above and the other below the extremity of the tail.

This is included in the Linnæan genus *Squalus*, but separated from it by Dumeril on account of the position of the mouth at the extremity of the muzzle, whilst in the Sharks it is beneath, and the eyes being on the upper surface, as in the Rays; the equal lobes of the caudal fin form also another distinction from the Sharks.

S. Angelus, Dumer.; *l'Ange*, Cuv.; *Angel Fish*, Pen. From five to seven or eight feet long, and up to one hundred pounds in weight; head nearly round, and wider than the body, from which it is separated by a deep notch; mouth large, transverse, with five rows of teeth in each, broad at their base, and terminating each in a fine point; eyes very small; inspiacles crescent shape, and its horns facing backwards; body narrower than the head, convex above and flat beneath; skin very rough, covered with numerous spiny tubercles, generally small, but some above the eyes and along the ridge of the back are larger; pectoral fins very large, lateral, pointed before, triangular on their outer edge, and rounded behind, with some little spines at their edge, which Jenyns thinks may be probably only a sexual difference; from their supposed resemblance to wings the animal has acquired its name of *Angel Fish*; ventral fins of similar shape, but smaller; dorsal fins very small,

SQUAT.

SQUA-

SQUA-
TINA.

and of nearly equal size, set far back on the tail; upper surface dark mottled-chocolate, under parts dirty white. It is not uncommon upon the British coast, where it is known as the Angel, Monk, or Fiddle Fish, from the size of its pectoral fins, from the head being sunk within the pectoral as within a cowl, or its shape resembling a fiddle. It produces in the spring and autumn seven or eight young ones. It is a very voracious fish, feeding on the smaller flat fish close to the bottom of the sea, and sometimes hiding itself in the loose stones of the mud. It is very fierce, and Pennant mentions an instance in which a fisherman had his leg torn very severely by one of them, while he was incautiously attempting to take it from his net whilst in shallow water. It is now rarely eaten, but its rough skin is manufactured by the Turks into shagreen.

Couch speaks of another species known to the Cornish fishers by the name of *Lewis*, but Jenyns states that from the description he hardly sees in what the difference consists, and Yarrell thinks the colour varies according to the soil upon which they live, and that in this there is also some sexual difference.

S. Dumeril, Lesuer. From three to four feet in length; head bordered on either side with a white membrane, wider than its length, emarginate between the nostrils, which have a broad ciliated skin on each side; eyes small, yellowish-green, with black pupil, the orbits elevated and studded with blunt tubercles, others of which are also between the inspiracles, which are wide and transverse; six or seven distinct rows of lanceolate teeth, five in each row; body flattened, broad, and elevated towards the pectoral fins, which are somewhat triangular, pointed in front, thick at their base, flexible posteriorly, and separated from the body by a slight notch, their outer margins beset with sharp points; tail attenuated and sharp-edged; ventral fins lanceolate, narrow, and straight, upon the edge of the body, and in the males terminating in a process called by Bloch a hand; dorsal fin small, triangular, between the ventral fins and end of the tail; lobes of the caudal fin pointed, the lower one longest; head, back, fins, and tail bluish-grey, tinged with reddish on the head and edges of the fins; belly white; a reddish spot upon the throat, belly,

and from behind the vent along the under part of the tail to its tip; pectoral and ventral fins bordered with large, irregular, red bands. Is found on the coast of North America. SQUA-
TINA.
—
SQUEAK.

See Cuvier, *Règne Animal*; Dumeril, *Zoologie Anatomique*; Pennant, *British Zoology*; Lesuer, in *Journal of the Academy of Natural Sciences of Philadelphia*.

SQUEAK, *v.* } To squeak, and to quake, (like
SQUEAK, *n.* } a duck,) and also the Italian *squit-*
SQUEAK'ING, *n.* } tire, to squeak or cry as a parrot,
Skinner thinks, are all formed from the sound. The
Sw. *sqwaka*, Ihre suggests, may be from the A. S.
swæg-an, sonare, tinnire.

To utter a sharp shrill sound.

And thus I sing, when pleasant spring begins,
Like Philomene, since every tangling byrd,
Which squeaketh loude, shall neuer triumph so,
As though my muze were mute and durst not sing.

Gascoigne. *The Steele Glas*.

And be content, that some lewd squeaking crier,
Well pleas'd with one lean thread-bare groat for hire;
May like a devil roar through every street,
And gall the finder's conscience, if they meet.

Donne. *Elegy upon the Loss of his Mistress's Chair*.

The howling of a wolf in the fields in the night, or the squeaking and roaring of tortured beasts, do not so certainly call to them those of their own kind, as this powerful magick of a pensive and complaining soul in the bitterness of its affliction attracts the aid of these over-officious spirits.

More. *An Antidote against Atheism*, book iii. ch. xiv. fol. 130.

Pies, crows, and daws, poetic presents bring;
You say they squeak, but they will swear they sing.

Dryden. *Persius. Prologue to Satire 1*.

Bartering his venal wit for sums of gold,
He cast himself into the saint-like mould;
Groan'd, sigh'd, and pray'd, while godliness was gain,
The loudest bagpipe of the squeaking train.

Id. *The Medal*.

Ran cow and calf, and family of hogs,
In panic horror of pursuing dogs;
With many a deadly grunt and doleful squeak,
Poor swine, as if their pretty hearts would break.

Id. *The Cock and the Fox*.

The mimic took his usual station,
And squeak'd with general admiration.

Smart. *The Pig*.
